The fixe and twentieth day, at a North-east Sunne, the Boat came aboord agains, having slaine but two Morfes, at twelue at midnight the wind came to the North, and blew fo hard, that I wasenforced to try with a Mayne-course, cold frosty weather, with snow. The sayd wind and was enforced to try whith a major country, constituting the state of the clock at night, which are stated to the country weather continued till a South Sun, the fever and twentieth day, at eight of the clocke at night, the wind came to the North-west and by West faire weather, then I stood towards the Landagain, And at a South-east fun, the eight & twentieth day, I was within three leagues of Faser-forfand, and standing in Hounded divers times, and had these depths, 15, 17, 19, and 18, lathous, within fine, fixe, and fenen myles of the shoare, and when Fager-forland did beare South and by East by the Compasse. It being two miles from me, I saw the Land beare North-east and by North, about nine leagues off, the which because it was full of knottie Mountaines, I called Knot. 40 tie-point, and between Knottie-point, and Fayer forland, Haw a great Bay, which because it was foggy on the fudden, I could not discouer. In the Sea, about the Fortund, I law great store of Mohories and Sea-fowle, I founded in the Bay and had nintie fue fathomes rockie ground. I flood to Sea, and had very foule weather, with fnow, and fogs, and frost, which weather continued till Thiny day of the chirtieth day, at foure of the clocke in the morning, at which time I was within one mile of Fayer-forland in nine fathomes, and then I fayled East North-east about two miles, and had thele dephs, 18.17, 16.14, and 12. fathomes all rockes. Then I fleered South with the like depths and grounds, but when I had runne South South-east three miles further, I had sandie ground, then did Fayer-forland beare West and by North, about three leagues of , the next cast I had tenne fathomes foule ground, and from thence I steered two leagues South and by East, having these 50 depths, 10.9. 8. and 7. fathomes, then I faw the Bay covered over with Ice. I turned out the wind at North, This Sound I named Forele-found, for in this Bay are three Sounds; this I fpake wind at Avertin. It is south, and gooth out at Black point: another lyeth in Eat South-eath, which I named Deen-found: another gooth in North, which is called Cinfo-come, and being neere the point betweene Fowle-found and Detre-found, it fell calme, and I fent the Skiffe on Lund, and flanding after, with a little wind at West, I found the fayd Point very shoale, with a ridge of Rockes, where I had these depths, 4.5.6.7.9.10.18. and then 30. fathomes. At a South Sun, the Boat came aboord and brought Wood, and fome Whale-fins.

The last of May, at an East North-east Sun, I was within three leagues of Knotty point, at which time I saw Ice all the Sea ouer betwixt the West and the Land : then I saw another Point some leagues diffant from Knotty point, the one bearing of the other North and by East, and South and by West, and it is smooth Land, the which I named the Gwnerds nofe, indifferent warme weather : and finding the Ice to bee fo thicke that I could not patfe it, and the wind comming to the West, I stood to the Southwards againe, determining to search the Sounds better for a Road, and

for commodities, because I saw no good to bee gotten in keeping the Sea amongst the Ice, and at a North Sun, I was in the entrance of Clofe-come, where I had no ground at one hundred & twenty Notes fathomes, and yet I was within two Cables length of a funken ledge of Rockes, that lyeth on the Larboard fide of the Bay a mile from the shoare.

The first of Iune I found a good Road in Clofe-case, on the South-west fide, where I rid in Iune, feuen fathomes fand mingled with oze, at an East Sun I fent a Skiffe to a low Point, that lyeth on the North fide of the Bay, where they found some Whales fins , and three pieces of Mohorse teeth, and spon a little rockie Iland, they faw neere one hundred Mohotfes, which were there fleeping. In this time I went towards the bottome of the Sound, and flue a white Beare. At a A Beare flainte 10 South-west Sun, I went towards the rocke, to see if I could kill any of the Morfes that lay there. and as wee went by the shoare side I espied Deere, three of them I flue, and one of my company one. But when I came to the rocke the Ice that the beafts lay on was hollow, and the rocks that was bet wist the Ice and the fea frood floping toward the Sea; the which when I faw, I determined to go aboord and let them alone, yet afterward I went on the rocke betwint the Ice and the Sea : and as I with the reft of my company were killing them, the Ice brake, and Ice and beaits fird Into the Sea together, and carryed one of the men with them, so that he escaped out of

that danger very hardly; for besides the weight of dead Mohorses, and Ice that bruised him, the 20 beafts that were aline frook at him in the water, and brunfed him very foare. I had beene in the fame cafe, if I had not beene the nimbler, and flipt on one fide. I killed three Morfes, whole teeth I cooke off. Then I espied the Beare, which my Mate had hurt before with a shot ; hee went into the Sea, when hee faw the Boate, where I flue him with a Lance, and brought ABeare flaines

The second day sea North and by East Sunne, At a South Sunne, I went to the South shoare of Deere-found, where I found a good quantitie of Fins, and came abourd, at a North North-west Sunne: "The third day , being Sundays, I rid full , having the wind at West South-West much wind. Then vpon the fide of a Hill, a mile to the Westwards of the Road, I fet vpa Crosse, with Acrosse fet vpa a writing ponit; lignifying the day of my arrivall first in this Land, by when I was fet Crefe road. out, and the time of my being heers. This Road Itealed Cofferend. At a South east funne for all minds the fourth day, I wayed, the winder West South-west, and when I was almost out, the wind increased with fogs, which made me purback into the Road, where I anchored the same day at fix

of the clocke, at afternone. The fifth day, at a North east and by East fimme I wayed, and it fell calme then I went to the Eaft fide, and killed fome Fowle, which I found in great abundance: There is great and when I was readie to go aboord, I faw tourceme Detre, at winditime I fpent all my powder, flore of Fowler and thor but one thor; with the which I flue a fat Buck. The lame day, at a South fun, I went on in this Land. Landand Hortwo Deere more. And at a South well fun I went on Land and fine a Dog, and took A Buck flaine. the Faune aline, and brought it abound; but it dyed the next day. The salme continued till the fixth day, at an East North-east funne Pand we droue in the Bay, with a little foaking ty de that rumeth there.) Then I fem the skiffe to the rocke aforefaid, to for what flore of Mohories were there; at three of the clicke they came about, and told mee there was neere ewo hundred beafts. Three Decre

40 I tooke both the boat and skiffe, with all my company, and went to the rock, and in going flane. a mouse coun use courann settie, with an my company, and wenter the rock, and my company chitcher I flow a Beare have better I came to their ocket, the beadth began to go ein to the flat, then I for referringly went on land? with all say semplany, and the eighnic beath, whose teeth I Beare flance tooks, and in going shooted flat modeled Beare, and came abouted the intenth day, and a bottom Monorate. eaft inh. Then I aw two white fifties; which at the fift fight I fampoist to be Beares, they had the Stingeoin, two flat Fifti close by their gills, list bodysis mall towards their tailes,

The centh day, I went on thouse and flue five Doore; swithshe which, and them that I flue Fine Deere, our Ancestors to bee trainffed vote, by region of the extreme work which they supposed to bee to shood a 50 here ) I find the afretemperate in the Lands, and nothing the colds & I have found at Chery .... Close-Come.

the North-west, and blew very hard, which made mee to put roome for Cross-road, where Irid till the fourteenth day, in which time I caused both the boates to bee trimmed, and the minutes. Compaffe vary thirteenth day at noone, I observed on Land, in this place, and found the Poles height 79 degrees, fitteene minutes, and the variation of the Compage 18, degrees, 16, minutes North-welt the

The fourteenth day, at a South-east Sunne I wayed, the wind at South-west forgie weather at a South-west Sunne, I went on Land and slew a Buck. The infreenth day, at East Sunne, I got out of the Bay, at which time I faw abundance of Ice to the Sea-wards, but the wind came to out of the Bay, at which time I saw anomalises to the shoare. At a North-weft Same, I due to the South-east, and I sayled betwixe the Ice and the shoare. At a North-weft Same, I due to the skille (with feven men in it) to the Land under Kuetie-powe, at which time the wind came to the North-east, and I stood to the North-wardes, where I had these depths, sitteene. Great flore of thirteene, and eleuen fathomes fould-ground. These depths were about a leagues, and other Northwards of Knottie-point, I saw great flore of Whales, the like Liaw in Desre-found. The fixteenth day, the Skiffe came aboord, and brought a few Finnes, and five Detre, and they told Fine Deere mee that within the Bay, that lyeth betwixt Knottie-point and Gurnerde-nofe in a Hauen, in the entrance whereof is an Iland, and seuen fathomes going in, but within eight, nine, fifteene. and twentre fathomes good ground. This maketh Gurnerds-nofe, an Hand, for this Hanen goeth out on the North-weit fide of Gurmerds-nofe. I named this Hanen, the Farre-banen : I Paier Hauen Abundance of found a great tyde heere, which runneth South South-weft, the floud commeth from the 20 Southwards,

Then standing to the Northwards, I saw the Sea conered with Ice, which lay close to 79. degrees 50. the Land which made me fland to the Southwards again, t observed at Garner de mode, and found the Poles height 79. degrees, 50. minutes. At a North-west Sun, the lame day, I lent the skiffe the foles neight 79. orgrees, 50. minutes, or a sound orgress, outs, one case usys, a end cas active on Land to dearch the Coalt to the Southwards of Kanta-jasse, where I founded and had recome, foure fathories Foulc-ground, and in the Fayre-way I founded, having their depths, 30.35, 43s The fried and 48. Asthomes all Rocky ground. By the fenenteenth day, I was in the entrance of Cha plice of my to-ing this Voyage at a South Sun, at which time the Skiffe came abourd, and brought a Beares skin, and a Buck, and This vincorns a good quantite of Whales Fins and an Vincornes horne, which was fine foot and down inches long, and in the biggeft part of it, it was fetten inches and a halfe about. The eighteenth day, at a 30 home is the Horne of a fish South Sun, I came into the Road, where I rid all that day, having very much wind and mine that wee could doe nothing. At a North Spine, I fent my Mate, with the Skiffe, and fixe men to feeke for more Fins, ecc. The ninteenth day, at a North San, they came abourd, haning flame ten Beares, three of their skins and fat they brought abourd, and a good quantitie of Fins, and fix paire of teeth. The twentieth day, in the morning, I fent both the Boat and Skiffe to flay the other feven Beares, the wind being at North faire weather. But they were no fooner gone, but itblew very hard at North, which brought abundance of Ice out of the bottome of the Sound, but did the Ship no hurt. Ac a West South West Sunne, the Boats came aboord with the Beares skins, the wind about find set fo much lee out of the found vpon the Ship, that it infarced men fer fayle.

The one and twentieth day, at a North Sun. Estock cowardes Fayer forders, and sen out the

skiffe. The two and twensieth day, at a South-east sunst, they same abourd, with the skiffe laden with Fine, and killed fine Deere. Then I went on Land so fearth wine I could find, and I flew a Beare, and rooke a young one sline, and at three of the clocke in the afternoone I came aboord with the skife ladels with Fine The three & swentieth day at a South eaft fine the Boat came abourd, and brought a good quantitie of Finnes, and a Beares skinne. Then I flood toward Cape-cold, and the fame day, at a South finine, I fent the skiffe on Land to the Northwards of the Cape, where they found fautrene Mohorfes on a rocke, which they flue ; and at a A Beare flaine North-east fun, the foure and twentieth day, they had brought all the teeth and blubbes of them Takeheeds of aboord; at which time the wind came to the North-weft, and blew senie hand ; then I food timardes the for famil to feele what commodities it would yeek! At a North time a way neere Black point, which hath a great many funken Rockes lying on the fourthermost end of is therefore you must come no necres that shours then twentie fine fathomes. The fire and twentieth day, till a South furgir was palitie, and the tyde drove the fain fofatre from the Land

that I could not fend the hout on thouse. The fixe and twentieth day, at a South South-weft Some, I came about , more laden with truciff then commodities, it which time I live a Buck. Then I flood toward les fromt, and at a Point which parteth Maniformal and les found, had thirtie fathomes one. It to us ten appears Rockes, then Fiftyred Bulbalong the shoure, and had between there and income father ter and fands in item farhomes I medium datum the wand at North North med faire weather at a North well fun, at a North fun, I fent the skalle so the theore to fearch for commonwises. In fourn and twentieth day of fourn, at an East Morth-caft fan, they cames house and because of parcel of fine. As fax of who check I fent the Skitle tombe Land against and far layer synth the filey but it being dakine, and for layer synth the filey but it being dakine, and the cide facting the Ship towards a ledge of rocks, made man manufacture.

C. H. A.P. I. Beares and Deere flaine. Young Beares taken. Sea-coale found.

gaine. At a South South-east Sun, they came abourd againe, and brought a good quantitie of fins: ara South Sunne I fent the Skifte towardes the mouth of Ice-found, and in the entrance thereof I 40und a Coue in the which was twentie fathomes, and fo to thirteene, but by reason of the tyde, and edy-winds, I could not get into it; here the Skiffe came aboord and brought a few finnes. Then I fleered to another Sound, in the Southfide of lee-found, where I anchored in twentie tathomes oze, the fame day at a North Sun. The eight and twentieth day I flayed at the place abourfaid, and tried the Beares greate to bring it into oyle, and when we were all bushed, a Beare came (winstning oner the Bay, cowards the ship, which I slew, and split my Peece, the wind be. A Beareslaine, ing at West. The nine and twentieth day, at a South east Sunne, I fent the skiffe to fearch the Coat. to vile Westwards of this Bay, the wind at North-west. The last of lune, the skiffe ABucke. 

... The first of fully being Sunday . I rid as the place about faid , in hope to have more Mo. July the first The first of they being sunsay. I me sected place another in mope to make more more more into an Land, si delirud secre into frontititible place in 78. degrees, 34, mixture, and the w. natures, rar, ristion Welthanis, latengene degrees. Then I fent the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it any more beafts were ... where the shift to fee it and the shift on Land. The wind at Northwest, faire weather. The fecond day, at a North Northon Land. The wind at Northwest-rate meacher. The februs day, and red Morfes, Two Deere and Sunne; they came aboott and brought two Deere. The third, wee flew a few Morfes, flaine. whose teeth and blubber wee brought abourd, at a North awell Soune, at which time I flew a Green burban Pricket; this place I named the Green-banen, Immediately I fent the skiffe to take the teeth, one Deere and fatofferen beafts, which lay thane in another piece. The wind at Weft, thicke foggie wez. flaine.

The wind at Weft, thicke foggie wez. flaine.

The wind at Weft, thicke foggie wez. flaine.

meth halfe' tytle halfe quarter. The fourth day, wee rid ftill at the South-west with fogges and raine, and very much windrat the same time I law great flore of ice in fee found. The fifth day at lee, a North-east Sunne I wayed; the wind at Wast thicke weather; and in standing out wee flew a A Beatestaine. the Beare, and tooke herewo young ones, Indifferent faire weather, we lay becalmed all this day. 1wo yong ones The fixth day, I was off Louisfo (at a South Sunne) the wind theing at East blew fo taken, thard, with raine aid chieffe weather , shad I was enforced to take in all the layles faue a Mayne-courle, which storme continued till eight at night, at which time I fet more fayle, and Rood to the Southwarder, hoping of got four goods that way a Thefenenth day, at moone the

To wind came to the North-east, and then re began to bee bleere weather , at what time I faw the Land of Bel-found, whith it purposed to gue; yet edalitinot by reston of abundance of Ice, which by about three leagues from the Land, which is dold not possibly page. At a North-west and by West fun, I faw abundance of Local slong the Land, to the Southwards of Bet found. The Ice. eight day; at twelve at moone, I flood into the scenin hope so ges to the floare, the wind at North and by West hatie weather, Home from Bearing East North east, nine leagues of, I frood to the landwards till foure of the clocke at which time I found the fee to thack that I was forced to flund to the Southwards to efchewit. I fayled by, and amongst the Ice., till a North North-west Sonne, at which time I was within three leagues of the floure. Then I sounded, and had thirtie fixe fathomes. Then I food to the Wellwards, and finding all this part

40 of the Land fullof Ice, I purposed to stand to the Northwards agains to fearch for commodities that way : the wind being at North-well, Towned to windwards, till the tenelsday, at eight of the clicke before home, at which eine westbind a part of a dead Whale, which Adead Whale Examind to bee made faft to the Ship, determining to get fire [cime Flatbour], there to make the best of it. I could get must Rel-found, at which time I saw all the bottom of the Sound full of Ice, fo ther there was no refuge for the Ship. Then I was faine to turne out with the winde at Westin and beginnis to blow write hard. At a North-west Sonne, it was fayre weather, and I dent my Mate with the skiffe to fearth the Coasts towards Bel-noint. The fourteenth day, at a North-east Sunne, the skiffe came aboord, and brought three Beares, which they had flaine. Immediately I fent the Boat for water and wood and then I Three Beares fined through the Ice, and got through it by a North Sun the fifteenth day, the wind at North-

so west forgie weather. Then I turned to windwards, to double Louneffe, and got cleere of it : at fixe of the chockeat night thicke toggie weather. The fixteenthiday, at five of the clocke in the afternoone, I got to Black point, the wind comming to the South, thickoweather. Then I fent the skiffe to range the Coatt, and to fearch What they might find. The feventeenth day, at ten of the clocke they came abourd, and brought Three Decrees fome Fine and three Deere. Then I frood towards Croffe-road, and ankered there at a North-lun, Bine. the wind and weather as about hid. The eighteenth day, about fine of the clocke in the morning, I fent the skiffe to fee hithey could find any Mortes on Land, on the Rocke, or in Derection

found, and in the meane time, I, with the rest of the company got drift-wood and water readie, A Beare with and about a South funne, a Beare with two young ones ; the Dam I flew, and tooke the young ones taken, ones about a south many, the wind Nostherly, cold, foggie weather. The nine and twenrieth day, in Five Deere the morning, I went to the Eastfide, to fee if any Mohorles were on land; there I slew foure ex- slaine ceeding fat Buckes and a Doe. In which time the skiffe came abourd and brought two Beares Two Beares skins, but found no beafts, and Dere-faste they found Sea-coales, which burnt very well.

The fribest

afre in Marie

The twenteen cary, a ten the same the faint at eight of the clock at night they came about ties, the wind at South close weather with raine; at eight of the clock at night they came about ties, the wind at Souria Clore weather who is a start aboord, which was ready before, purpa-but found nothing; immediately I got wood and water aboord, which was ready before, purpabut found norming a minemaster, a government of the first fact of the force and women's ring to fet fayle the windiand weather aboutfaid, we flux three Deere. The our and woments I wayed, the wind at North faire weather. The two and twentieth day, the wind came to the West, and then I stood to the Northward, at eight of the clocke ball-weather. As twelter of the clocke at noone the wind came to the North , and I food to the South wards by Fager forland The three and twentieth day, at an East north-east Samne, the Boas prought some Whales finnes. and three Buckes, and one Doe: In which time I shought I had feese Land bease Waft from me. I flood to the Westwards, and by a South South-east turne, had sun fifteene lengue. West and by In South, then I perceived it to be fogs. The fours and smentieth day, at fours of the blocks in the afternoone I came into Bel-found and found but little Ice, then I fent the Skiffe to fecke for a Road for the Ship, and also for commodities. The fine and swentieth day, at these of the clocks in the morning, the Skiffe came aboord, having beene in the mouth of the North bale, which I call Low-found, they went into it by Point-partition, but there is no good Channell thirt was for a Ship : neuertheieffe there feemeth to bee an laketor Channell, but it is full of Rockenfrom fide to fide, and the men told mee, that you the Land by fome Mohorfes, which I fent them to bill, At eight of the clocke, the Skiffe came aboord, and broughe the teeth of the layd beafts, and fome blubber. Immediately I fent them into Bel-found, to lecke for a Road for the Ship, the wind at West thicke foggie weather. About an North West Sunne, I anchored in Bel-found, institutes a A Beare flaine. fathomes ozie ground, this Harbour lyeth about two leagues about Paint-partition on the South. A far Bucke, faction of the County and the County of the C The fix and twentieth day in the morning, is blew hard, and I went on Land and flue a Bease, and a Bucke which had three inches and an helfe in thicknesse of fac on the haunches. At the faractic of the of the clocke I feat both the Boats to fesch the fat of those Mohories which twere flains the day before, and likewife to fearch if they could find any more, the swind at alforth with fores As fix of the clocke at might the Boats came about with the far, and brought two Buckes, but found as beafts on Land. The in course, who therefore to highly a course, who there is no Land.

thicke of fat. The feuen and twensieth day, at a South South ead Soune I weighed; the winde being se North and by Weft faire weather, and I flerred out. (betwire an Hand and the point where I 19 North-weft and by Weft, haung thefedepting 10.7.6cg, and 4. fartnines (then I was in the middef between the first points, and a final dwarf, one of the other, the minoert perwaxs the me point, and a montown mentary source and pourou, one or the center, and after keeping the same courfe, I had shefe depoint, it is \$18.90 rows and 23 fathomer, in all the federals I had fand, and after note. At fixe of the clocks the windown to the South-wife their copens are more measurement. As many in the second of the measurement of the South-war with figger, and I turned to the winsh wards, and I turned to the winsh wards, and it to the measurement of the many with figure and I turned to the winsh wards, and it is a fair the measurement of the many many of the measurement of the measu fream is ground with blacke flones, as which time is was calme; and continued to sill the nine and twentieth day at fixe of the closice in the morning, then the wand came to the North with fogges, and I stood to the Southwards, and to see what Commodities Found find that way.

written of the

were two and

three inches

As a most of the clocks I was netwer the fore-franch, where I not with risted here, which per me of from the Land, and I was announced to flavor Sputh, with said by South to thrancic; the windows North-weft which blew hard with fogger. The windstarted of those toward Chevis Bard (if possible I could arrayne it) for fogger and ice. The thirdstarted of those towards Chevis Bard (if possible I could arrayne it) for fogger and ice. The thirdstarted by its force of the locks the morning I faw no less having kept good-round to the morning I faw no less having kept good-round to the morning I faw no less having kept good-round to the country accorded by season of the less which I had part, the winde at North and by Welt, cold foggie weather with raine. From the time shoise faid rill twelto of the clocke at most layed South-sell, and antenness afterene leaguest, the famo wind and weather, as which time I founded it had eighting fathoms grown out libe Kowers dongs I founded as two of the clocke, and at fours of the clock, the first, sightie right, the second, eight tie two fathomes, and fayled fixe leagues, the former course wind and weather. At which time I heard a breach which proued lee, then I fleered West to eschew is, the fogges being so thicke 10 that I could not fee one Cables length, The last of July at noone, I had sayled South and by East halfe a point Southerly sight longues

hening little wind, and founded, and found one hundred and fortie fathomer thicke forgie weather, and in haling vp the Lead, a fish followed it to the top of the water : thin it tryed to take fish but could not. At four of the clocke in the afternoone, the winde came Southerly, and if the Northerne

flood to the Westward, by reason the Ice lay both to the South and East of vs, at a Planth Summer it was cleare weather, and I saw the Ice round about vs, cold weather wick field. The first of August, we beat in the Ice till moone, but could finde no end thereof ; because it was to toggie, and the Loe packed very close; yet after many intricate courses, I got to the Westwards of it at mid-night the same day, the windest South-east, cold weather with raine and fogges. And after I had feene fo much kee that I could not come neere Cherry lland, to profecute Pegges and arter i has seene to muon are than for Englands as God would give melizare. From mid-night the first day, till eight of the clock the focused day before more I layled South-west, and by South fine leagues, the wind at East South-east, thicke forgot with raine. From the fe-

cond day at eight of the clocke, till the third day at twelve of the clock at noone, I fayled West South-west fifteene leagues, the wind at South and by East, wet foggie weather. From noone aboutfaid, till twelue at noone the fourth day, I fayled foure leagues South, the winde variable, and the most part of that time calme, and so continued till eight of the clocke at night at which time the wind came to the South and by East, and blew very hard; from the fourth day at noon till the fift day at noone I fayled South-west Westerly seuen leagues. The fixt day, the winde was at South-east cleere weather, at noone I found the shippe in 73. degrees, the North Cape bearing by my computation, East South-east Easterly. The seventh day at noone, I found the ship in 72. degrees 22. minutes, indifferent faire weather. And from the seuenth day at To noone, till the eight day at noone I fayled foure and twentie leagues, the course South South

west, the wind at South-east and by East, at which time it beganne to be very foggie, and the winde came to the South, but immediatly it was calme, and continued fo till mid-night. Then the wind came to the North, little wind, and at a South Sunne the ninth day, I had fayled South feuen leagues. From the ninth day at noone till the tenth day at that time I fayled South , and ranne seuen leagues South, it being calme most part of the day, with much rayne and fogges. From twelve the tenth day, till noone the eleventh day, I fayled South and by West, and ranne feuenteene leagues, the wind Northerly. And from the eleuenth day at noone, till the twelfth 20 at that time, I layled South and by West eighteene leagues, the winde at North North-west faire weather. From noone the twelfth day , vntill twelve at noone the thirteenth day, I (ayled South and by West fortie eight leagues, the wind betweene the North, and the West North-west gustie weather. From the thirteenth at noone, till the fourteenth at noone, I sayled South and by West fortie fine leagues, the wind betwixt the West North-west, and the West South-west gustie weather , latitude 64. degrees 21. minutes. From the sourceenth day at noone, till the fifteenth day at that time, I fayled South and by West nine and twentie leagues, at which time I observed and found the ship in 62. degrees 53. minutes faire weather, the wind In 61. degrees

at North. At foure of the clocke the same day, I saw Skurfaeffe in Normay feuenteene leagues off, 15. minutes. and bearing South-east, from whence I hold it superfluous to write it, being a place well knowne.

A briefe note what Beafts, Fowlespend Fiftes were feene

The last of August I arrived at Loudon, Bleffed be God for ever and ever. Amen.

BEarts: Buckes, and Does, white Beares and Forces, of colour dunne and grey.

Fowles: white Partridges, a small land Bard, like a Sparrow, parely white, and parely browne, a Fowle with a combe and a tayle like a Cock, a redde Fowle of the bigneffe of a Pidbrowne, a rowne with a comor and a tayer nac a 100kg, weeder rowne or the organic of a trial green; a white Fowle with a green bulk, the top of the bild of it and the eyes were redde, with blacke feet. Wild Geefe, Coluidines, Gulls, Sta-mewes, Willockes, Noddies, Ice-birds, Reeks, as 1 Mailard.

Fishes : great store of Whales, Grampoles, Mohorses, the white fish I spake of the seventh necror of the 40 of June, a small fish like Cuplen, likewife I faw the bones of Cods, or Haddocks; but could colour, and take no fish: I often looked for Shel-fish, but could take none: diuers of my company did see two Beaners.

#### CHAP. IL.

A Commission for I o N A s P o o L E our Servant, appointed Master of a fmall Barke called the Elizabeth, of fiftie tunnes burthen, for Discouerie to the Northward of Greenland, given

Nas much as it bath pleased Almightie God, through the industry of your selfe and

the last day of March 1610.

others, to disconer outo our Nation a Land lying in eightie degrees toward the North- Poole enterpole : We are desirous not only to discouer farther to the Northward along the said tayned by a Land, to find whether the same be an Hand or a Mayne, and which way the same certaine ftidoth trend, either to the Eastward or to the Westward of the Pole, as also whether the pend He was fame be inhabited by any people, or whether there be an open Sea farther Northward then hath beene al- heard, milerareadie disconcred. For accomplishing of all which our desires, we have made choice of you, and to that bly and bailey 60 and have entertayned you into our fernice for certayne yeares upon a finend certayne : not dombting , but muchered besummer of the second point of the second point

No fife.

The three and twentieth day, at an East North-east Sunne, I was within three leagues of Carecold: this day it was faire weather, and I tookethe Sunnes height at twelve of the clocke, and found it to be 32, degrees 30. minutes, the declination being 22, degrees 13 minates, the diffance of the Pole from my Zeneth, was 11 degrees 17 minutes, the com-Fair weather plement thereof being 78. degrees and 43. minutes, the Poles altitude. All this day it was calmental the foremone, warme fundime weather, and whereas I named this place Capecold, if I had i. he with it this day, or the like, I should have given it another name. Here I tried to take

hith, but could perceive none, tiem, there is a point that beareth from Cape-cold North & by West Fig. firland, Which I called Faire-forland; this Forland, and Cope-cold, and Black point, are all one land. Ar which I cancer rare foreaux costs where no the North North-west, then I determined to IO view the ice-found better; but comming neere it, I perceived it packt ful of Ice, fo that I could fee view the recommon necessions common necessary partitions a partition of the recommendation of the recommendati the wind came to the North-east, and by North, then I stood to the Northwards, as before.

The foure and twentieth day, at a North-east Sunne, the wind came to the South-west, faire weather and warme. At a North north-east Sun, I tooke the Meridian Altitude, which was eleuen degrees aboue the Horizon, and by working accordingly, I found the elevation of the Pole al oue the Horizon, to be 78. degrees, 37 minutes. The fine and twentieth day, at an Eaft-fourtheath Sun, I fet the boat to the land, neere Fayer-forland, and it being calme I founded fortie five fathoms, where I proved for fish, but could find none, and within one league of the sheare I had

In Bithis land flue and thirtie, and thirtie fathome streamy ground. At a South-east Sunne, the Boat Came 20 la atms and shortd laten with Wood, and some Whales sins. The men told mee there was great is confluent tiere of Morles in the Sea, about the shoare fide, and about thirtie on Land. Immediately I fent o. Duffewood, my Alate, Nickolus Woodcock with the Boat on Land againe, to fee if they could kill any of the but n are fant Moherles, and also to fearch what other thing they should hap to find that might proue benederall. Moreouer I was cereified, that all the Ponds and Lakes were vnfrozen, they being Fresh-water, which putteth mee in hope of a milde Summer here, after 10 sharpe a keginning as I haue hai, and my opinion is such (and I assure my selfe it is so) that a passage may be assooned liepzofa Po- tayned this way, by the Pole, as any vinknowne way what focuer, by reason the Sun doth give a

great heat in this climate; and the Ice, I meane that that freezeth here, is nothing fo huge as I The fixe and twentieth day, at a North-east Sunne, the Boat came aboord againe, having slaine lut two Mories, at twelue at midnight the wind came to the North, and blew so hard, that I was enforced to try with a Mayne-course, cold frosty weather, with show. The sayd wind and weather continued till a South Sun, the feuen and twentieth day, at eight of the clocke at night, the wind came to the North-west and by West faire weather, then I stood towards the Landagain. And at a South-east fun, the eight & twentieth day, I was within three leagues of Fajer-forland, and standing in Hounded divers times, and had thefe depths, 15, 17, 19, and 18, fathoms, within file, fixe, and feuen myles of the shoare, and when Fayer-forland did beare South and by

Eatl by the Compatte. It being two miles from me, I saw the Land beare North-east and by North, about nine leagues off, the which because it was full of knottic Mountaines, I called Knot. 40 tie-point, and betweene Knottie-point, and Fager-forland, I faw a great Bay, which because it was foggy on the fielden, I could not discouer. In the Sea, about the Forland, I saw great store of Mohorfes and Sea-fowle, I founded in the Bay and had nintie fine fathomes rockie ground. I stood to 5e2, and had very foule weather, with fnow, and fogs, and frost, which weather continued till Thiny day of the thirtieth day, at foure of the clocke in the morning, at which time I was within one mile of Fayer-forland in nine fathomes, and then I fayled East North-east about two miles, and had thefe dephs, 18.17.16.14. and 12. fathomes all rockes. Then I steered South with the like depths and grounds, but when I had runne South South-east three miles further, I had fandie ground, then did Faver-forland beare Weit and by North, about three leagues of, the next cast I had tenne fathomes foule ground, and from thence I steered two leagues South and by East, having these 50 depths, 10.9. 8. and 7. fathomes, then I faw the Bay coursed over with Ice. I turned out the

wind at North. This Sound I named Fowle-found, for in this Bay are three Sounds; this I spake lait of, which lyeth in South, and goeth out at Black-point : another lyeth in East South-east. Deer - Cund. which I named Deere-found: another goeth in North, which is called Coffe-cone, and being neere Clofe-Cone. the point betweene Fowle-found and Deere-found, it fell calme, and I fent the Skiffe on Land, and franding after, with a little wind at West, I found the sayd Point very shoale, with a ridge of Rockes, where I had thele depths, 4.5.6.7.9.10.18. and then 30. fathomes. At a South Sun, the Boar came abourd and brought Wood, and some Whale-fins.

The last of May, at an East North-east Sun, I was within three leagues of Knotty-point, at which time I faw Ice all the Sea ouer betwint the West and the Land : then I faw another Point foure 63 leagues distant from Knotty-point, the one bearing of the other North and by East, and South and by West, and it is smooth Land, the which I named the Gurnerds nofe, indifferent warme weather : and finding the Ice to bee so thicke that I could not passe it, and the wind comming to the West I flood to the Southwards againe, determining to fearth the Sounds better for a Road, and

for commodatics, because I saw no good to bee gotten in keeping the Sea amongst the Ice, and at a North Sun, I was in the entrance of Clofe-come, where I had no ground at one hundred & twenty Notes fathomes, and yet I was within two Cables length of a funken ledge of Rockes, that lyeth on the Larboard fide of the Bay a mile from the shoare. The first of lune I found a good Road in Clofe-come, on the South-west fide, where I rid in lune,

feuen fathomes fand mingled with oze, at an Eaft Sun I fent a Skiffe to a low Point, that lyeth on the North fide of the Bay, where they found some Whales fins , and three pieces of Mohorse teeth, and woon a little rockie Iland, they faw neere one hundred Mohorfes, which were there fleeping. In this time I went towards the bottome of the Sound, and flue a white Beare. At a A Beare flainte South-weft Sun, I went towards the rocke, to fee if I could kill any of the Morfes that lay there, and as wee went by the shoare side I espied Deere, three of them I slue, and one of my company one. But when I came to the rocke, the Ice that the beafts lay on was hollow, and the

rocks that was bet wixt the Ice and the fea flood floping toward the Seathe which when I faw, I determined to go about and let them alone, yet afterward I went on the rocke betweet the Ice and the Sea : and so I with the reft of my sompany were killing them, the Ice brake, and Ice and bealts find Into the Sea together, and carryed the of the men with them, to that he escaped out of that danger very hardly; for befides the weight of dead Mohorfes, and Ice that bruiled him, the 20 beafts that were aline strook as him in the water, and bruifed him very foare. I had beene in the fame cafe, if I had not beene the nimbler, and flipt on one fide. I killed three Morfes, whole teeth I tooke off. Then I espied the Beare, which my Mate had hurt before with a shot ; hee

went into the Sea, when hee faw the Boate, where I flue him with a Lance, and brought A Beare flaines

The second day at a North and by East Sunne. At a South Sunne, I went to the South shoare of Deere-found, where I found a good quantitie of Fins, and came aboord, at a North North-west Sunne. The third day, being Sunday, 4 rid full, learning the wind at West South-West much wind. Then upon the side of a Hill, a mile to the Westwards of the Road, I set up a Crosse, with A crosse six up. a writing ponit, lignifying the day of my arrivall first in this Land, by whom I was fet trifle road. out, and the time of my being heere. This Road Italied Cofferend. At a South-east funne for all minds the fourth day, I wayed the windat West South-west, and when I was almost out, the wind inocreased with fogs, which made me purback into the Road, where I anchored the same day at fix

of the clocke, at afternone. The fifth day, at a North east and by Haft finne I wayed, and it fell calme, then I went to the Eaft fide, and killed some Fowle, which I found in great abundance: There is great and when I was readie to go aboord, I law fourteene Deere, at which time I fpent all my powder, flore of Fowle and thor but one that, with the which I flie a fat Buck. The lame day, at a South fur, I went on in this Land Land and flortwo Deere more. And at a South welt fun I went on Land and flue a Dos, and took A Buck flaine the Faune aline, and brought it abourd; But it dyed the next day. The calme continued till the fixth day, at an East North-east funne fand we droue in the Bay, with a little foaking tyde that runneth there.) Then I fem the skiffe to the rocke aforefaid, to fee what flore of Mohories were

there; at three of the clocke they came abourd and told mee there was neere two hundred beafts. Three Decre 40 I tooke both the boat and skiffe, with all my company, and went to the rock, and in going flane. thither I flure Beare: but withen I came to the rocke, the boats began to goe into the fea, then I prefently went on land; with all my company, and the eightic beath, whole test. I Berret flant tooke, and in going aboord the another Beare, and came about the intenth day, and both. Modelite. east finh. Then I faw two white fishes, which at the first fight I supposed to be Beares, they had White fishes. long fnoires like Sturgeons, ewo flat Fins close by then gile, and bodred small towards their tailes,

and a broad taile. The centificay, I went on thouse and fine fine Deere ; with the maich, and there that I fine Fine Deere, before I liant lengthened out my victuals, bleffed be the Coeator of the World, " which hath not " 1fa. 45, 180 made any part thereof ill vaine, but fo that in these parts ( which hath seemed viposible so our Ancestors to bee tratelled voto, by reason of the extreme leads which they supposed to bee to beet

50 here ) I find the agree temperate in the Lands, and nothing thousand in haut found at Chery Hand in flue feuerall Voyages. Moreouer, in this Land I have feenergreat store of Deere, which have neither buff nor tree to thefrer them from the mpping cold of Winter, nor yet amy extraordinarie pasture to retresh them. If these (Istay) hausig northing but the Rockes for a house, and the Starry Canopie for a covering doe live here why may not man which hath all the gifts of God bellowed voon him for his health and faccourse ::

The elementh day in file morning, I fent the shiftern a Beach , sharlyeth Northwards from the Rocke where we flue our beafts, Bile when they same to the Rocke, is beganne to blow hard at North North-west, that they could not proceed any further, vponthe Rocke they 60 found a Beare, and flue him, and cathe aboord. In which time I tooke she beate and went to the EilPlide, and flue two Beares and two Deere.

the matrine, and fine two Beares and two Deere. The twelfth day, at a Worth and the Two Beares.

The twelfth day, at a Worth-east further Twayed, and having wery little wind, I lent the Two Beares. skiffe to goe to the place about fayd, at a North funne, they came about and brought form and two Deere Whales Finnes and a Beare, and told mee that it did blow very much wind at Sea, yet I had

minutes

it all this time calme in the Bay. Yet before I could get out of the Sound, the wind came to the North-west, and blew very hard, which made mee to put roome for Crofe-road, where I rid till the fourteenth day, in which time I caused both the boates to bee trimmed, and the Compaffe vary thirteenth day at noone, I observed on Land, in this place, and found the Poles height 79.degrees. 18.degrees 16. fitteene minutes, and the variation of the Companie 18. degrees, 16. minutes North-west : the fame day I flue a Bucke. The fourteenth day, at a South-east Sunne I wayed, the wind at South-west foggie weather.

at a South-west Sunne, I went on Land and slew a Buck. The fifteenth day, at East Sunne, I got out of the Bay, at which time I faw abundance of Ice to the Sea-wards, but the wind came to the South-east, and I fayled betwire the Ice and the shoare. At a North-west Sunge, I fent 10 the skifle (with feuen men in it) to the Land under Knottie-point, at which time the wind. came to the North-east, and I stood to the North-wardes, where I had these depths, sitzene, Great flore of thirteene, and eleuen fathomes foule-ground. These depths were about a league, and to the Northwards of Knottie-point , I faw great flore of Whales, the like I faw in Derre-found. The fixteenth day, the Skiffe came aboord, and brought a few Finnes, and five Doere, and they told mee that within the Bay, that lyeth betwixt Knottie-point and Gurnerde-nofe is a Hauen, in the entrance whereof is an Iland, and feuen fathomes going in, but within eight, nine, fifteene, and twentie fathomes good ground. This maketh Gurner di-nofe, an Hand, for this Hauen goeth out on the North-weitfide of Gurnerds-nofe, I named this Hauen, the Fagre-bauen; I Fair-Haun.
Abundance of found a great tyde heere, which runneth South South-west, the floud commeth from the 20

Then standing to the Northwards, I saw the Sea couered with Ice, which lay close to

the Land which made me fland to the Southwards again, I observed at Gumerds-nose, and found

the Poles height 79. degrees, 50. minutes. At a North-west Sun, the same day, I tent the skiffe

on Land to fearch the Coaft to the Southwards of Knorin-point, where I founded and had twenty foure fathomes Foule-ground, and in the Fayre-way I founded, having these depths, 30, 35, 45a

South Sun, I came into the Road, where I rid all that day, having very much wind and raine

that wee could doe nothing. At a North Sunne, I fent my Mate, with the Skiffe, and fixe men

to leeke for more Fins, &cc. The ninteenth day, at a North Sun, they came aboord, having flaine

ten Beares, three of their skins and far they brought aboord, and a good quantitie of Fins, and fix

paire of teeth. The twentieth day, in the morning, I fent both the Boat and Skiffe to flav the

other feuen Beares, the wind being at North faire weather. But they were no fooner gone, but it blew very hard at North , which brought abundance of Ice out of the bottome of the Sound

but did the Ship no hure. At a West South West Sunne, the Boats came abourd with the Beares

skins, the wind about faid fet fo much Ice out of the found vpon the Ship, that it inforced men

skiffe. The two and twentieth day, at a South-east funnt, they same abourd, with the skiffe

laden with Fins, and killed fine Deere. Then I went on Land to fearth what I could find, and

fet fayle.

The one and twentieth day, at a North Sun. I flood sowardes Fager-forland, and leng out the

Fiue Deere

79.degrees 50. minutes, the Latitude of The firett and 48, fathomes all Rocky ground. By the letterteenth day, I was in the entrance of Class-complex of the contract of Class-complex place of my De-ing the Voyage at a South Sun, at which time the Skiffe came aboord, and brought a Beares skin, and a Buck, and ing this Volcorns a good quantite of Whales Fins and an Unicornes horne, which was fine foot and sourn inches home is the long, and in the biggeft part of it, it was fetten inches and a halfe about. The eighteenth day, at a 30 Horne of a fish of which fee after in Baffing discourry. Ten Beares

to fet fayle.

this point.

I flew a Beare, and tooke a young one share, and at three of the clocke in the afternoone I came aboutd with the skiffe lades with Fine The three & twentieth day at a South-eaft fine the Boat came aboord, and brought a good quantitie of Finnes, and a Beares skinne. Then I flood toward Cape-cold, and the same day, at a South funne, I fent the skiffe on Land to the Northwards of the Cape, where they found autoene Moliorfes on a rocke, which they flue ; and at a A Beare flaine North-east fun, the foure and twentieth day, they had brought all the teeth and blubber of them Take heeds of aboord; at which time the wind came to the North-well; and blew veste hard; then I flood towardes the lee-family to feele what commodities it would yeeld. At a North funge A was 10 neere Black point, which hath a great many funken Rockes lying on the fouthermost end of it, therefore you must come no neerer that shoure then twentie five fathomes. The five and twentieth day, till a South fungit was calme, and the tyde droue the faip so farre from the Land, that I could not fend the boat on fhoare,

The fixe and twentieth days, at a South South-west Sunne, I came abourd, more laden with tranell then commodities, at which time I fine a Buck. Then I flood toward lee-faund, and at a Point which parteth Poule found and les found, I had thirtie fathomes oze, & fo to ten fathomes Rockes, then I fleeted Bedralong the shoare, and had betwint thirtie and histeene fathomes oze and fand lift fifteen fathomes I anchosed having the wind at North North well fairs weather at a North well fund a North fund for commodities. The feuen and twentieth day of fune, at an Baft North-east fun, they came abourd, and brought a good parcell of fins. At fix of the clook I fent the Skiffe to the Land againe, and fer Tayle with the thip; but it being calme, and the side fetting the Ship towards a ledge of rocks, made mee to ancisor a-

gaine. At a South South-east Sun, they came aboord againe, and brought a good quantitie of fins at a South Sunne I fent the Skiffe towardes the mouth of fee-found, and in the entrance thereof I tound a Coucin the which was twentie fathomes, and fo to thirteene, but by reason of the tyde. and edy-winds, I could not get into it; here the Skiffe came abourd and brought a few finnes. Then I floered to another Sound , in the Southfide of lee-found, where I anchored in twentie fashomes oze, the same day are North Sun. The eight and twentieth day I stayed at the place abourfaid, and tried the Beares greafe to bring it into oyle, and when we were all bussed, a Beare came (windning outer the Bay, towards the Bay, which I stew, and split my Peece, the wind be. A Bearestains, ing at West. The nine and twentieth day, and South east Sunne, I fent the skiffe to fearch the Confi so the Westwards of this Bay, the wind at Morell-west. The last of lune, the skiffe ABucke. came abbold ridne South-eath Stanner and Groupher afthe Finner, and a Bucke, the wind at North on \$1.42 no not be a sold on the stand the sold of the wind at North on \$1.42 no not be a sold on the sold of the s

The wind at Weft, thicke foggie wea- flaine.

an in an observable for on the Change day South, and by Well, and hyeth fixe foot water, and run-neth halfe tyde halfe quarter. The fourth day, wee rid full at the South well with fogges and raine, and very much windest the same time I daw great store ofice in hee found. The fifth day at lee, a North-caft Sunne I wayed; the wind at West thicke weather; and in thinding out wer flew a A Bestellaine. the Bears, and tooke herewo young odes, Indifferent faire weather, we lay becaland all this day. we young one The fixth day, I was off Loung of are south Sunne) the wind doing at East blew to then.

hard, with raine and whicky weather , shad I was enforced to table in all the fayles face a Mayne-courfe, which florme continued till eight at night, at which time I tem most fayle, and flood to the Southwarder, hopings of girl foint goods rids way. The found that, at moon the Mond to the Southwarder, hopings of girl foint goods rids way. The found that, at moon the Monday, at Monday, at

Land of Bel-found, winth- I purpoled to goe, yet eddle not by resion of abundance of Ice, which by about three leagues from the Land, which I could not politisly page. At a North-well and by Well fun, I aw soundaries of Locall siding the Land, to the Southwards of Bet faund. The Lea-eight day; at twelter at moonie; I shood littor the Lea-in hope so get to the shoare, the wind at North and by Waft hatie weather, Home found bearing East North east, time leagues of I flood to the landwards till foure of the clocke, at which time I found she lee to thack that I was forced to fund to the Southwards to eschewit, I sayled by, and amonest the Ice , till a North North-west Sunne, at which time I was within three leagues of the moare. Then I founded, and had thirtie fixe fathomes. Then! flood to the Wellwards, and finding all this part 40 of the Land fullof Ice, I purpoied to fland to the Northwards against to fearch for commodi-

ties that way : the wind being at North-well, Tramed to windwards, till the teach day, at eight of the clicke before noone, at which time well found a part of a dead Whale, which Adead Whales scauled to bee made fast to the Ship, determining to get into Iome Hasbour, there to make the best of it. I could get and Bel-found, at which time I saw all the bottom of the Sound full of Ice, fo that there was no refuge for the Ship. Then I was faine to turne out with the winde at Worky, and begame to blow verie hard. At a North-west Sonne, it was fayre weather, and I fent my Mate with the skiffe to fearch the Coasts towards Bel point. The fourteenth day, at a North-east Sunne, the skifte came aboord, and brought three Beares, which they had flaine. Immediately I fent the Boat for water and wood, and then I Three Beares food through the Ice, and got through it by a North Sun the fifteenth day, the wind at North-

west foggie weather. Then I turned to wind wards, to double Lewnesse, and got cleere of it : at fixe of the chockeat night thicke toggie weather. The fixteenthiday, at fine of the clocke in the afternoone, I got to Black point, the wind com-

ming to the South, thickesweather. Then I fent the skiffe to range the Coatt, and to fearch what they might find. The feuenteenth day, at ten of the clocke they came abourd, and brought Three Dazzes fome Fine, and three Deere. Then I flood towards Croffe-road, and ankered there at a North-fun, Gine. the wind and weather as abouefaid. The eighteenth day, about fine of the clocke in the morning, I fent the skiffe to fee if they could find any Mories on Land, on the Rocke, or in Deerefinal, and in the means time, I, with the reft of the company got drift-wood and water readie. A Beter with final, and in the means time, I, with the reft of the company got drift-wood and water readie. A Beter with two young ones; the Dam I flew, and tooke the young ones taken.

ones abourd the ship, the wind Northerly, cold, foggie weather. The nine and twentieth day, in Five Deare the morning, I went to the Eastfide, to fee if any Mohorfes were on land ; there I flew foure ex- flaine. ceeding fat Buckes and a Doe. In which time the skiffe came aboord and brought two Beares Two Beares skins, but found no beafts, and in Deere-found they found Sea-coales, which burnt very well.

store of Whales in those Seas, wee are at an extraordinary charge this years, of setting out a stip and men for that purpose, which ship is called the Marie Margaret of London , in burthen one hundred and fiftic tunnes or thereabout: Our meaning is, that you dockeepe company with the faid ship, and not to leane ber, till God fend you to the places, where she may make her Voyage: which by your report should be at a rime named by you the last yeare 1610. Whale Bay,

food abe you from your Discourses. And in the means time while you are fairing about hills of the
Whole you may coule found by my peoples to be facedring in the Coals what their Schooling for the fair former.
Morfes teeth, Ambergreefe, or any other commodules, that may be found upon that Coaff, And Louing 10 thus flaved a connenient time with the faid great ship for the purpose abone specified, were would have you then to proceed on your Discourse for the saistying of our expectations formerly mentioned, which is so Further disco-discours surface to the North Pole as farre as possibly you can and how the Land alreadie discoursed doth trend, and whether there be any inhabitants in the faid Land, and whether there be an open Sea to the Northward beyond the faid land. And in this your coasting the land, we doubt not but you will endeauer mits jour Shaleps to gather up all the Whale fumes you can finde , and to kill the Morfes which you can come by on land, and to referm the teeth and blubber to the most advantage that may bee , the bester to beare ont the great charge which you know we are at in the fe Difconeries. And to that end we have laden in you eleven Tumes of empire cashe.

And having sport so much time in this your Discourrie, and in sathering up of such commodities as 20 that Coast will affoord, and as the scason of the yeare will permit yin, then we would have you returne for England and in your way homeward to touch at the place where you left the Mary Margaret , to fee if shee be not gone; and finding ber there, and that the time of the yeere will permit, wee would have you melt your Blubber into Oile before your comming from thence, to aword the great trouble and inconnemett yent timener om en er groen yen ermanne, prom toen, en en met to groen en en meiner op met pour befel mie to be dit perce to 10.6 by bringing the same inther in Blubber. But if the saut stip some bestore your comming stuther, yet we would been on significant of the ground to the good bestore to which end we have appropried stuther, or at Cheric Lland some some stime to melt your Blubber; to which end we have appropried Thomas Edge, Thomas Edge our feruant in that forp to leave a Copper and fuch necessaries as shall serve your surve, for See [12,13] (2. the performing of that businesse, behinde him; and have desincred him thewise advertisement at that place of their proceedings in the voyage, and of their intent; what course they purpose to take, together 30

with their opinions, what cour (e they would have you take. In these matters of Discourries and uncertaine Voyages, the varietie of occurrences and Sea dangers is such, as we cannot directly prescribe a course certaine to be beld: yet we held it fisting to fet downe Our opinious of the needfull : which are, that at your first diparture out of England you keepe counsell together, and agree upon your places of meetings, if by tempait of meether you chance to bee fever and; fill flaping your course derails for Chery Iland, where we would have you stay. And if as your comming thither, you finds the same cheere of Ice, and that there be Morfes on share, then wee would have you to works upon them, as time and opportunitie will permit, alway hasting respect to your intended worses.

And having districted your businesses interplace, was would have you depart in company together for The Whale Bay, as afarefaid, and to follow our infirmitions formerly fet demons to be done in that place, 40

And basing performed what may be done in the parts beyond Cherie Island, and fo returning backs againe for England, we bold it fit you make your Rendez vous agains at the faid Cherie Iland, and there to stay the one for the other, and to be killing of the Beast there is ill be last of August; if neede bec.
And if it happen that one strip doe arrive there before the other, and no Morses come on shoare, then we would have them frend the time in searching for the Lead Ora, or any other Minerall matter that may be like to be of worth upon the faid Land. And thus having stayed at Cheric lland till the last of Au-gust the one for the other, and not meeting together, the staying having made her Voque, wee would have ber to returne directly for England, and to lease a Note in writing of the day of her departure. This is our opinion. Notwithstanding, if upon better grounds you shall among your selves sinds a connenienter course to be held for the good of the Verage, and the benefit of vs the Admenturers, wee lease it to your selves to agree upon, as time and opportunitie shall serve.

And for the anording of an Obiettion beretofore weed, That the want of sufficient victuals bath beene the cause of the overthrow of the Voyages by speedier returns home , then otherwise they would; wee have thought fit to fet downe the quantitie of victuals delinered abourd your foip in this our Commission, to the intent to cleere our selues and our Agent of that imputation, and to lay the blame on your selues, if by default the same be enill husbanded. The particulars are these. Beefe, 22.6 3, quarters, 1811, Bisquit 30.0 Beere 14. Tunnes. Fish, 200. of Huberdin, and halfe an hundred Lings. Cheese 300.0 weight. Butter three Firkins. Oyle three Gallons, Peafe ten Bufels. Ome-meale fine Bufhels. Cardels, fixe dosen. Aquavita, thirtie Gullons. Kinegar one rundlet of swentie Gallons. This proportion of victuals will last you seuen or eight moneibs with good hubandry, together with the bloss of Fish, Fomle, and Beast that are to be had in abundance upon those Coasts. So that we hope to Jon shall have no canse to the contrary, but obsersully to goe forward in your businesse, whereby not onely the small Barke you goe in, but the great Ship may come home fully laden with one commodiate or other, which we donor not but by your deligence and good endenours you may attayne vato.

But if you hall chance by extremitic of les, or otherwife to be put backe from your descentic, or from observations of the property of the control of the co poere will permit you, to finish the rest of your voyage. And if there bee sufficient lading betweene you both to lade the big ger flip, wer would have her to bee dispatched from thence with all speeds, and you to flay abore as long at you may consensently for the good of the Voyage; which the more beneficiall it proueth, the more it will be for your credit, and we will not be unthankefull at your returne.

We would have you at enery place of meeting with the Mary Margaret, to deliner to Thomas Elge to a wome some you at every piece of years the government of early person for the particular Notes of what goodly so beneathen in your life, I had a you foul fill faint place to would have you make a general imapte of the whole Caryoline of goodle laken in your life, and having a fixed above flow, to failed to you and hard the fourset our Agent refines to the South of the same of fixed above flows, to failed to you and hard the fourset our Agent refines to the colon. And if you have seen to make to with the Mary Marquett at or after your light Port of lading, we would have you delease a common to make to with the Mary Marquett at or after your light Port of lading, we would have you delease a Copy of the fail of more than to be me fined an immograe ever reader feeled, and for more takens: fake put up in fome fare place of enftodie.

We belds fu , that you lours Poole Should be as grand Pilot in this veyage to the Northward. And therefore we would have you to accompany the great thep, and to bring her to the places of filling for the Whale; or to any other place, which you out of your experience shall thinke sit to bring her for the good of the Voyage and benefit of the Aduenturers. And our will is, That Scenen Bennet Master of the 20 faid great hip segether with the reft of the company in that ship , doe follow the faid Ionas Po. les dire-

James, as they will an four the contrarte open their perils at their commune bome.

And for that beretofore the Company baue beene abused by level and bad people, who have imbessed part of that which by our great charges and adventures bath beene obtayned : Our monde and will is, That you longs Poole doe make fearch in your owne flop, that none of our Whale finnes, Morfes teeth, Oyle, or any other commodities gathered at our charge, he imbefiled or carried away by any of the Mariners, who will looke to have the vitermost of their wages paid them, and to bee fed with meate and drinke sufficient. And God sending you into England, we would have you suffer none of your people to goe on | beare unfearched : neither would we have you to leave the flop till your comming into the River of Thames, that we gine you order to the contrarie. And if you chance to be winde bound upon the coaft, 30. you may find up one of your people mith your Letter, but not se come your felfe on floore till one farther order, a directful.

The like order we would have Steven Bennet to vie in his frip, by vertue of this our Commission, which we have ordered to Thomas Edge our formant to see performed accordingly.

And in as much as we have agreed here with a Tanner for all the Morses bides which wee kill and Agreement with you, baning alwayes regard to commodities of more value, which are Oyle, Teeth, and Whales finnes, that none of them be left behind; We would have you leave the faid overplus of hides in some conne-40 mient place, till the next yeare, that we fend more flore of shipping.

A Commission for Thomas Edge our seruant, appointed to goe as our Factor in the Ship called the Mary Margaret, of the burthen of one hundred and fiftie Tunnes, for the killing of the Whale and Morfes vpon the coast of Greenland, or any other place in the North Ocean : Giuen the 31. of March, 1611.

50 VOn menos ignorant of our imploying you beresofore in two fenerall Voyages to Cherie Iland. The I first whereof, by reason of one Duppers going thither, together with certains men of Hull, glutting Adventures In prix source; ye respon ye so to expect your seed of the price of the service o verage above fine hundred pounds. We entring into due consideration of the premises, doe not impute the camp of these our losses unto you; but to the accidents then happening contrarie to our expectation: per thefe loffer growing upon us in the times of your imployment, we can doe no leffe then put you in minde an thereof, to the intent to incourage and forre up your minde to doe your vitermoft indenour to further the bufineffe in this your third imployment, that we may recover our felues of the loffes formerly fustained. And for that end we have made choice of you againe to goe as our Factor in the Ship Mary Margaret, of one bundred and fiftie Tunnees, the Master being Steven Bennet, for the killing of the Whale : And to that end, as you well know, have bin at charge of procuring of sixe me tof Saint Iohn de Luz, accusto-

med to that function : who fenames are as followeth : videlices luan de Bacoyne, luan de Agerre, Martin de Karre, Marsene de Horisada, Domingo de Sarria, and Adam de Bellocke: which men wee would have to be vield very kindely and friendly during this their voyage, whereby being strangers and leasing their owne Countrie to doe vs fernice, they may have no inst cause of complaint, but rather to be have heard) by incouraged to doe to fernice hereafter, if there be cause. And allbough it be our meaning the should be including the securing of a long or person concentre, a source or among a new meaning to a source or among the source of a month of the source them in Grand Whales from the wor fer, whereby in their firiting they may choose the good, and leave the bad. And to that end we doe fet you downe bere under, the feurall forts of W bales, together with the differences of goodnesse betweene the one and the other, as we have gathered the same by information from men of excellencie in that businesse: who make knowne unto us, that there are eight severall hinder of Whales, all differing the. one from the other in quantitie and qualitie. Which for your better instruction, we have thought good to The first fort of whales, we called the Bearded whale, which is black in colour, with a smooth skinne and I be gift just of your seas, because the weat west your value, when a brack in commence a general secure, and white order the chops; which Whales is the half of all the reft; and the elder it is, the more it date yields. This fort of Whale date yields of welly four bounded, and sometimes fine boundered finnes, and between

one bundred and one bundred and twentie Hogheads of Oyle. The second fort of Whale is called Sarda, one towarea and one ownerea and twente croppedate of Upte. I no second fort of wronte of called Swada,
Secost telenial of the fame colour and fallion as the former, but somewhat less, and the sinner not about one stations long,
of Whiles sup and yeeldesh in Oyle, according to his bignesses, sometimes a bundred Hogsbeads. The 10 or visions sup man section in O sectoraing to our organic, sometimes eightie, sometimes a bundred Hogbrads. The Art is have at third for to swhale is called Trumps, being as long as the first, but not so thicks, of colour Grs., basing compared with the one Trumes in his head, whereas the former base two. He hash in his month teeth of a span long, and 5 one one a rener or use comes, wavereas use prome come every tea course us a monasse use of a span song, and as thicke, as a sense wriff, but no fluxes whole beads in oger them ever being of the two former, and in proposition farre bigger then his body. In the bead of this whale is the Spanment, which you are to keppe in Caske apart from your other Oyle: you may put the Oyle you finde in the bead and the Spermaceti. altoge-Spermacetion ther, and marke it from the other Ople, and at your comming home, we will separate the Ople from the Specimacetty fore, and marks in from toe other Opic, and an join commonly when it is one one of the free freezients the rulgat call Spermecets. The life is to be done with the Opic of this fort of Whale, which is to be kept apart from the Opic of this fort of Whale keing boyled, will be at the Opic of the opic of the control of the Opic of the control of the opic opic. the Ote growner round, and round a summer of the grown of the grown was being cornen, who we as beard and white as Talkow, which to be simpled with the other Oyle being liquid, would make the fame to show as south Oyle, and so consequently spoul both, and so of little value; you are therefore to be ve. 30 yr carefull to keeps the Oyle of this fore of whale apart, as well of the head as of the body, for the reasons before mentioned. In this fore of Whale is likewise found the Amber greefe, lying in the entrals and puts of the same, being of shape and colour like unto Kowes dung. We would have you therefore your selfe to be present at the opening of this sort of Whale, and cause the residue of the laid entrals to be put into small Caske, and bring them with you into England. We would have the Master allo to be by at the front Caste, and oring toom witn you me Engand, or enound case too Master aije to be by at the occurring of this Whate, and to be made prime of the packing of those Barits. And although it be faid, that the Ambergreess is onely in this Whate and in none other, yet we would not have you be absent at that the variance greety a way in the found for a man and a second and the contract of energy what, that you find find from the contract of energy what, that you find find from the contract of energy what, that you find for the contract of the contract of energy what, that you find for the contract of you know, of good worth, and therefore not flightly to be regarded. The Teeth likewife of this fort of 40 Whale we would have you cause to be reserved for a triall; as also any other matter extraordinarie that you so all observe in the same. This Whale is said to yeelde in Oyle fortse Hogsheads, besides the Sperma. ceti. The fourth fort, &c. as fup. 471.472.

And in as much as industrie and diligence are two principall steps to atcheese great enterprifes, and neoligence and idlenesse are enemies to the same; we would have you in this charge committed wino you, to imbrace the one, and to anoide the other: and to show that example of paines taking to the rest of the company of your Ship in your owne person, as well in setting them on works, as in patting your owne hand to the businesse when neede requireth, as that there be no idle time spent, but that enery one be implojed in some businesse or other in helping to kill the Whale, or in searching the Bayes along the coast for Whales. Ambergreese, Morses teeth, or any other brange thing that may be sound upon that coast, or in killing the 50

Amorgraves, temperatures may now, programming may be must upon tout confirm in riting the Montal Confirm or may thing that may make profit to mand our great charges.

Touching directions for your keeping company together with the Elizabeth and of the courfe we thinke fitting for the Master of that Sing to observe, we have set the stare downs at large in our Commission delinered to Ionas Poole, a Copie whereof we deliner you herewith, for your better instructions, to observe what is to be done on both your behalfes for the good of the Voyage: which our Commission, we would have you firstly observe, unless upon some speciall occasion to us unknowne, and by the consent of the principal Officers in both the Ships, you hall fee iust cause to the contrary,

You have with you an order set downe by the Lords of his Maiesties prime Counsell, for the maintai-Therefine not ming of our Charter: which we would have you make knowne to any of our Nation, that you may chance Decreta not may of our quarter. source on second one promote process the stay in the tensor, it can you may consider to necessary to meets without leafner at Cherte I leafn, or you may office coasts. And if any firinger due effery no was to make its leactor due diffusive you in your trade, you may both defined you follow, and manitume your trade to the consisted. uttermest of your powers, or c.

CHAP. IIII.

A Relation written by Ion As Poore of a Voyage to Greenland, in the yeere 1612. with two Ships, the one called the Whale; the other the Sea-horle, fet out by the Right Worfhipfull the Muscouie Merchants.

> He feuenth of Aprill, 1612. wee fet fayle at Blacke-wall, and went to Granefond. The third of May we came to Cherie Hand, where we found a thip of Holland, Cherylland. in which one Alan Salones an Englishman was Pilot. The fame day about a North funne wearchored on the West fide of the lland.

The fourth, we krimmed a shall op which I left there the last years and Alea Salowes went aboard our Admirall , and Mafter Ruffell fent for Mafter Thomas Edge, Master Arthington, labn Mafon, and my felfe: where wee had some speech about detayning him, and to have brought him inted in land to the the the dee was let goe. At a North funne we lent our shallon to the South-east fide of the Iland to fetch a shallon, which was left there the last yeere : but they could not get thither for Ice, and came aboard agains at an East

North-east Sunne the fift day: at which time we weighed, and stood to the Westward, but im-mediatly we altered our course, and stood toward the lland sgaine among the see; and about a West North-west Sunne wee sent our Skiffe and Shallop to setch the Shallop aforesaid. The winde was at North and by West, stoffie weather with inowe.

The eight, wee flood toward Cherie Hand againe, and were faire by it at a South funne: at which time the winde came to the South-east, and wee faw the Hollander standing with vs. Then we altered our course, and sayled West North-west, determining, if hee followed vs, to flay for him. At ten of the clock at night hee came to vs : and the Admirall fenthis shallon aboord of him to command him to be gone out of our companie; and ar a North form hee ftood away from ve, and fayled North and by Eaft, and we lay by the lee.

The twentieth at a South Sunne we faw our Confort, and spake with them, and they told ve, that they had almost split sheir ship with a piece of Lee, which brake nine of their Timbers, 10

The one and two and twentie dayes, wee plyed to windward, the winde being at North faire weather. And at Blacke Point wee law great flore of Ice drining to the South. At eight of the clocke at night Blacke Point did beare from mee East and by North nine leagues. And the three dayes past we saw great store of Whales within ten or twelve leagues off the Land, Great ftore of Cape Cold.

The three and twentieth we were faire off Cape Cold; where Mafter Edge and Matter off The three and twentnern we were tarrent of the forest of the forest of the fore Whales, thingson went with the Backy in their Shallops for Grafe-rode, in hupe to kill fome Whales,

The fine and twentieth we got into Fonle Sound, all the Sounds being full of Ice; and the Foule Sound. Shallops came aboord and brought some Venison, which was very leane. And at fixed the clock the Backs went with the Shallops to Faire Foreland, to fee if they could kill a Whale 2 and at a North-weit Sunne Mafter Edge went with a Shallop, to fee it Crofferede were open.

The fix and twentieth, the two fhipsabouefaid dame into Fonte Sound : one of them was that Hollander before mentioned; the other was a thip of London, called The Diana, whereof one The Diana of

Them a Bujin dwelling as Weping will, was Marten.

The feuer and twentisth, Aless Schoize came about of our hip, sind reld w; that his Merchant had both is necke down a Cliffer, The fine day the Holinson and the Disass Acod so the Southward. The winde was at North North-weft, and Northwest, which kept the Ice in the 30 Dutch Merchant brake his necke. Sounds. The twentie eight, we fent the long Boat and tur Shallop to Brokemeffe, with a Shall lop of ten Tunnes, there to be fet vp. The winde was at West with inowe and frost. The same day the Backs came aboord, but could kill neuer a Whale. The winde came to the South South-Six Bifcayners: west, with frost and snowe.

The nine and twentieth, the winds was at South with much Inowe. The same day one of our men dyed, named Iohn Batcher , haning layen sickelabout three weeks. The thirtieth , one Michael Perkins dyed abourd The Whale. The last of May; the winde was at South; and wee

flood toward the Foreland in 79. degrees, The famethry somidnight; the Chyrurgeon of The mailte ida v The first of June, we stood into Fonts Sound, where wee few abundance of Ice drive out with

the winde at East. The second day, the winde was at North and by East, told frostie weather, 40 All which day wee lay under faile in the mouth of the Sounds The third day ; wee spake with All wines may very service and the service of the service of the service about, but he answered, that he was not well, and furthis batte Christophe Ninter. The fune say, we flood to the mouth of the Sound, but it was conered with Ice, And Marmaduke flood to the Northward; and as we were afterward informed, discouered as farre as 82. degrees; two degrees beyond Hakluyts Hendland. The fourth, we fert our shallop on shore in Fonte Sound, to see Monatcher grees below a management of the pur our Admirath on ground to flop her leake. The ray harbour were open to ride in , and to put our Admirath on ground to flop her leake. The ray, degrees fame day, our long Boate came to va from Brekeniells. And we turned into the Sound, because we faw the Ice drine out with the winde at South, and blew hard. The fift, we additioned in Foule Sound in feuenteone fathoms water and fandie ground, Where we faw the place Where both the 50 Ships lay which wee loft the last yeere, courred with Ice The fame time wee fent our shallop with our Carpenters, to finish the afreesaid shallon at Brokennesse. The winde continued at South; and the Whale turned into the Sound by vs, and achnored there at a South-west by South Sunne. The nineh, the Admirals Boate and ours went with provision and men to worke whom Whale, which the Backs had killed; and we flood toward the Foreland with the flrips, where the Whale was killed, the winde at South, thicke foggie weather. And by an East North-east Sunne wee anchored in the mouth of Foule Sound in fifteene fachoms, gray fand with some thells. At a Well funne the Boate came abourd for caske and other promision, and told vs, that the But had killed two other Whales.

The feuenteenth, one Bathe muned Chapel, tooke fine of our Enelif men to him , and they 60 trimmed the shallop to kill the Whale: About a West North-west sunnerthey went away, the winde at South. The twentieth, the Biscaine shallow came abourd of vis from the Foreland, and told va that they had itrooken three Whales, which brake away.

CHAP.4. Nicolas Woodcock. Morfes and Whales, Basks and Hollanders. 715

The two and twentieth wee rid still, the winde being at North-west, with snowe and frost. The fine and twentieth, we got the Whale on flote, having flopped her leake. We were no fooner off, but it blew most fiercely, so that the Whales long Boare and our shallop brake from the Whales sterne, and were split in pieces on the Ice, that lay on shoare. The same day about a South funne two men came from Fare Foreland, and told vs that Mafter Edge was come from the South in the Pinnasse, and had spoken with one Nicolas Woodcock an English man , which was my Mate to this Countrey of Greenland in the yeere 1610. The faid Woodcocke was now Woodcock Pilot Pilot o faship of Saint Sebastian in Biscay, and rid in Ice Sound. Moreover, they spake with the of a history ship, men of the Boate of the Diana, and law the Hollanders Boate, but fpake not with their men. The two men aboutfaid told vs likewife, that lohn Chapel our Backe with fine English men had The fourth 10 killed a Whale; and betwixt them and another shallop they had slaine another, and had them and sinh

The feven and twentieth we rid still, and our Carpenter went to worke to mend the knee of our beake-head. And I went to fee what Morfes were on Land, where I found neere one hundred and fiftie. The eight and twentieth, the shallop that had all English men in her saue one Bate, came about for prouision, and told me, that they and lobannes Chapel, had flame a great The fixt whale Whale close by our ship, which towed them off into the Sound, and our long Boate followed killed. them. At the same time we saw sixe Whales close by the ships side as we rode in harbour : and we faw great store in the Sound, and within one houre there were so many about our ships and in the Sound, that we could not count them. About a North-west sunne our long Boate brought 30 the men that strooke the Whale abouelaid, and towed their shallop on land : for the said Whale had funke her with his taile. The fame time our Carpenter went to worke on the broken shal-

lop, and I went to the place where the Morfes lay, where I found about three hundred on land. Three hundred Then I went abourd the Whale to get fome harping Irons : for they had all, but I could get but Morfes. one, because the rest of the Backs had laid them vp, enuying that one Backs, that went with all English men, had done so much , because by their good wills they would not have vs to have any Biscainers en intight into this bufineffe. Moreouer, hee that had the chiefelt command in this voyage, did uic. steatly condemne the going of fo many English men with that one Bake, either for feare they should kill none, and lose all their prouision for the faid vie, or for feare that our men should kill the Whale aswell , and as soone as they ; yet was there none of the other Boates but had lost 30 more then they had loft. And as for killing, there was not one Whale killed with one Boate alone, faue ours, with all English faue the Buke aforefaid, which flue three without the helpe of

any other Boate. This day the Backs flue another Whale at the Foreland. The nine and twentieth, the broken shallop was meaded, and I went to the Foreland, to fee Whale killed. whether the other shallops would come where the ships rode in harbour, where abundance of Whales were fill. The same time the Basts killed another Whale. Then I romaged my ship, The eight and put caske on land. All this day it was calme."

The last of June, one came from the Foreland, and told vs, that the Basks had slaine two great Whales. All this day likewise it was calme : and there lay abundance of huge Whales in the harbour about our thips. One of the whales abouelaid, Iohannes with the fine English men the 40 without any of the others helpe, For they frood on the land flouting, and faying, that it was vapoffible for them to kill him, and would not once lanch their Boates to helpe them : yet hee was one of the greatest that were killed this yeere. All this day the whales lay so thicke about the ship, that some ran against our Cables, some against the Ship, and one against the Rudder. One lay under our beake-head and slept there a long while. At which time our Carpenter had hung a stage close by the water, whereon his tooles lay. And wee durst not molest the faid whale for feare he should have overthrowne the stage and drowned all his tooles. In the end he went away, and carried the thips head round, his taile being foule of the Cable.

The first of July, at a North North-east Sunne, the shallops came to kill whales in the harbour where we rid, and strooke three, which all brake away. The same day, Iobannes strooke a 50 whale, that fmit in the fide of his shallop and split it. Now wee perceined the whales to begin to goe out of the Bayes. The fecond day, the Basks flue three great whales faire by our ships, in The ninth and leffe then foure houres; which were with our long Boate and men towed into harbour, and tenth Whales made fast to our ship. And the Basks event with their shallops to Faire Foreland.

The feuenth day, wee had abundance of Ice about our flips, which with the winde and the The chuenth, twee draue out off another Sound. The eight, vverid ftill, and vvere troubled with much Ice, the teach by reason of a storme that blue at South-evelt and by evelt, &c. The rest is omitted as having Whales killed. nothing of note, but ordinarie accidents.

Whales killed.

The feventh

Y the prouidence of Almightie God wee departed from Queenborough the thirteenth day of May with fixe good Ships, viz. The Tigre, Admiralla the Matthew, Vice-admirall; the Sea-borfe, called the Gamalel, the 10 Reare-admirall; the Defire; the Annula; and the Richard and Banard; with the lobs and Francis shortly to follow.

The one and twentieth day, faire weather, the winde Southward, wee ftill making to the Northwards. This morning wee had fight of Land on the Coast of Norway. it lying East and by North off about twelue or fourteene leagues. This day at noone, we were in the latitude of 61. degrees and 30. minutes, the variation of the Compasse at Scottes-ari is eight degrees East, it being about ten or twelue leagues off : wee having made a North way halte East, about thirtie leagues.

The three and twentieth at noone, in the latitude of 65. degrees and 45. minutes, in which place, the Needle of Declination doth dippe vnder the Horizon 63. degrees and 30. minutes by that Instrument which declineth 54. at London.

The thirtieth day , about three of the clocke , wee espied the land of Greenland , being atayned meight bout eight or nine leagues off. The Southwardest part of it bare South-east and by East off it. which shortly wee perceived to bee the Land lying in 76, degrees and 55. minutes, which is called Horne-found. This Land lyeth by our common Compasse North North-west. Within two houres after we had fight of Land, it began to snowe, and was very cold. This evening the Compaffe was varied thirteene degrees Weft.

The one and thirtieth day, variable weather with snowe, and very cold, and the winde also variable : and in the afternoone the winde was at the North-east, In the morning, wee espied variable; and in the attended to the with her, and their Master and Pilot came aboord of vs. And and A flip of Saint wee knew them to be that flip of Saint Jobsu Lare, which had leave of the Companie to fifth them to Lare, And they told vs, that there were eight Jossiand on the Coaft. Alfo, were eight danother flip; Eight Spanied. which we supposed to be a French man, and had one Allan Sallas to their Pilot.

on the coaft. fight with a

The second of Lune, in the morning, about five of the clocke, our Generall fent our shallon to The Generall a small Pinke, that all this night we faw along the shoare, to bid their Master and Pilot come awis Capraine boord vs, which presently they did. The Masters name was Clair Martin of Horne, and hig Beniamin loseph thip was for Dunkerke, and he told vs that he was conforted with another ship that was his Admirall, the Captaines name was Fopp of Dunkerke, and that he was on the Coaft, Wee kept the Mafter and Pilot aboord of vs, and fent some of our men aboord of her, and brought her under our lee : and then, we fent their Mafter aboord againe, charging them to follow vs. This after-40 noone we tooke their thallop with five or fixe men, whereof two were English men, and one Scot, at the Faire fereland.

Dutch iffip. 23. of May.

The fourth day also faire weather. This morning was the first Whale killed. Wee had no night fince the three and twentieth of May. The fift day, faire weather, but very cold, the winde North. Wee fayled along the Hand being about eighteene or twentie leagues in length; lying for the most part by the common Compasse North and by West halfe West ward. About nine of the clocke in the afternoone, we faw our other three thips, viz. the Gamaliel, the Defire, and the Richard and Barnard, which lay there to and fro, because they could not goe into their Harbour by reason of the Ice : and also, because there were foure other ships in a Bay or Coue, called Pooppy Bay, or Nickes Cone : and also other ships on the other side in Greene Harbour. We 50 fayled along the drift Ice vntill about one or two of the clocke in the morning, at which time, we came to an anchor in the entrance of the Sound, because the Ice came driving out so fast.

The fixt day, faire weather, the winde variable, till the afternoone : at which time it came to the Northwards. About three in the afternoone we weighed anchor, and about ten of the clocke we came to the foure ships lying in Poopp Bay: two of them being Hollanders, and one a Rocheller, and the other a ship of Burdeauw. The Masters of the Hollanders came aboord of our thip, to speake with the Generall, both of them being of Amsterdam, and brought a Commission granted by the Graue Maurice, for to fish in this Countrey. But, when they faw our Kings Maiefties Commission granted to the worshipfull Companie, they told our Generall, that they would depart this Coaft : having our Generals Ticket to flew to their Adventurers, that they 62 were there, and had made their Port, and how he would not fuffer them to fifth. We anchored close by the French ship wherein was Allane Sallas, being readie to fight, if they refused to come aboord vs. So, when we fent our shallop, the Master came presently and their Surgeon, who could speake English. At the first, they denyed that Sallas was abourd of them : but, being hardly viged,

CHAP.S. Kings Armes and Croffe fet pp. Th. Bonner Pilot to the Dutch.

they confessed that hee and one Thomas Fifter an English man were abound, who were both prefently fent for. This Salles was their Pilot, and Fifter was their Gunner.

The fewench day faire weather, we road still at an anchor. This day I observed the latitude of the place, and found it in 78, degrees 24. minutes. The variation of the Compaffe is in this Lat. 78. deg. place 15. degrees 21. minutes West. About a North Sunne a small ship of Bifear came into the 24 minut harbour where we roade.

The eight day, for the most part snow; the winde Southward. This day the Master of the Snowe. French thip, being a thip of nine score, or two hundred, called the Lagues of Bardeaux, agreed with our Generall that hee might fish on the coast : out Generall was to have halfe the Whales to he could kill. Alfo, this day, the Mafter of the fhip of Rochel, and the Mafter of the fmall ship

of Bifcay, were agreed to depart from the coaft. The minch day, faire weather. This morning the Gamelel our Reare-Admirall, and the Defire weighed anchor to goe for Greene barbour, where two thips lay, one of Dunkerte, and the Green barbour. other of Saint Sebaffier in Bifeay. The Captaine of the Desterte, called Fopp, had beene with our Generall, and told him that he would depart from this Court. Our Generall gave him leave to take the Pilot of the Small Pinke, and the other Dates men he had taken of his keeping only the English men and the Sours. Allo, the two frips of Holland , with the flip of Bifery , and that of Rochel weighed anchor, and departed from this Harbout. About fix of the clocke in the

afternoone, came the Mafter of the flip of Saint Sobaffian aboord of vs, being brought by one of the Maiters Mates of the Defire (they having taken two of his Shallops) to know our Generals pleature, whether he should have them againe, or no. Our Generall gave them him againe, vpon condition, that he would depart the Coaft. About a North North-west Sunne, we weighed anchor to goe for Horne-Sound, where we heard, that there were divers ships; the wind Northward a small gale.

The tenth day, faire weather, the winde at North, being very close weather. About a North Sunne we came to an anchor in the entrance of Low Sound, where we faw two ships ride at an- Low found, chor. Our Generall fent our shallop to see what ships they were, who found them to bee the two thips of Holland. Alfo our long Boate went on thouse to fet up the Kings Maiefties Armes His Maiefties yoon a low point of land, lying a great way off, calked Low-weffe. We let up a Croffe of wood, Armes and a

and nayled the Armes vpon it.

The thirteenth day, in the morning, it fnowed very faft, being very thicke weather, the at Low meffe. winde variable, we standing off from the land. About feuen of the clock it began to cleere vp, at which time we espied three ships; and making roward them, at length we perceived them to be the three thips which came from the Bay where we road : the winde also was at Eaft and by South, and blew a very ftiffe gale. Then we flood in for the floare, and fpent most of this day in turning vp Horne-Sound. And about a North North-west Sunne, at ten a clock wee espied fix thirs lying at anchor on the South fide of the Sound, in a small Bay: The one of them was Captaine Fop the Dunkerker, who came in before vs, and was appointed by our Generall to come into this harbour, and there to ftay for vs, and to goe to the Foreland, to have his other thip 40 which we kept there. Foure of them were Biscames of Saint Sebaltian; and one of them was in the harbour where we road and found the French thip : The fixt was a thip of Amfterdam,

wherein Thomas Benner was Mafter and Pilot, and about twentie English men more, All the Thomas Ben Biscaines came aboord of vs as soone as we were at an anchor that Thomas Benner refused to come, English ma being fent for by our Generall. Our Generall commanded our Gunner to fnoot at him, he him- Matter and felfe discharging the second Ordnance. Then presently be began to set faile, and cut his cable, thinking to get from vs : but wee having that him through three or foure times, they began to weather vs, fo we fent our shallop and he came abourd. There were fine or fixe more of the Englifb men fetched aboord, and some of our men fent to bring her to an anchor, where shee might ride fafe : for, thee was almost run ashoare. This was about a North sunne, or eleven a clocke. 50 The Bifcaines were charged prefently to depart, fo foone as they had filled tresh water, which,

they faid, they wanted; and to bring what Whale finnes they had found, or had taken, or o-

The fourteenth day, faire weather, the winde at East Morth-east. This morning one of the Biscaines brought a few Whale sinnes aboord of vs, and the skin of a Beare, which they had killed. Then was our Boate-swaine sent aboord of them to search their ships, and to bid them depart. Out Generall kept the Holland thip, wherein was Thomas Bonner, to the vie of the Companie. This day I observed the latitude of this place by a Quadrant of foure foote Semidiameter, and found it to fland in 75, degrees 55, minutes; the Declination of the Needle vinder the Horizon, is 67. degrees 30. minutes, pointing to the Northwards : but pointing to the South-

60 wards, it is 80. degrees. The variation of the Compasse is 12. degrees 14. minutes west from the true Meridian: but from our common fayling Compaffe it is 17. degrees, because the 26.deg.45.mine. Compaffe is touched fine degrees and a halfe to the Eastward, and the variation is to the declination

This day in the afternoone, the foure ships of Bifear departed from this Harbour, which is

67.deg.30.min.

called Horne-Sound: and about a North finane , I, with the Mafter Thomas Sherin went afhoare with other, to fet vp another Croffe with the Kings Maiefties Atmes, caft in Lead, nayled vp. on it. Then I observed the Sunne vpon his North Meridian, by my foresaid Quadrant, and found it elevated about the Horizon 10. degrees and thirtie minutes: but because his heigh as the South Meridian, and his height at the North did not agree, in finding of the Latitude, I did abate fine minutes from each , as the meane betwirt both : for his alcitude at the South Meridian was 36 degrees 40. minutes, the declination 23. degrees and 29. minutes.

The fifteenth day, faire weather, the winde in the morning South, but almost calme. This day about noone we weighed anchor with the ship of Amsterdam, and divers of her men were fetched aboord vs with their Shipper, and some of our men were sent aboord her with one of 19 our Maiters Mates, called Mafter Spencer. All this day it was fo calme , that wee were faine to cowe our ship. Our Carpenter did trim vp two of the Biscaine Shallops which they did leave

behinde rhem, and they did leave divers Hoopes and Caske flaved ashoare. The eighteenth day, faire weather, the winde variable, we flearing away Northward. This

afternoone wee met with another thip of Bifes, being a thip of two or three hundred Tunnes. Our Generall, as he did to the rest, caused her Master and Pilot to come abourd vs, to whom he shewed his Commission, charging them to depart this Countrey. They, seeing no remedie. were content, fo foone as they had filled fresh water. Wee met with them off the Southward part of the lland. Our Generall being to neere Greene Harbour, where the Gamaliel and the Defire road, wee went into the Sound to fee them, with this great ship of Bifen, and the ship of 10 Abundance of Amfterdam. We found that the entrance of Greene Harbour was quite stopped with Ice: and ran our ship into it, thinking to get through, but wee could not. Then wee got her out agame, and came to the Bay where wee roade on the other fide of the Sound in Pooppy Bay, or

The nineteenth day, faire weather, the winde Northward. This day about twelve of the clock we came to an anchor in the forefaid Bay. This afternoone there came another ship of Saint Sebattian into the Bay where wee roade : and about feuen of the clocke, the Captaine came aboord of vs, who told vs that he had lott fix of his men and a shallop vpon the coast of Grome-An Iland in 72 land, vpon an Iland in the latitude of 72. degrees or thereabouts. This was the Mafter which degrees on the had beene here the last yeere, and made a great voyage, Master Woodcocke being their Pilot. His 30 making so great a voyage, was the cause that so many ships were here this yeere.

The twentieth in the morning, we had newes that the Ishn and Francis was come about two daves agoe, and that they had killed one and twentie Whales at the Foreland, and had also twentie whales killed two at Greene harbour. This day it was very close weather with some snowe; the winde North-west. This afternoone the Captaines of the two Bifesy ships were commanded to depart this Coaft.

The one and twentieth, wee perceived another ship standing toward vs. Weelessened our failes and stayed for her to fee what shee was. At length, we perceived her to bee another Bifcame. About a North finne we came to an anchor in Greene barbour, by the Gamaliel, and the Defire, and the ship of Burdeaux : and the Biscaine followed vs. So soone as they were come to an anchor, their Captaine came aboord of vs, to whom our Generall shewed his Commission as 40 he had done to the reft, charging him to depart those Coatts, and told him, that hee would take away fome of their shallops. They earnestly intreated him not to take them away, and they would depart : the Captaine offering his bond to our Generall, that if he flaved either in Greenland, Groineland, or Cherie Iland , he would willingly forfait all he was worth. There was ano-A man flaine. ther Whale killed in Greene-harbour, in the killing whereof there was a man flaine, and a Boate ouerwhelmed, by too much hafte of following him, after the harping Iron was in him.

The three and twentieth day, faire weather, the winde Northward. Thisday, and the last night I objerted the latitude of the place where we roade, and found it by both, to bee in the la-Lariende 78. titude of 78. degrees 7. minutes : the skie at both observations being very cleere, where I finde that there is no fensible error betweene a South observation and a North, the skie being 50 cleare. But if the skie be halie, there will be some difference, as of eight or ten minutes, being observed on sheare by some large Quadrant or other Instrument for the purpose, also a South A South South South-well Moone by the common Compalle, maketh a full Sea in this place.

maketh a full

The ninth of July, faire weather, the winde at North. This day wee flood to the Southward along the Iland : but, toward night it fell calme, and then the winde came to the West. The tenth day, faire weather, but thicke and close, the winde South South-west. All this day we flood for Bell-Sound. Our Generall went on shoare this afternoone, and killed foure Deere, and brought a young Morfe aliue with him aboord,

The eleanenth day faire weather, but calme. This afternoone wee perceived five fhippes in a Bay in Bel-found. The winde was so calme, that we were faine to towe in our shippes, and about 60 a North North-walt funne, we came to an anchor by them, with our three thips, viz. the Tigre Admirall, the Mathew Vice-Admirall, and the Richard and Barnard, having made all things resdie for to fight. These fine shippes which rid here, the one was a great shippe of Biscay of seven

hundred Tunnes, and the two Hollanders, which we found the fixt of Isme in Pooppy-bay, and A Bifcayn this one small Pinke of Amsterdam, and another small shippe of Rochell. This great shippe of Biscay, of 700, uns. which we expected would have fought with vs, fent their Captaine aboord of vs before we came to an anchor, and submitted themselves vnto the Generall. The two ships of Amsterdam, whose Mafters names were thefe, viz. Corneline Calias, William Vermogon, Admirall, and Iohn Iacob Vice-Admiral these two would gladly have stood out with vs, it the Biscaine would have affisted

The twelfth day faire weather. This day the ship of Iohn Iscobe was valaden of such goods as thee had in her; as Oyle, Blubber, and Mories skinnes. The thirteenth day I was fent in a fhal-

10 lop to Greene Harberough. The foureteenth day, thicke close weather, the winde Northward; but toward noone it began to cleare yp, and then it blew more winde. About a West tunne, we came to a small Iland. gan to create vp, and the first with the come where we found featen which we killed, and knocks Manyrecker ed out their teeth, and let them lye. In this place are many of their rockes, where are great multitudes of foule, and they are called Lizett Hands. The Land all along is fo full of Rockes, that Lifett Hands. it is vapodible for any hippe to come neere the Maine, but in the Sands which are very deepe, and good to come in. All this evening and night wee rowed betweene this Iland and Ice-found,

The fitteenth day, about nine or tenne a clocke, we came to the shippes in Greene-barberough where we found, that they had killed eighteene Whales in all. Foure of these ships were French. Eighteen

30 men, which had killed eight Whales for the Companie according to the agreement which the Whales killed. Generall had made wich them : which was, that they should kill eight for vs, and after, what they could kill, should be for themselves. Our English men had killed three in this place, and the Three Whales Bastes in the Defire also three. The Defire had taken in an hundred tunnes of Oyle when wee killed by the came there, and the was to be laden to come as the could.

The feauenteenthoday also faire weather, the winde Northward. This day, toward a West Sunne, the Mafter of the French hippe came from Sea berfe Bay, who went thither to fpeake with our Generall : because Mafter Mofen and Mafter Cooper had flayed his Shallops from going to Sea, in regard they would not observe the orders which the Genegall had appointed them; which were that whose Whales which our Englishmen did chase, they should not follow, nor our menshoold not follow the Whales they chased. For the order of the BiGeness is, that who is doth 30 ftrike the brit Harping Iron into him, it is his Whale, if his Iron hold. This evening, I fay, he returned from Sea-borfe Bay, haning loft ins labour : for the Generall and Mafter Edge were in Bell-

ned from Sea-norse Day, maining four his sapout : for the Street and annual was a well and that Eight & thirty found. We vaderstood by him, that they had killed some eight and that they whales killed there was one hundred and fixtie tunnes of Oyle ready made.

The five and twentieth day in the morning, the Done weighed Anchor to go to the Generall, and the Mafter of the French thip also this morning went from thence to speake with the Ge-

nerall, because of a Whale which was in strife betweenthis Biseaine, and pars : when for pilfering and for some peremptorie speeches, two of the Rochellers were ducked at our Yard arme, the one on the one fide, and the other on the other. This day I also observed the laritude of this place, and found it tobe 77. degrees 40. minutes. Alfo, the variation of the Compaffe is 13. de- Latinde 77. grees II. minutes West. This variation was observed the third of August in the morning : the degrees, 40. height of the lunne about the Horizon was 17 degrees 24 minutes, and the declination was 14 Variation, 13.

degrees 41 minutes. North in the latitude of 77 degrees 40 minutes, and his Magnetical azimuth degwas 63. from South to Eaft. The ninth day wee had light of Mafter Bouners Ship, wherein min was Mafter Marmedule, who had beene to the Northward as farre as Faire-banen ; and now, as he faid, he was bound to the fouthward to discouer beyond Point Looks and hauing his direction from Master Edge, as he faid. Our Generall rold him, that hee had hindered the Voyage more by his ablence, then his discouerie would profit; and that it were best that he went backe Laditude 79. with him to the Fore-land, and that he would give no licence to goe now for Discouerie, because degrees,14. the yeare was farre spent-but bad him, according to his Commission, so to proceede. The twelfth This was Man day I observed, and found the latitude of this place by an exact observation to be in 79. degrees 14. Cudaers thip of

minutes. They in the Pooppy-Bay had feener thip of England off Black-point, and had spoken with Landon, her, who told them that they were come from Kildeens The foureteenth day faire weather, the Winde at North North-east. This day about tenne a clocke in the forenoone, we waied anchor to goe homeward, being fixe thips in company, viz-

the Tiere Admirall, the Gamalel Vice Admirall, the Iohn and Frances, the Annula, the thip of Burdeaux which the Generall agreed with to fifth in Greene-barborough, and the Bifcar flip which filhed in Sir Thomas Smabs Bay. The fifteenth day very faire weather, all the forenoone almost calme, in the asternoone, an

60 eafie gale at North-eaft. This day about twelue a clocke at noone, were were again France Fore. Latitude 79. land, which is in the latitude of 79 degrees 8, minutes. This night was very cleere and taire wea degrees 8, minutes. ther, and also calme, by which meanes I had very good opportunitie to finde the furties refraction on. For beholding it about a North North-east funne, by the common Compaste, at which time Sunnes refrathe funne was at the lowest, it was but one fift part of his body about the Horizon, having about dion.

foure fifth parts below, so neere as I could gelle. His declination for that inflant was 10. degrees 25. minutes North, being at noone in the 2. degree 7, minutes of Vingo, his daily motion was 58. minutes: whose halfebeeing nineteene to bee added to the former, because it was at twelve houres afore noone. I fay his place at that inftant was 2. degrees 26. minutes of Free, whose declination was as before to.degrees 35. minutes : the Latitude of the place was 78.degre: 47.minutes, whose complement was 11.degrees 13.minutes, the declination being subftract d from the complement of the Poles eleuation , leaueth 38. minutes, foure fiue part of which 12, minutes; which being subitracted from 38, leaueth 26, minutes for the Refraction. But, I suppose the Refraction is more or lesse, according as the ayre is thicke or cleare, which leave for better schollers to discusse : but this I thought good to note, for the better helpe of fach IQ.

as doe profesio chis studie. The fixteenth day also very faire weather, and for the most part calme: the winde that was, was ac North-west. This morning, we espied a ship out in the offen, ouer against Cold-cape, which we flood with, and the alfo flood with vs. And when we came to her, wee found her to be the Defire, 2 shippe of Alboroueb. Our Generall sent for the Master and Merchant aboard of vs, who

certified bim that they came from Killedeene, and that they had made but a bad Voyage of file : and they were come to fee, if we could fraight them home. The Merchant was of London, whose name was Matter Cudner : the Matters name was Fletcher, who also brought fixe men which Thomas Bonner had left at Cherie Hand. These fixe men had killed but one Morse all this yeere at the Hand: who also told vs, that William Gourdon was gone, to the Northwards, At noone, the 20 Vanation 1. three and twentieth day, I observed the variation of the Compass, and found it to be one degree

degree semis. 5.minutes Eaft.

M. Cudger of

William Goar-

Landan

The three and twentieth day faire weather, with a fine gale at North and by Eaft. We flearing a way South and by Weft halfe South : being armoone, by supposition, in the latitude of 69. degrees no minutes. Having failed fince yesterday noone; some thirtie leagues South, true.

The foure and twentieth day, very faire weather and cleere, the winde all the fore-noone Northwards, but about noone it came so the South-east. This morning I observed the middle Posturatus pur apout none e came so the open the latitude of 88, degrees 24, minutes fairer in the Great Bearengape, 2 and found it to been the latitude of 88, degrees 24, minutes about two a clocke, at which time that flarre was on the Mendium vader the Pole. Also I observed the starre in the Beares Rumpe about one a clock, and found the like latitude. Also all 30 Asid gno min, this day we had fight of Keff Hands, being about ten er eleuen leagues off vs. Alfoat noone I The variation observed the latitude by the Sun, and found vs to be in the latitude of 68, degrees no minutes, 4 degrees 8. which did agree with the former Observations by the flares. Also the variation of this place is 4. degrees 8. minutes East from the erue Meridian, wee having runne fince yesterday noone some two and twentie leagues South and by Welt. Almost all the afternoon it was almost calme.

The fine and twentieth day also very faire weather , the winde this morning came to the Balt South-east a fine easte gale. Westered away South and by West halfe West ten leagues, being at moone in the latitude of 67, degrees 5, minutes. The variation of this place is 5, degrees 3. minut es East, neere to the set of our Compasse. This Euening the winde came to the South

South-west, which continued about two Watches.

The nine and twentieth day faire weather, with a good gale of winde at North North-eaft. From two this last night to fixe, we stood away South west and by Shuth, and at fixe we steered away South South-west, being at noone by obternation, in 62. degrees no minutes. The land the land about Scontofneffe lyeth in this fort : from fixtie three toward fixtie two, it is ninetpene leagues South South west halfe Westward: from thence tenne leagues South and by West, which is two or three Hands, which see the Weltwardest land in Norms, lying in the latitude of 6g. degrees 44. minutes. But whether these Ilands, or a Point of fand, which lyesh about three or some leagues more to the North, be called Scontefueffe, I know not. The fixt of September we entred the Thomes.

CHAP. VI.

A Voyage of Disconerie to Greenland, &c. Anno 1 61 4. Written by Ro. FoTHERRYE.

He ship Thomasine went downe from Black-wall to Woolwich the fixeenth of Aprill, and from thence to Granefend the three and twentieth, where the remayned whill the eight and twentieth of the fame; and weighing from thence 69 the anchored againe in Tilberie Hope, with ten ships more of good burthen, and two Pinnaffes all of the Greenland Fleet, fet forth alfo at the charge of the faid Company, under the command of Master Beniamin Isfept, Chiefe Captayne and Generall of the faid Fleet.

The att the world

CHAR.6. Troubles by Ice. Hackluyes Head-land in Greenland.

We set sayle out of Tilberie Hope the fourth of May, and came to an anchor the same day in Lee Road, where we stayed till the next morning, then wee fet fayle againe and went forth to We went forth

Sea before night. We proceeded in company of the Fleet, and met with stragling Ice the fine and twentieth of We proceed in company of the latitude of 75, degrees 10, minutes, through which wee passed without danger, hol- 10, minutes ding on our courie all that day, till time of mid-night; then we found the Ice fo close packt together, that we were forced to tacke about, and fland to the Westward, till wee found more open patiage; wee plyed through it without any great danger, till the eight and twentieth day : but then being in fight of Land, we puffed among it very much Ice all the fore-noone, which lav in great abundance on both fides of vs: but a defire (as it feemes) to get through it, drew vs on to be the more intengled with it, for about noone we could neither find a p. flage to goe forward,

mor way to retyre backragmae, but being nine thips and two Pinnaftes (for the Professor and the Defire loft Company through foule weather, the one and twentieth of May, otherwise we had beene thirteene layle) we began very fuddenly to bee inclosed and that vp with Ite. Now every one wropent the best meanes he could for the fafetie of his ship; Our Master in the Tho. Eleven Savies seafore caused a Hauter and a Grapnell cobe carried torth, and laid woon a great Hand of Ice, and fall on the Ice. on we rid as at an Anchor and by the metters wer third from forceable rulning against other M. Ta. Sherwite peeces; afterward we laid forth an anchorfer furer hold; and made fenders of an old Ca. le, which was hung ouer the ships sides to keepe the Ice from piercing of her plankes. Wee rid thus from the right and twentieth of May till the lecond of June, still floating as the wind droue vs

ac with our anchor, holding Hand, which now we accounted as the shoare, and made vie thereof accordingly, for vpon it our Carpenter fealed and trimmed our leffer shallop. On the retord of June we had a great homeming Seathe wind being at North-west, where- June.

by we judged we were not farte from an open Sea to windward of ys; there wee refolued to make tryall what we might doe, so free our felues out of the Ice. In the afternoone about three a clock we got aboard our Anchor, letting fall our fore top-layle, and putting forthour M zen; and fo droug afterne for a while, till the floating Hand game way; then wee filled our top-layle, and rounder the control of the control o as the topic we precupyed and of the west of the second of them they feemed much more perillous then they proued hurtfull, fo wee prayfed God for our fafe deliverance, withing chee the red of the thips which we left in the Ice, were as cleere out of

it as was the Thomafore, material with your one Hauing action not flat open Sea to the Westwards, we proceeded to the Northwards keeping We met with the for full on our flatboard side; and income the for full on our flatboard side; and income the Mary And Savas, that got also free of the the Mary And sides. Ice the fame day that we come that of an wetter company together till the next day, when some being as high as Prince Charles Halth we both flood in for the floore, the Mary An-Sarab going for Bel-found, her affigned Harbour, but we proteeded to the Fore land. where when wee Wecame to

40 came the fixt of lune, where met with two shallops that belonged to the Defire, wherein was the Fore land. Cutbbert Appleard, and refiliant Schomer Harponiers; by whom we widerflood, that the Froferow and the Defire had more definedly prospered, there all whe reft of the Fleet, they eliaped the danger that all the reft fell into, and came to the Fore land the third of lune, finding the

Here was yet no worke begunne, for they had not feene one Whale fince their comming into the Harbour; lo that for we there was no cause of stay to bee helpfull wnto them, and therefore we proceeded to the Northward, hoping to find the (hoate fill as free from Ice, as it was at this We proceeded place, but it fel out contrary to our expectations, for being come as farre as Mandles Sound, in the to the Northplace; but it fel out contrary to our expectations, to being come state from the mayne top we wards latitude of 79. degrees 34, minutes, we met with fome firigling kee, and from the mayne top we Maudlen faw much lee lye betwitz wand Hartings Head-land, which feemed to bee choic to the floare, sound, 50 therefore we fent former men in a find to the Mandles Samuel to fee if it were open, that wer Hartings might harbour our ship there, and fearch for a leake which wee found her subject water in fould Head land.

The Sound was open and we anchored in a good Harbout, but the Ice was not gone cleere in whather from the fhoare, therefore we could not hale our thip aground, but we carined her and fet vp our Biscaine shallop which we carried with we out of England in pieces.

The next day after our comming hither I went forth in a little shallop (the other being then I went forth in wnfer together) to fee how the Ice lay at Hackleyes Head-land, and whether we might paffe with a shallon our ship that way or no. Being come forth of the Harbour, we perceited, that it was very foule 60 weather at Sea, notwithflanding I proceeded into Faire Hauen , where the South Harbour was then open, but much Ice lay then in the Sound vnbroken from shoare to shoare; delict wife wee might have palled that way to Hackleyes Head-land, between the Bland and the mayine Land, we flayed here till the next morning, then the weather beganne to cleere vp, and wee purforth to Sea againe, intending to goe without the llands : but being out of the Harbour wet found the

gaine for thoare,

foule weather to be such, as our little weake shallop was notable to endure, therefore wereturned agains to our thip into Mandlen Sound, where we killed two Female Morfes, and took their Teeth, Hides and Blubber,

On the tenth of June we fet fayle out of Maniden Sound, and coafted along to the Northward, till we were pail Hacklayts Head land, but then we law the Ice lye before vs, extending close to the shoare, so that for vs to passe further that way, it was not possible: therefore wee turned to the Westward, to see if wee could finde passage further from the shoare. Wee fayled as the Ice trended West and West South-west till the thirteenth day, and keeping full alongft it, we found it to trend neerest South and South South-west, we proceeded well thus far, till we came vnder the latitude of Prince (borles his Iland, in 78. degrees 40. minutes, being 10 eight and twentie leagues from shoare, but then we altered our course, and stood in for the Foreland, to goe and be helpfull to the other ships there for the furthering of their Voyage according to our Instructions (as some did vnderstand them) but contrary I am sure to some of our defires, When we came neere the Fore-land, we saw eleven ships of Hollanders under sayle; plying to the Southwards; one of them came roome towards vs, and frucke her top-fayles twice, thips.
We anerored whereby we supposed shey tooke vs for some of their Fleete, which they wanted, but wee held on our course still into Sir Thomas Smiths Bay, where we came to an anchor the fifteenth of June, by the lohn-Anne-Francis, and the Defre, the Mary Margares being then underlyle to go

Here was yet no need of any helps that we could make them, for they had hitherto neyther 20 killed nor feene one Whale fince their first comming in hither; thetefore we thought it best not to flay here, but rather goe to Faire Hause, where wee should bee more readie to proceed on our Discourrie when the Le would give vs leave, and in the meane-time wee might bee helpfull to the two ships thither assigned for the making of their Yoyage, and so much the rather wee ha-sted, because we understood that the Hollanders also set for tha ship on Discourse.

Bay. nen hacke a-

gaine into

We fet fayle

We see tayle the seuenth of June, and met with the Properson, that came from Croft-road, and of Six T.Smain was going into Six Thomas Smain Bay, there so, get some Bricke and Lime to mend their Fornace, as Nicholas Woodcocke the Mafter told vs, then we went forth to Sea, and being about foure leagues from the shoare, the winde began to blow so hard from the North-west, that wee were forced back agains to feek Harbour, and came to an anchor the nineteenth of lune, in Croffe-road, 30 We were dri-Here we stayed two dayes, much wind blowing at the North North-east, till the one and twentieth of Iune, and then in the after-noone the wind came to the East and by South, and the weather was faire, therefore at a North North-west Sunne, we weighed and set sayle againe, and so did the Thomas Bonamenture, that came to an anchor by vs this morning, beeing also bound for out of Croffe-Faire Hauen.

This next day in the afternoone we were thwart of Mandlen Sound, and the weather being faire and calme, we fent a shallop to the Northward, to fac what alteration there was amongst the Ice, and to seeke out some good Harbour for a ship y and also to fet up the Kings Armes at Hacklayes Head-land, or some other convenient place.

The Kings

One fhallop not other thallop into Mandlan Some, there were the where hallop into Mandlan Some, when I was within the Some, I found no Beeches bare for Motles to Manden Sound. come vpon: for kee and fnow lay yet vndiffolied from the shoare side, but I went to the Harbour, and there caused a Croffeto beset vp, and the Kings Armes to bee nayled thereon; vnder which alfo I nayled a piece of fheet Lead, whereon I fet the Mosconie Companies Marke, with the day of the moneth and yeere of our Lord. Then cutting vp a piece of Earth, which afterward I carried aboard our ship, I tooke it into my hand and laid, in the hearing of the men there in Trimitie Har. prefent to this effect.

Itak; this sees of Earth, as a signe of leavilul possession of this Countrey of King Iames his New-land, and of this particular place, which I name I visitive Harbourd, taken on the behalfs of the 50 Company of Merchants, called the Marchants of New Trades and Discouries, for the visof our Sourreigne Lord lames by the grace of God, King of great Brittaine, France, and Ireland, whose to what the Royall Armets are here fer up, to the end that all people who shall here arrive may take notice of his Matesties Right and Title to this Country, and to every part thereof. God fave King lames.

This is a good late harbour, and is under the latitude of 79, degrees 34, minutes, as I have found

parallel of 793

by good observation, and have of Westerly variation 25. degrees. When I had here set up the We came to an Kings armes, I returned to ward our thip, which was come to an anchor at the entrance of Faire benen, Raying till the floud came, because that at the Tide of Ebbe, there runnes a great current. out of the Sound; fo at the next floud, we came into Faire basen and anchored by the Gamaliel and the Thomas Bonamenture, the three and twentieth day of Iune.

Then labu Majon, Mafter of the Gamaliel, came abourd of our ship, and I asked him if he had any worke for our men, for I would cause them to come a shore : he cold me, that hitherto he had were yet come not scene a Whale come in, but his Furnaces and Coppers were already set vp, and therefore as yet he had no neede of helpe, but when occasion ferued he would imploy them. This day about

eleagen a clocke Mafter Baffin returned in the Shallop from the Northwards : he faid that he had beene at Cape Barren, which is the point of an Iland three or foure leagues from Hackluits beadland, but further then that he could not paffe for Ice which lay close to the shore, and he had not the Northfet vp the Kings armes in any place.

On Munday the feuen and twentieth day of Iune, I went forth againe in the Shallop to the Gape Bartas Northward, partly to see what alteration there might be in the Ice, with the Easterly windes which had blowne hard fince the Shallop last returned, but chiefely to fet vp the Kings armes in some place concernent, because there was none set up to the Northwards of Mandlen found,

We rowed to Cape Barren, where formerly Mafter Baffin had bin, and finding the Ice there to gone from the shore, we proceeded further to an Iland which now we call the Saddle, in respect Saddle Hand. of the forme thereof, more then a league distant from Cape Barren. In our way thither it began to snow, and grew to be a great and vehement storme from the West North-west, therefore we hafted and got to the lee fide of the aforefaid Hand, and there made fast our Shallop with a grapnell laid vpon the Icie shore, ving the best meanes we could with our shallops saile to keepe vs from the extremitie of fo cold an harbour : we flaid here eight houres, and the florme continued drining the Ice still Eastward in great abundance and with wonderfull swiftness; when the weather began to cleere, I caused the men to rowe to Leewards to another lland a league diffant, 20 which feemed then to be a Cape of the maine land, purpoling there to fet vp the Kings armes;

but afterwards wee found it to be an Iland, and to the maine wee could not come for bro-This ftormie weather continued from Munday night till Friday morning, during which time we had beene but eleauen leagues at the furtheil from our fhip, yet went we fo farre as we could hauegone, had the weather beene neuer fo faire ; for at foure leagues dutance from Cape Bar-

ren, the Ice lay firme and vnbroken two or three miles from the shore, and close agains to it lay the thattered Ice thronged together with this pretent ftorme, On Friday morning we came backe agains to Hackluits headland, and there I fet the Kings Iulie. armes in the like manner as at Troute Harbour : from thence we rowed towards our ship, and as

we entred into Faire-basen, there came a Whale that accompanied vs into the harbour leaping The Whiles and advancing himselfe almost quite out of the water, falling headlong downe againe with great began now to 30 noile; we halted aboord our ship, and I sent forth both our Silallops to strike this Whale if they come in. could, and told Mafter Major of her comming in, who also went forth in his Shallop: but it

feemes the Whale past under the Ice which lay yet unbroken betwixe the North harbour and the South harbour, for they could not fee her againe.

The next day there came more Whalesin, and Robert Hambleton, our Masters mate strucke Two Whales two, which valuckily eleaped; the first for want of helpe; the Gamaliels Shallop being in chase eleaped, of another Whale, and our owne little Shallop not able to row against a head-sea to affist the other: fo that at length the Whale having towed the Shallop forth to Sea, the harping iron came out : the fecond was also strucken within the found, and ranne under the Ice, which lay yet vnbroken at the East end of the Sound, and drew the Shallop voon it cleare out of the water; by 40 which meanes the Harpingiron came forth. Here we remained till the fixt of lule, our men and

Boates being helpetull at all times to further the Voyage. The fixt of Iulie we fet faile forth of Faire-banen, intending to make triall if wee could to get to Westwards of the Ice, and so proceede to the Northwards, having sent away one of our Shal- We came forth lops the day before, prouided with twentie dayes Bread, to coast along it the shoare, search the of Faire havene Beach for Commodities, and fet up the Kings Armes at places convenient, hoping thereby to preuent the Hollanders, who now rid in the North harbour of Faire-banen, and were ready for the first opportunitie, to discouer and take possession of other harbours, having two Ships to goe forth onely vpon Discouery.

We failed Westwards from Faire-hauen seuen leagues, and then met with a maine banke of Ice which trended North & South, the Sea appeared to the Northwards to be open to far as we could We met with which trended North to South, the Sea appeared to the Porthwards to be open to tar 28 we could be and flood fee, therefore we plied that way, when we had run feuen or eight leagues more, the Ice lay fo thick to the Northon every fide, that we were bard from proceeding any further; then we flood in toward the shore, wards. and being a little to the Northwards of Cape Barren, our Shallop had fight of vs, & came rowing Our Shallop to vs through the broken Ice, Maiter Baffin told vs the shore to the Eastward was much pestered cameto vs. with Ice, and he had fet up the Kings armes at the entrance of a faire Sound, about foure leagues diftant from Cape Barren.

Now the weather being faire and calme, Master Sherwin, Master Baffin and I, went in the Shallop to the place where the Kings Armes were fet up, purpoing (because the ayre was very cleere) to goe vpon some high mountaine, from whence we might see how the Sea was pettered 60 with Ice, and what likelihood there was of further proceeding. According to this our intent, we ascended a very high hill, and from thence we saw the Ice lye vpon the Sea so farre as we could differne, so that the Sea seemed to be wholly toured with Ice, saue onely to the Eastwards : we thought that we faw the water beyond the Ice, which put vs in some hope that we should ere long get paffage with our Shallops along the shore, if we could not passe with our shippe. Being

The thallop re-

We returned

thus fatisfied, we returned abord our ship and plyed towards Faire basen, admising amongst our felues of the best course we could to further the businesse committed vato vs.

Weintended

We refolued to make our diffeoury along the shore with both our Shallops, and to carry with vs our prouision for the Whale-killing, conceining good hopes belides, of profit which the beaches would afford vs; therefore we intended when our ship was brought sate into harbour againe, to goe from her with both our Shallops, and to put in practife this our late resolution. But the weather falling calme, and a fogge succeeding, which continued three dayes, so that our ship I went forthin came not into harbour till the tweleth of July; I went from her the eleventh day, intending to fearch the Beaches, till Master Baffin came to me with the other Shallop, and then we to proceede both together: but before he came, I had gone so farre as that the Ice would not suffer mee to passe a Boates length further, and I had also searched a very faire Beach which was altogether to Matter Baffin came to me at a place appointed the foureteenth day of Iulie, in the other Shal-

Mafter Beffin the other Shal-

lop, and we proceeded both together to the Eastwards againe, and found passage amongst the Ice about a league further then I had lately beene, fo that we came to the firme Ice, that lay almost two miles from the thoare of Red-beach, vnbroken vp this yeare. Here wee haled vp our Shallops out of the water, left the broken Ice which is carried to and fro with the winde, might iplit them or bruse them : then Master Baffin and I with foure men more waiked ouer the firme Ice and went ashore on Red-beach, where we trauelled about the space of three miles by the thore file, but found no commodities as we expected to have done; for here had the Hulmen been 20 Weehailedour in 1612. as we might know by fires that they had made, and gathered the fruites that many yeares before had brought forth. Thus as we could not finde that which wee defired to fee, fo did we behold that which we wished had not beene there to be seene, which was great abundance of Ice, that lay close to the shore and also off at Sea so farre as we could discerne; wherefore being thus fatisfied, and more wearie to know that we could palle no further, then with trauailing fo farre, we returned to our Shallops, and went abourd of our Ship in Faire basen on Sunto our Shallop day the feuenteenth of Iuly, passing the neerest way betwint the llands and the maine Land, for now the Ice was broken betwixt the South-harbor where we rid, and she North harbour, where

The next day we fent our Shallop to the North-east fide of Faire hauen, there to lye for the 10 comming of the Whales over against the Gamabels two Shallops that Iye on the other fide for the fame purpose. The twentieth of July, wee were vnder faile to goe forth of Faire banen with the Gamalul, purpoling to haue taken two Ships that rid at the entrance of Mandlen-Sound, with John Majon,

who first described them, supposed to be the one a Bark, and the other an English man; but the came to an an winde blew right into the Harbour, so that we could not get forth, and therefore we came to an anchor againe where we rid before. On the one and twentieth of July, our Harponiers killed a Whale, which split one of our Shallops and ftrucke the Harponier that was in her ouerboord : but both hee and the reft of the men were relieued and taken into an other Shallop ; then we fent our Carpenter to mend the Shallop 40

Wekilleda

that was split; and on the five and twentieth day they helpt to kill another Whale. On the fixe and twentieth of July, I drew the plat of Faire basen, as it is here projected (but here too coffly to infert.)

the Hollanders vid.

August. We went to

We got to the

When this Scoale of Whales were past, we went out of Faire haven the first of August with both our Shallops, Mafter Baffin in the one, and I in the other, with five men more in each Shallop, thinking that now we should finde the Ice broken and cleere gone from the shore, conceithe North-wards without using some good hope to proceede and make some new discourry, which was the chiefe occasion of our imployment. Wee passed ouer Red cliffe-Sound, which we found cleare of Ice; and from thence we proceeded to Red-beach, where we also found great alteration fince our last being there, not with flanding the Ice was not cleerely voided from the shore; for in some places it was firme and vnbroken off, for the space almost of halfe a mile: so we rowed along st it, till wee came neere 10 the North end of the Beach which lyeth furthest into the Sez, and there we found an open way to the shore with our Shallops, and went on land; but feeing in all places great abundance of Beach with our broken Ice, we lay close to the shoare, and doubting that although perhaps with much adoe, we might get about the point of the Beach, yet should we still be pettered with Ice from proceeding any further, we retolued to walke ouerland, to the other fide of the Beach, where we faw a hill about foure miles diftant; from which we thought we should be satisfied, how much further it was possible for vs to proceede; fo thither we traugiled, where when we came, wee faw a very faire Sound on the East fide of the Beach which was open within, but there lay very much lee at the entrance of it, which although it was extended more then halfe over Sound, yet we doubted not but if we could get our Shallops about the Beach, we should finde either one way or other to 69 passe over the faid Sound, & from the high land on the other fide, we should receive very good fatisfaction, if the weather continued faire and cleare as now it was, therefore we intended to make triall what we might do; but before we returned we went down to the point of the Beach, at the

entrance of the Sound, and there fet up a Croffe, and nailed a fixe pence thereon with the Kings The Kings entrance of the sound, we returned to our Shallops, and according to our late determination, armes are fee we sowed about the point of Red beach, and with many crooked windings amongst the Ice, at your wiches length we got ouer Wiches Sound (for fo it is now named.)

As soone as we were ouer on the other side, about two leagues from Red-beach, Master Baffin Wepassed oues and I clambred vp a very high hill, from whence we faw a point of land bearing East North-east, Wiever Sonad: by the ordinary Compasse eighteene or twentie leagues distant, as I supposed. Wee likewise saw another faire Sound to the Southwards of vs, which was much pettered with Ice, but we could

not fee the end of it. Here vpon the mountaine wee fet vp a Warelocke, and then came downe 80 againe with leffe labour, but more danger then we had in getting vp, by reason of the steepinesse We found thereof: then we walked to the shoare side, and there found many beach Finnes, whereby I con\_ Beach Fins. jectured that Mafter Marmaduter men in his first discouery, made in Anno 1612. had not beene wpon this land to learch the Beaches, for in all other places where we had beene heretofore, we could finde nothing at all. Now therefore we resolved to make further search along it this shoare; and to proceede with our Shallops fo farre as we possibly could : whereupon wee returned to our

men againe whom we left with our Shallops, where we first landed.

Having flayed here a while and observed the latitude which I found to be 79 degrees \$4.minutes, we faw a Shallop come rowing towards the extreamest point of this shoare, therefore we We met with nates, we liw a Stratop control to the who were therein, and found them to be Mafter Marmadukes men, Shallop. lately come from their ship the Hartf-eafe, which they said they left at Sea amongst the Ice, about 20 a league from Red Beach : here they were fetting vp a Croffe, which they faid that they found there fallen downe, and had beene formerly fet vp in the time of Mafter Marmadutes first difco- Note. uery, by one Laurence Prestwood, whose name I law thereon engrauen, with two or three names more, and it had the date of the feuenteenth of August 1612. Vpon this Crosse they nailed the

Kirigs Armes. Fiere we parted from them, and according to our former determination we proceeded, fome in the Shallops amongst the Ice, and others on shoare, till wee went about foure leagues further : in which space we found many more Finnes, and one paire of Morfes teeth, but now we found the Ice fo close packt together, that wee could not proceede any further with our Shallops : owherefore Mafter saffs and I intended to walke ouerland vnrill we should be better fatified how farre this Sound went in, for wee could as yet see no end of it, and it seemed to make a

fepara tion of the land; fo leaving our men here with the Shallops, wee travailed almost a league further; till we came to the point of a fandie beach, that thot into the Sound, which was wonderfully flored with drift Wood in great abundance. From this point we received fuch fatisfaction runy re orea want to the same we faw the end of the Sound which lies South in about ten leagues. It Theend of Sir hath in it a good harbour that is landlockt, and doubtleffeit is a good place for the Whale-killing Thomas Smiths if it be not every yeare as now it is peftered with Ice. Here I faw a more naturall earth and clay Inlet discoue. there any that a name seems in all the Commer, but nothing growing thereins on more then in other places. This Sound is that which formerly had and full retained the name of Sir Thomas 40 Smiths Inlet. then any that I have feene in all the Countr , but nothing growing thereupon more then in o- red.

Being thus fatisfied, we came backe againe to our Shallops, and feeing no way but one, we returned towards our Ship; but before we could get to Red-biash, there arole a very great storme Werenurned from the East North-east, after we had entered amongst the kee in Wichet Sound, so that we were Ships separated the one Shallop from the other, whereby our danger was the greater; for whiles wee Attormobe-

were both in company together, the one might have beene helpefull to the other when neede te- gan when we quired, and more caffe it feemed to faue them both, then being separated to keepe either of them were amongst from wracke; but God (who in his wonted mercie is ever ready to relieve the farthfull diffreffe.) Icc. did not onely so prouide that we met together againe, and indeede were helpefull the one to the other other wife I doubt the one Shallop had miscarried, for the was in great danger) but also deother cother was very hard to fhus, of the Ice, which it was very hard to fhus, of the Ice, 50 and at the length brought vs into an open Sea, where with as feant a faile as we could make, we

paft swiftly before the winde, the Sea comming divers times over the sternes of our Shallops, which wet our skinnes, that had scarse any dry cloathes on before to keepe them warme, by reason of a drizeling Snow which fell with the fforme : then we went abourd our Ship into the We came a-South harbour of Faire banen, the fift of August, with one hundred and fiftie Beach finnes, and one boord our ships paire of Morfes teeth, giuing thanks to God for his bleffing and mercifull deliverance.

ire of Morfes teeth, giving thanks to God for his blening and mercinal defluctance.

The Holland The ninth of August, two ships of the Hollanders, that were appointed for Northerne Discources.

Discources nery, were feene thwart of Faire Hanen, fayling to the Southwards.

The eleventh of August, we let sayle forth of Faire Hanen, the winde at South South-west, Our Ship 6c intending to make tryall, if yet the Ice would admit vs to have peffige to the Northwards or wenforthe the North-eaftwards. We held our courfe from Cape Barren, North-eaft and by Eaft, till feuen Sea. a clocked right, at which time having runne eight leagues from the shoare, wee met with the Kemet with the leagues from the shoare, which time having runne eight leagues from the shoare, when the with the leagues from the shoare, which is the shoare and the sho Lee which lay East and by South, and West and by North, and bore vp along this to the East- leagues from wards, for the winde was now come to the North North-west; then wee tackt about to the the shore,

We plyed off

Westwards, and plyed off and on close by the Ice, till the thirteenth day at mid-night, slill expecting a change of the weather, that we might have made some adventure amongst the shatterd and on the lee, for both on the twelfth and thirteenth day, the winde blew hard at North, and the weather was cold, thicke, and very winter-like with fall of fnow: this winde being focontraite, droue both the Ice and our thip to leswards towards the thoare, to that wee were forced to put into Harbour againe, and came to an Anchor the fourteenth day in the North Harbour of Wee anchored Fare Hauen, where the Fleet of Hollanders lately rid, at which time the Harrfoafe was there at

North Harbor.

Now was the Land both Mountaynes and Plaines wholly coursed with snow; so that almost all mens mindes were possessed with a desire of returning for England. But to prevent a sudden to refolution for a homeward Voyage without further satisfaction, I made motion that once againe we might goe forth with our shallops, to see what alteration there might bee found along it the fhoare. It fell out that I was to goe in one shallop for this purpose, so I tooke with me eight men. and went from our hip the fifteenth day of August.

I went to the Eastwards in a Ice was newly Point Defive.

We rowed to Red-cliffe Sound, where we passed through much Ice that was newly congealed Ice was newly frozen in Red being thicker then an halfe Crowne piece of filter, notwithfunding we broke way through it, and being ouer the Sound, we had a cleere Sea againe; then we proceeded to Red-beach, where finding the shoare cleere of Ice (which at my last being there was wonderfully peftered) I conceiued good hope to finde passage to the furthest Land from thence in sight, bearing East halfea point Southerly, nine, or ten leagues distant; to this end we put off from the shoare of Red beach, 20 and rowed a league and more in an open Sea, and then met with Ice which lay dispersed abroad, and was no hinderance to our proceeding, so that we continued rowing the space of sixe houres, in which time we had gotten more then halfe way ouer: but then we found the Ice to lye very thicke thronged together, fo that it caused vs much to alter our course, sometimes Southward and sometimes Northwards, and even in this time, when we thought wee stood in most need of cleere weather, it pleased God to send vs the contrary, for it beganne to snow very fast, which made the Ayre to thick that we could not fee to make choice of the most likely way for vs to paste, therefore I thought good to stay hereawhile, hoping that ere long the weather would be more agreeable to our purpole; so a Grapnell being laid forth vpon an lland off, to hold fattour shallop, a Tent was made of the shallops sayle to keepe the weather from vs, and we remayned 30 here five houres, but finding no alteration in the conftant weather, I willed the men to take downe the Tent, and with faire tearmes perswaded them, that notwithstanding the wet westher, it were good to be doing fomething, to get ouer to the defired shoare, where we might refresh our selues, and haue fire to dry our wet clothes; they seemed well content with this motion, and so we rowed the space of foure houres more, the Ice still causing vs to hold a South and South South-east course, which carried vs further into Sir Thomas Smiths Inlet, and put vs from

I could not

The thicke snowie weather continued all this time, which was very vncomfortable to vs all, but especially to the men that rowed; and as the snow was noysome to their bodies, so did it alio begin to aftonish their mindes, as I well perceived by their speeches, which proceeded upon 40 this occasion. The fnow having continued thus long, and falling vpon the smooth water, lay in fome places an inch thicke , being alreadie in the nature of an Ice compact, though not congealed, and hindred sometimes our shallops way; this I say caused some of them, not altogether without reason to say, that if it should now freeze as it did that night when we came out Redcliffe Sound, we should be in danger here to be frozen vp. How soener this search might bee a meanes to difcourage the reft, that considered not of such a thing till they had heard it fooken of: yet true it is, that I faw no likelihood, by reason of the Ice, how to attayne my defire at

the place where we wished to be.

this time, and therefore I bade them row toward the shoare of Red-beach againe, where I intended to flay till the weather might happily be more convenient. So holding a West North-west course, so necre as the Ice would fuffer vs, wee came to the East-fide of Red-beach, having beene 50 eighteene houres amongst the Ice, during all which time the snow sell, and as yet cealed not.

Ireturned to- ding as I went to make a more particular Discouerie of Bread-bay, and Red-cliffe Sound, hoping wards our thips that one place or other would afford fome thing worthy of the time and labour. When we were

come to the West side of Red-beach, it began to blow much wind, where withall the Sea growing to be great, all men aduised to passe over Broad-bay, whilst the winde and weather would ferue vs to fayle, for they faid it was like to be very foule weather : fo feeing that it was no conueniont time for coasting, we came ouer the Bay to Point Welcome (which I so named because it 60 is a place, where wee oftentimes refted, when wee went forth in our shallops) it is about foure leagues distant from the North end of Red beach.

When we had been here about an houre it began to cleere vp, and the wind to blow hard at East,

which rather packe the Ice close together in this place then difperfeit, so that I was now out of hope to get any further then I had beene alreadie : wherefore I returned toward our fhip, inten-

At this point the Hollanders had fet vp Prince Maurice his Armes, neere vnto a Croffe which I had caused to bee set vp aboue a moneth before, and had nayled a sixe pence thereon with the Kings Armes, but the men that were with me, went (without any such direction from mee) and pulled downe the faid Princes Armes, whill I was gone vp a Mountayne to looke into the Sea, if I could fee any Ice and when I came downe agains they told me, that the fix pence was taken from the Croffe that I had fet vp, and there was another post set by it, with the Hollander Armes made fast thereon, which they had pulled downe; so, because the fix pence was taken The Kings away, I caufed one to nayle the Kings Armes cast in Lead vpon the Crosse : which being done Armes are let we rowed to the bottome of Red-cliffe Sound, and as we coafted along it the shoare, we searched up agains at two little Beaches, which had fome wood on them, but nothing that we found of batter value. Point Welcome. o little Beaches, which had lome wood on them, but nothing that we want to be to be a within the Sound on the East fide there is an Harbour where hippermay and diffe

ride in good ground Land-lockt, but if other yeeres be like this, I cannot fay that it is an Har. Sound. 10 bour fitriff for thrps; because it is last ere the Sound breake vp; for even now there key much Iceat the bottome of it, infomuch, that I was forch to leave the shallop, because I coold not paffe with her for Ice, and walke two miles over Home Mountaynes, with another man inmy company, to bee farified concerning a point of Land that the into the Sound, whether it were an find of vid, as by all likelihood it feemed cobec bur when I came to the fartheft part of it. "Traw it joyne to the mayne Land, wherefore I called it Powe Deves, because it decei. Pow Deteit, ued mee formuch. From hence wee proceeded toward our shippe, and came aboord of her in the North Harbour of Faire Hauses , on Priday night being the hineteenth of August, where she

rid alone; for Mafter Marmadate was gone forth to Sea that day.

The two and twentieth of Angust, Tohn Major Master of the Gamaliell, came over from AWhale lay the South Harbour for helpe to hayle vp a Whale which had beene famke fourteene dayes, in funken fourone hundred and twentie fachome depth, or elfe to pull the Wurpe and Harping Iron out of her, teenedayes. for now it was time to take her or forfake her. Maiter Showin our Mafter caused our long Boate to bee manined and went with him; when they came where the Whale was funke, they Boate to be mainted and went-winted in the many of the

the shallop from the Eastwards, the weather hash beene commonly warme, and the Mount ther in the end 30 taynes were now more chere of Snow, then they had beene any sime this yeare, notwith of August. flanding there had much knowe fallen know the beginning of this moneth, but it was quite confirmed, and a greater figne of warmth and thaw was now to bee observed thest say time

of the yeere heretofore; namely, by the often falling of the Ice into the Sea from the huge Inowie bankes, making a noyfe like Thunder, fo that the time was very hopefull, but thus wee

made vie of occasion offered

The senen and twentieth of August, it was faire and grarme weather, calme till noone, We sersayle to then had were a gale of winde from the South South-well, wherewithall wer fer tayle on the Enfluence Februard, Februard in the Company of the Enfluence Februard, Februard in the Company of the Enfluence Februard, which when the beene in termer of confortation of the Enfluence Februard in the Company of the English was supported by the English of the Barris which bore from vs South-walkand by South I

Barret, which bore from we South-weithend by South. If the woman is the more warmen of the thorness of the proceeded this to the North-eastward, and on the eight and gwarmen day, in the thorness were had cume about twentie leagues from Cape Barrets in an East North-east way by the ordinary Compally, being open of Sir Thomas Sauth Index, pind of tenns triggies from the shoare; at which time wee were come to the Ice, that trended Eak South eaft) and Weft North-weft, but the Sea being very rough, wet flood off against from the Iee; in the afternoone The Thompson it fell calme, and at night we had a gale of winde at EaR, and the flip was fleered Weft, and then recumes for South-west homewards.

The nine and twentieth day, the winde Easterty an easie gate; at foure a clocky inches to noone Hankley to Hank level bore from we South east by East foure begins diffant; ) the East four

50 was very warme. The thirtiethday, the winde at North-east an easie gale; at four a blocke in the afternol Mundim Point bore East North-east halfe a Point Easterly about the bagges distant Total the Evening it fell calme, the weather not cold.

- The thirtieth day, faire Sunne-Shine weather and calme till noone, and then we had a good gale of winde from the North-eaft, being fue leaguet diffant from the Pore land, which bore South-eaft; now wee altered our course and from to the West-ward: therefore so keepe vs fill in the parallel that now were were in which was 79 degrees 8 nitiaures, Weft Northwest We flood to course was directed, in respect of the Variation, to make good a true West way.

This courie wee held till we had tunne about twentie leagues and then weersame twentie leagues more in a Welf, and by North courie till one a clocke on Friday more more in a welf, and by North courie till one a clocke on Friday more may a see which time it fell calme; and wee heard the Sea make a great noyle, as if wee had beens neere Land. but wee rather judged it to bee Ice, as indeed it proued to bee, for in the morning when it

England.

bore to dierod.

We left the

Ice and came

for England.

was light and cleere, wee faw the Ice about a league from vs, which trended Southerly, having now a gale at East North-east, wee steered away, South and South South-east, but in the afternoone we were embayed with a long banke of Ice, which wee could not weather, Wee mer with therefore wee were faine to tacke about, and the winde having come more Southerly then it was in the morning, wee flood off from the Ice North-east and North-east and by Northand then to the Southwards againe, making fundrie boardes to get forth to wind wards

The third day before moone, wee had fight against of Ice to Westwards of ve, and at moone were winder the parallel of 78. degrees 27. minutes, according to my Observation : then wee flood a way South to keepe cleere of the Ice, for wer had a great homing Sea, although but TO fittle winde; and therefore durft not be to bold to edge too neere it, especially the wind being Easterly as then it was.

On the fourth day our men faw the Ice agains from the mayne top-mast head, and therefore wee still maintayned a Southerly course ; the next day it began to be foggie, and continued close weather and hazie for three dayes, fo that wee had no more fight of the Ice; neyther could wee at this time receive any further fatisfaction concerning the fame : therefroe wee kept a Southerly course so neere as wee could, although wee had but little winde, and the fame very variable till the minth day, but then wee had a good gale of winds at West

On the tenth day beeing Saturday, wee were by my reckoning fiftie leagues diffant from 20 Low-foot, which bore from vs East South-east halfe a Point Southerly; this day the wind shifted to the South-west, and at night came to the South with much raine; then came backe against to the West North-west and began a great storme.

the West North-west and began a great storme.

This night the Master and others law a light vpon the Fore-bonnes, which the Saylers call a A Corpo Santo. Corpo Santo : it appeared like the flame of a Candle, and (as Sea-men observe) it alwayes prela-It is often feen geth an enthing florme; which to verific, this foule weather continued the next day, and grew to be fo wehement on Sunday night, that the Sea oftentimer pure-raked our thip, and wee were faine to lye arry with our fore course onely, and our Mayne top-mast also strucke, which last thing (as Seamen fay) is feldome done at Sea, then about one a clocke we were forced to take in

our fore courie, and to lye a-hull for fine hours.

The fourth day of October, the thippe came to Wapping with the whole number of men that ther carryed forth (my felfe excepted that was come before) being fixe and twenties all to a service of the angle of the angle of the service of the servi

by the CHAP . IVVI By no federal Character

A true report of a Poyage Anno 1 6 1 5. for Riscourge of Seas, Lands, and Hands, to the Northwards ; at it was performed by ROBART FOR HERRIE, IN & Pin. 40 naffe of twentie tunnes called the Richard of London: fet forthat the charge of the Right Werfhipfull Sir Two was Smith, Knight, my very good Mafter, and Mafter RICHARD WICHE, Governours: and the reft of the Worthipe full Company of Merchants, called the Merchants of New Trades and Discourries, trading into Moscouia, and King
I A M I S his New Land.

Y the proudence of Almightie God I went forth of Harmith Harbour in the forefaid Pinnafie, the twellth of May, in the company of eight hippier of the Fleet, for King Lames his New Land, who in foole weather out-layed the in the 50 Latitude 71. degrees, or thereabours. So I proceeded alone rowards King Lamis his New Land; and net with Ice in latitude 73. degrees 30, minutes, it food Northeaftwards for the waft of King Lames his New Land, and had Lindry conflicts with

the Ice in rainie and wet foggie weather, and had fight of Land the eleventh of Inne, and on the nineteenth of the fame I anchored in Faire Haven. Here I flayed till the third of July for the Pinnaffe had received some burt amongst the Ice, which to amend, I was faine to hale her aground, belides divers other things necessary to be done, which detayned mee longer then willingly I would have flayed there.

From hence Mayled Northward, but met with Ice in latitude 79. degrees 40, minutes, being fix leagues from Hacklents. Head land, then I coafted the Iceas it lay in Points and Bayes to the Well wards and South-wellward, and being thirtie leagues from the Land in laritude 19. degrees 10. minutes, I found it to trend Northward and North-westwards, and coasted it to the latitude

of 79. degrees 50. minutes, but then I was embayed with Ice, and was faine to fland out againe and failed aboue ten leagues before I got elecre : when I was out of this Bay, I proceeded South Westerly with the Ice on the starboard to the latitude 78. degrees 30, minutes, where being fortie leagues from the shoare, I was againe embayed with the Ice, and having had faire Perill and Sun-fhine weather all the day , which made mee the bolder to fland fo neere it , the weather escape, on a fudden fell foggie, and the wind beganne to blow hard at South, which put vs to great trouble and no small perill : but the Almightie power who hath mercitully delivered vs heretofore out of as great dangers, preferred vs alto from this : when wee were gotten cleare off the Ice. we had the Sea much growne, and the ftorme increasing, but beeing defirous still to keepe the Sea, I flood close by the wind vader a payre of coarfes, till the Pinnaffe waxt leake with bearing too much fayle, and there was forced to lye acry worder a mayne coarse only : and although shee ftemmed South-east and South-east by South, yet was she hurried violently to the North-eastwards, and by the mercifull prouidence of God we fell right with the Foresland, in latitude 79. degrees, then I flood ouer Sir Thomas Smiths Bay for harbour in Crafe-road, where I anchored the thirteenth of July being Thursday. I flayed here foure dayes, in which time my men mended the Sayles and ships tackling that had received burt by the late storme, and made a new mayne Sayle to ferue in time of need, and on the feuenteenth of July I weighed out of Crofferoad, and (ayling Westwards from thence came to Ice againe in latitude 78. degrees 40.minutes, which I coafted as it lay neerest South-well, or more Westerly, but with many Points & Bayes. 30 wherewith I was sometimes intangled, yet, God be thanked, got cleere againe, either by helpe of Oares or Sayles without any hurt. In this fort I proceeded with good facilifaction, although not with fo good content, till I came to the latitude of 76, degrees, beeing about one hundred leagues from Point Looke-om, but then was croffed with a contrarie forme from the South-well and South South-weft, which drove me to the South-eastward, till I came in the latitude of 74.

and some degrees, and then I made my way Weltward nguine, somere as I could lye, close by the wind-and outer-rance the formerly supported Land of Cirymand, which some hause lynd down in plats Brand and extended to 75, degrees. When I came i must be lattitude of 73, degrees, I shood Wer find Grand. North-west, and fell with Ice agains in latitude 73. degrees 50. minutes, and thought indeed at that time that I was neere Land by abundance of Fowle, which we faw in great flockes : but Fogges fuch thicke forces have continued for three or foure dayes together, that we might fooner heare 3C the Land if anywere, then fee it, and fo did we first find this Ice by hearing the rur, thinking till we faw it that it had beene Land so that we were embayed with it, before we thought that we

had beene neere it; then I flood out agains and coafted the Ice ftill to the Westwards Southerly, but could fee no Land, as I expedied to have done, vatill wee came under the latitude of 71. degrees thirtie minutes, and then we efpyed a fnowie Hill very high in the cloudes, for this day High Hill. was very cleere at Sea, but the fogge was not yet cleered from the Land, fo that we could fee no part of it, but only the top of a mowie Mountayne, which appeared very high although wee were four teens or fifteens leagues diftant from it, bearing off vs South-east and by South.

Then I flood in for the shoare, supposing it had beene part of the Mayne of Groynland: for the fogge lay on each fide of this Mount, as if there had beene a great Continent under it, but it proued otherwise, for as we came neerer to it, the fogge dispersed more and more, and when wee

were fine leagues diffant, the Land appeared in forme like an Iland.
When I came neerer the shore, I could find no Harbor to anchor in Notwithstanding, the weather being faire & calme, I house out my Boat & went alhore with three men more, and fet up the Kings Armes: then we fearched a Sandie Beach, which was abundantly flored with drift wood, Drift wood, but weelded no other fruits, that we could find worth the taking up, fo I returned abourd againe, and fent alhoare my Boat to fetch fome wood. But before the men had laid into her the little quantitie that the was able to carrie, they came aboard againe, for the wind began to blow hard, and the Sea to goe loftie, fo that here was no place for vs to abide any longer, otherwife I was

purposed to have searched further alongst the shoare, but this gale of whale comming Northerly i stood from hence to the Westwards, being defirous to see more Land or finde a more open Sea. And having fayled about fifteene or fixteene leagues I met with Ice again, in fatitude 71 degrees, and coafted it eight or nine leagues further Weftward and South-weftward as it lay, but then the wind came to the South-west, and we stood close by it a white to the Southwards, but finding the gale to increase, and confidering that it was the most contrary while which could blow a: gainst my further proceeding (for the Ice as we found distorted neerest South-west, and besides if there had beene any high Land within twentie leagues of vs, wee might perfectly have made it, the weather was so faire and cleere.) In these respects, and for the Realins following, I cooke ic, the weather was to raire and decree-plantage to propose the penetit of this wind to returne to the North-eathwards againe; being now about two hundred 60 dred leagues from King Lames his New Land in latitude 71. degrees.

First. I purposed to tayle along it the South-east side of the Land that I had discouted, to bee better fatisfied what Harbours there were, and what likelihood of profit to enfire; and from thence to proceed to the place where I first fell with Ice in latitude 72, degrees when I was driuen to the South-eastwards with a Westerly storme, for I am yet verily perfwaded, that being

there we were not farre from Land, although wee could not fee it by reason of thicke foggie weather. Then my aurther intent was, if I found no good occasion to ipend my time there, for to coast the Ice, or try the open Sea to the Northwards, betwirt 73. and 76. degrees, where formerly I had not received defired fatisfaction by reason of a storme that draue me off, and then I purposed, if time might seeme convenient, to proceed to the North Coast of King James his New Land, to have seene what hope was there tobe has for passage Northward, or for compass fing of the Land, which is most like to be an Iland.

I stood away East and by South, and being neere the forefaid Hand, the winde came to the West and blew a very hard gale, where with I passed alongst the South-east side of the Hand vnader a paire of coarses, but without that satisfaction which I expected ; for the winde blowing so Io flormie, and the Sea growne very great, I was forced to stand further from the shoare then willinely I would have done, and besides there was a thicke fogge vpon the Land, whereby I could not be fatisfied what Harbours or Roads were about it, yet might we fee three or foure Capes, or Head-lands, as if there went in Bayes betwixt them. I fayled about it, and then stood to the Northward againe, and being now affured that it was an fland, I named it Sir Thomas Smiths Hand.

Six T. Smiths

Mount Hack-

This Iland is about ten leagues in length, and stretcheth North-east and South-west: it is high Land, and at the North end of it there is a Mountayne of a wonderfull height and bigneffe, all couered with Snow, which I called Mount Hack/wyt; the base or foot of it on the East fide is almost four e leagues long, it hath three such files at the base lying out to the Sea, and from 20 the fourth fide doch the rest of the Hand extend it selfe towards the South-west, which is also. as it were, a place fortified with Castles and Bulwarkes, for or each side there bee three or foure high Rockes which fland out from the Land, appearing like Towies and Forts. It lyes in the parallel of 71. degrees, where the N-edle varieth from the true Meridian Westwards eight degrees. The Land is generally so farre as I have seene, Rockie and very barren, and worse then the Land that I have feene in King lawer his New Land, under eightie degrees, for there is no grafte but mosse, and where I first landed upon low ground, all the stones were like unto a Smiths sinders both in colour and forme, the fand is generally mixed with a corne like Amber; the Beaches are abundantly stored with drift wood and many stones, light like Pumis, which will swimme on the water, I saw many traces of Foxes and the footing of Beares, but not any figne of Deere or other living creatures, and very small store of Fowle.

From hence I flood to the Northward according to my former purpose, but was croffed with a contrarie florme from the North. west which put me off to the Eastward: but as the wind shifted I made my way to the North-westwards all I could, and came againe to the Ice in latitude 75. degrees, from whence I proceeded towards King lames his New Land, and had fight of the Land the eighteenth of August, being in latitude 77. degrees 30. minutes, and having a hard gale of wind then at North-west, I stood close by it under a paire of coarses, but could not weather Prince Charles Iland, and therefore I bore vp, intending to goe into Nicks Come, which is on the North fide of Ice-found, there to attend a faire winde, and in the meane time to get ballaft aboard the Pinnaffe, and all other things necessary. But comming to enter into the Harbour, I 40. thought it not a place convenient, because I could hardly have gotten out agains with a Southerly wind, which would carrie me to the Northwards, and therefore I stood ouer for Green-harbor, where I anchored at one a clocke in the morning, the nineteenth of August,

Here I caused my men to launch a shallop, and to get ballast and water aboard the Pinnasse and before nine a clocke at night I was readie to proceed Northward with the first faire winde, I flayed here fine dayes, during which time it blew hard for the most part at North and Northwest, and on the sourcand twentieth of August, the winde came to the East North-east as wee supposed, till we were out of the Harbour, so I set sayle to proceed Northward, and had the wind Eafterly out of Ice-found, wherewith I stood North-west towards Cape Cold, but being cleere of the high Land, we found the wind to bee at North North-east; therefore I refolued of ano- 50 ther courie, which was this.

Hauring peruted Hudfons Iournall written by his owns hand in that Voyage wherein hee had with hepe que. fight of certayne Land, which he named Hold with hope; I found that by his owne reckoning it floned as be. should not be more then one hundred leagues distant from King James his New Land, and in the latitude of 72. degrees 30. minutes or thereabouts: therefore feeing I could not proceed Northward, I purposed to goe to the South-westwards to have fight of this Land, and discouer it, if wind and weather would permit. So I flood away South-west, and sometimes West Southwest, till I had runne one hundred and thirtie leagues, and was by account in latitude 72. degrees 30, minutes, where having the wind contrarie to proceed further Westward, I stood Eastward till I had runne thirtie leagues, in which course I should have seene this Land, if credit might be 60 given to Hudfour Journall, but I faw not any. And having a hard gale of winde still Northerly, I conceined no course so good to be taken at this time, as to speed homewards; and so stood to the Southwards, directing my courie for England, this beeing the eight and ewentieth of August. After which time the wind continued Northerly till the fixt day of September, and then wee

CHAP. 7. Fotherbyes opinion and aduice. King of Denmarks (hips.

were on the coast of Seotland in latitude 57. degrees, and on the eight day of September had fight of the land of England on the coaft of Torkelbire. Thus by the great mercy of God have we elcaped many dangers, and after a cold Summer have fome tafte of a warme Autumne. All glorie therefore be to God the Father, the Sonne, and the Holy Ghoft. Amen.

B; this briefe Relation, and by the plat wherein I have traced the ships way vpon each fenerall trauerfe it may plainly appeare, how farre the state of this Sea is discourred betwixt 80. and 71. degrees of latitude, making difference of longitude 26 degrees from the Meridian of Hack-

luyes Headland.

Now it any demand my opinion concerning hope of a passage to bee found in those Seas : I To answer, that it is true, that I both hoped and much desired to have passed further then I did , but was hindred with Ice: wherein although I have not attayned my defire, yet for a fruch as it appeares not yet to the contrarie, but that there is a spacious Sea betwint Groinland and King Iames his New land, although much pettered with Ice; I will not feeme to diffwade this worflipfull Companie from the yeerly adventuring of 150. or 200. pounds at the most, fill some further discouerie be made of the faid Seas and Lands adjacent, for which purpose no other Velfell would I aduife vnto, then this Pinnaffe with ten men, which I hold to bee most convenient for that action , although heretofore I conceined otherwife, but now I speake after good experience, having fayled in her out and in aboue two thousand leagues.

Ro. Fothersy.

A Letter of Robert Fotherby to Captaine Enge, written in Croffe-rode, Iuly 15: 1615.

Miler Edge. By the mercy of God I came into Crosse-road on Thursday lait, being drinten

Me from Sea necre phase of pextreme temposs. At the beginning of the storm to me was unwittingly esbed to God it in the storm to the st fes to and againe so long till my Pinnasse was made leake with bearing, I tryed it under a mayne coarse and fem'd South-east and South-east and by South, notwithstanding I was burried to the Northward, and fell right with the Forcland, which by reason of the until florms we could not fee till we were within a largue of it; then I flood oner the Bay and came to an anchor here, where I must be forced to stay till one trague of n; cote 1 processor to any amount of mount of the course of the course of mount of the course of the made, if not a fore config. In Ton 1 propels to go at 10 stages, and to proceed in costing the lees to the Willows d, if a binder me to proceed Northward. I have a decay confied it from Hackluyes Headland to the latitude aforefaid, and intend to beginne agains fo meare as I can at the place where I was put off with the storme. I came from Paire Hauen the fourth of Inly, and then had there beene killed twelme Whales, besides one found dead, and another brought in by 40 Fra. Birkes, which he found at Sea before be came into Faire Hauen.

When I came in buber, here were three Ships and a Pinnasse of the Kong of Denmarks; they rid in Ships of the When I came in buber, here were three Ships of the deep water about a league and a halfa from the Raad, but weighed from themee, and the Admirall came in or Design and the Admiral Came marks. to an auchor close by me, and sent to intreat me to come abourd of him; I went abourd and was contteously entertayned by the Generall, who questioned one of the Country, and asked one by what right the English Merchants dudresort and sish in this place: I told hims, by the King of Englands right, who bal granted a Patent to the Mulcouie Company of Merchants , whereby he authorizeth them, and forbiadeth all others to frequent these places. Then be entreated me to goe with him to Sir Tho, Smiths Bay, to the two Engl in forps there. I told him, it would be loffe of time to me, because I had some businesse here to dae, and the sto goe forth presently to Sea agains to prosecute my Discourry. He faid, that he would 50 hause me goe with him to be witnesse what passed betwirt him and you, for he had matters of importance to acquaint you withall, which concerned our King and theirs, and therefore intreated me to give direction

presently to weigh and set saile, for I must needs goe with him: I replyed againe, that it would be a great losse unto me of time, and I knew not how to answer it; but be told me peremptorily that I must goe with bim. So feeing no remedie. I had the Master be readie: then he presently weighed and kept me aboord him, but afterwards meeting with the two Captaines that came from you, be returned and anchored againe in Croffe-road. I received very courieous entertayment of the Admirall, Vice-admirall, and of Captaine Killingham: but Captaine Killingham being abourd of me, went away as be seemed, discontented, because I would not give him a young Morse I have abourd, which I denyed to doe, because I writ to my Master from Farte Haven, that such a thing I have, and will bring alme into England, if I may. So. When he went off aboord of me, he faid, he would shoot downe my stag: And some after there came a shoe which five ouer vs. out of the Admirall, and I expetted another; but some after there came a man aboord of me out of the Admirall, to fee if any of your men that came in the Shallop, would goe with them into the Bay, and he swore unto me that the shot was made to call their Boat aboord, because they were

ready to weigh. As farre as I can perceine, their purpose is to see what Grant the King of England bath

made vmo the Companie, for they freme to presend that the right of this Lond belongs to the King of Demmatic, and neither to English nor Hollanders. Thus with my heartic commendations to your felly, and Adafter Bredcake, sogither with my product for your profession veryage, I commit you

Diners other Voyages to Greenland, with Letters of those which were there employed, communicated to mee by Master WILLIAM HELEY.

An. 1616. Edges lland was discourred, and a prosperous voyage was made, all the ships being laden, under the command of Captaine Thomas Edge. An. 1617. Witches lland was discourred; and what voyage was made appeareth in the Letter following, written to Master Decree by William Edge.

Laus Deo, in Portnick the 12. of August, 1617.

Worshipfull Sir,

T dutie remembred, May it please you to understand, that through Gods blessing own Foyage is perspressed in all the Harbows in the Countrie this yeare, with a greater outplus them on Joya will carry; a that in some places wee must of force leave good some following to the contribution of the contribution of the wear year. We are all for the may be must year. We are all for the may be must year. We have a feel for the may be must year the second of the second o

whereby one provisions may be left in securitie. We tooke a lips of Fluthing, called the Noalts Arke (Master, John Verlile) in Horne-Gound, busing one of hom two hundred hopfeesd of Blubber, and we so veheles and bally to cat or yet a Copper, and disers other provisions, and four 50 him same halfed with stime. There were two more of them who were gone taken with Blubber, before we could get thin their housing intelligence of our comming, There were self now Dance, who made one boundred and olde tumous of Oile, and laded we log for Coppen haven, the other with bally the Other and Fames for Amalter Cudner, be rid in Portnick, where he killed element balls, and made some function and olde tumous of Oile, which is laden aboved him and his Finnes. In whom, if our ship had the times of Amalter Cudner, be rid in Portnick, where he killed element balls, and made some function and other times. In whom, if our ship had done recyclive thinter at despread, I would have laden spring our silver a stiff to the company and he is such as the stiff of the stiff of the strength of the week of the strength of the strengt

The whole kilds this years in the Country are about one hundred and fiftie in number, and the Opte made will be about one thoughout eight hundred and adde tames, before the blubber left for uses of cade. The lading of this lips a one hundred and eights tames, a by the Bild of Ladin here excepted. Thus having not further observable to acquaint your Worlpy, without praying God to fend all home on fofery with a good plage; I handhof take my learn, and deer visit.

Readie at your Worships command in all dutifull feruice.

WILLIAM HELEY.

A Letter of Master ROBERT SALMON to Master SHERWIN.
In Sir THOMAS SMITHES Boy, the
24. of lune, 1618.

Oning freend Mafter Sherwine, I kindly selate you, wishing you as much proficing at state my life, &c. Since our comming into the Bay, we have been much troubled with ice and Northerly winder, fo as we have not beene swo dayes free of lee. We had a forme Northerly which brought in much Ice, fo as we were inclosed withall eight dayes : there went fach a Sea in the Ice that did beate our flips 10 very much for foure and twentie boures, that I did thinks we fronted base fooled our forps: but I sharks God we cannot perceine any burt at all it bath done to us; also we have broken two anchors much the lee; we have killed threeene Waster; but they yould but little, in regard of the Ice which heath much hindred us in the works, for in tendage, we could not doe any works the Baymas fo full of ice : the Bay man full as me are recognized to the second secon fing; and they die man out eighteene Shallops, fo that with theirs and ours here is thirtie Shallops in the pay; and the many for us to make a veyage: there is at the least fifteene bundred tunnes of shipping of the 20 Flemmings; we have reasonable good quarter with them, for we are merry abourd of them, and they of vi; they have good flore of Sacks and are very kinde to vi, profering vi any thing that we want. I am very doubtfull of making a voyage this yeare, yet I hope Croffe-road will helpe us for one fip, the Company must take another course the next yeare : if they meane to make any benefit of this Country, they runsi fend better firps that must beat these knaues out of this Country , but as farre as I can understand by them, they meane to make a trade of continuance of it : they have every one of them Grave Maurices Commission under his Hand and Seale : we will let them rest this yeere, and let who will take care the next yeers, for I hope not to trouble them. I pray remember my dutie to the Captaine, and allo to bonest Master Thornbush , and to Iohn Martin; Master Smith doth remember his lone to you, and to all exafter 1 tottooms, some routh exacting, example, multi-town remember on over to year, and is all the rife of the friends: we are well at this prefere, I thanks God ! I pray let us hear of promy say when you have any companies appeared: I hope were finall got home in companies operation at wee came out. Thus with my laue once againe remembred to yea, beforehing God to fend us all a presiperous veryage, and infailly to 30 meet , I rest.

## A Letter of Master TH. SHERWIN: Bell-Sound this 29. of Iune, 1618.

M. After William Heley, your Letter I received, wherein, I guderfland you have tooky very great that I griefs, which I am our fort for his I am me good hope to come to you my felfe one of the fedgres, that I may comfort you with a good complet Hennes and shotted of Canary wine, but I gran because the good to the state of your felfe and keys you warms, and take break the Nadu doe not pick, out your eyes: hus as for the of Hennings for them all you have the word with the words are to good for them, the time may came you may be recurring to mediat with the Captaine willess they would come all some the time may came you may be recurring on them againe. The captaine willess they would come all some the time may came you may be recurring to the Holland; but you for the word in the come of the words and the control of the words of the time they for the state of them to the comety. Here came in two Flemmings, how we handled them very homefly the first for fearer of father-claps, or had it been the latter part of the years, we would shake handled them between the companies of the state part of the years, we would shake handled them for growing on their heads, as is in that Country. At exacerning our copying, Mattler's Ilmon can certified you show the Horne-Cound, and it now hobbors. Affect would be the the part of the year of the years, and will now home and it was hobbors. Affect because the Causey, how we have pulled downs the Hermith houle, and stought is never more we folk all those the Scawy, how we have pulled downs the Hermith houle, and stought is never more we folk all the base characteristics. Then promy your is 70 ross voyage, with all your good beaths, that we may ge mentry the home tagether.

# A Letter of I AMES BEVERSHAM to Master HELEY. From Faire-haven, the 12. of July, 1618.

Mafier Heley, Ma commendations remembred to your felfe, Master Salmon, Mafier Smith, and Mafier Beymond, as also to Mafier Wilkerton, Mast Headland, Mafier Ground of an abstract of our good freiend with you, willowing all your bealts as my owners. I must you forty to the deriflent of the amonganees by the Flemmings, both with you and other places; a salf of the final buser better is, in watering a worsige this yeter. For our parts we are and bouse beens to perfect with I ce thefethere is, in whaten a worsige this yeter. For our parts we are and bouse beens to perfect with I ce thefethere is, in whaten to be the abstract when the work of the work of the control of the work of the wo

one Whale in all that time, which after sheemas killed turned os to much trouble, by reason of soule westher, and forced us at last to leave her in the Ice, where the Beares made a prey of her, who I feare will sporte her before shee be recoursed. We have killed six teens Whales besides, whereof the Flemmish Biscai-Let folcone, for which they have promised saturation, but they are so shut up with Ice that they are not able to store either Ships or Shallops. All the Sea to the Northward of Hakluyts headland, and both Eastmand and Westward thereof, is packt so full of Ice, that I feare it will overthrow our very age, and preour ship; in much bazard, the Lord release us of that miserie in due time. I neither have no will be sack one from mome vacant, we want a way of the major will not fact, to do do my for discharge of the major will not fact of the major will not fact of the major of the major of the fact of the major of the majo southward, with my commendations to all the rest of our friends; thus for prosent walking your health, 10

I kindly take my lease, and rest your loung friend.

I had thought to have added a large Discourse of occurrents betwire the Dateb and Engish in Greenland this 1618. and had prepared it to the Preffe. But having alreading given fome Relation thereof from Captaine Edge &cc. and feeing the infolencies of fome of the Dutch were intolerable to English ipirits, which then fuffered, or hereafter should reade them; I chose rather to passe them by; adulting my Countrimen not to impute to that Nation what some frothy spirit yothem by; acuting my Constitute in the Computer Country in the from a midth his drinke, but to honor the Hollander's worth, and to acknowledge the glorie of the Confederate Provinces, how soever they also have their finks and slinking sewers (too officious mouthes, fuch as some in this businesse of Greenland, beyond all names of impudence against his Maiestie, and his Leege people, as others cliewhere have demeaned themselues) whose lothion: = 20 nesse is not to be cast as an aspersion to that industrious and illustrious Nation. Every Body hat h its excrements, euery great House its Vault or Iakes, euery Citie some Port exquiline and dunghils, every Campe the baggage; the World it selfe a Hell : and so hath every Nation the retriments, scumme, dregs, rascalitie, intempered, diftempered spirits, which not fearing God nor reverencing Man, spare not to spue out that to the dishonor of both, which faving the honor of both can scarsly be related after them. A difference is to be made of relation and personall faults, of which we have faid enough in the East India quarrels, twixt ours and the Dutes.

#### A Letter of IOHN CHAMBERS to W. HELEY, Bel-found Iune 16. 1619.

Oning and approved good friend, Master William Heley, &c. I am fore's to write in teares unta a you for the loffe of our Men, by the most uncouth accident that ever be fell unto poore men. The thir-Terrible of lune lass we were past assore in the Ice Bay, our Shallops being not abourd : but as some as wee

Terrible Ditbeard of it, we made what haste we could, and haled our shallops upon the Ice, and wens abourd our ship. board of e, we made what taylor we could wan based our fooding vom the loc, and went aboved our flip;
By that time we had been there on boar making what measure we could so get from an, a makes peace of
the Cliffe falling, the frantfall of fight that ever I beheld being then abound, expelling nothing eith but
death, with all the refl that were in her: But God of his great more and promitence delivered up, that
were not then appointed to dp., that were past all boye of flip; for the lex full fibries and for much, that it
were not then appointed to dp., that were past all boye of flip; for the lex full fibries and from the accurate
that five boards a piece of Ordanace our-board from under our halfs Deck; how me were board amongs? the Ice in all the fea, and get I thanke the Lord I was never burt with a piece of Ice, although it pleafed God they were footled and killed close by me. Thus having related unto you the miserie of this our Voyage. sout toy were popies and steastiff or me, a own coming returns own you to migres of this set V 1946, but not opping of your and and affiliared without you find the cut of the Captaine bid me write vate you for a fine into Hafer, which I pray you fare me and a to possible: I beau writ the particular of our wants in my Brother Sherwins Letter, which I pray you be a meanest to further me in. Thus ceasing any further to trouble you, I commit you unto the Lard, outo whom I pray to blesse and profper you in this your prefent Voyage, wish all thereft of your dayes.

> The men that are killed are these: My Mate Money, Nicholas Greene and Allin the Butcher. There be many more hurt which I hope will recouse it by the helpe of God and the meanes of a good Surgeon.

Owing friend Master Heley, I kindely falute you, Oc. Your Letter I receined the fifth of this pre-Lifent: wherein I understand of the backwarduesse of your Voyage, the which I am hartily sorrie for : but you must be content, seeing at is the will of God it shalloe so, and that other harbows take neighbours fare with you : our best hopes of our Uoyage was open you for of our selves we doe little, in regard we are much troubled with see, and have hin so this ten dayes, which hath made us hale assoure sixe or season 60 times for it: we have had the windes at North-east, and East North-east, and at North west, which now keepes in the lee: we have killed ten Whales, whereof eight are made into Oyle, which hath made one bundred and cleanen Tuns of a balfe the other two were killed the fourth of this present, being very large fift,

not doubting but they will make fixe and thirtse or fortie tunnes: we have the bundred tunnes abourd, the no assuming we have the state in, our ogard Maffer Buther, hope is not fitted up, no shall make bor fore-rest Master Barker taketh in, our ogard Masser Buther, hope is not sitted up, no shall make bor fore-wall to form against and all things offe for this Voyage. The fourth of this present, George Winelden came from Horne-found, where they have killed foure Whales, they have him much troubled with windes Easterby, alfo much Ice, there is fo much Ice off of Point Looke out, that George could not get about. Estre 17, my This Lee bath put in young Duke of Hull into Horne-found, his flip being much tome with the leabis Merchantis now about of vs., his name is Medcafe, whom the Captaine dath detains, his Voyage is vs. terly ouerthrowne, for be bath loft one shallop with fixe men, and another shallop broken with the Ice, his Ruther trons being all broken, his Steeme broke a way close to the Woodings, also George did mente with To a Fleming of Fluthing, burthen two bundred tuns, the which be thinkes to cafe away with les, for the lee did beate ber very fore. I understand by M. Catchers Letter, that there is cleanen faile of Flemmings and Danes about them, I doubt not but we final call them to account of how many tunnes of Oyle they have made, as they did call ut the last Voyage to account : my lone is such unto them, that I protest I could wish made, as very one can vive topy or organ in account; improve 1) new me to meet, next a pretent 1 count on the with damp bears that we might got and fee them, and to flowed by the folionis in the rybeing of one or mer very 1, 10 feel of workers worth of Konett Kone, that A irian of Flinking is one of them. I bented by the other Konet, that A irian of Flinking is one of them. I bented by the very very 1, 10 feel of workers were the country of the very very 1, 10 feel of workers with the very very 1, 10 feel of which we will be the country of the very large that the very very 1 feel of which we will be the very large that 77 glad to fee him, that I mught believe the account with him. The Captaine willed meeto write vinto you oncerning the Russe bonse, that if you cannot set it op, that then you should make an English bonse of it, and to place the post of a Deales length, and to be three Deales in length, and so much in breadth, and so to cover it with Deales the next yeare, and so he thinketh that it will make two frames : also hee 20 could was that you would remone the Coppers more up into the Bay. I pray you commend me to my lowing friend Master Sherwine, Master Wilkinson, Master Henderson and Michael Greene; allo my lous press craster out the configuration of the configur

Your affored friend to command ROBERT SALKON Innier.

A Letter of I. CAT che a to Master Helet from Faire-hauen. Laus Des, this feuenteenth of Tune 1620.

Oning Brober, with my helf loue I faine you, willhalf on better then we at this time, to have good Litore of whales to make for you and vs of ryage, for we time fewer half flore of whales, but have killed more ayes. In the Flemith hardown there is three Flemith gifted; hopes, whereof is one Staterman of Farre, who have for to See eighteene hollogy with these Flemith embeds felling; and ho our hardown who was for See eighteene hollogy with those Flemith embeds felling; and ho our hardown to the Karge of Demmarkee floring, who have for so Shi fement hallow with three slifetimers in energy hallogs the Vollanders have killed one whale, and found time whale of the Lat years talking. I thoughe good to fend to you the fower, because we hope you have good force of which; that you may fend 40 for vi von which for you can you which for you can you which for you can you would not for you can you which for you was now you got a first that you we now you premided to fend for vi, we have a great time to flay in this Countrie on which time, it may so please God, that we may here make a Voyage. For ome felter, now your mess is dead, and one select fiels, to be the hear but we shall be made in which is too little at you know, therefore if you can fiare or three more, they will fland vs in good fload: if our Voyage commestib in, there is to the Northward good store of les which putieth us in good comfort that we fhall baue Whalet : the Danes de report that there is two hipper to come from Denmarke to our barbour, but as yet are not come. I pray you commend vs to Master Wilkinfon, Master Greene, Mafter Hedlam, Mafter Cleyborne, Master Alpho, and all the reft of our good friends. Humfrey Moore is very ficke, fo that we shall want a Harponiere. I know not what to write more to you, for with griefe I write this. Thus kindely taking my lease, befeething God to bieffe so ve , and fend us a good Voyage, with a merry meeting, I reft

Your louing brother to vie IOHN CATCHER.

### A Letter of ROBERT SALMON from Sir THOMAS SMITH'S Bay, Inly 6. 1621.

Oning friend Master Heley mithus loue I salme you over. These were certifie you, that upon the Colfficents of the last, we arrived as Sir Thomas Smiths unsersumate Bay: succe which time we have a precent of the land, which are almost reduced into Oyle, being some seventic tunnes or somewhat more; so within a day or two we may gee sleepe, for I feare we have our portion of Whales in this place : wee have witten a say or two we may gee peeper, in a low we want of the say the best bless for two dates together we feen a Whale this furcteem dayes, and faire weather is as femfe as the Whales for two dates together wellow for the bin formetime Southerly and sometime Northerly: I doe verily per suade my selfe that making but bless, sometime Southerly and sometime Northerly: I doe verily per suade my selfe that 736

Your louing friend to command ROBERT SALMON IM.

Nine Ships were imployed Anne 1622, of which one for Discourie. Their disaftrous successyou may reade before, page 469. The last Fleete Anno 1623. was fet forth by the former Adventurers, valer the command of Captaine William Goodlard, William Heley being Vice-admirall, Of the successe thereof you may read the Letters following,

#### Lans Dee in Faire-Haven, the foure and twentieth of June, 1623.

Meller Heley, sour bestilt wished, as also a happy accomplishment of your presented V yage defi-red. I had written you according to order, of all matters happening since our arrival, had not contrarie winder and weather presented, and therefore have taken the first opportunitie offering a

pryen.
We arrined at our harbonr with both our Ships in (aftis upon the shird of this prefens helifed be God,
finding the year spaft to home become a write hard fadfon, in regard of the great quantities of Somo and Les,
to the stan to very disquise to us in replected our second harbour. Tenching our proceeding upon our Foy-30
age, by the eight of this prefens we had killed thirscens Whates, and then were all our Salanja confirmi. need to great of the paper we commented the fifteenth older, and upon the fifteenth we think the some made by regarding the fifteenth we think the some which the fifteenth we think the some which the fifteenth of the fifteenth older and then fitteenth will be and made past eight Tamers, which is a very final quantitie. The weather continued had till the overtic two, dicto, and upon the three us a very final quastites. The weather continuous and the true experience two, cloco, and upon too times and twentieth we blight here may which by productifits well made never fortie Tumers. And these wes drudt met that by degrees we had accompath one Vigages by the great of God.

At coaching one under for the Hermanings, was went as reterral about them. Supposing that we

Bould have found the Dares there, but they are ust as yet arrived, but wee found there fue failes of Flemmings, the Admirall fue bundred Tunner, the Vice-admirall of the fune burthen, the other three were two bounded each blop hains a small for vice-summate of the same owniters, no enter twee were two bounded each blop hains also fifte or fixing per out among them, having four and twente the Shallogs belonging to their fine Steps, and are building Houfer and Advancate to thembout for they make new and fubilisations, also they told or, they expected one or two Shay some events day; after fame time we had conference concerning the order given vs with the Generall Cornelius Ice, and declared water him are use conjective to fifth speaking lames his New Land was expired, and therespondis that the time granted them to fifth speaking lames his New Land was expired, and theresponds Maistire bath granted to our Principals a Commission under the broad Scale of England for the depres-Acadesive actor granulas our crimiquata a communicar vinue sou transactura y cauquamo, er ten entris-fine of any lacetoper or Hemming wholeheme that we follow more wholeh of your thic Constit yet institution transing it fields are Principals to appoint vit to graceboordatum, and in a fine of moment to inform them berry, Workshifty you will considered vinue and defit filting, you find manifelt; your filtest friends to our Principals; if otherwife, you find considered view to compelled fivery with tools reacher pripale by folice. Vita which be anjured, that he beard in a ficial nation in 1001 land, for it here were, it fould be certified by writing to which we suffered, that Ser Novel Carroon their Agent was an ignorant if it, who straid give information: and fast be, I have a Commission from the Prince of Orange, for the making of my Voyage upon this Coast, which was procured by my Merchants for my defence: and this is that could be gotten by words from bim.

Alfa at on Pirk arriad, here rade two Birkie shippes with the Flemming, but within a day or two
they were and flood for the Sauthward; but inquired of the Flemmings when you they were bound for,
they assured, for the North Cape; but Master Maston is personaded they are at Greene-harbout: to toy da pure a, for the version e.g.; one present many in prepriation were as decent relational, in which purple if warmes to Malier Catchet, that he gives order to his libella face to Bell-bound, to Hood in for the barbour, to give the Capsain true information. And if for prefact it fits, intrasting you to remember me to Malier Silmon and Malier John Hadland; and thus controlling my failes, left she 50 winds of my words carrie me into the Ocean of distante, bere lanchor: retting

CHAP.8: Peter Goodlard drowned, Difference of Whales.

Mafter CATCHERS Letter the nine and twentieth of June, 1623.

Benter Heley, with my helf lease I falues you, wishing sign bealth with a prosperous Vryage, che. Since on despitiers, we have had much found weighter and troubled with less before we could get use barrows differ we come with the how. We never helf all actions, by ready of the less ill the interaction of the mounts, or which times we telled fixes translated at the Fore-land, which made has eighteene Times and a halfe, to and fince we have killed fixe Whales more, which I hope will make in all upwards of eightie Tunnes. We base fit nine Shallops verie well, and I thanke God not one of our Men faileth, save one that was shot ashave fit time Shalips were well, and a transfe cira not one of our Men faiths, line our that was lost ac-cidentally wish a Mariet. I hope from of juk Shalipse haborisy will papply our mount; of there is any which from three will: our barbour, mount for fill, it is upplifted to make a France, by reason that the Flemmings for a bland law of which play Gedwick who flatter from or. For Faire haten, it doubtes to be the flow of the law of the faire from you of the proceedings; but Malier Shepvin, print, that there is flow the mining of the faire from you of the proceedings; but Malier Shepvin, print, that there is flow the mining of the fair the fair of the print of the Williams which the En-Cape; but I thinke they are in Greene-harbour, or gone to the Eastward; which if they be in Greene-harbour, our Shallop going to Bel-found field touch there to fee, and so certifie the Captaine, and know his will what he would have done in it : I hold it not fit that they found harbour there. There are no Danes in the Countrie as yet, Oc.

#### Captaine WILLIAM GOODLARD's Letter : Bell-found this eight of July, 1623.

Oning Friend Maffer Heley, I kinder falser you willing brails to you with the reft of your computant: praiging the Lord for your good interested to your filing. To cartifue you of our presquaints: we have hilled here in Bel-lound three and invest Winder, and lets main more by trans bracking, you I bagic to see the self-lound three and invest Winder, and lets main more by trans bracking, you I bagic to be a computation of the first three man brackets and invest Winder, and lets main more by trans bracking, you I bagic to be a computation of lease, which makes be adole, and finished to so much in produce, a first perfect day and flate warrish and lease, which makes be adole, and finished to so much in produce of the prefect day our final documents to the self-lound three three is the self-lound three three is the self-lound three three three is the self-lound three three

ried away with the rope (the dearest Whale tome that ever man strucke in this harbour) there mad weven anie loffe, I thinke, went fo neere my beart dec.

Many other Letters I could have added, but doubt I have already wearied you with this vncouth Coast, whereto our English Neptunes are now so wonted, that there they have found not onely Venison, but Pernassiss and Helicon; and have melced a Musam Fountain out of the Green-Land Snowes and Icie Rockes. Whole Elaborate Poems have I feene of Mafter Heley, as also of lames Presson, there composed: but we have harsher Discoueries in hand, to which wee are now shipping you. This I thought good at our parting to advertise thee, that Master Heley Cold and heate hath affirmed to me touching the divertitie of weather in Graeneland; that one day, it bath beene fo ftrangely valcold (the winds blowing out of some quarter) that they could scarfe handle the frozen failes: another day able. cold (to mind evening me v) from your of them were the cold that the cold the cold that the cold tha

Pestilence and Famine in Russia, Goodnesse truest Greatnesse. L. h. HIII

## CHAP. IX.

The late changes and manifold alterations in Ruffin fince IVAN VASL LOWICH to this present, eathered out of many Lesters and Obser-uations of English Embassadors and other Trauellers in thefe parts.

of the reigne of IVAN, PHEODORE his sonne; and of BORIS.

Gods mercy te England whiles warres haue infefted the reft of the Eader, I here present thee not what I would of Russian affaires, but what I could,
We Englishman whete the government of his Maiestine, have enjoyed their a Sunfine of peace, that four Summers sky to many hath been tections it sty hase
leathed their (Monna, and longed for I know not what Egyption fleft part. For what else are Warres but per let ouer the fire of Anger (how often of Furie, yea of Hell, the Furies or Deurts blowing the coales) and boyling mans step? whole 30

Families, Villages, Townes, Cities, Shires, Pronnees, not only hurried thereby in confinence of State, harried and enflamed with combittions of goods and goodnesse, but the shirth of Women, and Children, but thered and agit were boyled beyond the manifold shapes of Death, vnto the bones, into the Vapors, Froth, Scumme, Chaos, nothing and leffe then nothing of Huwho has comes, into the vapors, from, scumme, Union, nothing and life then nothing of Hamanitel Such is the inhumanite, the immanitei, the immanite of Warres! And fishe Warres have made imperfions into all our Neighbour Countries? (whiles were fit under the Andow of Beast Pacific) have highered on Twies and Bladtet this for High, have been fished Barbaris, have tome the Asia there, and run the Griffs Alpacin Milys, this fishes Deserve with earth-place the straight of the March Preser with earth-qualets, have rayle Belgium Course, Balances Brooks, 1879, I mention not the inundations and exundations of Poland; the Snowes and Milts of Sweden 40 the Danifb Hailes and Frofts. But all these and more then all these Tempests, Turnado's , Tuffons have combined in Ruffie, and there made their Fiel moust contre, there pitching the Tents of D. Am Ation, there erecting the Thrones of Defolation.

Pestilence and Famine had gone two yeeres before as direful Heralds, to denounce these dreadfull warres and mutations of State: the Pefulence possessing the Northerne parts of the World, and dispossessing it of many many thousands: the Famine in Russia wanting necessaries to eate, necessarily denoured all things, not onely Cats, Mice, and impure Creatures, but mens fielh also, and that in neerest necessitude, Parents renoking to their wombes by wnnaturall passage the dearell pledges of Nature, which having even now dyed with hunger, were made prefervatives from like death to those which first had given them life. The Hightier made sale of the Poorer, 50 yea, Fathers and Mothers of their Sonnes and Daughters, and Husbands of their Wives, that price might bee had to buy Corne, which was now beyond all names of whatfoeuer price cre-

dible. But these things must be further searched.

Bloudineffe is a flipperie foundation of Greatneffe, and the Mercifull'haue the promife to finde merg: other wifedome (how ouer feeming politike) is earthy, femfault, smills, yea, rune to the foole-wife Confutors, as appeareth in Phenados working wifely, that is, cruelly to preuent the multiplying I fractive. The greatest of Creatures on Sea and Land, the Elephant and Whale, hive on graffe, weeds, and fimpler diet, not on rapine and flesh or fish-decouring prey : Thunders and all tempertuous fromes trouble not the higher aiery Regions, but the lower and those next the bafer earthy dress, the lediment and finke of the World : nor doth ancient Philosophie rec. 60 kon Comets other then Meteors, or falling Starres to be Starres indeed, but excludes both from the heavenly Sphares. Had Alexander followed this rule, and fought Greatnesse in Goodnesse (like him which is Optimus Maximus, the Great God, the great Good of the World) and in him-

felfe rather then others, in being Master of humselse then Lord of large Territories; he neither had fighed after the conquetts of other Worlds which Foolofopbie had created before he had freme the t.nth part of this; nor had dyed by poylon in a forraine Countrie, forced to content himselfe with postesting, nay, being postested of a few feet of earth: then had he beene in very deed (now but in Title) GREAT Alexander. Great Goodnesse is the true and good Greatness:

I know not how fit a Preface this may feeme to the enfuing Ruffian Relation; this I am fure. that they which write of Inan Vafilewich , the Great Great Mufconne , doe lay heanie afperfions on his Father and Grand-father, but on himfelfe supersuperlatines of crueltie (that I mention not other vices) both for Matter and Forme. These things are delinered particularly in the Hittories of Alexander Gragnissus, Tilmannia Bredenbachim, Paulin Oderbornius, Reinoldus Heidensten and others, in large Tractates written thereof purposety. His merits of the English might procure a filence of his ends (wee of all men being in regard of respect to our Nation vnworthy to fpeake, that which hee , it those Authours have not beene malicious , was worthy to heare) if fo dreadfull effects did not force an Historian (that is, the Register of the execution of Acts of Gods bountie and inflice decreed in the Court of Dunne Proundence) to looke to the direcall Caufe in foregoing funes, that after Ages may heare and feare.

I will touch a few of these which Gwagninu alone relates. His owne brother being accused Al Gwagnin I will couch a tew of three which O wegmans and creates. First write concern being section shows and the state of the stat the cortures mit, an accuracy in the wife any property and the large conference and allowed to the surprise and the surprise

my purgation, was fet in Princely accountrements on a Throne, the Emperour standing bare-hea- addes principal ded before him and bowing to him, but foone after with a knife thrulling him to the heart, the Noblesheee Attendants adding other Furies till his bowels fell out; his body dragged forth, his feruants flaine, three hundred others in his Calile executed; his Boiarens all gathered into one house and blowne vp with poulder; their Wiues and Diughters rauished before his face by his followers. and then cut in pieces, and no liuing thing left in their houses or grounds; the husbandmens

wijnes ftripped naked as they were borne and driven into a Wood, where were Executioners purposely set to gue them their farall entertainment. His Chancellor Dubrenfts sitting at table 30 with his two Sonnes, were allo your acculation without answere cut in pieces, and the third fonne quartered aliue with foure wheeles, each drawne a divers way by fifteene men. Mieffoiedowy febly, supreme Notatie, displeasing him, his wife was taken from him, and after some weeks decayning was with her hand-maid hanged over her husbands doore, and fo continued a fortnight, he being driven to goe in and out by her all that time. Another Notaries wife was rauished and then lent home and hanged ouer her husbands table, whereat he was forced daily to eate. In travelling if he met any woman whose husband he liked not, he caused her to stand with her nakednesse disclosed till all his retinue were passed. Cutting out tongues, cutting off hands and feet of his complaying Subjects, and other discriffed tortures I omit; as also the guarding his father in lawes doores with Beares ty d there, that none might goe in or out, hanging his fer-40 uants at his doores, torturing him for treature; casting hundreds of men at once into the was 700, women

ter under the Ice; two thousand feuen hundred and seventie thus and by other tortures execu- stone time; ted at Nonograd An. 1 169. besides women, and the poorer persons which Famine forced, did 378. prisoners eate the bodies of the flame, and were after flame themselues; the Archbishop also let on a Mare at ano eare the boates or the usine, and wete arrer usine themselves; the Archbuthop allolet on a Mare as solone, with his feet yed vnder the b-lly, and male to play on Bag-pipes thorow the Citiesthe Monks and Virgins flowled and flaine; Theodore Sirveny, the Founder of tweller Monasferies, tortured to shew his of noble bload treasure and then slaine: Mazinsky his Secretarie, by many dayes renewed tortures dying; hee esposadtobe recreating hirafelie with letting Beares look in throngs of people; Ioba Michalemich Winkyman Traufindoy die the Chancellor, his eares, lips, and other members one after another cut off by piece-made Training and the Chancellor, his eares, lips, and other members one after another cut off by piece-made Training and the Michalemic Winkyman and the Winkyman an notwithstanding all protestations of his innocency; about two hundred other Nobles at the therime &c. fame time variously executed, one his Treature, two other Secretaries; the Treatures wife fet \* A Secretaries of the provided search of the secretaries of the secret on a rope and forcibly dragged to and fro thereon (by that torturing her naked fielh, to learne her coming off his

husbands treasures) whereof foone after shee dyed in a Monasterie, into which shee was thruit. Primities he nuonnos centra litetle of that which Gragemen alone hath written. A taffe and took is too which the Emule of blood, and in tuch immanities. He is also faid in a famine to have gathered many people, percur communications and the communication of the communicatio in expectation of almes, on a bridge, and there guarded the bridge being cut to drowne them, as firming tobe the readiest way for cheapnesse of corne, But I lothe such crudities. His last crueltie was on him-done purposethe readiest way for cheapness or come, Due 1 some usen cruairies. Firs sait crueine was on many felfe, dying with griefe, as was thought, for the death of his eldest some Index, whom fally active inflinity there inflinity cufed he struck with a staffe wrought with Iron, whereof he dyed in few dayes after. Hee was a to ease whit man accused for communicating in disposition with his father, and as a joyfull Spectator of his he had us off-

But if any delight to reade the terrible and bloudie Acts of Inan Bafilowich, he may glut, if not drowne himlelte in bloud, in that Hiftorie which Paul Oderborne hath written of his life , and both there and in others take view of other his vinuit Acts. I will not depose for their truth.

though I cannot disproue it : adueriaries perhaps make the worft. For my leffe I lift not to take

finkes against him, and would speake in his defence, if I found not an universall conspiracy of all Historie and Reports against him, I honour his other good parts, his wit, his learning (perhaps better then almost any other Ruffe in his time) his exemplarie severity on vniust Magistrates, his Martiall skill, industrie, fortune, wherby he subdued the Kingdoms of Cafan and Astracan (which also the Turke sending from Constantinople an Armie of three hundred thouland to dispossession of, A. 1569. belides his hopes and helpes from the Tartars, few returned to tell their disafters, and the destructions of their fellowes) besides what hee got in Siberia and from the Pole, Sweden, Profisan, extending his Conquests East, West, North, and South: yea, his memorie is sauourie still to the Russians, which (either of their feruile disposition needing such a bridle and whip; or for his long and proferous reigne, or out of diffatte of later tragedies) hold him in little leffere-

putation (as some have out of their experience instructed me) then a Saint. His love to our Nation is magnified by our Countrimen with all thankfulneffe, whose gainer there begun by him, have made them also in some fort seeme to turne Ruffe (in I know what loves or feares, as if they were still that vp in Ruffia, & to conceale whatfoeuer they know of Rufitan occurrents) that I have fuftayned no small torture with great paines of body, vexation of minde. and triall of potent interceding friends to get but neglect and filence from some, yea almost contempt and fcorne. They alledge their thankfulneffe for benefits received from that Nation, and their feare of the Duteb, readie to take aduantage thereof, and by calumniations from hence to interuert their Trade. This for love to my Nation I have inferted against any Cavillers of our Ruffe Merchants : though I must needs professe that I distaste, and almost detest that (call it 40 what you will) of Merchants to neglect Gods glorie in his prouidence, and the Worlds inftruction from their knowledge; who while they will conceale the Rassans Faulte, will tell nothing of their Facts; and whiles they will be filent in mysteries of State, will reueale nothing of the histories of Fact, and that in so perplexed, divertified chances and changes as seldome the World hath in fo fhort a space seene on one Scene. Whiles therefore they which seeme to know most, will in these Russian Relations helpe me little or nothing (except to labour and frustrated hopes) I haue (befides much conference with eye witnesses) made bold with others in such books as in diners languages I have read, and in such Letters and written Tractates as I could procure of my friends, or found with Mafter Haklays (as in other parts of our storie) not feeking any whit to difgrace that Nation or their Princes, but onely defiring that truth of things done may bee 30 knowne, and such memorable alterations may not passe as a dreame, or bee buried with the Doers. Sir Ierome Horsey shall leade you from Inans Graue to Pheodores Coronation.

Or Theodor Six lerom HorThe most Colemne and magnificent coronation of PHEODOR IVANOVVICE Emperour of Ruffia, &c. the tenth of lune, in the yeare 1584. feene and observed by Master I z R OM HORS BY Gen. tleman, and seruant to ber Maiestie.

The death of Inan Valitorich

Lord Beris adopted as the

WHen the old Emperor Inan Vafilowich died (being about the eighteenth of April, 1584, after our computation) in the Citie of Mafies, haung raigned fiftie four years, there 254, April 18. was some tumult & vprore among some of the Nobilitie and Comminaltie, which notwithstanding was quickly pacified. Immediately the fame night, the Prince Boris Pheodorowich Godonoua, Kn:2. Iuon Pheodorowich, Mesthis Slafiby, Knez Iuan Petrowich Susky, Mehita Romanowich and Bodan I aconlewich Beliker, being all noble men, and chiefest in the Emperours Will, especially the Lord Boris, whom he adopted as his third fon, and was brother to the Empresse, who was a man very well liked of all eftates, as no leffe worthy for his valour and wifedome : all these wereappointed to dispose, and settle his Sonne Pheodor Inanowich, having one sworne another, and all the Nobilitie and Officers whosoeuer. In the morning the dead Emperour was laid into the Church of Michael the Archangell, into a hewen Sepulchte, very richly decked with Veilures fit 10 for fuch a purpose : and present Proclamation was made (Emperour Pheodor Inanowich of all Ruffia, &c.) Throughout all the Citie of Mofee was great watch and ward, with Souldiors, and Gunners, good orders e stablished, and Officers placed to subdue the tumulters, and maintaine quietnesse : to see what speede and policie was in this case vsed, was a thing worth the beholding. This being done in Mosco, great men of birth and accompt were also presently sent to the bordering Townes, as Smolenske, Vobsko, Kafan, Nonoggrad, &c. with fresh garrison, and the old fent vp. As vpon the fourth of May a Parliament was held, wherein were affembled the Metropolitane, Archbishops, Bishops, Priors, and chiefe Clergie men, and all the Nobility whatsoeuer: wheremany matters were determined not pertinent to my purpose, yet all tonded to a new reformation in the gouernement: but especially the terme, and time was agreed upon for the 60 folemnizing of the new Emperours coronation. In the meane time the Empresse, wife to the old Emperour, was with her childe the Emperours fon, Charlewich Demetrie Iuanewich, of one yeares age or there abouts, fent with her Father Pheodor Pheodorowish Nagay, and that kindred, being

fine brothers, to a towne called Onglets, which was given vnto her, and the yong Prince her fonne, with all the Lands belonging to it in the fhire, with officers of all forts appointed, having The day of allowance of apparell, iewels, diet, horfe, &c. in ample manner belonging to the efface of a Prin- Pheoder his coa ceffe. The time of mourning after their viebeing expired, called Sorachyn, or fortie orderly dayes, ronations the day of the folemnizing of this coronation, with great preparations, was come, being woon the centh day of June, 1584, and that day then Sunday, he being of the age of twenty hie years: at which time, Mafter lerom Horsey was orderly lent for, and placed in a fit roome to see all the folemnity. The Emperour comming out of his Pallace, there went before him, the Metropolirane, Archbishops, Bishops, and chierest Monkes, and Clergie men, with very rich Coapes and Priests garments upon them, carrying pictures of our Lady, &c. with the Emperors Angell ban-

ners, cenfers, and many other fuch ceremonious things, tinging all the way. The Emperour with his nobility in order entred the Church named Blaughina or Bleffednes, where prayers and fernice were vied, according to the manner of their Church: that done, they went thence to the Church called Michael the Archangell, and there also vied the like prayers, and feruice : and from thence to our Lady Church, Precbifta, being their Cathedrall Church, In the middeft thereof was a chare of maiestie placed, wherein his Ancestors vied to sit at such extraordinary times: his roabes were then changed, and most rich and vinaluable garments put on him : being placed in this Princely feate, his nobilitiestanding round about them in their degrees, his imperiall Crowne was let vpon his head by the Metropolitane, his Scepter globe in his right hand, his fword of Iustice in his 30 left of great richest his fix crowns alto, by which he holdeth his Kingdomes were fet before him. and the Lor Boris Pheodorowich was placed at his right hand; then the Metropolitan read openly abooke of a small volume, with exhortations to the Emperour to minister true lustice, to injoy with tranquility the Crowne of his ancestours, which God had given him, and vied these

Through the will of the almightse and without beginning God, which was before this world, whom we glorifie in the Trinitie, one onely God, the Father, the Sonne, and the boly Ghoft, maker of all things, wor. ker of all in all eury where suisiler of all things, by which will, and working, he both lust h, and gineth life to man: that our ovely God which enspireth enerse one of us his onely children with his word to discerne Gathroughour Lord lefus Christ, and the holy quickning spirit of life, now in these perillous times establibedus to be-pethe right Scepier, and suffer us to raigne of our felues to the good profit of the land, to

the subdaing of the people, together with the exemies, and the maintenance of vertue. And so the Metropolitan bleffed and laid his croffe vpon him. After this, he was taken out of his chaire of Maiefty, having vpon him an vpper reabe adorned with precious flones of all forts orient pearles of great quantity, but alwayes augmented in riches: it was in weight two hundred pounds, the traine and parts thereof borne vp by ix Dukes, his chiefe imperiall Crowne vpon his head very precious: his staffe imperiall in his right hand of an Vnicornes horne of three foote and la halfe in length belet with rich ftones, bought of Merchants of Authorge by the old Emperour, in Anna 1.81.and coft him 7000. Markes sterling. This Iewel Master Hersey kept sometimes, before the Emperour had it. His Scepter globe was carried before him by the Prince Boris Pheodorowich his

4C rich cap befet with rich ftones and pearles, was carried before him by a Duke : his fixe Crownes alfo were carried by Demetrius Iuanowich Godonoua, the Emperours vnckle, Mekita Romanowich th- Emperors vnckle, Stephen Vafilimich, Gregorie Vafilimich, Inan Vafilimich brothers of the bloud rovall. Thus at last the Emperour came to the great Churchdoore, and the people cried, God faue our Emperour Pheodor Inanomeb of all Ruffia. His Herse was there ready most richly adorned. with a couering of imbrodered pearle and precious stones, saddle, and all furniture agreeable to it, reported to be worth 300000.markes flerling.

There was a bridge made of a hundred & fiftie fadomes in length, three manner of waies, three foot about ground, and two fadome broad, for him to goe from one Church to the other with his Princes and nobles from the presse of the people, which were in number infinite, and some at that So time pressed to death with the throng. As the Emperor returned out of the Churches, they were fored vader foot with cloth of Gold, the porches of the Churches with red Veluet, the Bridges with Scarlet, & stammelled cloth from one Church to another ; and as soone as the Emperor was passed by, the cloth of gold, veluet and scarlet was cut, & taken of those that could come by it, euery man defirous to haue a piece, to referue it for a monument : filuer and gold coine, then minted of purpose was cast among the people in great quantitie. The Lord Boris Pheodorowich was fumptuoufly and richly attired, with his garments decked with great orient pearle, befet with all forts of precious flones. In like rich manner were apparelled all the family of the Godonouaes in their degrees, with the rest of the Princes and nobilitie, whereof one named Knez Iuan Michalowieb Glynsky, whose roabe, horse and furniture, was in regitter found worth one hundred thou-6c fand markes sterling, being of great antiquitie. The Embresse being in her Pallace, was placed in her chaire of Maietty also before a great open window; most precious, and rich were her robes, and thining to behold, with rich ftones, and orient Pearles befer, her crowne was placed upon her head, accompanied with her Princesses, and Ladies of estate : then cried out the people, God preserue our noble Empresse Irense. After all this, the Emperour came into the Parliament

Ppp 2

house, which was richly decked: there he was placed in his royall seat adorned as before: his fixe crownes were fet before him wpon a Table: the Bason and Ewre royall of gold held by his knight of gard, with his men standing two on each side in white apparell of cloth of sluer, called Kindry with scepters and battle-axes of gold in their hands, the Princes and nobility were all placed according to their degrees all in their rich roabes.

Solemnitie of Pheodors Coronation. Strife for precedence. LIB. IIII.

The Emperour after a short Oration, permitted every man in order to kiffe his hand : which being done, he removed to a princely feate prepared for him at the table : where he was ferued by his Nobles in very princely order. The three out roomes being very great and large were belet with plate of gold and filter round, from the ground vp to the vauts one vpon the other : among which plate were many barrels of filter and gold : this folemnitie and triumph lafted a whole 10 weeke, wherein many royall pastimes were shewed and vied : after which, the chiefest men of the Nobilitie were elected to their places of office and dignitie, as the Prince Beris Pheodoromich was made chiefe Counfellour to the Emperour, Mafter of the Horfe, had the charge of his perion, Lieutenant of the Empire, and warlike engins, Gouernor or Lieutenant of the Empire of Caran, and Astracan, and others: to this dignitie were by Parliament, and gift of the Emperour given him many reuenewes and rich lands, as there was given him, and his for ever to inheritea Prouince called Vaga, of three hundred English miles in length, and two hundred and fiftie in bredth, with many Townes and great Villages populous and wealthy: his yearely Reuenew out of that Prouince, is fine and thirtie thouf and Markes sterling, being not the fifth part of his yeare Reuenue. Further, he and his house be of fuch authoritie and power, that in forty dayes warning they 20 are able to bring into the field a hundred thousand Souldiours well furnished.

The conclusion of the Emperours Coronation was a peale of Ordnance, called a Peale royall. two miles without the Citie, being a hundred and feuenty great pieces of braffe of all forts as faire as any can be made; these pieces were all discharged with shot against bulwarkes made of purpose: twentie thousand hargubusers standing in eight ranks two miles in length, apparelled all in veluet, coloured filke and ftammels, discharged their shot also twife ouer in good order : and so the Emperour accompanied with all his Princes and Nobles, at the leaft fiftie thousand horse, departed through the Citie to his palace. This royall coronation would aske much time, and many leaves of paper to be described particularly as it was performed : it shall suffice, to vinderstand that the like magnificence was never feene in Ruffia.

The Coronation, and other triumphs ended, all the Nobilitie, officers, and Merchants, according

to an accustomed order every one in his place and degree, brought rich prefents vinto the Emperour, withing him long life, and joy in his kingdome.

The same time also Master lerom Horsey aforesaid, remaining as servant in Russia for the Queens most excellent Maiestie, was called for to the Emperour, as he fate in his Imperial feat, and thealso a famous Merchant of Netherland being newly come to Mosco (who gave him felfe out to be the King of Spaines subject) called John de Wale, was in like fort called for. Some of the Nobilitie would have preferred this fubiect of the Spaniard before Mafter Horfer feruant to the Queen of England, whereunto Master Horsey would in no case agree, saying, hee would have his legges cut off by the knees, before hee would yeelde to tuch an indignitie offered to his Soueraigne the Queenes Maieftie of England, to bring the Emperour a present, in course after the King of Spaires 40 subject, or any other whatsoener. The Emperour, and the Prince Boris Pheodorowich percening the controuerfie, fent the Lord Treasurer Peter Inanomich Galaum, and Vafili Shalkan, both of the Counfell, to them, who delivered the Emperour backe Mafter Horfeys speech : whereupon he was first in order (as good reason) admitted and presented the Emperour in the behalfe of the Englift Merchants trading thither, a present, wishing him ioy, and long to raigne in tranquilitie, and so kissed the Emperours hand, he accepting the present with good liking, and auouching, that for his Sifters (ake, Queene Elizabeth of England, he would be a gracious Lord to her Merchants, in as ample manner as ever his Father had beene : and being difmiffed, he had the fame day fent him, seauentie dishes of fundry kinds of meats, with three carts laden with al forts of drinks very bountifully. After him was the foresaid subject of the Spanib King admitted with his present, 50 whom the Emperor willed to be no leffe faithfull &feruiceable vnto him, then the Queen of Englands fubiects were & had been, & then the King of Spains fubiects shold receive favor accordingly.

All these things thus in order performed, prayles were sung in all the Churches. The Emperour and Empresse very denoutly reforted on foote to many principal Churches in the Citie, and Vpon Trinitie Sunday betooke themfelues to a progresse in order of procession, to a famous Monafterie called Sergine and the Trinitie, fixtie miles diffant from the Citie of Mefco, accompanied with a huge armie of Noblemen, Gentlemen, and others, mounted youn goodly Herles with furniture accordingly,

The Empresse of deuotion tooke this journey on foote all the way, accompanyed with her Princeffes and Ladies, no small number : her Guard and Gunners were in number twentie thou- 60 fand : her chiefe Counfellor or Attendant, was a noble man of the bloud Royall her Vncle of great authoritie, called Demetri Inanowich Godonoua. All this progreffe ended, both the Empes rour and Empresse returned to Mosco : shortly after, the Emperour by the direction of the Prince

Boris Pheodorowich, fent a power into the Land of Siberia, where all the rich Sables and Furres are gotten. This power conquered in one yeere and a halfe one thousand miles. In the performance of this warre, there was taken prisoner the Emperour of the Country, called Chare Si- Chare Siberesia berity, and with him many other Dukes and Noble men, which were brought to Mosco, with a Prince of Sibeguard of Souldiers and Gunners, who were received into the Citie in very honourable manner, ris tiken prisoand doe there remaine to this day.

Hereupon the corrupt Officers, Iudges, Iuflices, Captaines and Lieutenants through the whole to Mofice. Kingdome were remooued, and more honest men substituted in their places, with expresse commandement, under seuere punishment to surcease their old bribing and extortion which they had vied in the old Emperours time, and now to execute true infine without respect of persons : and to the end that this might be the better done, their lands and yeerly flipends were augmented: the great taskes, customes, and duties, which were before laid upon the people in the old Emperours time, were now abated, and some wholly remitted, and no punishments commanded to be vied, without fufficient and due proofe, although the crime were capitall, deferuing death : many Dukes and Noble men of great Houfes, that were videt displeasure, and imprisoned twentie yeeres by the old Emperour, were now fet at libertie and reftored to their lands : all prisoners were set at libertie, and their trespasses forginen. In summe, a great alteration vnuerfally in the government followed, and yet all was done quietly, civilly, peaceably, without trouble to the Prince, or offence to the Subsect : and this bred great affurance and ho-30 nour to the Kingdome, and all was accomplished by the wisedome especially of Irenia the Empreffe.

These things being reported and carried to the eares of the Kings and Princes that were borderers vpon Raffia, they grew fo fearfull and terrible to them, that the Monarch of all the Scythians called the Crim Tartar or great Can himselfe, named Saphet Keri Alli, came out of Saphet Keri Alli his owne Countrie to the Emperour of Ruffia, accompanies with a great number of his Nobi- King of the litie well horfed, although to them that were Christians they feemed rude, yet they were Crims arrivall perionable men, and valiant : their comming was gratefull to the Emperour, and their enter. at Mosto, tainment was honourable : the Torter Prince having brought with him his wives also, receiued of the Ruffe Emperour entertainment, and Princely welcome according to their effates.

Not long after, one thousand and two hundred Polifb Gentlemen, valiant Souldiers, and 30 proper men came to Mosco, offering their service to the Emperour, who were all entertayned : and in like fort many Chirkeffes, and people of other Nations came and offered feruice. And as soone as the report of this new created Emperour wasspred ouer other Kingdomes of Europe, there were fent to him fundrie Ambassadors, to wish him toy and prosperitie in his Kingdome ; thither came Ambaffadors from the Turke, from the Perfian, the Bogharian, the Crim, the Georgian, and many other Tarter Princes. There came also Ambassadors from the Emperour of Almaine, the Pole, the Swethen, the Dane, &c. And fince his Coronation no enemie of his hath prevailed in his attempts.

It fell out not long after, that the Emperour was defirous to fend a meffage to the most ex- The new Emcellent Queene of England, for which feruice he thought no man fitter then Mafter Ierome Horpetor Phenders for, supposing that one of the Queenes owne men and subjects would bee the more acceptable to Litters and her. The fumme of which meffage was, That the Emperor defired a continuance of that league, Requests to friendship, amitie and intercourse of traffque which was betweene his Father and the Queenes the Queene, Maiestie and her Subiects, with other private affaires besides, which are not to bee made

Master Horsey having received the Letters and Requests of the Emperour, provided for his Master Horseys iourney ouer Land, and departed from Mofee the fift day of September, thence vnto Otmer, to voyage from Torshook, to great Nemogrod, to Vobike, and thence to Nybonse in Limins, to Wenden, and so to Masse to Eng.
Riga: (where he was beset, and brought forthwith before a Cardinall, called Ragenis, but yet

fuffered to paffe in the end : ) From thence to Mito, to Golden, and Liben in Curland, to Memel, to Koning shargh in Prussia, to Elbing, to Dantzike, to Stetine in Pomerland, to Rostock, to Lubeck to Hamborough, to Breme, to Emden, and by Sea to Landon. Being arrued at her Maielties Royal Court, and having delivered the Emperours Letters with good favour, and gracious acceptance, he was forthwith againe commanded to repatie into Ruffia, with other Letters from her Maieftie to the Emperour, and Prince Boris Pheoderowich, answering the Emperous Letters, and withall requelting the favour and friendship, which his Father had yeelded to the Emplos Merchants : and hereunto was he earnestly also solicited by the Merchanes of London themselves of that Companie, to deale in their behalfe. Being thus dispatched from Landon by Sea, he arrived in Mosco, the twentieth of Aprill, 1,86, and was very honourably welcommed, and for the 6c Merchants behoofe, obtayned all his Requefts, being therein specially fauoured by the Noble Prince Boris Pheodorowich , who alwayes affected Master Horsey with special liking. And hauing obtayined printicedges for the Merchants, he was recommended from the Emperour againe,

to the Que ne of England his Mittreffe , by whom the Prince Boris , in token of his honou-

rable and good op mon of the Queenes Mareftie, fent her Highnessea Royali present of Sables.

Luzarns, cloth of Gold and other rich things. So that the Companie of English Merchants, next to their thankfulnefle to her Maieflie, are to account Mafter Horfess paines their speciall benefit, who obtayned for them those priviledges, which in twentie yeeres before would not

The manner of Master Horseys last dispatch from the Emperour, because it was very honorable, I thought good to record. Hee was freely allowed post-horses for him and his servants, wictuals and all other necessaries for his long journey; at every Towne that he came vnto from Mosco to Vologda, which is by Land fine hundred miles, he received the like free and bountifull allowances, at the Emperours charge. New victuall and prousion were given him vpon the full allowances, at the Emperous cuttge. New Youtube to produce that gives man you the Ruer Dwos at enery Towne by the Kings Officers, being one thousand miles in length. When the Company of the Public New York Adv. 10 he same to the new Caftle, called Archangel, he was received of the Duke Knez. Valid Andres wich I summeyorodiky by the Emperours Commission sixto the Castle, Gunners being set in ranker after their vie, where he was sumptuously feasted: from thence he was disparched with bountifull provision and allowance in the Dukes Boat, with one hundred men to rowe him, and one hundred Gunners in other Boats to conduct him, with a Gentleman Captaine of the Gunners, Domning to the Road where the English Dutch, and French thips rode, the Gunners of the English and the thippes that in like manner fortie fixe pieces of their Ordnance, and so he was brought to his lodging at the English house voon Rose Hand.

And, that which was the full and complete conclusion of the favour of the Emperour and Bo-And that which was the total and compared to the exercise from the form of the property of the body of the property of the pro fion vpon the Sea by a Gentleman and a Captaine, the things following. Sixteene line Oxen, feuentie Sheepe, fix hundred Hens, fine and twentie flitches of Bacon, eightie bushels of Meale. fix hundred loaues of bread, two thousand Egges, ten Geele, two Cranes, two Swannes, fixtie fine gallons of Meade, fortie gallons of Aquavitz, fixtie gallons of Beere, three young Beares, foure Hawkes, store of Onions and Garleeke, ten fresh Salmons, a wilde Boare.

All these things were brought him downe by a Gentleman of the Emperours, and another of Prince Borss Pheodoremich, and were received in order by John Frese servant to Master Horfey, together with an honourable present and reward from the Prince Beris, fent him by Master Francis Cherry an English man: which present was a whole very rich piece of cloth of Gold, and

TVan Vafilowich is reported to have had seauen Wives, and of them to have left three children Tomaing, Todomer or Eventual and Demotring a younging by he laft wife, and a Daughter, the which was the wife of L. Briv aforefaid, whole fifter Phendre had married in his Fathers. life time, who would have caused her divorse for her barrennesse (as he had caused Inan his eldest some diversetimes to doe and his refusing it at last, was the occasion of that angry, last, and fatall blow, before mentioned ) but being protracted by faire excules for a time, the dinorte of foule and body in the Father preuenced that in the marriage bed of the Sonne. Yet by his Testament he ordained, that if within two yeares she proued not fruitfull, hee should marrie amp-Disorce riged ther. The executers viged this after that terms expired but Germin or Irems, fo wrought with her 40 husband, that their counfels were frustrate: wherein she was assisted by the politicke wisdome of her brother Borss, who was now become chiefe Pilot, though not the Master in that Russian thip: and is faid formerly to have been no small doer in those cruel designes of sanhis deceased Matter yet had he cunningly cast the blame on him now dead, and wifely infinuated into the peoples fauour, by mitigating the feueritie of his Decrees. You have read before of his great Revenues and D.Fl. \$5.1.H. Wealth, recorded by eye witnesses. Theorem faith, that three hundred of the Knazers and Boistens, whereof the Senate of the Empire consisted, by admife of the Executors, had subscribed. Beris made the simpler Emperor believe, that it was a conspiracie against him: whereupon they were all committed, ten of which (whom he thought his most dangerous adversaries) were suddainly and primly executed : to the reft, he procured the Emperours pardon and fauour, feeming very 50 forrowfull that this elemency had beene fo much foreslowed : and that the hastie execution had presented his officious indeuors for their deliuerance. And that he might feem ferious, he got their

dultry, alacrity, wifedome, power, bounty, and whatfoeuer might fether his neit in the neoples hearts, hus eatily ftoin and entertained in affection to him, whiles Theodore lived, which was not long : he dying in the yeare 1598. on twelfe day , having bued thirty fixe yeares, and reigned neere foureteene. His impotency of body and minde, you have read before in part. Thus was affin. D. Flet. meth, that Iuan Vafilowich his Father faid, he was fitter to ring Bels in Churches, then to gouerne an Empire; aluding therein to his superexceeding denotion and most denout superstition. His death caused a new aspertion on Beris as procured, in some mens concerts (and reports) by

His dead body was buried with his ancestors, in Saint Michaels Temple in the Castle, and 20 Souldiours were presently sent to the borders, to prohibite ingresse or egresse. Theodores will was read, and therein Gernia (or Irenia) his wife, and the Patriarch, entrufted with the administration of the State. Hereupon a generall State affembly was affembled at Mofes, and their oathes The Empresse giuen to the Emprelle. After this the Emprelle went into a Nunnery, to paffe there the fortie faccoedeth. dayes deftined to publique forrow in which time (whether of her owns or with her brothers accord) making shew of vnspeakable forrow for her deceased Lord, the renounced the world, and Rassanivic of transferred the Imperial government upon the Knazeys and Beiseens, which her Husbandhad forme dives transferred the Imperial government vpon the Knacest and bounded by Whiteh her transferred to her; that they according to their wildome, and house their Countrie, might take an Emperours

30 were fo moued therewith, that they came thronging to the Nunnerie gates, lamentably imploring her care in so perillous a time, whom onely they were bound to serue. And when she bad them goe to the Knazer and Bolaran; they protefted against them, saying, they had swore to her, and would be ordered by L. Barie, her brother. Herenpon Barie Pheadaranich goeth out to appeale their tumult, and voderraketh for the fortie dayes of mourning, together with the Knazers and Boiarens to administer the Empire. In which time, the Empfrelle renounced fe- The Queene cular cares, and professed her force a Nunney changing her name from Germa to Alex. surneth Non-

The time of mourning being past, the people were called into the Castle, and the Chancellour made an Oration, perswading them to sweare obedience to the Knazeys and Boiarens, which 40 they with out-cryes disclaymed, offering todoe is to the Queene and L. Borie. The Coun-

cell fitting to confider hereof, the Chancellor came forth againe, and commanded them to Iweare to the Knazeys and Bolaren; the Queene thining may become a Number Whereupon they all na-med Boris het Brother, as one worthy of the Scate; to whom aboy were readis; to sweater. Hee Bosishis milling med acts not procest; a one worthly a considerable investings he withwellingsfells and envoyed which thinsfle, and bidding them chufe fone other more worthly Apalegoing within into the Church, they laid in manner forceable hands on him; with ideal cryes and tamentations, befreeching him not to forfake them. Whereat he week and fish refused, alleaging his infusiciencie and to kindle greater desire in the people and Nobles, absented and hid himselfe with his Sister in the Nunnerie the space of a moneth. In which space the prople fearing his flight, besieged the place, and 50 with continual clamours viged the Queene, to periwade her Brothet to accept of the Empire which the had refused. Shee againe fends them to the Knazey and Bour ins the mention of

whole names seemed to cast them into a fit of muchine and ledition. Boris then commech forth and tels them, if they were no quieter, he also would take Sack-cloth, and (as his Sitter had done) enter into a Monafferie. They made to much greater stirres, casting out some desperate stirrests of looking to themselves, where the Common wealth was desperately noglected. The Queene then wonne by their importunitie perfwadeth her brother no langer to refit Gods will, which had put this constancie into the peoples mindes, and to accept that which thus God feemed to command, praying for his bletting therein.

Boris after new excuses, at last seeming ouercome by his Sisters intreaties, and to have held out 6c fufficiently to remoue enuie, affenteth to her, and shee signifieth as much to the people, to whom the presents him, praying them to be as loyall to him, as they had beene earnest for him. Boris alio toake vnto them : Forasmuch as it seemeth good to the Dinine Grace and Providence, whereby all Es whis seech things are gonerned, that by common confent and continual Prayers intreated, I take on mee the Prinsipalitie oner you, and all the Proninces of Russia, I will no longer resist, how beamie socner I concerne

care thereof. This was done by her brothers counfill, to try what the people would doe : who death.

ð. I I. Occurrents of principall Note which happened in Russia, in the time while the Honourable Sir THOMAS SMITH remained there Emballador from his Maieftie.

It Thomas Smith Knight, accompanied with Sit T. Challener and Sit W. WY ay Knights, dicers Gendemen and his owne Attendants. recovered to the Community of the June 1604, then lying at Greenwich, where by the Right Honourable the Earle of Salifburie he was brought to His Majestis presence, killed his Hand, &c. The next day

he tooke leave of the Prince, and on the twelfth being furnished with his Commission, he came to Granefend, and next morning went aboord the lobn and Francis Admirall: and the two and twentieth of July anchored within a mile of the Archangell. The fixteenth of September, hee came to Vologda: the five and twentieth to Periflame, and there staid three dayes, and then departed to Troites, (that faire and rich Monasterie) to to Brattesheen and Rostonekin, fine versts from the great Citie of Mufce. The fourth of October , the Prestane came and declared the Emperours pleasure that hee should come into the Mosco that forenoone : presently after came Mafter I. Mericke Agent, with fome twentie Horses to attend his Lordship, which forth-with was performed. Then we did ride, til we came within a little mile of the many thousands of No-

blemen and Gentlemen on both fides the way, attended on hersebacke to receive his Lordship. Where the Embassadour alighted from his Coach, and mounted on his foot-cloth Horse, and so rode on with his Trumpets founding. A quarter of a mile farther, met him a proper and gallant Gentleman a-foot of the Emperours stable, who with Cap in hand, declared to the Embassadour, that the Emperour, the young Prince, and the Mafter of the Horfe, had so farre fauoured him, as to fend him a Iennet, very gorgeously trapped with Gold, Pearle, and Precious Stone: and particularly, a great Chaine of plated Gold about his necke, to ride vpon. Whereupon the Embaffador alighted, imbraced the Gentleman, returned humble thankes to them all, and prefently mounted. Then he declared that they likewife had fent horfes for the Kings Gentlemen, which likewife were very richly adorned, then for all his followers : which Ceremonie or State performed, and all being horfed, he departed, we riding orderly forward, till wee were met by three great Noblemen, feuered from the rest of the multitude, and the Emperours Tolmache or

Interpreter with them. They being within foeech, thus began that Oration they could never well conclude : Which was, That from their Lord and Master the mightie Emperour of Russia, &c. they had a message to deliuer his Lordship. The Embassadour then thinking they would be tedious and troublesome with their viuall Ceremonies; prevented their farther (peech with this (to them a Spell) That # was unfitting for Subjects to hold discourse in that kind of complement, of two such mightie and renow-

med Potentates on borfebacke. They (hereby not only put by their Ceremonious Saddle-fitting, but out of their Paper instructions) allighted suddenly, as men fearing they were halfe valvor-40 fed, and the Embaffadour prefently after them, comming very courteoully all three, faluting the Embassadour and the Kings Gentlemen, taking them by the hands. Thus like a Scholer, too old to learne by rote (the Duke named King Yolladamur Enonywich Manfolker) with his Lesson before him, declared his meffage; which was, that he with the other two Noblemen, were fent from the Great Lord, Emperour and great Duke Boris Phedorowich, felfe-upholder, great Lord Emperour, and great Duke of all Russia, Volademer, Moskoe and Nouogrode, King of Calan and Tedious Titles Aftracan, Lord of Vobskoe, great Duke of Smolenskoe, Tuer, Huder, Vghory, Perme, Viatsky, Bolgory, Gr. Lord and great Duke of Nouogrod in the Low Countreyes, of Chernigo, Rezan, Polotskey, Rostoue, Geraslaue, Bealozera, Leisland, Oudorskey, Obdorskey, Condingskey. King

of all Syberia and the North Coasts, Commander of the Countreyes of Inersky, Grysitisky, and Emperour of Kabardiuskey, of Chirkasky, and of the whole Country of Garskey, and of many other 50 Countreyes and Kingdomes Lord and Emperour, to know of his Maiesties health of England, the Queene and Princes. The fecond, being a Captayne of Gunners (the Emperours Guard) named Karrine Danydowich Beabeerchoue, pronouncing the Emperour and Princes Title, faid hee was fent from them to know his Lord hips health and viage, with the Kings Gentlemen. The third, was one of the Secretaries, named Pheodor Boulteene, observing the former order did deliver what he had in command from the Emperor, Prince and Empresse, to informe the Embassador of their much fauour towards him, and the Kings Gentlemen, in prouiding for his Honourable entertayne and case, a faire large house to lodge in : Also that they three were sent from the Emperour, Prince, and Emprelle, to be his Preflames, to supply the Emperours goodnesse toward him, to prouide his necessaries, and deliuer any sute it pleased the Ambassadour to make to the Empe-

rour. To all which the Embaffadour very wifely gaue answere (as they made report vnto the

So we all prefently mounted againe, the Preflaues on either hand of the Ambaffadour his Horse and Foot-cloth being led by his Page, some small distance, his Coach behind that, and

this burrhen to my shoulders, but have determined to undertake your protection with greatest sidelitie, being readic to sway the Russian Scepter and Gonernment, as farre as Gods grace shall enable mee, On the other side bee you faithfull to mee and to my command, at God may you befor. I am you most loyfull acclamations followed, with all protestation of their fidelitie and future obedience.

Tarters.

Ruffian New

746

He entring into the Monasterie, after Prayers, received the first Benediction. The people retur-Born Emperor. ned full of joy, and the Bels (of which are numbred in Mosco, three thousand) resounded the publike Feltinitie. All the Magustrates and Officers, & such as received Salarie of the King, go prefently to the Monasterie and carrie Gold, Silver, Precious Stones, Pearles, Bread, and Salt, (after the folemne custome) with wishes of long life & al happines, and desiring to accept in good worth 16 their Presents. He with thankes rendred, accepts only the Bread and Salt, Lying, these were his; the rest they should take to themselues. Then doth hee bid them to a Reast, and presently His Wife, Son, with Mary his Wife, Theodore his Sonne of ten yeeres old, and Ar fenica his Daughter being fix. teene, he goeth out of the Monasterie with pompeous Procession to the Castle. Like Prefents were offered to his Wife and Children, which accepted only the Bread and Salt, remitting the

reft to the Presenters. When he was comme to the Castle, he chose his Sifters Lodging; for that of the Prince decealed, as offenfine by his death was destroyed, and after new built After Festivall entertaynment of innumerable people, solemne Oath was taken of all the Gouernours; those things being in action till May. Then came newes that the Crim Taylar had

entred the borders thinking to find all things troubled with an interregne; whereupon he afferm 20 bled an Armie of three hundred thouland, and went in person against them. But the Tartars hearing how things went, returned home and fent Emballadors to the Emperours Tents, Hee returned with them to Mofco, where the next September (which is the beginning of the Rufe fiam New yeere, which enters in other places with Ianuary following) hee was publikely bleffed by the Patriaske, sarrying a golden Croffe in his hand, and on the fourteenth of September. Basis crowned, before the Knazers, Boiarens, Bishops and other Orders, had the Crowne seton his head by the

Patriarke, and the Scepter put in his hand, with the Solemnitie in such cases accustomed. Twelue dayes together all Orders were feasted in the Castle, and the Magistrates and Officers had a yeeres pay given them. Merchants also of other Countries had Immunities and Priviledges granted. The Rustickes had their payments to their Boierens reasonably rated, and their 30 perions made more free. Germane Merchants had moneyes lent them to repay seuen yeeres after without Viurie. Widdowes, and Orphans, and poorer persons received much Almes. Phosderes Obsequies were solemnely performed, and the Priests zichly rewarded; and that Empire which seemed dead with the death of the bouse of Beals , now was as it were remined, and receiued a glorious Refurrection.

Thus have we delivered you Thusnas his report touching Born manner of acquiring the Empire without publike emie, and cunning wiping off the afperions of *Phoedere* and *Demetria* their deaths. And as every bodie is nourified by Aliments correspondent to the Principles of the Generation, so did hee seeke by politike wisdome to establish that which by wise Policies he had gotten. Wherein his care was not little to multiply Treasure, and as at first hee had see- 40 med popularly prodigall, so after a small time of his Reigne, hee became providently penurious, the wonted allowances of the Court being much shartened from that which had beene in former times, as I hate received from eye-witneffes. Likewife he was carefull to hold good tearmes with his Neighbouring Princes, and aswell by plots at home, as by forreigne Aliance indeuoured to fettle on his Race this new gotten Empire. He is faid for this end to have fought a Wife for his sonne out of England, and a Husband for his Daughter out of Danna ke. His Wife was

a woman of haughtie spirit, who shought hentoo good for any Hoden (so they call a flaue, and fuch the efteemed all the fubjects) and on fuch tearmes flie is faid to have beene denied to a great man his best Souldier and Commander of his Armie. But while his Sonne shined now in the height of his course, and with brightest and war- 50

mest beames of prosperitie, there arose grosse vapours out of Demetring his grave, which grew quickly into a blacke darke cloud, and not only eclipfed that Imperiall glorie, but soone esgendred a blondie storme, which with a floud swept away that whole Family, and ouer-whelmed also the whole Empire. Contraries set together cause the greater luftre; for which cause I will bring on the stage a Gentleman, which attended Sir Thomas Smith employed in Honourable Embaffage from his Maiestie of Great Brittaine to the then flourishing Emperor Boris and out of much to infult his large Relations deliuer you this which followeth in his owne words (omitting the most part on B ru his \*to our purpose not so pertinent) in the Booke printed, Amer 1605.

\* Where the fremeth too

60

fome fixe thouland Gallants after behind all : who at the Embaffadors riding through the guard. that was made for him, very courteoully bowed himfelfe. Thus was he followed by thoulands. and within the three wals of the Citie, many hundreds of young Noblemen, Gentlemen, and rich Merchants well mounted, begirt the wayes on every fide: divers on foot alfo, even to the gate of the house where the Embassadour was to be lodged, which was some two miles. When ther being come, he was brought into his Bed-chamber by the Noblemen his Prestaues, where with many thankes for their honourable paines; they were difmiff, betaking themselves to their further affaires. The next morning came three other Prestanes with the former, to know of his Lordships health, and how he had rested the night past: withall, that if his Lordship wanted any thing, they all, or any one of them, were as commanded, fo readie to obey therein. These, to with the Interreter and fixe Gentlemen were most within the walls, lodged in a house ouer the gate, besides we had sittle Gunners to attend, and guard vs in our going abroad,

The eight of October being the fourth day after our comming to Mulco, the Preftages came to his Lordship to let him understand, they heard he should goe up the next day : wherefore they desired his speech and Embaffage to the Emperour : and the rather, that the Interpreter might (as they pretended) translate it. To this purpose, very earneftly at seuerall times they made demand. The Embassadour answered, that he was sent from a mightie Prince, to bee his Embaffadour to their Emperour, and being fent to their Mafter, he deemed it, not only a difficnour to him, but a weaknesse in them, to require that at his hands,

His audience. The Leventh of October, his Lordship being fent for by his Prestance there wayting, having 20 excellent lennets for himfelfe, the Kings Gentlemen, and good horses for the reft : as likewife two gallant white Palireis to carrie or draw a rich Chariot, one parcell of the great Present, with his followers and the Emperours guard, carrying the reft; on each fide the fireets standing the Emperours guard with Peeces in their hands well apparelled, to the number of two thouland by esteeme, many Messengers posting betwixt the Court and our Prestages. Thus with much fate, fortly riding, till we came vnto the vtmoft gate of the Court (hazing paffed through the great Caftle before) there his Lordfhip dil mounted. Then met him a great Duke (named Knefe Andriay Metowich Soomedaroue) with certayne Gentlemen, to bring him vp. So in order as we rode, we atcended the staires and a stone Gallerie, whereon each side stood many Nobles and Courtiers, in faire Coates of Perfian Stuffe, Veluet, Damaske, &c. At the entry to the great 30 Chamber, two Counsellors encountred the Embaffadour, to conduct him through that Roome, round about which fat many graue and richly apparrelled Personages. Then we entred the Prefence, whether being come, and making obeyfance, we staid to heare, but not vnderstand, a very gallant Nobleman, named Peter Basmaz, deliver the Emperours Title : Then the particular of the Presents, and some other Ceremonies : which performed, the Embassadour hauing libertie, delinered so much of his Embassage, as the time and occasion then assoorded: After which the Emperous ariting from his Throne, demanded of the King of Englands health, the Princes, and Queenes: then of the Emballadors and the Kings Gentlemen, and how they had beene vied fince they entred within his Dominions : to all which with obeyfance wee answered as was meete. Then the young Prince demanded the very fame.

The Embassador having taken the Kings Letter of his Gentleman Viher, went vp after his obeyfance to deliver it, which the Lord Chancellor would have intercepted. But the Embassadour gaue it to the Emperours owne hands, and his Majestie afterwards deliuered it to the Lord Chancellor: who tooke it, and shewing the superscription to the Emperour and Prince, held it in his hand openly with the Seale towards them. Then the Emperour called the Embassadour to kille his hand, which he did, as like wife the Princes, and with his face towards them returned. Then did hee call for the Kings Gentlemen to kiffe his hand, and the Princes, which they after obeyfance made, did accordingly. Afterwards, his Majestie inuited his Lordship, the Kings-Gentlemen and the rest to dine with him, as likewise Master I. Mericke Agent by name, who gaue his attendance there on the Embaffadour, and was now (as divers times) very graciously v- 50

Emperours

ied of the Emperour and Prince : no stranger (that I euer heard off) like him in all respects. Being entred the Presence, we might behold the excellent Majestie of a mightie Emperour feated in a Chaire of Gold, richly embroydered with Perfian Stuffe : in his right hand hee held a golden Scepter, a Crowne of pure Gold vpon his head, a Coller of rich stones and Pearles about his necke, his outward Garments of Crimson Veluet, embroydered very faire, with Pearles, Precious stones and Gold : On his right fide, (on equall height to his Throne) standing a very faire Globe of beaten Gold, on a Pyramis, with a faire Croffe voon it, vnto which before hee spake, he turned a little and crost himselfe, Nigh that, stood a faire Bason and Ewer, which the Emperour often vieth daily.

Close by him in another Throne fat the Prince, in an outward Garment like his Fathers, but 60 not fo rich, a high blacke Foxe Cap on his head, worth in those Countreyes fine hundred pound, a Golden Staffe like a Friers, with the likenesse of a Croffe at the top, On the right hand of the Emperour, stood two gallant Noblemen in cloth of Siluer Garments, high blacke Foxe Cappes, great and long chaines of Gold hanging to their feet, with Pollaxes on their shoulders of Gold.

And on the left hand of the Prince two other fuch, but with Silver Pollaxes. Round about the benches fat the Councell and Nobilitie, in Golden and Perfian Coats, and high blacke Foxe Caps, to the number of two hundred, the ground being couered with Cloth of Arraffe, or Tapiffrie: Nobilities The Prefents standing all the while in the Roome, within little distance of his Majestie, where he and the Prince often viewed them. Being now by our Prefiance and others come for to Dinner, who led vs through much presse and many Chambers to one very faire and rich Roome. where was infinite store of mailie Plate of all forts; Towards the other end stood the Emperours Vncle, named Stepbean Vafelewich Godonoue, Lord High Steward, being attended with many Place Noblemen and Gentlemen, whom my Lord in his passage faluted, which with an extraordinary 10 countenance of aged Ioy, he received, making one of their honourable Nods. The Embaffador en-

tred the dining Roome, where we againe viewed the Emperour and Prince, feated under two Chaires of State, readie to dine, each having a Scull of Pearle on their bare heads, but the Princes Dining rooms was but a Coronet. Also their Vestments were changed.

The former Duke, that for that day was the Embassadours Prestane, came, as commanded Change of from the Emperor, and placed the Embaffador at a Table, on the bench fide, fome twentie foot from the Emperour. Then the Kings Gentlemen, Maiter Mericke, Maiter Edward Cherrie, and all the reft were placed, to that our eyes were halfe opposite to the Emperour. Ouer against the Embeffadour fat his Prestaues uppermost. Also in this large place fat the Privile Countell, to the Two hundred number of two hundred Nobles at feuerali Tables. In the midft of this Hall might feeme to Nobles gueffs. 20 stand a great Pillar, round about which, a great height flood wonderfull great pieces of Plate, very curroufly wrought with all manner of Beafts, Fishes and Fowles, besides some other ordi-

narie pieces of feruiceable Plate. Being thus fet (fome quarter of an houre as it were, feeding our eyes with that faire Piller of Three bune Plate) we beheld the Emperours Table ferued by two hundred Noblemen, all in Coats of cloth dred noble

of Gold. The Princes Table ferued with one hundred young Dukes and Princes of Caffen, A- Seruitors. Grican, Syberia, Tartaria, Chercaffes and Ruffes, none aboue twentie yeeres old.

Then the Emperour fent from his Table by his Noble Seruitors, to my Lord and the Kings Gentlemen, thirtie Dilhes of meate, and to each a loafe of extraordinary fine bread. Then followed a great number of strange and rare Dishes, some in Silver, but most of massie Gold; with boyled, baked, and rofted, being piled vp on one another by halfe dozens. To make your particular Relation, I should doe the entertaynment wrong, consisting almost of innumerable Dithes: Alfo, I should ouer-charge my memory, as then I did mine eyes and stomacke, little delighting the Reader, because Garlicke and Onions, must befawce many of my words, as then it Garlike and

did the most part of their Dishes. For our Drinkes, they confitted of many excellent kinds of Meades, besides all forts of Wirie Meads,

and Beere. Divers times by name, the Emperor fent vs Diffes : but in the midit of Dinner hee called the Embassadour up to him, and dranke our Kings health, where the Emperour held some discourse of our King and State. But at one time (thriking his hand adustedly on his breft) Ob. faid bee, my deere Sifter Queene Elizabeth, whom I loued as mine owne heart, expressing this his Memory of Q. great affection almost in a weeping passion. The Embassador receiving the Cup from his Prince- Elzabeth.

by hand, returned agains to his owns place, where all of vs standing, dranks the same health out of the same Cup, being of faire Christall, as the Emperour had commanded, the Wine (as sarre as my judgement gaue leaue) being Alligant.

Thus passing some foure houres in banquetting, and refreshing our selues too plentifully; all being taken away, we did arise. The Embassadour and the Kings Gentlemen beeing called by name to receive from his Emperiall hands, a Cup (or rather as they call it a Tendonor) of excellent red Mead; a fauour among them neuer observed before, which Cups for they were great and the Mead very firong, we often fipped at, but without hurting our memories, we could not fay Amen vnto : which the Emperour perceiuing, commanded them to be taken away, faying, Hee was best pleased with what was most for our healths.

Thus after our low courtefies performed, wee departed from his presence, riding home with the same former guard and attendance to our Lodings; where our Pressures for that instant left vs, but shortly after they came againe, to accompany a great and gallant Duke, one of them that held the Emperours golden Pollaxes, named Knes Romana Phedorowich Troya Narone, who was fent from his Majettie to make the Embafladour and the Kings Gentlemen merrie: likewife hauing instructions to drinke their Emperours, our Kings, and both the Princes healths, and divers Princes elie, which hee did himiclfe very freely and some of vs, as many of them as wee could with our owne healths, there being such plentie of Meades and other Drinkes, as might well with our owne hearts, there being non-pennet of an arms in the headed, and well laded especi-haue made tortic Ruffer haue stumbled to sleepe. Thus light-headed, and well laded especiso ally if you take knowledge of the thirtie yards of cloth of Gold, and the two standing Cups

with couers, which the Embaffadour rewarded him withall, before he departed. But vinwelcome newes within foure cayes after our audience so vinhappily came, as not only our Affaires, but any elie, except counfeil against present danger, was not regarded. For this was Newcoof Deheld for currant, that one who named himselfe Demerrie Enanowich Beals, as the Sonne of their mering

late Emperor Inan Vafillowich; hee that in the reigne of Pheodor Enanowich his brother was in his infancie, as was thought, murthered at Ougleets) is now remued againe, and vp in armes for his right and inheritance: whereupon prefently was fent an Armie of two hundred thousand Souldiers, either to take or flay him. But he was fo ftrengthened with Poles, Coffacts, &c. that a number of Ruffes yeekied to his obedience.

Voon the one and twentieth of November, the young Prince of an ancient custome going to a Church within Mofes, the Kings Gentlemen vpon knowledge thereof (the Ambassador being vnwilling to be seene publike, as also for that the Emperor himselfe did not goe as hee was accuflomed) went and attended where his Excellency might feethem, and they fafely behold him, Princes pomps, who rode in a very faire and rich fled, having a gallant Palfrey lead by two Groomes to draw it, Io many hundreds running before to sweepe the snowe away where he should passe, and were said to bee flaues, which I verily beleeue, because certainly they were his Subiects. Then came the Prince richly apparelled with two Tarter Princes standing before on his sled, and two young Dukes behind, with two hundred fleds following him.

The eight of Februarie, the Emperor fent vs fleds to ride abroad, and this day the rather, I ne eigne of reconsure; in ampass said a man and an anomal and the man up the rather, that we might behold a reported victorie, against the reported Rebill Demetrie, &c. So we the Kings Gentlemen did behold three hundred poore Priloners, fauenteene Enignes, and eleuen Drums brought in, with more gloriethen victorie. About this time returned Peter Bafman, one of the Generals, who had performed very honourable fernice, and certainly, he was the man of greatest hope and expectation in the whole Empire, who was brought into the Mofor, with all 20 the Counfell, Nobles, Gentlemen, and Merchants, a grace neuer performed before to any Subiect. But not without suspition of some extraordinarie secret herein, and "des particular fauours, bountifull rewards, and a promife he should never goe againe untill the Emperor himselfe went, he was, being but a young man , made a Privie Counfellor. Forthwith one thing I will you shall observe the Emperors favour, and his then noble Spirit, he making divers times sute(as was thought) because they were in great danger, to goe againe to the warres, once proftrated himfelfe to obtayne his defire, but falling downe too humbly, hee could not eafily rife againe, whereby the Emperor understanding of his many and great wounds, was said to weepe, rifing himfelfe vp to raife and helpe him vp, but extraordinarie Caufes have the like Effects, as hereafter you shall understand.

We were lodged in the same house where the young Prince lobs of Denmarke, brother to that King and our now Queene of England, did lodge, (who would have matried the young Princelle Ouch finia, the Emperors only daughter, but that he valuappily theredied) but not in any of those lodgings: for it is a custome there, that where a Prince dyes (especially a stranger) not of long time after to let any other lodge there.

Now the Ambastador understanding of the connenience of his passage downe by sled-way, also fearing (as wise men had cause) what the issue of these warres would be, knowing the state here wied in any futes, bethought himfelfe aduitedly that it was high time, being the middeft of Februarie, to defire a second audience for his sooner dispatch, which he forthwith requested, and wrote a letter to that purpose vnto the Lord Chancellor.

Second audience.

Out finls the

Princeffe.

Vpon the tench of March, the Ambaffador with the Kings Gentlemen all richly apparelled, and all his followers decently attending, very honourably (as before) and with the like recourse of beholders, and guard of Gunners ( but that they were faid to bee Citizens by reason of their Citizens Soul warres, but in like apparell) was attended to the Court, being received with the former grace, or more, he ascended the Presence : the Emperour and Prince holding their wonted state, onely changing their Vestments with the feafon, but for the riches nothing inferior.

So foone as the Ambassador and the Kings Gentlemen were come opposite to his Throne, hee commanded feates that they might fit downe : then with a Maieffick countenance, repreferring rather constraint then former cheerfulnesse, he declared, that He, his Sonne and Councell, had confidered his Maiesties Letter, the Maiestie of King lames of England, as also on whatforeer 50 elle was defired, and in token of his joyfull received arriftie with the renowmed King of Eng-Land, as with his Predecessor, he had wrote his Princely Letters to that purpose. Herewith the Chancellor from the Emperour deliuered the Ambaffadors his Highnesse Letters to his excellent Maiestie. Withall understanding by the Chancellor hee had some farther matter to intreas of, then in his Briefe to his Maiestie was remembred : therefore hee had appointed foure principall Councellors to confule with him of his Requeits, which was done. After, the Ambaffador yeelding courteous thanks for his Maiesties fauour, his Loruship attended by many Nobles, proceeded to the Councell Chamber, whither pretently after came foure Councellors, and the Emperours Tolmach: who after falutations, we withdrew to the next chamber, where wee palfed away an houre in discourse, among many young Nobles, having the Ambassadors Interpreter, 62 In the end, after three or foure goings and returnes of the Chancellor from the Emperour, wee went againe before him (where after hee had commanded vs to fit downe as before) by the mouth of the Chancellor was openly delinered a Briefe of the whole Embassie (and that dayes particular defire, according to the Ambassadors request, confirmed.) Also in good and pleasing

language, was declared the great defire structhe Emperour had, for the continuance of peace and assists with the removimed Lasses King of England, as with the late Queene Ein. admit; with that induction call accidents well cheedly he would find an honourable Ambafiador for further affaires, as likewife to congratulate wish our Ring of his pappine fe'in fo phinfible comming to his Right and Inheritance. Likewife, a Grane of in new Privaledge for the Companie, which he faid fhould be wider the golden Seale, &c.

the mount of vince and guiden from the Emperor salled for the Ambeliador and the Kings Golden Scale. Gentlemen to kiffe his hand, and the Princes a which does, with the Emperors nod or bowing to vs. as likewife the Princes, deficing the remembrance of his and the Rrinces commendations no to his Maiethie, the Prince, and Querne of England, Welveredifficially, but nor before the Emperor faid he would fend himse to vs. Thus we trooke out last leave of the Emperor's Court, be-count, named Knut Enan Enganomich Courding; was attended with many of the Emperor fer mute within our Gates: following him a dinner; Gentimen the Emperor by fome ewo hundred Great dinner. perfons, confifting of three hundred feuerall dishes of Fifte (for it washew Lent) of fish firance meffe, greatmeffe, and goodneffe (for their number) at it ware not to bee beleeurd by thy report,

Alfo to this end bee had fent men of great birth, viz. Rues Pheodor, Euanowich Methithfosky, and Rues Demetre, Euanowich Suskey; and given them Commission to difflace his Enemier, and Prestaue the Godonnoues, and others, till his further plessing were known, confia-ming tole monstrous blend suckers and Traytors, such returns of the Commons answers thereunts: Likewife to demand bis Meffengers, and they to bee brought before the Commons, whom bee had reafon to beleeue were ill-intreated, if not murthered; withall, that if they did fubmit themselnet nom to him , as to their lawfull Prince and Soueraigne , ( which hee was trucky resolued their consciouces were quiltie of ) that yet they should finde him a gracious and merciful Lord; if otherwise, a sewere and just Renenger of them, and their many muschedes towards bim, as hee that had bis Sword To ener unfreathed to execute his vengeance on them all: and was casily persuaded they were not ignorant of the many Villeriet bee bad obtayned formerly against them, when they would seeme able and willing to fight with his Souldiers : and how afficited and troubled berewith they all were : But that now . be had their chiefe and strongest Heads and Armes in his owne hand, the whole World might not betreth birn they durif ones freshe events grants the an affered that all (excepting a very few, and they of the worl) in beart were be legal Indicate, or a

But before this Letter was halfe read, the Hearts and Hands of the multitude were ftringely combined together, not one freaking, but all confusedly like fettered and chayned Horses stamping; being indeed without any feare, but of not doing mischiefe enough, all (as one) running violently into the Caftle, where (meeting two of the pitifully tormented Meffengers) 20 they pawfed to heare them as sufficiently as their insufficiencie would permit them, deliuer the vilde manner of their torturing, whipping, and roasting, which was in deede a Whip and Spurre to driue them, without wit or humanitie, as if they had beene fired like Gun-powder with the very sparkes of heate : Such barbarous crueltie, beaftly actions, and inhumane spe-Stacles, as without the great Deuill had beene their Generall, no particular could have a-Ged; laying violent hands on all they met : but not killing (the great mercy of God) any

man of account. Thus the whole Citie was in an vproare, all the Counsellors houses, sellers, and studies ransacked, beginning with the Godowower; spoyling, renting, and stealing all they met with; but carrying lettle away but drinke, which they could not carry away.

30 [The Commons (no doubt) would have made this day little inferiour to the maffacre of Pas ris, fo violent and deuillish were their sudden resolutions but that the Nobles (best beloued and obeyed) intreated, where none could command : of hers perfwading, all wishing an end to this most miserable and neuer exampled mischiefe. Butthe multitude did what they would and could; efpecially on the greatest, which certainly were the worst : So as the Empresse flying to a fafer lodging, had her coller of Pearle pluckt from her necke.

Then the Prince, Empresse, and Princesse, were prestaued (a second command being come from the Campe) with the Godsnones, and many others that were suspected most : The Nobles ioyning in one counfell for the prefent ordering of these sudden accidents, and for answere to the Prince Demetrius Engagement, who suddenly was by generall consent concluded

40 (by the particular knowledge of Boden Belikes a great Counsellor, that was primit to his departure, and some others) to bee their right and lawfull Emperour, onely a few excepted. So as the young Prince was by many (but particularly by his mother) counfelled to leave the Kingdome veterly, before it forfooke him; to follow his Fathers example in murdering himfelfe, and herein his mother (that Map of miferies, that Cradle of crueltie) and his onely deare fifter would affociate him.

Letters were deuised, and Meffengers framed to effe & this desperate treacherie on his innocent life; fo as in very few dayes (for Mischiefe hath the wings of Thought and Refolution) they three did confent (an wnhappy coniunction) to deftroy themselues; and rather to lay violent hands upon their hatefull lives , then make an Enemic feeme cruell in executing lu-

flice on them : which \* yet certainly this Emperour neuer dreamt of , but determined the \* Thus besbus SC Prince should be within himselfe, not lesse then Absolute, and in a very great Dukedome, othersascribe The Princely Mother began the health of Death to her noble Sonne, who pledged her with a this murther The Princety Mother began the hearth of Death to her mane south, who preages not to Death as hearthed hearthed draught, therein fo much frength did hee adde to his vile wicked obedience, that her his command, his command, prooued a banquerout prefently, and hand in hand embracing each other, they fell, and died as and dies telfes one , the Mother counfelling and acting , while it the child bethought and fuffered : yet fee Pro- murcher was uidence and Commiseration, Conftancy and Obedience : the Princesse dranke, but like a Vir- presented to nidence and Commiteration, Contrarcy and Obedience: the Princene diamet, so we another and enuy of gin temperately: fo as modefue (the want of which was the death of the Mother) now another of the fact. prooued the life of the Daughter.

Death of Mother & Spane.

60 However it was with Botts for other things, I thought it not amiffe to adde this testimonie of his refrect to the English Nation and Merchants in Primiledges granted them, as followeth,

Emperor Boris his Mofte Patent translated

Ne Almightic God without and before the Beginning, the Father, the Sonne, and the Hely Ghost, whom we glorific in the Trinitic, our early God, Creator and Preference of all things encrywhere, by which Will and Working, be lineth and gineth life unto Man; Our onely God which suffireth enery one of us bis Children with his boly Word, through our Lord lefus Christ, the Spirit of Life, now in this latter times, of ability vs to bold the right Scepter, and suffer vs of our sclues to reigne, for the good of the Land, and the happinesse of the People, together with our Enemies, and to the doing of

We the great Lord Emperour and great Duke Boris Pheodorowich of all Russia, fele Commun. ore the great term comprome and great Mangabutte production that of a state of Volodenne, Moice, Nongrot, Emperor of Grant, King of Affraca, Lord of Voloden, and the great Dake of Smolensko, of Twersko, Vhorskoy, Permskoy, Varskey, Bolharskay, and of a thers, Lord and great Duke of Nouagrod in the low Country of Chernego, Rezan, Polotskay, Ro-Rouskoy, Yerallauskoy, Belezerskoy, Leeflanskoy, Owdorskoy, Obdorskoy, Condinskoy, and all Siberia, and the North parts; Lord and Commander of Euerskey Land, and Cabardinskey Country, and of Cherces, and Igarskoy Land, as also of many other: Lord and Commander, with one Sonne Prince Phedar Borisowich of all Russia. We have bestowed on the Merchants of England, viz. Sir Iohn Hart, Knight; Sir William Webb, Knight; Richard Saltansfall, Alderman; Nicolas Mohley, Alderman; Robert Doue, William Garaway, John Harbey, Robert Chamberlin, Henric Anderson, John Audwart, Francis Cheric, John Merick, Anthony Marlar; Wee bouse granted and incenced them to come with their hips into our Dominion the Country of Dwina, with all to manner of Commodities, to trade freely from the Sea side and within our Dominions, to the Citic of our menner of Commonstres, to trace press promo to scan per som streets one Learnman 1, to the Citie of our Empire of Mockoo. Also there made fate verse vis Pos loth Hart, Kangle, and but Composite, to great-fie them to trade to our Citie of Moico, and to our Heritage of great Nowgrod and Vobeko, and to all parts of our Empire, with their Commodities, and to Trade freely without enitome: open which wee the great Lord Emperour and great Date Boris Pheodorowich of all Ruffia, with our Sonne Prince Pheodor Borilowich of all Ruffia, have granted onto the English Merchants, Sir John Hart, Knight, Phenoire Dotthewant of an Annie, some grantes over the tright extrements, or total right, angue, and his follows; for our Sifter field Queene Elizabeth, free piling to come unto our Kingdome of Molco, and into all the risk of our Dompsous, with all manner of Commundative to trade and reflick free for at their ples force. Also we have communded, not to toke any kinds of Conforms for their goods, you are h at their ples fore. Allo we have commanded, not to sake any kinds of Uniform for their goods, nor any other Colfornes what some reverse, viz. for pairing by any place by Land, wor for passing by any place by Place; 30 not for Colforne of their Boats or Headings, on the passing one Project and Perries, nor for any one rive of Wares: at allo all manner of allow Colforness or Danies what sheer were command shall not be taken of them : But they shall not bring passer man; goods into one Dominious, nor skewife recervy our tages of come in the configuration of configurations and the configuration of the Kingdome any other mens goods as their owner, nor to fell or harter for other men. Neither shall come Subjects buy and fell for them or from them: nather shall they keep any of our peoples goods or pawnes by them to come or colour them. Likewife they feall not fend any of our Subjects to any Towns or Citie to buy Commodities. But what Citie they came into them selmes they shall sell their owne Commodities, and buy our Commodities. And when they shall come to our Heritage to great Vobsko and Nouagrod, or to any other Citie within our Dominions with their Commodities, that then our Gentle-None and Concrement, and all after effects had fuffer, and let them paffe according to the art Letter, and to take no manner of Costians of them what fewer for any of their Communics for paffing to, no. 40 for paffing to, no. 40 for paffing to, and the the communication of the comm paffe through with goods not buying of any Commoditie nor falling their own, then in these Cities they fold take of them no manner of Cuitome what sener as after field, and wee home gratified and gueen them lease to trade in all parts of our Dominions with their goods freely without Custome. And likewife when severally the English Merchantes ball bee defired to buy or fell or barter their waves with our Merchants wares for wares, then skall they sell their wares whole sale and not by retaile, Cloth by the pack and by Clothes and by remnants; and Damasks and Velues by the Piece and not by the Tark, or pack and by Clustes and by remnants, one Damman, one remers of the rece and not by the I ard, or aftern, and fack of ammonisties is the feel of smarght, not to fell from the fined marghts, that is to fag, by the Zoloczucka. Alfo they feel fell times by the Proplem of the Hopfbead, but by the Gallon, \$0 Quart or Pas or Charles they feel may be it moreover, they fould buy, fell and exchange their owns Commodities them selves, and the Ruffe Merchants shall not sell or exchange for them or from them their Commodities, neither shall they carry any mans goods to no manner of place under colour of their owne, and which of the English Merchants would at any time fell his Governedities at Colmogro on the Dwina, or at Vologda and at Yeraflauly they may, and of all then Commodities throughout all our Cities and Dominion, our Gentlemen, Conernours, and all other Officers Shall take no manner of Cu-Rome according to this our Imperial Letter of fanour. Also through all our Dominions, Cities, and Townes they hall hire Carriers, Boats, and men to labour or rowe in the faid Boats at their owne cost, Likewife when as the English Merchants shall defire to goe out of our Dominion into any other Kingdome, or into their owne Land, unditakwe thinks is good for themso take mit them from our Treasure 60 any Commodities to fell or exchange them for us , for such Commodities as shall be sitting to our Kingdone, and to deliver them to our Treasurer: and with those their and our goods, our Gentlemen and Gomermours Shall Suffer them to passe through all Cities and Townes within our Dominions without Cu-

stome as before. And when they have ended their Market, and doe desire to goe from the Mosko, then they fall appears in the Chancerie to the Keeper of our Seale, the Secretarie Vaffily Yacolowich Schellcalou. Likewife , if there happen to the English Merchants any extremitie by Sea , or that a flip be broken, and that it be neere any place of our Kingdome, then we command that all those goods thall bee brought out initly, and bee given to the English people that thall at that time bee in our Land, or if they be not here, then to lay them up all together in one place, and when the Englishmen come into our Land, then to delmer those goods to them Also wee bane bestowed on the English Merchants the Honfe of Yourya, in the Mosko by a Church of Saint Maxims neere the Marger, to dwell m it as in farmer time, keeping one House-keeper a Russe, or one of their owne strangers: but no other Russe fulles they shall not keepe any. Likewise these Merchants baue Houses in dimers our Cities as followeth: A Honfe at Yeres, a Honfe at Vologda, a Honfe at Colmogro, and a Honfe at Michael the Archangell, being the firpping place: these saul Houses they shall keepe as in sormer time according to this own imperial Letter of fasour, or gratisted without paying any manner of Rent or anywather duties what foener, either at Mosko, Yereilaue, Vologda, Colmogro, or at the Caffle of the Archangell, weither shall they pay any taxe. Also at those Houses at Yereslaue, Vologda, Colmogro, and at Archangell they shall have House keepers of their owne Countrey-men, or Russes of a means for that are not Merchants, a manor two in a House : to lay up their goods in those Houses , and tomake sale their goods out of those Houses, to whom they will according to this our Imperial Letter of fanour, but their Ruffe House-keepers in their absence Shall not fell any of their Commodities. And the English 3) Merchants shal come with their ship to their Port, as in former times they have done to wilade their goods out of their ship, and likewise to lade them againe with our Russia Commodities, at their owne charges of one of nover/popt, and unempies to save town against with one town to their flores to their thought of Boates and bire of men, and ferrying over the faid goods from thoir flores to their thought at the Callet of Archangell. Likewife our Officers, Custowers, and Sournemen shall take a instruction of all fact goods as they have both of Russia and English Commoduties, and the note to peffe under the Merchants Firma, because it may be knowne what goods passeth of the strangers and of the Russes. But they Shall not look ower their goods, nesther unbind any packs in any place, and when they doe fend their owne Englishmen from Archangell to our Citie of Mosko, or doe fend Russia Commodities into their owne Land, Then all our Officers and Customers shall let them passe without delay, according to this our Let-ter of sauder. And when source the Merchants shall be defiron: to send any of their owne Countreymen to their owne Land, or me any other Knadoma over Land: they had doe it freely with our Imperial
to their owne Land, or me any other Knadoma over Land: they had doe it freely with our Imperial
Maightes order, without carrying any Commodatie suce with them, and they flash base their Letters of
Paffegium them in the Embaffalour Office. And concerning any matters of debate or convowerfe in Merchandize, or insurve, then they shall be indeed by the Keeper of the Seale, and Secretarie Vassily Yacolowich Shelcolou, doing right and Institute to both parties with equitie and truth. and what cau-120100 VICL SINCOVICE, and program was soften were not proven the vice of the late of the Officers shall doe true Institute them: and what cannot be sought out by Law shall be sought out by Lor shall be tought out by Lor shire Lor that it taken out shall have right done wnto him as before mentioned, as also they shall not 40 take any custome or dutie of them for any Law matter, not in any place in our Kingdome. Moreover. this our Impersall Letter in all our Realme and Dominion, our Officers, and all manner of our subjects hall not disobey or breake it in any point what somer, but of there bee any that doth disobey this our Imperiall Letter of fauour, that then those people shall bee in our high displeasure, and executed to death. This our Imperial Letter of gratitude, is given at our Imperial Palace and House in our Citie of Mosko, from the yeare of the beginning of the world 7107. in the month of November: being under-

By the great Lord Emperour and great Duke Boris Pheodorowich of all Russia , selfe-upholder ; bis Keeper of the Seale, and Secretarie by name Vassily Yacolowich Sheallcaloue.

#### d. III.

One pretending himselfe to be DEMETRIVS, with the Popes and Poles belpes assayneth the Ruffian Empire : his Arts, Acts, Marriage, fauour to the English, and miserable end.

Auing thus prefented you Berich is Tragedie out of that printed Author, and his Grant to the English from a written Cooke in Castlean and Author, and his furely and mature view of this Pretender, against whom Born his defire of secrecie (permitting none guiltie of the murther to furuiue) had vnfurnished him of Arguments. He produced a Parie given him by his Mother; with the Historie of his life after that fending him away and acknowledging another whom the was more willing to act that bloudy

Scene then her own Son: with other particulars which ored firing confidence in fuch as (wears of Boris) were defirous it should be so. But for the death of the youg Emperor, & his mother, it is by most ascribed to Demetrius, who seeing the people of Musco his friends, and the Emperour and his Mother in hold, pretended he could not come thither whiles his enemies lived, wherewpon they in a mutime flue them; to auert the enuie whereof, it is probable that it was made to be their owne act, and their Keepers therefore by him imprisoned. Born his daughter was thrust into a Numerie, and so made dead also to the succession. But as I have before delivered out of that diligent, learned and sincere Historian Thuanna, Boris his attayning the Scepter, Ishall likewife intreat your patience out of him to receive thefe Relations of Demetrins.

Tbs.L. 125.

Thus we writech that after the murther of that (true or falle) Demetring, some yeeres after in the horders of Polonia and Musconia, appeared one which called himselfe Demetrins , and in testimonie thereof, shewed a Warr in his face, and one arme shorter then the other (noted before in the true Demetrisu) a man of sharpe wit, bold courage, liberall mind, gentle behaviour, and of parts composed to a Scepter-worthinesse. First, was he made knowne to the Iesuites of princia feut reacher, or pall note in Poland, to whom he promited if he might receive helpe for the recovery of his just Inheritance, his first care should be to reduce the Ruffians to the Vnion of the Ramish Church, This thing was commended to the Pope as conducing to the enlarging of the holy See, by his ayde, and furtherance with the Polifo King and Nobilitie, to be promoted; which also was done by the seluites themselves, who brought him to George Miscins Palatine of Sendemir a man potent in that Kingdome, with whom he couenanted also to marrie his Daughter if hee succeeded 20 in his Ruffian Enterprize. He had lurked awhile in Liefland, cafting off his Cowle, and had there learned to speake and write the Latine Tongue : and had written to Pope Clement the Eighth, with his owne hand not inelegantly. And being by the faid Palatine, and Vifnonitz this Sonne in Sigifmunds fa- Law, brought before King Sigifmund, he made a pithy and Malculine speech, that he should remember that himfelfe had beene borne in Prifon and Captinitie, whence Gods mercie had deining oned by linered him, to learne him to fuccour others afflicted with like difaffre. Thus by the Kings favour, the Palatines money, the Issuites industrie ( not to mention the

Popes Sanctitie) he procured an Armie of ten thousand Souldiers in Toland well furnished, and

in his Russian March, winneth to his partie the Cossaks a kind of men which follow forreigne

Warres and prey, and leades with him tenne thousands of them. Paffing Borifibenes hee first 30

COT.LS.

Zersiga,

charged upon Zernies,& fummoned them to yeeld to the true heire Demetrine, which was done by Inan Takmeny, who had before conceived diffike against Boris. Coreles commanded the Cof-Patient yel- fate, anotorious Sorcerer. He was the Author of the fiege of Patienta a populous Citie, which Michelowich Sotiekoni held with eight thousand Coffeks, whom also he wrought with, that hee admitted and followed Demetrins. Hereupon Born lends an Army of an hundred thousand men again't him. He alfo fends Ambassadors into Poland, to put them in minde of the league betwixt both Nations, and earnestly desired this counterfeit Demetrine, a Priests Bastard and notable Sorcerer, to bee delivered vnto him alive or dead, adding threats if they periffed, and withall working under-hand with the Nobles to deterre the King from his ayde. But by the Popes and Islantes preuayling power nothing was effected, the King and the Poles refoluing to affift him, 40 as thinking it the bell course to accord both Nations.

Both Armies met at Nouogrod, where Palatine Sendomir the Generall, in the end of Ianuarie

1605, thinking to find a repole in the Ruffian Armie, gave a rash on-set, & was put to slight, and

atter returned to Poland. Demetrine retyred himfelfe to Rilikie Calife (in the borders) with a

few, and forfaken of others, he forfooke not himfelfe. Hee had brought with him two Dinines

Louitzi, which had beene Authors of the Expedition, and now encouraged him by their exhor-

tations and examples of parience. He confident (as hee made flew) in the julice of his caule,

The Pa'atine

ciftercions and of the Ciftercian Order which returned home : two Issuites also, Nicolas Cherraconi and Andrew

confi :cut Prayer.

when he was to begin battell or skirmish, vied to call vpon God, so as he might bee heard of all, with his hands thretched forth, and his eyes lifted up to heaven, in fuch like words. O most infi Indge kill me first with a Thunderbolt, deftroy me first, and spare this Christian blond, if vniustly, if 50 conctoully, if wickedly I goe about this Enterprize which thou seeft. Thou seeft mine innocencie, belpe the inst can'e. To thee O Queene of Heaven I commend my selfe and these my Souldiers. Which if they be truly related, and he not the true Demetrine, he was either an impudent lugler, or exceedingly gulled with fortunes daliance and prosperous successe, which condition in a Tragical period.

Bialogrod;

Part of Bors his Armie was now comme to Riliky, where in a battle betwire the horsemen or both parts, Demetrius got the better, and the lately conquered, and prefently fewer, became V .-Hors; at the first encounter a thousand being flaine, two hundred taken, and the rest put to hight, leauing their footmen to the flaughter, and the baggage to the spoyle. Hereupon fine neighbouring Castles with their seuerall Territories, yeelded to Demetrins, one of which, Bialogrod yecded him a hundred and fiftie Peeces of Ordnance. The Captaynes were delivered into his hands. Soone after Ialeka and Leptina yeelded, in which Hinsko Otiopeius that famous Sorce-Seucia yeelds. rer was taken : after which all Seucria, a large Principalitie, came in, and eight Caffles ; Demetrius vling great modestie in this vnexpected victorie. Boris memewhile tent tome with large

promites to murther him, and the Patriarke excommunicated all which fauoured him. Demetrius writ hereof modeltly to the Patriarke, and to Bons allo, extering faire conditions to his Family, if he would refigne his viurped Empire, which he with indignation rejected. That happened when the Emballadors of Denmarke and Sweden were in his Course to young league with Borndych him against the Pole. In that consultation Born is faid to have beene in such rehate, that hee fell Some say, that downe juddenly, much bloud palling from his mouth, nofthrils and eares; and in the end of A. hec had vo d downe fuddenly, smuch office paring from an inouting poylon which hee drunker; after the had to poylone a form a poylon with Agus the prill hee dyel; fome fay of an Apoplexie, others, of poylon which hee drunker; after the had to poylone. reigned fenen yeeres. His Wife with her Sonne were advanced to the Throne after him, and the thirs. Nobilitie fworne to them. The dead bodie was buried without any, pompe. Conflantine Filler a Nequeenim lex

10 Lieflander of Rie made an elegant Oration in his prayle, whole brother Gaffer terued Borit. influt via eft. ieflunder of Kie made an eiegant Giacom mins preyns, reien ... Hodunins (a neere Kinfmin of H). quam neis at-Prefently Peter Basman was tent away with an Armie. Hodunins (a neere Kinfmin of H). quam neis atris ) besieged Crom, to rayle whom, Demetrius vied this policie. Hee sent a simple man thither, vice sus which being deceined himselfe might deceine others, with Letters that fortie thousand with some fay at comming to ayde the befreged. He being taken (fent by a way which he could not efeape) aird 60000 min. examined with tortures confesseth the fame with his Lesters : which caused a turnult in the Campe; and in the end, the besieged taking advantage of the rumour still increased by some sent purposely with reports that they had feen the new auxiliaries issued with a counterfeit shew of great numbers, and caused the Russians to consult of yeelding Basman also the new General Basman yeels ye lided and cried out with a loud voyce, that Demetrins was the true heire, and therefore all true d.th. 20 hearted Muscouites should follow his example; which the most followed. Hedanius was taken, and refusing to acknowledge Demenius was call in Prilin. In the Tents were huge Ordnance to al. After this Campe-alteration, followed the like in Mofco, the people refounding the

that they poyfoned themselves, some that Demetrius commanded it The Germanes flying out of the Boriffian Campe to Demetrins drew many with them.

From Cromdo. h Demetrius now march towards Mosco, the people all the way flocking to see their new Prince, who in twentie remoues came thither on the 19. of lune, and entred with Demetrins compompous procession of Souldiers & Priests, the Ruffian Priests having Banners with the Pictures meth to Moles, of the bleffed Virgin and their Turclare Saint Nicolas in the end of al the Patriarch, and after him entrance, Demetrius by himfelfe on a white Palfray with a gallant trayne of attendants. Thus hee goeth to the Temple of our Ladie, and after Prayers, from thence to Saint Michaels Church in which his Father lay buried, and hearing that Boris lay there interred, he prefently commanded his body to be taken vp and to be removed to a meaner Chappell without the Citie. Paffing by Boris his peculiar House, he could not endure the fight, but fent workemen prefently to race the same;

name of Demetrins. The En presse and her sonne were committed to ward, where some write

faying, they were infamous with Sorceries, and that an image was faid to be placed under the ground, holding in the hand a burning Lampe, having vnderneath ftore of Guopouder buried; things fo dispoted, that the Ovle failing, and the Lampe breaking, the fire should (had it not heene before spied and removed) blow up that, and the houses adioyning. Thus had Boris impeached him, and he now Borie of Mag call arts, which are vitual acculations in those parts.

Thenche went to the Imperial Pallice, and beganne to gouerne the Empire, more inclining to the Poles and foreuners, then to the Refles which variantly experfing himselfe, hafined his ed. ruine. Seventie nuble Families of Borie his kindred or faction were exiled, that their Goods might be hared among't strangers, and new Colonies of men planted, brought into Russia. His clemency was remarkable to Smith, who being condemned for not onely refusing to acknow- Clemencie to ledge this Emperour, but vetering allo reproachfull speeches of him (as being of bate Parentage, Snike). and one which had conforred with the Poles to ouerthrow the Ruffian Temples, & Nobility) and now his prayers ended, and the fatall stroake on his knees expected, on the feauenth of July, by wnexpected mercy, even then received his pardon. The last which yeelded to him were the Plescouites. Sometell of exceeding Treasures also which hee found laid up for other purposes,

which through his profusenelle soone vanished. The first of September, was designed to his inanguration (being New yeeres day to the Ruffer, as sometimes to the lower) but for other caufes it was haltned, and his Mother was fent for out of a Monasterie (into which Boris had thrust her) far e from the Court. An honorable Conuoy was herein employed, and himfelfe with Refrect to his great shew of Pietie went to meet her, embraced her with teares, and bare-headed, on foot, at- Moihettended her Chariot to the Castle; whence afterwards the removed with her women into a Monafterie where the Noblett Virgins and Widdowes of Ruffia vie to fequetter themselves from the World. His Mother was noted to answere with like affection to him, whether true or diffembled on both parts. At his entrance to the Kingdome, after Ceremonies ended. Nicolas

Chermaconius a Iesuite made him a goodly Oration : the like was done by the Senate. To the Ie- Iesuite. 60 fuits was alotted a faire place of entertaynment not far from the Caffle, wherein to observe the Romille Rices and Holies and even then by their meanes he had declared himfelfe in that point, but for feare of Suiskie hee stayed till fitter oportunitie.

Having thus letled things, his care was to recompence the Poles, to enter league with that Na. Emb. flige w tion, and to confummate the Marriage. For which purpose hee fent three hundred Horfemen Polast.

with Athanasius the Treasurer, who in November came to Crassuia, had audience of King Signmand, where he with all thankfulneffe acknowledged the Kings forwardneffe with his Nobles to recouer his right, whereto God had given answerable successe beyond expectation; that bles to recover many; y where or an angeneration to the property of the deployed the Tuncja including in Harmy and other parts it. vimilitate which, he would willingly joyne with the Pole, and other Christian Princes: meane whiles he was willing to make an cuestafting league with him, and to that end entreated his good leave to take vitto himfelte a Wife out of Poland, namely, Anna Maria, the Daughter of George Miccinfie the Palaine of Sendomir, to whom for money, men, and endangering of his owne life, bee was so much engaged. The eight day after, the Contract was folemnely made by the Cardinall, Bishop of Cregaged. The eight day arter, the contract waston the King, Demetrius had sent her and count, and the Embast dour with her Parents featled by the King, Demetrius had sent her and 10 herFather, Iewels worth 200000. Crownes.

Thus farre have wee followed Thuanus, and hee lacobus Margaretus a French Captayne of Demetrus guard of Partifant, which published a Booke hereof. Now let vs present you alittle English Intelligence touching this Demetrins and his respect to men of our Nation in those parts, and first his Letter to Sir lobn Mericke.

The Copie of a Letter fent from the Emperor DEMETRY EVANOWICH, otherwife called GRISHCO OTREAPY OV: the which Letter was fent to Mafter IOHN MERRICK Agent, out of the Campe, as Mafter MERRICK was ta- 29 king his Iournie to the Sea fide, the eighth of Iune, Anno 1605.

Rom the great Lord Emperour and great Duke Demetry Euanowich of all Russia. To the Eng-I lith Marchant John Metrick, wee gine to understand, that by the init indgement of God and bis strong power, we are raised to our Fathers throne of Vladedmer, Mosko, and of all the Empire of Rus-12; as great Duke and fole commander: likewife we calling to memorie the love and amitte of our Father the great Lord Emperour and great Dute Euan Vassily wich of all Russia, and our Brother Theodor Eunowich of all Russia, which was beld, and kept by them and other great Christian Princes, in the GOT ELISTON NEW 9 ARE COURTS PROTES THE WORLD, STORE OF THE COURT OF THE STORE OF THE COURTS AT I FREE FROM THE COURTS OF THE CO and all you bis English Merchants, we will fanour more then before. Further, as soone as this our Letter and ally see us English intercounting or one passes more case wifee a minimum process can our letter do to come to your boad, and all come as you becaused your Markets at the Jopping place of Michael the Archangell, then to come up to Molico to behold our Maissites prefere, Andry row posts Hofe I have commanded shall be given you, and at your comming to Mosco, then to make your appearance in our Chancery, to our Secretarie Ofanasy Vlassou. Written in our Maiesties Campe at Tooly, in the yeare of the world Anno seasen thou fand one bundred and thirteene.

The Copie of the translation of a Passe given to Master I o HN MERRICK, which was given him in the time of his being in the Campe at Molodone with the Emperour DEMETRY EVANOWICH, otherwife called GRISHCO OTREAPYOVE.

Rign the great Lord Emperour and great Duke Demetry Buanowish of all Rusha, from Mosco to our Cities and Cailles, as also to the Casile of Archangell at the Shipping place and haven to our Generals, Secretaries, and all other our Officers, &c.

There did make suite unto us the English Marchant John Merricke and his Company, that we would gratific them to be suffered to passe to the new Castle of Archangell, or to the shipping place or hanen, is regard of irafficke of Merchandise.

Alfo, that if he doe send home any of his fellowes and servants from the shipping place, being of the English, that then they might be suffered to paffe into England. Alfo that to what some Citic of ours the English Marchant John Mericke, and his fellowes, doth or Shall come unto then all yee our Generals, Secretaries, and oil other our Officers, shall suffer them to passe enery where, without all delay. And as for our Customes, as for passing by or for bead mony, our custome of goods, you shall not take any of them nor of sheir servants. Lucaussa, when the English Merchants Ichn Metticke with his follows and servants, Shall come to the Castle of Archangell, then Timophey Matphewich Lazaroue, and our Secretary Rohmaneum Mocaryoue, Voronoue, as the forefaid Caffle of Archangell, hall suffer and permit the English Merchant, John and his companie to trade freely. Moreover, when at the stopping Place they baue ended and finished their Markets, and that then the fasd Iohn Metricke Shall defire 10 60 fend into England any of his fellowes or fernants with goods, then likewife they shall be suffered to passe. But Ruff: people, and other strangers of Molco shall not be suffered to passe surther : that if John Merricke with his fellowes and sermants doe not goe for England : but after their Market is ended doe purpose to come backe againe to Moleo; that then at the Castle of Archangel Timophey Matphewich

Lazaroue, and our Secretarie Rohmaneeu Voronaue; at alfo at all other our Castels and Cities. our Generals, Secretaries, and all other our Officers shall let paffe the English Merchant John Merricke with his fellower and fernants, without all flay or hinderance, and as for custome of them, their goods, or their fermants, there fhall not be any taken.

And after the Rending of this our Letter and Paffe, you Shall keepe the Copie of it by you : but this you hall deliner backe agains to the faid John, and bu companie. Written at our Campe at Molodone, the yeare from the beginning of the World 7113. the eighteenth of Iune.

#### The last of July 1605. at Archangell.

- The Copie of the translation of a Commission that was sent from the Mosks, from the Emperour DEMETRY EVANOWICH, alias GRYSHCA OTREAPYOVE by a Courtier named GAVARYLA SAMOTLOWICH SALMANOVE, who was fent downeto the Castle of Archangell, to Sir THOMAS SMITH, then Lord Embaffadour : as followeth.
- He great Lord Emperour, and great Duke Demetry Euanowich of all Russia, hath commanded Gausteela Samoylowich Salmanoue, to got to Vologita, and from Vologita to the new Cassia Archangell, or where some the salmanoue, the English Ambassassor Sir Thomas Smith. Also when be bath outrook; the Ambassadour, then Gauarcele shall find the Ambassadour bis Interpreter Ri-chard Finch, milling him to certifie unto the Ambassadour, that the great Lord Emperour and great Dute Demetry Euanowich, fole commander of Ruffia, bath fent unto him one of his Courtiers, in regard of bis Maissties affaires : and after some two boures respite, Gauarcela himselfe soall ride to the Ambafadour, and deliner vato bim bie Maiesties speeches, as followeth.
- He great Lord Emperour and great Duke Demetry Evanowich of all Russia, and of many King. A domes Lord and commander, Hath commanded thee, Thomas the English Ambasadour, to certific unto lames, King of England, Scotland, France and Ireland, that by the sust indgement of God, certific time I america, a may a sugarating securitative area attendance as you are set in angenties of voil, and the little general way are man and increased into the place of our Father and protections: a stife we are come to the throne of the great and flamous Kingdome of Vlodemer Molto, and to the Empire of Cazan, Altarican and Siberia, and of all the Kingdomes of the Baptive of Rullis, being an Empire belonging to the great Lord, Emperours, and great Dukes of all Rullis. Moreomer, we calling to me. morie ibe fending, lose and amitie betwixt our Father, ibe great Lord and Emperour, and great Duke Evan Vasily wich of all Russia, of famous memorie : as also our Brother, the great Lord and Emperour and great Duke Feoder Euanowich of all Ruffia, fole commander, with their fifter Elizabeth, Queene of England : in the like manner doe we purpose to have sendings, and to be in love with your Lord King
- 40 lames, and more then bath bin in former sime. And in token of our faid lone and amitte, we doe intend to fanour all bis subjects in our Land, and to give onto them freer libertie then they have bad heretofore; and you his Ambasadour, we have commanded to dispatch without all delay or bundrance. Therefore me would have you to make knowne unto your Lord King lames,our Maiesties lone. And as foone as God Shall grant the time of our Coronation to be finished, and that we are crowned with the Emperiall crowne of our predecessours, according to ourmanner and worthinesses, then we the great Lord Emperor, and great Duke Demeetry Euanowich of all Ruffia fole Commander, will fend our meffenger to falute each other. according to the former manner. And concerning those Letters which were fent by you from Bosris Godenoue, we would have you deliner them backe againe to our Comtier Gauarcela, and after the delimerse of our freeches to returne him to the Emperour, under written by the Chancellour Ofanaly Euanowich Vialeou.

The Copie of the Translation of a new Priviledge that was gluen to the Company, by the Emperour DEMEETRY EVANOWICH, otherwise called GAYSHCA OTREAPY OVE, the which Priviledge was sent into England over-land by OLYVER Lys set Marchant, and servant to the foresaid Company.

OD, the Trenitie, before, and without the beginning, the Father, the Sonne, and the boly Ghoft, 60 Lestablifo us to hold and keepe our Scepter and Realme for the good of our Land, and the happinesso of our people. Wee the resplendant and manifest, and not the miserable upholder, but sole commander, the great Duke Demetry Eurnowich, by the mercy of God, Cafar and great Duke of Rusha, and of all the Empire of Tartaria, and many other Kinodomes; as also of the great Monarchie of Moico. Lord Emperous and Commander, Have bestowed, and gratified unto the English Merchants, viz. Sir

Thomas Smith, Knight, Sw Iohn Spencer, Knight, Sir Humfrey Wild, Knight, Robert Doue, Robert Chamberline, William Garaway, John Haruey, Richard Stapers, John Merricke, Richard Wryght, Richard Cocks, Thomas Farrington, Richard Wych, George Bowles. Bartholomew Barnes, Richard Bowldra, John Caften, Edward Chery, Thomas, the fonne of Alexander alres Hicks:we bane given them free liberty to come with their lips into our Realme and Dominion, and to the Country of Dwina, or to the Cafile of Archangel, and to Colmogro, with all maner of commodities, and to trade freely, as also to come from the sea side by land or by water to our great dominion and Calats (in of Moico, & great Nouogrod and Vobsko, and all other cities within our dominions, to trade with all manner of commodities, in the same forme and manner, as heretofore was bestomed on the English Merchants, in the time of our father of famous memory, the great Lord and Cafar, and great Duke Euin 10 Vassigwich of all Russia, sole Commander, and as was granted unto them in the time of our Brother the great Duke Theodor Enanowich of all Ruffi fole Commander. And as for cuftome of their goods, or for passing by, as also for the cuttome of their boates, or for Head-money, or for going our brudges or Fer-Tes, or for entrie of goods, As also all manner of Custome what soener, we command shall not bee taken of them: Alfo the English Merchants shall not bring nor fell other mens goods in our Dominion, at their owne : neither shall our Subjects buy, or fell, or traff-pue for. Also our Subjects pawnes they shall not keep by them, nor fend others about the Cities to buy goods : but what Cities they come into themselmes they shall trafficke and sell their owne commodities, and buy R. sic commodities freely: And when they come ento our Dominion of great Nouogrod and Vobsko, or to any other Cities within our Realme to traffiche with their goods, and that after the market is past, they shall bee desirous to passe for Mulco, or for Eng. 19 land, then our Gentlemen and Concroners, and all people shall according to this our Carlats Letter, let them paffe without delay, and at for Customes for them and their goods they shall not take any. And whither some they passe with their goods, without buying any commodities, or selling their owne; Then wonvergreens two page with vere year, a common one of them any manner of Custome what fewer as before therenje in the Custo two fluid page, and not take of them any manner of Custome what fewer as before a fe the English Merchants shall trafficke as submets; They shall baster their manage goods, by the most Salectorh by the Packe, and by the Clothes: Damaske and Veluet not by the piece, but by the are shine and by retaile and retaile weights they hall not barter or fell. Alfo goods, which is foldby meight, by retaile, or by the Zolotnicke they hall libers fe not fell. And Claret wine they hall fell by the piece, but by retaile, as by the Veader stop, or Pot and Charck they Shall not fell. Liberisfe they Shall buy and fell, And barrer their goods themfelmes : but the Russe Merchant shall not fell nor barter their goods for them ; neither 10 Shall they carry other mens goods in colour of their owne, not to any place what sower. Also if the English Merchants beeminded to make side of their commoduties at Colmogro, or on the Dwina, or at Vologda, or at Yerastaue, then they shall doest freely. And for their said goods in all our Cities within our Realme, our Gentlemen and Governors, and all manner of our Officers shall not of them take any Tole or custome, according to this our Cusars Letter of Fanor. And in all our Cities within our dominion, they shall byre Carryers Boats, and men to row them freely as before. And as the order is of the Merchants within our Realme : so likewise if the English Merchants be destrout to goe out of our Realme, into any other Kingdome, or into their owne Country: as also if they bee destrous in our Realme to buy any Staother Angaome, or the steer event commers: no myoty ever over earnesses over Acaims to our any any ste-ple commoditie, and to carry it into their owne Land, then shall they likewife buy and trassick freely at pleasure, and those Staple commodutes which are fitting for our Calars Treasure, they shall likewise bring 43 it to our Treasure freely at pleasure, and for the said Staple commodities in all our Cities, our Officers shall not take any manner of Custome : but they shall suffer them to passe without any slaying of them, Alfo when the English Merchants have ended their market, and shall desire to goe from the Mosco, then they shall appeare in the Embassadours Office, to our Chancellour and Secretarie Euan Cowrbatou Hramoteenop. Moreoner, if that by the providence of God, the English Merchants have any Sipwracke, and that the faul ship bee brought or driven to any place within our Realme, then our Casas commandement to those places where the ship is brought in, that our menin office doe seeke out the English Merchants posted insifty, and a guesterm to the English people then field been at that time in our leave and to English.

Adverbants good insifty, and a guesterm to the English people then field been at that time in our Land.

But if at that time there has more of them in our Realime, then to guider them together, and to far from up in one place : and so when the English Morchants doe come there, by our Castars Order, to deliner 50 those goods to the faul Merchants. And whereas the English Merchants according to their former Letters of Fanor had a house in the Molco by the Church of the holy Maxim by the market, which was granted was them by our predections the great Lord and Calar of Relia, be faid English Merchants [ball dwell in the faid bough as benestative they bene done: Keeping one bough super a Rulle, or me of their owne ftrangers, but any other Russes they shall not keepe. Moreover the faid English Merchants baue bouses in other Cities, a bouse at Yerastaue, a house at Vologia, a house at Colmogro, and a house at the flipping place at the Castle of the Archangell : and those bouses they shall keepe and hold by them, according to our Calars Fanour or Gratitude, as in former time they base done, and for any subsidie, rent dutie, or any custome what somer for the faid houses there shall not be any taken of them: and their cther boufes, as at Yerallaue , Vologda , Colmogro and Archangell, they fhall have boufe-keepers of 60 their owne countrie-men or Ruffes, but the Ruffes Rall bes meane men. a man or two at aboufe: And they shall lay their goods in those houses, and likewise shall make sale of their goods out of their houses, to whom they will, according to this our Calars Letter of Fanour, and their house-keepers being Ruffes shall not buy ar fell any manner of commodities in their absence. Also they shall come with their ships to

the shipping place, as before with their Commodities, and to unlade out of the shippe sheir goods; and to lade their shippe with Russe goods with their owne goods oner in their owne Boats and Veffels, to their owne boufe at the Caffle of Archangell. And what fremer goods they base, our chiefe Customer, and Officert, and Sworne men, Shall take a note of the goods under their owne firme, both of goods they bring in, and alfo of goods they carry out. But they hall not looks over, neither unpacke their packes in any place; as also they shall suffer them to passe me all places, without all flay or deley, according to this our Catlets privilege and Letter of famme. Also whensever the English Merchants shall be destrous to send out of our Realme into their owne Land any of their ferments. enerland, er outo other. Kingdomer, then they final likewije fond their people over land with own Coates or-the freely, thu westbout carying any Commodistics, and their pagle final be given them in the Embalfadores office Funtion concerning any matter of controverfie that any man fall bane to doe with them other in .... bargaining, or in ineury, according to this our Cziars order they foal be indged by our Counfeder and So cretar) Eun Comroatou Hramotecu . Therefore, at before, whereformer they, or any of their farmants. in all our Boulous; in what Civic forner, have any matter of contronerfie in Bargaining, or in Immrie a. gamft any man, or that any man have any matter against any of them, then mall our Cities, our Gentles men, and Godernours, and all abor our Officers, fall indge them, doing inflice betwies either of them with equitie and truth. Therprintedge or letter of fanour was given at our Calars Pallace of Molco. 20 From the world Anno 7813 in the moneth of December.

The Copie of the Translation of a Contract, made by the Emperour DEMERAT EVANOWICH, otherwise called GRYSHCAOTREAFY OVE, and the daughter of the Palatine SENDAMERSKO, chiefe Generall of Poland, in the time of DEMETRY his being in Poland, the which was sent ouer by Master I o H N MERRICE, and translated out of Ruffeinto English for the Kings Maiestic, as fol-

A True Translation of a priting out of Polithimso Russe, given by a Adomte who left his babit, called by the mane of Grythea Orcapyoue, supposed to be the Son of the Emperour Euan Vassiliwich, manuel Democtry Euanowich, who game this after once under his stime, to the Palatine Sendamersko, at alfo bith beene anouched by one Bewicheesko, principal Secretary unio the faid Demetry before all the Nobilitie of Rulsia that this faid writing was written by the Generall his owne hand, as

Wer Demetry Eunnowigh, by the mercy of God, Prince of all Ruffis, of Owgleets Demetry-uskoy, and Lord of all the Super of Molico, and being of the flocks of Prestrone; Calling to memoria our former life, being not in the forms and measurer, as is in other great Mangrechies, as was in the time our jorners let, beam, met in thes transe automaner, as in a stere great secondition, at wal is let time of a few freedingers, and while Carliftian speak. Neutribulify, by the prosidence of first disnightive from whom proceeded to designating and an end, and from whom comments life and death. We have by time friend and made closely true our field, write good high, in the time of per when for it he Kangdome of Pelands, of a Companion, of great and hourseled to this, and of gody education; and it finds a companion, with whom we find if y the more coffeed, line peaceably: whose the refishends and Nobel Lach Marina, daughter to the great Pelantin Scademersko. And open this occasion have saken him for our Father, and baning requested of him to give vuto ve bis Daughter Maryon in mariage, and in regard that wee are not set in our owne Kingdome, therefore doe we purpose hereafter to take or der for her comming sonto us with the Generall Sendamersky. Lakewise, when I doe come to line in my wome Kingdome then shell the Palatine Sendamersko remember bis fatthfull and true promofe with his Daughter, the Lady Mary va ber vow, my felfe remembring my owne vow, and so beth of us to hold it fathfully with lone and effection 30 on, and to shat end doe we binde our felues by our writings. Likewife, first and principally, in the name of

the baly Trinnia, I doe give my faithfull and true princely promife, that I will take in marriage the Lady Maryrra, I fan the contrary, I doe not, then, I wish that I might grue this as a curse upon my selfe: alfo, fo foone as I hall make entrance into our Kingdome, and heritage of Musco, then will I give the Palatine, the Lord her Father, aremard of tenne thousand peeces of Polith gold. And to whell ade Mary na our mife, in confideration of her great and long lourney, as also for the providing and furnish; and states ing of ber felfe, I will give out of my Treasure Veluets wronghe with Silver and Gold. And the Mef- 100 min fengers that shall be four to me from the Lord her Father, or from the Ludy her felfe. I shall not hald or keepe, but shall let them passe, and will reward show with gifts, which shall be a token of som Princely fai-60 Mont ; and thereunto doe we give this our Princely promujo. Secondly at some as we shall come to the sus-periall throne of our Father, then presently will we send our Embassadour to the resplendant King of Po-

Alexander Gofenstie Corninus was fent Embaffadour from Poland with rich Prefents and Letten he red of in ters from King Sigifmund to Demering, which because they expressed not the Title of Emperour that place of were not received nor opened. In excuse whereof the Embassiadom reld words vintiferable to feruite, which Ruffian patience, that he should goe and deprive the great Turke of those Tickes." Demotrate diffembled notwithstanding in regard of his past experience, and hoped below from the Pole. The dayes following were spent in pastimes and sloth. Saturday was following were spent in pastimes and sloth. Saturday was following to the Sufficient, a Teast then happening which they preferre before Eafter. The Emperous and Empresse have been made any the first the Pall, and made a great Feaft to their owned to Stangers; in which the Fall Empassion. fought to little dour refused to be prefent, except he might sie at the Princes Table, as the Roffiam Embassadour had beene honoured at Cruconia. The Ruffer denied fiiffety , but Demerius at length yeelded. Many peremptorie and licentious passages happened, the Paler carrying themselves domineeringly to the Ruffer, as Victors to the conquered. Demetrins at first over-bold, now beganne to feare, ty to the Rayer, as recovering and feme for all his guards. On Friday, the Rayer preparing 60 for offence, and the Poles for their defence (for they and not the Prince, feemed to bee then in danger) in the Euening the Nobles command the people to arme against the next day. The Emprese was this while secure, and made ready a magnificent Feast against Sunday. But on Saturday (the fixteenth of the Kalends of June) the Conspirators affemble early, and a great cry is

rayled to kill the Poles and Demerrius. Some greedie of spoyle runne presently to the Poles Lodgings, assault them and embreyle all with slaughters. Others runne to the Castle. Few of the guard were there, delay having bred fecuritie in Demetrins, nor were any of their Captaynes feene. Margaret then lay ficke as he after told me (Thuanus) which difease faued his life. Things were done with fuch furie and celeritie, that many Raffes in Polato attire were flaine before they

Peter Balman came running forth halfe naked, & was killed by one of his own fernants. Swirkie P. Balman flain their Leader, carrying a Sword in one hand, a Crosse in the other, caused the great Bel to be rung in token of fire that Demetrine might be raifed & come forth of his Parlor. He awakned with the

noyfe, now feeing a greater danger then fire, taketh a Turkifb Sword, and fuddenly flips downe out of a window, breaking his legge with the fall, whereby he was eafily taken by the people, Demetrias in and by Smithers command carried into the greater Hall, where Embaffadours have audience. ken and flaine. There some vpbrayding his impostures, he with his sword layd one on the ground : and then defired the Nobilitie to permit him to speake to the people, which was denyed. Some say that he obtayned of Sniskey, that he might be tryed by the teltimonie of Vafilowich his Wife; which being brought out of the Nunnery, affirmed before the Nobles on her oath, that her Sonne Demetring was many yeeres before murthered by Boris his perfidies, which the at first feeing the peoples fauour, and suft revenge on Boris, willingly diffembled, whereupon they ranne vpon him. and with many wounds flue him. Thus writeth Peter Pater fon of Pofal which then was in Consumelious 20 Ruffia. When they had flaine him, they thrust a rope thorow his secret parts, and drew him riage.

thorow the myre into the Market place, where he remayned foure dayes lying all gorie and myrie on a boord, with Peter Basman under it, and an vely Vizar ouer it, a Bag-pipe in his mouth, with other lascinious cruelties exercised on his dead body.

The Palatine Sendomir (or Sandamerske) was blocked up in his House, and other Poles Hou. Poles flaine, fes rifled, many of which died not vareuenged, how foeuer by numbers ouercomne. Viteneskie after much flaughter of the affayling Ruffes, when he faw Ordnance brought, fet forth a white flagge in token of yeelding, bidding his Servants caft abroad his money; which whiles the people were gathering, he and his made way with their Swords with great flanghter, & yeelded to the Boise ous which came from the Caftle. The miferable Bride was not only spoyled of in- The Officene. estimable Treasure, but of all her Apparell, and Iewels, carefult only of her Father and Vncle, and thinking it a happy purchase, if the might saue her hie and recourt her Country. Meanewhile, without her Garment to couer her, without Bed to lye on, without fecuritie of life, shee

cing Popery (the Popes Letters also challenging his promise produced) to give the lefuites Temples, Colledges, and other necessaries; with other over-tures to the Palatine Sanda. merske, for Smolenske, and Nonogrod; his bringing in Poles in Ruffian Roomes, his luxurie, riot, pompe, referring Boris his Daughter in a Numerie with intent of inceffuous luft, having murthered her Mother and Brother; making a filuer Throne with fixe Lions on each fide, and other red: and by therea her Mother and Brother; making a filter Throne with fixe Lions on each fide, and other ill willers, bad pride; abusing Numeries to lust and lascinious fiels, &c. But wee shall give you hereof more auis made worfe, then ticke tellimonie then this of Thurnus in Suiters Imperial Letter to His Majestie. Meane. while touching this Demerrius we will produce a few English Testimonies extracted out of their Letters and Relations : wherein if some circumstantiall discrepance appeare (in things done both fo farre and fo foule in tumultuous furie, where men had rather hide themfelues then be- 10 come witnesses, lest whiles they would bee Spectators, they should bee forced to bee Actors. and have their parts acted in that bloudie Tragedy) it is no maruell. I produce all Witnesses I can. in a cause of so remarkeable consequence, and choose rather to bee proline then negligent, that the Reader out of to much evidence may better weigh and examine the truth.

The former part of this inteligence I found in Mafter Each uges lowing. Occasion of ambition. Beris ill go-

"He late Emperour of Ruffie called by the name of Demetry Enemerich, is now credibly faid (as some of them say) to have beene the Sonne of a Ruffe Gentleman, named Gregorie Pest poloy, and that in his younger yeeres he was shorne a Frier into a Monasterie : from whence her afterwards printly got away, trauelled into Germanie and other Countreyes, but had his most a-Papers, the la. biding in Poland, in which time he attayned to good perfection in Armes and Military know. 20 ter by confe- ledge; with other abilities of infficiencie; Afterwards finding a conceit taken by the Ruffes of a rence, &c. Son fecret conneying away of Demetry Encounich, brother and heire to Phendere Encounced Empeo Gregory Pen-poloy, See Suif- rour; and that some other should be made away in his steed: And finding also the generall distaste keys Letter tol- of the government of Bors then Emperour, who after a faire beginning, did in his latter veeres vphold himfelfe, and his house with oppression and crueltie: And having also many circumstances and oportunities of time and age, and such other likelihoods, to advantage and second his pretence, began first to broach his Title (as before) and by degrees found such a generall acceptation of all forts of people, that it fo daunted Boris, that (as it was then rumoured about) hee first. and afterwards his Wife, and his Sonne succeeding him, made themselves away by Poyson. Demetrial Em- Though now it goeth for certayne, that the poyloning of them was procured by the Pretender, 20 to make the easier way to the Empire, which thereby he obtayned, entring and continuing the

fame with all the State, and greatneffe that fuch a place required : Vntill at length the Ruffer moued rather by other certainties, then by any thing discourred by himselfe, the fixt day after his marriage (which was kept with very great pompe and folemnitie) being the feuenteenth of May last past, taking a time when the Poles stood least on Guard; came to the Court with one confent of Nobilitie and Commons about three of the clocke in the merning, and mastring the Guards, drew the Emperour out of his bed from the Empresse, and charging him that hee was not the true Demetry Eugnowich, but a falfe Pretender, he confessed the Deceit, and was forthwith hewed in pieces by the multitude: Peter Bafman relifting was likewife flaine; and both brought into the Market place, where their bodies lay for a time to bee viewed of every man. The old Queene denied him to bee her Sonne, excuring her former acknowledgement to have 40 proceeded from feare and the generall acceptance which he found amongst the people. As many Poles as made reliftance, were flaine to the number of feuenteene hundred. The new Empreffe

Suiskey Empo-

eight or nine thoutand. And then proceeding to a new Election they choic Emperour Vaffilee Enanowich Shorkey, who not long before was at the Blocke to have been beheaded, for reporting that hee had feene the true Demetry Enauewich after he was dead, and did helpe to burie him. But the Emperour did recall him, and afterwards advanced him to the chiefert place of dignitic about his person. He "This might be rumoured: is the next of bloud " liuing, descended of the Race of the old Emperour Inco Vasilewich, of the Determoured: age of fiftie yeeres or thereabouts, never married, but kept under during Boris time, a Prince of 50 was not of that great wisdome, and a great fauouter of our Nation, as did specially appeare by the care hee had but of very no- to guard the English House from rifling, when the late Demetry was brought in by the Poles.

her Father , his brother with the other Poles were committed to fafe keeping to the number of

ble bloud, See Go in Fletcher Demet in his

The late Precender was o flature low, but well fet, hard fauoured and of no prefence; howfocuer otherwise of a Princely disposition, executing Inflice without partialities And not remitting the infolence even of the Poles; well feene in martiall practiles, and trayning his Noperson describilitie to the Discipline of warre, to make them the readier against the Tartar, not given either to women or drinke, but very liberall and bountifull, which occasioned some grieuous Exactions Some lay that to maintayne the lame. And to conclude, a man in the opinion of fuch as knew him, not vieworhewas not like.

Dometrius and the dame, And to conclude a man in the opinion of fuch as knew him, not vieworhewas not like by the dame, and to conclude a man in the opinion of fuch as knew him, not vieworhewas not like by the dame and the dame that he feemed neffe of his minde, supposing that none of his Subjects durst attempt any such matter against 60 a dozen yeeres his person, when as in the meane time the practice went on with luch a generall Conjuration, elder: but that the Ruffer were summoned by the ringing of a Bell to bee readie to enter the Court. And

perhaps they miliake this for an other after Precender calling himfelfe the fame Demetries, &c. as after thall appeare, a deformed man.

to thake off that Government which would have made them a more noble Nation then formerly they have beene.

IT is reported by fome of Ours, that hee the rather was inclinable to our Nation in the respect he bare to his Majestie, having read that his worthy Worke dedicated to Prince Howis: Hee is faid alfo to have beene a refolute man of his hands, to have delighted in fighting with the Beare; active and strong. I have like wife heard that hee gave the command of his Guard confifting of ftrangers to Captayne Gilbert a Scot; to have made one Buchenskey (a Learned and Reli. Captayne Gilgious Protestant) his Secretarie; and otherwise to have beene so alienated from Ruffilm manners; but manners; but manners; but manners; but manners; so and so well affected to Strangers, that they conspired as aforesaid. The people are said to have entred the Caftle (which was a quadrant, having a high bricke wall of feuen frories, and another of frone, and a Market place) with frones in their pockets (which are rare thereabouts) and fome Stones rare &

Some report from Captayne Gilberts Relation, that lying on his bed not long before his

death (as hee thought; awake) an aged man came to him, which fight caused him to arise and Capraine Gil come to Captayne Gibert, and his guard that watched, but none of them had feene any thing. a Vilion Hereupon he returned to his Bed, but within an houre after he againe troubled with like appa-20 rition called, and fent for Buchinsten: telling him that he had now twice feene an aged man, who at the fecond comming told him, that though for his owne person he was a good Prince, yet the injustice and oppreisions of his inferiour Ministers must bee punished, and his Empire should bee taken from him. In this perplexitie his Secretarie gaue him good and holy counfell, faying till true Religion were there planted, his Officers would bee lewd, the people oppreffed, and God Almightie offended, who perhaps by that Dreame or Vision had admonished him of his dutie. The Emperour feemed much moued, and to intend that good which that Countrey was not fo happy to receive. For a few dayes after (as that Relation auerreth) his Ruffe was not to mappy to receive. For a rew cayes arer (as time electron netteren) pin Knyy.

Scorectaric came to him with a Sword, at which the Emperour felted, and thee findenly after Another man fawrie speeches assumed that the summary other Grander of that Conspiracie, and (like another act of his cay like him, crying Endersh; derive his guards could apprehend the danger; of which some test, were slaine, but the most with Gilder's their Captayne, got to a place called Grang a, which with Galaga.

30 the helps of some Reflect they fortified and held for their defence. "Backinshes the Secretarie was " the help of some angles they continue and deat for their definite. Somewhat the selectarte was taken and imprisoned, the first gers murthered, the English except, who have in all changes been well beloned of the Englisesyss in-leed they defence, having a liway done good ferrice to the Empe-tors, and their interest faced the life of that worthy man Empirity, which they required with

much observance to the succeeding Emperour Saintey, who comes next to be spoken of; and first

you fhall have his Letter to our Gracious Souereigne.

The Copie of the Translation of a Letter sent from the new Emperour Valsily Enanowich Shorker to the Kings Maiestie by Master Iohn Mericke.

The love and mercie of God that guideth vs in the wayes of seace, we glorifie with the Trinitie.

I and him called Sheder Suiskey, Zisha, tranflation and

Rome the great Land Emperous and great Date Vafily Eunnowich of all Ruffa, fale Commonder of Voludoner, Manko, Nonogrod, King of Cuzan and Affarcan, of Syberia, Land of Voludoner, and great Date of Smolenko, Twenkoy, Vinhistory, Detrankoy, Vatakoy, Bolharskoy, and of other: Land and great Date of Nonogrodas of the Land Country of Chemego, Rezankoy, Pelotakoy, Rochoukoy, Verthaskoy, Bed. lozerskoy, Leeflanskoy, Owdorskoy, Obdorskoy, Condinskoy, and Commander of all the North parts : alfo Lord of the Land of Ecuerskoy , Cartalinskoy , and over the Empire of the Gotgians of the Land of Cabardinskoy, and Echarskoy Land, libewife of many other Lordings Lord

To our beloned Brother James King of England, Scotland, France, and Ireland, Weegine to winderstand that Sigifmund King of Poland, and great Duke of Letto, on Anno 7109 day fend unto the late Emperour Boris, bu Embassadon named Lewis Sapeago, being Chanceler of the great Duke. dome of Poland, requesting the faid Emperour Boris , that the former league and peace made and concluded upon by the great Lord Emperour and great Dake Theodore Euanowich of all Ruffia, and

him Sigismond King of Poland, might be stedfastly holden and continued till the time of that league were expired. As alfo that the Emperour Botis would inlarge the faid league for thirtie yeeres more, whereupon the Emperour Boris yeelded thus farre unto the request of the King of Poland, that bee would continue the old league till the full time were expired, and affent to a new league for twentie yeares more; and to that effect be tooke an Oath, to hold and keepe all the contents faithfully, montioned in the faid Writing, touching the same league: and instead of the King of Poland, his Embassadour Lewis Sapeagor was sworne in the presence of the Emperour Boris. And after the Polish Embassadour was departed from the Mosko, the Emperour Boris fent unto Sigilmund King of Poland his Emballadour being one of the Prinie Councell, called Michailo Zleabowich Sallcecoue, with some others to and and finish the aforesaid league, to the which league the King of Poland himselfe was sworne in the 10 presence of the Emperours Embassadeur to bold and keepe the Said league faithfully, according to the tenour of their Writing.

But not long after Sigifmund King of Poland, with one Pauarade, entred into fuch a practife, as be therein fallified his Oath, and made way to the shedding of much Christian blond: Pirit, by retayning camil the pre- and upholding one Gryshca Otreapyoue, a Runnagate, a Coniurer, and one that left his profession being a Monke, and ran away out of Rulla into Poland; and being come thither, tooke upon him to be the Son of the great Emperous Euan Vaffila wich of famous memorie, and by name Demetry Euanowich: when as it was well knowne in our Kingdome, that before he was storne a Monke, he was commonly called Yowihoo, Son to one Bowghdan Orreapyoue, dwelling at a place called Galitts : and when bee had committed much villanie, to faue his life be boare himselfe a Frier, and forume from one Monasterie 20

A Frier. Magician,

to another, and lastly, came into a Monasterie called Chowdo, where bee was made one of the Clearkes; being so placed there by the Patriarke of Mosko bimselfe : But be did not leave off his former life; for he continued still in his most Dewillsh attions, as he did before he was shorne, committing villary, for saking God and falling to the studie of the Blacke Arte, and to many such like enils be was inclined. Also there was found by him a Writing which showed how be was faine from God, and the same was made well knowne to the boly Patriarch of Mosko, and of all Ruifa, and to the Metropolitanes, Archbilhops, and Bishops, and to all the holy Cleargie : whereupon the faid Rulers of our true Christian Faith, which is from the

Greeke Church Grecian Law, for these his most ungodly works, consulted to send him to perpetual Prison there to end his life. Whereupon this notorious Instrument of Satan, perceiung this his enerthrow, and that his vide pra-Flight to Letto. Hifes were disconcred, ran away out of the Kingdome of Mosko, beyond the borders, and into Letto to a 30 ctift were allease the framework of the Aregonius of the actions, serious to the west-sam and electrons a place called Keyveve: thus according to the Denth infrarking of him, as one for faken of God, be made this bis doing meanfeltly known to alleapole feature of his Month Habit, and without by the compile and admice of our Enemie the Polith King, and one of his Palatines named Sandamersko Yourya, much

Duke Constantine, and Duke Veshnenetskoy and bis Bretbren with other Polish Lords that were of bis Councell, began to call him the Son of the great Lord, Emperour and great Duke Evan Vallity wich. by name Prince Demetry of Owglitts.

As also by his villanous treacherie and the Denills persuading of him , be made much trouble in our Land, by fending abroad many of his intifing and prouoking Letters, to divers places upon the borders of our Countrey : that is, to a place called Done, and to the Volgoe, to our Coffacks and Souldiers, naming him felfe to be the Prince Demetry of Owglitts. Moreoner, there came to our Kingdome of 40 Mosko many Polish Spies, which brought and differ fed Libel's both in Citie and Townes, and in the high-wayes, practifing to rayle diffention in the Kingdome of Mosko. Alfoit is well knowne, not only to them in the Empire of Mosko, but likewife in other Kingdomes, that the great Lord Emperour, and great Duke Euan Vallily wich of famous memory, had a Some called by the name of Prince Demetry, and after his Fathers decease, there was given unto him and his Mother the Cute of Owelitts.

But in the yeere 7095, being in the Reigns of the great Lord, Emperour and great Duke Theodore E-uanowich of all Russa, this foresaid Demetry was murthered by the order and appointment of Boris

Godenoue. And at his Funerall was his Mother now called the Empresse Martha, wabber owne Brethren by name Michaila and Greegory the Sonnes of Theodore Nahouo. Likewise to bis burying. there was fent from the Mosko Metropolitanes , and Archimandreets , and Abbots : and the great Lord Emperour, and great Duke Theodore Evanowich fent to bis Funerall many Nobles and Courtiers of the Land which faw him buried in the chiefest and principall (bureb of Owelitts, Moreoner, Martha the Dutches and Empresse his Mother is yet living , and many of ber Brothers and Vachles. which doe at this present time serne ve the great Lord Emperour, and great Duke Vallily Enanowich, of all Ruffia fole Commander: Likewife in thefe last yeeres past, as in Anno 7111. and in Anno 7112. and 7112, concerning that forefaid Traytour and Hereticke, the for faken of God Gryfhca Otreapyon ue, many of our Gentlemen, Captagnes and others our Officers did many times write from the North

Buziall.

parts of the borders of our Kingdome into Poland and Letto, and to others their inferiour Cities, to the Rulers and Gouernours of the same; as also our spiritual people: the Patriarke, the Metropolitans, Archbishops, and Bishops wrote unto the spiritual people of Poland, declaring unto them what that Heretick 60 and Trayter man, likewife from whence he came and what manner of per fon he was; as also of his demea-neur, and likewife of the occasion why hee runne away to them out of the Land, as also the manner of the making away of the Prince Demetry, and withall requested the Rulers and Spiritual people of Poland, that they knowing what Runnagate this was , would not give credit unto him, nor to make a broach of the late le aque concluded voon.

CHAP.9.S.4. Ruffe flory of Demetrius in Suiskys letter to King Tames. 767

But the Governours of the Dukedome of Poland and Letto, as also the friestnall men, according to the King of Poland bis com nandment, gane no credit unto our writings, but began, more then before to intice and persuade men to uphold the Traiter, and to aide him. Marconer, to make trouble for to state and prime and the tooke this for faken of God, Greellica unto them, and cald him by the and differing in our Land, they tooke this for faken of God, Greellica unto them a chaine of gold, with many Polife sides, name of Prince Demetry of Owglits: likewife the King gaue unto him a chaine of gold, with many Polife sides, thousand pecces of Polish gold, to the defraying of the charges; as also fent in armes to our borders with one of the Lords, the Palatine Sendamersko, and another of his chiefest Lords, with many troopes of Poles. But when the Emperour Boris understood bow that this Gryinca Ocreapyoue was called, by the name of Prince Demetry Evanowich of Owglits, and withall, that they did aide and below him

ogainst the Kingdome of Rustia: he caused his Commell to send a messenger, at fram themselves, to the Succession of Polish Lord Panametrada, which Messenger was named Smeernay Otreapyoue, being Variation the Caid Gryfica Otreopyoue being the Son of one lamateen Otrepayou, onely to declare onto them what this Gryinca was; but that Polith Lord Panameerada would not fuffer him, and his Unchlo to be brought face to face. But be made answer to the faid Meffenger Smeetnay that they did not aide bins, meither didthey stand for bim in any fort.

So after he had feat away the Meffenger Smeeting, the King of Poland, and the Lord Panameerada did aide Grythca Otreapy que with men and treasure liberally then before, purposing to make great strife and trouble, and to feel much bloud in the Kingdome of Mosco. Also at the same time Sisilmund, King of Poland, requested the aide of one of the Princes of Crim in Tartaria, named Cazateers; and to that end be flouid aide Gry thes with his fores; against the Kingdome of Mosko; and crim Tatio.
20 he in consideration, and premise to give unto the foresaid Crim, Prince, what her would demand. Then

the Emperon. Boirs understanding what praitifes were in band, being altogether contrary to the league; thereupon purps fit be fent to Sigitmund King of Poland, another Speciali Messenger, one named Polnicke Agareoue; likewife at the same time, the bast Patriarke of Moko, and all Russia, with the Me-tropolatus, Archiishops, and Bishops, with all the rest of the bast Clergie, sent their Messengers with Another Mcs Letters to the State of Poland, and fo the great Dakedome of Letto, to the Accordiops, and Bishops, lenger, and to all the Spiritualite. Moreover, in the faid Letters, the Emperour Botts with the Patriarke, and all the boly assembly, wrote unto the Lord Panameerada concerning Grynca, making it knows onto them what he was, and wherefore he rame away into Poland, and themselves that the Sonne of the press 20 Lord Emperour, and great Dute Evan Vafiliwich, the Prince Demetry was dead: And to that intent, that the King Sigilmund fould not give credit to the faid Gryfica, and that they fould not

Bill Christian bland nor violate the league. Hereupon Sigilmund King of Poland writ unto the Emperour Boris and further, by word of mouth. both be and Panametrada delivered to the faid messenger in his message; that bee did hold and keepe their League, and morconer, did not violate or brooks his oath no manner of way: and liberise did write, that be did not ande that forefaid Grylhca, neither did gine credit onte him : withall denying that be was with him in his Krugdome: and further he did write that if there were any out of Poland or Letto that did aide or affift bons, that then they found be executed. But after be had diff niched away the messinger of Both, morregarding his oath, full more and more data and bept but Gryth-40 ca Otrcapyoue. Also the Palatine Sendamersko, and Mybala Ratanisko came me the Kingdome of Molco, to a place called the Land of Secuersko, putting the people of that Land in feare, and perfinaling them there, this Grylhea must be true Prince, and that the King of Poland and Pana-

meerada, had found out the certaintie thereof: and therefore they will have Poland and Letto Stand for burn. Also from out of many other Kingdomas they goe to aide and assist burn: likewise atter infe-riour Kingdomes are willing to stand for birn: marconer that Gryshch in the foresaid Land of Securesko. room conguences are summe to passe yet and successful and in other places of our Berthell and in other places of our Berthell, by the measure of this ideality brightles and commentation did notify and tempt them to fall to him. I likewife the people of these forefait places of the Land of Securisko, and on the Berders, himse simple people, and referring soldmen to the Catio of McCoc, and then provide by Gryhica, and the refs of the Courtmant, conditions within the people of them to them, where supon against those Polonians and Luttoes, and other enemies that were already entred the Kinedome of Molco, the Emperous sent his Nobles with a great Armie: but by the appointment of God, the Em-

perour Boris deceased; upon whose death, the chiefest of the Nobles departed the Campe. And after their departure, the Armie hearing of the death of the Emperour, and being drawne thereto by feare and otherwise, at last reelded themselves over unto Gryshca, as the Borderers had done before

Alfo the forefaid Gryflica, by the belpe of the Dinell, and King Sigilmund, and Panameerada, came into the Citie and Kingdome of Molco, to the great difquietnesse and trouble of the whole Land by whom the Religion was corrupted, and by him were many true Christians put to exile, for denying his right and interest to the Kingdome of Molco. And Shortly after be was fetled in the Kingdome, and he tooke to wife the daughter of one Sandamersko, as was appointed by the King of Poland and Pana-6c meerala : the which wife of his was in Mosco with her Father and Brother Schatskoy, and with one Veffinenetskoy, with their Polish and Letto Lords, and other people, by whom Religion was prophaned: as also we were forced and driven to receive many wrongs and insuries, which the people of the King. dome of Mosco couldn't induce. Also, at last thus Greessea, by the counsel of the Palatine Sanciamersko his Father in Law, and by the counsel of Veshneuetskoy, and other Polish and Letto people, Religion.

which he brought in with him, was purposed, by a secret politicke denise to have put to death the Me. tropolitans, Archbishops, and Bishops, and all the boly and first wall affembly, with the Nobles, and Courtarr, and duers others which were of the better people and fo to have feet others into Poland and Lector.

Remiji Relig: wubsil to have changed the Religion, and so have of bublifued the Romish Religion, which who who was probably the religion.

The which we the great Lord and great Duke Vafily Eusnowich, of all Ruffia, with the Metropo. litans, Archbiftops, and Biftops, and with all the bols formual affembly, and with the Nobles, Courting ers, and Commons of the Kingdome of Molco, well-emfidering, and percenting what an alteration this or, and a common of the Anagamon of mission, was amountained, and personant word an accretion that model do to one Christian facility, with the overstown and otter undering to our whole kingdome; we then carriefly between and all amounted, and without beautify project to the distributive Trainite over one of Lord God, 10 that is usually beautiff and the Common models to the contract of the Common models. from those vile, cruell, discelluly astempts, and desifes of theirs. Thus defiring the mercy of God, we all returned and flood fledfash to our former unspotted and true Christian faith, ugainst that usurper and counterfeit Grylhen and bis Counfell, with a resolution to stand in the same manfully, and even to the commerciae Crystuce and an outcome to the description of the state of the death hoping and denote hope from the state all popule, and war like from the Southern's and many other soft the Empire of Motico me got come to garber themsolisas regenter, of that they major themsolis percense and for early the state of the of our Religion. The largeness of the Kingdome of Molico cannot be unknowne unto you our lossing Brother, how farre it extendeth it selfe both to the South, and to the Weil, as also to other places, that in balfe a yeares space they could not gather themsclues together. But when as the power and warlike Soul. 20 diours, and all other people were gathered sogether, then through the mercie and famour of God, this enemy of Gods Commonwealth was disconcred to all what he was. And the Empresse Martha, being Mother of the true Prince Demetry Enonowich, ded certific unto us before the Metropolitant, Archthey is not sent to be best to be be best to be be best to be be best to be be be best to be best to be be best to be be best to be be best to be be be best to be be Officers, and men of more who ment impute, was fore account, some our comme the rrace Demetty was more thread Boyand realon, at a place called Owelits, by appointment of Boris Godenoue, and that he dyed in her armses; yet did this Grythes fulfaf, call himselfly by the name of him that was

museures.
Also we found in the cuttedy of this Grythen, the Copie of a writing, which was the contrall and
agreement that he made betwick hims and the Palacine, before his comming out of Poland; in which 30
was written, that as some as he did come to the Kingdome of Mosleo, that then he would take to wife the daughter of the Palatine, and would give her two Prounces, called great Nouogrod and Volsko. dangoire of toe trainine, and women gree not trained to the training time troops to the most voise, with inferior Cillia and Lands, freely in those forefaid, to build and fer op Mountlewine, and will be the training to the Roman Religion. Lamai, rees on songe yes an a commander of commences and a property of the commences of Polith Gold, where is the same tree Rullia account, three hundred songland Market and to Josa pieces of voim year, worn we give Mallia mercine, sure summers trongism, oranges: and to be wife, so confidences on the they comme, be promised to give cells of Gold, and cloth of Sther, and of all the left timing that was in the Freshiris of the Kingdome of Molco. Lektrolly, that her the find Gryllica, as the commising to Molco, would take order to brong they are to help with all distance, whereby he much than all the Dominion of Molco from our true Greens Religion, and so to beautre. motive per magne draw acree Lemmono of account propose of the Charles of the Char before faid; that he according to his owne hand writing; would bold all the faid concennts with all diorganical consecutions and the Empire of Motion rate Roman Rilgion. The which commons an un-ligence, at these first the single state of the single but the single but the single commons and agraements the Generall Sandamersko himselfe but confessed to one Maritie, and Nobles, that the agreements and covernants betwire him and the fare faid Geyffica mere trine, and how that they trafted one to another : moreoner, the Palatine did certifie unto our Nobles, bow Gryshea fent him a Letter under his owne hand and Scale, in which he promifed to give him Smolensko, with all the Proninces belonging thereto, and another place called Securrow, as also grate him liberty to fet up Monastee 50

ries, and the Religion of the Church of Rome. Further, there was found by him Letters which were fem to him from the Pope of Rome, and the Cardinals, and Priest, to that effect, that he should vemember and withall be mindefull to take in hand speedity bose matters and businesse upon which he had ginen to Sigismund, and the Cardinals his troth and vow, the which was, as before faid, to be himselfe of the Romish Religion, as also to bring all the people of the Ringdome of Russia into the same Romish Rethe KOMINIA resigned, as also so oring an son proper of two Annyames of Annia mis interface KOMINIA Ar-figure, not easily them that of them falses were willing therets, but also others by compulsion, and so put them to death that fought to contrary the same. And not easily them of the Kingdom of Russia, but sidemife other godly people of Jenerall Religions and that doe forms in the Kee dome of Moleo, as the Ca-tholicky, and the Calaimsh, them them to be found feeks to bring into the Romilli Religion with all perfundions. Moreoner, Gryshca bim felfe, before vs. and our Nobles, and Constiers, and before our Com- 60 mons, did acknowledge as much, and thereupon yeelded himselfe to be in fault: as also that be did all with butpe of the Distell, bearing for faken God. For which these but vite alterns, this Gryshca, according to the true instince received an end to his life,

and was by abundance of people slain in the Mosco, where be lay three dayes in the midst of the Citiz, to the

view of all such like vsurpers, and disturbers. And because his body was leathsome vato vs, we caused Slaine & burne a to be carried out of the Cute, and there to be burnt.

This Enemie thus baning ended his life, then the Kings formes of diners Countries, now dwelling within our King dome, with the Patriarhe, Metropolitanes, Archhilhops, and Bilhops, with the Nobles, Courters, and the Commons, made entreaty unto us Vaill Euanowich , to raigne and gonerne over Election of them and oner all the Kingdome of Mosco, as their Lord, Emperour, and great Duke of all Russia. Ac. Smuly. cording to which entreatie made unto usby the faid Kings sons of diners Countries as likewise by our Nobles, Courtiers, Merchants, and all the rest of the Commons of all the Kingdome of Molco, Wee are come to the great Kingdomes of Volodemar, Mosco, Nouogrod, and as also of the Kingdomes of Ca-

2210, Afracan, and Siberia, and ouer all the Provinces of the Empire of Molco: as also wee the great Lord Emperour, and great Duke of all Russia, are crowned with our Imperial Crown: and for the fail Kings sonues of diners Religions, and our Nobles, Courtiers, and Souldiers, and all manner of People, doe ferne our imperial Maissfy with defire and good liking voluntarily, and not by delusions and contertations, as the Poles and Lettoes were bewitched by Grishca. But we the great Lord Emperour and great Duke Vasili Eunowich, with great care flayed and refused our People from the spool of the Poles and the Lettoes, defeading them from death; and withall have commanded to let see my of them into Polanil and Letto: but the chiefest of them that were of the Councess, and that practifed to bring trouble and diffention in the Kingdome of Mosco, are now taken. And we to doe an honour unto the dead body of the true Demetrie, have (upon conference with our Metropolitanes, Archbilhops, 20 and Bishops, and all the holy Assembly, our Nobles and Courtiers, and all the Kingdome of Mosco) sent

to the Citie of Owglets a Metropolitan, named Filareta, of Rossoue and Yeralliue, who was called before he was made Metropolitan, Theodor Neckete, which being one of the Nobles in times past, and with him the Archbishops of Astracan, called Feodosia, and our Nobles the Duke Eurn Michalowich Vorotinskoy, with the rest of his fellowes, commanding them to bring up with them the body of the Prince Demetric Eusnowich, who was muribered by the appointment of Boris Godonous, and to bring it up to our Citie of Mosco with great bonous, which body shall be buried in the principal Church of Mosco. called Michael the Archangel, neare to his father the great Lord Emperour and great Duke Evan Vasslowich of famous memorie, and by Gods power his body skall not be touched or abused any manner Vantowich of Jamous memorse, and of Goal power on some not be touched or assiged any manner of way. Likewife will we, by the fauour of Goal, bonour the Funerall of Demetric Euanowich with the ciall folementie, which body performeth many cures, and worketh miraculously vuto them, that came to Mirackt.
him with Faith to be cured of their diseases.

And now most loning and deare brother, wee calling well to minde the great amitte and friendship that was betwirt the great Lord Emperour, and great Duke Euan Valily wich, and his Sonne Theodor that was occasion of the above the competent of the compe land after the bearing of the se great and strange dangers past, to reiouse with vs., that he hath delimend from such a vile enemy, and that he, our merciful God, hath dimided and scattered that wicked comfell, and that he hath turned their cruelty upon their owne head, to their shame and confusion. And concerning your Merchants that were in our Kingdome, John Mercicke with his fellower, we have graced to the his fellower, we have graced Sir toby Merchants and the fellower with the single state of the singl

corming your derivation, him to wree over the Companies votal to the Control of Tables, no these Faced it the Merc them with our Emperial professes; as also been given write to fail them kiro Mercicke, and his follower; the same primitides, and Letters of James, by which the James from iros or Krighmes, and so traffice New Patters with all manners; of goals freely, which we provide the James to James the James of the New Patters with all manners; of goals freely, which we provide any fail to the Control which all the Contr ted in former time, and this fanour we have given them to manifolt unto you our loung Brother, our Brotherly lone. And the reason that we have not sent to you, louing brother, our Embassadour, is, because we bad not isme, in regard of many our Emperial affaires, but hereafter doe purpose to send, to visue you in your Kingdome. Written at our Emperial palace and Citie of Molco, from the beginning of the World Anno 7114 the fourth day of lune.

Thus is Demetring painted out by his Enemies, which perhaps were not altogether led with fimplicitie of truth, but in many things made him worle, that they might make their owne caule (bad enough) to appeare better. They tell also of great outrages committed by the Poles, Politin olen-(like those sometimes here in England by the Danes) their proud infulting over the men, squish- cies ments of women, fetching them out of their houses and husbands bosomes to serue their lusts: neither did Demetrine, as they fay, punish them; one onely being sentenced, and hee violently refcued from execution by the Poles. They fay also that Demetrine his body was plucked out of the grame and burnt, the albest hrowne into the aire, the feeds, as the fequele feemed to fliew, of many Demetrijafter. Smikey is allo by some reported to have beene chosen by lot in this manner. The Nobles cast

(O lots foure times to receiue a Succeffor, as it were, by divine sentence in lot-oracle : in euery of Choosing by which times the lot fell vpon Switter (tor as some fay, there were three or source neerer then hee) lot, he modefly refuling and enforced by constancy of the various lor to accept that Scopeer; whereof others thinke him as ambitious, as was modest Boris before him. However, he hath left his name and memorie written in as blacke inke as either Bors or Demetrine, if Reports bee true.

which fay that he proued a wicked Prince, partly by poison, partly by the Tarters, making away Suit groices. all, whose bloud might by Nobilitie threaten a probabilitie of their prousing his Corrinals. Yea, he is faid to have fent for Witches and Sorcerers, Laps, Sameeds, Tantars, or whatfoeuer other Nation yeelded fuch Hell-hags, incarnate Fiends, the Deuils blacke guard, to confult about his Empire and fucceffion ; and (the Deuill is a murtherer) to have fealed their predictions with bloud. Thus being told that one Michalowich should succeed, he is faid presently to have plot-The like is told ted the death of three Grander of that name, his best Teruants : yet the appersitious people obof K. Edward ferue (after much chopping and changing) that in little time the State was fettled on one of that the fourth that Name, which still swaieth the Scepter; Who then being a youth of no State-terror, was his attendant in Court, and bare an Axe (after their custome) before him.

One of his first Acts, was to fend into Poland an Embassage, which could not bee admitted audience till Ianuarie. Hee thereby complayned of Sandomerskes artes which obtruded that with G, he put Changeling on Ruffle, whereby aboue two hundred of principall Nobilitie had loft their lines: demanding reflicusion of the moneys which that Impostor had caused to bee transported into Duke of Clas-rence his bro-Poland, and restitution of goods; otherwise hee would with Charles of Sweden Duke of Suderather, and yet man, enter Poland with an Armie to bee reuenged for the league (which they had fworne) broken, &c. Sigs smand answered modeftly, with excuse of their helping the right Heire in their conceits, and that his defire was that peace should continue (being loth in times then tumultuous Aprinted book 1614, relis of a at home, to prouoke a forreine enemie, foncere in dwelling, foremote in affection) Sandemers be gress man, na. ftill remay ned prifoner in Ruffia. But things being better feeled in Poland, and growing worfe in 20 reuiued Demetrius (yea many pretending that Name and Title did after arife, as out of his dia speried ashes) within Ruffie; and from the Poles without, willing both to affift him vnder colour of Reuenge, and with hope of Conquett alfo, to inuade and his for themselues in troubled As for that Demetriss new rifen from the dead (not to mention the others of inferiour note)

and to preuent Suiter flabbed Cap. Gilbert,

I shall relate Captaine Gilberts reports which knew him and was by him entertayned, as I receiued them of a judicious friend of mine, which had them from his owne mouth. Hee being at Coluga (as before is faid) received a Letter from this new Demerius \*, fo written that it appeared to bee of the former Demetritu his owne hand : and thus also he vied to doe to others being 30 able to counterfeit his writing, and to relate such other particulars as seemed impossible to any but Demetrius to doe. Hereupon Captaine Gilbert went with his Guard of Souldiers to meete the maffacre him and the Polake Generall which came with him. And whiles he was yet a good diffance off. the master.

Ab (this Demetrina called to him) my true fermans, where were you and my Guard, when the villwas occide

was occide

Limes have me? but if I had fillowed the counful which you game me fuch a time in fact a place (readd statistical.

lating the particulars) I bad presented them. This circumstance had moved him to believe this to be the former Demetrins, had not he differed from this in person, as night from day. Thus also A ftrange log- he faid he affirmed to the Pole Generall, asking him how he liked this Demetring, that This and That were as like as Night and Day (for the former was of goodly personage, and this a very deformed wretch.) The Pole replyed, It is no matter, Captaine, this Demetrins shall serve our 40 turne to bee reuenged of the perfidious and bloudie Ruffe. And this Demetrine acted the other fo neerly, and could in cunningly and confidently relate particular passages of past occurrents, that the Lady of Demetrine was by him bedded. Thus was miserable Russia ground betwix these two Mill-stones, the pretending Demetrine and the super-intending Pole. Smisker is helped not a little by the English, which brought him strangely and adventurously powder and munition to his Castle to Moseo, which yet at last by revolt of the Citizens delivers up it selfe and him to the Poles. And as for that pretending Demetrius, he was afterwards murthered in his Campe by

a Tartar. But it is meet to take hereof larger view.

Sigismund King of Poland layeth claime to Sweden, as sonne to King John (who is faid to hane vniustly deprived Ericas of his life and Kingdome) whose yonger brother Duke Charles first re- 50 ceiued his Nephew King Sigifmund (then also elected and still continuing King of Poland) but vpon warres which after arose betwixt them, the iffue was, that the Pole holds the Title : but Charles obtayned both Regall Title and Power, wherein his Sonne hath succeeded. Snickey takes hold of this difference, and Charles affifts him with an Armie fent under the command of Pontas de la Gird a French Coronell, confifting of Englifs, French, and Seess. These march to Moses, which the new Demetriss and Poles held besieged, and put Demetriss into such seare, that not trufting the Pole, and fearing his Adverfaries on both fides, he stole away by night with a small Formine aides retinue : and the Poles obtayned Articles of composition and departed. But milerable were the diffresses by famine, fire, sword, rapes, and other outrages in other parts of Russia, caused by other Poles; and yet these but as a beginning and prelude to other following. For the King of 60 Poland entred with a huge Armie (some say of an hundred thousand men) inuaded the Muscomire, and especially laid siege to Smolensko. He is reported thence to have sent twentie thousand

Smiles had fent to King Charles for more aide, which he procured out of England, and other

Countries, of which I had rather let you heare an eye-witnesse fpeake of this, as elsewhere other English men have related their owne voyages. This indeed descrueth relation, as a tragedie of meaner persons with manifold vicilitudes of miseries (attending voluntarie Souldiers) as before you have feene tragedies of Princes and Grandes. And first you may reade King Charles his compack and promifed stipend to such voluntaries, which for the more violerstanding Readers de-light I have here inserted.

1200.Souldiers fhipped from

Bout a fortnight before Midlimmer, which was A. 1609.4 companie of Voluntaries, to the A Bout a fortnight before Midlimmer, which was A. 169.4 companie of Voluntaries, to the number of a thouland and two hundred Souldiers, were at feuerall times (hipped from England to passe into Sweden, to side the King of that Countrie in his warres against the King of Pe. land. To which aide divers other Nations did likewife refore, as French, high Dusch, &c. Of the English Companies that went thither, the first was commanded by one Calmine a Seet; who to by appointment was made Lieutenant Colonell, and chiefe of the other Captaines out the

Colonel Cal-

After the first Companie was gone, a second number of three hundred men of which I the Relator of this, was one) were put into one ship belonging to Sweden, and came from thence for vs. We were assaulted with a great tempest, and were tossed so long, that all our victuals were almost spent : the miserie of which, threw vs into more desperate feares : now were wee affaulted by double deaths (Famine and Shipwrack) what course to take for our reliefe no man prefently knew. Continue without foode it was impossible, and as impossible was it for vs to recouer the Land in any short time, without the affured destruction of vs all. At this season, our

A tempeft.

Commanders were thefe; Lieutenant Benfon, Lieutenant Walton, who was Prouoft Martiall of 10 the field; and an Ancient of the Colonels companie. The common Souldiers vowed and refol-Another tem. ued to compell the Mariners (feeing the prefent mileries, and no hopes promiting better) to fet peft of the mu. vs all on shoare vpon the first Land that could be discovered. Our Commanders did what they pensor returns. could by diffwafion to alter this generall resolution, because they feared it would bee the loss of the greatest part of our Companies, if they came once to bee scattered : and besides, they knew that it would redound to their dishonour and shame, if they should not discharge the trust impofed upon them by our Captaines, which trust was to conduct vs and land vs before, whilest our few you them by our capeanes, when the state of the state vs aboord our ship, but every man swore if the Master of the ship would not set vs on the shoare, 30 the failes should be taken into our owne hands, and what was resolved upon (touching present landing) (hould in despite of danger be effected. Vpon this the Mafter of the ship and the Mariners told vs, that if we put to land in that place, we should all either perish for want of victuals, which were not to bee had in that Countrie, or effe should have our throats cut by the people Wee refolued rather to trie our bad fortunes on the land, and to famish there ( if that kind of death must needes attend upon vs) then to perish on the Seas, which we knew could affoord vs no fuch mercy : and en shoare wee wene, as fast as possibly we could. When our Officers saw, that there was no remedie, nor force to detayne vs aboord, they then disheartned vs no longer, but to our great comforts told it, that the Mafter of the fittp (which thing hee himfelfe likewife openly confessed) knew both the Land and Gonernour thereof (as indeed we proued afterwards he did : ) and therefore defired they all our companies not to miffe-behaue themfelues toward 40 the people, for that it was an Iland called Inthland, under the Dominion of the King of Denmarke, but subject to the command of a Lord, who vinder the King (as his Substitute) was the

And that we might be the better drawne to a civil behaviour towards the Inhabitants, our Officers further told vs, that they would repaire to the Lord Governour of the Countrie, and acquaint him with the cause of our vnexpected landing there; vpon which we all promised to offer no violence to the people; neither was that promite violated, because we found the Inhabitants tractable, and as quiet towards vs, as we to them : yet the greater numbers of them ran away with feare, at the first fight of vs, because (as afterward they reported) it could not bee remembred by any of them, that they ever either beheld themfelves, or ever heard any of theiran- 50 memorary and the state of the s by reason of the dangerous Sands,

Our Officers (o foone as they were at land, went to the Gouernour of the Iland, whileft the Souldiers (who ftayed behind them) ran to the houses of the Handers, of purpose to talke with the people, and at their hands to buy victuals for a present reliefe: but when wee came among them, they could neither understand vs nor we them; so that the Market was spoiled, and wee could get nothing for our money, yet by fuch fignes as wee could make, they understood out wants pitied them, and bestowed vpon ws, freely, a little of such things as they had. In the end, a happy meanes of our reliefe was found out by a Souldier among ft vs who was a Dane by birth, 60

but his education having beene in England, no man knew him tobe other then an Englanman. This Dane made vie of the owne natine language, to the good both of himfelfe and vs , certi-

fying the people (who the rather beleeued him because he spake in their knowne tongue) of the cause that compelled vs to land vpon their Coast, and that we intended no mischiefe, violence, or money : to which report of his they giving credit, flood in leffe feare of vs then before, and thereupon furnished vs with all such necessaries, as the Countrie affoorded to sustaine our wants. The foode which wee bought of them was onely fish, and a kinde of course bread, exceeding cheape. Of which foode there was fuch plentie, that for the value of three pence wee had as Fift cheaper much fish as twentie men could eate at a meale, and yet none of the worst forts of fish, but even of the very best and daintieft, as Mackrels and Lobsters, and such like. In which our trading

with the poore simple people, we found them so ignorant, that many, yea most of them regarne ded not whether you gave them a Counter, or a Shilling for the bigger the piece was, the more Ignorant fish they would give for it : but besides fish wee could get no other sustenance from them, or at Bores, leaft, could not vinderstand that they had any other. But observe what happened in the meane time that we were thus in traffique with the Handers for victuals, our Officers (as before is faid) being gone to the Lord Gouernour, who lay about twelve English miles from the Sea fide, the Mafter of our ship on a sudden hoysed up sailes, and away he went, leaving one of his owne men

at fhoare, who accompanied our Officers as their guide, through the Iland. The cause of the ships departure, did fo much the more amaze vs, by realon it was fo vnexpected, and the reason the reof vnknowne to vs : But wee imagined the Matter of the ship and Mariners feared to receive vs into the Vessell againe, because some of our men at their being at Sea, threatned the Saylers, and 30 offered them abuses before they could be brought to fet vs on land,

On the next day following, the Lord Gouernour of the Iland came to vs, bringing our Officers along with him, yet not being so confident of vs, but that (for anoyding of any dangers that might happen) he came strongly guarded with a troupe of Horse-men well armed. And (vpon his first approca) demanding where our ship was, it was told him in what strange manner it stole away and forfooke vs : he then asked what we intended to doe, to which we all answered, that we would be ruled by our Officers: hereupon hee inquired of them , what they would have him to doe in their behalfes: they requested nothing else at his hands, but onely his fauourable Passe through the Countrie, and a thip to carry vs forward into Sweden: to which request hee made answere, that he could grant no such licence vntill he had made the King of Denmarke acquain-20 ted with our being there, for the Hand belonged to the King, he faid, and he was no more but

an Officer or Substitute winder him. Yet in confideration that our flip had so left vs in a strange Land, he promifed to doe all that lay in his power to effect our good : but withall told vs, that the people had inward feares, and were poffeft with suspicions, that our intents of landing vpon tuch a Coait, were not, as we our felues affirmed, only to get foode, but rather to make i poile of the poore Inhabitants. And therefore, to remoone all fuch feares and realouses out of the peoples hearts, he held it most convenient for the generall fafeties of both parties, to separate our numbers, and to spreade vs abroad in the Countrie, one and one in a house, where it was agreed that we should receive both a lodging, and meate, and drinke, vntill hee had sent to the King of Denmarke some of his owne men with our Officers , to vaderstand his Maieslies pleasure, and

40 what should become of vs.

To this we all agreed, and accordingly for that purpose, were by the Lord Gouernour, safely by these armed hotse-men which were his guard, conducted to his owne house. To that place were al the people of the Hand fummoned together, they came at the appointed day to the number of fine or fix hundred, circling vs round with Bils, Holbards, two-hand Swords, and diners other weapons: And at the first fight of vs grew into such rage, that presently they would have cut all our throats, and he wed vs to pieces, but that the authoritie of the Gouernor kept them from offering violence, yet was hee faine to vie the fairest meanes of perswasion to allay their furie. For they would not beleeve but that our arrivall there was to destroy them. Yet the Governour the wed vnto them all our number, which was but three hundred men, and those all vnweaponed, and so consequently, neither likely nor able to undertake any mischiese against them:

50 Charging the vnruly multitude, vpon paine of death, not to touch the least finger of vs, but to divide vs equally into severall Villages, as it should seeme best vnto them, and so bestow kinde and louing entertainment upon vs till they heard further from him, which command of his they

accordingly performed.

Immediately upon this fetling of them and vs in quietnesse, one of our Officers with two of the Gouernours men, were fent away to the King of Demmarke, to vuderstand his Highnesse pleasure, which Messengers were no sooner dispatched about the businesse, but the Ilanders grow- Icalousse of the ing more and more suspitious, came againe to the Gouernous, and neuer would cease or give ouer people. troubling him, vntill they had gotten him to make Proclamation (in hearing of vs all.) That if 60 any of vs would freely discover the true cause of our landing woon that Coast, and reueale the

plots of any dangerous enterprise intended against them, he should not onely be rewarded with great store of money, and have new apparell to his backe, but also should without tortures, imprisonment, or death be set free, and tent backe againe into his owne Countrie. This Proclamation strucke vs all with feare and assonishment, because albeit we to our selves were not guiltie of Griffin a bafe

A wife Gouer-

any plot, or villany intended to the place or people, yet wee knew this might be ameanes to endanger all our lives, how innocent foeuer. Our suspicion of danger fell out according to our feares: for one Thomas Griffyn a Welch man, one of our owne company, went and kneeled before the Gouernour, and with a face counterfeiting a guiltinesse and fearefull destruction, told him that we came thither onely, and for no other purpose, then to surprise the Hand, kill the Inhabitants, make spoile of their wines and goods, and hating set fire of their Townes and Villages, to flye to Sea againe. Yet for all this would not the Gouernour beleeue him, telling him itself. a matter very vnlikely, that fo imall a number, fo diftreffed for want of foode, fo weather-beaten and so disarmed, should venture vpon an enterprise so full of dangerous events; but the villaine replyed, that all those complaints of want, were but songs to beguile the people, for that vpon to the least Allarum given, other ships that lay houering at Sea, and surnished both with men and armour, would on the sudaine, and that very shortly land for the same defire of spoyle, as these their fellowes had done, and therefore counselled the Gouernour to preuent such imminent mis-

The Gouernour being thus farre veged, presently called before him Lieutenant Walton, whose lodging was appointed in his house, and having related to him all that Griffis had discovered, and withall, demanding of Lieutenant Walton what he could fay to this matter of treason and con-Spiracie : the Lieutenant at the first stood amazed, and veterly denied any such intended villany, protefling by the faith of a Souldiour, that this report of the Welch-man proceeded from the rancour of a vile traitors heart, and therefore on his knees intreated the Gouernour, not to give 20 credit to so base a villaine, who for the greedinesse of a little money, went about to sell all their lines, and to make all the inhabitants of the Hand become murderers. The rest lay scattered about and knew nothing of the matter. Now soone after, just as the traitor had told the Governour, that more ships were not farre off, but were ready to second vs vpon our arrivall, it chanced that in the very heat of this bufineffe, and their feares of danger where none was, two other thippes full of armed Souldiers came to the fame place of the Hand where our thippe put in : These two fhips had brought Souldiours out of the low Countries (a ceffation of warres being there ) and were going into Swethland, as we were, but by croffe windes and fowle weather, lay fo long at Sea, that wanting victuals, they were driven in hither for fuccour. Whose sudaine approach and ariuall being fignified to the Lord Governor, the Welch-mans words were then thought true; all 30 arman temp against to the the lland was prefernly up in Armes to refift the firength and furie of a most dangerous supposed enemy : and so secretly did the Inhabitants put on Armes, that we who were kept like priso-

ners amongst them, knew not of these vproares. But night approaching, the Generall gaue speciall charge that fecret watch should be fet and kept ouer every Souldior that lodged in any mans house: which by the common people was as narrowly performed, for they did not onely watch vs as the Gouernor commanded, but among it themselves a secret conspiracie was made, that in the dead of night, when wee should be fast asleepe, they should come and take vs in our beds, and there to binde vs with cords: it being an easie thing to doe so, when our company were di-uided one from another ouer the whole lland. At the houre agreed vpon, the plot was put in force, for they entred our Chambers, and bound enery Souldier as he lay, making them all rea- 40 dy like so many sheepe marked out for the slaughter. For mine owne part, I had sue men and three women to binde me, who fo cunningly tyed me fast with cords, whill I flept, and felt nothing, nor deampt of any such matter, that with a twitch onely I was plucked starke naked out of my bed, and laid voon the cold earth vnderneath a Table, with my armes bound behinde me. fo extreamely hard, as foure men could draw them together, my feete tyed to the foote of the Table, and my necke bound to the vpper part or bord of the Table. In these miserable tortures lay I, and all the rest ( in severall houses) all that night, and the

most part of the next day, our armes and legges being pinched and wrung together in fach pittileffe manner, that the very bloud gushed out at the singers ends of many. The enduring of which torments was fo much the more grieuous, because none knew what we had done that could in- 50 cense them to this so strange and spitefull cruelty, neither could we, albeit we inquired, learne

of our tormenters the cause, because we understood not their language.

Whilest thus the whole Iland was full of the cries of wretched men, and that enery house seemed a shambles, ready to have Innocents there butchered the next day, and that every Hander had the office of a common cut-throate or executioner; Gods wonderfull working turned the ftreame of all their cruelty: For the two ships that came out of the low Countries, and whose arrivall draue fo many milerable foules almost vpon the rocks of destruction, having in that dolefull and ruinous night, gotten some prouision aboord, weighed Anchor, and departed towards Swetbland. Which happy newes being serued up at breakfast to the Lord Gouernour betimes in the morning, and that the Shippes had offerd no violence to the Countrey, but had paid for 60 what they tooke: About eleauen of the clocke the very fame day at noone, wee were all like vnto so many dead men cut downe, and bidden to stand vpon our legges, although very few had fearce legges that could frand.

Of one accident more that befell, I thinke it not amife to take note, which began merrily, but

ended tragically, and in blond; and that was this: Foure of our company being lodged in one Village, and they being bound to the peace, as you may percente the reit were; it happened that an Hoalf, where one of thermlay, had typied hard, and gotten a Hories difease, called the Stag ! Effects of gers : In comes he stumbling, to the roome where the poore Englishmen was bound to the Table drunkestieffer band and foote : which thing the drunken Sorbeholding, drew his Harchet, which he wore at his.gird'e, according to the fathion of the Country, and because hee would be fure his prisoner thould not of cape with his Hatchestie cleft his bead. And thinking in that drunken murderous humour, he had done a glosious act, away he reeles out of his owner house to that house where the other three Souldiones lay bound, where beating at the decresand windowes, and the Hoaft

In asking what he meant to make fuch a damnable ney ie; he told him fo well as he could flammer icout, that she Luril Conernous had sent him thither to put the three Emplify men to death. Vp. on this, the divell and be (hand inhand) were let in, the one flanding to clote at the others elbow. shat be mener lest him till herhadicleft two of their heads, thatlay bound i and being then weary (in should seeme) with playing the butcher, he neuer ceased five aring and shring. Brill floid rithing with his bloudy Axe about their heads, till the people of the house had hung the third man your abeane in the roome. But they having left curring in the Hang-mans trade, then will to practite it, eyed not the maker to fast about his moke, as to frangle him: To that after hee had hung an houre, hee was cut ddwine, renined againe, was well, and afceswards was flaine

Fo This bloudy feathbeing thusended, and all stormes as we well hoped, being now blowne oner to our freedome, and fitting at liberty from our tormerstors; on the necke of their former miferies fell a mifulicte more dangerous to vs then all the roll ; for tidings were brought to the Covernous, that our Auncient, while transited with the Gollemours two men to the King , had tray teroully murdered those his guides, and then ranne away hamfelfer upon this rumour, nothing but thundring and lightning flew from the common peoples infanthes : there was no way now with vs but one, and that one was, to have all our throats cut, or our heads cleft with their Axes. Cruell cowaf-Butthe Gouernor pittying our misfortunes, laboured both by his authority, & by faire speeches, jealoufer to keepe that many-headed dogge (the mulcitude) from barking. And in the end, when he faw

nothing but the bloud of vs poore Engliftmen would fatisfie their thirft; because they fill held 30 vs in suspicion and seare; he most nobly, and like a vertuous Magistrate, pawned to the inhumane Rascals (to my knowledge) hishonous all that ever he was worth; yes, his very life vnto them, that within three dayes the meflengers fent to the King, thould returne home, and that during those three dayes we should be of good behadious to the Handers; and besides that, if they did not returne in fuch a time, that then he would deliver ve vp into their hands. Our Auncient with the Governours two men, came home upon the third day, to the Governours house, King of Detand brought from the King of Demmerte his licence, to carry ve not onely through the Country, but commanding that we should be allowed shipping also at concerning place, to carry vs to Sweneland, whither we were to goe: And according to this Licence the Gouernour caused vs to be called all together the very next day; at which time, Thomas Griffinthe Welch Indus, who had

40 all this while lyen feating in the house of the Lord Gouernour, began to tremble and repent him of his villanie, begging most bale forgiuenesse on his knees, both from the Governour, and vs his Countrimen and follow Souldiours, protesting that what he did, came out of his feare to faue his owne life. But our Officers (vpon hearing him speake thus) had much adde to keepe the companies from pulling downe the houle where Griffin lay, because they would in that rage have hewed the villaine in peeces.

But leaving him and all fuch betrayers of mens bloud to the hell of their owne confciences, let vs fet forward out of this infortunate Iland, and not flay in any place elfe, till in small Boates wee come by water to Elzmore in Denmarke, where wee loyfully got aboard once more; Elzinne. and are howfing up failes for Sweneland. Yet even in this fun-finne day a ftorme fals upon vs

50 too : for our Officers not having tofficient money to furnish vs with victuals, wee were enforced to pawne our Auncient and Lieutenant Walton , for the fafe returne of the Shippe , with condition, that they should not be released vittill a sufficient summe of money was fent to defray all charges. So that we left our Officers behinde vs; but the King of Sweveland did afterwards release them, and then they came to vs. But before their comming, wee having a good winde, landed at a place called Newless in Swene: and from thence were carried to Srock boline (the Stockboline, Kings leate ) and there was the King at the same time; betweene which two places, it was a daies march on hortebacke.

Voon this our arrivall at Stockholme, wee met with the rest that had gone before vs, and with divers others of our Countrimen, that came out of the Low-countries, as before is re-60 lated. In this place we lay fo long, and had fuch poore meanes, that wanting money to buy foode, wee wanted toode to maintaine life, and fo a number of vs were readie to flarue: till in the end, our mileries making vs desperate, we fell together by the eares with the Burgers of the Towne : in which scambling confusion and mutinie, every man got one thing or Milery after other, of which he made present money to relieue his body withall : yet lay wee at the misery,

walles of the Citie, crying out continuelly for money, money, till our throates grew hoarfe with bauling, but the stones of the walles gave more comfort to vs, then the Inhabitants. One day (aboue all the reft ; wee heard, that the King was to ride a Hunting; and wee imagining that all the abules, wrongs, and mileries, which wee endured proceeded from some vinder-hand hard d aling, and packing of our Capraines and Off. cess, resolved to gather about the King at his comming forth, and to cry out for money; but the King being angry (as wee supposed) cameriding amongst vs, drawing his Pistoll from the Sadule-bow, as if hee purposed to have shot some of vs : but seeing none of vs to thrinke from him, nor to be difmayed, hee rode backe againe, wee following him, and defiring, hee would either gue vs money, or elfe to kill va our right; one amongst the self to ( whole name was William Attane) spake to the King aloud; thus: I hold at honour to deeby the bands of a King, but basely to starne to death, I will mener suffer it. V pon thele our clamour. the King looking better vpon our necessities, fent money the next day, and immediate, ly after gaue vs a moneths meanes in money, and two moneths meanes in chath, to make

Captaines COZEDAVE.

Of the cloath wee received some part, but the money being payed, was by our Captaines fent into England to their wives; no part of it ever comming to the poore common Souldiours hands for prefently upon this, wee were commanded aboord the Ships, with promife that when wer were aboord, wee should have our money. But being in the Shippes vader hatches, away were wee carried with prouision onely of one moneths victuals; when by rea- 20 fon of the weather, wee were forced to lye eight weekes at Sea : in all which time, wee had nothing but pickelled Herrings, and falt Strewlings, with some small quantitie of hard dryed meates : by which ill dyet, many of our men fell ficke, and dyed. In the Shippe wherein I was, wee lined foureteene dayes without bread, all our best foode being falt Herrings, which were were glad to eate raw; the best of vs all having no better for

At the last, it pleased God to send vs to a place called Virasound in Fynland, where wee landed, (Finland being libited to the King of Swassland.) From Pfrafound wee were to got to Wesherough, a chiefe Towne in the Countrie of Finland: where wee no sooner arrived, but our Souldiers runnt some one way, and some another, so long that the Captaines were left alone 30 with the Shippes : This running away of them, being done onely to feeke foode, fo great was

Dispersing.

By this careleffe dispersing themselves, they lost the command of the whole Countrey, which they might early have had, if they had beene vnited together; and not onely were deprined of that benefit, but of Horfes also, which were allowed by the King for them to ride upon. So that , what by the reason of the tedious lourney (which wee were to trauell, being fourescore leagues) and what by reason of the extreame cold, being a moneth before Christmas, at which time the Snow fell, and neuer went off the ground vntill Whitfontide tollowing; but all the Raine, and all the Snow that fell, freezing continually, divers of our men were it arued to death with the Frost. Some lost their fingers, some their toes, some 40 their notes, many their lines : infomuch, that when wee all met at Weyborough, wee could make no more but one thousand and foure hundred able men; and yet when we were landed at Vfrafound, were were two thousand strong; the extremity of the cold Countrey having killed so many of our Souldiours in fo little time.

Diffreffe by

At our landing at Werberough wee had good hopes to receive better comforts, both of money and victuals: for the Inhabitants told vs, the King had allowed it vs, and in that report they foake truth ; yet contrary to our expectation, wee lay there about four eteene dayes, and had nothing but a little Rice, of which we made bread, and a little butter, which was our best reliefe. Drinke had we none, nor money : our Captaines gauevs certaine letherne pelches, onely made of Sheeps skins to keepe vs from the cold-

Their miferah'emuch into

At this place we received armes to defend vs against the enemy, and six Companies that were 50 allowed by the King for Horsemen, received Horses there. From thence wee were to march into Ruffia, where our enemies continued. But the journey was long and vncomfortable: for wee marched from Newyeares day vntill Whitfontide, continually in Snow, having no reft, but onely a little in the nights. So that the miferies and misfortunes which wee endured woon the borders of Fynland, were almost infufferable, by reason the number of them seemed infinite. For all the people had for faken their houses long before wee came, because they were evermore oppreffed by Souldiours : by which meanes we could get neither meate nor drinke, but were glad to hunt Cats, and to kill them, or any beafts wee could lay hold on, and this wee baked and made them ferue for daily fuftenance. The greatest calamitie of all was, wee could Wantof meate get no Water to drinke, it had beene so long frozen vp, and the Snow so deepe, that 60 and of Water. it was hard to fay, whether wee marched ouer Water, or vpon Land. So that wee were compelled to digge up Snow, and with stones redde hot, to melt in tubbes, and then

This affection continued about twelve or foursteene dayes, till we same into Ruffis. Vpon our very first entrance into which Kingdome, we marched our an arme of the Sea, that was eight leagues ouer, many of vs staruing to death in that passage, by the cold freezing windes that blew the lame day. In which frolly journey, I law to much bread as a man might buy for twelve pence, fold away in little bits, for the value of fortie fullings. But this mifery ended the next day, at our ferring footinto Ruffis, where we found plenty both of come and cattle; onely the people of the Countrey rames away, leauing all their goods behinde them, but so cunningly hidden, that the best policie of ours could hardly finde them out. By this meanes of the peoples running away, we were glad to play the Millen, and to grinde all our corne our felues,

CE AP.9.S.4. Enhalt provided by their flebing twentien Cruel Poles.

to bake our bread, and to dreffe our owne victuals. Then marched wee up to Nonerod (a Nonerod chiefe Citie in Ruffia) where wee were to receive all our meanes that refted behinde vnpayed: but our Captaines beguiled vs, and kept it for themselves : yet to stoppe our mouthes, they told vs wee should goe into Muscony, and there all reckonings should be

made euen. Wee had scarce marched about three dayes towards Muscony, but that newes came, how a

certaine number of our enemies lay in a sconce by the way; the strength of them was not perfectly knowne, but it was thought they were not about feuen hundred, and that we must Polate entivie some stratagem to expell them from thence : vpon which relation, our Captaines drew this forth to the number of three hundred English horfemen', and two hundred French horfemen : fo that in all we were about fine hundred that were appointed to fet vpon the supposed fenen hundred Polanders, (our enemies) that fo lay infeonied v pon whom we weat. Our chiefe Commander in that fengice was Monfier to Veile, a French man, who so valiantly led vs or, that They fled. the enemy hearing of our comming, fled ouer a water that was by the sconce; yet not with fuch speede, but that wee flue to the number of foure hundred of their fide, and lost onely three men of our owne : but we tooke the fconce. About the fconce ftoods faire Towne called .rions, with a river called the Poles, running through the middle, but no bridge over it; onely a with floor of

few Boates and Sloates (made and cut out of trees) were there, to carry the people ouer from Armess the one halfe of the Towne to the other, This sconce familiaed vs not onely with great store of riches, but also with a number of Polish Horses , and as many armes as served to arme five hundred men; our want of that commoditie being as much as of any thing befides: for of those five bundred men that went vpon the service, there were not three hundred fixed armes; yet through the hand of him that deales victories, or ouerthrows, as it pleafeth him best, the

Quer this river Volga the enemies were never driven before, either by the Emperor of Ruffia, or by the King of Swethland: for which cause (as afterward wee heard) the next day when they departed from the other fide of the River, they burnt that halfe of the Towne on which fide they were themselves, and in most bloudy, barbarous, and cruell manner, made haucke both of men, women and children, albeit (not aboue halfe a yeare before ) the Inhabitants on Ples civelfies that fide had revolted from their owne Emperour, and turned to them, In which tyrannicall moft execuably

that the had reduced from their owner. A necessar, at utract core cleam. In winner by yranical, we yrone, plays callyment was, in fall a loudy full of georphs, and giften (the dopres being locked yron being what maps might high forth) the house, was faced about, their extent, and often times, were young children being by the house by the plays and the plays the tracking of the human cyrannia being graphful of the most by the Paley, that weiging to movies, but, seen by that. Raifer, that weiging the plays the tracking to the plays and the plays the plays and the plays th whose cruelty farre exceeded the Polish.

The Townsheing thus burns to the earth, all the fixe thousand (which as I faid before, fled oust the Bings, day of the france, and were by as supposed to be that seven hundred temp downs in full battelion to the Suggy fide wish such serveness, as if presently, they and their buries would have from ouer, to fell with vs. which being percented, our poore oue, bundled flood so ready to refift them. Bus whether they feared our numbers to be greater then they region and that wee had fome other troret forces. I know not : but swax they marched, the left lame day in which they came downe in that brauety, not doing any thing, of which, wee for our parts, were not much logy; because if the patrailes had loyned, were knew jour, felics farre viable to withitend them. And this was the fertice of the mail nears what we

Two or three other I conces and Townes we tooke from our enemies, they not once daring Cavelle Cane

to resist vs. because they know nothing of our numbers and force. But the difficult dealings Gayrift of our Captaines, made the whole Armie discontents; informath, that our Spuldiors would of taines tentimes deny to goe forth upon fernice, because they had beene almost a yeare in the Land. 60 and had seepingd no more but one Raddom (amounting to the value of eep fullings Eaglib.) So that you the full of the control of the seep of the control o fire of a new confpiracie was likewile kindling, but it was perceived, and quenched with the blow of the confpirators, of which, the thirds were hanged. On the parties we went; when

# 798 Fuerhom the Finlander, P. le Guard Generall of English. Go. LIB. IIII.

## Hondivs bu Map of Mulcouia

we'came within fortie leagues of Mulcoute, newes was broughe, that the enemy had beleaguard feuen thousand Ruffer that were our triends, and that valefic wee forced the fiedge to break vp, the feuen thousand Ruffes would enery man be flatted where they lay. This fad report, (albeit we had re olued neuer to goe voon any more fernice, whill wee had our pay I to wrought in our hearts, that wee much pirtied the miferies of beheis, becking wee our felues had tafted

Our Generall (whole name was Emerhorne) was a Fynlander, and with a company of Fynland blades (as they tearme them) well appointed on Horlebacke, was by the King of Surveitand,

Pantiale Guard fent affect vs., as our Connoy, wntill wee should come to Pontiale Guard, who was chiefe Generall over the whole armie of strangers that came into the Land : fo that according as he was fent and charged by the King, hee our tooke vs before we came to Arisms. By the intreatie therefore of this Fyshender, and the flattering promifes of our owne Captaines, we were contented to goe vpon this fervice, and to deliver the Ruffer, or to dye our felues in the action. Yet with childition, that (as they promifed to vs) we should by the way meete our chiefe Generall, Ponton le Guard, who with certaine numbers of English, French and Dutch (which the yeare before were come into the Land) was vpon a march out of Mulcony, not onely to meete vs. but to toyne with vs , and pay vs all our money which remained good to vs ; prouided likewise, that so soone as ever wee should release the femen thousand Ruffes, our money should be payed downe. On these conditions (I say) were yeelded to goe upon the

At leagth porter le Guard met vs (according to the promife) and with him was money brought to pay vs, and his word guich that prefently wee should receive it. But the lamentable effate, in which the poore befledged Ruffer were (within the fconce) being as the point of death for want of foode, required rather speedy execution, then deliberation's fo that the necessities of their hard fortunes crawing liaste, on wee went, having about nurreene or twenty

#### C. H. A.P.O. S. 4. Ruffe flight; French fight & flight: English bonor & coposition. 779

thousand Ruffes, that were people of the same Countrey, joyned to our Armic, to aide them in this enterprize. But as we all were vpon a march, the enemy having received intelligence of our approaching, let forward, to the number of eight thouland Lanciers and more, to intercept ys by the way : and being within one dayes march of the place to which wer were likewife going, they fet fire vpon three or foure Villages hard by the place where we lay at Graffe with our Horfes, for a token that they were comming. And this was done upon Midlummer day laft in 40-1610. the morning, by breake of day. Then came they thundring wich shours and cries to fer voon vs: but no fooner was the Alarum given, when the greatest part of those nineteene or twenty Bale Russe thousand Ruffer, that were soyned to vs as our side, fled most basely before any blow was gi- flig

To uen. This tudden cowardize of theirs somewhat amazed vs : but the houre being now come. wherein we were not to talke of dangers, but to goe meete them, with our fixe companies of English harfe, we brauely relifted the Polanders, and with great hurt to them, but with little loffe vpon our part, charged them three (euerali times.

At last Ponton le Guard (our chiefe Generall) tooke his heeles and fied too, leaning vs vtterly P. to Guard destitute of all direction : which much altonished vs, as not well voderstanding what to doe; fleeth, for our greatest strength (being by their flight) taken from vs, none but wee strangers were left in the field, and of vs there was not in all, about two chouland, and of that number there were aboue fix hundred French horiemen, who feeing both the Generall gone, and the Ruffes fled, French flee. turned their backs upon vs, and ranne away too most valiantly, yet not out of the field, but to

Then were wee not about twelue or foureteene hundred at the most left to resist eight thoufand at the least : voon whom notwithstanding, our fix companies of English horsemen, charged three feuerall times, without any great lote, but with much honor : And at the fourth time, for Eiglibhonout. want of powers to lecond them (which the French should have done) all our fix companies were feattered and overthrowne with the loffe of few of our colours. The Captaines over thefe fixe Companies of Horse, were these :

Captaine (rale, of whole company I was. Captaine Rendricke, Captaine Benfon, Captaine Carre, Captaine Colbron, Captaine Creyton.

Which ix Capraines had not in all their companies about five hundred men. In this battaile, 20 Captaine Creyron was flaine in the field; Captaine Crale was fhot in the knee, and within a fhort time after dyed of that wound; not about twelve of his companie escaping. Captaine Kendrick was wounded in diners places of the head, and dyed. Captaine Benfon was flot in the hand, and wounded in the head, and yet escaped, and lived : onely Captaine Corre and his Cornet escaped, but all his companie feattered and loft. Diners other Officers were flaine, whose names I can-

Thus were all our English horse-men dispersed and ouerthrowne, to the number of fine hundred and yowards. Our Generall Enerborne with his companies of Finland, or Finland blades. were also put to retrait : so that there was not left in the field aboue fixe or seven hundred, which were foot-men. And of these, one halte was English, one halte Dutch, who kept onely a cer-40 taine place by a wood fide, barricadoed about with wagons, having with them foure field vieces. wich which they did great spoile to the Enemie. But their number being but few, neither durst they venture on the Enemie, nor durit the Enemie enter vpon them , but kepr them field (as it were belieged) in that place onely, because they could no wayes escape. The inconvenience of which cooping up in so narrow a roome, being looked into, and the dangers on every side well considered, it was held fittest for lafetie, to summon the Enemie to a parley. In which parley, the Enemie offered, that if they would yeeld, and fall to their fides, they should have good quarter kept. And if any man had defire to goe for his owne Countrie, hee should have libertie to goe with a Pasport from the King of Poland. Or if any would ferue the King of Poland, hee should have the allowance of very good meanes duly paid him. Vpon these compositions they

so all yeelded, and went to the Enemie; onely Captaine Torks and his Officers, with some few of their Souldiers, went backe into the Countrie, and came not to the Enemie, as the rest had done : who from thence marched vp to the Polifb Leaguer, being ten miles distant from the place, and there they continued. But fuch as defired to travell to their owne Countries, were fent to the King of Polands Leaguer, which lay at that time at a place called Smolensko, and there accordingly had their Passe, to the number of one hundred, of which number I my selfe was one. What became of the reft I know not : but I with fine more held together in tranell, vntill we came to Dantzicke, a great Towne in Pruffia, being diffiant from Smolenike one hun-

To make an end of this Storie of the Foxe and the Beare, the pretending Demetrius and contending Suisker; it is reported, that Demetrius feeing these perplexities of Suisker, rayled a great Armie of fuch Ruffes as voluntarily \*fell to him (the Pole having now rejected him, except fome . Some fay i.e. Voluntaries) and againe laid fiege to Moses; Zolkiewsky for Sigismund, beleaged another part had recover thereof with fortie thouland men, whereof one thouland and fine hundred were English Scottish, which is foully and French. Smiker feeing no hope to withitand them, his Empire renouncing him, hee would credible.

feeme to renounce the Empire first, betaking himselse to a Monasterie. But not the fanctitie of Moscoycelded. the place, nor facred name of an Emperour might protect or secure him. The Musiconites ved ded up their Citie and his Person to the Pole, and the Caftle was manned for Syrifumoud. All ioyne against Demetrius, who betaketh him to his heeles, and by a Tariar (as before is faid) was flaine in his campe. Charles King of Sweden dyed Octob. 30. 1611. and Gustamar his sonne speceeded. Sigifmund obtay neth Smolensko also after two yeares siege and more : in which time the Defendants had held out fo resolutely, that the Polish Peeres and States (which in that Kingdom beare great iway) had called the King to their Parliament, the rather in regard of the King of Denmarks warring upon Sweden (in which warre divers thousands of our English voluntaries Noder the affitted the Dane) but he first defining to trie his fortune, carried the Citie with two banders to Lord willings pieces of Ordnance and other rich spoile. Many were slaine, and divers great persons taken, of which was the Archbishop. Many were blowne up (as was thought) by their owne voluntaries act, by fire cast into the store-house, in which is faid to have beene (if our Author mistake me) fifteene thousand veffels of poulder; whereupon feemed to returne the very Chaos, or in flead quindecies m. Re thereof a Hell into the World. It is accounted one of the strongest Forts in Christendome, the

quantum mass unservor arress motors would as a second breach. It was taken the weelfth of Italy, 16 to.

Souther was carried into Palend and there imprifoned in Warningtoning Calle, and sfort the Suakrys impei- Is see of libertie and his Empire, exposed to scorne and manifold miseries, hee dyed in a forraine countrie. But before that Tragedie, the Poles are faid to haue more then acted others. For when they held him prisoner before his departure from Mesconia, they sent for many Grander in Sail. 20 keys name, as it he had much defired to feethem before his fatall farewell, to take a friendly and Poilh cruekie. honourable leaue of them. They come, are entertayned, and in a private place knocked on the head and throwne into the River; and thus was most of the chiefe remayning Nobilitie destroyed. The Poles fortified two of the Forts at Mofes, and burnt two others, as not able to man Their reward, them. But the Muscouste also there held them belieged till famine forced them to yeeld the Russians finding there fixtie barrels of pouldred mans field ( it seemeth of such as had dyed, or Exters of mans were flaine, that their death might give life to the Survivers) a just, but miferable and tragicall Ach forced to spectacle. We shall conclude this Discourse with giving you two Letters, the one taken out of a Letter written from Colmogro Sept. 7. (the yeere is not dated) amidft thefe broiles; the other from Captaine Margaret before mentioned by Thuanne: and after them, for further illustra- 30 tion and profitable vie of this storie, is added part of a Letter of Doctor Halls.

The Polish

The Po who now had men gallant men, are almost flarmed in prifon. It is supposed that the Emperour cannot long hold out , and Demetrie Euanowich is reported to bee a very wife Prince. there. The fecond

> Captaine MARGARETS Letter to Master MERICE from Hamborough, lan. 29. \* 1612.

R Ight worshopfull Sir , I could not omit this commoditie without commonding my sernice to your 60 Worshop, and also briefly to advertise you of the State of Molco, which is not as I could wish. Also Mosto effected I lest Master Brewitter in good bealth at my departure; but three dayes after the Tomme within the by the Roffis. red wall was burnt with certaine fire Bals flot in by the Ruffis, fo that there is but three bonfes left whole,

the English bonse also being burnt. Mafter Brewster is constrained to base his dwelling in a Seller un- English bouse der the Palace, without great friends except Misslofsqui. The Generall Cotqueuilfh is arrived there, butat and left a sufficient number of men to keepe the Caftle, and the red Wall, bee himselfe with his Armie is gone towards Relan, and be bath fent with much to doe, and upon certaine conditions, to the River of Sana towards the Volga, to bring vill nals to maintagne them that are in the Caffle befreged of the Muscountes. The King of Poland is altogether refolaed to goe there in perfon this fummer, and if the Ruffies have no fornaine beloe, as there is no appearance, no question it will come to passe as I writ last to your Warfoip, that they will be forced to yeeld. I write briefly to your Worfoip, because I hope to take my voyage to France through England, and there to meet with your Worfhip; intreating your Worfhip to ac-10 sept thefe few ienes as a tellimony of the fermice I have vowed to your Worthip, etc. and fo I end in hafte;

Thus have we finished source Acts of this Tragedie: the first, ending with the end of Beales family; the second, with the raine of that of Boris; the third, with that (what sever) Demotrius : the fourth, with this Smikey, attended with that fladow or ghoft of another Demetrius, Now as I have feene fometimes the Spectators of Tragedies whiled with discourse of a Cherus, or (as in our vulgar) entertayned with moticke, to remit for a time those bloudie impressions fixe ed in attentine mindes ; fo have we represented Pheedires Coronation added to the first : Boris his Charter to the English to conclude the fecond; that of Demerring to the third, and for this fourth I have here made bold with a Letter of my worthy friend (fo am I bold to call that good Man, zealous Protestant, elegant Writer, industrious Preacher, learned Doctor, and Reuerend Deane Doctor Hall, a Hall adorned with fo rich Arras, and with all the ground, light, life, the All of thefe, Christian humilitie) which may fetue as a Letter of commendation to my intent, as it was intended to another worke, which had it beene publike, might have prevented the greatest part of this : A worke of Matter Samuel Sombeby, in Sir Tb. Smith: Voyage mentioned, Master Sa. touching thole Ruffian occurrents which he in part iaw. As a Traueller he deferueth place here, Southeby. And howfoeuer I have neither beene fo happy to fee the Worke nor the Workman, yet this Epiftle tells what we have loft, and my worke eafily proclaimes the defect of fuch a Wardrobe, being (as you fee) like a Beggars cloke, all of divertifyed patches; fo much more labour to mee, in both getting and stitching them, though so much less instastation to thee. Once, as I have ge placed this long sufficient torie in the midth of Marine Discouries, to refresh the Reader a while on Land : fo amidft thefe tragicall, harfh Relations, T'thus feeke to recreate thy wearie forits with this char of mine, and after these Monda gates, mibre really, with this Letter so vietall to the present subject, so pleasing in the stile. The whole, and the next following to Bachinski, the Reader may finde in his so oft published Decades of Epistles.

Rauell perfitath wifedome ; and observation gives perfection to travell; without which, a man may please his eyes, not seede his braine ; and after minob earth measswed, shall returns with a weary body, and an empty minde. Home is more [afe, wore pleasans, but lefte frustfull of experience : Bus , to a minde not working and descursive, all beauens, all caretie are dike. And, as the end of trauell is observed 40 tion; fo, the end of obfernation is the informing of others: for, what is our knowledge if smothered in our felnes, so as it is not knowne to more? Such secret delight can content name but an ennione nature. To be the desired many and cold aires, gone faire, seen much, beard more, beforwed all. The serve yeares you have spen in musician of Nabuchadrazzars seven; consuming with such recutives. A Paul sought with at Ephclus. Alas! what a face, yea what a backe of a (burch base you seene i what manners: what perior Amongs in boom, squerous Superstand strings with close Attentione, Treachery with Cruelty, one Denill wash another; while Truth and Fernus does not so much as you any challenge of ref-flance. Resurving once to our England after this experience, I imagine you doubted whether you were states. Actuaring over 15 was suggested up to the property of 50 be a gratefull labour, to vs, to Posteritie. I am decemed, if the fickleneffe of the Ruffian State, bane not

yeelded ware memorable matter of Historie then any other in our Age, or perhaps many Centuries of our Producessers. How shall I thinke, but that God sent you thather before these broules, to be the winnesse, the Register of so famous mutations? He loues to have those tust ends which bee doth in one part of the World, knowne to the abole, and those enils, which men doe in the night of their secretie, brought forth into the Thater of the Weed ; that the cull of more since one were use my compared with the easil of his parallement, may initifie but proceedings, and condemne theres. I now worke fault thus bowner him the charges your (condemner) former, and the brenefit of the Church. For while; you difcourfe of the open Tyra-nic of that Rullian Nero, Iohn Basilius; the more secret, no leffe blond, plots of Boris; the ill successe of a stolne Crowne, though let upon the head of an harmelesse Sonne; the hold attemps and miserable end of a false, yet aspiring & challenge; the perfidionsnesse of a servile people, unworthy of better Governours; the misse-carriage of wicked Concruours, vieworthy of better Subjects; the uninit usurpations of men, init (though late) renenges of God; crueltie rewarded was bloud, wrong claimes with overthrow, treachery with bondage; the Reader, with some secret borror, Shall draw-in delight, and with delight instruction : Neuher know I amy Relation whence hee skall take out a more casis Lesson of Instice, of Loyaltie, of Thanke-

But about all, let the World fee and commisserate the lined estate of that worthy and noble Secretarie, Buchinsky, Poere Gentleman bis diftreffer recalls over to my thoughts Alopa Storke, taken mongst the Buchinsky, I were testimmen, we work you can be displacing of a foreigne Prince; As more thank or dear rance, and hands meet be found in dear rance, and hands meet. He foreign and ill Master; but, mith on boust benet, with cleane hands. The Masters trimfice doch no more infatt a good Seruant, than the trub of the Seruant can infafte but if Master. A bad Worke man may use a good instrument: and oft-times a cleane. Naphin respetts a fonte deafier. A pour rover may may view grown and the more beld friendly on Heaven, so more to some them to mouth. It was meyer to thinke, this his piete, as it were beld friendly on Heaven, so more towards have friends in this our other World: Lo, even from our Iland was pelled deliverance takes a long signs, and friends in this our more voice: La, con y you bleaden, by us. That God; whom bearforms, will be belified him beyond hope; year raber, from Headen, by us. That God; whom bearforms, will be knowne to those rade and scarce humans Christians, for a presenter of managere, a sammer of truth, a la geomet is voyed that and years immune varieties of the presence of the presence of trails, a revarder of piece. The many of our gracious Kirg, the compelfior of an homeroid. Complether the lane of a true friend, and (which wrough all, and for all on works) the great of fine good God, fallium life those board, and fine a flad accione to be thereigh, and a malle force! to be diffred. It is no differed. It is no differed to be a second to the second worthy of your Records, than your love to this frend is worthy of mine. For neither could this large See worthy of your accords town your come to won passed overly by more. Let nestore come some targe Soil drownes or questlo, mor time and defrect (which are most to breed a longing companying of finally) about the breat of that affection, which has kindnessed or religious monthly did. But a reasoft, and worth final commond this true lose; which to fay true) hath beam now long out of fallow. Never times yet. ded more love; but, not more subtle. For every man loves himselfe in another, loves the citate in the per son: Hope of aduantage is the Load-itone that drawes the yron hearts of men; not vertue, not le desc. No Age affoorded more Parasites, sewer friends: The most are friendly in sight. Serviceable in expectation, hollow in love, truftleffe in experience. Tet now, Buchinsky, see and confesse thou best found one friend, which bath made thee many, Go,

Of the miserable estate of Ruffia after Swiskers deportation, their election of the King of Polands Sonne, their Interregnum and popular estate, and chusing at last of the present Emperour, with Some remarkabe accidents in his time.

Hus haue we leene the Russian sinnes veterly rooting vp so many Russian Imperial Families and persons : the whole Family, of Inan extirpate, that of Boris succeeding, annihilate; two pretending Demarry and Smiskie extinct: and yet have wee greater abhominations to shew you. No Tyrant, no Serpent, no Dragon is so exorbitant and prodigious as that which hath many heads and therefore in dinine Visions Monarchies (how euer excessiue and tyrannical) haue beene resembled by simpler and more vniforme beasts, but the 40 Dan. 16 7.68 Devill in a great red Dragon with feuen heads and ten bornes, and the Beast likewise to which hee Anis, 6.13 gene bu power and bis fest and great ausborsse, which opened his meast is black braine against Godge.

14.04 17.1. On which fat the great Whore, the Antichritian Babsion. There was no King in Israel, is both Ind. 17.6.6 18. Alpha and Omega, Preface and Conclusion, Diume Writ to fome mifery in Ifrael; as if all Kings and no King, were the Circumference of all the lines proceeding from Mischiefes Centre. And

now was Russia a Monster of many heads, that is, a bodie fallen into many pieces. One man possessed of the Wife of that double Demetrius, got to Aftracan, there feating himselfe to fet vp an vsurped shop of Rule; the Southerne parts choic Prince Vladylam, Son of K. Sigismund of Poland, chose of the North thought of other Princes; and at last when neither the Fig-trees sweetneffe nor Olines fatnesse, nor cheering Wine from the Vine could take place in their inconstancie, the 50 Brambles conceived a fire which deseared the Ceders of Liberau: a popular government happened, or if you will, a Confusion of the multitude bare sway, which killed and murthered enery Great Man, whom any Rascall would accuse to be a friend to the Poles, or to any of the dead Emperours, whom those popular injudicious Judges fancied not. And now Ruffia blushed with impudencie, that is with shamelesse fight of the daily effusion and profusion of her best bloud; now euery man was an Actor : and oh had they beene but Actors! too really did they present (not represent) bloudie Tragedies, of which their whole Countrey was becomne the Theatre; the Deuill the Choragus (a Murtherer from the beginning) and the whole World Spectator, stupid with admiration, quaking with horrour of fo vincouth a light!

Now for the ouertures betwixt the Muscouites, and Scanislam Stanislamich Zolkiewskie, Ge-60 nerall of the Polakes, touching their Election of Vladiflaus Sonne of King Sig fmund, and the Articles propounded : also the answere of Prince Vladiflaus to the same Articles , Anno 1612. I have here expressed in Latine as I found them fearing I should be over-tedious to translate them, especially seeing the businesse came not to esfect : and the English Articles following of the

# The points of the Embassage of the Ruthan Messenger sent to his sacred Maristic, briefly collected.

By what manner their natural Lords ruled out them, they alleged, to wit, beginning from 10 Lord and Language of the blood of a Angulus (see Emperous of Rose, such you the late Lord and Language Periods Emanusch, in whom their Race crade).

This keris Godonous abiding with Proche Emanusch, was created (by the owner force and power) Emperous or Lord vious after a little time, the pleature of God to working, being timed out of the Imperial feate, departed this life flamefully, and by vision Seath, together with his

Gregorii Eutro-Demetry Eus-Primares,

That Conflighers Orrepay the Referee, being of bale defent, ruder the Name which he did beart of Emperour, otherwise Demery Emansporte Ilains as Ongett, did fraudiently and by de-cit (wherewith he decrined the common people, and others the belonged them) obtains the Imperiall Seate by force, without the confent of the Spiritualtie, and all the chiefe Bishops and Lords, and great men of the Kingdome, who durft not withfland the fame, feging the Commons to yeeld thereunto.

Lord Palatis of How the excellent Lord Palatis of Spandware, gave his daughter in marriage to the Rofrigs,
Sandware.
and himfelfe (many Gentlemen both of the Kingdomet Palatis, and press Ducky of Lieu, to

and hundrife (many dentifiered both of the Augustome of Friend, and great Ducky or Lien, accompanying him came into Mofessia.

The that Unfile Emmersich Sauker, with his brethern, and many others associated to this attempt, and firring wy other great men of the Land, did kill the Safrings, with many Gende
men of Friends, and the great Ducky of Liens, and pure the red input disert Calles. And himselfe
was made Emperour, although he were not elected by all the Sagres. Whereupon many of our Valili Eugnoweb Suntey.

The Wor.

was made Emperour, a temperour were now to the control of the cont vnto him, because of the murtherers. How others called Wors, did name and call themselves somes of the Saine Emperour, as Inc.

Other Wers, or precenders , 1. Peter, Pheodor , and by many and divers other names ; and under the same names , did consume Phesder.

the State, and thead much bloud. How the Kings facred Maiestie, comming to Smolenike lent his Messengers the Lord of Pre-The King of miffase, and other noble men, who comming vnto the Campe, the forenamed 18'er, fied away: but divers of the Reffer came vnto his Maieftie. And taking counfell with the Betaries, at that 40 The Lord of time remayning with Saukey in the chiefe Citie, we fent our Mellengers to his Majeffie at that

Poland Michael Salti-

The Articles are before

time, being at Smolenske, viz, Michael Salticone, and others, requesting that his Maicstie would grant vs his Sonne to be our Lord, How they were dispatched away, and what answere they brought from his Malettie, with conditions engroffed, and figned with his hand and feale,

How that after the depoint of Smiker, the noble Lord Generall of the Kingdome, comming into Moscoma, concluded all the faid bufineffes and treaties; and confirmed them with the oath of himselfe, and his fellow Souldiers. And that they after that outh , likewife made their outh for the same. Then, that for the greater defence of the said principall Citie from the Wors, they fent Souldiers into the Citie, and fent also their Meffengers from the whole Countrie Fiderets, 50 Valle Galicies. the Metropolitan and Vafili Galichin, with others, vnto the Kings Maieffie, and required an oath in his Maietties behalfe, of all the feuerall Provinces.

How that his Maiesties Souldiers dwelled and behaved themselves in this capitall Citie of Mosco, before the troubles began, without injuring any man, punishing the cuill according to

How the Boiarins handled other Gentlemen, and principall persons of the Ruffe Religion, although more inclined wato them : but especially the Officers and Servants of the Wors, as also

It followeth, how they often fent word vnto the Citie of Smolenke, and willed them to deliver up the Citie unto his Maiestie, to bee under his prosperous government and power. As for 60 the fecret plots of their Meffengers, Galechin and others, they faid, they were ignorant, as also of some vnknowne practises, handled with the Wor called Halusin. But they faid, that they had written very often to the Citie of Smolenske, and commanded them to doe what souer stood with his Maiesties pleasure, and liked him, without further effusion of bloud.

How also it befell in the chiefe Citie to Lepun, and Sa. why, and the other Robels, when they Lepun violated their fidelitie.

That they certified his Maiesties Souldiers thereof, and that they, with them, did rise against the Rebels, and that even to this present, they doe keepe, and will keepe their oath once made, and their due obedience vnto their Lord.

And, in that Lepin was punished of God for his treacherie, and departed this life with so shamefull a death, wee thinke it to bee for the good example of others, to reduce them into their former estate, to reuoke others vnto their fidelitie, and for keeping their oath alrea-

Therefore, after many circumstances, they inferred, that they would presently send their Messengers to the generall Parliament : but mooued with the perswasion of the honorable Lord Generall, to wit, that his Maieffie would bee contented with their fidelitie once made, and performed under eath, and with their griefe for the fame cause, and will cheerefully forgive them : and doth not refule to give his Sonne to raigne over them. Adding withall, that many Kingdomes, to wit, the Kingdome of Hingerie, the Kingdome of Bobernie, and a great part of Ruffe, doe earneily request, that he would receive them under the happy government of his Marefre : that they might entor the printledges of Poland , and Liton , to which , none in the whole world can be compared.

But , because his Excellent Maieftie , as a Christian Lord , reichting all other Kingdomes, and Dominions, will graciously receive vader his Rule and government the faid Dominions, and that he is forry for their destruction : he therefore now admonsheth them, if they will bee under his prosperous Rule, and enter into an union together with the Kingdome of Poland, and the great Duchy of Lnow, and live friendly with them ; if they will performe, and confent therevnto , His Excellent Maiestie promiseth to remit their offence, and to receive them vnder his The King as happy gouernment and authorifie, and refuseth, and by no meanes will alter or change their taith seams and confeience, or places dedicated vnto Ged, or builded for deuotion: neither will impose on them any other Religion, or after their ancient Manners, or Customes, but will bestow on them prulledges and offices: and that the Rights and Prulledges, which the Pair, with the great Duchy of Litem doe enjoy, shall be conferred on them: and that they shall be equalled with the 30 Kingdome and great Duchy of Litem, &c. which illustications and prulledges, in former times,

their Predecesfors wanted. For this perswallon therefore of the honourable Lord Generall, which he had in charge from his Maiellie to make, they yeeld all thankes : but notwithflanding they propound, and plainly adde, that their oath shall be so, that his Maiesties sonneshall succeed in their gouernment, with certaine additions, to wit, that they will have none other over them but onely his Maieffies fonne, and that the whole Land dorh make it knowne , and propound their in gement and fentence, by way of denunciation, that by no meanes, but by offering his Maieffies sonne, these troubles of Mosconia can be extinguished. Adding withall, that at that time, in the first troubles, when the honourable Lord Generall came into the Country of Mofconia, and required the 40 oath for the Kings Maiesties sonne : if his Maiestie had made any mention thereof, it is certaine,

that the Commons and all the Nobilitie, would not have confented thereunto by any meanes, and that greater effusion of bloud had rifen thereupon : And that they had taken for their Prince Klutzimity, called the Wor, to whom all were not affembled, who also at that time had a great Klussimity a power of men, as well of Poles, as Ruffes and Litowes. They therefore feeing the great discord West or Pretenamong if the people, taking couniell, did freely choose for their Lord and Emperour his Excelder, acknowlent Maiesties sonne, vnto whom they had a great affection, and who had a long time before ledged Emgelayen in their hearts : affuring themselves also, that by this election of his Maiesties sonne, many troubles and diffentions would be pacified, and fo reiected the aforesaid Wor Klutzinsky: As alfo they received into their chiefe Citie the chiefe Generall. But, when it was heard that his Exso cellent Maiestie, would by no meanes give vnto them his sonne for their Lord, and to rule over

them, they fell into such effusion of bloud and insurrections, As also the same time, the whole Country of Mosconia looked and expected nothing else then his Maiesties sonne. Calling to memorie, for their better aduice, that it was to be feared, least whilest his Maiestie came too late with his fonne, divers parts of the Land should choose vnto themselves severall Lords. As to the Southward the Castles Strachen and others, to the King of Persia; part of Pomerland and Si- Afracan. heria, to the Kings of Denmarke and England; Nonogrod, Plefco, Inanogrod, and others, to the Lapland King of Sweden and that the other Cities would choose to themselves other Lords separate from the rest. In the meane season, they defire his Excellent Maiestie, to make a speedy end of these warres, according to his Obligation and promife ratified by the oath of the honorable Lord Ge-

6c nerall, and the whole Armie : and that his Maiestie himselfe, with his sonne, would come into Moscouia. They request also, that his Excellent Maiestie would recayne with himselfe and his Sonne, Counfellors, and Messengers of their Commonwealth, for the ordayning and concluding of perpetual Conditions. They request also, that his Maiestie, in the name of his Sonne, would fend vnto all the Inhabitants of the Townes, and write vnto the feuerall Cities, fignifying his

How

comming into their Dominions, and willing, that out of the feuerall Prouinces, all forts of men send their Messengers, to treate and conclude of the affaires of all sorts of People, and of perpetuall tranquillitie. Promising after the said Charge and Letters to all people in generall. and notifying from their faid Lord, that (by Gods grace) there may bee throughout the whole Land of Moscoma, tranquillitie, peace, and securitie.

To conclude, they pray heartaly vnto the Lord God, to grant vnto his Maieslie in this busneffe begun, a prosperous and speedy end.

Thus have wee scene diffolute resolutions, or resolute diffolutenesse, men onely constant in inconstancy, resoluted wpon irresolution. As we often see sicke persons turning every way, and mountancy, resource por mountaincy, resource p the Ruffian fickneffe, they would and they would not, and yet would againe, and againe would not, they scarsly knew what or why; fluctuating in an inward storme of diversifyed hopes, feares, delires, diffracted affections, no lefle then in that out ward broile of State. For it was not long that they looked toward Poland, whether for breach of conditions of that part, or out of inueterate hate to the Pole, or their Na ionall icalousic and diffrust of Strangers, or a natural inconstancy; they fell off from that Prince : and their Chancellor (Father to the now raigning Emperour) employed there with others in Embaffage) were detayned thereupon prifoners. It is also reported that they made fecret overtures to His Maieftie of Great Britaine, and that Sir Iobu Merick and Sir Willam Ruffel were therein employed : but the firong consulfions and sharpe agues and agonies of that State could not, or would not endure the linguing of such 20 remote p lincke; the wheele of Things being whirled about before fuch a Treatie might admit a passage of Messengers to and fro. Once that Russian Head grew so heady and giddy, that Many-headed at laft it bred innumerable Heads, yea the whole Body became Heads in the worlt of tyrannies, a popular (gouernment shall I say ! or) confusion. Neither were Hydras heads (monftroully multiplying two for each cut off) like this: for besides so many wor's after the sirfe and second Demetrins (which might make up that comparison) each limbe, nay almost each haire of this Hydra (not the Nobles alone, but the baleft which had nothing but themselves, and were nothing but Numbers) became so many prodigious Heads; they also like Pharach leane time demonring the fat, and upon light pretences beheading themselves in cutting off the heads and nobler Persons amongs them.

When they had thus made away almost all the Grandes, and left the South parts to the spoile of the Poles, which once agains were drawing neere to Mosca to beliege it; the Poles allo fuffered some disaster, their Souldiers mutinying for want of pay, and banding themselues to returne into Poland, there inuaded the Mints and Custome-houses, and some governments, detayning them for their pay; sending also threatning Letters to divers Cities and Townes, forced divers Nobles and Plebeians to composition. The Turkes and Turkers brake likewise into Walachia, Moldania, and Polonia, fo that Zolkiewsky or Sulcosky the Generall was forced to goe against them, of whom he made so great a slaughter, that the Great Tarke committed the Pelate Embaffadour at Conftantinople to Ward, and threatned the Poles with invasion. Thefe mutinous Souldiers continued meane while that and the next yeere to spoile Poland, doing much 40 damage to the King and the Bishops, challenging many millions due, as they faid, for pay. Yea they passed further into Prussia, and made sporte in every place, on the eight of November 1612. passing with a great prey to Thorn, being parted into three Bands, the Sapians, the Shorouians, and Smolenskians. Another companie of them terrified Silesia. The Tartars likewise made impression and committed great spoile in Podolia.

Perarsip cho-

Thus an Armie divided could not conquer, nor lo etterly exterminate Ruffie as otherwise opdence permits portunity was offered : the Pole Souldiers being herem like angry Elephants which formetime recoyle vpon their owne troupes and doe more spoyle then the enemy could either have effected or expected. But whiles the Inuaders were thus inuaded, the Ruffer were forward to worke those executions on themselves, which their enemies could have wished to them; till at last awakened with the horrour of their owneeurls, some began to thinke of a better course. In the 50 Strange altera- North about the Dwina, a bold fellow, a Butcher, rayling at the Nobilities basenesse, and the orrange aircras. tion of affaires. Officers corruptions, faid, if they would choose a good Treasurer and pay Souldiers well, they by a Burcher. might have those which would fight and expell the Poles their Enemies : provided, that they would first choose a worthy Generall, for which place he recommended to them a poore maymed Gentleman, called Powarsky, who had done good feruice, but being neglected, now had retyred himselfe not farre off. The multitude approved the Butchers counsell, and chose Persistence and a Butcher ky for their Leader, and that Butcher for a Treasurer, delivering into his hands what money they had, which he so faithfully disburfed , Pozersky also discharging so well the trust reposed, that a great Army was gathered, and the fiege of Mufco thereby rayfed. And joyning with Knes Demetry Mastroukswich (a kind of Tartar which commanded an Army of Coffaks in fer- 60 uice of the Ruffe) they tell in confultation with Boris Liein, the third Great Souldier of that Countrey, vpon choice of an Emperour. Their mindes herein difagreeing (some naming one, some another) some named Mastronkswich himielse, other for further securitie against the Poles,

and to recompence the fufferings and imprisonment of the Russian Chancellor in Poland, named and to recompense the inferings and imprinoisment of the hading a good Councell appointed) they Micalimich is young Sonne Micalimich, under whose Empire (haung a good Councell appointed) they Son to the might huc happily. This was first approved by the Coffake, and then by the other Armies, the Chancellor But her allo was taken to become a Counfellor, and those three Leaders aforesaid were made choics, Militarie Commanders for the prefent Emperour against the Poles. Embaffadours also were sent to divers Princes to mediate betwitt them and the Fole, and betwitt them and the Sweden: and by his Majethe of Great Brittaine (w.iom God long preserve to reigne over vs) his countenance and intercession, there hath beene lome agreement, and the young Emperour hath settled Our Kings me his Dommions in peace, making at laft a truce for fourteene yeeres with the Poles, obtaying His Fathers 10 also in that Treate his Father the Chancellour his libertie and returne out of Poland, who fince returne and is confectated Patnarke of Russia.

His Embaffadour to the Emperour came to Line in December 1613, and thence was conneighen by the Emperours Officers to the Court, where hee had folemne audience, where after rich presents of Furres and his Letters, he delivered his speech, that Michael Phedorowich was langue. now by vnanimous confent advanced to the Russian Empire, and willing to entertayne and continue the ancient confederacie betwixt both Empires : defiring the Imperial Majeftie to dehort the Pole from his vinuit attempts, to deliver the Ruffe Captines, and not agains to infest the reco-

an Embaffadour to his Court, &c. This mediation Cafar promifed, and gaue the Embaffadour 20 liberall entertamment, and gentle dispatch.

Not long after in May 1614. the Ruffian Embaffadour had audience with the States of the Voiced Prouinces at Hages and before that in England. I was prelent both at his arrivall at Granefend, and his honourable entertaynment into London, and faw him also prefently after the running at Tile at White-hall, the foure and twencieth of March, admitted to his Maieflies presence, performing that Russian Rite of bowing with his face downe to or neere the ground, &c.

uered Mufco, but to enter into prace, and abstayine from Christian bloudshed. Likewise to fend

Anno 1615. The Turkish Embassador treated with the Cafarens Majestie about the mediation betwixt the Pole and the Mulcounte, who employed to that purpole Erafmu Heidel and the Baron of Dobs. The Pole no: withit and ing tent an Army in his Sonnes challenge (who was 30 fhortly to follow to Smolenshe) into Mufconia; Pontus Tellagard the Sweden Commander infefling allo the Ruffan at the same time. But the next yeere 1616. Sir John Merike Knight, negotiston, a nan of great experience in those Northerne parts, was employed his Majesties Embassadour to Sir Dadey Dies negotiate betwirt those two Great Princes, the Moscouite and the Sweden, the Articles of whose was also sent composition I obtayned by the mediation of Sir Thomas Smith (my ancient Benefactor in this Embassador in kind) and haue here communicated to thee, but in another Chapiter as being now past our Tra- a croublesome gicke Thunders: as also the following Russe-Change Newes, that you may see not only the face of time, when he Ruffig washed from her bloudy pollutions, but her hands further then euer extended (fortunate in fafetie paffe vp treaty of Commerce) as far as China : likewife the Rufe Patent to the Englift. Sweet is the name to Mojco for of Peace, and the thing it lelfe a Heaven vpon Earth. BLESSED ARE THE PEACEMA- the enemie, in

KERS (His Maiefties word elfe-where, here his deed) for they fhall be called (faid the only begot - the fift times ten Son) the Children of God; even the God of peace will make them his heires of Heaven, which (models of Deity) feeke to establish the peace of God vpon Earth, And let it not feeme tedious here to prefent thefe His Maj:fties Trauels, amongst our other Trauellers, but in a more glorious manner (I ker to God vomeneable which moueth all things) who hath not only been our Sunne, and with lightfome heate and influence filled our Brittifb Hemisphere, but hath dispersed his bright rayes of Light, and warmed with I weet quickning beames of heat, those remoter frozen Chimates of Sweden and Ruffia, (not to mention, or but to mention the quarrels of Demmarke and Sweden) and after their long froftie Night (fuch is the nature, fuch was the state of those States) to reduce the faire day-light of Peace, the warmth whereof hath thawed the Icie hardned hearts 50 of Enmity, and filled all things with tweets, and cheere of a returning Spring. Nulla falm bella, pacem te poscimus omnes.

Ordnance and Munitionto remaine.

10. And as for the Russ. Ordnance in these Castles which shall be given to our Lord Emperour, and great Dule & C. from the Kings Maiefte G. A. &c. which Ordnance Shallremaine there, Shall be ginen to bu Maiestres Officers, and what munition of Artillerie, as provision for Warres, and Bels, and other to bus natispies Opices, and non-time bash taken in the Land of Rulla out of those Casiles, before the 20 contract which the Kings Maiesties great Commissioners, and the great Lord King James &c, great Ambassadour Sir Ioon Metricke, Knight, did erect, as the twentieth of November, such Ordnance and proussions hall remaine to the Kings Maiesties wse, and Crowns of Sweden, wishout all contradiction

11. And because the late great Lord Emperour, and great Duke Vailly Eusnowich of all Russia. Sam, did give and construct by writing, two observings, sumply, late Lord, King Charles the minth of The court of Veter Coeffin Safe c. and to the Crowne of Sweden the Castle Corela, and the Promine thereof, for that faithfull and and the Terri. good willing aide which was done unto him, against the Polith people: in like manner doth confirme, torus, consis and establish the same by this contract of our great Lord Emperour, and great Duke M.F. &c. the same med to Swedin yielding and donation of the great Lord Zare, and great Dake Vailly Euanowich, &c. for himselfe, 30 present the surface of the surface of the surface of all Rulia, and for the whole Empire of all Rulia, that the faul Callenge, Corolla, with all profest, renewest, and rents, by Lond and by Water, according to their former assuctent, and now being borderers, nothing exempted in all, accorof Paters according to the proper former and paters and paters and the paters and paters and paters and paters and another in factor in food and better in food and paters after it shall remaine to their Kings Massesses, GaA.of S.co.c. and to but Massister Saccossors, and bereafter following Kings of Sweden, and the Crown of Sweden, without all casillation or contradiction for enertasting times. 12. And that bereafter there be no more difficulty or variance concerning the borderers of the Land,

Commissioners or both fides to meeta

it is concluded and agreed upon that in this yeare 7 125, upon the first of lane, our great Lord Emperour, and great Duke M.F. Go. and their high, mighty King G. A.Go. shall send on both sides, speciall good Courtiers, and Notaries, to meete between Louiga and Orcieke, at the mouth of the River Laus, whence is doth fall into the Lake of Lodiga, so that they shall meete upon the said River, on the midst of the Bridge, which of both sides their people shall make upon that Risser, and when there the one shall have showed the other their ample Commissions, and shall appeare that they are worthy to measure out the bordersthereby, betweene the Emperours Maiestie, and the Kings Maiesties Lands: so that from the borders of Nouograd, Lodiga and Odow, with their Provinces, and also from Somerskey, Voloit, be douided from the anucient and former precinits, and borders of Orelecke, Copora, Yam and Euritogorod, in suff manner as it ought to be, at the Jame time next enfaing the first day of tune, then the faid Courtiers and Notaries, through presence in the faid manner on both sides, shall meete tagether open the borders of Nouogrod, betweene the Pronince of Olimets and Corela at Salomensky Towne, by the Lake of Lodigi,; which Constiers also hall view the same Pronunces according to the former borders, and as the former are express, bow they have bin, and confirme the same, and if they so chance, that they cannot bappen upon the former austient borders, then fall they, by suft inquificion, make new borders and Land-markes, in such manner, that bereafter there be no further controversie concerning those borders, and those Courtiers or Gentlemen shall not part asunder of neither side, till they have sufficiently and friendly ended that bufineffe in all manner, and what those Courtiers shall finish and effect in this manner. the same according as befitteth there shall expresse by writing upon parchisent on both sides, and confirme the fame by their subscription, Seales, killing of the Croffe, and oath interchangeable : and as concerning the deviding of borders, and the Gentlemen shall doe it; as namely of Novogrod, Lodigs, Odo, Somer key Vololt, of one part, and also betweene Orefeke, Copora, Yam, and Euanogorod, on the other fide, and also betweene the borders of Nouogrod and Corela, that be fet downe and written, the 50 fame had be wremonerable and fall for enertlafting times, by our great Lord Emperour, and creat Disc Michall Fedorowich of all Russiacoc, and the Kongs Maufile Gultanus Adolphus, See, and the successioners, and bereafter being an both fides, for enertasting times, according to this contract of an ener-

lasting peace: and for more firme confirmation of the same, that is shall be held and kept; it shall be deelared further in the Letters of contract, which hall be bereafter ginen betweene both Princes, from the Emperours Minisfie, by kissing the Crosse, and confirmation of bu said Letters by his great Scale, and by the Kings Maiesties oath upon the bely Enangelists.

13. As alfo the former, of bleffed and most famous memory, great Lord Emperour, and great Duke Fedor Euanowich of all Ruilia, Sam. our great Lord Emperour, and great Duke Michail Fedorowich, of all Russia, Sam, &c. Vnchle m conclusion of peace made at Tavim, in the yeare 7103. did reelde and gine oner all bu pretention and claime to the Country of Leifland, at alfo the great Lord Emprover, and great Dake Vasily Euanowich, of all Russia, Sam. in a conclusion of peace made at Emprover, and great Dake Vasily Euanowich, of all Russia, Sam. in a conclusion of peace made at The title of Wyburgh, in the peace 7117, did renounce the same; for a work burnel of the title of the same of the same of the title of the same of the same of the title of the same of

great Lord Emperour, and great Duke M.F. &c. and bis successours, and bereafter being Emperours Leistandresivand great Duker, shall at no time for ever challenge unto themselves any right, or pretance to the Counticoby V. E at trey of Leifland; neither fhall our great Lord Emperour and great Duke Mi.F. of all Rutha, Sam. morbie Willers, And rey of Leinand; sensor you war great Low Lungerme was team Long rule of ma Commentation of morely marks, thus facelflours, great Lords, Emperours, and great Dukes of all Rollin hereafter white vales their great found, 7197, how can Kang Galtunas Adolphus, now has facesflows bereafter, being Kangs of Sweeden, nor to the Greanse of timed, Sweeden, with the title of Leitand, or those Cattles which the Emperours Maisfite hash now renown. ced to the Kings Maiestie for eurs, neither by Lessers of confirmation to write themselvines, or name eltern-selves in them, nor juster his O granodes, Servants and Commenders, to write themselves with the sitle of Leifland, or the Townes aforefaid, neither in writing non speeches, to name themselmes. As also our

great Lord Emperour, and great Dite M. F. of all Ruffia, Sam. bis successioner, and bereafter being great Lord Emperour, and great Duke of all Rusha, in their writings and speeches ; Shall give to their Kings Maiefie, and bereafter being Kings of Sweden, their accustomed title of Leifland, and Corella. Item, on both fides, the great Commissioners have agreed, fince at this Treatie we could not accord upon the full title of both the great Posentates , As to instile the Emperoure Muiefie, and of many other Dominions, Lord and Conquerour, and the Kings Maiefile, with the title of Ingermanland, woo bane of both fides great Commissioners, referred the same to both great Potentates liking therein; and if that either Potentate will be pleafed to write the other with the full title, at to the Emperours Maiestre, the Title to be Kings Maiefite doth write the full title with the word Conquerour; and that the Emperours Maiefite allo dos write to the Kings Maiestie bu full title with Ingermanland, then both the Potentages are to Cend those tules by their Ambassadours, and nominate the same full title in one of their Letters of confir-

mation, and the other, Letter to be written according to this our prefent agreement : and if in both the Letters, the titles be written to the full at the Emperours Maiester sull title, with Conquerous; and the Kings Maieste with Ingermanland, then both sides Ambassadours shall shem one the other the said Letters, and basing shewen them, shall goe to each Prince with the same; if then on either side the Potentate shall not like thereof, and shall send the said Letters of construction with the short title, according to this our present agreement : the Ambassadours of both sides shall in like manner make knowne the same one to the other, and fo proceede therewith to both Potentates.

14. Alfoit is agreed and concluded, that there fall be free commerce of Trade betweene both the great Kingdomes, the Empire of Russia, and the Kingdome of Sweehen, and both Kingdomes Subietts: to that all the subjects of our great Lord Emperour, and great Duke Michael Fedorowich, of all Ruisia, Trade.

Sam, Merchants of the Dominions of Ruisia, from Nouogrod, Plesco, and other Cities and Townes, paying their due custome, shall have free liberty without let to trafficke at Stockholme, Wibritgh, Reuell, Narue, and other Townes in the Countries of Swethland, Fynland, and Leifland, and they that dwell and plant themselves at Iuangrod, Yam, Copora, Nettingburgh, and Coreilla, what Nation focuer, either Ruffe or other people, (hall have free liberty without let to traffiche, and to trade, paying sheir due custome, in the right Custome houses, at Moico, Nouogrod, Plesco, Lodiga, and other Townes of Russia, with the Emperours Maiesties subjects, and also have libertie to travell through the Dominions of our great Lord Emperor, and great Duke M.F. &c. for their trade of Merchandize within the

13. And by reason heretofore our great Lord Emperour and great Duke Michall Phedorowich, of 50 all Russia & c. his Maiefires subjects Merchants, had their free bouse of merchandize at Revell, also now by contract of Taulin and Wiburgh, it is concluded they flowed have a good place for a house, and Merchants of pointed them in Reuell, as also in other the Kings Maiesties Townes, as at Stockholme, and Wyburgh, to house house house house they have house the state of the sta they shall have house and Dimme Service, according to their Religion, in the faid bonses, without let or and Churches binderance, but at Revell in their Church, as formerly they have done; yet to fet up no Church, accor- in each others ding to their Religion. And as heretofore their Kings Masesties bis Subjects, base had a free house of Countries trade at Nouogrod, now also according to the contract of Taulina, and Wyburgh, they are to have a goodplace for aboute, prepared thom at Nouogood, and the Emperours Maesses other Cities, at Molco and Plesco, bonds for the said people, and of their Dinine Service according to their Religion, in the bonds; that a build no Charches for that up of any where.

For breutie, I have omitted the following Articles to the 29 the lubstance whereof is as followeth. The 16. determineth what debts shall be recourable. The 17. Free passage of Subjects thorow each others Territories. 18. Freedome of Prisoners, on both fides, 19. Liberty of Inhabitants to flay in the places furrendred. 20. Fugitiues to be redeliuered. 21. Borderers

tobe reitrained from robberies. 22. For ending of quarrels, if any happen. 23. 24. Confirtobe relitatines from routeres. 22. For enough quantity in suppers, 23. 24. Contraction of former contracts, of Taspha and Wibange. 25. No printe or publisk practice to be made against each other, 26. Shewing of Letters of confirmation at the meeting of Ambassia. dours of both fides. 27. Honorable convoy for Ambaffadours on either part. 28. And allo for

29. Item, It is agreed and concluded, that if by the permission and pleasure of God, there bappen an New Ambilla- Alteration of government in Severien or Rullia, then that Prince which hall newly come to bis govern-New Ambulla-dors in case of ment first, shall reneale by bis Ambasadur to the other Prince from himselfe, and after that the other new necessors. Shall visit bim by his Ambassadour.

load vije time by his Ambaij adonr.
30. Item, if it so fall suc as any time; thus of both sides the Princes, as one great Lord, Ge. G their great I alord King Guitavus. Adolphus shall find one to the other their great, Ambailladonrs, to confer of good masters then those faid great Ambassadour's pon the borders ball meet without all controverse or first, Place of Am-either hatmeene Odow and Eusingotod for hetweine Lodiga and Oreleke, where they shall blinke mill Pieces am enter converse Union ma cum grant process the distribution of the best process and process a good matter in friends and louing fore orther by the Princes Commission or other commandement, as

31. Item, If it happen that the Emperours Mainsties Subjetts and Merchants, their Boates, Lodies, and Merchants Dessets shall go to Rewell, Wybourgh, or other Townes and Cassies of Swetnen, Fynland or Liefland, or forps and other Coffels, whereupon the Emperours Maiestics Ambassadours Fyiland or Lienand, wryong non over System, more topic to the Pop, into England, or any other King, 20

Relation of two Ruffe tra-

Sirgos.

Three Leo-

pards, &c. for

Anno 7128, the three and twentieth of September in the Emperours Dominions at Solding, a Caracter of Siberia, called English Priviles, did report, beeing examined of his Trauels. The last yeere past 7127. hee said that the Boiaren and Voyanod Knez Enan Simonowich Koorockin, For him from the Lattie or 1 mm, months are the Kingdomes of Cater. They went from the Lattie or Tomo, about the kingdomes of Cater. They went from the Lattie or Tomo, about the kingdomes of Cater. They went from the Lattie of Tomo, about the kingdomes of Cater. They went from the Lattie of Tomo, about the kingdomes of Cater. They went from the Lattie of the Market of the Marke fent him from the Castle of Tomo, and ha follows Andre De, to conduct the Kings Alunes Ana them thence: so they passed through his kind into wellers or the Control of Steremongal, where raisened a Queen called Manageria, who caused to have promision and post gueen them. In this great a Queen called Manageria, who caused to have promise into the Pointhing of Control of the Control very few at once. Thus their whole trailed from Tomo Caffle to this gate, was twelte weeken befides forme dayes that they flood fell, and from the gate to the great Empire of Catal tenne 90 daves, and came to the Citie or Caffle of Cats about the beginning of September, and were lodged in the great Embaffadors houfe and having beene there in Caray Foure dayes, there vied Relations in to come vnto them a Secretary with two hundred men upon Affes very well apparelled, and did entertayne and feaft them with Sacke and other Drinkes made of Grapes, and told them that the Emperour, or King Tambur had fent him to aske them wherefore they were come into the Dominions of Catay. Whereupon they answered that our great Lord and Emperour had fent them to discouer the Dominions of Catay, and see the King thereof; but hee answered them againe, that without prefents they could not lee the King, and withalf gaile them a Letter, which Letter they brought with them to Talboike, and from thence is fent to the Emperours Maiestie by them. Out of Catay they went about the twelfth of October, and came to the Castle 60 at Taboleke about Whitfontyde the fame yeere 1619. Lungar militarys

A Description of the Empires of Catay and Labin , and other Dominions aswell inhabited, as places of Pasture \* called Vlusses and Hords, and of the great River Ob , And other Riners and Land passages.

lings or flec-Rom Kngs to the River Bakanna is fixe dayes travell, and from Bakanna to Kinebike, is nine with their tings, rather I'dayes trauell, from Kinchike to the great Lake, (in which Lake Rubies or Saphires grow) beafts. is three dayes trauell, and the compaffe of that Lake is twelve dayes travell on horsebacke, There Their Journal, To fallethalfo into the faid Lake foure Rivers, to wit from the East, South, Welf and North, yet the or daily jourwater doth not increase in the Lake, nor decrease. There falleth yet another River into the faid place to place Lake, which commeth from betweene the East and the North, and is called Kitta, vpon which Huge Lake, we went fifteen dayes to the head of it, where we found the King Alime in progreffe; the way is very stony. And from the King Aline to an Pluffes fine dayes travell; the Pluffes is called King Aline. Algunas, and the Duke in it is called Tormofhine; from him to another Ulaffer five dayes, the V. Miller, or Tar. luffer is called Chikursha, and the Duke in it is called Carakula; from thence to an Viuses five dayes called Sulduffa, wherein is a King called Chaksara, from him to an Vinfes called Refue, five dayes, the Dukes name is Chichin; from him to an Vluffes called Iglethin, fine dayes, the Duke is . . .... Talebils Cherekta, from him to an Vluffes called Beskuta, five dayes, the Duke is called Cherkar,

him to an Vinfes called If the five dayes, the Duke of it is called Checken. From him to at Vinfes called Tulent Vnient foure dayes, the Duke is called Tayku, Katim. From him to the Vluffes Togerfin three dayes, there is a King called Bakfouta. From thence to an Viuffes of the yellow Man. Yellow Mugali, galls called Mugolehin, wherein is a Dutcheff- called Manchika, with her Sonne Ouchai Taichie, it is within two dayes journey of the Land of Mugalla, a very dangerous passage through Mugalla, or the cliffes of the Rockes, which being pait they came into the Land of Mugalla, wherein are Ta tavia Orien. two Caftles or Cities built of stone, they are called with them Balbins, in one of them is a Duke talk ipm Balbins. called Talay Taifben; and in the other the Duke is called Egiden Taifben; there is also a third Citie in it called Lobin, wherein doth gouerne a woman called Dutcheffe Manchika with ber Sonne, 30 the faid Dutcheffe doth command all the Cities of Mugalla, and her command extendeth into Catay. If any man be to travell over the borders, and into Catay, he must have a Passe vader her

Seale: which if they have not , they may not palle through Catay. The Land of Magalleis great and large from Bugbar to the Sea; all the Cattles are built with flone foure fquare; at the corners, Towers, the ground or foundation is layd of rough, grey frome, and are covered with Their built les, the gates with counterwards as our Raffe gates are, and vpon the gates alarum Bels or dings W. ceh-bels of twentie poode weight of metall, the Towers are covered with glazed Tiles ; the houses are built with stone foure cornerd high, within their Courts they have low Yaults, also of stone, the feelings whereof, and of their houses are cunningly painted with all forts of colours, and very well fet forth with flowres for flew. In the faid Countrey of Mugalla are two 40 Churches of Friers, or Lobaes, built of iquare flone, and fland betweene the Baft and the South

wpon the tops of them are made beafts of stone, and within the Church just against the doore are fet three great Idels or Images, in the forme of women of two and an halfe fathorne long, Friers. gilt all ouer from the heads to the feet, and fit a fathome high from the ground whom beafts made of ftone, which beafts are painted with all manner of braue colours. Those kook have each in their hand a Veffell, and there burne before them three tallow Candles, on the right fide of them Candles are erected eight Idols more in the forme of men, and on the left fide eight Idols more in the forme of men, and on the left fide eight Idols more in the forme of Maydens, gilt all ouer from the head to the foote, their armes fireadhed care after the manner as the Mugall people, or Religious men vie to pray. And alittle way from their Idols fland two Idols more made naked as a man is in all parts, not to be differned, even as abough he 50 were aliue, having before them Candles burning, as small as a straw, and hume without a stame Candlebur-

only in an Ember or Coralf. Their fernice or finging in these Churches is thus, They have two Trumpets of a greatile mith, flame. about two fathomes and an halfe long, and when they found on their Trumpets, anabeate up. good on Drummes, the people fall downe vpon their knees and clap their hands againe, cathing their armes alunder, they fall to the ground and lye fo halfe an houre. They Churches are concred with glazed Tiles. As for bread in the Land of Mugalla there growe hall manufered (grinne, as Profie, or Roffe Rice, Wheate, Oates, Barley, and all forts of other Grains of abbulbancy and their Wheate bread is as white as Snow. As for Fruit in Magale they happet all britis oderhol. Come. their where the same of the property of the same of th the Capes of their Garments both of the men and women long downers when the characteristics. They arrive diffill Aquinitie out of all forts of Graine, without Hops. As for Pessions Stores and Gold

they have none, but for Sluer they have great flore out of Casay. Their Boots they weare of their Diffilled wine

20 from him to an Vinfer called Girne, foure daies without water, the Duke is called Checkenge, From

owne fashion, They have no Horses, only Mules & Asses in abundance; they till and plough their ground with great and small Ploughes, as we doe in Siberia at Tebolske. Their Castaffs are in our Language Patriarkes, and both in Mugalla and Catay are but two Cuttuffs; the one was about Cutuffs, or Patwentie, and the other thirtie yeeres of age. Within the Churches are made for them high places with feats whereupon they fit : the King doth honour them with bowing downe before Lobas or Friers them. Their Lobas are in our Language Friers, which are shorne about twentie yeeres of age, Continually energy day, and shaue both Beards and Mustachoes: their Garments are of Damaske of all sorts and colours, and their Hoods yellow, they say that their Religion and ours are all one, only the Roffe Monkes are

Beyond the Land of Magalla are three other Countreyes or Dominions, Aretching towards Three King. Buebar, the one called Orsm, the Kings name there is Enaker, the Citie is offtone, and the Kingdomes. Ortus.

The other is called Dominions of Talguth, the Kings name is Sanelanche, his Cities are also of Talguth. stone, and his Kingdome rich.

The third Countrey where the chiefe Citie is, is called Shar, and the King thereof is called Zellezmey, or Iron King, his Kingdome is rich, and not farre from Bugbar. From this Iron King come Diamonds, and all these three Kingdomes are under the South, and on the other side of the Blacke Mugall, blacke Mugalls are the yellow Mugalls, stretching all alongst the Sea, aswel Townes as walking people, with their Families and Herds.

From the Countrey of Mugalla, where the Dutcheffe Manchika dwelleth, to the Citie of Easts.
Walisof Cates. Shrokelye in [ dass, is two dayes travell on horsebacke: and the bordering or frontier wals stand
Walisof Cates. Shrokelye in [ dass, is two dayes travell on horsebacke: and the bordering or frontier wals stand under the South towards Bughar, two moneths travell, all made of Bricke of fifteene fathome high, whereupon they told about a hundred Towres in fight, on both fides of them, but towards Bughar, and towards the Sea, the Towres are not to bee numbered, and every Towre standeth from another about a flight fhot diffant. The faid well went the downe towards the Sea foure moneths travell. The people of Catay lay, that this wall itretcheth alongst from Bugbar to the Tower-becons Sea, and the Towres vpon it fland very thicke; it was made, as they fay, to be a border betweene

Mugalla and Caray. The Towres vpon it are to the end, that when any enemy appeareth, to kindle fires ypon them, to giue the people warning to come to their places where they are ap-30 pointed ypon the wall. At the entring without the wall dwell the blacke Mugali; and within is the Countrey and Cities of Catay. In the wall to Catay are fine gates, both low, and straight Cara Catas. or narrow, a man cannot ride into them vpright on horse-backe, and except these five gates But fine care there is no more in all the wall; there all manner of people paffe into the Citie of Sbrokalgae in the wall.

Within the borders or wall is a Citie or Caffle of Catay, called Shirokales, built of ftone, the Gouernour thereof is called Duke Shubin, who is fent thither for a time from Tambur King of Catay, the Caftle is very high walled and artificially built; the Towres are high after the manner of Moseo Castle, in the Loope-holes or Windowes are Ordnance planted, as also vpon the Gates or Towres; their Ordnance is but short, they have also great store of small shot, and the Watchmen euery-where vpon the Gates, Towres, and Wals, well appointed; and assoone as 46 they perceive the Sunne going downe, the Watch dischargeth their Peeces of Ordnance thrice, as also at the breake of day in the morning, they shoot out of their Pieces thrice, and doe not open the Castle Gates till the fixthoure of the day. Within the Castle are thops built of stone, and painted cumningly with divers colours, wherein they have all manner of Merchandizes, as Veluets, Damaskes, Dorogoes, Taffataes, Cloth of Gold, and Tiffue of diners colours, fundry forts of Sugars, Cloues, &c. in the Gouernours houle is a frong Watch of Partifers and Halberds, and their Drummes made like great Barrels. When the Governour goeth abroad, they carry a Cano-

pie ouer him, and make way before him with Rods, as before our Emperour in Melco. And from Shirotalga to the Citie Tora is three dayes travell:this Citie is large, built of flone, and the circuit of it is two dayes trauell, with many Towres, and foure Gates to come in at, the 50 Markets in the Citie are well and richly accommodated, with lewels, Merchandizes, Grocerie, or Spices, the Citie well inhabited having no place void or waste in it. The houses and shops are built with stone, with streets betweene; the Gouernours here are called Duke Byw and Duke Inchate, freere they have Post Stages as wee , their Markets have a very odoriferous smell

And from this Citie, to a Citie called Tayib, is three dayes journey, it is built of Rone, large, and high walled, & is in compaffe two daies travel about, at the first comming to it are five gates barred and botted with Iron, very thicke and close, fastned with Nailes; the houses and shops, or Ware-houses are all built of stone, wherein are all manner of Merchandizes, Spices, or Grocerie, and precious things more abundant then in the aforefaid Cities, they have Tauernes or Drine 60 king bould-iflored with all manner of Drinkes, as Aquania, Meade, and Wines from beyond Seas in abundance, there they have also their Watch, Ordnance, and Munition in great store; the Governouses of this place are one Duke Tuga, and the other Duke Zumia, there wee faw Sinamon, Annifeeds, Apples, Arbuzes, Melons, Cucumbers, Onions, Garlicke, Radilli, Carrets,

Parlenips, Turnops, Cabbage, Limons, Poppifeeds, Nutmegs, Rice, Almonds, Pepper, Rubarbe, & many other Fruits, which we know not so that they want nothing whatsoener groweth in the World; the shops are within the Citie, stored of all manner of Commoditie as 18 faid, as also vi-Equalling and drinking Houses, stored with all manner of Drinkes, where they have also Dicers and Whores, as with vs. Their Prifons in the Citie are of stone, for theft they hang the theeuts, and for Robberie or Murther they stake the Murtherers, or elfe head them.

And from Shirokales to a Citie of Catay, called Shirooan is a dayes journey : this Citie is built Shirooan of stone high walled, and large in compasse, it is a dayes trauell, it hath twelue Towres; whereupon, as also on the Citie Gates is planted Ordnance and small shot great store, with a continu-10 all Watch or Guard, night and day at the first comming are fine Gates well surnished with Ordnance and Warlike Munition; and from one Gate to the other through the Citie is halfe a daves going. The Gouernour of this place is called Duke Sanchit. For Victuals and Merchandizes,

here is more then in the Cities mentioned, all their shops very full, and the Citie so populous, that one can hardly passe the streets for the throng of people. The Ambassadors Houses are also faire built of stone, their Wels couered with Braffe, so that this Citie is adorned more with precious things then the former mentioned, and much more populous.

Now from the Citie of Tayeh, to a Citie called White Cattle, is two dayes trauell: this Citie is built of white stone, and thereof hath his name, it is high walled and large, being in compasse or circuit three dayes trauell, athe first entry it hath three Gates under one Towre, the Gates are high and wide with strong fron barres: and the Gates fastened with Iron Nayles whited with Tinne, it hath great Ordnance in the Gates and Towres: some Peeces carrying shot of two Poole waight, the shops within the Citie reach from Gate to Gate, and betweene them are ffreets paued with stone, all their shops and houses are built of stone before their shops. They haue grates painted cunningly, with all manner of colours, flowres and fuch like, and vpon the shops are the houles painted cunningly with Pictures and flowres in divers colours, and the painting within is voon Pastboord adorned with Damaske and Veluets; heere is more abundance of Riches and Commodities then in any of the Cities afore mentioned. The Gouernours names

From this white Citie, or Caffle, to the greatest Citie of all Cataya, called Catay, is two dayes iourney, where the King himselfe dwellerh, it is a very great Citie, built of white stone foure Citie of Catas. 30 fquare, and in compafie it is foure dayes lourney, vpon every corner thereof are very great M'Calay be the Towers high built, and white, and along it the wall are very faire and high Towers, likewife fame with chiwhite and intermingled with Blue or Azure, vpon the Gates, Wall, and Towres, the Loop-holes na(as before in or Windowes are well furnished with Ordnance, and a strong Watch. In the midth of this white Gers and the Citie standeth a Castle built of Magnet, or Load-stone, wherin the King himselfe dwelleth, called ferued) many Tambur; this Castle standeth so in the midst of this Cirie, that every way you have halfe a dayes difficulties a. going to it from the Gates, through the ffreets which hath from thoppes on both fides with all rife, But this manner of Merchandizes; vpon their shops they have their houses built of stone, cunningly pain- Russian Relatited more then the former Cities. The Caffle of Magnet is curiously tet forth with all manner of Cheet Memes

here were Duke Toynan, and Duke Sulan.

40 artificiall and precious deuices, in the middeft whereof standeth the Kings Palace, the top where- feeme to agree of is all gilt ouer with Gold. And they would not admit vs to come before their King without to place some Prefents, faying, it was not the manner of Catay, to come before their King without fome Catas, North Present, and though (said they) your white Emperour had but sent with his first Ambastadours to our King some thing of no great value, our King would have sent him many speake of the precious things, and dissified you his Ambassadours honourably, and haue fent his Am-wall The Tar-bassadours with you: but now hee only endeth his Letter to your Emperour. The Citie to names so of Catay, where the King dwelleth, is built upon an euen plaine ground, and is incompaffed round about with a River called Tonga, which falleth into the blacke Sea, which is from Prinzglis that the Citie Catay feuen dayes trauell, to that there come no thips neerer the Citie Catay, then fe- it is hard to re-50 uen dayes trauell off, but all things are transported in small Vessels and ship-boats. The Mer-concile them-

chandizes the Kine doth fend into all parts of his Dominions of Cates, and from thence are car- And the letuits ried ouer the borders, into the Land of Magalla, to the King Alime, to the black Kollmaker, make foure moneits to the Iron King, into Bagbar and other Dominions, their Patriarkes and Friers, trauell with the well from the Commodities, as Veluets, Sattens, Damaskes, Silver, Leopard Skinnes, Turkeffes, and blacke wall to Peque, Zenders, for which they buy Horfes, and bring them into Catay, for in Catay are but few hor- which is here fes, only Mules and Affes, and Cloth they have none, their Horfes and Silver goeth into ftrange but a few Gountreyes, or as they say, Nems sy, the Silver is made in Brickes, which they call Kriss, wa- we say the side. lued each Kriefy at firtie two Rubles, their Apparell they weare with long broad hanging fleeues, fer entred the like the Gentlewomens Summer-coats or Letimes in Ruffia, the people are very faire but not wallarthe warlike, timorous & most their endenour is in great and rich traffick, They cold vs that not long North East 60 before our comming, the people of Magalla had taken two Castles from them by deceit, also part of it.

thornesse of their journey admits not. Perhaps this chiefe Citie was but the chiefe of that Prouince where the Vice-roy resided, and they were willing to make the most of their tranells Ruffice fide Yerthe necrenctic of the Sea, there also cause th scruple. I sup-pose rather that these Ruffer entred China but a little way, and received the Vice-royes Letter only (there observed with Regall Rites) and had much by Relation, of that little which they tell. How ener I have here offered this to thy view at more legiste to vie thy more indgement, Vuu 2

can write; and afture thy felfe the mouth of Ob is deepe. On the Ruffe fide of Ob foiourne Samoeds, colled Ugarskai & Sibierskie, Samoeds; and on the other fide dwel another kinde of Samoeds. called Monganet, or Mongafeisky, Samoods. We must passe by five Castles that fland on the River Vetribit and of Ob. The name of the nrit is Tefuer Gorodok, which standeth vpon the mouth of the River Padon. The fecond small Castle is Noforo-gorodock, and it standeth hard upon the side of Ob. The third is called Necheiour-geskey. The fourth is Charedmada, The fit is Nadefreda, that is to fay. The Caftle of comfors, or traft; and it standeth vpon the River Ob, lowermost of all the former Caftles toward the Sea.

Heretofore your people haue bin at the faid River of Obs mouth with a Ship, and there was Ashipwracke Io made shipwracke, and your people were slaipe by the Samerds, which though that they came the mouth torob and subdue them. The Treesthat grow by the River are Firres, and a kinde of white, for and light Firre, which we call Tell. The bankes on both fides are very high, and the water not fwift, but fall and deeps. Fift there are in it as Sturgeons, and Cheri, and Pidle, and Nelma, a dain-Ty fill like white Salmons, and Moucoun, and Sign, and Scerlidi: but Salmons there are none, An Illand neets
Not first distant from the maine at the mouth of Ob, there is an Illand, whereon refort many the mouth of wilde beafts, 25 white Betres, and the Murfes, and fuch like. And the Samed tell vs, that in the Ob. winter feafon, they oftentimes finde thete Morfer teeth. If you would have ve travell to feeke winter featon, they of text interest more there except extent 1 you and Nova Zembla, and by the but the motif of 0 by 5 ea, we must go by the filtes of Vegats, and Nova Zembla, and by the Land of Maphieme; that is, by Matthews Land. And affaire thy feller that from Vegats, to the Matthews

20 mouth of De, by Sea, is but a finall matter to fiyle. Written at Pechera, the yeare 7092. the Matthews land twenty one of February.

> Master M A K S M also learned these distances of places and Ports, from Cattinos so Ob by Sea.

Rom Corners to the Bay of Medemske (which is fornewhat to the East of the River Perbota) cannot, if seven dayes sayling. The Bay of Medemsky is over a day and a halfe sayling. From Me-30 demote Samuel to Courses, is fixe dayes faying. From Courte Bay to the fartheft fide of the Medomite. River Ob, is nine dayer fayling. The Bay of Carete is from fide to fide, a day and a nights Caratea,

He learned another way by None Zembla and Manhofeban Tar to Ob, more North-eastward. Brom Canines to the Hand of Colgoiene, is a day & a nights fayling From Colgoiene to Nena Zem. Canines. ble are two dayes fayling. There is a great Ofers or Lake voon None Zemble, where wonderfull Coign ftore of Geefe and Swannes doe breede, and in moulting time caft their feathers, which is about Saint Porereday : and the Rufes of Columpro repaire thither yearely, and our English men venter thither with them fenerall shares in money ethey bring home great quantitie of Doune-Feathers, dried Swammes, and Geele, Beares skinnes, and Fish, Sec. From Naromske Reca or River Naromste.

40 to Matinifhan Tar, is fixe dayes fayling. From Matinfebun Tar to the Peronologis Templa, that Matinichan Tal is to fay, To the warme passage ouer-land, compassing or sayling round about the Sands, is thirtrene dayes fayling : And there is voon the Sands at a full Sea, leven fathomes water, and two The Sands. fathomes at a low water. The occasion of this highing of the water, is the falling into the Sea fathomes at a low water. The content of the two Seas, to wit, The North Sea, and The East Sea, that is, the which make both high water and great Sands. And you must beware that you come not with Northandibe your Shippe neere vnto the Hand by the River Ob. From Mattufeban Tar to this Hand, is five Eaft Sea, dayes fayling. Mattuban Tar is in some parts fortie Versts ouer, and in some parts not pattix The bignes of

The aforesaid Anthonie Marsh sent one Bodan his man, a Ruffe borne, with the aforesaid foure Ruffer, and a yong youth, a Samoed, which was hkewife his Seruant, whom the discovery of the Anthonie Marie River of Ob, by Land, through the Countrie of the Sameeds, with good store of commodities to fenerwo of his trafficke with the people. And these his Seruants made a rich Voyage of it, and had bartered men voon the with the people about the River of Ob, for the valew of a thouland rubles in lables, and other discourse of Ob with the people about the Kauer or Os, for the valew of a recultant motes in lanes, and other by land with fine Furres. But the Emperour hauing intelligence of this Discourry, and of the way that Bo four Ruffer. des returned home by, by one of his chiefe Officers lay in waite for him, apprehended him, and Bedan Mafter cooke from him the aforefaid thousand Markes worth of Sables, and other Merchandifes, and de- Mark his man linered them into the Emperours Treafurit, being fealed up, and brought the poorefellow Boden brought to on the Citie of Mofor, where he was committed to prifon, and whipped, and there detained a Mofor. long while after, but in the end releafed. Moreouer, the Emperours Officers asked Anthonie

so Marth, how he durft prefume to deale in any fuch enterprise ! To whom he answered, that by the priviledges granted to the English Nation, no part of the Emperours Dominions were ex- Ruffien icalouempted from the English to trade and trafficke in : with which answere, they were not fo fatis- fie of discounty fied, but that they gave him a great checke, and forfeited all the aforefaid thousand Markes worth of goods, charging him not to proceeds any further in that action: whereby it fremeth

they are very lealous that any Christian should grow acquainted with their Neighbours that border to the North-east of their Dominions, for that there is some great sectet that way, which they would referue to themselves onely. Thus much I vaderstood by Master Christopher Holmes.

Third Volume Raneis Gaulle that paffed the Ocean betweene lapan and Nona Hillania, in the Latitude of of Englifevoy- 1 37. degrees and a halfe, writeth thus. Prouing a great Sea to come from the North-east parts ages, pag 446. ot Tartarie; running thus East and East and by North about three hundred leagues from Japan, we found a very hollow water, with the streame running out of the North and North-west, with full and very broad Sea, without any trouble or hinderance in the way that we past. And what winde foeuer blue, the Sea continued all in one fore with the fame hollow water and threame, vn- 30 till we had passed seven hundred leagues. About two hundred leagues from the Coast of New Spaine we began to lofe the faid hollow Sea, whereby I perswade my selfe that there you shall finde a Channell or strait passage betweene the firme Land of New Spame and the Countrie of Asia and Tartaria. We found all this way Whales, Tunnies, Bonicos, which are fishes that ke. pe in Channels, Straits, and running Waters, there to difperfe their feede, which further confirmeth me in that opinion.

But feeing thus we are lopped from Rulla, and base againe taken Soufe has which bee permitted not to See piern Burrough, Pet and lackman, nor others, English and Durch, which have attempted that North east paffage; and that which Mafter Batho faid to me, that if he might have imployment, he would adventure to discover from the Coast of China and Iapan on the Worth of Alia buberward; all 40 thus shall be suddenly permiosus to our froster and unstayable thoughts, to set us in a new discassery by Danish and English assistance for a North-west passage Jo ofrew, not so fortunately assimpted, as by Rea-son it seemeth probable and almost certains, especially that way where Sir Th. Bueton and Nelson left. But we will discouer these Descoueries more methodically and bistorically to you, that you may see the English ancient right, at I may fay, to those parts of the new World.

#### O CHAP. XIII.

Discoueries made by English-men to the North-west : Voyages of Sir SEBAS- 50 TIAN CABOT, Mafter THORNE, and other Aucients: and of Master WEYMOVTH.

Voyages. The defire of Riches in fome, of Knowledge in others, hath long wheter ted mens industries, to finde out a more commended. a shorter cut then the vsuall passage, which in going to the places of principall

Trade there, and the returning thence by enforced compassings, is made no lefte a Voyage for time, cost, danger and labour, then the immediate compating of the whole Globe, 60 as in Master Candafter circumnauigation (not to mention others) is suident. But if either by the North-eaft, or North-west, or North, a passage be open, the sight of the Globe (the Image of the fite of the World) easily sheweth with how much ease, in how little time and expense the same might be effected, the large Lines or Meridians under the Line contayning fixe hundred miles,

contracting themselves proportionably as they grow neerer the Pole, where that wast Line and Circumference it selfe becomes (as the whole Earth to Heauen, and all earthly things to heauenly) no Line any more, but a Point, but Nothing, but Vanitie. Hence fuch laborious fearches from Columbus his first discourse (that also occasioned by a concert of finding the East by the West, whereupon he named Hispaniola Ophir, thinking he had then arrived at the East Indies) especially the English, seated commodiously for that discouerie, and to reigne ouer the Northerne and Westerne Ocean, haue herein beene more then industrious.

Doctor Powell in his historie of Wales faith, that Madoe foune of Owen Guyneth left the Land in contention betwirt his brethren, and prepared certaine ship; with men and munition, and sought ad-10 mentures by Sea, fayling West, and leaving the Coast of Ireland fo farre North, that hee came unto a Land whomme, where he faw many frange things. There hee left many of his people As. 1170. and returned for more of his owne Nation and Friends to inhabite that large Countrie, going the fecond time thither with ten failes. This westerne Land is like to be some part of the West In- Some thinks des, though the volueriall fauagenes of those parts make it questionable where. But he which seeth that the Mexic how fome of our Englis in small time have growne wilde in Ireland, and become in language and least limit they apply to a small the small time have growne wilde in Ireland, and become in language and least limit they apply the small the small through through the s and found) will not wonder that in fo many Ages the halfe civilized Wells, amongst Barbarians, gets) were without fuccession of Priests and entercourse of these parts, might wholly put on fertile. Meredith bence derived, 20 ap Rife a Welfh Poet, which lived before Columbia had begun his discoverie, hath these verses.

> Madoc wyf, myedic wedd, Iawn Genau, Owyn Guynedd No finness dir, fy enaid oedd Na da Mawr, and y moroedd. that is.

Madoe I am the ionne of Owen Gwynedd, With stature large and comely grace adorned, No lands at home nor store of wealth me please, My mind was whole to search the Ocean seas.

Columbus also tent his brother Bartholomen to King Heurie the feuenth, to make offer of his feruice in the New-Worlds discouerie, which fell by the way into the hands of Pirats, whereupon pouertie affaulted him with fickneffe in a forraine Countrie, fo that hee was forced to get fome. D.F. Leton de vipouertie anauteu min with manifer a consumer and the more ancient then elegant in- ta pairis Christon what about him by making of Maps : one whereof had this more ancient then elegant in- ta pairis Christon what about him by making of Maps : one whereof had this more ancient then elegant in-

Whose Countrie Gennais, whose name Bartholomen Colon de Terra Rubra, this worke fet forth new At London, A thousand foure hundred eightic Februarie thirteenth, fing praise to Christ on height

One of these Maps hee presented to King Herrie with the said offer, who cheerfully accepted the fame, and fent to call his brother into England, who before he could effect it, was imployed 40 by the Kings of Castile.

Columbus his fortunes awakned others industrie, amongst the rest lobn Cabeta a Venetian, and his three formes Lewis, Sebastian, and Sancias, who obtayned a Patent of King Hourse the seventh for discouerie with fine ships with English Masters, Mariners, and Colours also, the iame to erect in whatfoeuer Lands vnknowne before to Christians , to hold the fame to them and their Heires See Hat tem 3. as Vaffals and Lieutenants to the Crowne of England, paying the fifth part of their gaine at Polis

In the yeare 1497, Iohn Cabot a Venetian, and Sebastian bis some (these are the wordes of the great Map in his Maiesties privile Gallerie, of which Sebastian Cabot is often therein called the Authour, and his Picture is therein drawne, with this Title, Effizier Sebash. Caboti Angli, shij le. Ca.
50 Venetiani, Miluie Awati, &c.) discovered that Land which no man before had attempted lan. 24. This Map,

about fine in the morning. This Land be called Prima vilta (primum vilam, or first teene) became fome say, was that was first descried from Sea. That I land which lyeth out before the land, he called Saint lohns I taken out of that was just described from Sea. I have summed system one before the same, be cause Sans tolline be-land, because on that seast day it was disconcred. The Inhabitants weare beasts skins and as much e-May by Clem, May by Clean Bern and Singer. The first is been under the first been as we do garment melt precusus. In their underse, they vife Bower, Arymer, Piler May 1549, Darts, Clubs of wood and Singer. The first is been us found pileces and yeelful brittle fruit, but is it filled of white Beers and Stage of vomified greatenines. It advantables with Fyler and hot great, as Seales and Salmons; Soles also an elle long. Effecially there is great flere of those fiftee which they call commonly Bacallaos. There breede also Hawkes as blacke as Rauens, Partridges and blacke

Thus wee fee New-found Land discovered by English Ships , Mariners and iurisdiction. Six Sebaltian Cabot, for his English breeding, conditions, affection and advancement, termed an En- Ramus Tom. 1. glifb man, thus reported of this voyage; That vpon occasion of the admiration of Columbus his voyage into the East, where Spices grew, by the West, so rife then in the Court of King Henrie See Hat. Tom. 1. the seventh, there arose in his heart a great desire to attempt some notable thing. And wnder. pag-74

standing by the Sphere (faith he) that if I should faile by the North-west, I should by a shorter Tract come into India; I thereupon caused the King to be advertised of my deuise; who immediately commanded two Caruels to bee furnished with all things appertaying to the Voyage which was, as farre as I remember, in the yeere 1496, in the beginning of Summer. I beganne therefore to faile toward the North-west, not thinking to find any other Land then that of Cato Floridadic thay, and from thence to turne toward India. But after certaine dayes I found that the Land concred by the turned toward the North, which was to me a great displeasure. Neuerthelesse, sayling along by the Coast to see if I could finde any Gulfe that turned, I found the Land still continent to the 56. degree under our Pole. And feeing that there the Coast turned toward the East, despaying as he writ to Francisco Representation of the Coast of that Land toward 10 the Equinoctiall (ever with intent to finde the faid passage to India) and came to that part of this firme land, which is now called Florids; where my victuals fayling I returned towards England; was cause of the tumules and preparations of warres against Sectland caused that then no more consideration was had to this voyage. Whereupon I went into Spaine, &c. By the King and Queene there he was fet forth and discouered the River of Plate, and fayled into it more then fixe score leagues After this he made many other voyages, &c. Sir Seb. Cabor was after by King Edward the fixt See [40], La, I, constituted grand Pilot of England with the annual stipend of one hundred and fixtie fix pounds thirteene shilling: and soure pence, and was Author of the Russian and North-easterne discourses. Fabian in his Chronicle A. R. Hon. 7. 14. hath this testimonie. This yeere also were brought vato the King three men taken in the New-found Land, in Williams Prochas time being Major, 10 These were clothed in beasts skins, ai d did eate raw fleth, and spake such speech that none could wheeffand them, and in their demeanour like to brint beaffs, whom the King kept a long time after. Two yeeres after I saw two of them at Westminster, apparelled like English, &c.

Mafter Robert Thorne writes, that his Father and Mafter Hugh Elior a Merchant of Briffell fift finders of were the first discouerers of New-found Land; and if the Manners would have been emiled and followed their Pilots minde, the West Indies had beene ours : so that it seemeth this Discoverie was before that of Columbia. Master Haklust hath published the particulars of these things more fully, as also divers Treatiles touching the North-west of Sir Humphrey Gilbert and others: to which I referre the Reader ; and no lelle for the Voyages made by divers English into thole parts: three by Sir Marton Frobifher, in the yeeres 1,76, 77, and 78. Two of Captaine lobn 30 Danies, in 86, and 87. that of Mafter Hore , An. 1536. that of Sir Humpbrey Gilbert, 1583. that of Master Charles Leigh to Ramea, An. 1597. and before in 1593. that of George Drake; with those of laques Carsier, and divers others. My purpose is not to steale Master Haklers labours out of the World , by culling and fleecing them for our purpose, but by this Index to in-Aruct men where they may have festivall store in this kinde. I had rather give you new things. Such are to the World, these that you had before in Hudsons voyages set together, as also those of Greenland: and fuch are those of Waymonth, Knight, Hall, Baffin, Ge. And first, as Foreman of our Qieft, we will give you Sir Humphrey Gilberts Letter, written with his owne hand from New-found Land, whereof he tooke formall possession to the Crowne of England, and was as a Martyr of thole Discoueries. It was written to S.r George Pechbam (a great Aduenturer in that 49 voyage, and a greater in one of longer lite, his written Treatife of Westerne planting, extant in Mafter Haklayts third Tome) and I have here inferted, it being hitherto vnprinced, as a memorial of both their worths; and after it (though in time before) wee will recreate you with a plaine Mariners Letter endorsed in homely phrase, To the Honorable Kings Grace of England, here (as I thinke) given you from the Originall, I have also another written to Cardinall Wolfer touching the lame voyage in Latin , by Albertu de Prato ; for the antiquitie, rather then any remarkable raritie, worthy here to be mentioned.

> C Ir George, I departed from Plymouth on the elementh of Inne with fine failes, and on the thirteenth 50 She Barke Rawley ran from me in faire and cleare weather, basing a large winde. I pray you felicite my brother Rawley to make them an example of all Knaues. On the third of August wee arrived at a Port called Saint lohns, and will put to the Seas from thence (God willing) fo foone as our flips will be ready. Of the New-found Land I will fay nothing, until my next Letters. Be of good cheere, for if there were no better experation, it were a very rich demaynes the Country being very good and full of all forts of villual, as fish both of the fresh water and Sea-fish, Deere, Pheasants, Partridges, Swanner, and ainers Fowles elfe. I am in haste, you shall by enery Messenger heare more at large. On the fifth of August, I entred here in the right of the Crowne of England; and have engraven the Armes of E. and, divers Spaniards, Portugals, and other frangers, witnessing the same. I can stay no longer; fare you well with my goo! Lady and be of good cheare, for I have comforted my felfs, answerable to all my bopes. From Samt lohns in the New-found Land, the 8. of August, 1, 183.

> > Yours wholly to command, no man more,

HVM. GILBART. I men-

I mentioned before Master Thornes fathers finding New-found Land, with Master Eliot. Thele animated King Henrie the eight to let forth two thips for discourrie, one of which perished in the North parts of New-found Land. The Mafter of the other, John Rut , writ this Letter to King Henrie, in bad English and worse Writing. Ouer it was this superscription.

Master Grubes two ships departed from Plymouth the 10. day of June, and arrived in the New-found Land in a good Harbour, called Cape de Bas, the 21. day of Iuly : and after we had left the light of Selle, we had neuer fight of any Land, till we had fight of Cape de Bas.

Deafing your Honorable Grace to beare of your fermant John Rut, with all his Company here. in good health, thanks be to God, and your Graces ship. The Mary of Gilford, with all ber thanks be to God: And if it please your bonorable Grace, we ranne in cur course to the

Northward, till we came into 53, degrees, and there we found many great lands of lee and despe meter, we found no founding, and then we dough no so no forther to the Northward for fear of more lee, and then we did about to the Santhamand or founding and then we dough no so no fourther to the Northward for fear of more lee, and thom we did about to the Santhamand, and until in fear adjust after the adon to hundred and fixed fathom and them were came into 52, degrees and fell with the mayne Land, and within ten leagues of the mayne Land we met with a great Iland of Ice, and came bard by ber, for it was standing in deepe water, and so went in with Capede Bas, a good Harbor, and meany found Hands, and a great frejb River going op farre 20 into the mayne Land, and the mayne Land all wildernesse and mountaines and woods, and no natural ground but all mosse, and no inhabitation nor no people in these parts: and in the woods wee found footing of diners orest bealts, but we faw none not in ten leagues. And please your Grace, the Samion and wee kept company all the way till within two dayes before wee met with all the llands of lee, that was the first day of last a night, sad there rofe a great and a marualtons great strene, and much finite weather; I truit is Aimighte Isla to hear good near of her. And place your Great, we were conflaining and a writing of all our ander, how we would always and what comfo ever would day and when Gold doe fend foule weather, that with the Cape de Spet free should goe, and he that came first should tarry the space of fixe weeks one for another, and watered at Cape de Bas ten dayes ordering of your Graces ship and fish-ing, and so departed toward the Southward to seeke our fellow: the third day of August we entered into 30 a good Hauen, called Samt John, and there we found eleven faile of Normans, and one Brittaine, and two Portugali Barkes, and all a fishing, and so we are readie to depart toward Cape de Bas, and that is swo to the dealers, and the man symmy, and the second the confliction of the leagues, as flority as we have filled, and for each the confliction where the second for the dealers the confliction of the second for the of God, as we were commanded at our departing: And thus left Jape, and keepe your bonorable Grace, and all your honourable Reser, in the Hassen of Saint John, the third day of August, written in

> By your fernant lobe Rue, to his vetermost of his power.

I have by me also Albert de Prate's original Letter, in Latin Rile, almost as harsh as the former English , and bearing the lame date , and was indorfed , Renerved, in Christo Patri Domino Domino Cardinali & Domino Legato Anglia : and began , Reuerendissime in Christo Pater Salutem. Renerendissime Pater, placeat Renerendissima paternitati vestra, scire, Deo fanente post quam eximinue à Plemut que fuit x. Iunij &c. (the substance is the same with the former, and therefore omitted) Datum apud le Baya Saint Ioban in Terris Nouis , die x. Augusti, 1927. Rener. Patr. vest. humilis ferum, Albertin de Prato. (the name written in the lowest corner of the sheet.)

bafte. 1527.

#### The voyage of Captaine GEORGE WEYMOVTH, intended for the discouerie of the North-west Passage toward China, with two flye Boates.

N Sunday the fecond day of May, 1602. in the afternoone, I weighed anchor and fet faile from Redeliffe with two Fly-boates, the one called the Difeoury, of feuentic Tunnes; and the other called the God freed, of fixtie Tunnes, to discouer the North-west passage, having in my thips fine and thirtie men and boyes, throughly viotualled and abundantly furnished with all neceffaries for a yeere and an halfe, by the right Worthipfull Merchants of the Mofomie and Turkie Companies : who for the better successe of the yoyage prouided mee of a great trauailer and nie 60 learned Minister one Master laba Cartwright. The Master under mee in the Dilcouerie was one Master cart-William Cobreth, a skilfull man in his profession; and in the God freed, one lown Drewe, and Mate wright had bin in the faid thip one Iohn Lane.

The first of Iune, we descried Buquhammes in the Latitude of 57. degrees. The second day former Tome, we faw she Point of Buquhammer North-well from vs, being a very smooth land; and the land Buquhammer

and I agreed with one of the fifther men to carry me betweene the Isles of Orkney, because I was

not acquainted with the coast. The fourth day, at ten of the clocke, wee descried the Isles of

Orkney. Some of those Southerne Hands are prettielingh land; but the Northerne Hand, which

is called the Start, is very low land. There is no danger, giving the shore a good birth, whise is

be by the Norther point of the Start : there doth a ledge of Rockes lye a mile from the floare.

Orkner.

The Statt. 59.degrees 30. At noone I found my selfe to be in the latitude of 59. degrees and 30.minutes, the point of the Fairelle.

Two fmail I-

Stars bearing West: and at one of the clocke in the afternoone, we saw a faire Ile, which bare North-eaft and by North from vs : and at eight of the clocke at night, wee were North of the Start: Then I directed my course West and by North. The fifth day about ten of the clocke in the morning, we ranne fome tenne leagues, and then we faw two small Hands, some two leagues off: and at eight and nine of the clocke we faw foure or fine Boats of Fisher-men, and spake with one of them, and they were Scottifb-men. The fixt, in the morning fell much raine, and lafted till nine of the clocke: and at ten of the clocke it cleared up, and became very faire weather, and very temperate and warme, and our course was West. The seauenth, the winde was at East and

by North, faire weather, and our course West. The eight, at noone I observed the Sunne, and found vs to be in 59. degrees and fortie feuen minutes, and we ran West South-west. The tweifth day we held our course West, the winde at East North-east, with sogge in the The twenten day we may be some, and found my felfe in 57, degrees, and 55, minutes, 36

and the winde at East North-east, and our course West and by North. The fifteenth much raine

all the forenoone, our course West, the winde at East and by North. The sixteenth, the winde

was at North North-east, with much raine, winde and fogge. In the forenoone, being very cold,

and at noone, I observed the Sun, and found vs to be in \$7.degrees and 35.minutes; we found the

variation to be eleuen degrees Westward; and by that meane I found my selfe to be one degree

more to the Southward, then we should have bin by our course; for we could not see the Sunne

twelfth day, we could not finde any variation at all. Then we flood close by a winde to the

Westward, the winde being at North North-east. The seauenteenth wee ranne North and by

West, the winde at North North east, faire weather. This day we saw many gray Gulles, and

fome Pigions. The eighteenth at noone I observed the Sunne, and found our selves to be in the

lay North from vs, as farre as we could ken ie from the head of our maine topmast : and about

two of the clocke in the afternoone, we law the South part of Groneland, North from vs forme

ten leagues. As we coasted this Ice to the Northward, we found it to be a maine banke of Ice :

for we law the other end of it to beare West North-west from vs; the winde being at South South-west, little winde : Then we ranne West South-west, to cleere vs of the Ice, The nine- 40

teenth, the winde was at East South-east, with some small raine. The twentieth, our course was

againe. Seeing this change of water, to often to be thick, and cleare againe fo fuddenly, we imagined it had beene shallow water: then we founded, and could fetch no ground in one hundred and twenty fathomes : and the Sea was to smooth, that we could discerne no current at all. At this

time I reckoned the Cape of desolation to beare North North-east twentie foure leagues from vs.

The one and twentieth, the winde was variable. The two and twentieth, we were in the lati-

in 96 houres before this day at noone, and at our last observation before this, which was the 30

the variation here was nothing at all. The thirteenth at noone, our course was West and by North, the winde at North-east, with fogge some three or soure houres, and then cleare again: the ayre very warme, as in England in the moneth of May. The foureteenth was faire weather,

Variation ele-Weftward.

ons, 53,deg.51,min. latitude of 59.degrees, and 51.mimutes. And then we first descried a great lland of Ice, which Grantland.

Blackwiter as Welt North-west, the winde being at North and by East, little winde. This day sometimes we thick as suddle came into blacke water as thickeas puddle, and in failing a little space the water would be cleare

Americade (cri-

by Weft. The season and twentieth, the winde was at West South-west : then our course was 50 North-west and by North, the weather faire and warme, as in England, in the moneth of Store of Guls, May. This day we faw great flore of Gulles, which followed our Ship fundry dayes. The eight and twentieth, the winde being at North and by West, wee directed our course to the Westward; and about twelve of the clocke the same night, we descried the land of Ausrica, in the latitude of 62. degrees and 30 minutes; which we made to be Warnick; foreland. This Headland rose like an Iland. And when we came neere the Foreland, we saw source small Hands to the Northwards, and three small Hands to the Southward of the same Foreland. The Foreland was high land: all the cope of the hols were conered with Snow. The three small llands to the Southward were also where, that we could not differne them from Ilands of Ice : also there was great store of drift Ice vpon the Eastside of this Foreland : but the Sea was altogether 60 voide of Ice : the Land did lye North and by East, and South and by West, being fix leagues

The nine and twentieth, at fixe of the clocke in the morning, were were within three leagues of this Foreland : then the winde came up at North-east and by East, a good stiffe gale with

fogge: and wee wereforced to fland to the Southward, because wee could not wether the land to the Northward: and as wee flood to the Southward along by Warniels Foreland, we hand supposed could discerne none otherwise, but that it was an Iland. Which if it fall out to be so, then to be an Iland. Louders Inlet, and the next Southerly fifter, where the great Current fetteth to the Weft, The greateft must of nevertitie be one Sea; which will be the greatest hope of the passage that way. The hope of the mun or necessary to the state of the state o

coast of America.

The first day of Isly, the white was at West, with forger and Snow; the syre being very cold. Under the state of the syre being very cold. The day were came into imany Ouerfalts; which seemed to summ a great current; but green which way it did fet, were could not well discreme. The greatest skelshood was, that A current sies is should force to the West. But haning contrary symbols bodie factored or currenteste dayer, we I you fut to the always slay its trausers among the courterfalts; but could better finde any great current by our W. ft. courtes: twee founded former many slays to ground in one hundred and twents; the

thomes. The second day, we deferred a maine Bank of Te in the latitude of so, degrees 'che winds' A make bank. The second day, we deferred a maine Bank of the was at North North-with, and very tariet weather. We wanting fifth was ended high close offer in o das cother Land of te, and high close to not no Bank and high day the review with I ce, which made "s green with I land of te, and high close to not no Bank and high day to review with I ce, which made "s green with I land of the control in the North Research and the second s very good fresh water. Whitin twenty leagues of the coast of "America", wee should oftentwenty good fresh water. Whitin twenty leagues of the coast of America", wee should oftento times come into many great outstals. Which doth manifestly show, that all the coast of America (seemed to

The third, the winds was at South-west, very foggie: and as wee stood toward the coast of America, wee met with another maine Banke of Ice. The fogge was fo thicke, that we were hard by the Ice, before wee could fee it. But it pleased God that the winde was faire to put vs cleare from this Ice againe; and prefently it began to cleare up, fo that wee could fee two or three lesgues off; but we could fee no end of the Ice. Wee judged this Ice to be some tenne leagues from the coast of America. We found the water to be very blackish and thicke, like pud- Blacke outdie

The eight, the winde was at North North well, very faire weather; wee flanding to the 20 Westwards met with a mighty maine Banke of Ice, which was a great length and breadth, and it did reft close to the floare. And at elemen of the clocke in the forenoone, wee descried agains the Land of America, in the latitude of 63 degrees and 33 minutes, being very high Land : and America against te did rife as llands, the toppes being covered with Snow, This Land was South-west and by difered in 62.

West, some fine leagues off vs: we could come no nearer is for the great quantitie of Ice, which refted by the shoare side,

The ninth, the winds being at North-east and by East, blew to extreamely, that we were forced to fland to the Southward, both to cleare our felues of the Land, and of the Ice: for the day before we passed a great banke of Ice, which was some foureteene leagues to the Eastward of vs, when the storme began; but thankes be to God, we cleared our selues both of the Land and of the Ice. This day in the afternoone the ftorme grew to extreame, that we were forced to stand along with our forecourse to the Southward.

The functional water of some analysis.

The function was expressed was expressed to the afternoone, weetaw foure great flands of fee, of a functional profile; and about foure of the clocke we came among fome final feattered Ice, and lippeded our felds to be neare fome great Banke. The fogge was very thicks, but the winde large to fland back the fame way week came in: or elfe it would have indangered our lives very much. And at nine of the clocke at night we heard a great noyle, as though it had bin the breach of fome thours. Being defirous to fee what The lozeblome it was, we flood with it, and found it to be the noyle of a great quantity of Ice, which was noyle of Ice, very loathfome to be heard. Then wee flood North North-well, and the fogge contiso nued fo thicke, that wee could not feetwo Shippes length from vs : whereupon we thought good to take in some of our layles; and when our men came to hand them, they found our fayles, ropes, and tacklings, to hard frozen, that it did feeme very ftrange vnto vs, being in the Sayles, when

chiefest sime of Summer. The eighteenth day, the winde was at North-east and by North, the avre being very cleere and extreame cold, with an exceeding great frost; and our course was North-west. This day in the forenoone, when we did fet our fayles, we found our ropes and tacklings harder frozen then they were the day before : which frost did annoy vs. so much in the vsing of our ropes and fayles, that wee were enforced to breake off the Ice from our ropes, that they might sunne tayles, that we will be the blockes, And at two of the clocke in the afternoone, the winde began to blow verthrough the blockes, And at two of the clocke in the afternoone, the winde began to blow verthrough the blockes, And at two of the clocke in the afternoone, the winde began to blow verthrough the blockes. Thick troops and tackling, the company of the blockes and the blockes and the blockes and the blockes and the blockes are the blockes. Thick troops and tackling, the blockes are the blockes and the blockes are the blockes. Thick troops and tackling the blockes are the blockes are the blockes are the blockes. The blockes are the blockes are the blockes are the blockes are the blockes. The blockes are the blockes are the blockes are the blockes are the blockes. The blockes are the b

that we could not almost hoyse or strike our sayles, to have any vie of them. This extreame frost and long continuance thereof, was a maine barre to our proceeding to the Northward, and the difcouraging of all our men.

The nineteenth day, the winde was at North and by East, and our course to the Eastwards.

Mutinie.

The same night following, all our men conspired secretly together, to beare up the helme for England, while I was affeepe in my Cabin, and there to have kept mee by force, vntill I had Legistra, while I was a users in my count, and there exists them for fo doing. And indeede they had drawn in writing, the causes of their bearing up of the helme, and thereunte fee their hands, and would have left them in my Cabin : but by good chance I understood their pretence, and

The twentieth day, I called the chiefest of my Company into my Cabin, before Master Lobe. Corneright our Preacher, and our Mafter, william Cobreth, to heare what reasons they could alleadge for the bearing vp of the Helme, which might be an ouerthrow to the Voyage, feeing the Merchants had bin at fo great a charge with it. After much conference, they delinered mer to

Concluding, that although it were granted, that we might winter betweene 60 and 70. degrees of latitude, with latetie of our lines and Veffels, yet it will be May next before wee one difmore them, to lanch out into the Sea. And therefore if the Merchants should have purpole to proceede on the discouerie of these North-west parts of America; the next yeare.

pole to proceed on the discourse of state evolution the parts of otherway the next year, you may be in the aforefail distinder for England, by the first of May, and so for furnished better with men and victuals, to pesse and proceeds in the aforefail action.

Seeing then that you cannot assure vs of a fast harbour to the Northward, wee purpose to beare up the Helmefor England; yet with this limitation, that if in your wiscome, you shall thinke good to make any discourty, either in 60.0r 57 degrees, with this faire Northerly winde, 20 we yeelde our lines with your felfe, to encounter any danger. Thus much we thought needsfull to fignifie, as a matter builded vpon reason, and not proceeding vpon feare or cow-

Then, wee being in the latitude of 68. degrees and 53. minutes : the next following, about 68.deg.53.min Intel, wer brung in the locke, they bare vp the Helme, being all fo bent, that there was no meanes to periwade them to the contrary. At last understanding of it, I came forth of my Cabin, and demanded of them, who bare up the Helme. They answered me, One and All. So they hoysed up all They returns ded of them, who oare up the retimes a new aniwered me. One and to the fayle they could, and directed their course South and by West.

The two and eventieth, Hent for the chiefest of those, which were the cause of the bearing up of the Helme, and punished them seuerly, that this punishment might be a warning 30 to them afterward for falling into the like mutinie. In the end, vpon the intreatie of Mafter Carturiebt our Preacher, and the Mafter, William Cobreato, vpon their submiffion, I remitted some part of their punishment. At twelue of the clocke at noone, wee came hard by a great lland of Ice : the Sea being very smooth and almost calme, were hoysed out the Boates of both our Shippes: being in want of fresh water, and went to this Iland to per some Ice A great Iland to make vs fresh water. And as wee were breaking off some of this Ice (which was verie a great time of fee cracked painefull for vs to doe; for it was almost as hard as a Rocke:) the great lland of Ice gaue a mightiecracke two or three times, as though it had bin a thunder-clappe; and prefently the mignetactive to continuous, which was like to have funke both our Boates, it were had not made good hafte from it. But thankes be to God, we efcaped this danger very lappily, and came to aboord with both our Boates, the one halfe laden with Ice, There was great store of Sea Foule The fine and twentieth and fix and twentieth, the winde being at East, did blow a hard

The feuen and twentieth, the winde was at South South-east, and blew very hard, our course

was West. The eight and twentieth and nine and twentieth, our course was West and by South,

the winde blowing very hard at East South-cast, with sogge and raine. The thirtieth, the winde

Shippes sicke, wee thought it good to returne with great hope of this Inlet, to bee a

passage of more pessibilitie, then through the Straight of Danie : because I found it not much peffered with Ice, and to be a straight of fortie leagues broad. Also I sayled an hundred leagues West and by South, within this Inlet; and there I found the variation to be

35, degrees to the Westward, and the needle to decline, or rather incline 83, degrees and

like a thunder-Great flore of Sea Foule vp. on the Ice.

An Inletin 61. gale, and our course was West and by South, with fogge. This day in the afternoone I did reckon degrees & 40. my felfe to be in the entering of an Inlet, which standeth in the latitude of 61. degrees and 40.

minutes.

The return out fore the Sea. Now because the time of the yeare was farre spent, and many of our men in both

Thevariation 35. degrees Westward.

The fifth of August (the winde all that while Westerly) wee were cleare of this Inlet agains. The fixth the winde was at East South-east with fogge. The seauenth, eight, and ninth, we paifed by many great Ilands of Ice. The minth day at night, we descried the land of America, in the coast of 4. the latitude of 55 degrees, and 30 minutes. This Land was an Iland, being but low land and very smooth : then the night approaching, and the weather being something foggie and deg. & 30.min. darke, we were forced to stand to the Northward againe. This might we passed by some great Ilands of Ice, and some bigge peeces which did breake from the great Ilanis: and we were like

to strike some of them two or three times : which if we had done, it might have endangered our Shipperand lines. Our confort, the Godfpeede, ftrooke's little piece of Ice, which they The Godfpeede thought had foundred their Shippe; but thankes be to God they received no great hurt, for piece of lee;

CHAP. 12.

our Shippes were very firong. The tenth day, the winde was at North-east and by North, with fogge and raine; and our course was so the South-eastward: for we could by no meanes put with the shoare, by reason of the thicknesse of the fogge, and that the winde blew right vpon the shoare, so that we were forced to beare faile to keepe our felues from the land, vntill it pleafed God to fend vs a cleare; which God knoweth we long wanted. As fixe of the clocke in the afternoone, it was calme 10 and then I judged my felfe, by mine account, to be neerethe Land; fo I founded, and had ground in 160, fathomes, and fine grey Olie Sand : and there was a great Hand of Ice, a ground within a league of vs, where we founded, and within one houre it pleafed God to fend vs a cleare. Then www.c. we law the land fome foure leagues South-west and by South from vs. This land lyeth East and by South, and West and by North, being good high land, but all Hands, as farre as wee could dil. Many Hands. cerne. This calme convinced vatill foure of the clocke in the afternoone of the elebenth day; the weather being very cleere, we could not differne any Current to goe at all by this Land. This day the Sea did fet vs in about a league neerer the Land, fo that wee judged our felues three leagues off. Here we founded againe, and had but eightie fathoms.

The variation of the Compasse we found to be 22. degrees and 10. minutes Westward. At The variation 20 fine of the clocke there sprung vp a fine gale of winde, at Eaft South-east, and being so neere 31 degrees to night, wee flood to the Southward, thinking the next day to feeke some harbour. But it pleafed God, thenexe day, being the twelfth, to fend vsa ftorme of foule weather, the winde being A Storme, at East and by South, with togge : so that we could by no meanes get the shoare. Thus wee were forced to beate up and downe at Sea, untill it should please God to fend vs better weather. The foureteenth, I thought good to stand to the Westward to fearth in Inlet; in the latitude

of to degrees. I have good hope of a passage that way, by many great and probable seasons. The fifteenth the winds continued at the South ; with exceeding faire weather, and out course was West. We were this day at noone in the latitude of sy degrees and 31. minimum and 30 I found the variation to be 17 degrees and 19 minutes 918 the Westward. And about seven of Variation the clocke at might, we described the Land against being tenne tragues to the Eastward of this deer same. Indee, This Land did beare from as Southa well when he had been seen in the They differe clocke the lame night, the winde cometo the West's which blew right against vs for our en- the land against 

The fixteenth, the winde was at Walt North well , and was very faire weather , and our course South-west : about mine of the clocke in the forenbone, we carrie by a great Iland of Ice; and by this Hand we found fome preces of Ice broken off from the faid Hand : And Being in? great want of fresh water, wee soyled out our Boates of both Thippes, and loaded them twice with Ice, which made vs very good fresh water. This day at moonly wee found our selves to be 46) in the latitude of 55 degrees and twentie minutes : when we had taken in our Ice and Boates, the 55 deg. 20, min. weather being very faire and cleare, and the winde at Well North-well, we bent our course for the Land, and about three of the clocke in the attenuous; we write within three ferroles of a pletant bothe (hours. As is a very pletaint low Land; but all Hands; and goods from do going between Land, sour all Hands; and goods from do going between Land, source them, toward the South-word. This Land doth fland in the relativistic of 5% degrees; and Lands found the variation to be so the Well 18, degrees and 12, whintees. This don't is voide of force you. The variation to be so the Well 18, degrees and 12, whintees. This don't is voide of force you. The variation to be so the Well 18, degrees and 12, whintees. leffe it be some great Hands of Ice, that come from the North, and so by windes may be direct 18 deg, and 12. woon this chaft. Also we did finde the ayre in this place to be very temperate. Truely there is min. Westwards in three fenerall places great hope of a passage, betweene die latitude of ou and and enteres if the Temperate forget doe not hinder it, which is all the feare I have. At fixe of the clocks, wee being becalmed Grein bose of So by the liberethere appeared vnto vs a great ledge of rookes, berweene var and the thouse, as a pallage hunt though the Sea did five quarit with a greatheight. As we all beheld it within one libite; when three places. though me section by outsite with a feature give. A we at note the word of the property of the feature of the fall of the feature of the feat

But the leventeenth in the morning, the winde being at the South, it began to blow to exce -committee treamely that we durk not they by the floure, for it was like to be a great florme ? then our courfe was East North-east, to get vi Sea roome. This filtime ftill increasing, our five boates diff 60 receins in much water; for they wanted a Sparre-decke, which wer found very dangerous for A Which inde the Sea. About twelve of the clocke at noone, this day there role vp a great flowre mille Well, taking vp the and prefently the windexame out of this doarter with a whirle, and taking up the See into Sea, the ayre, and blew to extreamely, that we were forced always to runne before the Still Rowlo-

They returned

ener the winde did blow. And within, swelue houres after this florme beganne, the Sea was so much growen, that we thought our sye Boates would not have beene able to have en-

The eighteenth, the winde was at North-west, and the storme increased more extreame, and lafted vntill eight of the clocke in the morning of the nineteenth day, fo furious, that to my remembrance, I neuer felta greater: yet when we were in our greatest extremities, the Lord They were en. deliuered we his vinworthy feruante. And if the winde, with fo great a fforme, had bin either tred 30 leagues Northerly, or Southerly, or Eafterly but one day, we had all perified against the Rocks, or the Ice: for wee were entred thirty leagues within a Head-land of an Inlet, in the latitude of co. degrees. But it pleased Good to fend vs the winde so faire, as we could defire, both to cleare our to They returned feluce of the Land and ite. Which opportunitie caused we for this time to take our leaves of the This Book was coast of America, and to frape our coast for England.

The fourth, in the morning, wee deforted the Hand of Silly North-east and by East, some by w. Colvell. foure leagues off vs. Then were directed our course East and by North, and tenne of the clocke in the forenoone, wee descried the Lands end, and next day were forced to put into

CHAP. XIV.

IAMES HALL his Voyage forth of Denmarke for she discovery of Greeneland, in the yeare 1605. abbreniated.

N the name of God Amen, we let layle from Copensan-bauen in Denmarke, the fecondday of May, in the yeare of our redemption 1605, with two Shippes and a Pinnace : The Admirall, called the Fresh, a shippe of the burthen of thirty or for-

Finner: 1 De Ammiral, called the Favil, a lippe of the burnen or there or tricially wherein was Capitaine, and chief commander of the whole Fleet, Captaine I also Comming to an a Secretal Grantenman Centum vance the Kinge Maichle of the Granten vance the Kinge Maichle of the forefaild burthen, wherein ways Captaine, so one Selfout Landange, a Danillo Grantenma, and Steereman of the fame, one Paint Mille of Comming the humb. The Pinnace, a Barke of the burthen of twelve Lafts, or thereabouts; wherein was Sectionan or commander, one lobs Knight, my Ishn Rnight of Countrie-man. So fetting fayle from Copennen-hauen, with a faire gale of winde Easterly, wee came vato Elfonere, where we anchored, to take in our mater.

The third day we toake in our water, at which time, the Captaines, my felfe, with the Lieutenants, and the other Steeremen, did thinke it consenience to fee downe cretaine Articles, for the hetter keeping of company one with another, so which theticles or commants wee were all fenerally fworne, fetting thereunto our hands.

The fixt we came to Flacerie, into which harbour, by Gods helpe, we came at two aclocke 40 in the afternoone. The fearenth day we supplied out wants of wood and water. The eight day, about two a clocke in the afternoons, we let fayle for ib of the harbour of Fine in about fix a clock it fell calme, tillabout eight, about which time, the Naloof Normakby the Delib mencalled Lyndy, safe, bate next hand North-west of vs , fixe leagues off; at which time I disected my courfe West North-west, finding the compasse varied 7. degrees rominures, to the Eastwards of

The thisteenth, we had light of the Hand of Fore Ile, and allowf the South-head of Shotland; called Sminsborne bead, which are high Lamis : at noone, the Hand of Faire Ile bearing West halfe a point Northerly a foure leagues off /I made observation, and found vs in the latitude of 59. degrees so, minutes. This night about fever a clocke, were came about an English league to the Northwards of the North-west and of Euro IIa, were met with a great record a tyde, as 50 Erace what the chough it had been the rage of Portland, inferring North North-well. Being out of the faid race, I directed my course West and by North, having the winde North-east and by Norththis evening Faire Ile bearing East South-east four leagues: Swimberry head, North-east and by North-eight leagues: the Hand of Fose, North-east and by East, see a leagues. I found by east observation, the compasse so be varied to the East ward of the true North 601 degrees

The fourteenth in the morning, the winds came to the East Southerast, wer steering West and by North away; this morning the lland of Faire ble did thew in my light to bee about ten leaguas off at which times would deferie swa of the Westermost Bands of Orkney, which did ov good .. bear South west and by South stor or the ve

The eightneach, the mindeat Month-well and by Well , wee laid is away South well and by West, and Smerimes South-west. Thirdly so mone werevers in the Laurence of \$3. degrees

40. minutes. The nineteenthday, the winde at South-west and South-west and by West. wee lying as the night before, being at noone in the Latitude of 59. degrees and a halfe. The foure and ewentieth day, the winde at North-east and by East, we steering still with a fresh gale West South-well, this evening we looked to have feene Buffe Hand, but I doe verily suppose the same Buffe Hand to be placed in a wrong Latitude in the Marine Charts. The fixe and twentieth at noone, wee wrong placed were in the latitude of 57. degrees 45, minutes. The thirtieth day in the morning betweene feuen and eight, the weather began to cleere, and the Sea and winde to waxe leffe, wee looking for the Lion and the Pinnaffe, could have no fight of them, we supposing them to bee afterne off vs. we standing still vnder our courses. This day the winde came to the North-east and by East,

10 being very cold, weather, we lying North North-well away. Making my observation at noone, I found vs in the latitude of 50 degrees 15, minutes, our way North North-west fortie leagues. This afternoon between one and two a clock we deferied Land, it bearing North North-east off vs about ten leagues off North-east & by North off vs about ten leagues, it being a very high rag- First fight of ged land, lying in the latitude of 19. degrees 50. minutes, lying along & South-east and by South. Graniere. and North-west and by North.

This Head-land wee named after the Kings Maiesties of Denmarke, because it was the first Cape christian.

part of Greenland, which we did fee. This afternoone about one a clock, bearing in for the shoare we faw an Iland of Ice, which bore West South-west of ve three leagues off, so having the wind at East South-east, we bore in for the shoare, where wee found so much Ice that it was impossible 20 either for vs or any other ship to come into the shoare without great danger : yet wee put our felues into the Ice as wee thought convenient, being incumbred and compaffed about with the The sheare full same in such fort, as the Captaine, my selfe, the Boatswaine with another of our companie, were of Ice. forced to goe cuerboord vpon an Hand of Ice, to defend it from the ship, at which time I thought it convenient to stand off into the Sea againe, and so being cleere of the Ice, to double Cape Defe- Cape Defel-Lation, to the North-westwards of which I doubted not but to find a cleer coast, so standing away the all this night West South-west, to cleere vs of the Ice, which lay farre from the shoare, being very thicke towards the Land with great Hands of Ice that it is wonderfull. This evening, the Cape Christian bearing North-east and by East fine leagues, I found the Compasse varied 12, de- Compasse vagrees 15. minutes to the North-westwards. Moreouer, standing to Seaward from the foresaid ried. 30 Cape, we came in blacks water, as thicke as though it had beene puddle water, we fayling in the Black water.

fame for the space of three houres. The one and thirtieth in the morning faire weather, with the winde fomewhat variable, wee ffeering away North-west and by West, betweene foure and fine in the morning we had light of the Lion againe, but not of the Pinnaffe. They being a Sea-boord off and having efpied way, they Sicht of the flood with vs, at which time the Captaine, Lieutenant, and Steereman came abourd vs, earnestly Lieu. intreating mee to bestow a Sea Chart of the Steerman , and to give him directions if by tempeftuous weather they should lose vs, they protesting and swearing that they would never leave vs as long as winde and weather would permit them to keepe companie with vs. By whole speechees I being perswaded did give them a Sea Chart for those Coasts, telling them that if they

40 would follow me, that by Gods affiftance I would bring them to a part of the Land void with. out pefter of Ice, and also harbour the ships in good Harbour, by Gods helpe; they swearing and protesting, that they would follow mee so long as possibly they could, with which oathes and faire speeches I rested satisfied, thinking they had thought as they had sworne, but it fell out otherwise. So having made an end with vs about noone, they went abourd againe, wee being this day in the latitude of 59. degrees 45. minutes, having flood all the night before, and this forenoone alfo, fo nigh the shoare as wee could for Ice, the Cape (briftian South South-east and North North-west, and from the Cape to Cape Defelation , the Land lyeth East and by South, and West and by North about fiftie leagues. This day betweene one and two a clocke, the Viceadmirals Boat, being newly gone aboord, it fell very halfe and thicke, fo that wee could not fee 50 one another by reason of the fog, therefore our Captaine cansed to shoote off certaine Muskets with a great peece of Ordnance, to the intent the Lion might beare vs , which heard of them they presently flood with vs, at which time the fogge began somewhat to cleere, were having

fight one of another and to flood along it the shoare, as night as we could for Ice. The first of Iune, wee had a fresh gale of winde at South-west, wee steering North-east and Iune 1605. by North into the shoare, about three in the morning there fell a mightie fogge, so that we were forced to lye by the lee, for the Lion playing upon our D rum to the intent for them to heare vs, and to keepe companie with vs, they answering vs againe with the shooting of a Musket, wee trimming our failes, did the like to them, and to flood away North-east and by East : larboard Hands of Ice. tackt aboord halfe a glaffe, when we were hard incumbred among ft mightie Hands of Ice, being Mightie in-60 very high like huge Mountaines, to I caused to cast about and stand to the Westwards North- cumbrance of west and by West. About twelve of the clocke this night it being still calme, wee found our Ice. west and by West. About twelue of the clocke this night it being rini caune, wee round our A mightie curselues suddenly compast round about with great Ilands of Ice, which made such a hideous noyse rent testing

as was most wonderfull, so that by no meanes wee could double the fame to the Westward: North North

Wherefore were were forced to fland it away to the Southwards, South South-West, stem- weit.

ming the Current, for by the same Current wee were violently brought into this Ice, so being incumbred and much to doe to keepe cleere of the mightie Ilands of Ice, there being as both and others did plainly fee vpon one of them a huge rocke ftone, of the weight of three hundred pounds or thereabouts, as weedid suppose. Thus being troubled in the Ice for the space of two or three houres, it pleased God that we got thorow the same.

The second day in the morning about three a clocke, I came forth of my Cabin, where I found that the Shipper whose name was Arnold had altered my course which I had set, going contrarie to my directions North North-west away, whereupon hee and I grew to some speeches. both for at this time and other times hee had done the like. The Captaine likewife feeing his bad dealing with we, did likewise roundly speake his minde to him, for at this instant wee were to nigh vnto a greatbanke of Ice, which wee might have doubled if my course had not been altered, fo that we were forced to cast about to the Southwards, South and by East and South South east, with the winde at South-west and by South or South-west till ten a clocke, when we stood againe to the Westwards, lying West North-west and North-west and by West, being at noone in the latitude of 60. degrees 18. minutes, Cape Defalation is, I did suppose, bearing North and by West three or source leagues off, the weather being so thicke and hasie that wee could never fee the Land.

The fourth day betweene one and two a clocke in the morning, it began to blow a fresh gale Eafterly, we steering away North and North and by West, webeing at noone in the latitude of 50. degrees 50. minutes, having made a West and by North way four and twentie leagues. This 20 euening about feuen a clocke we had very thicke water, and continued to about halfe an houre: about nine a clocke we did see a very high Hand of Ice to the windward of vs, and about halfe an houre after with some drift Ice, they in the Lion thorow the fearefulnesse of their Commanders prefently cast about standing away larboord tackt, till they did perceine that I flood fill away as I did before, without impediment of the Ice, they caft about againe and followed vs.

The fift in the morning, being very faire weather with the winde at East South-east, our course North North-west, some of our people supposed they had seene the Land : our Captaine and I went aboord the Pinnasse, when after an houre of our being there wee did see the supposed Land to be an hasie fogge, which came on vs to fast that wee could scarce see one another. But 30 the Lion being very nigh vnto vs, and it being very calme, weel aid the Pinnasse aboord of her. and fo the Captaine and I went abourd of them,

The pinth day about foure a clocke, it began to blow an easie gale at South-east and by South. I directing my course still North North-west, when some of our people would not be persuaded but they did fee Land, and therefore I stood in North and by East and North North-east, till about three a clocke in the afternoone, when wee met with a huge and high lland of Ice, wee Reering hard to board the same, and being shot a little to Northwards of it, there fell from the top thereof some quantitie of Ice, which in the fall did make such a noyse as though it had beene the report of five Cannons. This evening wee came amongst much drift Ice, being both windwards and to leewards of vs, yet by Gods helpe we got very well through the same, when 40 being cleare I directed my course againe North North-weit.

The tenth day the winde at South-west and by West, I steering still North-west and by

Our people repurne backe

A huge high

Hand of Ice.

816

North: This forenoone also wee met with great Ilands of Ice, it being very hase and thicke weather, the which did drive them in the Lion into great feare, and calling to vs very fearfully periwaded me to alter my course and to returne homeward, saying that it was impossible for vs by any working, and course keeping to sease vpon the Land, which did drive all our companie into fuch a feare, that they were determined, whether I would or not, to have returned home, had not the Captaine as an honest and resolute Gentleman stood by mee, protesting to stand by me fo long as his blood was warme, for the good of the Kings Maiestie, who had set vs forth, and also to the performing of the Voyage. Which resolution of his did mitigate the stubborne- 50 neffe of the people : yet nothing would perswade those fearfull persons in the Lien, especially the Sceerman, who had rather long before this time have returned home, then to have proceeded on the action, as before the faid Steerman had done when he was imployed eight yeeres before in the faid action or discouerie. Therefore our Captaine and my telfe feeing their backwardnesse now, as before we had done, went our selves the same evening into the Pinnasse, having a mightie banke of Ice of our larboord fide, and spake to them very friendly, giving order both to our owne thip and to them, that they should keepe a Seaboord of vs (for I did suppose this banke of Ice to lye in the narrowell of the Streight, betweene America and Groenland, as indeed by experience I found the same to be) therefore I determined to coast the Ice alongst till I found it to bee driven and fall away, by realon of the fwift current that fetteth very forcibly through the faid 60 Strait, and then by the grace of God to let ouer for a cleere part of the coaft of Groenland, fo all this night we coasted the Ice as close aboord as we could East North-east and North-east and by East, till about midnight, when we found the faid banke to fall away.

The cleuenth day, being cleere of the Ice, I flood away North North-east till fixe a clocke,

when we met with another great banks of Ice, at which time the Commanders of the Lion being now againe very fearfull as before, came vp to our ship, perswading the Shipper and Com. Another banke panie to leaue vs, and to ftand to Seaboord with them. But the Shipper who was also Lieftenant of Ice. of the ship, being more honestly minded, said, that he would follow vs so long as he could : with which answere they departed, ving many ipitefull wordes, both of the Captaine and mee, faying we were determined to betray the Kings thips, at which time they shot off a peece of Ord- The Lims denance, and so stood away from vs. I seeing their peruerse dealing let them goe, wee coasting parting from along it the Ice North North-east with a fresh gale, it being extreme cold with snow and hayle, the Sea also going very high by reason of a mightie current, the which I found to set very force. A mightie cur-Io ably through this Strait, which being nigh vinto America fide, fetteth to the Northwards, and rena on the other fide to the contrarie, as by proofe I found. So coasting alongst this mayne banke of Ice, which seemed as it had beene a firme Continent till about eleuen a clocke, when weeespyed the Ice to ftretch to windward, on our weather bow wee tetting our ftarboord takes aboord, ftood away East and by South with the winde at South and by East, till wee had doubled a Scaboord the Ice, at which time I directed my course directly ouer for the cleere coast of Graineland, East and by North, which course I directed all the Frost to goe, we ftanding away our course all this night, it being very much fnow and fleete.

The twelfth day in the morning about foure a clocke, we espyed the Land of Groenland, be- Sight of Land, ing a very high ragged Land, the tops of the Mountaines being all coursed with snow, yet wee go found all this coaft veterly without Ice, wee flanding into the Land efpyed a certaine Mountaboue all the reft, which Mount is the best marke on all this Coast, the which I named Mount Mount Cun-Cunning ham after the name of my Captaine. We comming into the shoare betweene two Capes ningham or Head-lands, the Land lying betweene them North and by East, and South and by West, the Southmost of which Forelands I named Queene Annes Cape, after the name of the Queenes Ma- Queene dants Southmost of Which Porchands I mained Capeta Southmost of the two I called Queene Sophias Cape, after the name Cape. of the Queene Mother. So standing into the Land, we came amongst certaine Hands, where sayling in still amongst phias Gape.

the same vnto the Southermost foot of the forelaid Mount, wee came into a goodly Bay, which wee did luppose to be a River, being on both sides of the same very high and steepe Mountaines, 30 wee named the fame King Christianus Foord, after the name of the Kings Maie fie of Denmarke. chrifians Foord, So fayling vp this Bay, which wee supposed to bee a River, the space of fixe or seven Enelish leagues, finding in all that space no anchoring, being manuellous deepe water, till at the length we had fayled up the Bay the forefaid diffance, at length I brought the Ship and Pinnaffe to an anchor in fixteene fathom shelly ground, at which time our Captaine and I went aland, giving Our anchothankes vnto God for his vnipeakable benefits, who had thus dealt with vs as to bring vs to ting. this defired Land into to good an Harbour; which done, the Captaine and I walked vp the Our first lan-Hills, to fee if wee could fee any of the people, having our Boat to row along it with vs. Having ding in Greingone along the River side vpon the tops of the Hills the space of three or toure English miles, land, at length looking towards our Boat , wee faw vpon the River fide foure of the people standing Our first fight 40 by their Houses or rather Tents, couered ouer with Seale-skins. Wee comming downe the of the people,

Hills towards them (they having espyed vs) three of them ranne away vpon the Land, and the other tooke his Boat and rowed away leaving their Tents. Wee being come downe the Boat of Scale Hills called to our men in the Boat, and entring into her rowed towards the Sauage who was sking in his Boat made of Seale-skins. Hee holding vp his hands towards the Sunne, cryed Tota; wee doing the like, and shewing to him a knife, hee presently came vnto vs and tooke the fame of the Captaine. When hee had presently rowed away from vs, wee rowed a little after him, and leeing it was but in vaine wee rowed aland againe and went into their Tents, Our entring which wee found conered (as is aforefaid) with Seale-skins. Wee finding by the houles two into their Dogs being very rough and fat, like in thape to a Foxe, with very great abundance of Seale fift,

50 lying round about their Tentsa drying, with innumerable quantities of a little fifth like vnto a Smelt (which fifth are commonly called Sardeenes) of which fifth in all the Rivers are wonderfull skuls, their fishes also lay a drying round about their Tents in the Sunne in great heapes, with other fundrie kindes. Then entring into their Tents, wee found certaine Seale skins and Foxe sking very well dreft; also certaine Coates of Seale skins and Fowle skins with the feather side inward : also certaine Vessels boyling vpon a little Lampe, the Vessell being made after the manner of a little Pan, the bottome whereof is made of itone, and the fides of Whales finnes; in which Veffell was some little quantitie of Seale fish boyling in Seale oyle; and fearthing further, wee did finde in another of their Veffels a Dogs head boyled, fo that I perswaded my Exters of felfe that they eate Dogs flesh. Moreover, by their houles there did lye two great Boates, be- Dogs-

60 ing couered under with Scales skins, but aloft open after the forme of our Boates, being about twentie foote in length, having in each of them eight or ten tofts or feates for men to fit on, which Boates, as afterwards I did perceive, is for the transporting of their Tents and baggage from place to place, and for a faile they have the guts of some beast, which they dresse very fine and thin, which they fow together.

Of the other fort of Boars. There is one of their Boats in Sir T.Smiths The manner of killing of

Their comming to our

Alfo the other forts of their Boats are fuch as Captaine Frobifber, and Mafter Iohn Danis brought into England, which is but for one man, being cleane couered ouer with Seale skins artificially dressed except one place to sit in, being within set out with certaine little ribs of Timber, wherin they vie to row with one Oare more swiftly, then our men can doe with ten, in which Boates they fish being disguised in their Coates of Seale skinnes, whereby they deceive the Seales, who take them rather for Seales then men ; which Seales or other fish they kill in this manner. They shoot at the Seales or other great fish with their Darts, vnto which they vie to tye a bladder. their great fift which doth boy up the fift in fuch manner that by the faid means they catch them. So comming aboord our ships having left certaine trifles behind vs in their Tents, and taking nothing away with vs, within halfe an houre after our comming aboord, the Sauage to whom wee had given 16 the Knite with three others, which we did suppose to be them which we saw first, came rowing to our ships in their Boats, holding wp their hands to the Sunne, and striking of their brests. crying Tota. We doing the like, they came to our shippe or Captaine : giving them bread and Wine, which, as it did teeme, they made little account of, yet they gave vs some of their dryed fishes, at which time there came foure more, who with the other bartered their Coats, and some Scale skinnes, with our folke for old Iron Nailes, and other trifles as Pinnes and Needles, with which they feemed to be wonderfully pleased, and having so done, holding their hands towards the Sunne they departed,

The thirteenth, there came fourteene of them to our ship, bringing with them Seale skinner, Whale Finnes, with certayne of their Darts and Weapons, which they bartered with our people, as before. This day I made observation of the latitude, and found this Roadsted in the laof the latitude, ritude of 65, degrees 25, minutes, and the mouth of this Bay or Sound, lyeth in the latitude of 66, degrees 30. minutes. Also here I made observation of the tydes, and found an East and West Moone to make a full Sea, vpon the Full and Change, more it floweth, three fathome and an halfe water, right vp and downe.

The fourteenth and fifteenth dayes we rode still, the people comming to vs , and bartering with vs for pieces of old Iron, or Nailes, Whale Finnes, Seales Skinnes, Morfe Teeth, and a kind of Horne which we doe suppose to be Vnicornes Horne, at which time the Captaine went with our Boat, to the place where we had feene their Tents, but found them removed; and the other fith and the Seale fifth lying still a drying : the Captaine taking a quantitie of the Sea fifth into the 30 Boat, caused some of the Mariners to boyle it ashoare, the Sauages helping our men to doe the fame, the Captaine ving them very friendly, they having made about a barrell and an halfe of Oyle, leaving it aland all night, thinking to bring the same aboord in the morning. But the Sauages the same night let the same forth. Yet notwithstanding, the Captaine shewed no manner of discontent towards them.

The fixteenth day, I went into the Pinnaffe, to discouer certaine Harbours to the Northwards, the wind being at East South-east, I loosed and set faile, but instantly it fell calme, and so Our departing continued about an houre. When the wind came opposite at the West North-west a stiffe gale, in the Pinnaffe we spending the tide till the floud being come, I put roome againe, and came to an Anchor a from the flip. little from the Frost in twelve fathomes fandie ground. About one in the afternoone, the Frost 40 departed from vs further vp the Bay, which we did suppose to be a River, promising to abide our returne two and twentie daves.

The feuenteenth day, the wind continuing at the West North-west blowing very hard, wee rode full, the people comming and bartering with vs. The eighteenth day, the winde and weather as before, wee riding still. This forenoone there

The Sauages begin to fling

came to the number of thirtie of them, and bartered with vs as they had done before, which done, they went alhoare at a certaine point about a flight-shot off vs, and there vpon a sudden began to throw stones with certaine Slings which they had without any iniury offered at all; yea, they did fling so fiercely, that we could scarce stand on the hatches. I seeing their brutish dealing, caused the Gunner to shoot a Falcon at them, which lighted a little over them, at which time they went to their Boates, and rowed away. About one a clocke in the afternoone, they came againe to vs crying in their accustomed manner, Thiese, they being fixtie three in number, the flripper inquired of me whether they should come to vs or not. I willed him to have all things in a readinesse, they comming in the meane time nighto the Pinnasse, I did perceive certaine of them to have great bagges full of stones, they whispering one with another began to fling stones wnto vs. I presently shot off a little Pistol which I had for the Gunner, and the rest of the tolke to certainly tell, but they rowed all away making a howling and hideous noise : going to the same point, whereas in the forenoone they had beene, being no fooner come on Land, but from the Hils they did so affaile vs with stones, with their slings, that it is incredible to report, in such fort that no man could fland upon the Hatches, till fuch time as I commanded for to lose failes 60 and bonnets two mens height, to fhield vs from the force of the stones, and also did hide vs from their fight; fo that we did ply our Muskets and other Peeces fuch as wee had at them : but their subtilitie was such, that as soone as they did see fire given to the Peeces, they would suddenly

frones agained discharge, which indeed they did, but whether they did hurt or kill any of them or not, I cannot

ducke downe behind the Gliffes, and when they were discharged; then fling their flores hercely at ye againe. Thus listing continued there till foure a clocke, they departed away. The ameteenth day in the morning, about foure a checke it beeing calme; I departed from this Roadified, fo caming our men to row along it the shoure, till the tide of the ebbe weighting it

which time it began to blow a fresh gale at North-west and by West, we turning downe till about two a clocke, when the tide of floud being come : when I came to att Anchor hast excellent Hauen, on the South fide of Country hans Mount, Which for the goodnesse thereof I ha med Denmarkes Hanen. The twentieth day , in the morning the weather being very same with a field sire to fwind, I looked and curied to row forth of the forested Hatboar, and comming forth between

the llands and the maine, the people being is it formed looking for we third wi miking a hithe libral amonthe mainst, the people being as it issued tooking for vy spried vy limiting a hij. The people is a down notify at which time at an inflant ower gethered topedwis blood relearned three Bard wife ones against men rowing to vs. I feeting chem, though sighed to precede the worth pedraft we will led bond in the property of the people is the people is the people is the people in the content to be britter with their for to inflant people is an an inflant people is the people in the people in the people is the people in the people is the people in the people in the people is the people in the people in the people in the people is the people in t gue to anchor among it loss out from the Bands : but I presenting their deuter, made certaine Skonces with our failes, to defend virtom their Scones, Arrowes and Darts. They feeling this, with cer-20 taine of them from vs sowing to certaine llands, to which they did thinke wee would come: The fabilities tamen on the final state of the same and Basers above vs. who rowed stongth the finale of an ofthe Samesa bour with vs. making figure of six addition to the same of the same certains thele and trifles snoothe Boat, making fignes and tokens to fetch them, the which my Boy called William Huntries did. He being in the Boat, they preferrely that him through both the buttockes with a Dare at which time they rowed from vs, they multering upon the Hands to the number of these hundred perform, keeping themselnes farresmough from our dinger. perhoyled eather with blend, Oyle, or a little water, which they doe drinke. They apparell themselves in the skinnes of inch beafts as they kill, but especially with Seales skins and lowle skins, dreffing the skins very for and fmooth, with the haire and feathers on, wearing in Winter the haut and teacher fides inwards, and in Summer outwards. Their Weapons are Slings, Darts Arrowes, haning their Bowes fast tyed together with finewes; their Arrowes have but two feathers, the head of the same being for the most part of bone, made in manner and forme of a Harring Iron. As concerning their Darrs, they are of fundry forts and fashions. What knowledge they have of God I cannot certainly fay, but I suppose them to bee Idolaters, worhipping the Summer. The Country (Sast safetaid) fetterthe to be very fertile, yet could per-ceine of the no wood to grow thereon, 'Wee met all alongit thus Coath much Duffe-wood, but whence is commeth I know not. For coasting all this Coast along it from the latitude of 66.de-Drift-Woods I grees and an halfe, vntill the latitude of 60 degrees, Lfound many goodly Sounds; Bayes, and Rivers : guing names unto divers of them, and purposing to proceed further, the folke in the Pinnaffe with me did earnefily intreate me to returne to the ship againe, alleaging this, that if Figure 15 years in the cattering means agreed in the flap would mutine fand to terme home be-we campled in contenient time, the people in the flap would mutine fand to terme home fore we game: the which indeed had fallen forth, if the Captaine as an home! Gentleman had not by Jeuere meanes withfrood theirattempts, who, would needes contrarie to their promites haue beene gone home within eight dayes after my departure from them. But the Captaine respecting his promise to mee, would by no meanes consent, but withstood them both by faire meanes, and other wayes. So that vpon the feuenth day of July, I returned again into the Kings 20 Foord, which they in cheship had found so be a Bay and comming so the place where wee had left the first hoping to have found them there, I faw upon a certaine point a Warlocke of Hones, whereby I did perceme that they were gone downe the Ford. So the tide of ebbe being come, it being come we rowed downe the Foord, finding in the mouth of the fame amongst the Hands,

July 1605.

Froft Iland.

Our meeting againe with the ship. people takena

The tenth day of July the wind being at North North-west, I beeing in a certaine Sound aingong true lands, inching high water I weighed, flood Welf forth of the Found going to Set on the adult lands, inching high water I weighed, flood welf forth of the Found going to Set on the adult, lands between a land high lands which lland at our first comming, we called right fluid, after the name of the hip; we triped on the South fides certaine Warlockes level, whereupon I dispected that the Fraft might be there, commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the commanded the Cummer to floor off 130 per the cummer the cummer to floor off 130 per the cummer the cummer the cummer the cummer the cummer thave the cummer the cummer the cummer the cummer the cummer the cu Peece of Ordnance, they prefently answered va againe with two other. We seeing the smooth (but heard no repore) bore in to them, comming to ap. Anchor in a yery good Sound by them, and found them all in health 'the Captaine being very glad of our comming, for smuch ashee had very much trouble with the company for the caute aforefaid. Alfo in the time of our abfence the people did very much villanie to them in the ship, so that the Captaine tooke three of them; other of them allo he flew, but the three which he tooks he veed with all kindoule, gi-uing them Mandillions and Breeches of very good clock, allo Hole, Shore and Shitts off his own backe. This afternoone, I with my Boy came againe about the thip, taking in this Euening all our prouition of water.

all our probation of water.

The element day, the wind being at North North-zil, we fet faile for the of the Saund which 40 we named First Saund, but before our comming forth of the lame our Captaine commanded a young main whose name was 10 to the Saund out of the Saund which 40 young main whose name was 10 to the Training and 10 to the Saund of the Saun course South South-west till fixe aclocke when wee were among it much Drift Ice, being to leeward two points vpon our lee-bow, fothat I was forft to lie off Well North-west till we were 50 cleere of the same, at which time I directed my course South-west and by South, wee Lyling so

many good Sounds and Harbours.

all the night following.

The twelfth day, the wind at North North-east, were went away South-west and by South I ne twetten day, the wind at North North-eat, wee went away south-weit and by some till ten a clock, when we were amonged more Drift kie, wee buying again to lie We feld North-weit, to get cleere of the fame, which we ill a bout nione, we having this day and the Eurning before a mightie hollow Sea, which I thought to be a correct, the which letter thorow Prime, ron feiting, to Dank to the Southwards, as by experience I proud; first making obfiguration this day at notine, the southwards of 66. Address of the southwards were so that the southwards of the southwards we come to define of 66. degrees 10. in mores, launing made by account south and by Well way about ten leagues. This afternoon I directed my court south south with the wind as before, we frected full South and by Well, being a noone in

the latitude of 60. degree 17, minutes, going at the lame time away South and by East. This foreist current I did find to let along if the Coaft of Governed South and by East. The fourteenth day, close weather, being an easie gale we fitering South-east and by East. The hiterenth day,

fill close weather til noone, we steering as before, being in the latitude of 59. degrees. This day at noone I went away East South-east; this afternoone it was halle and still weather, when we had fight of some Drift Ice. The 16. day, close weather with the wind at North-west and by West, Drift Ice our course East South-east til about ten aclock, when we met with a mightie bank of Re to wind- A mighty bank our court e art Sourt-ear chaoous cut account on the whole what a might beauth of sec to wind a might base ward of vs, being by supposition feven or eight leagues long, were flering South South-eaft to of fice. South South-eaft to a first cleer of the fame. We met all along fit his loes might is full of Whales. Moreover, we A great cut effect with a great cutrent, which as night as we could suppose, feet West North-west over for A-Whales. merica. This day at noone, the weather being very thicke, I could have no observation, this Eucning by reason of the Ice, wee were forced to Iye South and by West, and South South-

To west, to get cleere of the same, amongst which we came by divers hoge Ilands of Ice. The feuenteenth day, being cleere of the Ice, about foure in the morning, I directed my A great cucourfe South-east by South till noone, at which time I went away East and by South, the weather being very hayse and thicke: about midnight it fell calme, the wind comming vp Easterly. The eighteenth day, the wind still Easterly, welving East South-east, away vinder a couple of courses larboord tackt. This day in the forenoone, we faw certayne llands of Ice. The nine-

teenth day, the wind full Eafterly with the weather very hafie.

The first day of August also is was very thicke weather, with a faire gale at South-west and by West. This forencome wee met with a scull of Herrings, fo that I knew wee were not farre from the Iles of Orkney, to having a thrinke at noone, I found ve in the latitude of 58, degrees 40 40. minutes, at which time I founded with the deepest Lead, finding 42. fathomes redde sandie ground, with some blacke dents. This Euening betweene fine and sixe a clocke wee founded againe, when we had no more but twentie fathomes dent ground, whereby I knew that we were faire by the shoare, when some of our men looking forth presently, espied one of the Ilands of Wefell with Orkeney, it being very thicke, wee cast about , and stood with a small sayle to Seaboord againe. Orkeney. welving West North-west off all this night.

The tenth day, about five in the moning, we came thwart of the Caffle of Elfonore, where we discharged certaine of our Ordnance, and comming to an Anchor in the Road, the Capetain with my false went assumed as he aring of his Rajesties being at Copumer-Hauer, were presently went about against, and set sayle comming thirther about two a clocke. The Pinnasse also 30 which he had loft at Sea, in which my Countreyman Ishn Knight was Commander, came also the same night about foure a clocke, both they and we being all in good health, praifed bee Almightie God. Amen.

CHAP. XV.

The fecond Voyage of Mafter I AMES HALL, forth of Denmarke into Groenland, in the yeere 1 606. contracted.

E departed from Copeman-Hanen, the fenen and twentieth of May, in the yeere of our Redemption 1606, with foure ships and a Pinnafe. The Frost beeing Admirall, wherein went for principall Captaine of the Fleet Captaine Godske Line Godske Lindens, deno a Danifb Gentleman with my felte, being under God Pilot Maior of the Fleet. In the Lyon which was Vice-Admirall, went for Captaine and Comman-

mander, Captaine Iohn Cunningham a Scottill Gentleman, who was with me the yeere before. Captaine Can-In the Tewers went Hans Brown, a Gentleman of Normay. In the final thin called The Gilleflowre, ningh went one Caftine Ricker fon a Dane. In the Pinnaffe called the Car , went one flipper of Andre Ham Blowne a 50 Noll, of Bergen in Normey. So by the prouidence of God, were weighed and fee faile about fixe Normey. a clocke in the Euening, with a faire gale at South South-west, comming to an Anchor in Elfo- Richarlena moure Road to take in our water.

The nine and twentieth in the morning, we shot off a Peece of Ordnance, for all the Cap- Andres Not of taines and Commanders to come aboord of vs, who being come, our Captaine commanded the Bergen. Kings Orders to bee read, which done, they returned aboord, at which time wee weighed with a faire gale at East North-east, standing away North and by West till I had brought the Cole North-east and by East off, when I steered away North North-west, and North-west and by North. This Euening about five a clocke I fet the Annold it bearing West halfe Northerly, three leagues and an halfe. All this Edening wee stood away North-west and by North.

The thirtieth day, the wind at East South-east, wee steering as before, this morning about fixe 60 a clocke, the Lefeld bore West and by North of vs sixe leagues off. At fine this Evening, the Seaw bearing West South-west fine leagues , I directed my course West North-west, with the wind at North-east and by East,

The one and thirtieth in the morning, very halie weather with a stiffe galeat East North-

morning, haung a fresh gale at East North-east. About eleuen at noone, I fet the Nafe of Nermay, it bearing North North-well fours Jeagues off. The fourth day in the morning about two a clock, we were raire by the high Land of the Teddee, I caufing to cast about stood to the Southwards, Well and by South and fometimes Wells. This day at noone, I found my felfe in the late. tude of 57 degrees 45. minutes , the Nate of Normay bearing East North-east two and twente leagues off. This day at noone also I cathabout and stood to the Northwards, lying North with 10 the stemme, having the winde at North North-west. This afternoone died one of our Grein-One of our landers called Oxo. All time quening, and the night following, the windens before, we lying al-

io North with little winde. The fift and fixt moftwhat

The fewenth day, the winde at South-weft and by South and South South weft , we fleering West and West and by North. This day at noone we were in the latitude of 92. degrees 40. minutes. The tenth day about foure in the morning, it began to blow a fresh gale at Kast and by South, at which time we flood along it the Land to the Southward, till I had brought the South Head of Shotland, called Swinborne Head, North-west and by North about three leagues off: and Faire He next hand South-west and by South eight leagues off, at which time I directed my course away West with a fresh gale at East South-east about halfe an houre to three. I fet the 20 South head of Shotland it bearing North-east eight leagues off, Faire Hetiext hand South-east feuen leagues off, foule next hand North foure leagues, wee still steering away West with a fresh gale at East South-east. All this afternoons and the night following it was very thicke and ravnie weather, the winde continuing as before. This night at midnight dyed the Groenlander which we had aboord vs, named Omeg.

der dyed.

Shor'and.

The fourteenth day, the winde as the night before a faire gale, we steering as we did before, with hayfie weather haning a fhrinke, at noone I found ws in the latitude of 58. degrees 40. minutes, having made a West and by South way Southerly two and thirtie leagues, differing to the Westward from the Meridian of the Nase 19. degrees 45, minutes. This atternoone we had a faire gale at South-east with thicke weather, we steering away West.

The fifteenth day, the winde as before, we steering away West, being by my imagination in the latitude of 58. degrees 40. minutes. The three and twentieth day, the winde at the Northeast a faire gale, we steering betweene the West North-west, and the West and by North, being at noone in the latitude of 56. degrees 10. minutes, having by reason of a Northerly current contrarie to my expectation, made a West way Southerly two and twentie leagues. The Compasse also as I doe suppose, being varied more then a Point to the westwards.

The first of July wee saw Land being eight leagues off, with a great banke of ice lying off South-west, wee setting our tacks abourd haid befreat and by South and East South-east, to double the fame, about two a clocke having doubled the fame, were went away West and by South all this evening and night following. This Land I did suppose to be Buffe Iland; it lying 40 more to the Westwards then it is placed in the Marine Charts.

The second day thicke weather with the winde at North-West, we steering West and by North. This afternoone we were in a great Currenz fetting South South-west. The which I did suppose to set betweene Buffe Hand and Freseland over wath America; wee steering West North-west with a faire gale at North. This night about nine a clocke, the Pinnasse came soule came foule of of the Vice-admirall, where with her anchor thee tore out about a foot of a planke a little about water, and broke downe the beakes head.

the Lion. Variation ob.

The fixth making observation, I found vs in the latitude of 58. degrees 50. minutes, contrarie to my expectation, whereby I did fee the Southerly Current to bee the principall cause. The feuenth day, the winde at North and by East, we lying West North-west, being at noone in the latitude of 59 degrees 40. minutes, our way North-west two and twentie leagues. This ene-50 ning I found the North Point of the Compaffe to be varied 12. degrees 5. minutes, to the Wellward of the true North.

The eight day, the winde came vp more Southerly betweene the South-west, and the Southwest and by West with an easie gale, we steering away North-west and by West; being at noone in the latitude of 50. degrees 30. minutes, having by reaton of the Current and Variation made a Weil way Southerly about ten leagues.

A current fetting South-Sight of Ame-

The ninth day clote weather, it being calme all the forenoone, wee perceining by our ships which lay becalmed, a violent Current tetting South-west. This day at noone, we were in the latitude of 59, degrees 40, minutes. The tenth about foure in the morning, the winde came up to 60 the North North-weit. I cathing about flood to the Weitwards, lying Weit with the itemme, being in the latitude of 60, degrees 16, minutes. We saw the coast of America about nine leagues off, at which time I made obleruation of the variation, and found the Needle varie 24. degrees go es and 300 to the Westwards of the true North.

CHAP. 15. Obsernations of Currents and Variations in Groen poyage.

The Hillrops were covered with flow and the house to the Northwards full with Ice. but to the Southwards it feemed cleere; Here I found a great Current to fet West into the shoare. A Current which about midnight did bring vs to one incumbred with very many llands of Ice, having much to die toget cleere off the lame withour danger : but by Gods helpe it being faire weather with a freshigale at South-west, wenger cleere off the same, standing East South-east and South eait anuby Eaft.

The four cetath in the morning being cleere of the Ice. I went away East North-east and North-east and by East till eight a clocke, when I directed my course North-east and by North , being an noone in the latitude of 19 degrees, the Cape or Head land which wee faw that night bearing West South with increene leagues off. All this afternoone and night following it was tou chemost pare will weather : chis evening I found the variation 23, degrees 55, Variation the

The inteendheaire weather with a fresh gale at East South-east, our course as before, being in the latitude of 60, degree, 201 minutes, the ships way North and by East northerly twentic leagues. This afternoon eaudithe night rollowing the wind as before, we fleering fall. Northeaft and by North.

The eighteenstrallo thicke steather, being forcel to stand away North North-west to double a great hanke with great Mountaines of Iceanmost incredible to be reported, yet by the helpe of God wee ralleuthe fame, Jayling allthis day by great and huge mountainous Ilands of Ice,

20 With the whate at South-weef and by South; being at noone in the latitude of 63. degrees 45. minutes. Wee and fee our Isloes befet round about with mightie bankes of Ice, being forced to Compaffed make-more taile; and to lye to and againe all this night to keepe vs cleere of great and small about with see. Hands of ive, where many times we were in fuch danger, that we did looke for no other thing then present dwath, if God mad not beenemercifull vnto ws and fent vacleere weather, where by his artiftance we kept our felues very hardly and with great difficultie cleere of the Ice. The nineteenth day in the morning cleere weather with a fresh gale at South-weft, wee

plying amongst the Ice to fee if wee could get a gut to get cleere of the same, at which time wee law the Land of America about the latitude of 64, degrees, it lying next hand South and Land of America North, being high ragged Land couered with fnow, the shoare being all befet with Ice. So vice. are lying off and on a nongit me Ice in great pegal till about noone, when God of his goodnesse

fent vs to elpie a little gut where wee went through, and flood South South-east away, comming fill by many Ilanis of fee. Heere I did finde both by my course and reckoning ( the variation also of the Compasse respected ) that wee were carried with a mightie Current to the Amighie cur-Westwards, as both now and atterwards wee did probably prooue and see the same. For I set rent setting to ting my course from the coast of America in the latitude of 58. degrees and a halfe for the coast the westward, of Groenland North North-east with a compaffe, whose wyers were placed more then two third parts of a Point to the Eastwards of the North, the variation being 23. degrees: 30. minutes Northwesting and 24. degrees, as by observation I found betweene the latitude of 58. Note, and a halft and 54 degrees, yet I did finde my felfe contrarie either to mine owne, or to any of 40 their expectations which was in the Fleet with mee, carried almost foure Points with the Cur-

rent to the wellwards over our indgements. The twentieth, wee still layled to the Eastwards by many great Bankes and Hands of Ice, Here I did give The twentieth, wee still tayled to the Eastwards by many great saints and times direction to being still compassed in , wee being forced to stand to the Southwards to get cleere, where the other steers being sometimes becalmed, wee did plainly see and perceive our selves carried into the Ice to manto direct the westward very violently. This Current setteth West North-west. The twentieth in the their course

evening I found the Compasse varied 23. degrees. The one and twentieth day in the morning faire weather, wee efpyed a gut through the Variation obkee, it feeming cleere to the fouthwards of the fame, where bearing into the fame about noone, wee were cleere of all the Ice by the mercifull prouidence of God. Here I observed the latitude, it being 63. degrees 33. minutes. Now having the one and twentieth day at afternoone

caused the Admirall to call the other Captaines and Steermen aboord, with whom wee might conferre, and having shewed briefly my reckoning with the other events, which contrarie to my expectation had happened, the cause whereof at that instant they did plainly see and perceiue: They confessing, the Current as they did now plainly see, to bee the cause of the same. The Current, So having done; I gaue to the other Steermen directions, that being cleere of the Ice they should goe betweene the East and the East and by North over for the coatt of Greenland and not to the Northwards of the East and by North, because of the former events. And now at this instant, by Godshelpe, being cleere I called to them, giving the fame directions. This afternoone and the night following it was calme. This evening I found the Compaffe varied 23. degrees 25. Variation ob-

The two and twentieth day at noone I found vs.in the latitude of 63. degrees so. minutes. The three and twentieth faire weather, the ayre very cold, as with vs in the moneth of Iamuarie, the winde variable betweene the East North-east, and the South-east and by East, being at noone in the latitude of 63, degrees, having made a South-east and by South way

eleuen leagues. This day at noone I cast about to the Westwards, the other ships doing the like; lying North-east and by North with the stemme, finding this evening the Needle varied to the Variation ob-Weltwards 23. degrees 30. minutes.

The foure and twentieth, the winde variable betweene the South-east and the Southeaft and by South with raine and fogge. This day about eleuen a clocke wee did fee much lee to Iceward, wherefore I cast about to the Southwards, the winde comming to the East Northeaft, were lying South-eaft with the flemme, supposing the stip to have made a North and by West way hale Northerly two and twentie leagues. This aftermoone, by reason of the forget we lost fight of the Lise and the Gilliftowre, wee looking earnefily forth for them, and shooting both we and the Uris divers pieces of Ordnance, but wee could neither fee nor heave them . as 10. which time the winde came up Southerly, we standing away our course betweene ahe East and East and by North.

The fine and twentieth , wee had light of Greenland , being about ten leagues to the Southward of Queene Ames Cape. Wee flanding away Eaft South-east in with the Land with the winde at South. All this night it did blow very much, wee thering North by West and North North-west. The seven and twentieth day in the morning was reasonable cleere weather with a fresh sale

at South South-west. This morning betweene foure and fue of the clocke, I espyed Queene Annes Cape to beare East by South next hand of mee, and King Christians Foord South Southeaft of me , being thwart of Romels Foord , Queene Sophian Cape bearing North halfe westerly , 20 about fine leagues off. Therefore I thought it concenience to put into Campanghama: Foord where the filter was, both in regard that I had fwome to his Maieflie as concerning the fame; and also because were experificly commanded to being home of the same. So having a saire gale at West South-west, were came into the ascressid Biner, anchoring in a very good Sound, hard by the Vrs in fixteene fathoms , at the mouth of Camminghame Foord , about five of the clocke. There came pretently foure of the Countrie people vato vs after their old accustomed manner. This evening about time of the clocke the Vriss anchored by vs. This night the Admirall, my felfe, and Captaine Browne went on Land to fee the Myne of files : where it was decreed, that we should take in as much thereof as we could.

On Sunday the third of August, the Sauages feeing our curtefie toward them , bartered Seales 30

Barter for and Whales

The filmer

The place of

skinnes and Whales finnes with vo : which being done, wee went to our Boat, and rowing away, three of them taking their Boats, rowed with vs vp the Foord, calling to other of the people, telling them and making figures to ve , of our dealing towards them. Then they also came to we and bartered with we for old Iron and Knines, for Seales skinnes and coates made of Sealer skinnes, and Whales finnes, and rowed fill all with vs. In the end, having sowed fine or fixe leagues up the Foord, and feeing it to bee but a Bay, were returned alongst many greene and pleasant llands, where wee found good anchoring: the people still followed vs to the number of fine and twentie persons till about fixe of the clocke; when it fell thicks with fome raine, and the winde being Southerly, wer rowed in among the Sounds, at which time they went from vs : wee rowing our Boat to one of the Bands went to supper. And having 40 Another foord, supped, wee rowed some three leagues up an other Foord, where we found very shallow water. in which place we stayed with our Boat all that night.

The fourth day in the morning about three of the clocke, wee returned to our thio assine with a gale of winde Southerly, being fomewhat thicke and raynie weather, fayling by the Seeine Land among the Hands, till we came three leagues to the Northwards of Queene Sophia Cape, when going without the llands, wee met with a very high Sea, fo that wee had much to doe, but by the prouidence of Almightie God , the Boat was preferred from being (wallowed vp of the Sea. In the end, wee got againe among the Ilands, and to about noone wee came to our thins. The fift day, fome of our men went on Land among the Mountaines, where they did

The fixt day, I casting about, stood into the shoare South-east, till wee had brought Ramels Foord Eaft and by North off vs , bearing roome for the fame Foord. There goeth a very hollow Sea betweene the Hands of the Kings Foord and Ramels Foord. The winde being somewhat still, wee towed on head with our Boats till wee came thwart of a Bay, in which I was in the Vrius Boat, which I named Fos Bay, after the name of Philip de Fos , Pilot of the Urine But the Admirals wilfulnesse was such, that I could by no meanes counsaile him therein though night were at hand, but hee would goe up the Foord, till wee came on the starboard side of the Foord to fixe and twentie fathomes fandie ground. The Frm let fall anchor by vs , but the winde comming off the Land (our Captaine and Companie being to obflinate and willfull, that I could by no meanes get them to worke after my will ) the thip draue into the mid- 60 in the middest foord, where wee could have no ground at an hundred fathoms, till the Tyde of flood came, when the flood fet the ship to the shoare : but I laying out a Cage-anchor got the ship off; and fetting our forefaile, flood for another roade up the River.

The eight day about fourein the morning, wee came to an anchor in eventie fathomes fandie

ve le flowerh in this River South-east and North-weits sand at Randoth in the latitude of 65. This day was for the most part calme, and sometimes wee had a fresh gale of winde : our course was West and by South, halte a point Southerly. This day I passed by two small Hands. Two small 40 The one of them is called, the Clete, and the other the Res. They are diffant foure leagues the one Hands. from the other. The course betweene them is South-west and North-east. The Southermost is called the Clete, and is the leffer of the twaine : it is diffant from the North-east part of Lewis, called the Bing-head, feuen leagues : and the course betwixt them is North-west and South-east. The Bing-head Alio this Bling-bead is distant from the Farro Head, of the Hieland of Scotland West and by the Northest North halfe a point Westerly, and is distant seuenteene leagues. Also the course betweene Bling- parto: Lenis. bead and the North- west part of Lewis, is West and by South halfe a point Westerly, and faire low Land without Wood. There is good riding all along the thoare, the winde beeing off the Land, and in some places are very good Harbours for all winds. From eight to twelve at night, we ran fixe leagues West South-west.

This morning we had a fresh gale of wind at East North-east ; our course was South-west and by West two houres fine leagues. From two to ten South-west, and by South 20. leagues. From ten to twelue West South-west fixe leagues. The latitude at noone was 58. degrees 27. minutes. Fifty eight de-

From Wednesday at noone till Thursday at noone, was for the most part raine and fogge, the grees 27.min. wind at North-east and by East : our course was West halfe a point Southerly : our latitude at noone being Thursday, 58. degrees 23. minutes. From Thursday at noone till Friday at noone, being the fixteenth, our way was West Southerly about twentie leagues : the latitude at noone was 18. degrees 19. minutes. This night the wind was fometimes variable betweene the South and by Well and South-east, with faire weather, the Magneticall Declination 18. degrees : the height of the Pole was 98, degrees 10, minutes. Also in the morning the Sunne beeing tenne Eighteene de-60 degrees about the Horizon, was diffant from the Eaft to the North-wards of the Eaft twen-

From Friday at noone vntill midnight was little wind Southerly, and fometimes calme, and from midnight till twelve at noone the next day a fliffe gale of wir dat East North-east. This four and twentie houres I judged our way to be made good West, something Southerly thirrie

leagues. The latitude at noone was 38, degrees 10. minutes. Also the summe did rise fiftie degrees to the Northward of the East.

From Saturday at noone being the fewenteenth, till Sunday at noone being the eighteenth, our course was West and by South a shifte gale of wind sistic leagues, being close weather, we made

From Sunday at moone till Munday at moone I fteered away West and West and by South, ha uing a ftorme at East and by North: our courfe was West and Southerly fiftie least From Munday at noone till midnight, our course was West and Southerly and from that

time till noone West and by North and West among. I judged wee sayled fortie leagues these 10 foure and twentie houres, being for the most part foggie. The latitude at moone was 57. degrees

From Tuesday at noone till noone on Wednesday, our course was West and by North fortie A current to the Narihward fine leagues, being foggie weather without observation. Here wee had a current, which I indoe fetteth to the Northwards.

From Wednesday at noone till Thursday at noone, being the two and twentieth, our course was West and by North fiftie leagues with much fogge and close weather; and much, winde at North-east and by East.

From Thursday at noone till midnight, our course was West and by North. Then the winde came to the North : wee tooke in our mayne course, and I spooned away with our fore-faile till Friday , the winde being at North North-east , I judged our way West South-west , the 10 twelue houres that I spooned about fifteene leagues, the other twelue houres West Northerly fine and twentie leagues. This three and twentieth day, wee faw many Gulles and much

Many Gulle: Rock-weed. A current to

From Friday at noone till Saturday at noone, I judged our way to bee made South-west and by West, but it proued West and by South, rather Westerly, twentieleagues by reason of a current, that I judge setteth to the North-eastward. The latitude at noone was 57. degrees 53. minutes. The variation of the Compaffe was about a point to the Westward. This forenoone and all night the wind was at Northa very hard gale; wee spooned with our fore-sayle. Also this forenoone, we law much Sea Tange and Rock-weed.

An Owle.

From Saturday at moone till Sunday at noone, our course was Southward about twente 30 leagues, the wind being Northelly. This day we saw much Rock-weed and Drift-wood. The latitude was fiftie feuen degrees. The variation was to the Westward thirteene degrees or thereabout. The funne being five degrees high in the morning, was twentie foure degrees to the Northward of the East.

From Sunday at noone till two of the clocke the next day in the morning, beeing Munday, our course was West North-west, we made our way West and by North twentie leagues, hauing a tresh gale at South-east and by East : it fell calme till foure of the clocker then it blew an ease gale at West South-west, wee stemming North-west, &c. betweene that and North Northeast the wind being variable. The wind freshed toward noone, This morning we saw an Owle,

The latitude at noone the eight and twentieth, was 57. degrees 57. minutes. The variation 40 of the Compafe was fourteene degrees and an halfe to the West. This day wee had blacke water, The variation and many ouer-falls, streame leeches, and fets of currents, as it seemed to the Northward, and 14 degrees and fome to the Westward.

an halfe to the The thirtieth, we found our latitude to be fiftie eight degrees. Heere it seemed that we were Fiftie eight de. in a tyde gate, which I judged to fet North and South, or that it was the Eddie of the currents, which we saw the other day. Also wee saw white Fowles, which cheeped like Spar-hawkes. grees of lati-Also we saw driving many dead Cowes. White fowles, Dead Cowes.

The one and thirtieth, the funne being fiftie degrees about the Horizon, I found it to bee twentie seuen degrees to the Eastward of the South : againe in the afternoone, the sunne beeing fiftie degrees high, it was distant from the South to the Westward fiftie one degrees : at noone 50 it was 55. degrees 6. minutes, the height of the Pole was 58. degrees 3. minutes. The variation of the Compasse was twentie foure degrees toward the North-west, Our way made these twentie foure houres was not aboue fixe leagues Weft, being little wind for the most part.

From Saturday at noone till two of the clocke it was calme: then it began to blow an easie gale at North. At night I observed the sunne setting, and found it to set twentie one degrees to the Westward of the North, the winde continuing variable betweene the North and the West North-west till noone, being the first of June. Then I found my selfe by observation to be in the latitude of 57. degrees 35. minutes. I judged our way from noone to noone West and by South or thereabout thirteene leagues.

From Sunday at noone till ten of the clocke the fame Euening, it was calme. Then it began 60 to blow a stiffe gale of wind at South South-east. Our course was West till noone, the next day being Munday, twentie three leagues. This day wee faw many blacke Fowles like Willockes flying in flockes together.

The fourth my latitude at noone, was 36. degrees 40. minutes. The latitude next day at

noone was faftie fixe degrees. The variation of the Compaffe by the Scale was twentie degrees, Latinde co. and by my osher Inflrument twentie foure degrees to the West. The sume was twentie two degrees. degrees and an halfe high, and to the North of the West that ie degrees by the Inflorment, and Variation 2 twentie fixe degrees by the Scale,

Our lasteude at noone she sherenth, was fiftie eight degrebs. And at night the funne did fet wird. fourteene degrees to the Weftward of the North, and did sife fiftie degrees to the Entward of Finy digit des

The chirocenta, the Ice feemed to be disperfed thinner with the wind, of lome other actident: then I fet fayle with our two courses, but was forced to take them in agains, and moored to another ther great Hand of Ice, about mide so the Weftward of the ories Here ferrett foriet mal oursus A fmall curto the South-berftward. For the great flakerof fee that webe fornewhat despidratero the South reproche ward, and the other finall Low bich was florie drain with the wind, which was variable betwine South-well. the North-weft and the North. From Friday at moons call eight of the chocke as night; ower learnings of moored call the degree. faid Ice : then it fell calme; and I knowed and sowed so the West ward with our Oares, hepine to get thorough, till twelve of the clocke, then the lorgery very thicks. I moored against till foure of the clocke the next morning. Then we sowed and fayle bwith an eafle gale of wind till eight of the clocke the next morning being Saturday. Then it began to blow a fresh gale Eatherly, and 20 we cunned the ship among the ace with our Oares till noone. Our latitude was fiftie eight de-

grees. From Saturday at noone till midnight wee guided our shippe to the Westward amone the Ice with our Oares, hoping to get though; but wee were fuddenly compiled about with many great liands of Ice, and continued so diffreded with a fore forme of wind at Southeasth, beauny great liands of Ice, and continued so diffreded with a fore forme of wind at Southeasth, beauny great liands of Ice, and continued so diffreded with a fore forme of wind at Southeasth, beauny great liands of Ice, and continued so diffreded with a fore forme of wind at Southeasth, beauty and the southeasth of Ice, and continued so diffreded with a fore forme of wind at Southeasth, beauty at the southeasth of Ice, and continued so diffreded with a fore forme of wind at Southeasth. ing foggie and thicke weather twe were fo bruifed betweene mightie great Hands of lee, that we were in danger enery minute to be crushed in pieces with force of the heaving and fetting of the faid Ice with the great Sea that the wind made, had not God of his mercie prounded for var for our owne endenours did little auxile to our helpe, though wee employed all our industries to the vitermost of our powres. The nineteenth, we described the Land of America, which rifeth like eight Hands athe Nor- The Land of

thermost part of it did beare North and by West about fifteene leagues from vs. I observed the America def-30 latitude, and found my leffe to be in 56, degrees and 48, minutes. The variation of the Compaffe cryed in 56, latitude, and found my leffe to be in 56, degrees 42, was twentie fine degrees to the Westward. All this Coaft the weeth like broken Land or Illands; minutes. and the tyde of floud commeth from the Northward.

Tuesday the foure and twentieth all the morning, there blew a frome Northerly, and such a sheweth like fuffe of the Sea, and fo much Ice came in, that our fafts brake that were faft on floare, and our broken lization Rudder was driven from our sterne with the force of mightie Hands of lee; to that we were forced to hale close into the bottome of the Coue to faue our clothes , furniture and victuals : wee did our best, but before we had done, our ship was halfe full of water : the night comming vpon vs being wearie, we tooke a little reft.

On Wednesday, we went hard to worke when the thip was on ground, to get the water out of her, and to ftop io many of her leakes as we could come by, and to faue fo much of our bread as we could; and some went to building our shallop. Also I caused our Boate to be lanched our the Hand; and fent my Mate Edward Gorrell, with three others, to feeke for a better place where Edward Gorrell to bring our ship on ground, if it were possible, to mend her againe. But they returned without the Masters any certaintie by reason of the abundance of Ice, which choked every place. They found wood Marc.

growing on the shoare. Thuriday being faire weather.] Here Mafter Iohn Knight ended writing in this Iomrnall. On this Thursday the fixe and twentieth of Inne in the morning, our Master caused some of our men to goe aboord our ship, to said what things they could. And hee and Edward Gorrell his M. Iohn Knight Mate, and his brother, and three more of our Company tooke the Boate, carrying with them with flux more foure Piltols, three Muskets, fine Swords, and two halfe Pikes for to goe oner to a great Hand, a great Hand, which was not about a mile from our ship, to looke if they could find any Harbour or any Coue, where he and to get our (hip into for to mend her. Also he carried an Equinoctial! Diall with him, and pa- three of his per to make a Draught of the Land. When they were paffed ouer to the other fide, our Mafter, his company feem

per to make a Draught of the Land. When they were paged ouer to the other inde, our matter, mis to have bin ins. Mate, and his brother, and one more went on shoare, leaving two of vs in the Boate with one recrepted by Musket, one Sword, and an halfe Pike to keepe it : which two flayed in the Boate from ten of she Sauages. the clocke in the morning, untill eleven of the clocke at night, but could heare no newes of them after their departure vp into the top of the Hill. Then did the Trumpettor found two or three Their Trumtimes, and the other did discharge his Musket two or three times, and so they came away to the Pettor. 60 other fide to the West of the Company, where the ship was : where they were watching for our comming; who seeing vs two comming and no more, they maruelled where the rest of the company were. When wee came on shoare, they enquired for our Master and the rest of our

company. But we could tell them no newes of them after their departure out of the Buat, but

that we did fee them goe vp to the top of the Iland. Which report did firike all our men into a

The variation of the Compalfe 24.degrees North-

great feare to thinke in what extremitie we were, because we did want our Matter and three of our best men, and our Ship lay funkey and we had nothing to trust to but our Shallojs, which was not at that time halfe finished. This night lying carshoare in our Tent; which was betweene two Rocks, we kept very good watch, for feare of any peoples fudden affaulting wives or if our not paffe is the Mafter and his company had travailed fo farre, that they could not come againe that night, and would shoote a Musket, that wee might beare them. But they came nor at alla-

The next day being Friday, and the feuen and twentieth of Iune, wee confulted to goe ouer fenen of va with our Boate; to try if we could fee or leanie any news of our Matter, or any of our 10 men; forwe were afraid that they were either furprifed by the Smages of the Countrie, or elfe denoured by the wilde Beafts. So we tooke with referen Munkets, and Swords, and Targets, and fuch prouision as we had in the Ship, and went downe to the Sea fide, but wee could not get on tuer for Ice: At length wereturned, with much adoe to get on shoare, land went to our Ship, to

fage what things we could all that day. !-

On Saturday, the eight and twentieth, we did likewise saue what things we could, and gatall our thingsout of our Ship, and made her cleane in hold, having faire weather, keping in God to faue her, and to mend all things, as well as we could; for the lay woon hard rocks: wherefore to save ner, and to make the could, for heating and bruifing of her hult. That night about nine of 20 the clocke, it began to raine very fore, and so continued all night; and about one of the clocke. at night, our Boate-Swaine and our Steward being at watch, and their watch almost out, the Steward went aboord the Ship to pumpe, leaving the Boate-Swame at watch fome Musket fhot The Sauages of length from our Tent; while he was in pumping, there came ouer the rocks a great fort of the Countrey people toward the place where the Boate-Swaine was: who when they faw him. they shot their arrowes at him, running toward him as fast as they could. Whereupon hee difclocke arnight, charged his Musket at them, and fled to our Tent as fait as hee could, thinking they had befet vs, they were so many of them in light. The Steward hearing his Musket goe off, came out of the Ship, and as he was comming, faw the Sauages running to our Shallop, and cryed out to vs that were afleepe in our Tent, to come to rescue the Boate-Swaine, and the Shallop. We made what hafte we could; when we came towards them, and faw fo many of them in our Shallop, we were afraid we were betraid. At this time it rained very fore ; yet calling our wits together, we fent two of our men backe vnto our Tent, the rest of vs made toward them, and shot at them fome three or foure Muskets : who when they faw vs shoote, they stood in our Shallop, and held up their hands untous, calling one to another. Then thought we with our felues, that we were better to dye in our defence in pursuing of them, then they vs, being but eight Men and a great Dogge. When they faw vs marching toward them fo fiercely, our Dogge being formoft, they ranne away : but we durfenot purfue them any further, for it was in the night, and they were in fight abone fiftie men. Thus we recovered our Shallop. Then we fent fome more of our men to our Tent to keepe it; and the rest followed toward the place whither they fled. But 40 before we could ouertake them, they were gotten into their Boates, and were rowing away through the Ice; which was fo thicke, that they could not passe away, but stucke fast; for their Boates were very great : wee feeing them flicke fast in the Ice, fome fetting with Oares, and fome rowing, came fo neere them, as we could, and thot at them some dozen shot, before they could get cleere: which that caused them to cry out very fore one to another; for their Boates The description were full of men As farre as we could indge, they be very little people, tawnie coloured, thin or of the Sauages no beards, and flat no fed, and Man-eaters.

Very great

Aboue fiftie Sanagesin

· On Sunday, the nine and twentieth, all day long we gat fuch things as we could abourd our Shippe, for feare they should come ouer with more men, and befet vs, our Ship lying betweene two great Rocks, and all without so full of Ice, that we could not passe any way to Sea, no not with a Boate. That day, two of our men kept watch vpon the Rocks, to give vs warning, if they did come over with Boats. Then did our Carpenter make what shift hee could with our Shallop, and did tench her in some places, but neither calked her, nor pitched her. Then did wee take her, and bring her downe close to the Shippe, and there shee did stand all

On Munday, the thirtieth day in the morning we went to worke to cut the Ice with Axes and Pick-axes, to get our Shippe; for all about the lland was nothing but Ice, and no place to ride free neither with Shippe nor Boate. That night it pleafed God, that wee got her out, and came away rowing with our Oares; but she was exceeding leake, and our Shallop too; and, which was worfe, we had neuer a Rudder to stirre our Ship withall. Wee rowed allthat night among

The first and second dayes of July, we continued also rowing up and downe among the floring and driving Ice, with little hope of recovering our Countrey.

A great Cur-

The third of July, we had a gale of winde at North, and a great current fetting to the Southward: Then made we fast our Ship to an Iland of Ice, and went to worke, and to stow her things within boord, to make her stiffe; for wee had neuer a whit of balast in her. Then did our Carpenter make what thift he could, to hang our Rudder, having nothing consenient in our

Ship to make Gudgins, nor Pintels. Then were we forced to breake open our Maiters Cheft, and Ship to make Glogins, nor Pinters. Then were we to take all the Iron bands off it, to make fast two Pick-axes, for two Pinters, and to binde our final Iron pins Rudder withall. So, as it pleased God, that night we hanged our Rudder, hauing but two Pin-made faft to tels and a Cable through the middle of it, to keepe it to with two tacks. Then were we in good the Rudder. hope to get cleare of the Ice, because wee had some steerage, though it was but bad : for before, and bung the we durft beare but little fayle, our Ship being fo leake, and her stemme to fore beaten with the Rudder to the rocks and Ice, and having no feerage, but were forced to rowe with our Oares, till wee were all Stern-post, &c. fore and weary.

The next day about tenne of the clocke in the morning, the winde came to the West North-The next cay about terms of the there are a state and by North, to get vs out of the Bay:

So west, and was faire weather . So we steered away East and by North, to get vs out of the Bay:

They get out And at noone, the watch being out, which was the third watch that we had after we came out of the of the Countrey (for before, continually we did watch all, to keepe our Shippe cleare of the Ice, where they as there as we could) we begin to Pumpe our Shippe, but could not make her fucke in a thou-rode find strokes, if the had frood but one half shoure vapumped. Then were wee forced to various age our Ship, to fee if we could finde our leakes. We foom found a great many of leakes, but not that which caused ws to Pumpe so fore. At the last, we found it close abaft our foresoot, whereher keele was fplintred in two or three places, where the Sea came running in fo fail, that it was not Our Shippes possible to keepe her free with both our Pumps, and wee could not come to it to stop it; for it Keelewas foliase possible to keepe ner rece with portiour rumps, and wee could not control to the other to the did we take our maine Bonnet, and basted it with Occom, and three places. are put it out to merboord, right against our leake, which eased vs some foure or fine hundred stroakes in an They consist houre. Then vpon confultation had among our felues, wee refolued to shape our course towards to touch at New Newfound Land, to fee if we could get any place to mend our Ship, hoping there to meete with found Land. fome Englib or French men. At this time we had one of our men very licke, and another had his hand very fore splitted; and most of veall were so fore with rowing and pumping, that we were

frarce able to ftirre, but that we must perforce. The fift of Iulie, wee shaped our course for New found Land, with the winde at West

The one and twentieth, the winde was at South South-west; and we fell with the Land, be- Broken Hands ing nothing but broken llands. Then we flood to the Westward, being in the latitude of 49.de. in 40.degrees 30 grees and an halfe.

The two and twentieth was faire weather, and the winde very variable; and about fixe of the clocke at night, the winde came to the West North-west. Then we steered in among the I- Many broken la lands, to feelf we could finde any harbour to mend our Shippe; for the was very leake. When hadd which we were come in among them, we found nothing but broken llands, and a great current, which were the file. did fer from Hand to Hand, and had no ground at an hundred fathoms. That night we were ve- de Fogary fore intangled with funken Rocks, and in great danger of casting away our Ship, haning very Sunken Rocks, thicke weather : wherefore we kept to and fro all that night. The foureand twentieth of Iuly, in the morning, we spied some dozen Shallops, which were Twelue Shal-

filling fome two leagues from vs. Then wee made what way wee could toward them, &c. lops of Filher-40 We remained in this Bay of Foge, in repairing our Shippe, and refreshing of our selues, vittill men.

the two and twentieth of August. Then taking our leases of our kinde and loung friends, with guing them most hearise thanker for their goodnesses over the property of the season of their goodnesses over the property of the season of their goodnesses over the property of the season and fent word to London vinto our owners, of the loffe of our Mafter and his three companions, and of the dolefull faccesse of our Voyage, the soure and twentieth day of September, 1606. The rest of this Iournall, from the death of Master John Knight, was written by Oliner Browne one of the Company.

CHAP. XVII.

The fourth Voyage of IAMES HALL to Groeneland, wherein he was fet forth by English Aduenturers, Anno 1612. and flaine by a Greenelander. Written by WILLIAM BARRIN.

CHAP. 17.

Ednefday, the eight of July, 1612, in the morning I perceived the Sunne and the Moone, both very taire aboue the horizon, as I had done divers times before. At which time I purposed to finde out the longitude of that place, by the Moones comming to the Meridian. Most part of this day I spent about finding of the Meridian line; which I did vpon an Iland neere the Sea, hanging at the extreames of my Meridian line two threeds with Plummets at them, instead of an index and fights.

Thursday, the ninth day very early in the morning I went on shoare the Iland, being a faire

rence of longi-Graculand.

merning, and observed till the Moone came inst vpon the Meridian. At which very instant. I observed the Sunnes height, and found it 8. degrees, 53. minutes, North : in the elevation of the Pole 64, degrees 20 minutes. By the which, working by the doctrine of sphericall trians gles, having the three fides given, to wit, the complement of the Poles elevation; the complex ment of the Almecanter; and the complement of the Sunnes declination, to finde out the outre ment of the range at the Pole : I Isy, by this working, I found it to be foure of the clocks, 17 oil-nutes, and 24, feconds. Which when I had done, I found by mine Ephemerics, that the Moone nuces, and 24 records.

came to the Meridian at London that morning at foure of the clocke, 25 minutes, 24 records: which 17.minutes, 24.feconds, substracted from 25.34 leaueth 8.10.0f time, for the difference of longitude betwixt the Meridian of Landon (for which the Ephemerides was made) and the Meridian passing by this place in Groenland. Now the Moones motion that day, was 12 degrees 7. minutes : which converted into minutes of time, were 48. minutes, 29 feronds : which working by the rule of proportion, the worke is thus : if 48 minutes, 20 (econds; the time that the Moone comment to the Meridian fooner that day, then the did the day before, give 360, the whole circumference of the earth, what shall 8 minutes to feconds give, to wit, 60. degrees 30. minutes, or neere there abuut : which is the difference of longitude besweene, the Meridian of London, and this place in Groenland, called Cockins Sound, lying to the Westward of This finding of the longitude, I confesse is somewhat difficult and troublesome, and there may

Objection.

be some imali errour. But if it be carefully looked vnto, and exactly wrought, there will be no. 20 great errour, if your Ephemerides be true. But some will lay, that this kinde of working is nor. for Marriners; because they are not acquainted to worke propositions by the table of fignes, and an instrument is not precise enough to finde out the houre, minute, and second. For the hole of one minute of time, is the loffe of 7 degrees of longitude. I answere, that although the molt, part are not vied to this worke, yet I know iome of the better fort, which are able to worke this and the like propositions exactly. And those which yet cannot, and are desirous to learne. may in short space attains to such knowledge as shall be sufficient for such things. And how no ceffary it is, that the longitude of places should be knowne, I leave to the judgement of all skilfull Marriners, and others that are learned in the Mathematicks.

This afternoone it was agreed by the chiefe of our Company, that our Master, Lames Hall, 30 should goe in the smaller Ship, farther to the Northward.

Variation 23. deg. 58 min.

The forelaid Thursday in the evening, he departed out of the Patience into the Harrf-sale, to Cochim Ford in get forth of the Harbor, which our Mafter called Cockim-ford, in remembrance of Alderman Cockim 65, deg. to min one of the Aduenturers: which place, is in the latitude of 65 degrees, 20 minutes. And the variation of the compaffe is 23 degrees, \$8. minutes, to the Westward. That entening was very calme, and we towed our Shippe forth with the Shallops and Ships Boat. But within an houre. or two after we were got into the Offin; the winde being at North, it blew a great floring, which continued all that night.

The foureteenth, our Master turned the Ship vp to the River againe, foward the River where The foureteenth, our matter turned the support to the Australians, provide the Australian the fluor bed, But the type wasto farre (pent) that was outed not get poles, but, 40 were conftrained to Anker in a roade at the South fide of the Riber, force there leaves, from the Patience, in which place are many good Rode, freely to be flower, from the superior grounds, Thursday, the fixteenth day, the winde was a Night, welf, and they of little a provide the support of the superior force of the support could not get to Sea that day. That night, eighteene of vs went into the Handa to looke for

Great footing. forme Deere, but found none. But we perceived the foote-freps of forme great Breat, which wee tome treet, our manners are the treet was as bigge as any Q at long and the treet are true that the treet are the treet are the treet are treet are the treet are tree any meanes get to the Riner, where the supposed Myne should bee. Wherefore our Master bare roome for Ramelsford, being a River Southward of another, called Cunninghams ford, some twelue leagues. And we came to an Anchorat the entrance on the Southfide of the Ford, about

feuen of the clocke.

Wednessay, the two and twentieth day, about nine orten of the clocke, the Sauages came to barter with vs, being about fortie of them, and continued about an houre and an halfe: At which time our Mafter lames Hall, being in the Boate, a Sauage with his Daro frooke him a deadly wound voon the right fide, which our Surgean did thinke did pierce this liner. We all mufed deadly woun-) that he should strike him, and offer no harme to any of the rest: whiesie it were, that they knew him fince he was there with the Danes; for out of that Ruer they carried away five of the people, whereof neuer any returned againe : and in the nexp River, they killed a great munber And it should feeme that he which killed him, was either brother, or some neere kinfman to Ibme of them that were carried away ; for he did it very resolutely, and came within source yards of him. And, for ought we could fee, the people are very kinde one to another, and ready to revenge any 60 wrong offred to them. All that day he law very fore pained, looking for death every hours, and refigned all his charge to Matter Andrew Barker, Matter of the Harts-eafe, willing him to place another in his roome Mafter of the imall Ship.

Thursday, the three and twentieth, about eight of the clocke in the morning he dyed, being The death of tery penicent for all his former offences. And after we had throwded him, wee carned him in lamer Hall. the Shallop, to burie him in some out Hand, according to his owne request while he was liming. After we had burned him, we went in the Shallop to leeke for the mine, which we had expected Queene Sont folong. All that day we rowed along soward the North, patting by a Cape called, Queene Sophia a Cape. Cape. That night we flaied at an Iland, some three leagues short of the River.

Friday, the foure and twentieth, in the morning, wee rowed along, and came to the place, which is on the South-fide of the entrance of Commagnature River: And we found diversplaces, Commingnant where the Down had digged; it was a lande of fishing flone, which when our Goldfmith, River. to lames Carlele, had tried, it was found of no value, and had no mettall at all in it : but was like The supposed unto Malcome limbile, and of a glistening colour. That day after we had dyned, weo rowed up Mine found to unto Majorani liadida, and o'r zjakeranig coletiu. I has day arter we had oynem, wee rewen vp Mini bound to the Bisseriane fourse leagues, where duars to our company went ty into the Mountaines, and be folso relate. Hannak Valley mewr phesiants, then they had feene in the Commey. That customing we returned, a pleting videous to the comment of the comments of the c and came to the place where the Danse had digged their supported Mine, and tooks forme of it in our Boats to carry with vs, and returned toward our Ship. That night we rowed and failed, and

the next morning about nine of the clocke, we came to our Ship.

Samuday, the fire and twentieth, being Saint Lemer his day, in the foremone, we came to our Shippe, lying on the South fide of the River, called Ramels River. And as foons as our Mafter found, that the people came no more to trade with vs, he determined to depart with the Shippe Many of their An into the Kings Ford to the Passence: and rowing about the harbour, where we lay to finde fome winter houses neerer way out to the Sea, we found among the flands, where many of their winter houses had in Ramel River bin, and fome of their Tents were but lately carried away. In which place wee also found one The triftion of bin, and tome of their rems were one many carried away. and their greater of cheir long Boates, made of wood, and bound together for the most part, with flauers of Boates, Whales fins, and coursed with Seales skinnes, being some two and thirtie foote in length, and fome five foote broad, having tenne thoughts or feates in it. That day about twelve of the clocke Rameli Ford in tome mue foote mean, manufe entire tongers of reacts and to the latitude of 67, degrees, the latitude of we weighed anchor, and departed ont of Remels Ford, which little in the latitude of 67, degrees, of 7, degrees, and the variation of the compafia is an degrees 16, minutes, being a very faire River, and one of 67, degrees. the most principall, which wer law in that Country, stretching in East and Bast and by South is 2, degrees This night, about one of the clocke, we came to the Patience, lying in the Kings Ford. Sunday, the fixe and twentieth, Mafter Andrew Banker, and our Merchant, Mafter Williston.

with other of the Company, were in conference about returning home, because that fince our Mafor was flaine, none of the Sausges would trade with vs, as they were wont.

Wednesday, the nine and twensieth, we were likewise occupied about taking in of ballaft; for our Shippe was very light: and that euening it was agreed, that \*\*Audres Barker, Master of the Hartf-eig, should goe Matter of the Patience, which was fore against the minds of William Goer William Harting day and Hallow Garrendy, one of Matter of the Harts-eige, and love Garrendy, one of Matter of the Harts-eige, and love Garrendy, one of Matter of the Harts-eige, and love Garrendy. the quarter Malters of the Powerer, was Makers mate of the Harsinesfe.

Tuefday, the fourth of August, in the morning the winde being Northerly, a very small gale we They come out got to Sea, where the winde came to the Southward, and we tacked sometime on the one board, of larbour.

40 and foractime on the other, making fmall way on our course. Munday the tenth, was raine and foule weather, as it had continued every day fince wee came Thick and fogfrom harbour, fauing the feuenth day, which was fomewhat faire : For commonly while the gis weather, winde is South, it is very thick and foule weather. We tacked sometimes on one boord, and some the winde be-

times on the other, making a South by West way, at noone fixe leagues. Wednesday, the twelfth, it waxed calme, we being somewhat Southward of a Cape, called Burnils Cape: and about three or foure of the clocke in the afternoone, the winde came to the North and by West, an easie gale, with faire weather.

The eighteenth, at noone we were in 58.deg. 50.min. The fenenceenth day, I tooke the varia- Variation 13. tion of the compaffe, finding it to be 13. degrees 22. minutes, contrary to the observations of o- degr. 24. min. so therein this place. And if any doe doubt of the truth thereof, they may with a little paines proue

it. The eighteenth of August, the declination of the Sunne was 9 degrees & minutes, for the Meridian of Landon. But we being almost foure houses of time to the Westward thereof, there are three minutes to be abated from the reft : and fo the declination was g. degrees cominutes; and his height about the horizon was 24 degrees 40 minutes in the latitude of 59 degrees 0 min. and his distance from the South to the Westward, by the compasse, was 81. degrees. And for truth of the first observation, I tooke another shortly after, finding them not to differ above

Wednesday the nineteenth, the winde fill continued with thicke and hafie weather, we being at moone in the latitude of 58, degrees 30. minutes, or thereabout, making a South South-east 60 way, about ten leagues.

Thursday the twentieth, was faire weather, the winde at East North-east, wee steered away South-east and South-east and by East, making at noone a South-east and by South way, about thirtieleagues, being at noone in the latitude of 57. degrees 20. minutes. This day in the after- Variation 11. noone I tooke the variation of the compasse, and found it about 1 1. degrees 10.minutes.

deorees 20.

minutes.

minutes.

Friday the one and twentieth, faire weather, with the winde at North and North by East. and we made an East South-east way, halfe Southerly twentie foure leagues, being at noone by observation, in the latitude of 56. degrees 50. minutes.

Saturday the two and twentieth, faire weather, the wind at North and Nith by East, wee made an Eaft way halfe Southerly, some twentie two leagues, being at noone in the latitude of 6. degrees 47. minutes.

Sunday the three and twentieth, faire weather, the wind at West North-west, we making an East and East by North way about twentie four leagues. This day I tooke the variation of the Compasse, and found it to be 7. degrees 23, minutes , being at moone in the latitude of 57, de-10

Munday the foure and twentieth, being S. Bartbolomenes day, faire weather with an North North-west, wee making an East North-east way, halte Northerly about twentie seven lengues and were at noone by observation in the latitude of \$8. degrees 4. minutes. This day I observed and found the Compaffe to be varied 7. degrees 20, minutes.

Tuesday the fine and twentieth, faire weather and calme: the winde at North, wee madea North-east and by East way seventeene leagues, being at noone in the latitude of \$8.degrees 30. The true variminutes. This day I found the common Compafe to be varied one point, and the true variation ation 6. deg. to oee 6. degrees 4. minutes. 4- minutes.

We brief lay the lixe and twentieth faire weather also, with the wind North North-west, we made a North-east and by East way halfe about twentietwo leagues, being in the height of 59, 20

Thursday the feuen and twentieth indifferent faire weather, with a ftiffe gale of wind at the North North-west, we making a North-east way about thirtie one leagues, being at noone in the latitude of 60, degrees 10. minutes.

Friday the eight and twentiete, the wind at South-east with a stiffe gale, wee made good abont noone a North-east and by East way about twentie nine leagues. This day in the aftermoone it bleav to great a ftorme, that wee were in great diffrese, the windeat East South-east. But about eleven of the clocke it came to the North-west, and North-west by Lyuch, And we ranne some twentie leagues.

Saturday the nine and twentieth, it blew fo ftiffe, that wee could beare none but our fore- 30 faile, norking an East and by South way halfe Southerly, about thirtie leagues.

Sunday the thirtieth, all the forenoone it blew a very stiffe gale, and about noone the winde came Southerly, and it blew a very great fforme, which continued all that day and that night in fach fort, that we could not faile at all, but all that night lay at hull.

- Manday the one and thirtieth in the morning about foure of the clocke, the winde came to the South-west a very stiffe gale. At which time we set our fore-faile. The wind continued all this day and night, we steered away East and by South , making at moone an East North-east way about thirtie foure leagues.

Tuefday the first of September, the wind still continued at South-west, blowing a very siffe gale, we steered away East and by South, making an East way about fiftie leagues. This day at 40 moone we were in the latitude of 60. degrees 45. minutes.

:Wednesday the second faire weather with the wind at South-west, wee made an East and by South way halfe a point Southerly about fortie two leagues, being at noone in the latitude of 60. degrees 10. minutes. This day I observed, and found the Compasse to be varied three degrees to

Thuriday the third day faire weather, the wind at South-west : wee made an East by North way at noone about twentie leagues. This day in the after-noone, the winde being at North North-west, it blew a very stiffe gale for two Watches; and toward seven or eight of the clocke the storme so increased, that our shippe was not able to beare any faile. And all that night wee

Friday the fourth, the storme still continued, and we could beare no faile all that day till about foure of the clocke in the afternoone, at which time we fet our fore course, and our maine course. The night before in the storme, we lost The Hartf-eafe. This day wee made some twelve leagues East and by North. And we fell to lee-ward lying at hull fome fine leagues South by West.

Saturday the fift calme weather, but very thicke and close all the forenoone : the wind continued still at North North-west, we making from the time wee set our courses the day before, about twentie leagues East halfe Southerly; beeing at noone in the latitude of 50 degrees

Sunday the fixt, faire weather, the wind at North North-west, we steering away East Northeast, and East and by North, made an East by North way, halfe Northerly some 29. leagues, 60 being at moone in 60; degrees 10. minutes. This day the Compafe was varied to the East fixe Groundfound, degrees. This afternoone it was almost calme : and wee founded, and found ground at fixtie eight fathomes. This Evening about ten of the clocke the wind came to the South-east.

Munday the feuenth, very faire weather, the wind South-east and South-east by East, wee

tacked in the morning to the North-ward, and ranne East North-east and East by North vntill fewen or eight in the afternoone : at which time we tacked up to the Southward, and went away South-weil till toward twelue a clocke that night twentie leagues.

Tuesday the eight, in our morning Watch I found our selves to be in 59. degrees 20. minutes And about fine of the clocke I espied Land, which we supposed to bee the lies of Orkney, as The Iles of afterward we found them to be the fame. And toward three of the clocke, we came to an Anchor in a Channell running betweene the llands; where the people came to vs, and brought vs Hennes, Geefe, and Sheepe, and fold them to vs for old clothes and shooes, deliring rather them then money. There are about eighteene of their Ilands, which are called by the name of the

Wednesday the ninth, it was thicke weather, and the winde so Easterly that wee could not

Thursday the tenth, faire weather, and the wind came to the North-west, and about noone we weighed Anchor; and toward fine of the clocke we were cleere off the Iles. The Channell for the most part lyeth North-west and South-east. All that tright we stood away South-east. Friday the eleuenth, faire weather, with the wind at North North-west. And about nine of in order, the clocke in the morning, we steered away South South-east. At which time wee had fight of Buquham-neffe: And about two of the clocke we were thwart of it. The fewenteenth, we came Buquhem neff. to an Anchor in Hull Road, for which the Lord bee prayfed.

30 Here I thinke it not amiffe briefly to relate the flate and manners of the people of Groenland, Hall. for a much as I could learne : As also what likelihood there is of a passe into the Sea, which lyeth ypon Tartarie and China.

The North-west part of Grenland is an exceeding high Land to the Seaward, and almost nothing but Mountaynes; which are wonderfull high all within the Land, as farre as wee could perceiue: and they are all of stone, some of one colour, and some of another, and all glistering, as though they were of rich value; but indeed they are not worth any thing. For our Gold-fmith Lames Carille tryed very much of the Vre, and found it to bee nothing No profitable worth, If there bee any Mertall, it lyeth fo low in the Mountaynes, that it cannot bee well Vie come by. There are some Rocks in these Mountaynes, which are exceeding pure Stone, finer, 30 and whiter then Alabafter. The tides of these Mountaynes continually are coursed with Snow for

the most part, and especially the North sides, and the North sides of the Valleyes, having a kind of Mosse, and in some places Grasse with a little branch running all along the ground, bearing a Community little blacke Berrie, it runneth along the ground like Three-leased Grasse heere in England. Snow. littleblacke Berrie, it runneth along the ground dike Three-leafed Graffe here in England. South Three are few or no I rees growing, as farre as wee could pheticipe, but in one place forme forcit No Trees, miles within the Land, in a Rjuer, which wee called Bake Riuer. There I saw on the South-Bake Riuer. fide of an high Mountayne, which we went up, and found (as it were) a yong Groue of small A Groue of Wood, some of it fixe or seven foot high like a Coppice in England, that had beene some two small wood. or three yeeres cut. And this was the most Wood that wee faw growing in this Countrey; being some of it a kind of Willow, Juniper, and such like.

We found in many places much Augelica. We suppose the people eate the Roots thereof, for some curies. For we have seen them have many of them in their Boats.

There are great store of Foxes in the Hands, and in the Mayne, of fundry colours : And there Foxes. are a kind of Hares as white as Snow, with their furre or haire very long.

Alfo there be Deere, but they are most commonly vp within the Mayne very farre; because the people doe so much hunt them , that come neere the Sea. I faw at one time seuen of them together, which were all that wee did fee in the Countrey : But our men haue bought divers Coates of the people made of Deeres skinnes, and have bought of their Hornes alfo. Thee feems Befides, we have divers times feene the footsteps of some beast, whose foote was bigger then to be Elkes, or the foot of a great Oxe. Furthermore, the Inhabitants have a kinde of Dogges, which they Lossbes. 50 keepe at their Houses, and Tents, which Dogges are almost like vnto Wolues, living by fifth, as Dogges, like the Foxes doe. But one thing is very strange, as I thought : for the Pizzels of both Dogges and Wollies,

The people all the Summer time vie nothing but filling, drying their fift, and Seales fielh Porceare wpon the Rockes for their Winter Prouision. Euery one both man and woman haue each of them bone: fo allo a Boate made with long small pieces of Firre-wood, conered with Seales skinnes very well the Markes dreft, and fewed fo well with finewes or gurs, that no water can pierce them through, beeing piezle, of fome of them aboue twentie foot long, and not past two foot, or two foot and an halfe broad, in by me one forme of a Weavers shittle, and so light, that a man may carrie many of them at once for the gone. weight. In these Boates they will row fo swiftly, that it is almost incredible: for no ship in the The great 60 World is able to keepe way with them, although thee haue neuer fo good a gale of wind; and swifmede of world is able to keepe way with them, atthough thee haue neuer to good a gard of which a life their Bosts, yet they vie but one Oare, who fitting in the midle of their Boate, and holding their Oare in Their Oares the middle, being broad at each end like our Oares, will at an instant goe backward and forward, broad at both

Hartftafe.

as they pleafe.

Salmons and Angles and

836

In these Boares they catch the most part of their food, being Seales and Salmons, Morfer, and other kinds of fiftes. Some they kill with their Darts, and other fome with Angles, having a Line made of small shivers of Whales Finnes, and an Hooke of some fishes bones : with which Line and Hookes, we also have caught very much fifth.

Their great

Alfo they have another kinde of Boate, which is very long. For wee have feene one of them thirtie two foot in length, open in the toppe like our Boates; hauing tenne feates in it. In which when they remoone their Dwellings , they carrie their Goods or House-hold-stuffe; for they remoone their Dwellings very often , as their fishing doth serue, limng in the Summer time, in Tents made of Seales skinnes, and in Winter in Houses some-what in the ground.

Wee could not particularly learne their Rites or Ceremonies : but generally they wer-They worthip fhip the Sunne, as chiefe Authour of their Felicitie. At their first approach unto vs they vied with their hands to point up to the Sunne, and to firike their hands upon their brefts, crying lyom; as who would tay, I meane no harme : which they will doe very often, and will not come necte you, vntill you doe the like; and then they will come without any feare at all.

Their burials.

They burie their dead in the Out-Ilands neere the Scafide. Their manner of Buriall is this. Vpon the tops of the Hils they gather a company of stones together, and make thereof an hollow Caue or Graue, of the length and breadth of the bedie, which they intend to burie, laying the stones somewhat clote like a wall, that neyther Foxes, nor other such beasts 20 may denoure the bodies, covering them with broad ftones, shewing afarre off like a pile of stones. And neere vnto this Graue where the bodie lyeth, is another, wherein they burie his Bow and Arrowes, with his Darts and all his other Provision, which hee vied while hee was liuing. Hee is buried in all his Apparell : and the coldnesse of the Climate doth keepe the bodie from smelling and stunking, although it lye aboue the Ground.

and all other Furniture of the dead.

They eate all their Food raw, and vie no fire to dreffe their Victuals, as farre as wee could perceine. Also wee haue seene them drinke the Salt-water at our shippes side : But whether it bee viuallor no, I cannot tell. Although they dreffe not their meate with fire , yet they vie fire for other things, as to warme them, &c.

They are not

Diners of our men were of opinion, that they were Man-eaters, and would have deuou- 30 red vs, if they could have caught vs. But I doe not thinke they would. For if they had bin so minded, they might at one time have caught our Cooke, and two other with him, as they were filling of water at an Hand, a great way from our ship. These three I say were in the ships Boate without eyther Musket, or any other Weapon, when as a great company of the Sauages came rowing vnto them with their Darts , and other Furniture , which they neuer goe without, and frood looking into the Boate for Nayles, or any old Iron, which they so greatly defire, while our men were in such a feare, that they knew not what to doe. At length our Cooke remembred that hee had some old Iron in his pocket, and gaue each of them some, as farre as it would goe, with his Key of his Chest. And presently they all departed without offering any harme anall. But this I speake not, that I would have men to trust 40 them, or to goe among them unprouded of Wespons.

Nailes & old Sauages,

#### CHAP. XVIII.

A true Relation of such things as happened in the fourth Vijage for the Discouerie of the North-west Passage, performed in the yeare 1615. Written by WILLIAM

Fter three fundry Voyages towards the North-west, to the great charge of the Aduenturers : the last being under the command of Captaine Gibbins (in which was little or nothing performed.) Yet the Right Worthipfull Sir Dudley Digger Knight, Mafter Woffenbolme Elquire, Mafter Alderman Imes, with others being not there with discouraged, This yeere 1615. againe fet forth the Discoury, a ship of fiftie fine tunnes or thereabouts, which thip had beene the three former Voy-

ages on the action. The Master was Robert Bileth, a man well acquainted that way : having beene employed in the three former Voyages: my felfe being his Mate and Affociate, with fourteene others and two Boyes.

The fixreenth, we weighed Anchor at Saint Katharines, and that tyde came to Blackwall, the 60 windebeing at South South-west. The seventeenth, wee went downe to Granefend, and the eighteenth to Lee, where we anchored that night.

Vpon the fixt of May, we faw Land on the Coast of Groenland, on the East fide of Cape Fare. Groenland. mell; and that night we had a great frome : lo wee kept a Southerly course to get about the Ice Cape Fatemet which lay on that shoare, and then kept our course vntill the seuenteenth day of May, all which which may be layled by many great Hands of Ice, fome of which were aboue two hundred foot High Icie high about water (as I proued by one shortly after) which I found to be two hundred and fortie liands. foot high, and if report of some men be true, which affirme, that there is but one seventh part of the Ice aboue water, then the height of that piece of Ice, which I observed was one hundred and fortie fathomes, or one thouland tixe hundred and eightie foote from the toppe to the bottome : this proportion I know doth hold in much Ice, but whether it doe fo in all, I know not.

This feuenteenth of May, about noone we were come to the firme Ice, as one would suppose, being in the latitude of 61. degrees 26. minutes or thereabout, being the latitude of the South part of the Ile of Refolution: we comming to this Ice, our Marter asked my opinion concerning the putting into the Ice. My judgement was it would be best for vs to fland, and ply it vp to the Northwards. Hee answered, we were on the North fide of the South Channell, and much lee we must passe through, and if that we could get some two or three leagues within the Ice, it would euery tide open, and we should get some thing onward of our way, having all the Channell to the South-wards of vs. So with this resolution we put within the Ice, the wind being at East North-east: this first entrance I liked not very well, scarce finding any place to put in our ships head, and being neere thirtie leagues from the shoare, towards Euening wee were fastamonest

20 the Ice. But fometimes each day the Ice would a little open, we making what way we could towards the North-west in for the shoare till the two and twentieth day, having had the wind all Southerly. Yet we plainly faw that we fet to the Southwards, for all that wee could doe.

The two and twentieth day, the wind came vp at North North-west : then our Master determined to fland forth againe. For if the wind should have come to the North-east, it would be vnpossible for vs to fetch any part of the Channell, feeing wee droug fo fast to the Southwards, with Southerly winds, and having fo farre into the shoare, not having seene the Land.

Our Master was also determined to spend some twentie, or sourcand twentie dayes in Frea tum Danis, to fee what hopes would be that wayes, supposing there would be little good to be 30 done in Hudfons Streights for this time limited : then we plying to get to Sea-ward, and to by eight a clock at night, the three and twentieth day, we were cleere of the thick Ice : againe, the Lord make vs thankfull, the wind at North-west and by North faire weather : but no sooner were we forth of the Ice, but that our Mafter changed his opinion: and beeing cleere of this thicke Ice wee flood to the Northward as much as the Ice and winde would give va leane, running some thirteene leagues true North-east by North, being in the latitude of 61. degrees 500 minutes. The foure and twentieth day faire weather : the fine and twentieth day, also taire weath ther, the wind at North and by West, till sixe a clocke, we having made a North-east by North way about twelue leagues and an halfe, our latitude at noone 62. degrees 20, minutes, at fixe 2 clocke the wind was at the North North-east. The fixe and twentieth day, all the forenoone

40 faire weather and cold: but in the afternoone it blew very hard, being close hasie weather, that about two a clocke this afternoone wee tooke in our failes and hulled with our ship till the next morning at foure a clocke, all the time that we fayled this day we past through many ledges of Ice having great quantitie to the Northward of vs, and having runne about twentie one leagues true vpon a West course. And note where I put this word true, I meane the true course, the variation of the Compaffe, and other accidents allowed.

The fenen and twentieth day close foggy weather with much fnow freezing on our shrowds and tackling : the like we had not all this yeare before: but towards foure a clocke in the afternoone it began to cleere vp, and about fine a clocke we faw Land, being the Hand of Refolation, and bearing West from vs about thirteene or fourteene leagues. This morning we set sayle, and stood so to and fro as the Ice would fuffer vs, and at ten at night, wee moored our ship to a piece of Ice, the wind being at West.

The eight and twentieth day being Whitfunday, it was faire weather, but the winde was at the West, and West by North: al this day we were fast to the piece of Ice. Yet we plainly perceiued that we fet a great deale more into the Streights with the floud. Then we fet forth with the ebbe the nine and twentieth day, the wind was variable, and faire weather: about eleuen a clock we fet faile and tacked to and fro along by the Hand. And about two a clocke the next morning, the wind came to the South South-east, but we had so much Ice that we could doe but little good with a faire wind, the wind continued all this day and night a fliffe gale : this night (or No night, rather Euening, because it was not darke at all) we were set within the point of the Iland : so 60 that now we were within the Streights.

The one & thirtieth day also faire weather, the wind for the most part at North North-west, the afternoone being cleere wee faw the point of the South shoare, called Buttons Iles, to beare from vs due South by the Compaffe, which is indeed South South-east, somewhat Eastward, be- Variation 14 cause here the Compasse is varied to the Westwards twentie foure degrees.

Z z z 2

Dogges.

Situation.

The first of Iune, wee had some snow in the forenoone, but very faire weather in the afternoone, the wind at West North-west. We perceiuing the Ice to be more open close about the floare, made the best way we could to get in, and to come to Anchor, if the place were connenient; and by feuen a clocke we were in a good Harbour, on the North-west side of the Hand of Resolution, where an East South-east Moone maketh full Sea, or halfe an houre past seuen on the change day, as Sea-men account the water doth rife and fall, neere foure fathomes; the Compasse doth vary to the West 24. degrees 6. minutes, and is in longitude West from London 66. degrees 35, minutes. The breadth of the South Channell, or the diffance betweene the Iland and the South shoare, is fixteene leagues, and the North Channell is eight miles wide in the

Vpon this Iland we went on shoare, but found no certaine figne of Inhabitants, but the track of Beares and Foxes, Rockes and stonie ground, hardly any thing growing thereon: it is indifferent high Land to the Northward, haung one high Hill or Hummocke on the North-east fide.

but to the Southward it falleth away very low.

The second of Iune in the morning the wind came vp at East South-east, with much snow and fowle weather; about noone wee weighed Anchor, and flood vp along by the Iland, io well as the Ice would give vs leave to get to the North shoare. Wee continuing our courses so neere the North shoare, as conveniently we could, with much variable weather and windes, but stedfait in continuance among Ice, till the eight day, having the wind full contrary to vs, and being formewhat neere a point of Land, or rather a company of Ilands, which after wee called Sauge 20

Iles, hauing a great Sound or In-draught, betweene the North shoare and them. At fixe a clocke we came to Anchor neere one of them, being the Eastermost fauing one. But whiles weewere furling our failes, we heard and faw a great company of Dogges running vp and downe, with fuch howling and barking, that it feemed very itrange. Shortly after we had moored our ship, we fent our Boat somewhat neerer the shoare, to see if they could perceine any people; who returning, told vs that there were Tents and Boats, or Canowes, with a great many Dogges, but people they faw none. After Prayer, when our men had fupt, wee fitted our Boate and our felnes with things convenient : then my felfe with feuen others landed , and went to their Tents, where finding no people, we marched up to the top of a Hill (being about a flight fhot off) where

we saw one great Canow or Boat, which had about fourteene men in it, being on the furthest, 30 with 14 men. or North-west point of the Iland, and from vs somewhat more then a Musket shot, Then Icalled vnto them, wing some words of Greenlandile speech, making signes of friendship. They did the like to vs; but seeing them so searchall of vs, and we not willing to trust them, I made another figne to them, shewing them a Knife and other Trifles, which I left on the top of the Hill. and returned downe to their Tents againe. There wee found some Whale Finnes to the number of fortie or fiftie, with a few Seale skinnes which I tooke aboord, leaving Knives, Beades, Bagge of Ima and Counters instead thereof; and amongst their houses I found a little bagge, in which was a

company of little Images of men; one the Image of a woman with a child at her backe, all the which I brought away.

Among these Tents being fine in number, all courred with Seales skinnes, were running vp 40 and downe, about thirtie fine or fortie Dogges; most of them muzled. They were of our mungrell Mastiffes, being of a brinded blacke colour, looking almost like Wolues. These Dogges they vie in stead of Horses, or rather as the Lappians doe their Deere, to draw their sleds from place to place ouer the Ice : their fleds are fled or lined with great bones of fifnes to keepe them from wearing, and their Dogges have Collars and Furniture very fitting.

These people haue their Apparell, Boots, Tents, and other necessaries much like to the Inha-The people described. bitants in Groineland, fauing that they are not so neate and artificiall, seeming to bee more rude and vacuill, ranging vp and downe as their filling is in feafon. For in most places wherewee came ashoare, we law where people had beene, although not this yeere; but where their I hitation or their abode in Winter is, I cannot well conjecture.

This Iland lyeth in the latitude of 62. degrees 30, minutes, and in longitude West from Lon. 50 don, 72. degrees or neere thereabouts, being fixtie leagues from the entrance of the Streights: here the Compasse doth varie 27. degrees 30. minutes, and a South-east Moone foure degrees
East maketh a full Sea: it doth ebbe and flow almost as much water, as it doth at the Residuion, and here the floud commeth from the Eastward, although our Master was of opinion to the

The tenth day in the morning, at fixe a clocke we fet fayle, the winde at North, which continued not, but was very variable till noone, and then it came to North-west, we having sayled along by the shoare, about some nine leagues and an halfe North North-west, the Icelying so thicke in the offen, that wee could not well get out of it: then perceiving a good Harbour betweene two small Ilands and the Mayne, wee went in with our ship, where wee moored her, 60 and flayed till the twelfth day at Evening.

In this place it is high water on the change day, at nine of the clocke, or a South-east Moone maketh a full Sea : the latitude of this place is 62 degrees 40 minutes ; and the floud doth come

from the Eastward, although our Master was perswaded otherwise, as well in this place, as at Salusge Hands: for being among Hands, every point hath his feuerall fet and eddie. But I going to the cop of the Hand, plainely perceived the Ice to come from the South-east, and from the North-west on the ebbe. In this place is no figne of people, as we could perceive.

The fixteenth day, lying fill in the Ice, the weather being very close and hafey, as it hath beene these fix dayes: and being neere a great company of Hands, in the atternoone, the winde being at West North-west, were stood in amongst these Hands, and in the evening we moared our Shippe to one of them in a small coue, the better to defend her from the Ice. In this place wee flaved all the feuenteenth day; and vpo, the eighteenth, being Sunday, about eleuen a clocke

10 we tet fayle, being almost calme, making the best way wee could to get forth. Here are a great Many Ilands company of Hands, each both his feuerall fee and eddy, that the Ice doth fo runne to and fro, and and feuerall with Juch violence, that our Shippe was in more fafetie further off then in this place : the lati- tyde Sets. tude of the Ile we rode by is 63. degrees 26. minutes , and longitude West from London, neere 72, degrees 25. minutes : the Compaffe hath variation 27. degrees 46. minutes; and at a quarter of an houre after nine on the Change day, doth make a full Sea. This Evening, and the next morning, wee had a faire fitering gite of winde at South-east, wee standing along by the Land, it beeing all small broken ilands; to a point of Land about twelue leagues in diffance from the lie wee put last from e which Point, I called Broken Point, it being indeede Brok n Point.

a point of broken Iles. On the nineteenth day, by twelve a clocke at moone, wee were about foure miles from the Point before named, fait inclosed with Ice, very faire weather ; and well we might have called this Point Fairenesse or Faire Point, for from this day till the thirtieth day, the weather was fo taire, and almost, or altogether calme, that in few places elsewhere, finer weather could not be a and till the feuen and twentieth at night, wee were fo fast inclosed vp with Ice, that at some times one could not well dippe a paile of water by the Ship fides : while wee were thus faft in the Ice, vpon the one and twentieth day, I faw both the Sonne and Moone at one time, as indeede it is vivall in faire weather.

This one and twentieth, being faire weather, as afore is faid, and I feeing both the Sunne and Observations Moone fo faire: I thought it a fit time to make an oblemation for the longitude.

30 But the two and twentieth day being very faire and clease, and also calme, being almost as fleedy as on floare : it was no neede to bid me fit my Infrument of variation to take the time of the Moones consming to the Meridian, having allo my quadrant ready to take the Sunnes almi-canter, it being indifferent large, as of foure foote femideamites: have taken the variation of my needle as precifely as posible I could, which was \$8. degrees 20. minutes West, and if any be defirous to worke the fame, they may, but my worke was as followeth.

The Sunnes almicanter, at the inflant when the Moone was on the Meridian, was 26. degrees 40, minutes and the Sumnes declination for that time 23 degrees 6, minutes. By which three things given, I found the houre to be five a clocke 4. minutes 52. feconds, E. third 4. fourths, or 76. degrees, 12, minutes, 16. feconds, of the equinoctiall afternoone : and according to Seatles Ephe-

40 merides, the Moone came to the Meridian at London at foure a clocke 54 minutes, 30. feconds: and after Origanue the Moone came to the Meridian at foure a clocke 52 minutes, 5. feconds, at Wittenberge the fame day. Now having this knowne, it is no hard matter to finde the longitude of this place fought. For according to the Moones meane motion, which is 12.degrees a day, that is in time 48. minutes: and to this account, if the be on the Meridian at twelue a clock this day, to morrow it will be 48.min.past 12.So I having the time found by observation at this place, viz. q. houres, 4. minutes, 52. feconds, 1. third 4. fourths : but in this I neede not come fo precife: and at London, at 4. houres , 54. minutes, 30, seconds : which substracted from the former, leaveth 10, minutes, 22. feconds, 1. third, 4. fourths, now the Moones motion that foure and twentie houres, was 21.degrees, 38.minutes: which converted into time, is 50. minutes 25. feconds 20. thirds: then the proportion flanderh thus; If 50.minutes, 25. feconds, 20. thirds; give 360. degrees, what

50 shall 10. minutes, 22. seconds, 1. third, 4. fourths give? the fourth proportionall, will be 74. degrees 5. minutes, which is West of Landon; because the Moone came later by 10. minutes, 22. seconds, and by the fame working by Origanus Ephemerides, the diffrance is 91. degrees, 35. minutes, West of Welt, But whether be the truer, I leave to others to judge : in these workings may some errour be committed, if it be not carefully looked vnto : as in the observation, and also in finding what time the Moone commeth to the Meridian, at the place where the Ephemerides is supputated for, and perchance in the Ephemerides themselves: in all which, the best judicious may ene: yet if observations of this kinde, or some other, at places farre remote, as at the Cape Bonasperanze, Bansam, Japan, Nona Albion, and Magellan Straits, I suppose wee should have a truer

60 Geography then we have. And feeing I am entred to speake of celestiall observations, I will note another which I made the twenty fixt of April, being outward bound at Sea, by the Moones comming in a right line, with two fixed Starres; the one was the Lyons bears, a Starre of the first magnitude; the other a Starre in the Lyons rumpe, of the second magnitude, as followeth: The circumference or outward edge of the Moone, being in a right or ftraight line, with those

two Starres before named : at the instant I tooke the altitude of the South ballance, which was 3. degrees 38.minutes, because I would have the time : but in this it is good to waite a fit time, as to have her in a right line, with two Stars not farre diffant, and those not to be much different in longitude, because the Moon will soone alter the angle or position, and such a time would be taken when the Moone is in the nintieth degree of the eclipticke about the horizon, for then there no paralell of longitude, but onely in latitude : but who to is painefull in these businesses, shall foone fee what is needefull, and what is not : my observations were as followeth:

Right affention 46.deg.28.min, 30.dec. TRight affention 63.deg.23.min.eo.de.
Declination 1. 3 deg.27, mi. 30.dec. Tright affention 63.deg.23.min.eo.de.
Declination 2. 2.deg.23.min.go.dec. Tright affention 63.deg.23.min.go.dec.
Latrude 2. 2.deg.23.min.go.dec. Tright affention 63.deg.23.min.go.dec.
Latrude 2. 2.deg.23.min.go.dec. Latrude 2. 2.deg.23.min.go.dec.
Almiemer: 3.deg.24.min.go.dec. 2.deg.25.min.go.dec.

Moones Latitude 03.deg. 20. min. 46.fec. North. Almicanter - 37, deg. 00. min. 00.fec. Latitude of the place - 56.deg. 43.min.

These notes I have set downe, that if any other be desirous to trie, they may spenda little time therein; my felfe haue spent some therein, and more I would have spent, if leisure would have permitted : but finding it not to my minde, I have not here fet downe my particular worke : MasterRudson, the working of this observation I received from Master Rudston.

But if it had pleased God, we had performed the action we were bound for, I would not feare but to have brought fo good contentment to the Aduenturers, concerning the true feituation of notable places, that small doubt should have beene thereof: but feeing so small hopes are in this place, I have not fet downe so many observations as otherwise I would

We lying here inclosed with the Ice with faire &calme weather (as before is faid ) till the feuen and twentieth day at evening, at which time we fet fayle; the winde at South-eaft, an eafie gales all the eight and twentieth and nine and twentieth dayes, we made the best way through the Ice we could, but the nine and twentieth day, the Ice was more open then it had been these ten dayes before, and at noone we saw Salisbury lland, it bearing due West from vs.

The first of July close foggie weather, with much raine, the winde at South South-east : by 30 noone this day we were some three leagues from the Land: but having much Ice by the shoare, we frood along the Hand to the Northward : and the next morning wee were faire by another fmall Ile, or rather a company of fmall Ilands, which after we called Mill Iland, by reason of grinding the Ice, as this night we made proofe thereof: at noone, being close to this Ile, wee took the latitude thereof, which is neere 64 degrees. Here driving to and fro with the Ice all this day, till feuen or eight a clocke, at what time the Ice began to open and feperate; The Ice, as is faid, beginning to open : we had not stood along by the Ile, on the East fide thereof, an houre ; but the Ice came driving with the tide of floud from the South-east, with such swiftnesse, that it ouer went our Shippe having all our fayles abroad with a reasonable gale of winde, and put her out of the streame, into the eduy of these Iles.

This Hand or Hes, lying in the middle of the channell, having many founds running through them, with many points or headlands, encountering the force of the tide, caused such a rebound of water & Ice (which ran one way, and the ffreame another) our ship having met the Ice with the first of the floud, which put her so neere the shoare, that she was in the partition betweene the Ice, which the eddy cauted to runne one way, and the streame the other, where shee endured great distresse; but God, which is still stronger then either Ice or streame, preserved vs and our Shippe from any harme at all. This continued till towards a high water, which was about one a clocke; then with no small trouble we got into the channell, and stood away to the Northwest ward. After we had past some distance from this Iland, wee had the Sea more open then it was fince we put first into the Straits; and failed all the next day through an indifferent cleare 50 Sea, with the winde at South-west: but towards eight a clocke at night, wee were come againe into much Ice; this Ice being more thicker and bigger then any wee had beene among : this place where we began to be inclosed againe, is fixe and twenty leagues diffant from the fmall Hand we were at last : and our true course North-west by West : after wee were fast in the Ice, we made but small way, yet we perceited a great tyde to fet to and fro. The next day, wee founded, and had ground at one hundred & twentie fathoms, foft Ofey ground: flanding more Northerly: the next morning we had ground at eightie fathoms, then the winde came to the North, and we fetting fomewhat Southward, had ground at a hundred and ten fathoms. Thus feeing this great abundance of Ice in this place, and the more we got to the North-west ward, the shoalder it was, the Ice also being foule and durtie, as not bred farre from shoare: our Master determined to 60 stand to the Eastward, to be certainely informed of the tide.

The fixt day in the morning, we brake in a planke and two timbers in our Ships bow, which after we had mended, we proceeded for to get to the East fide, which we called the North shoare, because it is the Land stretching from the Refelation, on the North fide of the S. raits.

The fewenth day we faw the land, it being but low land, and the Sea is should, in respect of of ther places, having ten or twelve fathom about a league off from shoare, some thirty fathoms sue or fix leagues off thore, but further off tome twenty or eighteene leagues, there is a hundred or a hundred and five fathoms; having very good channell ground, as small stones & shels, some twelve or foureteene leagues from hoare, but the further off the more Ofey- and also here is a very great tide runner h to the Northward, which this evening we found to be the tyde of ebbe for comming with our Shippe neere the shoare, about seuen a clocke, we hoysed out our Boate, then I with five other went on shoare, and found it to ebbe : we staied on shoare about an houre and a halfer in which time the water fell about three foote and a halte, and a South-fouth East Moone maketh a full Sea, or lalite an houre past tenne, as Sea men account: we faw no figure of people to be here this yeare, but in yeares heretofore they have beene, as we might well fee by divers places; where their tents had stood and perchance their time of fifting was not yet come, therebeing fuch great abundance of Ice as yet. The eight day the winde was at West, and the ninth almost calme: wee reeking neere to this

floare the tenth day, our Mafter determined to fland for Notting games Hand to make triall of Nothingsame the tide there; yet the winde was at South-west, so that we were forced to surae, but towards land, night it came to the North North-west, so that then we stood away to the West wards, leaving the fearch of Notting games Ile, having a great swelling Sea, come out of the West with the winder which had blowne, which put ws in some hope : the eleventh day in the morning, we saw Land 20 West from vs, but had no ground at one hundred & thirty fathoms 10 standing along by the Land which here lay about North-west by North, the next morne we were thwart of a Bay : then flanding ouer to the Northwards towards a faire Cape or head land which we law, in the afternoone it was almost calme, and being about a league from shoare, we hoysed out our Boat, and sent fome of our men in her, to see what tide it was by the shoare, and from whence it came; they went from the Ship at five a clock, and came aboord agains at eight, who brought vs word, that it was falling water, and that it had eb'd while they were on shoare somewhat aboue two foot: also was failing wasti, and flood came from the Northward in this place, the which we also perceited affirmed, that the flood came from the Northward in this place, ued by the fetting of our Ship, the fetting a pace to the Northward, although no whit of winder alfo we might fee by the rocks, that the water was nowfalne : this put vs in great comfort and 30 hope of a passage in this place.

Then our Matter called this Cape or head land, Cape Comfort, for the reasons beforesaid; also Cape Confort, we had one hun ired and fortie fathoms in depth, not a league from the shoare : and here a South by East Moone maketh a full Sea: the latitude of this Cape is 65 degrees 00. min, and 85 degrees 20, minutes Welt from London. But this our sudaine comfort was as soone quailed, for the next day having coubled the Cape, and proceeded not past ten or twelve leagues, but we faw the land trending from the Cape to the Westward, till it bare from vs North-east by East, and very thicke peftered with Ice, and the further we proceeded, the more Ice, and the more Northerly, the flouider water and small shew of any tide. At six a clocke this afternoone, we founded, & had ground in o :e hundred and thirty fathoms, foft Ofey, having had at noone one hundred & fiftie fathoms.

This was the fartheft of our Voyage, being in the latitude of 65, degrees 26. minutes, and longitude Welt from London 86. degrees 10. minutes: for seeing the land North-east by East, from va about nine or ten leagues off, and the Ice fo thicke : our Master was fully perswaded, that this was nought elfebut a Bay, and so tacked and turned the Shippes head homewards, without any far-

The fourteenth day, the winde was for the most part at South-east, that we could make but fmall way backe againe: and the next morning very foule weather, we comming to an Anchor in a small Inlet, neere the Cape Comfort, on the North-west fide thereof; here wee found, as on the other fide, a South by East Moone, to make a full Sea; but from whence the floud came, we could not well ice, it being to foule weather at Sea : in the afternoone the winde came to North 50 by West then we waied, and flood along to the Southwards by the shoare, with a shiffe gale of winde, and very hasey. By the fixteenth day at noone we met with a great quantitie of Ice,lying some few leagues within the point of the Land: among this Ice we law a great number of Sea Morfe, not iteing any more in all the Straits but here, and thefe very fearefull, not fuffering a Ship or Boat to come neere them: by eight a clock we were come to this Southern point, which sea Harle plant I called Sea Horfe point, where we came to anchor open in the Sea, the better to try the tide !

here most apparently we found to all our companies fight, that in this place the tide of floud doth come from the South-east, and the ebbe from the Northwest. We weighed, and stood ouer with a stiffe gale of winde, which continued all this day, and toward night very foule weather & a fore florme: by tenne a clocke we were come to Anchor on the North-west fide of Nottingbams Ile, 60 where are two or three smal Iles, lyeth off from the greater, which make very good Sounds &Harbors: about this He we had store of Ice, but nothing as we had heretofore in other places. We staied about this Hand "il the feuen and twentieth day, having much foule weather, many stormes, often fogs, and uncertaine windes, many times we weighed anchor to goe to that fide of the Ile, where this Ship road when Captaine Button was in her; finding in other places of this He the tyde of

Digges lie.

Salusges.

floud to come from the South-east ward, and the time of high water on the change day, to be at halfe an houre past ten, and not at halfe an houre past seuen, as they supposed. In these cen dayes we staied about this He, we fitted our Ship with ballast, and other necessaries, as we had neede of

Then proceeded as followeth the fixe and twentieth day, being indifferent faire weather, we Salisbarie lle. paffed betweene Salisbaries Ile and Natingbans Ile at the South Point thereof I meane of Note. singhams He, where are many small low Hes, without the which had beene a fit place for vs to have anchored to have found out the true let of the Tyde. But our Mafter being defirous to come to the same place where they had rode before, stood along by this lie to the Westward, and came to an anchor in the eddy of these broken grounds, where the ship rode at no certaintie of Tyde.

The feuen and twentieth, the next morning the weather proued very foule with much raine 10 and winde, to that our Reger anchor would not hold the ship at eightie fathoms scope, but was driven into deepe water , that wee were forced to fet faile, the winde being at East, and then come to the East North-east and about noone at North-east, still foule weather, being voder faile, westood away towards Sea berfe Point : our Master (as I suppose) was perswaded that there might bee some passage betweene that Point of Land and that Land which they called Swan Hand: to this afternoone we faw both Sea berfe Point and Notting bass Hand, the distance betweene them is not past fifteene or fixteen leagues, bearing the one from the other North-west

The eight and twentieth day in the morning, wee were neers to Sea borfe Point, the Land trending away West South-west so farre as wee saw, and very much pestred with Ice. At seven 20 a clocke our Master caused vs to tacke about, and stood away South-east and by South

The nine and twentieth the next day at eleuen a clocke, we came to anchor at Digges lle, hauing very foule weather. At this place where we rode it lyeth open to the West, having two of the greatest lies, breake off the force of the Flood, till the Tyde be well bent; for after the water were rifen an houre and a halfe by the shoare, then would the ship ride truly on the Tyde of Flood all the Tyde after. Now the time of high water on the change day, is halfe an houre past ten or neere thereabout.

The thirtieth day, being faire weather, wee weighed and flood along close by Digger Ile. where we prefently perceined the Salunges to bee close on the top of the Rocks: but when they faw we had efpyed them, divers of them came running downe to the water fide, calling to vsto 30 come to anchor, which we would have done if conveniently we could. But in this place the water is so deepe, that it is hard to finde a place to ride in, which we seeing lay to and fro with our thip, while fome of our men in the Boat killed about fome seventie fowles, for in this place is the greatest number of fowles (whom we call Willacks) that in few places else the like are not seene, for if neede were we might have killed many thousands, almost incredible to those which have not seene it, Here also as we lay to and fro with our ship, wee had sufficient proofe of the set of the Tyde: but when our men were come aboord againe, we fet all our failes for homewards, making the best expedition we could; but on the third of August, wee were forced to come to are chor about thirtie leagues within the Resolution Ile on the North shoare. The next day wee weighed anchor: And the fifth day in the forename, we past by the Refolution Hand, but saw it 40 not: Thus continuing our courses (as in the briefe lournall may be seeme) with much contrarie windes and foule weather.

Wee had fight of Cape Clores in Ireland the fixt of September: the next morning by day light, we were faire by Seely, and that night at two a clocke the next morne, we came to anchor in Plymonth Sound with all our men living, having onely three or foure ficke, which foone

The next yeere being agains employed in discenerie, amongst other infrustions they received this. For your counts you must make all possible halfs to the Cape Delolation, and from thence, you William Bassin as Plats, keepe along the Confid of Gronoland and yo Frecture Daise, varied you come toward the 50 beight of eightst degrees, if the Land will give you letter. Then for force of indeping, by keeping to. Myertherly a counts [hope your comp fired] and Somborty, for force as you find thinks at conserners, 11 you come to the latitude of fixtie degrees; then divers your counts to the latitude of fixtie degrees; then divers your counts to the latitude of Vedera down that beight, leaning your farther fayling Southward to your owne discretion, according as the time of the that origon, seeming, non-passes, spring. Someone is you can any serious, according as occurred, in yourse and window will give you leave, although on drifter its, of your cryage prove for properous that you may been the year lefter you, that you go a fare Southerly as then you may truck the North part of lapan, from whomever of your Color, of you can be rememble is without danger, we would been you is bring home one of the men of the Country, and fo God biffing you with all expedition to make your returns

CHAP.

#### CHAP. XIX.

To the Right Worshipfull Master Ioни Wostenholme Esquire, one of the chiefe Aduenturers for the discouerie of a passage to the North-west.

Orthy Sir; there neede no filling a Iournall or short Discourse with preamble, complement, or circumstance, and therefore I will onely tell you, I am proud of any Remembrance, when I expose your Worth to my Conceit, and glad of any good fortmie; when I can anoid the imputation of ingratifule, by acknowledging your many fusions: and feeing us is not unknowne (to your Worship) in what estate the businesse concerning the

North-west bath beene beretofore, and how the onely hope was in searching of Fretum Dates, which if your felfe had not beene the more forward, the action had well nigh beene left off : Now it remanneth r your Worlbip to know, what bath beene performed this years; wherefore I entreat you to admit of my outlome, and pardon me if I take the plaine highway in relating the particulars, without vising any refined phrases and eloquent speeches.

Therefore briefly, and as it were in the furefront, I intend to show you the whole proceeding of the vorage in a namely, there is no passege, nor bope of passege in the North of Dauis Streephs, we busing constel all or neere all the Circumstrence thereof, and finde is to be no other then a great Bay, as the Maphere placed doth truly show: wherefore I cannot but much admire the works of the Almightie, Howsoner the when I consider how vaine the best and chiefest hopes of man are in things uncertaine. And to speake of no pallage this when I consider how vame too belt and consign copies of man are an assong voncer amount of prongery no penage in other matter, then of the hopefull polyceto the North-oneff; Hom many of the belt for of men home, et way as arm their whole medianours to prouse a polyce than wayes, and use such in Conference, but also in Printing and Synchyte than their whole medianours to prouse a polyce than wayes, and use such in Conference, but also in Printing and Synchyte than the way to the conference of t their whole indensors to prove a pallage to me ways, some now very so ways care, our age in orthing and formed dies, publishing to the World, year when great famoure of money has been from the abit that altims, as your weigh of Six Worldon has cally experience off. Neither would the vaine glorious Spaniard have feathered abroad to The Matter Worldon has been feathered abroad to The Matter Worlph bash coity experience off. Nettoter woman see varies generally passed until passed memoral of ten, active month fall Mays and lowered, it has bad passed complexes of a palinge shis may, that of had placing (then by him many falle Mays and lower found, they might have cellifed the worthy praife of the Admentiores and true (kept kected for God, a paffage that dream passed the control praife of the Admentiores and true (kept kected for God, a paffage that was part, we will have all have believed the control praife with missed the control praife which is board.

Difference 11, and for my counce part, I would have all have believed the control praife with the control Discource , and you make the house found, fill taking occasion of bope on enery little likelihood, till such more probable time as we had almost coasted the Circumference of this great Bay, Neither was Master Dauis to be and to themost blamed in his report and great hopes, if he had anchored about Hope Sanderlon, to have taken notice of indicions more blamed in his report and great hopes, if he was anthored about Hope Sanderholl, to make taken notice of theaprobable; the Tydes: for to that place which is in 72. degrees 12. minutes the Sea is open, of an unfearchable depth, and that by and that by and of a good colour, enely the Tydes keepe no certaine course, nor rise but a small height, at eight or nine that Tyde are foote, and the flood commeth from the Southward, and in all the Bay beyond that place the Tyde is fo small, gument from and not much to be regarded, yet by reason of from melting on the Land, the Ebbe is stronger then the the West, asin and not much to be regarded, yet by reason of some metting on the care of the yetre, the great less of Master Brigg.

Flood, by meanes whereof, and the windes holding Northerly the fore-part of the yetre, the great less of his Map and tion, of meanes were en, and one into Fretum Hudion, and others towards New found Land, for in nousseppea-An all the Channel where the Seass open are great quantities of them driving up and downe, and till this reth.

yeere not well knowne where they were bred. Now that the worlt is knowne (concerning the passage) it is necessarile and requisite, your Worship Bould understand what probabilitie or bope of pross might bere be made bereafter, if the very este at sempted by sitting men. And suff for the killing of Whales, curtaine it is that in this Bay are great numbers of them, which the Bilcainers call the Grand Baye Whales, of the Same kinde which are killed as Greenland, and as it seemeth to me easie to be strooke, because they are not vsed to bee chassed or bea-ten, for we being but one day in Whale Sound (so called for the number of Whales thus wee saw there) Store of Grand Store of Grand lying aloft on the water, not fearing our flip or ought elfe, that if wee had beene fitted with En Whales, men and things necessarie, it had beene no hard matter to have strooke more then would have made three one name using many many that it is of that fore of Whale there is no feare. I being upife at Greenland, Enfer unice at 50 each flavor that it is of that fore of whale there is no feare. I being upife at Greenland, Enfer unice at 50 each fulfilleriest notice to know them against the fighted a dead Whale wee found at Sea, basing all her firmes Greenland.

(or rather all the rough of her mouth) of which with much labour, we got one hundred and fixtie the same enening we found her; and if that foule weather, and a storme the next day had not followed, wee had no doubt, but to have had all or the most part of them, but the winde and Sea arising shee broke from vs , and we were forced to leave her. Neither are they onely to be looked for in Whale Sound, but also in Sir Tho. Smiths Sound, Wostenholme Sound, and diners other places.

For the killing of Sea Morfe, I can give no certaintie, but onely this , that our Boat being but once ahor toe giung of sea transfer, this Bay, which was in the entrance of Alderman Iones Sound, at the re-Sea Vnicotne turne, our men told us, they saw many Morses along by the shoare on the see; but our ship being under Sha Uniconce is saile, and the winds comming saire, they presently came aboord without surface search, besides the people still kept in the 60 inhabiting about 74. degrees, told us by diners signes, that toward the North were many of those beasts, Robes at Wind-

baning two long teeth, and shewed us diners pieces of the same. As for the Sea Unicorne, it being a great fish, having a long borne or bone, growing forth of bis fore-nectes seven bead or nostrill (such as Sir Martin Frobisher in bis second voyage found one) in diners places we saw of footlong and them, which if the horne be of any good value, no doubt but many of them may be killed.

creffed, &c.

And concerning what the Shoare will yeeld, as Beach finnes, Morfe teeth, and fuch like, I can little

fas, because we came not on loars in any of the places where boye was of finding them.

But there some may obticl and uske, why we sought that to dail no better. It is this I anssert, that while
we were there along it to weather was a fexceeding shall were could not, for light were anchored in Welchen
holme Sound, where presents one shop drone with two anchors a bead, then were we forced to fland some with a low faile. The next day in Whale Sound, we lost an Anchor and Cable, and could fetch the place no more; then we came to anchor neere a small lland, lying between Sir Tho. Smiths Sound, and Whale Sound, but the winde came more outward, that we were forced to weigh againe: nevertheleffe if wee bad beene in a good harbour, haming but our Ships Boat, we durit not fend her farre from the ling , having fo fem men (as senenteenem all) and some of them very weake; but the chiese cause wee spent so little time 10 to ficke a Harbour, was our great defire to performe the Disconcrie, basing the Sea open in all that part, and fill likelihood of a passing: that boye of and fill likelihood of a passing: that boye of passage was none, then the seere was too farre front, and many of our men very weake, and withall me baumg some beliefe that soits the next yeare would be sent for the killing of Whales, which might better doe

And seeing I have briefly set downe, what hope there is of making a profitable voyage, it is not unfit Jour Worship should know what let or binderance might be to the same. The chiefest and greatest cause is, that some yeere it may happen by reason of the Ice, lying betweene 72 degrees and a halfe, and 76. degrees no minutes, that the Ships cannot come into those places, till toward the middest of July, so that want of time to stay in the Country may bee some let: yet they may well tarry till the lust of August, in which space much businesse may be done, and good store of Oile made: neverthelesse if store of W bales come in (as no feare to the contrarie) what cannot bee made in Oile may bee brought home in Blubber, and the Finnes will arife to good profit. Another hinderance may bee, because the bottome of the Sounds will not be so some cleere as would be wished, by meanes thereof now and then a Whale may be lost (the same case sometime chanceth in Greenland) yet I am perswaded those Sounds before named, will all be cleere before the twentieth of Iuly: for we this yeare were in Whale Sound the fourth day among many Whales, and might have strooke them without let of Ice. Furthermore, there is little wood to bee expected, either for fire or other necessaries, therefore Coles and other such things must bee provided at home, they will bee so much the readier there.

Thus much I thought good to certific your Worship, wherein I trust you will conceive, that much time 10 bath not beene frent in vaine, or the businesse ouer carelessy negletted, and although wee have not performed what we defired (that is, to have found the paffage) yet what wee promised (as to bring certaintie

and a true description) truthwill make manifest, that I have not much erred.

And I dare holdly say (without boasting) that more good discourrie hath not in shorter time (to my remembrance) being done, faces the altem mas attempted, confidering from much leave beause policil, and the inflicialist of Japing for serve the Polic (spop a transfer) and about all, the variation of the Compil, the bollow moderal operation is fine in this May, inventing and descretafy; for findings and furth, being an about the moderate of the serventing and furth, some and the serventing Some part (as in Wostenholme Sound, and in Sir Tho. Smiths Sound) varied above fine Points or 56. degrees, a thing almost incredible and matchlesse in all the world beside, so that without great care, and good observations, a true description could not have beene bad. In fine, what sever my labours are or shall be, I est come them too listle, to expresse my thankefull minde for your many supers. wherem I shall be c-40 mer studious, to supply my other wants by my best endenours, and ener rest at

Your Worships command,

WILLIAM BAFFIN.

A briefe and true Relation or Journall, contagning such accidents as happened in the fift voyage, for the discouerie of a passage to the North-west, set forth at the charges of the right Worlhipfull Sir Tho. Smith Knight, Sir Dudly Digges Knight, Master Iohn Wostenholme Esquire, Master Alderman Iones, with others, in the good ship called the Discouerie of London; Robert Bileth Master, and my felfe Pilot, performed in the yeere of our Lord 1616.

TN the Name of God, Amen. The forenamed thip being in full readmette upon the twentie lixe of March, we fet faile at Granefend, being in number leuenteene persons, having very faire 63 weather, which continued till the second of April: by that time we were off Portland, then the winde comming Westward with soule weather, we kept Sea till the fourth day, then being not able to fetch Plimonth, bore roome for Dartmouth , where wee flayed eleuen dayes , in which time was much foule weather and westerly windes.

The fifteenth day of Aprill, being cleere of Darsmouth, we were forced the next day to put into Plimenth. The nineteenth day we fet faile from thence, and the twentieth in the morning we past betweene the Lands end and Silly with a faire winde. Continuing our course, as in the briefe Table or Journall is let downe, with every particular from noone to noone, that here I need not make a tedious repetition, nothing worthy of note happing, but that we had a good passage, and the first Land we faw was in Freum Danis, on the coast of Groinland in the latitude of 65. Grinden degrees 20. minutes. On the fourteenth of May in the forenoone, then fixe of the people being a fifting came to vs, to whom we gate small pieces of Iron, they keeping vs companie being very ioyfull, supposing wee had intended to come to anchor: but when they faw vs stand off from

to shoare they followed vs a while, and then went away discontented, to our feeming. We profecuting our Voyage, were loth to come to anchor as yet, although the winde was contraine, but faill plyed to the Northward, vntill we came into 70. degrees 20. minutes: then wee came to anchor in a faire Sound (neere the place Mafter Danis called London Coaft,) The twentieth of May at enening, the people efpying vs fled away in their Boates, getting on Rocks wondring and gafing at vs, but after this night we faw them no more , leaving many Dogs run- Men and dogs ning to and fro on the Hand.

At this place we flayed two dayes, in which time wee tooke in fresh water and other necessaries ; here we had some dislike of the passage, because the Tydes are so small as not arising about eight or nine foot, and keepe no certaine courle, but the neerest time of high water on the change 20 day is at a quarter of an houre past nine, and the Flood commeth from the South.

The two and twentieth day at a North Sunne, wee fet faile and plyed full Northward, the winde being right against vs as we stood off and on. Vpon the fixe and twentieth day in the afternoone, we found a dead Whale, about fixe and twentie leagues from thoure, having all her Dead Whale, finnes. Then making our ship fast, wee vied the best meanes wee could to get them, and with much toile got a hundred and lixtie that evening. The next morning the Sea went very high and non-noting on a numerous and notice that occurring a true next morrough time Set went very right and the winde arthing, the Whale broke from vs, and we were forced to leave her and fer faile, and having not flood past three or foure leagues North-westward, came to the Ice, then wee tacked and stood to the shoars-ward, a fore storme ensued.

By the thirtieth day in the afternoone, wee came faire by Hope Sander fon , the fartheft Land Hope Sander fons 30 Mafter Danie was at, lying betweene 72, and 73. degrees; and that evening by a North Sunne

we came to much Ice, which we put into, plying all the next day to get through it.

The first of Iune, we were cleere of the Ice before named, and not farre from shoare, the winde blowing very hard at North North-east, then we put in among divers llands, the people see- Tents, Men ing ve fled away in all hafte leaving their Tente behinde, and upon a finall Rocke they hid two and Womens young Maides or Women. Our flip riding not farre off, we elpyed them , to whom our Mafter with fome other of our companie went in the Boate, they making agoes to be carried to the Hand where their Tents were close adjoying. When they came thither, they found two old women more, the one very old, to our efteemation little leffe then fourescore, the other not so old. The next time we went on shoare, there was another Woman with a child at her back, who had hid 40 her felfe among the Rocks, till the other had told her how well wee had vied them, in giving

them pieces of Iron and fuch like, which they highly effective, in change thereof they give vs Seales skinnes, other riches they had none, faue dead Seales, and fat of Seales, some of which fat or blubber afterward we carried aboord, the poore women were very diligent to carry it to the water fide to put into our caske, making flew that the men were ouer at the Mayne, and at an other small Hand something more Eastward. Then making fignes to them that wee would shew them our ship and set them where the men were : the foure youngest came into our Boate; when they were aboord they much wondred to see our ship and surniture : we gaue them of our meat, which they cafting would not eate. Then two of them wee let on the Iland, where they suppofed the men to be; the other two were carried to their Tents againe. Those that went to feeke the men could not finde them , but came as neere the flip as they could , and at evening wee fet 50 them over to the other.

This place wee called Womens Hands; it lyeth in the latitude of 71. degrees 45, minutes : Womens Handsi here the Flood commeth from the Southward, at nep Tydes the water arifeth but fixe or feuen foote, and a South South-east Moone maketh a full Sea. The Inhabitants very poore, living chiefly on the fielh of Scales, dryed, which they cate raw, with the skinnes they cloathe themselves, and The people de also make coverings for their Tents and Boats which they dreffe very well. The Women in their scribes apparell are dafferent from the men , and are marked in the face with diners blacke flrokes or Women. lines, the skin being rafed with fome tharpe inftrument when they are young, and blacke colour put therein, that by no meanes it will be gotten forth.

Concerning their Religion, I can little fay: onely they hade a kinde of worthip or adoration. Religion. to the Sunne, which continually they will point vnto and firike their hand on their breaft, crying Ilyans; their dead they burie on the fide of the Hils, where they live ( which is commonly on fmall Ilands) making a pile of flones over them, yet not fo close but that wee might fee the dead body, the aire being fo pierfing that is keepeth them from much flinking fanour. So likewife and Dode

I have seene their Dogs buried in the same manner.

Vpon ti e fourth day we fet fayle from thence, having very faire weather, although the winde were contrary, and piyed to and fro betweene the Ice and the Land, being as it were a channell of feuen or eight leagues broad : then on the ninth day, being in the latitude of 74. degree 4.minutes, and much pettered with Ice, neere vote three small llands, lying eight miles fromth thore, we came to anchor neere one of them.

The fe llands are vied to be frequented with people in the latter part of the years, as it feemed by the houses and places where the tentshad stood but this years as yet they were not come: here the tides are very imall, especially the floud, which ariseth not about fine or fix foot, yet the ebbe runneth with an indifferent ftreame, the cause thereof (in mine opinion) is the great abundance of Snow, melting on the Land all this part of the yeare.

The tenth day wee let layle from thence, and flood through much Ice to the Westward to try if that further from the shoare, wee might proceede; but this attempt was soone quailed. for the more Ice we went through, the thicker it was, till wee could fee no place to put in the Seeing, that as yet we could not proceede, we determined to fland in for the shoare, there to

abide some few dayes, till such time as the Ice were more wasted and gone (for we plainely faw that it confumed very faft) with this refolution we flood in, and came to anchor among many Ilands, in the latitude of 73. degrees 45. minutes. On the twelfth day at night here wee continued two dayes without flew or figue of any people, till on the fifteenth day in the morning. 42 Inhabitants about one a clocke, then came two and fortie of the Inhabitants in their Boaresor Canoas, and 20 gaue vs Seale skinnes, and many peeces of the bone or horne of the Sea Vnicorne, and shewed vs

divers peeces of Sea Mors teeth; making fignes that to the Northward were many of them; in Vnicornes exchange thereof, we gaue them small peeces of Iron, Glasse Beads, and such like : at four feuerall times the people came to vs, and at each time brought vs of the aforesaid commodities, by reason thereof we called this place Horne Sound. Here we stayed fix dayes, and on the eighteenth day at night, we set sayle, having very little winde; and being at Sea, made the best way we could to the Northward, although the winde

had beene contrary for the molt part this moneth, but it was strange to see the Ice so much consumed in fo little space, for now we might come to the three Ilands before named, and stand off to the Westward almost twenty leagues, without let of Ice, vntill we were more North (as to 74. 30 degrees 20. minutes) then we put among much feattered Ice, and plyed to and fro all this month, fill in the fight of shoare, and many times fast in the Ice, yet every day we got something on our way, nothing worthy of note happening, but that at divers times we law of the fifthes with They feemany long hornes, many and often, which we call the Sea Vnicorne : and here to write particularly Sca Vnicornes, of the weather, it would be superfluous or needelesse, because it was so variable, sew dayes without Snow, and often freezing, in to much, that on Midfummer day, our shrowds roapes and failes

Sharp froft on were fo frozen, that we could fearie handle them; yet the cold is not fo extreame, but it may Midiummer well be endured. The first of July we were come into an open Sea, in the latitude of 75, degrees 40, minutes

which a new reuned our hope of a passage, and because the winde was contrary, wee stood off 40 twenty leagues from the shoare, before we met the Ice : then standing in againe; when we were neers the Land, we let fall an anchor to fee what tyde went, but in that we found small comfort. Shortly after the winde came to the South-east, and blew very hard, with foule weather, thicke, and foggie : then we fet fayle, and ran along by the Land : this was on the fecond day at night. The next morning we patt by a faire Cape, or head land, which wee called Sir Dudley Digges Cape, it is in the latitude of 76.degrees 35.minutes, and hath a small Iland close adioyning to it, the winde still increasing, we past by a faire Sound twelve leagues distant from the former Cape, having an Iland in the midit, which maketh two entrances. Vinder this Iland we came to anchor; and had not rid past two houres, but our Ship drove, although we had two anchors at the ground, then were we forced to fet fayle, and fland forth : this Sound wee called Wosfenbelme Sound : 50 hach many Inlets or smaller Sounds in it, and is a fit place for the killing of Whales.

The fourth day at one a clocke in the morning, the storme began againe at West and by South, so vehement, that it blew away our forecourse, and being not able to beare any Lyle, wee lay a drift till about eight a clocke, then it cleared vp a little, and we faw our felues imbayed in a great Sound : then we let fayle and flood ouer to the South-east fide, where in a little Coue or Bay we let fall an anchor, which we loft with cable and all, the winde blowing fo extreamely from the tops of the hils, that we could get no place to anchor in, but were forced to fland to and fro in the Sound, the bottome being all frozen over; toward two a clocke it began to be leffe winde, then we flood forth.

In this Sound we faw great numbers of Whales, therefore we called it Whale Sound, and doubtleffe if we had beene prouided for killing of them, we might have strooke very many. It lyeth in the latitude of 77, degrees 30, minutes. All the fift day it was very faire weather, and wee kept along by the Land till eight a clock in the cuening, by which time we were come to a great banke of Ice, it being backed with Land, which we feeing, determined to fland backe some eight

leagues, to an Hand we called Hacklans Ile, it lyeth betweene two great Sounds, the one Whale Sound, and the other Sit Thomas Smiths Sound : this last runneth to the North of feuenty eight Sir Thomas degrees, and is admirable in one respect, because in it is the greatest variation of the Compasse of Smiths Sound any part of the World known: for by divers, good Observations I found it to be about five points in 78, deg. or fifty fix degrees varied to the Westward, so that a North-east and by East, is true North, and to Variation of of the reft. Also this Sound seemeth to bee good for the killing of Whales, it being the greatest the compasse and largest in all this Bay. The cause wherefore we minded to stand to this Iland, was to see if 56.degrees to we could find any finnes or fuch like on the fhore, and so indeed this night wee came to anchor, the West. but with fuch foule weather, that our Boat could not lind. The next day were were forced to let Which may to fayle, the Sca was growne to high, and the wind came more outward. Two dayes were freme nable D.G.I. and could get no good place to anchor in: then on the eight day it cleered up, and wee feeing w bettrule. Tom. t company of Ilands lye off from the shoare twelve or thirrowne Leagues, were minded to goe zor 1.2. c.1. that them, to fee if there we could Anchor. When we were fomething neere, the winder tooke vs where more floort; and being loth to fpend more time, we cooke opportunitie of the windered left the fear-arts dison of attraction of

. doth truly describe. Solve frood to the Westward in an open Sea, with a stiffe gale of wind, all the next day and variation to till the tenth day at one or two a clocke in the morning, at which time it fell calme and very the known con fogeie, and wee neere the Land in the entrance of a faire Sound, which wee called Alderman tinenes of Alia 20 Jones Sound, This afternoone being faire and cleere, we lent our Boat to the shoare, the ship be- &c.must be vaing under fayle, and affoone as they were on shoare, the wind began to blow; then they returned speakably more againe, declaring that they faw many Sea Morfes by the shoare among the Ice, and as farre as then here there againe, declaring that they law many sea Mories by the House among the fee, and as the can be, and yet they were, they law no figure of people, nor any good place to anchor in along the shoare. Then here is more having an eafie gale of wind at East North-east, we same along by the shoare, which now trend variation then deth much South, and beginneth to shew like a Bay.

On the twelfth day we were open of another great Sound, lying in the Latitude of 74 degrees Brafil, Pern, &c. 20. minutes, and we called it Sir Lames Lankasters Sound: here our hope of passage began to be This Map of leffe every day then other, for from this Sound to the Southward, wee had a ledge of Ice be- the author for tweene the shoare and vs, but cleare to the Sea ward, we kept close by this ledge of Ice till the this and the to foureteenth day in the afternoone, by which time wee were in the latitude of 71. degrees 16. formerVoyage fourcetent day in the presentation of which makes were in the statutes of interest of the work of the last of the Southward of 70 degrees 30 minutes, then were shaking for much lee round before the Last of the Southward of more Estimated, Juppeding to have been as of ship insurall having for much lee round beyon to the off face of the Lee, virial whard come into 70-degrees, then were forewhere the come of the state of to have flood in againe. But this proved quite contrary to our expectation: for wee were for- woublefome ced to runne aboue threefcore leagues through very much Ice, and many times fo fail, that wee and too coffly ced to runne about mercutor leagues through very most and many many many could go no wayes, although we kept our courfe due Eaft; and when wee had gotten into the 'o infers. open Sea, wee kept fo neere the Ice, that many times we had much adoe to get cleare, yet could Sound. not come neere the Land, till we came about 68. degrees, where indeede we law the shoare, but Sir lames Loncould not come to it by eight or nine leagues, for the great abundance of Ice. This was on the safter Sound. 400 four and eventieth day of luly: then ipens we three dayes more to fee if comeniently we They fee Land could come to anchor, to make trial for the cides, but the fee led's into the latitude of 6, de. and and them gree 400 minutes. Then we left of feeding to the Welf thours, because were were me felture embiding to the Welf thours, because we were me felture embiding indirate of Combeniesate Iles, and should know no certaintie, and hope of passing could like.

Now feeing that we had made an end of our discovery, and the years being too farre spent to goe for the bottome of the Bay, to fearch for dreft Finnes; therefore wee determined to goe for the Coast of Gromeland, to see if we could get some refreshing for our men: Master Hnbert and two more, having kept their Cabins about eight dayes (besides our Cooke. Richard Waymen, which died the day before, being the twenty fix of July) and divers more of our company fo weake, that they could doe but little labour. So the winde fauouring vs, we came to anchor in

50 the latitude of 65, degrees 45, minutes, at fix a clocke in the evening, the eight and twentieth day, in a place called Cankin Sound. The next day going on thoare, on a little Iland we found great abundance of the herbe called

Scuruie Graffe, which we boyled in Beere, and so dranke thereof, vsing it also in Sallets, with Sorrell and Orpen, which here groweth in abundance; by meanes hereof, and the bleffing of Scuruy Graffe. God all our men within eight or nine dayes space were in perfect health, and so continued till our arrivall in England.

Wee rode in this place three dayes before any of the people came to vs; then on the first of August, fix of the Inhabitants in their Canous, brought vs Salmon Peale, and such like, which 60 was a great refreshment to our men : the next day following, the same fix came againe, but after that we faw them no more vntill the fixt day, when we had wayed anchor, and were almost cleere of the harbour; then the same six and one more, brought vs of the like commodities, for which we gave them Glaffe Beads, Counters and small peeces of Iron, which they doe as much esterme, as we Christians doe Gold and Silver.

ching of these llands, which wee called Careyer llands, all which Sounds and Ilands the Map the compession

2d

In this Sound we faw fuch great Scales of Salmon (wimming to and fro, that it is much to be admired: here it floweth about eighteene foote water, and is at the highest on the change day. at feuen a clocke: it is a very good harbour, and eafie to be knowne, having three high round hils like Piramides close adioyning to the mouth of it, and that in the middest is lowest, and an long all this coast are many good harbours to be found, by reason that so many Hands lye off from the maine.

The fixt of August, by three a clocke in the afternoone, wee were cleere of this place, having a North North North-west winde, and faire weather, and the Lord sent vs a speedy and good paffage homeward as could be withed : for in nineteene dayes after, wee faw Land on the Id coaft of Ireland, it being on the five and twentieth day : the feuen and twentieth at noone we were two leagues from Sally, and the thirtieth day, in the morning wee anchored at Dower in the roade, for the which and all other his bleffings the Lord make vs thankfull.

#### CHAP. XX.

A briefe Discourse of the probabilitie of a passage to the Westerne or South Sea, illustrated with testimonies: and a briefe Treatife and Mappe by Master

Thought good to adde somewhat to this Relation of Master Baffin, that learned-vulearned Mariner and Mathematician; who wanting art of words, fo really employed himselfe to those industries, whereof here you see so euis dent fruits. His Mappes and Tables would have much illustrated his Voyages, if trouble, and cost, and his owne despaire of passage that way, had not made vs willing to content our felues with that Mappe following of that thrice lear-

ned (and in this argument three times thrice industrious) Mathematician, Master Brigges, 30 famous for his readings in both Vniuerfities, and this honourable Citie, that I make no further Voyage of Discouery to finde and follow the remote Passage and extent of his name. Mafter Baffin told mee, that they supposed the tyde from the North-west, about Digges Iland was milreported, by miltaking the houre, eight for eleuen : and that hee would, if hee might get employment, fearch the passage from Impan, by the coast of Afia, or (qua dataporta) any way hee could. But in the Indies he dyed, in the late Ormus businesse, flaine in fight with a shot, as hee was trying his Mathematicall projects and con-

Now for that discourry of Sir Thomas Button, I have solicited him for his Noates, and receiued of him gentle entertainment and kinde promifes; but being then forced to flay in the Citie 40 vpon necessary and vrgent affaires, he would at his returne home, feeke and impart them. Since I heare that weightie occasions have detained him out of England, and I cannot communicate that which I could not receive : which if I doe receive, I purpose rather to give thee out of due place, then not at all. Once he was very confident in conference with me of a paffage that way. and faid that he had therein fatisfied his Maiestie, who from his discourse in private, inferred the necessitie thereof. And the maine argument was the course of the tyde: for wintering in Port Nelfon (see the following Mappe) hee found the tyde rising every twelve houres fifteene foote (whereas in the bottome of Hudfons Bay it was but two foote, and in the bottome of Fretum Danis discouered by Baffin, but one) yea and a West winde equalled the nep tydes to the spring tydes; plainely arguing the neighbourhood of the Sea, which is on the Welt fide of America. The 70 Summer following he found about the latitude of 60 degrees a strong race of a tide, running sometimes Eastward, sometimes Westward; whereupon losses Hubbard in his plat, called that place Hubbarts Hope, as in the Map appeareth. Now if any make scruple, because this discouery was not purfued by Sir Thomas Button, let him confider, that being Prince Henries Servant, and partly by him employed (whence I thinke he named the Country New Wales) the votimely death of that Prince put all out of ioint; nor was hee so open, that others should have the glory of his dis-

And if any man thinke that the passage is so farre, as the Maps vie to expresse America, runming out into the West : it is easily answered, that either of negligence, or over-buse diligence, Maps by Portugals in the East, and Spaniards in the West, have beene falfely projected. Hence 60 that fabulous tirait of Anian, as before by Francis Gaules testimonie and nauigation is euident: And hence the Portugals to bring in the Moluccas, to that moity of the world agreed vpon betwirt the Spaniards and them, are thought to have much curtalled Afia, and the longitude of those Hands, giving fewer degrees to them then in inft longitude is requisite. So the older Maps

of America make the Land from the Magelaw Straits to the South Sea, runne much West, when as they rather are contracted somewhat Easterly from the North. The like is justly supposed of their falle placing, Quimra, and I know not (nor they neither) what Countries they make in America, to run fo farre North-weitward, which Sie Francis Drakes Voyage in that Sea (his No-"Albien, being little further Weltward then Aquainles) plainely cuince to be otherwise. This cafily Yea the late Map of California found to be an Iland, the Saunges diffourfes in all the Countries appeared in Northwards and Westwards from Freguine: fame whereof filled my friend Master Dermer with obtaining his to much confidence, that hearing of firange Ships which came thither for a kinde of Vre or earth, Vouse, Roome the men wing forkes in their diet, with Caldrons to dreft; their meate, &c. things nothing fur-10 table to any parts of America, hee supposed them to come from the East, neere to China or la therenith. pan, and therefore he made a Voyage purpolely to discover: but croffed with divers dislaters, hee returned to Highwa, frustrate of accomplishment that yeare, but fuller of confidence, as in a Let-

ser from Verginia he fignified to me, where death ended that his defigne foone after. But how often are the vitall Charts rejected by experience in thefe Nanigations, in this worke recorded ?

Painters and Poets are not alwayes the best Oracles. For further proofes of a passage about the se parts into the West Sea (or South, as it is called

from the first discourry thereof to the South, from the parts of New Spaine, whence it was nitt descried by the Spaniards) there is mention of a Portagall (and taken in a Carricke in Queene Elizabeths dayes, of glorious memory) confirming this opinion; Sir Martin Frebifher allo from 20 2 Persugall in Gumie, received incelligence of fuch a passage, he saying he had past it. The Pilots of Lubeneare fail generally to acknowledge fuch a thing; and the Admirall of D. Garcia Geoffrey Lass a of Cite-Real, in the time of Charles the fifth, is reported by the Coaft of Baccalass and Las brader, to have gone to the Moluccas. Vafco de Caronado writ to the Emperour, that at Cibela he was one hundred and iffere leagues from the South Sea, and a little more from the North. Antonie de Herera, the Kings Cerenifta Maier (part of whose workefolloweth) maketh with vs also, in the distances of places by him described. But to produce some authority more full, I have here prefented Thomas Conter a Marriner, and Maiter Michael Locky Merchant, and after them, a little Treatife aloribed to Mafter Brigger, together with his Map. And if any thinke that the Spamiard or Portugal would foone have discoursed such a pullage : these will answere, that it was Some of one 30 not for their profit to expose their East or Welt Indies to English , Dutch , or others , whom Merchants are not for their profit to expole their half or west restires by so neere a passage. First, Thomas Combes for Miling for

auerreth thus much.

A Note made by me MICHAEL LOK the elder, touching the Strait of Sea, commonly called Fretum Anian, in the South Sea, through the North-west passage of Metaincognita.

Hen I was at Power, in Aprill 1596, happily arrived there an old man, about threefcore yeares of age, called commonly Inan de Fuen but named properly Apostoles Valerianes, of Nation a Greeke, borne in the Hand Cefalonia, of profession a Mariner , and an ancient Pilot 6c of Shippes. This man being come lately out of Spaine, arrived first at Ligarno, and went thence to Florence in Italie, where he found one Iohn Donglas, an Englishmen, a famous Mariner, ready comming for Venice, to be Pilot of a Veneties Ship, named Ragafena for England, in whose g pany they came both together to Venice. And lohn Denglas being well acquainted with m fore, he gaue me knowledge of this Greeks Pilot, and brought him to my speech : and in long

talke and conference betweene vs, in prefence of lobs Douglas: this Greeke Pilot declared in the Italian and Spanish languages, thus much in effect as followeth. First he faid, that he had bin in the West Indies of Spaine by the space of fortie yeares, and

had failed to and from many places thereof, as Mariner and Pilot, in the femice of the Spaniarde Alfo he faid, that he was in the Spanife Shippe, which in returning from the Hands, Philippia Oaptaine Can nas and China, towards Nona Spania, was sobbed and taken at the Cape California, by Captaine Candish Englishman, whereby he loft fixtie thouland Duckets, of his owne goods.

Also he laid, that he was Pilot of three small Ships which the Vizeroy of Mexico sent from Mexico, armed with one hundred men, Souldiers, vnder a Captain, Spaniards, to discourt the Straits to of Anian, along the coalt of the South-Sea, and to fortifie in that Strait, to refut the paffage and proceedings of the English Nation, which were feared to passe through those Straits into the South Sea. And that by reason of a mutinie which happened among the Souldiers, for the Sodomie of their Captaine, that Voyage was overthrowne; and the Ships returned backe from Ca-Informacoult to Nova Spania, without any effect of thing done in that Voyage. And that after

their returne, the Captaine was at Mexico punished by instice,
Alio he faid, that shortly after the faid Voyage was so ill ended, the faid Viceroy of Mexico. fent him out againe Anno 1 592. with a finall Caranela, and a Pinnace, armed with Mariners one-

ly, to follow the find Voyage, for discouery of the same Straits of Anian, and the passage thereof, into the Sea which they call the North Sea, which is our North-west Sea. And that he followed his course in that Voyage West and North-west in the South Sea, all along it the coast of No-11.1 Spania, and California, and the Indies, now called North America (all which Voyage hee fig. Land trending miffed to me in a great Map, and a Sea-card of mine owne; which I laied before him) virtill hee in 47- degrees, came to the Latitude of forthe feuen degrees, and that there finding that the Land trended North and North-east, with a broad lister of Sea, betweene 47, and 48 degrees of Latitude : hee entred thereinto, fayling therein more then twentie dayes, and found that Land trending still fometime North-west and North-east, and North, and also East and South-eastward, and very much broader Sea then was at the faid entrance, and that hee paffed by druers llands in that favling. And that at the entrance of this faid Strait, there is on the North-west coast thereof, a great Hedland or Iland, with an exceeding high Pinacle, or spired Rocke, likea piller 30

> Also he said, that he went on Land in divers places, and that he saw some people on Land, clad in Beafts skins : and that the Land is very fruitfull, and rich of gold, Siluer, Pearle, and other

things, like Nona Spania.

And also he faid, that he being entred thus farre into the faid Strait, and being come into the The mouth of North Sea already, and finding the Sea wide enough every where, and to be about thirtie of forme leagues wide in the mouth of the Straits, where hee entred; hee thought he had now well discharged his office, and done the thing which he was sent to doe : and that hee not being armed to relift the force of the Saluage people that might happen, hee therefore let sayle and returned homewards againe towards None Spania, where hee arrived at Acapitles Anno 40 1502. hoping to be rewarded greatly of the Viceroy, for this femice done in this faid

> Also he said, that after his comming to Mexico, hee was greatly welcommed by the Viceroy, and had great promites of great reward, but that having fued there two yeares time, and obtained nothing to his content, the Viceroy told him, that he should be rewarded in Spaine of the King him felfe very greatly, and willed him therefore to goe into Spaine, which Voyage hee did performe.

Also he faid that when he was come into Spaine, he was greatly welcommed there at the Kings Court, in wordes after the Spanish manner, but after long time of fuite there also, hee could not get any reward there neither to his content. And that therefore at the length he ftole away out of Spaine, and came into Halle, to goe home againe and line among his owne Kindred and Countrimen, he being very old.

Also he faid, that hee thought the cause of his ill reward had of the Spaniards, to bee for that they did vindershand very well, that the English Nation had now given order all their voyages for discourrie of the North-west passage, wherefore they need not feare them any more to come that way into the South Sea, and therefore they needed not his feruice therein any more.

Also he faid, that in regard of this ill reward had of the Spaniards, and understanding of the noble minde of the Queene of England, and of her warres maintayned to valiantly against the Spaniarde, and boping that her Maiestie would doe him justice for his goods lost by Captaine Greath, he would bee content to goe into England, and ferue her Maietie in that veyage for the disjouerie perfectly of the North-west passage into the South Sea, and would put his life into her 60 The fit aight to Maightes hands to performe, the fame, if thee would furnish him with onely one thip of fortie tunes burden and a Pinnaffe, and that he would performe it in thirsie dayes time, from one end to the other of the Streights. And he willed me to to write into England.

Iuan de Fucas Letters and Relation of a passage.

And upon this conference had twife with the faid Greeke Pilot, I did write thereof according ly into England vnto the right honourable the old Lord Treasurer Cecill, and to Sir Walter Raleigh, and to Malter Richard Hakluys that famous Colmographer, certifying them hereof by my Letters. And in the behalfe of the laid Greeke Pilot, I prayed them to disburse one hundred nounds of money, to bring him into England with my felfe, for that my owne purfe would not itretch io wide at that time. And I had answere hereof by Letters of friends, that this action was very well liked, and greatly defired in England to bee effected; but the money was not readie and therefore this action dyed at that time, though the faid Greeke Pilot perchance liveth fill this day at home in his owne Countrie in Cefalonia, towards the which place he went from me within a forenight after this conference had at Uenice.

And in the meane time, while I followed my owne basinesse in Umice, being in Law suit asainst the Companie of Merchants of Turkie, and Sir John Spencer their Governour in London , to recouer my pention due for my office of being their Confull at Aleppo in Turkie , withich they held from me wrongfully. And when I was (as I thought) in a readmeffe to returns home into England, for that it pleased the Lords of her Maietties honourable Prime Counsell in England, to looke into this Caufe of my Law fint for my reliefe ; I thought that I should be able of my owner pur fe to take with me into England the faid Greeke Pilot. And therefore I wrote vinto him from

Venice a Letter, dated in July 1596. which is copied here-vnder.

Al Mageo. Sigor. Capitan Iv AN DE Frea Piloto de Indias, amigo mio charme en Zefalonia.

M 17 hoursalo Sennor, sendo 70 para huchierme en Inglatierra dentre de pocas mecet, y accuerdandeme de lo trattado entre un 71 % M. en Venesa, sobre el viagio de las Indias, me ha purisida bien de sermir esta certa a V. Amigo & servitor de V.M.

And the faid Letter came to my hands in Venice, the 16. day of November, 1596. but my Law fuite with the Companie of Turkie was not yet ended , by reason of Sir Iohn Spencers suite made in England at the Queenes Court to the contrarie, feeking onely to have his money difcharged which I had attached in Vence for my faid pension , and thereby my owne purse was 60 not ver readie for the Greeke Pilot.

And nevertheletie, hoping that my faid fuite would have shortly a good end; I wrote another Letter to this Greeke Pilot from Venice, dated the 20, of November, 1 596, which came not to his hands. And also another Letter, dated the 24. of Ianuarie, 1596. which came to his hands. And thereof he wrote me answere, dated the 28, of May, 1597, which I received the first of August

1597. by Thomas Norden an English Merchant yet liuing in Lordon, wherein he promised flilled goe with me unto England, to performe the faid voyage fordiscource of the North-week passage into the Souch Sea, it I would lied him money for his charges according to his former writing, without the which money, he faid he could not goe, for that he faid he was vindone veterly, when The Ship Santa he was in the flip Santa About, which came from Chima, and was robbed at Chilipmini. "And yet, dates."

Assat.

The Stip Series he was in the litip Series shound, which came from Chima, and was robbed at California; 'had yet, stone.

and a signed afterward I wrote him another Letter from Proises, whereauto he wrote me antiwere, by a Letter written in his Greeke language, dated the 20. of October, 1998, the which I have full by me; wherein he promiteth full to go with the into England, and performer the fail of veryes of discoverized the North-weft passage mot the South Sea by the fail threights, which he callect he fail of North-weft passage mot the South Sea by the fail threights, which he callect he of North-weft passage in the first play, if I will lead to of North-weft passage which the callect her fail the work of the Mark Spania, which he faith is but thirtie daies voyage in the streights, if I will lead to of North-weft passage which he called the three high called the yet fend him.

thirtie dayes for that I had not yet recoursed my pension owing mee by the Companie of Turke aforesaid.

Sension with him in this matter,

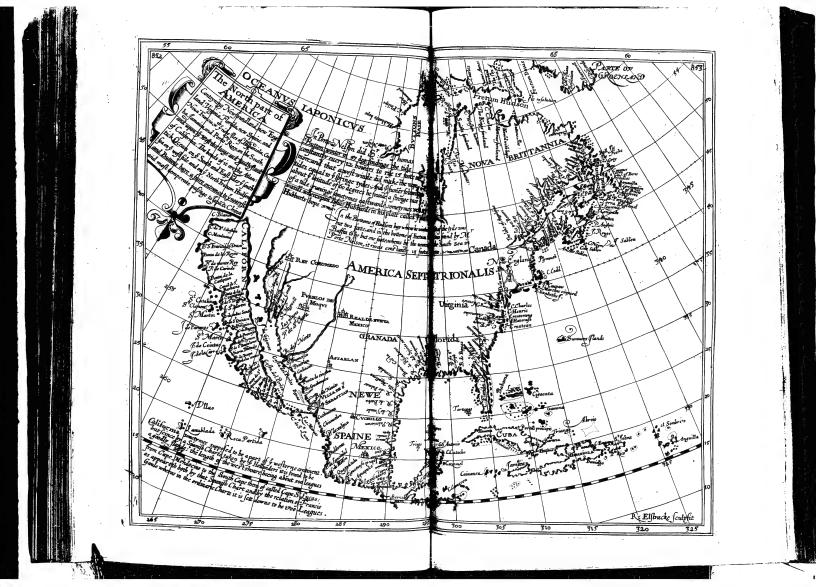

And yet hafty, when I'my felle was at Zante, in the moneth of lune 1602, minding to paffe from thence for England by Sea, for that I had then recovered a little money from the Companie of Tarke, by an order of the Lords of the Prime Countill of England, I wrote nother Letter to this Greek Pilot to Cofalonia, and required him to come to me to Zante, and goe with mee into this Greek Pilot to Cofalonia, and required him to come to me to Zante, and goe with mee into the Analysis of the Analysis of the Sea from Sante to Venice, and from thence I went by land through France into England, which is a facility of a Correct of the Company of Tarket boliness, which least not the respective time; with great viriables had for the Company of Tarket boliness, which hath cost me a great fumme of money, for the which I am not yet fastingth of them.

## A Treatise of the North-well passage to the South Sea, through the Consinent of Virginia, and by Fretum Hudson.

The noble plantation of Virginia hash fome very excellent prerogatives above many other 30 famous Kingdomes, namely, the temperature of the aire, the fruitfulness of the toile, and the commodious fuel of fluitunion.

The aire is healthfull and free both from immoderate heate, and from extreme cold; for that both the Iniabitants and their Castell doe proping exceedingly in fature and fitength, and all Plants brought from any other remote climate, doe there grow and fruefite in agood or better manner, then in the folk from where they easpe. Which though it doe manifelly proous the fruitfulfuefice of the folk; yeelding all kindes of Graine or Plants committed vators, with a rich and plentifull increase; yet cannot the famelie of the earth alone produce such excellent effects, validite the temperature of the are be likewise for fauousle, that those tender fiprous which the earth doth abundantly bring forth, may be ethersselfled with moderate heate and seasonable moi-40 strue, and treed both from icorching drought, and nipring fresh.

These bleffings are so much the more to be esteemed, because they are bestowed upon a place fituated to conveniently, and at fo good a distance both from Europe, and the West Indies . that for the mutuall commerce betwixt these great and most rich parts of the habitable world, there cannot bee deutled any place more convenient for the faccour and refreshing of those that trade from hence thither : whether they be of our owne Nation, or of our Neighbours and Friends, the multitude of great and nauigable Rivers, and of fate and spacious Harbours, as it were inviting all Nations to entertaine mutual! friendship, and to participate of those blessings which God out of the abundance of his rich Treasures , hach so graciously bestowed some vpon these parts of Esrope, and others no lesse defired vpon those poore people: which might still have remayned in 50 their old barbarous ignorance, without knowledge of their owne miferie, or of Gods infinite goodnesse and mercy; if it had not pleased God thus graciously both to draw vs thither with defire of fuch wealth as those fruitfull Countries afford, and also to grant vs so easie, certaine, and fafe a meanes to goe vnto them : which paffage is in mue opinion made much more fecure and easie by the commodious Harbours and refreshing which Virginia doth reach out voto vs. The coasts of Florida to the West, being not so harberous; and of New England to the East, somewhat more out of the way, amongst so many Flats and small Ilands not to safe: Neither is the commodiousnesse of Virginia's situation onely in respect of this West Atlantiche Ocean, but also in respect of the Indian Ocean, which we commonly call the South Sea, which lyeth on the West and North-west fale of Virginia, on the other fale of the Mountaines beyond our Fails, and openeth a free and faire paffage, not onely to China, lapan , and the Moluccaes; but also to New 60 Spaine, Para, Chili, and thole rich Countries of Terra Auftralis, not as yet fully discouered. For the Sea wherein Master Hadfon did winter, which was first discovered by him, and is therefore now called Freeum Hadfon, doth thretch to farre towards the West, that it lyeth as farre West-

ward as the Cape of Florida: So that from the Falls aboue Henrico Citie, if we shape our journey towards the North-west, following the Rivers towards the head, wee shall undoubtedly come to the Mountaines, which as they fend divers great Rivers Southward into our Bay of Chefer sock, fo likewile doe they fend others from their further fide North-westward into that Bay where Hudfon did winter. For fo wee fee in our owne Countrie, from the ridge of Mountaines continued from Derbifbire into Scotland, doe iffue many great Rivers on both fides into the East Germore Ocean, and into the Westerne Irish Seas : in like fort from the Alpes of Switzerland and the Grizons, doe runne the Danubie Eastward into Pontsus Euzense, the Rhone into the North Germane Ocean, the Rhofne West into the Mediterrane Sea, and the Po South into the Adriatice 10 Sea. This Bay where Hudfon did winter, ftretcheth it felfe Southward into 49, degrees, and

cannot be in probabilitie fo farre diffant from the Falls as two hundred leagues; part of the way lying by the Rivers fide towards the Mountaines from whence it fpringeth; and the other part on the other fide cannot want Rivers likewife, which will conduct vs all the way, and I hope carry vs and our promisions a good part of it. Besides that Bay, it is not wnlikely that the Weflerne Sea in some other Creeke or River commeth much neerer then that place : For the place where Sir Thomas Buston did winter, lying more Westerly then Master Hudsons Bay by one hundred and ninetic leagues in the fame Sea, doth extend it felte very neere as farre towards the west as the Cape of California, which is now found to bee an Iland stretching it selfe from 22. degrees to 42, and lying almost directly North and South; as may appeare in a Map of that Iland which 20 I have feene here in London , brought out of Holland ; where the Sea vpon the North-west part may very probably come much neerer then some doe imagine : who giving too much credit to our vivall Globes and Maps, doe dreame of a large Continent extending it felfe farre Westward to the imagined Streight of Anian, where are feated (as they fable) the large Kingdomes of Cobola and Quinira, having great and populous Cities of civill people; whose houses are said to bee fine flories high, and to have some pillars of Turqueffes. Which relations are cunningly set downe by some vpon set purpose to put vs out of the right way, and to discourage such as otherwise might be defirous to fearch a paffage by the way atorelaid into those Seas.

Gerardus Mercator, a very industrious and excellent Geographer, was abused by a Map fent vnto him, of foure Euripi meeting about the North Pole; which now are found to bee all tur-20 ned into a mayne Icie Sea. One demonstration of the craftie falshood of these viual Maps is this, that Cape Mendocino is fet in them Well North-well, distant from the South Cape of California, about seventeene hundred leagues, whereas Francis Gaule that was imployed in those discoueries by the Vice-roy of New Spaine, doth in Hugo Linfebotten his booke fet downe their di-

stance to be onely fine hundred leagues. Befides this, in the place where Sir Thomas Button did winter in 57. degrees of latitude, the constant great Tydes every twelve houres, and the increase of those Tydes whensoever any ftrong Westerne winde did blow, doe strongly perswade vs that the mayne Westerne Ocean is not farre from thence; which was much confirmed vnto them the Summer following; when fayling directly North from that place where they wintered, about the latitude of 60, degrees, 40 they were croffed by a ftrong Current running fometimes Eastward, fometimes Westward: So that if we finde either Hudfons Bay, or any Sea more neere vnto the West, wee may affure our ielues that from thence we may with great eale paffe to any part of the East Indies : And that as the World is very much beholding to that famous Columbia for that hee first discoursed vnto vs the West Indies; and to the Portugal for the finding out the ordinarie and as yet the best way that is knowne to the East Indies, by Cape Bona Speranza: So may they and all the world be in this beholding to vs in opening a new and large paffage, both much neerer, fafer, and farre more wholesome and temperate through the Continent of Virginia, and by Fretum Hudson, to all those rich Countries bordering vpon the South Sea, in the East and West Indies. And this hope that the South Sea may eafily from Virginia be discourred over Land, is much confirmed by the confrant report of the Sauages, not onely of Virginia, but also of Florida and Canada: which dwel-50 ling fo remote one from another, and all agreeing in the report of a large Sea to the Westwards, where they describe great ships not valike to ours, with other circumstances, doe give vs very great probabilitie (if not full affurance) that our endeuours this way shall by Gods bleiling have a prosperous and happy successe, to the encrease of his Kingdome and Glorie amongst these poore ignorant Heather people, the publique good of all the Christian world, the neuer-dying honour of our most gracious Soueraigne, the mestimable benefit of our Nation, and the admirable and fpeedie increase and advancement of that most noble and hopefull Plantation of Virginia; for the good fucceffe whereof all good men with mee, I doubt not, will powre out their prayers to H. B.

thips, Rememniard feakes

The degrees of longitude, which are those that are reckoned by the a Equinoctiall, which 60 affow the de goeth from Bailt to Weft, through the middeft of the Orbe, and Globe of the Earth, have not gres of long! beene able to bee taken well, because there is no fixed figne in the Heaten. Degrees of altitude
are those which are taken, and reckoned from the Pole which fall out certayne, because it is a

of memorie should no longer be buried, and that they should be written by a Royall Chronicles (seeing so much from is gotton of Historie, that is exceeded to much the Pitture, at the foule, the bodie, against the opinion of a moderne Writer.) Providing all the meanes necessaries with liberalists and difference have beene the moere and onely Inftrument; following the opinion of S. Augustine, that this Hifterie, and the ricably taxed: for he doth but Description that followeth hath come to the present effate. And because it hath not beene of least imperblane the fol-tance to bosone the Author, assumating him to got forward with for great a labour, assuming young young to family felly with the universal followings the use that is due to the machings, and labours of the Friedrich and the universal followings of the Universal fo folly with the vasture full openion of the muses tran is and to tree matering, and theories of the principle, on any this Office of Chaple Chromicals in these posses and vegatation these to shot hem Exercife deferreds, on the most favoure men of the tree that the most favoure men of the tree that have indeed it, and it is obtained and taking of among all Nationals to they mere for horizontal post of the principle in 10 which is presented the making mentioned finisher Tatherit, and Productifors with their Names, and it is publicly in presented the making mentioned finisher Tatherit, and Productifors with their Names, and Country, all that hath before 10 fifther, against the best between and most trends of this Baytifia.

Ramusifo, in his Promes in the third Falume of the Namigations, where he faith to be been a value than the country of the trends of the Namigations. though but to- and ridiculous, that the Spanish Authors should take paines in writing the names and Country of the bellions, then which ferned in the matters of the Indies. Wherein be heweth the venime of the onnie concessed of the glerious deeds of these Catholike Kings, and of the Castillian Nation, feeing the Chronicles dee forme to honour the good, and to reproch the enill, for an example of those to come; which could not be obtained with the opinion of this Ramulius, whom the faying of Cato against the Grecians doth fit, But the with the operation of the abstract of the state of the st bee reknowledged of it eternally. God keepe your Lordship, from Vallyadolycede the fifteenth of Odober 1601.

He compatic of the Earth is 260 degrees, which being reduced to leagues of Cafile are 6200. and by the compare of the Earth is vinderstood the Sea together with it, which two Elements make the Globe; whose vpper face in part is Earth, and in part is Sea : The Ancients diuided the Earth in three parts, and gaue to every one his name. The first they called Emps, more celebrated then any of the other. The second Affa, which is greater then the rest, and contayneth the great Kingdome of China. The third. Africa And men being in a supposition that contayment ungreat anguouse or comments in the contrayment and man being manaportion that the World contaymed no more there was reflectefed, not contenting themselves with it, entred 30 in the Art of Naugazing, and in the inneutrion of libra of high being for the them in fach order that they might abole the force of the wanes of the Sea, do this Art the Spanisard have 1 The Speciards furpaffed all the Nations of the World. For whiles there reigned Ferdinand in Cafile and in have surpassed Lyon, the famous Kings Catholike Ferdinando the Fift, and Ifabella a most wise, prudent, and most pursant Queene; and Don John the Second , called the Pellican , raigned in Portugal, (hee that ever will be worthy of memory) Don Christopher Colon, first Admirall of the Indies, having lived many yeeres married in Spaine; with the counfell of Martin of Bobensia, a Portugall borne in the lland of Farall, a famous Aftrologian , and especially a Judiciarie, and of others ber that a Spa- with whom he communicated it, gaue a beginning so the Difcourry of that which at this day is counted the fourth part of the World, and the greatest of them all, and taking his course toward the Sunne fetting, going from Paller a Village of the Earle of Miranda, in the Coast of Anda-40 luzis, he fayled fo much by the Ocean, that hee found this great Land, which the Equino diall Line cutteth in the middelt, and it goeth so farre toward the South, that it reacheth to fiftie two degrees and an halfe, and goeth so high to the North, that it hides it selfer under the Pole Articke, without m knowing any end.

The greatnesse of this fourth part hath set the people in great samiration, whose description shall here be handled, winder the name of Hands, and firme Land of the Ocean Sea, because they are compaffed with this Sea, and placed to the West, and are commandy called, the West Indies, and the New World, and comprehended within the limits of the Kings of Caffule and of Lym. and the New York and national comparison of the World, of 180. degrees, beginning to reckon from Meridian Circle, which paffets by thirtie nine, or by fortie degrees of knogfrinde, Ocidental 10 from the Meridian of Toleia, brough the mouth of the Ruer Collegness, and to the Orientall, through the Citie of Mallace, in fort, that at twentie leagues laying for a degree, thefe bounds have from the one part to the other 3000. Capitaliae leagues, early loss of 3000, paces, of fine foot of a Caffiller yard, which mentay are fixtie Italian miles, from the Orient to the Occident, which the Sea-men doe call East and West. And this account of twentie leagues to a degree, is according to Peolomie, and to the opinion of many curious men. It hath feemed to others that the miles of enery degree are feuentie, and that they make no more then feuenteene leagues and an halfe of Caffile, which is held for the trueft account.

## CHAP. 1. How farre America hath bin discouered. Nature of the Loadstone.

fixed point, which is the marke that is taken, by the which it shall be shewed in this description. There is discourred, and naugated from the North to the South, from 60. degrees of Septentri. What is discoanal altitude, voto fiftie three Austral, which are 1977, leagues of ground, which hath in breadth, ucred and na-

onal attitude, vinto nittle times Autura, without a property of the broadest 1 300, and thence downewards winto eighteene, which is the narowest by Nemat the broaden 1300, and the local whereby Nature divided this Land, leating almost the discoursed far balle of it to the North, and the rest to the South, which are the two parts of these bounds. The more: From third, is the llands and firme land, that lye to the East of Mallaca, where through passed the 81. in Green third, is the llands and free land, this system to the basis remains a system to be which although land, and from Lincot the partition, between the two Growness of Castle and Personals 1 we which although land, and from they are part of the Eath Indea, they are named of the Westin respect to Castles, as shall bee

to feene in the generall Map that followeth. And because the Discouerie of all these Regions, from whence so great Riches have beene Amaruellous brought to steels Kingdomes, is due voto the Load-stone, I will set downe heere a wonderfull ef- Amaruellous fect of his, difeouered by Don Antonio Offerio, a Gentleman of Valladolid, and it is, that it doth effect of the communicate to the Iron, more attractive vertue then naturally it hath of it felfe; feeing that Loadine. communicate to the 100n, more attractive vertor tier in total ny to make the view of the 100n datasite applying an ilron to the sart of the front that hath most force, much more weight will bee ray. Den datasite applying an ilron to the sart of the front that hath of the communication of the communicat applying an iron to the part of the flone it selfe; fo it bee loyned with it, in fort that to a Load urreit a great ftone, that weighesh no more then two pound one quarter, and hath no naturall vertue for to keret of the lift more then fixe ounces weight, it made the Iron in my prefence to lift fourteene pound of I Lozdinane ron, and this vertue bath not the Load-stone of Spaine, a thing that causeth the Philosophers to

20 mule much vport.

The Author had here inferred a Table or Generall Map of America; the defell of which wee have Supplied with this farre more complete of Hondius.

#### HONDIVS.bis Map of AMBRICA.

Chap. 2. Of the Naui-

How many

THe Ocean that is toward the East, as caused us vorted on a Hipponia and Para: that washesh West, Mar del Sur, or the Somb Sea: this washesh Nona Hipponia and Para: that washesh west, Mar del Sur, or the Somb Sea: this washesh toward the Magellas Streight: "He Ocean that is toward the East, is called the North Sea, and that which falleth to the thole Regions which are lituated on the South coaft of Brafile toward the Magellan Streight : and especially the North coast from Brafile toward Caffile , and other Septemerical parts. These two vait Seas are duided into other leffer Seas and Gulfes, and are fayled by foure principall Nauigations. The first and most ancient, from Cashile to Terra firme, and to None Hispania. The second, from Caftile to the River of Plate, and the Streight of Magellan. The third, from the coast of Nona Hispania to Guatimala, and Panama, to Peru, Chile, and the Streight. And the last. and newest, from Nona Hispania to the Blands of the West, and trafficke of China, as it is seenein 10 the Table preceding.

The first Nauigation, because it is most vied, called Carrera de las Indias , The course of the Indies, is divided in two, one to the port of Saint lobe of Ulas in None Hift aris , whitherto from Simil is fayled about one thousand and seven hundred leagues in two moneths and an halfe; and another to Nombre de Dies , and now to Porte belle , which is in the Kingdome which they call Terra firme; of one chouland and foure hundred leagues, in two moneths large, and both goe by one course, till they come to the Hands of the North Sea from Saint Locar of Barrameda, whence vee cannot take Sea without a Pilot skilfull in the Channell, a fit winde and spring Tydes, and light of the day, or lights, for to fee the markes of the Barre.

going out of the Barre of Saint I acat.

The Times for to begin these Nauigations, are divers. For Nona Hispania, the winter being 20 paft, from the beginning of April vnto the end of May, and not after, that they may not come tions are to be to the Hands of the North Sea after August, when the North winder begin to reigne, and the Vrecanes doe begin, which are stormes and great gusts arising of contrarie windes. And to Terra firme, the Nauigation is before the entring of the Winter, in all August and September, that they may come to Porte bello from Nonember forward, when by the beginning of the North winder that Coast is alreadie least diseased, and more healthfeil.

The voyage of the Fleers till the place wher they goe.

From Saint Lucar they goe to the Canaries, whither there is about two hundred and fiftie leagues of Nauigation, of eight or ten dayes, through the Gulfe de las Topus; which in winter is very dangerous for flormes : and in the Port of Congris they caft anker when they thinks it good, or elfe in the Port of Comera, which is the best of those Ilands. From the Conserse they 30 faile to Deffeada, which flands in 15. degrees and little more; and to Dominica, whicher they make seuen hundred leagues, through the great Ocean, and they stay sue and twentie dayes, whereby they cannot returne, because the Brises are ordinarie, and contrarie at their returne. The Brifes are windes which comprehend all the Easterne windes with all their quarters and are fo ordinarie and firme, because the swift motion of the First Moener, doth carry after him the Element of the Aire, as the other fiperior Orbes: and so the Aire followeth alwaies the motion of the Day, going from East to West, never varying, and the effectual motion of the Aire carrieth after him also the vapours and exhalations that doe arise from the Sea, and therefore the Brile winde which runneth from the East, is so continuall in those parts. This voyage from the Canaries to Dominica, Peter Aries of Anila , which was called Gentill and the Initer , made the 40 first, the yeere of 1514. When hee went with an Armie for Governour and Captaine generall of the Kingdome of Golden Castele, now called Terrasirme, fince which the Nauigation hath beene ordered, that vntill then went out of order.

Because it is now ordered that fresh water and wood be not taken in the Hand of Desteads.

and in Dominica, the Fleet of Nona Espanna goe hence to Occoa, a Port of the Iland Hispan-yola, to take refreshing, and they stay long because the stormes from (what doe overtake it. And they They take was that goe for Nona Espanna, doe water in the Hand of Gnadalupe, and there they divide the courter alreadie in fes. The fleet of Nona Espanna goeth in demand of the Cape of Saint Antonie, which is in the the He of Gua- furtheft part and most Occidentall of the Hand of Cuba, to which place they faile about five hundred leagues in twentie dayes ordinarily, in fight of Saint John of Porto Rico and of Espannols, two 50 leagues off the Port of Saint Domingo, running along the coast by the Point of Nizao, and betweene the Hands of Cuba and Iamayon, they goe with great heede of the shoales, which are cal-led the Iardines, neere to the middest of the coast of Cuba where many ships have beene lost, pasfing afterward in fight of the Hand of Pines and Cape Correntes twelve leagues fhort of the Cape of Saint Antonie. From whence there are two courses to the Port of Venacruz, both of tenor twelve daves a one which they call Wahin Land, of two hundred and fiftie leagues, for the Summer time from May to September, when there bee no North windes which are croffe windes on the coast of Tucatan, whereby they passe; and another which they call Without, for the time of Winter, of about two hundred and eightie leagues somewhat higher in altitude: and the best Namigation, for to goe to the Port of Saint Iohn de Viua, is to leane to the coal of Florida, and the Playnes of Almeria, that no contrarie wind stay him from seasonable attayning the Port of Saint

Cape of S. An. John de Vlus.

delape, where the Courfes

The fleets that went from Dominica, and now goe from Guadalupe to Terra firme (whither is about foure hundred leagues voyage of fifteene dayes) they goe in demand of Carragena, farre off the coast of Torra firms, where the Brifes are almost perpetuall, and contrarie to the returne, and the Southerne windes continuall in Summer, and the Northerne in Winter; which are eroffe windes. They doe reknowledge by the way the Cape de Pella between Santa Martha and a Pe- a Officie netalla, and the Cape ball Again neere Carragena, where they valade the merchandife that are Penier. to goe to New Kinfilome; and those which are to patie to Peru, are carried to Porce belle, whit b Or of the thereo from Carageme are ninetie leagues, foure or fixe dayes layling, reknowledging the Point Needle. of Gaptina, and fromtile Comaries to Cartagena is fine and thirtie dayes fayling.

Fhole that goot of Hunduratand Guatemala, goe in companie with them of Nona Efforma, The royage of who Cape Tiburen, the vimost Westerne part of Espannels, from whence running along by Hunduras and In the Hand of Landyes on the North fide, wnto the Point of the " Negrale, the vttermoft of it, c Or little they put to Stalin demand of the Cape of the Cameron, the beginning of the Gulfe and Prounce black Mooits. of Hawkerse ; from whence they goe to anker to Traville fifteene leagues to the West from the Cape, where the merchandize secondaden that are to remains there, and the rest doe passe to the Port of Canalles, and to Golfe Duice, along the toult by the Guite of Hunduras, to transport them

And from the llands of Azora, vnto Saint Lucar of Barraneda, Saint Lucar.

50 the Mariners make three hundred leagues of Nauigation in fifteene dayes, others in thirtie for

the many Briles that doe reigne in this Gulfe of the Azores, whereby they faile till they come. wpon the Coaft of Portugal, and the doubling of the Cape Saint Vincent; and after in fight of the Coaft vnto the Port of Saint Lucar.

The Natigation from Caffele to the River of Plata (whitherto there is one thousand and fixe Natigation to hundred leagues, and to the Streight of Magelanes neere two thousand) hath beene much lon- the River of ger in the time then in the diffance of the way, because being necessarie to come to those Prounces in their Summer, which is from September forward, they cannot depart from Caffile at fuch time as not to paffe the Equinoctiall by June or August, when in it the Calmes are many and very great, and therefore they flay fine moneths in the Voyage, which might bee made in two or three, if from Simil they did depart by August or before : and touching in the Canaries they goe 60 North and South, to eight or mire degrees on the other fide of the Equinoctiall, from whence fome doe faile East and West, to reknowledge the Cape of Saint Augustine in Brafile, and after-

ward in fight of the Land vnto the River of Place and the Streight. Others from the eight de. grees have gone straight through the South Sea to the Streight, although few have come to passe

Serranille, and 4 Distafueno, and from the Cape of Saint Antonie to the Anena, are neere fitte Fleiste degos 30 leagues; and the thips that come from Handaries, doe come allo to reknowledge the Cape of from tening.

The Nauigation of the South Sea bath alwayes beene along the Coast, and because the the South Sea. South windes are very continuall, and the Current of the Streight ordinarie to the North; The Namigation of Natigation of Panama to the Citie of The Kings, is wont to continue two moneths, and the returne leffe then thirtie dayes, and the fame from the Kings to Chile, from whence to Pana. me are fayled nine hundred leagues in leffe then two moneths, eight being needfull for the going , which is alreadie shorter then it was ; for putting to the Seathey finde better windea to

The Nauigation to the Westerne Hands , Malucas and Philippines , from Cafille to the 10 Streight of Magellane paffeth foure thousand leagues, and so for being so long as for the difficultie of passing the Streight of Magellanes , it is held for difficult to vie it , and from None E. frame through the Westerne Gulie, which is in the South Sea. This Nauigation was made, please arrough the restriction of the Medical in the Coast for None Element 2. It has true is a season of the Partials in the Coast for None Element 2. It has true is a season from the Port of Acquiler, from whence to the Medicae and Philippina, they doe make a voyage of none thoutand fix hundred, or a thouland and feuen bundred leagues, which is fylled in two moneths, or two and a halfe, departing in November which is the time most free from calmes. And the returne to Nous Espanns is longer, because not being able to returne the way they went, it is necessarie to alcend to 39, degrees, and depart in May and lune, when the Brises bee leffe, and they stay foure moneths in fayling two thousand leagues that may bee in the 20

of the North. Hereway inferbath in be former booke Which bee the was called Wer

Ature having divided these western Indies in two parts, by the Ishmos or narrownesse from
Perte belle to Panama, placed the one to the North, and the other to the South; wherefore wee will call them the Indies of the North, and of the South. The Kings of Caffele and Lion, with the aduice of the supreme Councell of the Indees, have ordayned, that in each place there the North par's bee a Vice-roy, Courts, and Gouernments, and Bishopricks, as hereafter shall bee shewed. of America, But And first shall be entreated of the Northerne Indies, which commonly they call None Hispanie, because the first discouerers (which were lobe Grijalne and his Companions) having not seene in the Hands houses of stone, nor other things as in Spaine, which here they found with people 20 apparelled, and more civill; They named it New Spaine: which exceedeth the other part of the Indies in pastures, and therefore they have innumerable Cattle of all forts : and it exceedeth ter, to which I also in husbandrie and fruits: it hath no wine, because generally the grapes doe not ripen with perfection, the raines of July and August not suffering them to ripen. The " upper llands have also great Pastures, and a pleasant prospect : for all the yeere they are greene and flourshing, with great pleafantnesse, and great Arcabuces, which are very thick Groues and Inclosures, and in the Playnes are great Lakes and Quagmires. Neither Bread nor Wine grow in them; for the great ranknesse of the ground doth not suffer it to ripen nor eare : the Rivers for the most part haue gold. Florida, Nicaragna, and Guatimala are almost in this manner, as of all more particularly wee will rehearse in their place, and in the Table following shall the bounds of these Northern 40 Great passures Indies bee seene.

in New Spaine, " The weathermoft or

"He Court of the Iland Hispaniela, which in time and place is the first, being neerest vnto Cafile, it hath of bounds East and West five hundred and fiftie leagues, and North and South more then three hundred, wherein are included the llands and Governments of Hispaniala, Caba, Saint lobe, lamayca, Margarina, and the fishing of the Pearle : the Prouince and Goperment of Venezuella , and for neernesse the Prounces of new Andaluzia, Guayana, and Florida, with all the llands of the North Sea, which doe passe a hundred which are named, and are aboue fixe hundred great and small: and those which doe leane toward the Coast of Terra firms, the Mariners doe call of the Lemand, and the other to the Weatherward. The temperature of 50 them all is commonly moift and exceeding hot, and although they be plentifull in Paftures and Trees, they are not to of the Seedes of Caftile, not of Wheat, Barly, Vines, nor Olives : but there is great flore of great Cattell and small, as Kine, Mares, Swine, and Sheepe, and therefore their principall trafficke is Hides and Sugar, for there is great store; and although in the most of them there is gold; it is not fought for.

Cazebi bread. Towner.

The Countrie-men called the Iland of Hifpanials, Apri and Quifqueys, which fignifieth Raughneffe, and a great Countrie. The figure of it is like a Chefnut leafe: it flands in nineteene degrees and a halfe of eleuation of the Pole, it compaffeth about foure hundred leagues and somewhat more, and bath in length East and West an hundreth and fiftie, and North and South from thirtie to fixtie where it is broadeft, it is very plentifull of Sugar, and Cattell, and of Taca, the roote whereof maketh the Cazabi, the bread of the Countrimen. They have no Millet nor Wheat, although they begin to reape fome in the inward parts and coldeft. It is rich of Copper mynes and other metals, and some veine of Gold though but little is gotten, for want of workemen : it hath ten Spanish Townes.

Hondivs bis Map of Hispaniola, Cuba, cc.

The Citic of Saint Dominick or Dominion neite the Coast of the South, on the Riutr of Os.4- The Chie of ma, stands in the faid 19, degrees and a halfe, and 60, of Occidentall longitude from the Mercidian Saint Domings of Totals, from whence vato it there may bee by direct line one thousand two hundred fortie feuen leagues, it hath aboue fixe hundred houfholds. There is refident in it the Audience or Councell, the Officers of the Goods and Royall Treasure; a Mint house, and the Cathedrall Church. And the Archbishoprick hath for Suffraganes the Bishopricks of the Conception de la Voga (which is writed with that of Saint Dominicte) those of Saint lobu, Cuba, Venezuele, and the Abbothip is vinical with tractor datas. Demonstrate from the complete property resistance, and the resolution of lampers; and in the Citicare Monaferies of Dominicans, Promissions, Merusawaris, and other two of Nunes, Grammar Schoole, with Swerthousand \* Pefes of Rent, and an Hofpitall with \* Pefe issue. twentie thousand. The Hauen which is great, and capable of many thips, is in the mouth of the childing zeto Riuer Ozama, and hath the Citic on the West, which the Deputie Don Barbolomer Colon did 25th.

build the yeere 1494. On the Ealkide, better and wholfomer in fituation, and the chiefe Knight Of Alcanters, Nicholas of Onanda being Gouernour of Hilpaniols, An. 1402. remoued it where now it is , from the other fide the River to the Batt, vpon occasion that the Citie had fallen by a great Earthquake. The Village of Saluations of Tguery, eight and twentie leagues from Saint Do- Saluation of miniche to the East, of the Archbishoprick; the Captaine, John of Efquinel, did people it. The Trug. Willage of the Zerbo, twentic leagues from Saint Dominicke to the East, toward the lland of The Village of Saona: the Captaine also planted it in the time of Nicholas of Onando. The Village of Carny, Zopia. fixteene leagues from Saint Dominicke to the North and very close in his circuit, Roderick Mexic El Cary of Trillo, founded it. The Village of Assas in Composition in the country four and Assas of twentie leagues from Saint Dominick to the West, in his borders are many fugar Mills; it was

peopled by the Prefident James Vellas ques, it was called Compostella by a Gallesian Knight, Who carried which held an Heritage in that fituation , and Acoms is the name of the place which the Indians to the Indian had there. The first that carried sugar Canes to the Indies, and began to make triall of them the sugar and there, I me mit that can cannot be a supported by the supported by the

Santa Marie of the Port, feated on the Westerne coast of the Hand, is fiftie or sixtie leagues from Saint Dominicke, as betweene the North and the West; the chiefe Knight Nicholas of Onunde The Citie of the Conception of the Valley, is in the Kingdome of Guarineen, which the first Ad-

mirall Don Christopher Collon built, neere to the which he obtayned the victorie in the great battaile of the Valley Royall: it is twentie leagues from Saint Dominicke to the North-eaft, where is a Cathedrall Church (although there is no Prelate, for it is wnited to the Church of Saint Donni nicke) it hath one Monasterie of religious Franciscans, where is the wood of the Crosse which the Indians could not burne, cut, nor overthrows, which hath done many miracles.

the Valley.

Saint lago de los Canalleros is ten leagues from the Citie de la Vege directly to the North-eaftit was first a Fortresse which the first Admirall made in the Countries of the Cacique Guaracount for the fecuritie of the Valley, and the Fort Magdalene which was four leagues off.

The chiefe Knight of Aleanana, Niebolas of Onanda, As. 1502 did people the Port of Place

in the North coafts, five and thirtie or about fortie leagues from Saint Dominicke, because the things of Caffile might more commodicully trafficke, and because it was no more then ten leagues from the great Valley, where in other ten leagues flood the Village of Saint lames, and the Conceptua within fixteen, and within twelue the Mynes of Cibas, and it was of the Bishoprick of the Valley, the Port of Plate stands in little more then twentie degrees. The Village of Monte-Christe, is in the coast of the North fourteene leagues, so the West of Port of Plate, and fortie from Saint Dominicke, is of the Bishoprick of the Valley; it hath a good Hauen, and certaine salt Pits in it; 30

Nicholas of Ouando did build it. La Verapaz,

There was in old times in this lland the Citie of Ifabella, now difinhabited, which the fifth Admirall built the yeere 1493. the Village of Verapaz in Xaragua, which James Velazques built in the yeere 1503. and the fame yeere peopled also Saluatierra of the Zabana, which fignifieth Playnes and Pastures, in the Indian language: and that Province is plaine and faire. Hee also peopled (betweene the two mightie Rivers Nepba and Taqui) the Village of Saint lobu of the Maguana, in the middeft of the Iland, where the Church continueth yet; and heere reigned The Magnana Coanabo, who tooke Alfonso de Oseda. Hee also planted Villamena de Taquime vpon the Haven, where Oseda call himselie to swim, being prisoner in a ship, with two paire of fetters; and it flands in the South coast, which the Admirall did call the Coast and Hanen of Brasile. The Vil- 30 lage of Bonao is necrevnto Cotty, which the first Admiral also built, where hee made a Fort for the securitie of the Mynes, which were the first that were found in this Iland, The Village This land flourished to much, that there were in thousenet chousand a Castillane, many of

El Bando,

La Ruenauen

14000 . Spatim's there were them Noble people, and the Plantations of other parts which happened afterward, caused it to

in the Hispanis be difinhabited; for from it, and from the lland of Cuba, went all the substance for the new Coun-

treyes that were found.

Wherethey the first time

The Ports, Roades, Capes, and Points most famous, and the Ilands pertayning to the Coast of this Iland, are in the South Coaft, the Point of Nizae, ten leagues from Saint Dominiche to the 40 West. The Port of Ocoa, eighteene, which is a Bay where the Fleets which goe for Nona Epania doe anchor and take refreshing, when they doe not anchor in the nooke of Zepezepin, Parto Hermofe. Which is neere vnto it, or in another which they call the Faire Hanen, two leagues before they come to Ocea. Azma a Port and Towne twentie foure leagues beyond Ocea la Calongia, a large Point thirtie leagues, right against the Hands of Boara and Altobelo, fine leagues from the Coast, and the Beatados. Tagaimo about thirtie foure more to the Weit, and Abaque, an Iland neere the Cape of Tiburon, the furthest West of Hispaniola: la Nabata ten leagues to the Sea East and West from the Cape, and Cape Rojo twelue leagues from it to the North : the Rookes, or Hermones Trees, lile Oscillos neere the Coast that turneth to the East: Caprosito another little Hand betweene thefe, and Gmanabo another Hand of eight leagues in length, in the nooke of Tagnana. The Port 50 and Cape of Saint Nichelas, the furthest West on the North fiele of the Hand, A little further the Port of " Mofquitos, in the North Coaft, and twentie lesgues forward the Port of Valparayfe, or of the Conception, North and South, with the Torings an Iland neere the Coast of hie leagues in length : Port Royall twelue leagues to the Welt from Monte-Christe, which is as much, or a little more before Ifabela, and this from the Port of Plate, other twelve leagues: Cabo Frances, and Cabo del Cabron, in the turning, which the Coast maketh to the East, before the Gulfe of Samana, which entreth fine or fixe leagues the Land inward, vnto the place where the Towne of Santa Cruz flood. And in the River of Samana, was the first time that Armes were taken against the men of the Indies; because they would have done violence to the first Admirall. The Cape of Deceis, (Cabo del Enganno) is the furthert West of the lland where the Coast returneth 60 by the South to the West, at the beginning of the which stands the Saona, an Iland which the fleets doe reknowledge, when they goe, and somewhat more towards Saint Dominiate is another little Hand, which is called Saint Katherine; and all the names rehearfed were given by the

The Hand of Cuba which first was called luana, or loane, by the Father Don Iuan, and after Cuba. it was commanded to be called Fernandma by his Father. The Captaine Sebastran of Ocamoo, made an end of compating the yeere of our Lord 1508. by order of Nicholas of Onando: for untill then it was not wholly believed that it was Land, and the yeere 1511, the President Iames Velacques went over with three hundred Spaniards, by order of the second Admirall to paeifie it. It hath two hundred and thirty leagues from the Cape of Saint Antonie, vnto the Point of Mayzi, going by Land, although by the Sunne, and by water there are not fo many. It hath in breadth from the Cape of Croffes, to the Port of Manati, fortie fine leagues, and then it beginneth to ftreighten, and goeth to the last Cape, or Occidentall Point, where it is narrow, of 10 twelte leagues, little more or leffe, from Maramano to the Anana. Her fination is within the

CHAP.I. Herreras description of Cuba: ber Ports and Plantations.

Tropicke of Cancer, from twentie to twentie one degrees, the Countrey is almost all plaine. with many Forrests, and thicke Woods : from the Easterne Point of Mayer, for thirtie leagues it hath most high Mountaynes, and likewise in the middest it hath some, and there runne from them to the North, and to the South, very pleasant Ruers, with great flore of fish. On the South fide it hath the little Ilands, which the firft Admirall called the Queenes Garden, and the other on the North fide, which James Velazquez called the Kings Garden, the trees are of many differences, and wild Vines as bigge as a man : they gather no. Wheate nor other Seeles of Spaine, but great abundance of Cattle : it hath great Copper Mynes, and of Gold, and is it found in the

Rivers, though it be base in the touch.

20 Immer Velazquez peopled first the Citie of Saint lamer in the South Coast, fortie leagues from S. Ingo. the Cape of Tiburen, which is in Hifpaniele; and two leagues from the Sea, neere to a Port, one of the best in the World, for securitie and greatnesse. The Citie came to have two thousand Inhabitants; now it hath few with a Gouernours Deputie: the Cathedrall Suffragane to Saint Damingo, is refident in it, and a Monastery of Franciscas Priers, The Village of Baracoa, is a Towne Baracoa. furtheit East of the Hand of Cube, at the beginning of the North Coast 60 leagues from the Citie of S. James toward the East North-east, which was also an inhabiting of the President James Velarques. The Village of Bayame, which Immer Velarquer alfo built, is 20. leagues from S. James to Bayan the North-weft, it is the foundeft Town of the Hand, of a more open foyle, and of a good disposition, The Village and Port of the Prince, in the Coast of the North, is about fortie leagues from Puers dil Print tion, the village and roll on the Films in the Count is the stories about first engages from sense train.

30 Saint Lause to the North-west. The Village of Saint's primes, is a Port on the South fide, becipt.

tweenet the Trainfall, and the (spe de Bajos Percalle, of Figurese, about fiftie leagues from Saint Saidt Sprim.

Lames, a Colonie of Lames Velazquez. The Village and Port of Saint Christopher of the Abena, is in the North Coast, almost oppolite to Florida, in twentie two degrees and an halfe in height, of more then fixe hundred Houholds; where the Gourmour refides and the Officers Royall. The Port is mar- El alhems, or uellous in greatnesse and securitie, especially since that King Philip the Second, the product, fent the Campe-master Islam of Texads, and Baptista Amenalia, to fortifie it in real the Fleetes of the Indies doe meete for to come for Spaine in company. It was first called the the secretary and I done; Falazques built this Village, and all the relief of the land, with Parts de Ca-Port of Garanas: and I done the Saltes Baralome de las Cafes, which afterward became a Dominisky Frier, remain

and Bishop of Chiapa.

The Ports and Capes, and point of the Coast of Cabe, and the Hands belonging to it besides those which are rehearfed are in the South Coast, the Port of the Citie of Saint James in twentie degrees, and twentie five leagues to the West: the Port of Santh Spiriton, Cape of the Croffe twelve leagues forward, and the Queenes Gardens, which is a great shelfe of Ilands and shoales : the Port of Trimitie in twentie one degrees, about thirtie leagues from the Cape of the Croffe, and ten more to the West, the Gulfa of Zagus, a great defence with some llands, in the middek, and forward the Two Sifters, two Hands at the beginning of the great shelfe, and Hands, and shoales, which they call Camarco, betweene the Coast and the Ilands, which is of ten leagues in length,

50 and feuen in breadth twelue leagues from the Cape of Correntes, which is as many from the Cape of Saint Antonie, the furthelt. West of this Hand. In the North Coast standeth the Port of A- Wherefore it bana, and thirtie leagues to the East is the Port of Slangbers where was a Towne, and was call was called the ledde Matanças, of the Slanguers, because the Indians killed certaine Spaniards, which they car . Slanguers, ried in their (anose vnder (ccuritie to the other fide, only one escaping, and two women whom they kept sometime with them. From the " Maranças to the Port of Tacanaca, are fiftie " Or Slaughleagues to the Kings Garden, which is a great shelte of little Illets and shoales, and at the end of ters. the Iland Obabassa, eight leagues before the Port of the Prince, foure or fix from the Port of Fermando Alanfe, and fix to the East of this, Cubana which is a point. The Port of Varocea is about twentie leagues before the point of Mazi, the fartheft Welt of Cuba, and the hidden Port and Gulfe neere to Cape f Rois, in the South-coaft, about twentie leagues from the Port of Piege- f Or Red. 60 ent, which is about ten leagues from the Port of Saint lames.

The

Chap. 7. Of the Ilands of Iamayca,5. lobs, the Lu-

THe lland of *Iamagea* was so abundant of victuals, and breedings, that it gaue great pro-uition of Cotton, Hories, Swine, and *Cazabi*, for the new Discoueries, and the first Admi. sall called it Saint Iames, when hee discoursed it; and the first that passed to inhabit it, was the Captayne lohn E (quinell, the yeere 1 509. by order of the second Admirall Don Diego Colon, It ftands in seuenteene degrees and an halfe of altitude in the middest of it, and twentie leagues from Caba to the South, and as many from Hift aniela, direct to the West. It hath in compasse one hundred and liftie leagues, it hath East and West fiftie, and twentie in breadth. There are in Sinil, Melilla, it three Villages, Simil in which is the Seat of the Colledge, toward the North Coaft formewhat & Oriflon, inha Westerly; Iohn Squinell a Gentleman of Smil peopled it : Melilla, which stands in the 10 North Coaft, fourteene leagues from Smill to the East : Orifica in the South Coast towards the West fourteene leagues from Simil, and are Plantations of the President Francisco de Garage. which governed in it. But of the Towne de la Fega, whence the Admirals Lords of this !land tooke the Title of Dukes, nor of other two Plantations painted in some Maps, there is

Cape of Mo-

There is in the Coast of this Hand, the Point of Morante the vttermost West of it, by the North Coaft ten leagues to the Weft, the Port of Iama, and tenne leagues forward the Port of The first civill Melilla, where they say the first Admirall arrived, and called it Santa Gloria, when hee returned warre among loft from Veragua; and heere happened to him the mutiny of the Porras of Simil and it was the the Spaniards, first Civill Warre of the Indies. Other ten leagues thence standeth the Port of Simil, before the 20 was in lamagea. Point Negrillo, from whence the Coast windeth, vnto the Cabo de Falcon, fleere to Oriftan, and goeth by the South to the Port of Guayane. And fiveleagues from this Coast, are the Harmingas, a dangerous shoale, and seven leagues further las Vineras, small Ilands compassed with thoales, and to the South of them the Serrana, and a little Hand compaffed with shoales, with other foure or five neere vnto it, and to the North-west of it, the Serranille, and to the West of it the Roncador, another Rocke, and to the South-west of it, Saint Andrewes, an Hand compassion fed with shoales North and South, with Nombre de Dies, about fortie leagues from it, and neere from thence another called Saulta Catilina; the . Commers directly Well from lawares, twen Or Negrillo, tie fine leagues from the little . Blackmoore, which are two little Ilands fixe leagues the one from the other, and the great Common another Hand of feuen leagues in length, fifteene leagues to p Or open the from the Commanes to the Welt, and to the North Coaft, betweene Caba and Hiffaniela another Shoale which is called ? Abre-oio.

S. luan de puer- The Hand of Saint Ishn of Port Rice, which the Indians called Barriquen, lyoth betwixt

twelve and fifteene leagues from Hispaniele, to the East, of fortie five leagues in length . East and West; and from North to South, betwixt twentie and thirtie, very plentifull of all that Hispaniols bath, and of Millet, Yuca, and of Mynes of Gold. The temperature is good, and almost one all the yeere, except in December and January. There is in it three Spanish Townes with a Gonernment, and a Bishoppricke : the Prefident lober Power of Lion passed to discouer this Iland the yeers 1 508. being Gouernour in the Province of Tyney, for Nicholas of Onando in Hifpaniala, and returned the yeere 1510, by order of the King to people it. The Citie of Saint 40 lobn, is in the beginning of the North Coast, on the East side in eighteene degrees of height, and they call it of Port Rico, for the excellencie of the Hauen. The Bishop and the Gouernour are refident in it, and the Officers of the Kings Revenues : and it is Suffragane to Saint Domingo. Arrecibe flands thirtie leagues to the West from Port Rice: the Towne of Guadianilla or Saint German the New, in the Westerne Coast three and thirtie leagues from Port Rice to the South-west.

There was in old time in this Iland another Towne which was called Guanica, in the South Coast, at the end of it where now is the Port of Maguitte, which is very good, from whence it was removed to another fituation of the Westerne Coast, which they call Agnada, or the Waterme, with name of Soco-Mayor: there is in this Hand a row of Mountaynes, that divide it in 50 the middeft East and West vato the Ses, and Borders of Saint Gomman, and heere is found the Tree called Tabernacula, which yieldeth white Rozen, like Gumme. Anime, and it serveth for Pitch for the ships, and for fire or light, and it is medicinable to take out the colde or num-

There are few Ports in this Iland, for all the Coast of the North is very foule with shoules, and Rockes : those that are, are to the East from the Port of Saine John. The River of Luria, The hauens of and that which they call Causha, and la Cabeca; the fartheft East point of the Hand, neere on this Hand.

the Hill of the Logarillo, and in it a Bort which they call Saint Laure; three leagues further is another called Tabucas, and three leagues from the Coast, on this fide of the passage, is a little Illet, and at the beginning of the South passage, another which they call Boygui, and forward 60 the Hand of Saint Anne, Gueyama a Port, and afterward the Rivers Neabon, and Xania, fix leagues before the Port of Guadianilla, two leagues to the East of the River of Mofquites, in whole mouth is the River called Guerica, and fix leagues from it, the Cape Rois, the furtheff West of the South Coast : and to the West of it, toward Hispaniela is the Iland of Mona, and to the North of it

the Manice, and Zeches, other two little Hands : the Port of Pines, and the Port of Mayagnez. and the Bay of Saint German the old, and the mouth of the Ruser Guanabo, or the Watering, and that of Guebataca more forward, and afterward in the North Coaft, that of Camey, and of Cafines, and Tea, necre to Port Ries, and in the middeft of the Coaft of the South Sea, leaning water it the Haberianas, foure or fine little llands. There is also much Ginger gathered in this Who carried Iland, which is a Root like vnto Madder, or Saifron, which the Portugals brought from the East, the Ginger to to this Hand of Barlinents.

The Hands which are to the North of Saint Ishn, Hispaniola, and Cuba, of which none is Thellands of inhabited with Spaniards, are called the Lucayer. One the most Septentrionall , is about twen-IO tie feuen degrees of altitude, which is called Emergeneque, or Tweapeneque, which bath almost to the West Bahamaanother Hand in twentie fixe degrees and an halfe, of thirteene leagues in

length, and eighe in breadth, from whence the Channell of Bahama betweene Florida and the Wherethe finales Deles Minutes talieth the name, whereby the Currents of the Sea doe goe for witten Chantellof the North , that although the wind be prosperous the ships cannot enter it, and although they Zabana is. be contrary they goe with the Currents.

contrary they goe with a contrary of an Iland in the middeft of them, of fine leagues in length, Banel & Birmini which the first Admirall gave the same the first time became to (she, and it is that which fobs Paul of Lyon didagree to inhabit. Abacon, isanother in the middeft of the faid fhelfe of twelve leagues in length : Cigateo of twentie fine. Cigateo, another fmall lland in twentie fixe de.

20 grees: and Guanasa fireene leagues of length, and sen in breadth, and neere vnto it Guanabani, Guanabani the the first Land of the Indies, which the first Admirall discoursed, which he called Saint Santon; first Land that Transa of tweatre leagues, and eight in breadth, in twentie foure degrees and an halfe, which was discovered the Admirall named fabelle, in honour of the famous Queene Donna labelle his particular Pro. in the India. tectreffe, and that gaue him this Discouerie. Immete in twentie three degrees and an halfe, fifteene leagues in length, to the North of Hispaniola. Samana feuen leagues over, betweene Inmete and Guanima, three square of eight leagues in length, in twentie foure degrees, Tabaque of ten leagues, in twentie two degrees and an halfe. Mina-par-vos, are three little llands in triangle, compassed with shelues, so the South of Immete. Managuana, twentie leagues in length and terrin breadth, is twentie three degrees. Trague of ten leagues, in twentie degrees and an 30 halfe. The Carear, an Hand of five leagues, in twentie one degrees, and to the North of it is an-

other, called Hamana, and another Concina. Magarey stands in twentie degrees compassed with shelines. Abresis a great shelfe of fifteene leagues, the middest of it in twentie degrees, and among these Hands are many little ones without name. The Handsthat are from the Hand of Saint lobs of Porte-Rice, to the East of it, toward the

The Handsthat are from the Hand of Saint some of Forie-Rice, to the East of it, toward the coast of Forie-Frame, were called the Combide, by the many Carrier, exters of humaine fifth that were in them: and in their language, Carrier, it to far Falane sizes, for they were held for foot amilian. Of the other Indians. All their lands are dangerous for their, and the incarrel to Saint Islam, are Whan a capture of the coast of the Carrier for the Santis Craz, to the South-weft from it, in 16 degrees, and a halfe of fixteene leagues, and Sa ball fignification ba las Virgines, two little illets compaffed with shelses, and other eight or ten Hands, the greatest

of ten leagues: Virgen gords, and the Blances or White Hands, Westward from Virgen gords, La Ane gada, of feuen leagues in length, in 18. degrees and a halfe compassed with (helues, as Sambrero is, a little Iland neere vnto it : and these Ilands which are called the Weather Ilands or Men humers. Barlowento, the first Admirall discovered: and in particular, the men of Sabile Cruz, and others, had a custome to goe and hunt for men to the lland of Saint John, for to east, and at this day they of Dominuca doe it. They dideate no women, but kept them for flaues. Now they fay, that within this little while, they of Dominics did cate a Fryer, and that all they which did cate his field, Frier von his had fuch a fluxe, that fome dyed, and that therefore they have left eating humane field : and it fome food. may be, because instead of men, with lesse danger, they steale Kine and Mares, for the great quantite there is of them, and with this they fatisfie their raging appetite.

Adjulie lath ten leagues of length, it flandeth in 18 degrees: Saint Merits in 17 degrees and

a halte, it is of fixeene leagues, compatied with little Illess: and neers vnto it Saint Bur flace, Saint Burbolesure, and Saint Christopher, enery one of senine leagues. The Burbala in 17, degrees and a halfe, compassed with thehies, neere to the Redonds and the Snewer or Nieuer, and of Monferrate, of five leagues every one, in 15 degrees and a halfe. The Antigna, Guadaluje, and Tedas Santes, from 14. to 15, degrees. The Deffende to the East of Gandeling, about fixe leagues, the first which the Admirah Den Christopher discoursed, in the second Voyage that he made to the Indies, in 14 degrees and a halfe, for which the fleete goe al wayes from the Camaries. Marigalante, the name of the Shippe the Admirall had , fine leagues to the South-weft from the Defired, and from the Dominica, in 13 degrees, twelve leagues in length, where the

60 Fleetes take in water and wood, for it hath good roades, although with danger of the Cambais. Meere vnto Deminica to the South, flands Marinino, Saulta Lucie, and the Barbudos, the which because they fall on the left hand of the Fleetes, when they goe, they call them already of the Hands of the Leeward (de Sozanemes) which appertaine to the coaft of Terrafirmes: and of them thegreatest, the first, and the most Orientall is the Trimidad, neere two hundred leagues from

A 4 248

Historiola, North and South with the Dominica, about fixtie leagues from it. It hath fiftie The di courry leagues in leangth East and West, and almost thirry in breadth. The Admirall discourred it the of the lland of yeare 1498, the third Voyage that he made to the Indies, and called it the Trinite, because hathe Trinite, using great trouble in the Voyage, he had promifed to God to give fuch a name to the first Land that he should finde, and presently the Mariner that was in the top, saw three points of Land, whereby the name fitted enery way to his vowe: then hee discouered also the mouthes of the Dragon, and of the Serpont, the gulfe of Paria, and all the firme Land vnto Camana, which in-Arrogancie of unfilty American Vespuise claimes to himselfe, whose name vinworthily is given to the port american unit. which they call Peninsula Anstrales or Indies of the South. This Iland of Trinsidad is knowne that it is no good Countrie, though it hath many ladien; it hath thirtie fine leagues of longitude. and others fay more, and twentie fine of latitude, it flands in 8, degrees : the most orientall part of it, is a point on the North fide, which is called de la Galera : and to the North of it a small Iland, compassed with little Iles, which they call Tabago : and in the South coast a Cape which they call the Round Point: at the East, the point of Anguilla, at the West in the guife of Paria, which is that that is from the Iland to Terra forme, which may be eight leagues of distance, because the firme Land maketh an oblique semicircle, as a Diadem; and in the entrance of the East is the distance recited; in the entrance of the West, the straightnes is much, and with great depth.

and two little Ilands at the end of the North coaft; by the West, which is called the Dragge month : and to the North S. Vincent, and Granada, other two little Hands. The Iland of Margarita, io named by Christopher Colon, the first Admirall (as also all the reft. a most sufficient proofe of the Finder, to the confusion of those which deprined him of the glory of the discourse of the firme Land, attributing it to themselves, although changing the times) it is twentie leagues from Trinidad Westward, and one hundred and senenty from Hispaniola; it

hath fixteen leagues in length East and West, and yet some say twenty, and the halfe in breadthe it hath no flore of water, although it is very plentifull of Paffures for Cattle. There is in it two Townes, one neare the Sea, which reacheth to a fortreffe where the Gouernour is refident, and another two leagues within the Land, which is called the Valley of Santia Lucie : there is in his coast a 200d port, and a nooke, and many beds of Pearles, whither the fishing of them is remoued, which before was in Cubagua, and they fay it went away from thence, for the rumour 30 Wherforemen of the ordnance of the many Shippes that reforted to this Hand, to the trafficke of the Pearles,

do fay that the Which was very great. Cubagua stands one league from Margarina to the East, there is no water fifthing of the in it, and yet the new Cadie was built there, and they carried their water feuen leagues, from Pearles passed the River of Camana. To the Kast of Cabagua are source little Illets, close by the shoare. which the first Admirali called Los \* Frayles : and to the East betweene them and Granade, other foure of Cabequato the first Admiralicated Los Frajles; and to the East betweene them and Granada, other foure the Material or five, which he called (Los Testigos) the Wisnesses, and to the West after Cubagua, another lit-Hand of Cuba - ele Hand which he named (Tortuga) the Tortogle, neere to the point of Araya: and from hence the discouery being made from below Paria, he went to Hiffaniola, with a purpose to finish the discouery being mane troin bottom the discouery of Terra street; and as here after shall be seene, hee went after to discouer, and the discouery of Terra street; and as here after shall be seene, hee went after to discouer, and the street shall be seene. found the Hands of the Guanaies, and from before Veragua, vntill he passed Nombre de Dier. The 40

He Government of Venezuela parteth the bounds in the coast of Terra firme, to the East.

vaines of Gold of more then two and twentie carracts and a halfe : it is plentifull of Wheate,

because there is two harusests in the yeare, and most abundance of all kinds of Cattle, great and

Cotten-linnen : and in the port of Guerra, in the Province of Caracas, are laden many Cowe-

Hides, and Sarfaparilla. There is in it eight Spanis Townes : and the name Venezuela was given

it, because when the Belzares , Almaines, went to gouerne in this Province the yeare 1528. by

a couenant which they made with the Emperour, they thought to inhabit in a Rocke and hils

that are in the mouth of the Lake of Maracaybo, where it falleth in the Sea, a Towne which

they named Venezuela. It stands in 8 degrees, a little more, and from hence the Cournment

tooke the name. His first Towne is the Citie of Core, which the Indians call Corians, which com-

monly they call now Venezuele, it stands in TI. degrees of altitude, and 79 degrees one third part

from the Meridian of Toledo, one thousand and five hundred leagues from it : here the Governor

I with the new Andaluzia, from whence to the River of Hacha, and Government of Santia

Officers and Royall treasure are in Margarita: and it, and the Hand of Cabagua, are in eleven degrees, a little more.

Chap.8. Of Venezuela, Mariba, with which it joyneth by the Weft, is an hundred and thirty leagues, and within the river of Hacha, newFlorida, and Land about eightie, wato the bounds of the new-Kingdome of Granada. In this Countrie are Gulfe of Nexa is the reft that small. There goeth from this Promuce great store of Meale, Bisket, Cheese, Bacon, and much so remainerh of the limits of this Counfell.

Wherefore in was called Ve. nezuela,or lit-

The Citie of

from Core eightie leagues, and with a bad Hauen : Den Prancifee Faiarde built it the yeare 1560.

is wont to be resident, and there is the Cathedrall Church suffragane to the Archbishop of S. Dominicle. Lobu of Ampair built first this Citie, and then those that went for the Belware made 60 their abode in it, the first was Ambrose Alfinger: it is so healthfull, and of so good an ayre, that there is no neede of Physitians. The second place is our Lady of Carnalleda, in the Province of Carness, necreto the Sea, East

CHAP, I. Herreras Description of the Spanish Indies. Venezuelas Gonernment. 867

which went for that purpose from the Margarita. S. I ames of Lyon in the same Province, seuen leagues within the Land, and three from Carnalleda to the South, and fixtic from fore, S.lego de Leen, where at this time the Gouernour is most residence. The new Valencia fixtie leagues from Core,

and twentie five from S. lames of Lyon, seven from the port of Burburata, The Captaine Villacinda peopled it. The new Xerez about rifteene leagues, almost South from the new Valencia, and Xerez, twentie from the new Segonia, and fixtie from Core to the South-east, a new Towne. The new Segonias, in the Prouince of Bariquizimite, twentie leagues from Xerez to the South , and tenne Tucine. from Tuenjo, and eightie from Core to the South-east, where the Officers royall, the Gouernour, and the Lieuetenant are refident at times: Ishu of Villegus peopled it in the yeare 1552. The Citie

10 of Tweeye is famous, because in it they slew the tytant Lope of Againte, it stands tenine leagues from Segonia, to the South-west, eightie fine from Care; it is the habitation of the Captaine Carnajal. Truxillo, on our Ladie of Prace, in the Prouince of Cayes, about eightie Traille, leagues almost to the South, direct from Core, somewhat to the East, and twenter five from Ta-

enyo, directly to the West. The Auditor Valley discoursed this the years 1 249; the Bacheller Tollefa being Gouernour in it : and the yeare 1559, the Captaine fames Garete of Pareder inhabited Traxillo : and there may be in this Gouernment more then 100000d. Indies tributaries, and in them are not comprehended from eighteene vnder, nor abour fiftie yeares, because the supreme Counsell of the Indies hath prouided, that in no place of this Orbe, these doe pay tribute : and because daily 20 they increase and diminish in number, it cannot be said precisely and perfectly how many

The Lake of Maracaybe, which the Castilaner call of our Lady, is of fresh water, it entreth The Lake Me fortie leagues within the Land, from the Sea, and hath more then tenne in breadth, and eighty racque, in compaffe, with many Townes voon his Borders in the end of it entreth a River that deicendeth from the new Kingdome of Granada, by the which, and the Lake, Marchandile are transported which came to the new Kingdome of Castule, and to other places; fome of the men of

this Lake doe line in Boates, their houfes being made in the Trees within the water, and at the Border, whence it tooke allo at the first, the name of Venezuela; fayling by some parts of this Lake, ye can fee no Land : there enter into it other great Raiers, it runneth to the Sea, it hath

about halfe a league of mouth, and in it the shoale and rocks abouefaid. The Ports, Capes, and Points of the coast of this Gouernment, and those annexed vnto it, are The ports and to the Well, Marcapana, the Vrebila, an Iland against the River Oynare, neere to another called points of the to the West, Magragama, one resua, an illusa agains the store symers, necreto anomer cauce pointed the Rock of the Ises, and afterward the Cape of the Codera, and Patrier Bickerds, and the hance of Gourtmers. Swimus or Pickers: and opposite the He of Anex or Birds, before Burbarata, a maruellous hauen, which the Bachiler Tolofa peopled, and is a Scale or Port for the new Kingdome (Nueno Reme) & Prouinces of Pern, and after that is Gulfo trifle, and to the North of the Bonagre, an Iland of ten leagues in length, and eight in breadth, and afterward Punta feca, and right against it Caracae, and a little forward Coracaste, toureteene leagues in length, right against the Cape of S. Roman to the South of the Hand of Araba, S. Roman entreth twentie leagues into the Sea, it 40 Standeth twelue from Coro, the Indians doe call to Paraguana, it lacketh a little to be an Iland : it may have in compaffe twenty five leagues and more of plaine ground, with a Mountaine almost in the middeft : it is discourred a great way into the Sea. There is at the beginning of the Gulfe of Penezuela, the entrance and channell of the Lake of Maracapho, and at the entrance of it the River Muare, and to the West the Montes, three little Hets close by the Point and Cape of Coamibocoa, where onely in all the Indies was found waight and touch for the Gold, and afterwards

the deepe Baye (Balna Honda) and the Portete, the Cape de Vela, which the Captaine Alfonfus of Oieds named, when Americo Vefpneio went with him the first time, much after that the Admirall discovered this coast, which stands in 12 degrees, somewhat more, And there is from the Cape de Vela, to the River of Hache eighteene leagues, without any stone in them, nor water, 50 but raine water. This Gouernment remained destroyed, fince the time of the Almame, because they would not inhabit, onely feeke to make flaues, and to wafte the Countrie.

They called first the River of Hache, our Ladie of the Snowes, and after of the Remedies, neere wnto the Sea, betweene Venezuela, and Santia Marta, to the Eaft, thirtie leagues from it, and fixtie from Core to the Well, North and South with the Care de Vela, with eight leagues of bounds betweene Venezuela and Santia Marta, without howes of Gold. It is governed by Alcaldes immediate to the Counfell of Hifpaniola, and the Spiritualtie is of the Bulhopricke of Santia Marta. The Towne is 1000.paces from the Sea, on a little hill ; the Hauen hath the North for trauers, it is a most fercile Coun rie, and yeeldeth whatsoeuer is in Cafile : there are many Tigers, Beares, Ants, and Lizards in the Rivers, much Gold, and Stones of divers vertues, for the Spleene. 90 the Kidneys, for the Milt, and Flix, and they have good Salt-pits. Nicolas Federman for the Belzeres, was he that began to inhabit this Towne. The gouernment of Serpen, which they call the new Andaluxia, and in the indian Language Guayana, extends the limits From the lland

of Margarita vinto the river Mar aujon, three hundred leagues to the Eaft, and as many North and South within the Land , wherein the Indians Quagues are included , and the Omyga.

with the Prouinces of Dorodo, to the fouth of this Government , wherein falleth by the Coaft the Prouince of Maracapana, in the bounds of Veneculela, where the mouths of Santta Fe were inhabited, in whole Borders is the knob of Unave, and neere voto it a great Lake with great flore of fish and falt, and the Indians which are called of Perso, twentie leagues within the Land and the Indians Palenques, so called for the Poles where with they fortified themselves , and the Prouince of Cumana, Morth and fouth with the Margarita, where is a Towne of Spaniards, which is called new Gordona, which the Captayne Gongalo of Ocempo built, when he went to chaftife the Indians of Cumana, for the destruction of the Monastery of the Religious Franciscans, And to the East or the lland of Trinidad, and the River of Saint John of the Amazones, is the Protince of the Indiana Armaen, part of the Caniballs, and all Warlike, that neuer are quiet or no

After the point of Paris, which flands in fenen degrees, and the Dragons Month neere water Trinidad flands the point Del Galle, or Anegada, to the South of the Trinitie, and the River of Paria, or Orinico, which tome call Tuyapari, and others will have that thefe two, and the Riner of Saint Iobu, and of Orellana be all one thing, and also the Maranyon; but in this they are deceiued. There be other Rivers in the Province of the Arnaca that are well knowne , the River of Saint lobn, or of Orellana ipringeth in the Ander of Pera, right against Cases, from whence it runneth fifteene hundred leagues, or more, winding vnder the Equinoctiall, by Countreyes well inhabited, though not well discouered, till it came to run into the North Sea, whose mouth hath in breadth fiftie leagues; and in the first five hundred from the mouth vpward, many Hands inhabited; and eightie or a hundred leagues more to the West, stands the River of Moranton ale most in the bounds whereby passeth the Line of the Diusson betweene Castile and Porrugal, and is great and terrible, having ifteene leagues of mouth, and the streame commeth from the paris of the South, and the Provinces of Brafil, and they fay that the fpring is vnder Poparas, and the bounds of the new Kingdome of Granads,

Cubagua,

Cadiz, which was difinhabited because the fishing for Pearles fayled: this Iland had no water that could be drunke, nor trees, nor beafts; for all is brackin, except those Hogges that have Strange Hogs the Nauell in their backe-bone, and some small Conies, and having so great inhabiting, they went feuen leagues to the river of Commons for water, although there was an opinion that it bred webbes in the eyes. In this River and coast, happed in the yeare 1530. the first of September. 30 Terra fitme, the the haven being cleare, the Sea did rife foure fadomes from his ordinary courfe, and entring into yeare 1530. vo. the earth it began to shake, and the fortresse which the Captaine Jacome of Castellon had built ry admirable by order of the Counfell of Hifteniela, fell, and the earth did open in many places, whereout fprang much falt water as blacke as inke, and did ftinke of brimftone, and the mountaine of the gulfe of Cariaco remained open with a great rife: many houses fell, many people died drows ned, and with feare, and taken with the earth quake. Margarita one league from Cubagua a more pleasant lland, the Bachiller Marcelo of Villalobes did people it.

Seuen leagues from Cumana stands the Hand of Cubaqua, where stood as was faid, the new

Margarit, Florida.

The Province and Government of Florids, bordering on the Counfell of Hispaniola, according to the Government of Peter Melendez, is all that which lyeth from the River of Palmes, which doth confine with the Government of Panaco in new Spaine, limits of the Counfell of Mexico. 40 which is neere the tropicke in 22 degrees, vnto the point of Bacallass, which falleth in 48. degrees, and a halfe, in the which are 1258.leagues of Coatt, and from thence to 73. degrees of altitude to the North by the Coast, and within the Land all that which hee discouereth. Of this hath beene coasted and discovered, from the River of Palmes vnto the Point of Santia Helena, and the River Iorden, which are about 600. leagues, it is a firme Land of a good climate, plentifull, and well inhabited in many places, as those that went through it with Hernando of Soto did know it, the yeare 1536, and 1537. John Pards borne in Cuenca, went by Land from Florida to new Spane, in leffe then two yeares, and it is the neerest Europe of any part of the Indies, & from the Bay of S. Isleph, which is eightie leagues from Ponuco. There is also discouered vnto New found Land, but that which is particularly taken for Florida, is the point that goeth into the Sea North 50 and South, with the lland of Cabe, of a hundred leagues in length, and twentie five in breadth East and West, and (when it is most) thirtie. John Ponce of Lyon discourred it Anno 1 512. on Eafter day, and for this cause he called it Florids: and afterward returned the yeere 1 = 21, and retired wounded to Caba, where he dyed, leaving a report that he fought the Fountaine or River which the Indians faid that old men washing themselves therin, became yong. This Province is according to the temperature of Callile, and many fruits were found there like the fruits of Spain, and it feemeth fit for Cattle and Corne. There is no Gould, neither feemeth that the Indians did know it, nor Siluer ; for it hath beene feene that they have found the Chefts with bars of it and money in ther Gold, Sil. their coafts and made no account of it: yet Hernando de Soto, within the inward parts of the 62

uer, nor Monie. great River, found great abundance of Pearles. There are but two Fortreffes in this Prouince with men in Garison, both in the Coast that looketh to the East : the one is called Saint Make, in the point of Saint Helena, about one hundred leagues from the Henens, and another of Saint Augustin, which is the principall, because HONDIVS bis Map of Florida.

40 the hauen is good, and is neere the channell of Ballama. It flands about fiftie leagues from les me namen se good, and is neere the channels of barries, which are neare the point of Florida, whereby it ioyneth most with the Hand of Case, a league and a halfe, and lest, the one from the other, and Points with a ranke of thelues with mouthes, in twe naie three or ewentie four leagues, which thefe Florida. Martyreshaue in length; whose beginning on the West side, is called the Point of the Martyres, andto the Eaft, the Head of the Martyres; and there is an Iland of foureteene leagues in length, and very narrow, the Point of it is the first of Torra firms to the East, in 24 degrees and a halfe, where a Towne of Spaniards was built, which continued not, and to the North, almost direct the River Ars, and more Northward in 28 degrees, the Point of the Caues, and forward the River of "Gnats, before the River of Matanca, which is so called by that which Peter Melendez did to the "Or Molavitte Captaine Ribas, and his Frenchmen; and the Point of S. Augustin in 29 degrees three quarters, and Shugher of 50 ten leagues from thence the River of S. Maiben , from whence the Coaft turneth to the North the French in

The Channell

went neerell to it was the Prefident Peter Melenden, by fome conjectures, All the Coaft on the West fide, vnto the Gouernment of Paumes, which is aboue 300. leagues, is called The Gulfe of New Spaine, wherein is no Towne of Spaniards, thought was given for gonernment to Pamphile of Namenez, and to Hernando of Sete, and first to Francisco de Garan and of his people in pareicular. The Country is very poore of victuals, and the people miferable, and although in it are many Rivers and Ports, no mention is made of them, because they are not well knowne. This Gulfe hath two entrances : by the one the currents doe enter furiously, betwicene Tucatan and Cuba, and goe out with a greater force betweene the fame Hand of Cuba, and the point of Florida and running doe-make the channell of Babama, which taketh his name of the

of Granada go dent of S De-

The fecond Audience which was fetled in the Indies, is that of New Spaine, and Numpods Guzonau Canallero de Guadalaiara was the furth President, till a Gouernour wete prouided, and because he gave no satisfaction, there was another new Councell quickly fent, and for Prefident of it Don Sebastian Ramirez of Fuenteal, which of a Judge of the Chancerie of Grandle. went for Prefident of the Councell of Saint Dominicke, and Buhop of the Citie of the Concepti-Ramirez ludge on of the Valley , a person of great Learning, Vertue, and Valour. Hee had the charge of the Gouernment, Iustice, and disposition of the goods Royall, the Warre remayning at the charge of the Marquelle of the Valley, with order to communicate with the Prefident, that which appertayned thereto; and betweene them was alwayes great conformitie. The bounds of this Coun-Great confor- cell, on the one fide doth not comprehend that which commonly is called New Spaine, and on 30 mity betweene the other it comprehendeth more, because the new Gallicia, which is a Councell by it selfe, is part of New Spaine. The Province of Tucatan, falleth within the bounds of it, which as now it is, may have in

length about foure hundred leagues, from the furthest East of Tucatan, vnto where it parteth bounds with the Councell of new Gallozia, and North and South, about two hundred from the end of the Government of Panaco vnto the South Sea, his bounds remayning open on the North fide, whose principall Prouinces are the Archbishopricke of Mexico, the Bishoprickes of Mechoacan, and that of los Angelos, or Tlascala, and of Guaxaca, and of Chiapa, and the Gouernments of Panneo and Tucatan, with that of Tobosco, and for circuit or commerce, the Ilands Phillipinas, and the dispatch of the Nauigation of China.

New Spanne is one of the best Prouinces of the new World, and the most habitable in a good temper, having abundance and plentie of Come, Miller, and Cattle, and all other necessaries for humane life, except Oyle and Wine, and although in many places of it there is Gold, Silver is most generall, whereof there are many good Mynes.

The Archbishopricke of Mexico, falleth betweene the Bishopricke of los Angelos, and that of Mechoacan, it hath in length North and South, one hundred and thirtie leagues, and in breadth eighteene, which it hath by the Coast of the South Sea, vnto sixtie within the Land, wherein are included the Prouinces of Mexico, and to the North-east of it Lateotlalpa, Mexiclan, Xilotepeque, and Panuco the most diffant : and to the West, Matalzingo neere to Mexico, and Cultepeque the furthest off : and to the East, Tezenco neere to Mexico : and to the South-east, Chalco, to neere to that of Mexico: and to the South of it Suchmileo, the first, and after Tlalue, and betweene South and South-west Copaca, and Acapulco, the furthest to the South. There are no more in all but foure Townes of Spaniards, although in the Prouince of Mexico are many Spaniards dwelling in the Townes of the Indians. They called Mexico in old time, Tenoxistlan it flands in nineteene degrees and an halfe of altitude, and one hundred and three degrees of longitude from the Meridian of Toledo, from whence it may be diffant by a direct Line, one thousand seven hundred and fortie leagues, which are eight houres of 1 Sunne : it flands in the middeft of two great Lakes that doe compaffe it, the one of falt water, because his bottome is Salt-petrish; the other fresh having fish, and voydeth into the Salt one; each is of five leagues in breadth, and eight in length, and both doe compaffe thirtie three leagues. They goe into the Citie by three caufies of halfe a league in length, and there are in it foure thouland Spaniards, and thirrie thouland 60 Houles of Indians or more. In the foure ancient streets wherein the Citie was divided, in the time of their Paganisme, which at this day is called of Saint John, Saint Mary the Round, Saint Paul, and Saint Sebastian; and the Tlatelulco is the principall firet which they call Saint lames.

eight more to the West, the River of Cicle, and ester foure, the River of Ania. In the Couf of the North, it hath that which falleth in the Godernment of Tanaca. In the limits of this Councell are the Mynes of Puchuca, fourteene leagues from Mexico, and the Mynes of Tafcet wentie ewe, those of Thougash, which are of Lead, ewenter we; the Mynes of Thouses twenter four. In Mynes of Thouse twenter the Mynes of Thouse the Mynes and Saint Lower of the Peace, and in them all there may bee about foure thomand Speniarde west had ith industrie and labour doe attend these Mynes, all of Silier except one, which as bath beene kild, is of Lead, and procuring that the Indians taking example of them, may lise polis to tickly land the first that with maruellous cunning and wisdome, brought in the breedings of case. tell and tillages, which have beent the mightieft meanes for the prefernation of the Mynes, was the about faid Prefident Don Seligian Ramirez of Fuenteal, originall and the foundation of all the good of those Realmes.

The Protince of Panace to the North of Mexico, Nume of Guessan had in government; is breesing and hath fiftie leagues in breadth, and in length, and after it was incorporate with the limits of the Councell or Audience of Mexico. The Countrey that looketh toward New Spaine is the befl. plentifull of victuals and hath fome Gold. That which runneth toward Florida is milerable, from whence till yee come to his bounds, are more then five hundred leagues. This government hath three Spanish Townes, Panico, in somewhat more then twentie three degrees, and by anothername the Village of Saint Stephen of the Hauen, which Gençale of Sandonallbuilt, by order of the Marquelle Don Formando Carter, when they went to refift Prancifeo Garay, and to pacifie the Indians of Chila, the yeere 1 120, and it standeth fixtie five leagues from Mexico to the North North-east, eight leagues from the Sea, neere to a River whose entry is a Hauen ; it is a chiefe Alcaldia, or lufticethip, prouided by the Vice-roy of New Spaine. The Village of Saint Lames of the Valleyes, twentie five leagues from Pannes to the West. The Village of Saint Lane de Tampico, eight leagues from Pannes to the North-east, neere to the Sea : and although in the Coaft of this government are many Rivers, & fome rode vnto the River of Palmer, they are not knowne in the Gulfe of New Spain, but the River of Pannes, & his hanen, which is not very good.

The Bishopricke of Tlascala, which by another name is called de los Angeles, betweene 30 the Archbishopricke of Mexico, and the Bishopricke of Guaraca, is of 100. leagues, and more in length, from the Coast of the South to that of the North, and betweet the confines of the Arche bishopricke, and of Guaxaca 80, and as many in breadth, by the Coast of the North Sea . and no more then 18. or 20. by that of the South. There is not in it all more then three Spanift Towns. which is the City or Towne of the Angels 22. leagues from Mexico to the East, fomewhat in-clining to the South, of 1500. housholds in foure streets: it is a Chiefe Instice-ship where the Cathedral Suffragane to the Archbilhoprick of Mexico is Relident, with Monasteries of Dominicks Franciscan, and Austine Friers, one of Nuns, & one Colledge of more then coo. Indian children, to be instructed, with 10000, Pezos rent, which the Bishop Don Sebastian Ramirez built, which fent the Batchelor Salmeron Auditor of the Coungell to build this City, and although he had de. 40 termined to have made it in Tlafcala, he left is because he would not endamage the Indians, nor touch their Lands; for he had a great regard in generall to the good of the Indians, and in particus lar for those of T lafeela, being to well deferring of the Crowne Royall.

The Citie was built in the bounds of Cholala, from whence went 25000. men to warre, and it was feated in a Plaine called Cuetlaxcoapa, neere to a Valley called Atlifeo, on the border of a fmall River that commeth out of the & Oulcan, where they gather Wheate, Wine, and all the Fruits of Cafele, Sugar and Flaxe, and all manner of Herbs. For it is a temperate Country, more betweene the Citie of the Angels and Cholula, it goeth very great and without fifth, it passets through the Prouinces of Mechancan, and entreth into the South Sea by Zucania, and there bee in it fo many Carmanes, or Crocodiles, that they have dispeopled some places,

In Tlafeala to the North of the Angels, which stands in more then twenty degrees in height, where the Cathedrall Church was till the yeere 1550, when it was removed to the Citie ; the first Bishop was Frier Inlian Garces, the Valley of Atlesco, which may have in breadth about ane vancy or one league and an halfe, where the Corne is neuer blafted, and there is gathered in it about 100000. Haneges, and there are more then 2000. Spaniards that do traffick in it, and 7. leagues from the Citie to the East, is the Valley of Ocumba: and in the Prounce of Tepeaca, the Marqueffe of the Valley built a Spanifb Towne, which he called Segura : and in the Valley of S. Paul, may be other 1200. housholds of Spaniards, in Farmes and Grangeries of cattle, that multiply lo much, that there were men that with two shag-haird sheepe came to have about 40000.

The Citie of Veracruz, one way stands fixtie leagues from Mexico, and by another fixtie fine, it flands one quarter of a league from the Sea, it is of more then two hundred Spanife hou hholds. There is in it Treasurie Royall, and House of Contractation. The Port is called Saint John of VL

ma. a name which the Captayne Iobs Gryalma, which discourred it the yeere 1518, and the frame of the Key that it hath, the Viccoroy Don Antonie of Mendoca began. It is fue leagues from the mouth of the River of Veracruz, between the Coals and the little Hand, which is about one league in compaffe, compaffed with shelues, and so low that the tydes doe couer it right against the mouth of the River of Saint low of Flus. They goe into this Hauen by two Channels the most frequented is that of the Flat, the other is called the Gallifun Channell, which is very deepe, and there the ships doe fasten themselves to a great wall of more then source hundred foot with Rings of Iron and Braffe, and when the North winds are very strong, they are not very fure. The Vergeruz stands in eighteene degrees, somewhat more, and there was wont to be to the valoading of the Fleets, and they flayed foure or fine monethes in valoading , because it stands five leagues from Saint Iman of Vina , therefore it is now made in the Port of Buytren, which is from the Port of Saint loke of Vine about eight hunded paces, and it is finished in one moneth and an halfe, and it is called Baytron, by a House that was there of one called Baytron. and they begin to make a Towne there in that fituation,

There are in this Bishopricke two hundred chiefe Townes of the Indians, and one thousand There are in this Billiophiac two hundred fiftie fine thouland Tributarie Indians, in thirtie fix Akinde of charges of Doctrine of Priests, and thirtie Monasteries of Dominicke, Franciscan, and An-Parish or Gine Friers: and in the Coast of this Bishopricke on the North Sea, is the River of Aluarado, Schoole diviwhere the bounds of the Bishopticke of Guanaca, and the River of Almeria doe joyne neere to fion, Spe parti-20 the River of Saint John of Vlua, where the Towne of Medellin was built by Andrew of Tapia, the des de dellinae yeere 1522, when the Marquelle Don Fernando Cortes fent the faid Andrew of Tapia, and Gongalo of Sandenall, to conferre with Christopher of Tapia, which had Warrants to take away the Government of New Spaine from the Marquefle, and the Factor Salazar, and the Ouer-feer Peralmindez dispeopled. The River of Almeria springeth in the long Rome, in the Provinces of Totomaques, and Micantle, and betweene Mountaynes it goeth into the North Sea, and against this River is the Iland of Sacrifiers, which the Captayne Grisales gave the name vnto , and the River of Zemponia to the North from Venerus, and voward the River of Saint Peter and Saint Paul, which ipringeth in the fame Rome , and the River of the Carones , Topa , and Tamiagua,

neere the Gouernment of Pannes.

He Bishopricke of Guaraga (so called by the Province wherein it is, and Antequera by the Chap. to. Citie where the Cathedrall is resident betweene the Bishopricke of the Angels, and the Of the Bisho-Bishoprickes of the Councell of Gustamala) is of one hundred and twentie leagues, from the prickes of Gustamala) is of one hundred and twentie leagues, from the prickes of Gustamala one Sea to the other, by the Confines of the Bishopricke of Tlafeala, and fixtie by the Confines and Austama. of Chiaps, and one hundred in breadth by the Coaft of the South Sea, and fiftie by the North & of the Pro-Sea, wherein are included the Prouinces of la Miffees, high and low; the high fortie leagues uince of Tabaffrom Antequera to the Welt, Se the low more to the South Sea John Nannez Sedenno, and Fernan ce, which is the de of Badaioz inhabited first the Citie of Antequera ; and after the first Councell of Mexico inha . 10ft of the bited it againe; the only Judges therein were Batchelour lobn Ortiz of Matienzo, and Delgadillo, Scribed. 40 which was the first, that as a man of Granade, began to breed Silke in Mexico. The President

and Gouernour, the Bishop Don Sebattian Rammer, began the Cathedrall Church, the beginning of the good of those Kingdomes: the Church hath all the Pillers of Marble of one piece, very great and bigge, and the Citie hath about foure hundred Spanib Housholds.

This Valley of Guarage, from whence the Marquelle of the Valley taketh his Title, begin- Guarage Title neth from the Mountayne of Cocole, in the bound of Guarolotician. In it is gathered much Silke, of the Mar-Corne, and Millet; it hath the Zapoteca Tongue. There hath beene in it good Mynes of Gold. queffe of the The fituation of the Citie of Antequera (which as hath beene fait) they call Guaraca, was inha- Valley. bited with people of Mexico, which lay in Garrison by order of the fecond Morezuma, and the many Garrisons that the Kings of Mexico had through their Empire made general in it the Mozican Tongue. The River of this Citie doth finke under the ground, against Cimatian, and ra-

50 feth two leagues off, at the Mountaynes of Canlan, other two from Guaraca; and at a halfe a league from the Citie right against a Hill that stands to the North, is a point of a little Hill, and there goeth a glade of a Valley altoplaine, for the space of eight leagues, which is the aboutlaid faire Valley of Guartea, plealant, and remperate, and of a most healthfull Ayre, where plentia Stinking Rinte fully are gathered all kind of things, and especially fruits of Caffets, most pleasant. To the Souths west stands the Prouince of Tutepeque, which hath many Townes by the Sea-coast, and is of Tutepeque, more then fixtie leagues ; and that of the River of Alwards , betweene the North and Northeaft : and that of the Zaporecas to the North east from Antequera, and Guazacoaloco in the Con-

fines of Tabasco, all rough Countrey, & notwithstanding the rich Mynes of Gold, little is gotten 60 because of the roughnesse. There are foure Spanish Townes. The faid Citie of Autequera is eightie leagues from Mexico, tonhe South-east in the high way of Chiana, and Guaremala; and the first that entred to pacific this Province, was lobn Nunnez of Mercado, the yeere \$421. by Commiffion of Don Fernands Cortes, and from thence were men of Was lent to ferue the King Quantity simoc, in the defence of Mexico, when Don Fernando Cortes Subdued it.

S. Alifanfoof

The Treasurer Alfonso of Estrada, when he did governe in Mexico, inhabited the Village of Saint Alifonso de los Sagneces, twentie leagues from Antequera, toward the North-east. They live in it by Gold, Cotton-wooll, and Millet, there are about thirtie thousand Indians tributaries. It stands betweene most high Hils. Saint lago de Nexapa is in the Valley of Nexapa,twentie leagues from Antequera to the East, in the way of Chiapa, and Guatemala. The Village of the Nexapa. tie leagues from Antequera to the East, in the way or Chiapa, and Guatemata. The Village of the El Edwird See- Holy Ghoft in the Prounce of Guataccoalco, at the Coaft of the North Sea, in the Confiner of Tabasco, is ninetie leagues from Ansquera. Gonçalo of Sandonali inhabited it in the yerre 1522. It hath about liftie Townes of Indians; it flands on the border of the River, on the fide of Chiapa : this River fpringeth in the Mountaynes of the Mixes, and Chomales, neere to Tecountepeque, and with the waters of the Neighbour Prouinces of Chapa, and the Chomales, it in goeth into the North Sea, there enter into it thips of one hundred tun.

In all this Bulhopricke there is no River that doth not yeeld Gold, and the Indians doe line without want if they will worke, for they lacke nothing for backe nor belly : and they have the Cacao, a Fruit like Almonds, which feruerh for Money, and they make Wine of it, and it is eaten tofled, and is held for a great fuftenance. They are wholfome Countreyes , and please fant. The Silke was before nourished by the Castillans, with the Mulberie Trees of the Countrey, wherewith the Indians ferued themselues, for to make Paper of the second barke: and the Spaniards have planted to many of Castile, that they grow infinitely : and if the Indians did The Indians pay tithe of it, and of other things, five Bilhoprickes might be made; but none doe pay tithe Tithes.

This Bishopricke hath three hundred and fiftie Head-townes of Indians, and in them, and in

three hundred Granges of more then an hundred & fifty thouland tributary Indians, & one hun-

dred and twentie Monafteries of Dominicke Friers, and the rest Schooles of Priefts for Doctrine.

Guatules in obedience, and the Port of Tecomstepeque is neere, which also is reasonable; and the

Towne is great, and there is in it a great fifting for Shrimps, and other fift which they carrieto

Guaxaca, and in the high way of Cuyxtata is a Myne of Christall-borill. Tecoantepeque is fortie

fine leagues from Antequera, they paffe by the Mountaynes of the Chentales, Nixapa, and Me-

xalpeque, whitherto this Bishopricke extendeth, and bath many Townes subject by the Coast

The Bishopricke of Mechacan (which is a Prouince between the Archbishopricke of Me-

rice, and the new Galicia) hath in breadth by the Coast of the South Sea, about eightic leagues, 40

and fixtie within the Land, with open bounds, by the Septen rionall parts : in it are included

the Provinces of Zacatula, and of Colima, both in the Coast of the South Sea. The Citie of Mechanean, or Pazenaro, in little more then nineteene degrees, and fortie feuen leagues from

Mexico, of plaine way. In Guayang areo called Vallodolid, is Refident the Cathedrall Suffragane

to Mexico, with two Monasteries of Franciscans , and Anfine Friers. The Master of the held

Christopher of Olid built Mechanan, the Cathedrall was first Resident in Zinzonza, voto the

yeere 1544, that he removed it to Pazenaro. The Bishop was Don Basco de Quiroga; and it hath

one Monafterie of Franciscan, another of Anfine Friers, and it itands tenen leagues from Me-

ward the Zacatecas, wherein there are about fixe hundred Caffilians, in two Campes " which

they have with their chiefe Aleade or Commissioner, and the seate and dwelling of those that

follow the Mynes is a Reall or Campe. The Village of Saint Michaell, in the Province of Me-

chescen, is thirtie five leagues from Pazenere, to the North-east, in a rough Countrey. And the

Village of the Conception of Salaya, which was built by commandement of the Vice-roy. Don Martin Euroquez, the yeere 1 570. for to affure the way of the Chichimecas. The Village of

The Mynes of Guamaxnate, are twentie eight leagues from Mecheacan, to the North, to- 50

River of Alua. The Coaft of the North Sea of this B thopricke, beginneth in the River of Aluaredo, that com-

meth from the Mountaynes of the Zapotecas, and betweene many other it goeth to the Prouince of Chimantla, and croffing overthwart the Mountaynes whence it fprung, goeth out into the North Sea, betweene the River of Guazacoalco, and Saint lohn of Ulna, and there is also the River called Agualules, whole mouth may terue for a Haven; and the divided Rocke, a point of the Land that commeth from the Mountaynes of Saint Martine, named by thips that have bin loft voon a shoale full of Rockes under water, which lye along the Coast right against them in to the Coast of the South Sea. This Bishoprick hath the Hauen of Guarales in fifteene degrees and an halfe, great, good, and frequented. The Prefident Don Peter of Aluarado fer this Province of

Village of S. The Concep-

The Village of Saint Philip fiftie leagues off Mechacan, toward the North, and fixtie two from Mexico to

the North-well, with one Monasterie of Antime Friers, in a barren foyle and cold; it was built for the fecuritie of the way of the Zacatecas. The Province and Village of Zacatula, in the Coaft of the South Sea, flands in more then 18.de- 60 grees, and fortie leagues from Machoncan, to the South-west, neere the Sea: Iohn Rodriguez, of Vilmorte, and Simon at Chenea, built it the yeare 1523, it flands minetie leagues from Mexico, and the Prouince and Village of Casma, in Little more then 18, degrees, in the Couft of the South Sea, and in the confines of new Gaticle, fiftie leagues from Mecheacar, to the South-west, with a

chiefe Commissioner, in a hot foyle, and plentifull of Cacao, and Cassia Fistola, with Gould, and well conditioned people. Gençale of Sandonal built it in the yeare 1522. All the Countrie of Mechagean is most plentifull of Wheate, Miller, and all kinde of Spanish Fruites, and Cattle, stored of Fish: it hath Graine, Cochinilla, and Cotten wooll, and the people is industrious, and given to labour.

There are in this Bilhopricke one hundred and thirtie Townes, the nintie four head Townes with Schooles of Doctrine : this Bishopricke reacheth no Coast of the Sea of the North, in the South Sea are many Rivers, and in the furtheft West of the Province, almost in the border of the new Galicia, is the port of Nauidad, in the height of 19 degrees, good and frequented, from the new comment, as the past of a same man, in the length of 19 degrees, good and requenced, from whence the Natigation is made to the Philipinas; and more to the East, never the Port of Saint More are now and Concess Mines; and all the past of the Port of Saint More are now and Concess Mines; and all the past of the lames: there are very good Copper Mines in these bounds, of the which the Indians make very curious Veffels, for it is pleafant, and other fo hard that they digge the ground with it inflead of

Iron, which they could neuer doe till the Spaniards taught it.

The Prosince and Government of Tuestan (which tooke this name when the Captaine Francifcus Fernandez, discouered it, and our Ladie of the Remedies, when Iohn of Grigalia discouered Tucture. Consent) was at the first held for an Hand, because it was almost compassed with Sea, in fort that it may be called Peninfula, and it compaffeth more then two hundred and fiftie leagues : it is in length where it extends it selfe East and West, about one hundred leagues, and as many North and South, from the Coast that looketh to the North, vnto the part that doth confine with the 20 Provinces of Guaremala, whereby it hath our rwhart about flue and twentie leagues. The tem-

Protinces of Guatemala, whereby it natu ourtemart about nite and seventee reagues, a for term-or of the perature is not, and very motif, and though there he no Ritter, nor running water in it all, the war-fail the Conf. Sea and the prince of many their of Sea-fifth where the Hones, that this, and the rear is to near for Wels, and they finde to many their of Sea-fifth where the Hones, that this, and the Coast being so low, hath guen occasion to suspect that it hath beene Sea in other times: it is of Lattenin much compassed with Wood: they gather no Corne, nor seedes of Cafille, there is no Gould, nor Yucatan, whereany other kindeof Mettall, whence is knowne the invention (or deceit) of those which faid as there never any other kinde of Mettall, whence is knowne the mountain to decerty of those which that there were found in this Prouince, when the Spaniard entred in it, Croffes of Latten, which the Indiribewas never found in any Province of the Indies: it is very plentiful of game, especially wilde forethe Speniorethe Boares and Deere, they breede up in it greatstore of Poultrie: they gather much Cotten wooll, ards. and Azure, the people multiplieth and luseth long; a man there was which attained to three hun- A Man of 300; dred yeares: it hath all the kinde of Cattle of Spaine, and good Horses;

There are in this Companyant without the first property of the companyant without the first property of the companyant without the companyant with the comp There are in this Government without that of Tabafco, which goeth loyntly with it, foure

Spanifb Townes, and one Bishopricke : and the Townes are buildings of the first Gouernour, the Prefident Don Francisco of Monteio. The Citie of Merida is intwentie degrees height, almost Merida. in the middeft of the Province, neerer to the coaft of the North Sea, twelve leagues within the Land. In it are resident the Gouernour, the Officers of Reuenues, and treasure Royall, and the Cathedrall Suftragane to Mexico, with a Monasterie of Franciscane Frees, they called it Merida, for the great and auncient buildings that it hath like Maride in Caffile, and it caufeth admiration, that having no kinde of Mettall in this Province, fogreat Scones could be wrought, in the which were found engrauen naked men, with eare-rings, whereof is inferred that they were Temples, AO and that it was a very famous Countrie. The Village of Oalladolid is thirtie one leagues from Me. Valladolid.

rida, toward the South-east with a most sumptuous Monasterie of Franciscan Fryers, and 1,000. tributane Indians in the limits. The Village and port of Saint Franciscus of Campeche, in 20. de- Campeche grees, in the Coalt that looketh to new Spaine, about fiftie leagues from Merida to the West, declining to the South, it hath a reasonable Hauen, though little depth for being a Bay Don Franrifers of Monteio gaue it the name. The Village of Salamanca the Prefident called fo by his Salamanca owne Countrie. In the Provinces of Bacalar, and Chetemal, seventie leagues from Merida, North and South, leaning to the West, and other seventie from Valladolid, neere to the Coast of the gulfe of Honduras : there are in this Prouince Monasteries of Franciscanes, and fix Schooles of

Prietts for Doctrine.

The Coast of all this Promince is so shallow, that in few parts ye can ride at anker at leffe then thing. foure or fue leagues from the Land, and to there is no Port but for small Shippes, and it floweth Tides. and ebbeth more in this Coalt then in any other place of these Provinces of new Spaine. The The Ports and Ports that are, be thele: Cicle, and Telichaque, Cical and Cauquil: the River with two mouthes, points of this Campeebe in the Coalt that looketh to new Spaine, and in it the small Cape from whence the Goutenment. Coaft beginneth to winde to the East, and neere to the Point a little Iland which is called la Desconocida or the Vnthankefull, compassed with shelves: and to the West from this, about eighteene leagues, another which they call the Zarza, and the Triangle, which are three fmall Hands, close by another little Hand compassed with shelues, other fixteene leagues from & Cabo a Or Sharpe, Delgado, Hands de Arenas (of Sandes) and the Redde (la Bermeia) and another Hand thirtie leagues

all the people of the Pronince went in Pilgrimage; it flands four leagues to the Sea, at the beginning of the Gulfe of Himdorm, almost North and South with Valladdid, more inward to the
Gulfe, other three little llets with shelpes, almost over against the Lake of Bacalal, which is with in the Land thirtieleagues from the Lake of Chetemall, in the Coast that goeth painted with I-Ortake away lands vnto Salamanea, which is the first Pantoia, neere one thelfe called "Quitasnenno, and another Zaratan, and another Lamanay, and the last Ylbob.

The Province of Tabasco, which goeth with the Government of Yucatan, and falleth youn the Coast of the North Sea in the gulfe of new Spaine , bath in length East and West , about force leagues, from the confines of Tucatan, vnto the confines of Goazacealco, wherewith it ioyneth to on the East, and as much North and South from the North Sea, vnto the confines of Chiana. It is all plaine ground of Marshes, Lakes and Quigmires, and so they goe ouer it in Boates, and Canoes; it is very moift, and hot, and therefore very plentifull of Paltures for Kine, and of Miller and Cacao, which is the greatest stocke or substance of this Prouince, wherein is onely one Town, which is Tabasco, and by another name, the Village of our Lady of the Victorie, so called for the Victory that Don Hernands Cortez had there of the Indians, when hee went to new Spaine , the yeare 1519. The tribute which the Indians doe pay in this Prouince, is two thousand Xi. quipiles of Caca, and enery Xiquipill are eight thousand Almonds, and one load maketh three X:quipiles or Terces. In the Coast of this Prouince besides other Rivers and Marishes, is found Rivers of this the Lake of Xucalango, or Port Royall, great and capable, with two little Ilands at the mouth, and it was the Captaine Lewis Martin, that by order of Don Fernando Cortes, made an end of pa- 20 cifying this Prouince.

Lake of Xica-

(bap.11. of the Counfel

He bounds of the Counfell of new Gallicia or of Xalifeo (which Numo of Guzman faid hee A had discouered, and Don Fernando Cortes, that the Captaine Goncale of Sandonall, did it in his name, when hee fent him to pacific the Columns ) it parteth bounds with of Guadaluara, the Countell of new Spaine, neere by the Port of the Nativitie, and the Lake of Chiana la, going toward the North-east, whereby (and by the North, and somewhat of the West, for it is not all discouered) it hath the bounds open, for the rest to the West is all Sea: that which is inhabited on the one fide, and the other, may come to one hundred leagues, wherein are comprehended the Prouinces of Guadalaiara, Xalifco, the Zacatecas, Chiametla, Culi- 30 acan, the new Birkey, and Cinolos; and for Circuit the discouerie of the Prouinces of Cibola and of Quibira.
The temperature of the Province, and borders of Guadalaira, is good, and the Countrie plen-

tifull of Corne, and Miller, and other Seedes of Spaine, and many Vaines of Silver : there are in it Spanish Townes. Numo of Guzman peopled the Citie of Guadalasara, the head of this Kingdome, the yeare 1531. and gaue it the name of his Countrie: it stands in 106 degrees and a halfe of longitude from the Meridian of Toledo, 1780, leagues by a direct Voyage, & in 20, degrees one third part in height, eightie feuen leagues from Mexico, betweene the North and the West, more toward the West: in it is resident the Counsell, the Officers of the reuenues, & Royall treafurie, and the Cathedrall fuffragan to Mexico, fince the yeare 1570, forbefore it was commanded 40 to be built in Compostella: it hath one Monasterie of Franciscan, another of Austine Friers. Nunne Smills Meric of of Guzman built also the Village of the Holy Ghost in Topque: and the Village of Santia Marie of the Lakes, stands thirtie leagues from Guadalaiara to the South-east, with the chiefe Commissioner. It was built for to be sure of the Chichimecan Indies, that are in Countries between the North and the East, a barbarous people, which live scattered in the field, without any taste of humanitie or policie, liuing in Canes, &in the Groues like fauage beafts; they live upon wilde chair and fruits, they know no riches, nor pleafure; they goe naked, and fome couered with Beafts skins; their weapons are Bowes and Arrowes, they are well bodied, great eaters, they make wine of certaine rootes wherewith they drinke themfelues drunke.

the Lakes,

The Chichime-

In the Prouince of Xalifco, which is plentiful of Millet, more then of Sheepe, or Horfes, there 50 is onely the Citie of Compostella neere the Sea, three and thirtie leagues from Guadalaxara, to the West, where the Counsell was at the first, and commanded to build the Cathedrall, vntill the yeare 1 560, that they removed to Guadalaiara to be more in the borders: there is in it a Monatterie of Franciscan Friers; and it was also inhabited by Nunno Guzman, the yeare 1531. which trauelled two yeares in these Countries, which they called the greater Spaine, in emulation of Don Fernando Cartes, in all that time nothing being knowne of him in Mexico. The Village of the Purification, to the South-well, from Guadalaiara, and thirtie leagues from it, neere the port of the Nationie, in the confines of the bounds of this Counfell, and of that of Mexico. in a very hot and fickly Countrie : and vnto the end of the years 1531. Numme of Guzman discovered one hundred and fiftie leagues of Land by the Coast of Xalifeo, which stand 60 in somewhat more then 22. degrees.

In the Prouince of the Zacatecas, are rich mines of Silver, and want of Water, Corne and Millet: there are three Townes of Spaniards, and foure Camps appointed of mines: thole whith they call of the Zacasecas are the principall, fortie leagues from Guadalas are to the North, and

eightie from Mexics, wherein are ordinarie more then fine hundred Spaniard, fine hundred Slaves, one thousand Horses and Mules, and one Monasterie of Franciscame Fryers; and there is relident alwayes one of the Officers Royall of Guadalaires. In this Prouince also are the Mines of Assens, in the confines of the Zacatecas, and those of Saint Martin seven and twentie leagues from the Zacatecas, to the North-west, wherein are wont to be about four hundred Spaniards, and Xerez of the Frontier, thirtie leagues from Guadelaxara, to the North, and tenne from the mines of the Zacarecas, in the way to them. There are belides these other Resles or Campes, mines of the Erena, & the Mines The Erena, & the Mines The Erena, Called of the little "Hat, are fine and twenty leagues from Zacatecas to the North-west, neere to "Or Seminated 10 to the Language Company of the Co eight leagues from the Citie of Guadalaiara, and tenne from the Mines of Saint Martin to the Gad. North, with a Monasterie of Franciscan Friers, aboundant in Corne, and Millet, and good Mines in his Borders, The Village of Durange, in the Borders of the Mines of Saint Martin, and the Valley of Saint Saluador, eight leagues from Nombre de Dios, a wholefome Countrie, & many Rivers, with whole watering they gathered great flore of Corne, and Millet, and of other Prouisons, and in the Borders are the Mines of Saint Late, and a very good Salt-pit. And the Indians of this Kingdome in many places were in armes, and the Chiebimecas, and Gnachachiles did great burt in the way of Guadalaura to the Zacatecas, and this warre was very colly, and tedious, and was

ended, the Marquelle of Villamanrique being Viceroy. The Indians are divided in this precinct in

20 one hundred and foure partitions or tribes. The Prouince of new Bizkie, is North-west ward from the Zacateens siftie leagues from them; Musea Victoria. a Countrie of Prouifions, and much Cattell, and of good Siluer Mines, the Mines of Hindebe are in it, of SantiaBarbola, and of Saint John, and in it is the Prouince of Topis; and in this discourry, and inhabiting, Franciscus Tharra did many services. The Province of Chiametla, twenty leagues broad Chiametla, and long, in the Coast of the South Sea, about fortie leagues from Xalifee, hath Mines of Silver, and in it stands Saint Sebastian, a Village of Spaniards, which was first of the Counsell of Mexico, and it flands in more then 22.degrees. Culiacan is a government in the South Sea, more to the East, and West from Chametla; it is a plentifull Countrie of Victuals, and showes of Silver Mines. and west tion Commons, it is a presentate Countrie of victors, and mowes or Since Mines, whereof there is a Campe peopled, which they callof the Figure. The Village of Sinte Mi. S. Michael, charl, eightic leagues from Composella, and one hundred and three from Guadalaira, Numee of

Guzman inhabited it the yeare 1531. The Promince of Covaloa, the lait, and most Septentrionall of the new Kingdome of Galicia, Ciudia, two and fortie leagues from Culinean, one hundred and fiftie from Guadalaiara, to the North, was a Towne built in it that was called Saint lobu of Cinalon, of Spaniards, and could not be kept. This Prounce was discoursed, Don Antonie of Mendoca being Viceroy in new Spaine, and they faid there was a Citie feene wrought with stone, which they called Granada, and that those Indiene were warriers, and that in the Countrie was great flore of Victuals. Quibira, flands in Quibira. forcie degrees, of a temperate and fruitfull foyle. Cibola, stands thirtie leagues from Culiacau, Cibola. toward the North, and Quibira two hundred from Cubola to the East; it is all of poore peo-40 ple; for that they have no Cotten , they weare Deere skinnes, and of the Countrie Kine, which have a lumpe on the ridge of the backe, and long haire in the fore parts, the hornes

leffer then ours; and in them confifteth the greatest part of the sustenance of the people, for of the skinnethey cloathe, and make Shooes, and Cords; they eate the fielh, and make tooles of the bones : they have fundry languages in this Prouince, because they communicate little the one with the other.

California is a great point of the Land that putterh out to the Sea in the vttermost West of California new Spaine in two and twentie degrees height, from whence it extendeth to the North-west, nesre about two hundred leagues, although of it there is no certaine notice, nor of the Ports, and Ilands of the Gulfe California, which is made betweene the faid point, and Gulfe of new 50 Spaine, which goeth along that way, as to the North-west; in the which alchough there be many Rivers, Capes, and Points, and landing-places, there is no particular notice lud of them, because they are not much frequented. At the beginning, and entrance of this Guile are very long and narrow Hands along the Coast, and very close with it, which is called the Guay anall, that reacheth from the River of our Ladie, or of Sebastian of Bora, vnto the River of Christman in Cultuces. The River of the Village of Saint Michael is called Cignation; and neerer co new Spaine is the River of Pastla, and against it the Defar Hand, and afterward the River of the Hos Ghoft, and the port of Xalife, and to the South of the point of California, is Annublada or the Cloudie Iland, and the Iland of Saint Thomas, and the Hand of Flores, and another which is called

Las Monias. T was first called the Counsell of Guatemala of the confines, because it was commanded first to Of the Bounds be built in the confines of the Prounces of Nicaragua, and Guatemala, without affiguing any of the Bounds certaine Towne, It hath in length East and West two hundred and fortie leagues, and from the of S. James of Meridian from 84. to 98. of longitude, and North and South, in breadth one hundred and eigh. Guatemale.

a Or tiue b Or Rich coaft.

tie, from 9.to 10.degrees of height, vnto eighteene or ninereene, in the which are comprehelded the Provinces of Guatemala, Soconusco, Chiapa, Suchnepeque, the Verapaz Honduras and Cacos, Saint Saniour, and Saint Michael, Nicaragua, Chiduteca, Taguzgaha, and b Costarica; and in enery one of these Proninces they alter in speech : and according to the opinion of Religious men, it was the worke of the Diuell, for to plant diffentions and discord betweene their Nations which were bloody and reuengefull. The Gouernment and Prounce of Guatemala on the Guerema's. South Sea coast, in length of it may be about feuentie leagues, and in breadth North and South thirtie : it is a Countrie of a good temperature, plentifull of Millet, Cotten wooll, Corne and other fruits, though they preserue not the Seede of one yeare for the other : the waters are few, to but when it raineth they are very violent from Aprill to October, the windes are North and South, and the North laiteth but fifteene or twentie dayes, and it is very cold, and furious. There are in it fine Spanif Townes, buildings of the President Don Pedro of Aluarado, in the yeare

1524. and 25. The Citie of Saint Lames of Guatemala, whose situation was called Cachequill. which fignifieth an Eagle, because the Generall of this Nation, when hee went to warre, did beare an Eagle for his Plume : it is the head of the Gouernment, where the Counfell is refident. in 24 degrees and a halfe of height, and 93 degr. from the Meridian of Toledo, from whence it may bee diffant by a greater circle of one thousand fixe hundred and fixtue leagues, and it is twelve from the Sea, and a towne of fixe hundred Spanish housholds: the Officers of the goods and Rove all Treasure, are resident there, the melting house, and the Cathedrall Suffragane to Mexico, with one Monasterie of Dominicans, and another of Mercenarie Friars, and one Hospitall, and 20 in the bounds fine and twentie thousand tributarie Indians. This Citie is feated in a very plea-

fant Valley, with fruits of divers forts, and all kinde of provision and dainties.

Saint Saluator. The Citie of Saint Saniour, which in the Indian language is called Cuzcatlan, is fortic leagues from Saint Iames to the South-east, with one Monasterie of Dominicans. The Village of the Trinitie, which in the Indian tongue was called Conzonate, fixe and twentie leagues from Saint Lames to the South-west, foure leagues from the Port of Axacula. It is a chiefe Commissionership with title of his Maiestie, with one Monasterie of Dominicans, in a plentifull foile of Cacao, and the Indians of it are of the innification of Saint Iames, it is a place of great trafficke , and the Ports Saint Michael, touch for the fhips of Pers, and of New Spaine. The Village of Saint Michael fixtie two leagues from Saint James, and two and twentie from Saint Saniour to the South-west, two leagues from 10 the Sea and Bay of Fonfeca, which scrueth it for Hauen, and in the bounds are eightie Townes of

Indians. The Village of Xerex of the frontier, in the Indian speech called Chalateca, in the confines

Zerez,

of Guatemala and Nicaragua, eightie leagues from Saint lames, and twentie from Saint Michael to the South-east, both plentifull of Cotton wooll and Millet, Neere the Citie of Saint James is that \* Volcan fo famous of Guatemala, and in all the Indies are many of these Volcanes (butthe mouthes like most famous are those of Guatemala, which hath burst out divers times, casting fire, stones, and ashes, with great hurt of the Countrie.) That of Arequipa, of Tlascala, Quito, and others, In this Countrie are many fprings of water, hot, and of fundrie properties and colours; there is much and good Balme , which the Spaniards knew without learning it of the Indians , against the

which some Author speaketh, and also liquid Amber, Gumme-anime, Copall, and Suchicopall, 40 and other Gummes, and Liquoris most perfect, and beasts that breed the Bezar stone, they gather Cacao deferi- great store of Cacao, which is great riches; it is a meane Tree, the leaves like a Chefnut though bigger, it giveth flower and fruit every Moone, and the same doe in that Countrie the Orange trees. The Cacao is a tree that loueth moifture better ehen the Summe , and therefore they plant neere him another tree to shadow him.

The Ports of this Gouernment in the South Sea, beside the rehearsed, are the Bay of Fonfeca Ports of this neere to Saint Michael, in twelve degrees and a halfe of height, Gil Gonçales of Anila gave it the Gouernment. name in the yeere 1522. for the Bilhop John Rodrigues of Fonfeca, Prelident of the Councell of the Indies. And within the Bay is an Hand which he named Petronilla, by a Neece of the Bishop. The Port of Acazenta, neere to the Trimite, in twelve degrees height, is the best of this Govern- 10 ment for New Spaine and Peru, and the Bay of Guatemala twelve leagues from it . and the River of Xicalapa feuen leagues from the Bay to the West. On the North fide this Province hath no coast, for it commeth not to the Sea by fortie leagues, vnto a landing place which they call the Port of the fresh Gulfe, from whence the merchandiz: that goe from Spaine, are conveighed by the Gulfe of Honduras, into the Land with carriages vnto Guatemala, Saint Sautour, and the Trinitie, and twelve leagues before Guatemalu, in the high way of Mexico, is the great Lake of Auslan, of ten leagues in compasse, and soure in breadth, without bottom.

Bottomleffe Lake.

The Province and Government of Soconnico is the furthest West from Gnatemala upon the coast of the South Sea, of length and breadth about foure and thirtie leagues, plentifull of Cacao (the greatest trafficke of it, and of all that in it is fowne except Wheat) there is no more then one 60 Spanish towne, which is called Gueneslan, founded by Don Pedro de Aluarado, where the Gouernour is resident; her coast which is in the South Sea, beginneth seuen leagues from the River of Ayutla to the West, and prefently the Rivers Coatlan, Capanercalte, Colati, Hazzatlan, Amutuc, and Quizatatlan.

The Prounce and Bilhoprick of Chiapa is Mediterranean, betweene Seconnico by the South, Chiapa and the vecermoit of New Spains by the West, and by the North and the East, betweene Tabas coant " Verapez, in length East and West about fortie leagues , and some lesse in breadth , some " Or mue left fertile of Wheat and Millet, and other Seedes, and of Cattell, except Sheepe that are not peace. many. It hath one Towne of Cashlisse, which is called Case Royall, fewentie leagues from Saint Issues of Gastemala toward the North-east, which by a particular priviledge is governed by ordinarie Luttices. The Cachedrall is refident here with one Monasterie of Dominice Friars, and onarre nutrices and the limits (Chiaps is the principalled Towne of them, from whence the many Indian Townes in her limits (Chiaps is the principalled Towne of them, from whence the room to cooke the name. The Countrie-men have skill in breeding of Horfes, that those of this Promise rooke the name. The Countrie-men have skill in breeding of Horfes, that those of this IO Countrie become the best that are in New Spaine : they are Mulicians and Painters, and learne any Trade that doth confilt in arte: they were in old time of Nicaragua, and the Captaine lames of Mazarieges, the yeare 1531. built this Citie in a Valley where now it flands, round, of a marnellous firuation in 18. degrees and a halfe, fixtie leagues from the North Sea , and as many from

The Province of Verapes (4 name which the Dominicto Priars gaue it, because they pacified Verapes. je with preaching) is also Mediterranean betweene the bounds of Seconifes, Chiape, Tacatan, Handard , and Guntemala, of chirece leagues over , and as many from Saint lames of Guntemala a most Countrie, and therefore the better for the Millet that in it is gathered twice a yeere, and for Wheat. There is Cotton wooll, and some Cacao, and much Fowle of those that give the co- Picture fea-20 loured feathers for the pictures which the Industry doe make, which is a merchandize of this Pro-thers. uince, and the Kings of Mexico carried them from this Pronince, which was the most esteemed thing they had, and it was sudged for a great finne to kill these Fowles, but to plucke them and to

let them flie. There is in this Countrie but one Monasterie of Dominicke Friars, with one Indian Towns of feventeene Indian children that are there, by order of the religious men for to inftruct them the better; for before they lived fearered and like faunges, and now they live like Christi-

ans, and in comporall things politikely.

In this Prouince there is no Governour, but a chiefe Iustice, prouided by the Councell. The River of Zacatula divideth this Pronince from the Province of Guatemala, from the which it extendeth vnto the fresh Gulfe, whither all the Rivers of it doe runne, whereby and by the many 30 falls of waters that defeend from most high Hills, the Countrie was to moift, that the Millet rotted; but it is bettered in the temperature, fince the cutting downe of the Woods: it likeh many Lions, Tigres, and Buffes, whose fielh the Youlans doe care although it be lustious and foft; it is called the Fresh Gulfe, for the multitude of the Rivers which on that fide doe enter into the Sea. Gulfe date. The water is treft, and there are exceeding great Fishes, and specially the Manati, which is the atomic a fifth Sea calte, which swimmerh to delicately, that being very great he maketh no noyse; when hee described. Seeth he goeth to the Deepe, and waxeth angrie and fierce against them that feeke him , and giueth great strokes; his fielh is very fat like vnto fat beefe.

THe Province and Government of Hondaras hath in length East and West, by the coast of the Chap. 13. 40 North Sea, more then one hundred and fiftie leagues, and in bredth from the Sea with the Of Housens, bounds of Costa Rica and Guatemala, in parts eightie : is hath many Hills, and is plentiful of Nicasau, and bounds of Colfa Rica and Charlemata, in parts eignite: 18 inth many fruit, and is perfection of Colla Rica, or Millet, Wheat, and all forts of Cattell, and fome Hynesof gold and fifther there is in it has Spanish Rich Rich Conf. mit Townes in one Bishopricke, and the first Bishop was Friar lokes of Talanera, Prior of Prado, Handera. of the Order of Saint Ierome of Spaine.

or the Under or Junt Lemons of James.

The Citic of Valladaid, in the Indian language, is called Comergana, in more then fixteene degrees, flands fixts leagues from Saint Lames of Guatemala to the Eaft, and about fortis from the North Sea: in it is the Governour resident, and the Cathedrall, since the yeare 1758, when it went from Tracillo, whereat first it was; and one Monasterie de la Merced. The Captaine Aland of Cacever pacified this Countrie, by order of Don Peter of Alwarade; it flands in the mid- Or of our 30 deft of the two Seas, and from the one to the other are three and fiftie leagues, from the Port de Lady of the Canalles or of Herfes in the North Sea, wato the Bay of Fonfeca in the South Sea, and the Inginer Vilitation of Basiffa Autones visited this way, by order from the King ; because many thought that by it the trafficke of the North Sea was more eafie to the South Sea, and hee found that it had many in- Basific Antone

The had, But the Gouernorro if Hondaries and Nieuragues, nor furcouring him by realising Figure. Thanks been vers betweene them , hee was forced to forfake it. And in the yeere 1536. Captaing Gonçale of to God. Se Allagrade, inhabited this Citie againe. The Village of Saint Perro is thirtie leagues from Co- Saint Perro managers to the North, somewhat aside to the West, and eleven from the Port of Canallas, where the Officers Royall are refident, because the Port of Canallos is fickly, whither the difpatches of the thips doe come. The Prefident Don Peter Aluarado built it 1536.

The Village of Saint John of the Port de Canallar is in 15, degrees of altitude, eliven leagues Saint John.

from Saint Peter, foure from Comayagua, it is inhabited with Factors of the Merchants, and with Black-moores, because it is an vnwholsome Port; for although it be a Bay, it is a good one, it was called the Port of The Horses, because some were cast in the Sea by aftorme. The Citie of Truxillo is fixtic leagues from Comayagua to the North-east, and fortic from the Port of Horfes to the East, and one from the North Sea: the Cathedrall was here, the Hanen is called Saint Git, it is good, though it be a Bay dead and sheltered, where the ships that goe for Guatemala doe touch first, Francisco de Las Casas, began to inhabit this Citie 1524. and because they were all people of Estremadura, he called it Truzillo, and Don Hernando Corres ended the inhabiting of it when he went to the Theeras. The Village of Saint George of Olancho, is fortie leagues from Comanagua to the Bast, of fortie housholds, and in her borders fixteene thousand tributarie Indians, and to much gold, chiefly in the River of Guayape, ten leagues from this Towne. This Valley of Olenche is very pleasant and profitable, and in it was much gold gotten, and the Governours of Honduras and Nicaragua, had in other times great differences: for every one would have it in his inrildiction , and therefore here it was where Gil Gonçales Danila tooke one hundred and twentie thousand Pefes of gold of Hernando of Soto, and ditmified the people which Pedrarias Danila had

for his defence; and here Cabriel of Rojas defended the entrance of Gonçalo of Sandonal, for

Don Hervando Cortes did fend him from Traxillo, and here the Indians killed Iohn Grigalus, a very

Points and

famous Captaine, and others.

The coast of this Pronince is all in the North Sea, in the Gulfe which they call de Hondaras. which is all the Sea coast betweene this Province and Tucatus, to the place where it ioyneth 20 with it by Verapaz, where it was called the Gulfe of Guanajas, the first Point is of the Thurses to called, because they first found many pompions on the Sea, which they call Thurras in the language of Hispaniola; it flands in fixteene degrees of height, Necre to the Fresh Oulfe a Port for Guatemala, where Saint Gil of Bouaufta was built, neere to the Cape of Three Points to the East from the Fresh Gulfe, and Gul Gonçales Danila peopled it 1524. And more to the East is the River Piche, and Rio Baxo, and the River of Ulna, by another name Balabama before the Port of Horfes, which stands in fifteene degrees. And afterward the River and Point de la Sal, and Trisampho de la Cruz, a Cape of three points, where the yeare 1524: the Mafter of the field (briffe. pher of Olid planted; and the River Hulms or of Xagus, and to the North of his mouth the Iland of Vila; and to the North-east, Guayana, Helen, and Guanaja, and Saint Francise North 20 and South with the Point of Truville, which are the Hands of the Guanajes. The faid Point is called by another name, Cabo Delgado, the Small Cape, or of Honduras, from whence to the Cape Or Stringe of & Camaron, in fearch whereof they goe from Jamenea, are thirteene Rivers, and at the Pointol the Cape a plazell or great shelfe of more then twentie leagues into the Sea, and in the middest of it neere to the Coast a great Hand, which is called the Hand de los Bases (of the shelves) and another to the North, neere the shelfe called Saint Miller, and having passed the shelfe, the Bay of Cartago, and the Deepe Bay, before the Cape of thanks be to God, which stands in fourteen degrees Cabe de Gracias one third part, and to the North of it three Hands, which they call the Viciofas, and Quita fuenno or Take away fleepe, and Roncader, the Suorter, two dangerous fielues, and having pasted the Cape, the Gulfe of Nicuefa, where hee was loft in the yeere 1 5 to. and the River of Twe in thirteene 40 degrees, where the Governments of Honduras and Nicaragua are jowned.

The Hands of the Guanajes, which are the rehearded, the first Admiral Don Christopher Colon discovered 1502, in the last voyage he made to the Indies, when he discovered Torra firms in the coast of Veragua, where his ill lucke appeared; for if as he went to Veragua, hee had gone to the other fide, he had discouered New Spaine.

The Province and Government of Nicaragna, which the Governour Iames Lovez of Salzede, called the New Kingdome of Lion, on the West ioy neth with Guatemala, and on the North with Hondurgs, and on the South with " Coffa Rica. It is of one hundred and fiftie leagues East and West, and eightie North and South, a plentifull Countrie of Miller, Cacao, Cotton wooll, store of Cattell, without Corne or Sheepe, it hath fine Spanift Townes. Lion of Nicaragua is one hutte 50 dred and foure leagues from Saint lames of Guatemala about the South-east, and twelve from the South Sea, neere to the great Lake of Nicaragua, where the Governour is resident, the Royall Officers, and the Cathedrall, and James Alwarez Office was the first Bishop. It hath five Monasteries of Mercenaries, and in her bounds one hundred and twentie thouland tributarie Indians. The Citie of Granada is fixteene leagues from Lion , which and Lion were built by the Captaine Franciscus Hernandez. 1523, and Granada stands by the border of the great Lake, and sourcand twentie leagues from the Port of Realeis, betides the great Lake, stands the Lake of Lindiri, and Lake of Nice, the famous Vulcan or Fierie month of Mallayaten. The great Lake ebbeth and floweth, it hath vegas, many Hands, is runneth into the North Sea, by the River which is called El Deseguadere, or The Venture, it hash great flore of Fish and many Lizards. At two leagues from it, and leven from Grande is the great florie mouth of Membacho, very high with many Groves of divers fruits, of Go which much refresh the Countrie. A Friar perswading himselfe, that that maffe of fire that in To many yeeres burned without confuming within the mouth of Maffaya was gold, having made by a certaine arte certaine Cauldrons with their chaines to draw ir, they fearcely came at the fire, when the Cauldron and the Chaine were melted like Lead.

## CHAP. I. Harrer To deferipe ide of foodbres America Andrew Sierras of Priv. 881

The new Segonification was the beginning of Rear Arrachis planeation, by thirtte leagues Segonia from Liou to the North, and as many from Grandia, formewhat Northward allo, in which limits much gold is gotten. And laen a Citie is thirtie leagues from the North Sea, in the end of the laen great Lake, whereby the River which they call the Fording, and the merchandize which are carried from Nombre de Dies, and now from Porte bello , are convayed in it. The Village of Realeje one league from the Port of the Poffesson, which commonly is called of the Realeso, flands in a Real leven degrees and a halfe, and is one of the best Ports and furest in all that Coast, wherein are made good ships by reason of the good prouision of Timber there.

There are in this Gouernment many Townes of Indians, and in them flore of tributaries, and 10 in the Confines of this Gouernment , and of Cofia Rica , and of Niceya eight and fortie leagues from Granida, in the South coalt, is a Corregidorship; in which, and in the Hand of Chyra, which is of the jurisdiction thereof eight leagues to the Sea, are many tributarie Indiaga of the Crowne Royall subject in other times to the Councell of Panama , vato the yeere 1572, at which time it was incorporated in Coffa Rica; whose Gouernour placeth a Depurie, and the Bishop of Nfcaragua & Vicat. There is in it a regionable Port, in the coaft of this Province on the North Sea. After this is the River Two that divideth it from that of Hondards, the River of Tarepa, before Port and Rithe Ruser and Port of Saint febr, which is called the Voying or Difugadors, with a great linds weight at the Ruser and Port of Saint febr, which is called the Voying of Difugadors, with a great lind weight at the mouth, and after, fome other Rivers common to fig. Ress. In the South Set, it hash becomes fides the Realeis, the Port of Saint James, before the Chira, and the Port of Pareright against 20 Nicoya, in the Gulfe called of the Sale pirs , before the Point of Saint Lacarne , and the Cape of \* De Salman. Borrica, at the East fide whereof are the Hands of Saint Marie, Saint Martha, Cobaya, and Se-

baco, neere to the bounds of Veragna, common to Costa Rica. In the Coalt of Nusragua, on the South fide, the Village of Brazzilles was peopled 1529, and Brazzilles. Innes Lopes of Salcedo diffinhabited it , because they had received in it Pedro de los Ries , Gover-

nour of Castilla del Ore, which went to take the Gouernment of Nicaragua, where Salcedo had thrust himselfe, and had gone from Honduras his owne Gouernment vnto it. Captaine Franciscas Hernandez planted it 1524, in the doubtfull Streight, in the feate of Vrisina, and on the one fide it had the Ses, on the other the Playnes, and on the third fide the Mountaine of the Mynes, and in all this Orbe there are no Indians more expert in the Caffellan tongue then those of Ni-

The Province and Gouernment of Costa Rica , the furtheft East of the Northerne Indies, and ColaRica Councell of Gustemale, hath in length East and West ninetic leagues from the Confines of Verasma vnto those of Nicaragna, with which it iowneth by the North, and by the West In it are two Townes, it is a good Countrie, with many showes of Gold, and some of Siluer. The one Towne is the Village of Armines fine leagues from Chames Indianes, a Towne of the in- dranjue, ridiction of Nicoya. The Citie of Cartage, fortie leagues from Nicoya, and twentie from the Cartage, Sea almost in the middeft of the Province, hath a Port and landing place in the Coast of the common to this Government, and the Bayes of Saint Ierosso and of Caribaco, neere the limits of Urragua.

He part of the Indies of the South is vanishing called admorate, it is all that is discoursed Chap. 14.

I from Numbre de Dies and Passense to the South, wherein is included Torsa firms, the Orthe unter Kingdomes of Pirm, the Pirm Chile, which the Indiana call Chille; The Provinces of the othe South Streight, the River of Plate and Brafile, where are fine Councils of Passama, new Kingdome of Granada , Saint Francisc of Quito , Lima , the Charen , and the cleuen Gouernments : part of their Coast toucheth in the North Sea, and part in the South : in the which for the most part reigneth the South and the South-west, which contrarie to his nature is there plealant,

and doth mitigate the great heate, whereby that Countrie may bee inhabited, although it ne-50 mer rayneth nor hayleth in it, but in a very little diffance. And the two rowes of Mountaines Agreat diffethat runne equally through all these Indies, have a great difference, though they are in one al- rence of t manual rence of the state o trac runne equative incongram enter a small agree outstreamen, though they are in it, and perature in the titude of the Pole: for the one is well replenished with Trees and it alwayes rayneth in it, and reso towes of it is hot: the other is all bare, and cold in Summer and Winter. These rowes are called Ander, Pine. and Sierra or the Mountagne; they have most high Hils, and goe in fight the one of the other one thouland leagues, almost equally. In the Hill are bred fundrie beafts, and in the parts where The two rowes they open they make Valleys, which is excellent dwelling, as that of Xonxa, and Gueyles, and doc runne al-Tucay. In the Ander also are bred fundrie beatts, and past the Citie of Cuzes, these rowes doe most 1000. diude themsclues, leaving in the middelf a great champaine Countrie, which is the Prouince of Colles, where are infinite Rivers, Lakes, and Paltures, without Trees or Wood, for Quilities of

the difference of the Countrie, though wholesome and much inhabited. There follows the Proplace 60 eth after it the Prounce of the (barea, hot and of great plentie, with very rough Hills of of college great riches of Mynes : and the figure of thefe ludies is freme in the Table before going.

"He limits of the Counfell of Panama, which was first called Castilla del Ore, and afterwards Terra Firme, are very small, for the Counsell is principally resident there, for the dispatch of the Pleetes, and Merchants , which goe and come to Pirm: it hath in length East and West. about nintie leagues, from the confines of the government of Cartagena, and Poparan, vnto Quantities of the Caitle of Veragus, and in breadth from the South Sea to the North fixtie leagues, and thence downeward vnto eighteene by Nombre de Dies, or Porto bello to Panama: it is a ground generally very rough with Mountaines, full of quagmires, the ayre close withvapours, mostly, hot, and for this cause very fickly from May vnto Nouember, a barren soyle, and destitute of many things: for there groweth nothing but Millet, and very little, though there be good Pastures for Kine, and breeding of Cattle. The gouernment of Ueragua Randsin the bounds of this Counfell, and in it, and in that of Panama these Townes following.

The Citie of Panama is in the coaft of the South Sea, neere vnto it, in 9, degrees of latitude, and 82.of longitude from the Meridian of Tolodo, from whence it is diffant by direct way one thoufand fine hundred and fixtie leagues. It is a Towne of fix hundred housholds, the most are Merchants and dealers. And with the Counfell are resident the Kings Officers, and Royall treasurie, which doe goe already to Portobello, when there is any Fleete to the dispatching of it, and likewife the Cathedrall fuffragan to the Archbishopricke of the Kings (delos res) is here resident with three Monasteries, of Dominiche, Franciscane and Merced Friers. The Port of this Citie is reasonable, although at low water the Ships remaine dry, and therefore in Summer they ride in the 60 ftrand, and in winter in the hauen of Perice, two leagues from the citie. Pedrarias Danila peopled it, being Gouernour of Cafillo, del Oro, or of the Gold, against the will of the dwellers of Sancia Marie, the auncient of Darson, the yeare 1519. and a little after the Cathedrall Church was removed thither; and it might have had a better feate, and more wholesome, and to the

## CHAP.I. Porto bello, Strange case of a Lizard. River of Snakes."

purpole for the trafficke of the South Sea, not going very fatre from whence the Citie

The Citie of Nombre de Dios, was by Iames of Nucuesa first planted 1510. and afterward by Lones of Albnez, by order of Pedrarias, and he was the first Admirall that discoursed her ports Les removed to Porsobelo, for the first Admirall discovered it, and gave the name, because it was portebelle. more wholesoner, and fitter for the loading and valoading of the Fleetes, and for their fecuritie. and of the new Citie of Saint Phillip, which is built there : the Inginer Baptifia Antonelli, bath made a Castle, and appointed another on the other side the hauen, for to keepe the entrie. The Merchandize are carried from Portabelo to Panama by two wayes, one by Land with carriage, to which is eighteene leagues of leffe difficultie then by the way of Nombre de Dios : the other by

Sea, and the River of Chagre, whose mouth is eighteene leagues from Portobelo, to the West, whereby the Merchandize goe vp when the water reacheth to the vent of the Croffes, and from thence they go in carriages hue leagues to Panama.

The Village of Nata stands thirtie leagues from Paname to the West, in the Coast of the Saint Lames of South Sea, Captaine Franciscus Companion peopled it, by order of Peter Arias , for the warre Nata with the Casique Urraca. The inhibiting of Acla, and Captaine Gabriel of Rosas finished by commandement of Peter Aries in the Coast of the North Sea, and entrance of the Gulie of Vraba, Alla, right against the Hand of Pisor, whereof at this present there is no more memory then that there was the death of that famous Captaine, whose memory will last eternally, the President Bases 20 Numez of Balnsa, and of his company. In the breach of Almagro, and in the head of the River

Chupo, there is Gold, and in times past was much gotten. In all these Rivers are many Lizards or Crockadiles, and very great, which put the first discouerers and pacifiers to great trouble, and dil denoure somemen. It happened that a man being in a Boate neere to the Kings A ftrange case Houle in Panama, a Lizard came and matched him from the Steame of the Boate, and carried of a Lizard. him a way to eate him on certaine Rockes, and having begunne to teare him in pieces, they flot at him with a Cahuer and killed the Lizard, fo that he before his death received the Sacraments of the Church.

. The Prouince of Veragua, which stands in somewhat more then tenne degrees, doth confine Veragua, with Coffarica, on the West isie: it hath in length East and West fiftieleagues, and in breadth 30 fine and twentie : aMountainous Countrie, full of bushes, without Pastures or Cattle, Wheate, Barley, little Millet or little Pulse; but full of Gold with many vaines of it, and rich Mines in the Rivers, and breaches, and those Indians that are, are in warre : it hath the Citie of the Conception fortie leagues from Numbre de Diss, to the West, where the Gouernour and the Officers ( which they of Panams at this prefent doe prouide) are reft- The Conception. dent. The Village of Trimitie flands fix leagues to the East of the Conception by Sea (for The Trimitie. yee cannot goe by Lani) neere to the Ruer of Berbleem , at three leagues from the Sca. The Citie of Sanita Fe stands twelve leagues from the Conception to the South, with mel- "Hoh Faith, ting houses , and Deputie Officers. The Citie of Charles , in the coast of the South Sea , Charles

neere to the Sea, fiftie leagues from the Citie of Sanita Fe, to the East : all the Indians of this 40 gouern ment are in warre. There is no Port of name in the two Coasts South, and North, of this government, and is all The Ports the bounds of the Counfell, are the Rivers, Ports, and points following. The Bay of Carabaco, or of Saint Hierome, in the coaft of the North Sea, and the confines of Veragua, and to the Ealt of it, and of the River of the Trintie, of the Conception, and of Bethlebem (where was the first inhabiting that the first Admirall made in Terra firme, of all that Orbe, in the yeare 1503. which continued not : and right against the Shield, an Hand, and the River of Chagre, and more to the Eleftude. East a league the Portete, to the place where the Admirall came discouring the same yeere, and the Ports of 2 Langostas twelve leagues from Nombre de Dies, to the Weit, and the Port de a Or Lands. Gallinas or of Henras nine degrees, and the Port of Bonauenture ix, Portobelo fiue, and right against

it the Hands of the b Lookings, and those of the Proxissions or Bastimentos : and having Nombre de blas Miras. 50 Dies two leagues, the River of & Sardinilla, and the Hand of & Sardina, foure; and the River of Cor Little Pil-Millet or Mayz, and the River of Snakes, or Culebras, eight; and at the entry of the Gulfe of shead. Vraba, where in the yeare 1509, the Bachiller Everso built the Citie of Santia Marie of Davien, d'Or Pichard. This Bachiller Encife was he that published that in the Prouince which was called Castilla del Ore, there were places where the gold was fished with nets, which encouraged many people to goe to the Indies, which passed in the yeare 1514. With Peter Arias Danila: and the President Bases Nunnez of Balboa, went 1513. from the Darien in demand of the South Sea, and discoursed it. The Point of the Iland of Capsina, itands right against the Mountaines of Saint Blas, and the Iland of Comagre, and the Iland of Pines, more within the Gulfe of Uraba, and in the

60 inward Port of it, the Port of Niless, neere to the mouth of the River of Darien, which diuideth the bounds of this Counfell, and those of the Gouernement of Cartagena, and there is Culata de Uraba, where in the yeare 1510. Alonso of Oieda inhabited Saint Sebastian of Vraba. This Gulfe stands in 8. degrees, it hath foureteene leagues of longitule into the Lands, and in the entrie ie hath fix in breadth, and a little forward fiftie,

and at the end foure, and fine leagues within was the Citie of Santa Marie, the aunciene

In the South Sea stands the Cape of Santia Maru, and point (de Guerra) of Warre, and toward Panama, the Gulfe of Parita, or Paris where stands Nata, the point of Chiame, the Countrie of that Cazique Chiapes, the friend of Basco Nunnez of Balboa, which holpe him in his discourte: and passed the Port of Panama, the River of Chepo, and the Balfa, or of Congos in the inner part of the Gulfe of Saint Michael, North and South from the Hand of Pearles, and the Point or Port of Pinyas, at the entrie of the Gulfe on the South fide, which is fitte leagues from Panama, and twentie ouerthwart to the Gulfe of Vraba, and Puerto Quemado, or Burnt Hauen, necre to the Cape of Corrientes, in q.degrees of altitude Septentrionall.

Bogota : which

Chap. 16. THe bounds of the Counfel of the New Kingdome hath in length East and West, three hundred leagues, and as many North and South, wherein are comprehended the Prounces of the New Kingdome, the gouernments of Santia Martha, and Cartagena, and part of that of Popagan; & for borders the Prouinces of the Darade, or new Stremadura : the Prouince of New Kingdome, which is that which the Counfell gouerneth it hath in length from East to West toureteen leagues, and Kingdome of eightie in breadth North and South of plaine ground, for the most part with Valleys and hils and good Pastures for all fort of Cattle, which are in abundance, and in many places, Wheate, Miller, and the fruits of Castile, and generally much Gold and very fine, and Mines of Copper & Steele: and the Countrie men for the most part are able men, great traffickers, and doe weare Cotten 20 cloath. And the Townes that be in the Kingdome of Spaniards, are the Citie of "Santa Feof Elouin, Album I was buik at the foot of Bogon, to called by the Cazigne which was called Bogon, which the Prefident Gonçals Ximenex of Quefade built, and gaue the name to the Cities and to the Kingdome, because he was of Granada, though in the discouery the President Belalcazar, and Nicholas Federman had part : it flands 72 degrees and a halfe of longitude from the Meridian of Taledo, which by a greater circle may be one thousand foure hundred and fortie leagues, and 4. degrees on this fide of the Equino chal, it hath more then fix hundred housholds, in it is resident the Counsell, the Kings Officers and Royall treasurie, and Melting house, the Cathedrall Metropolitane, whole fuffragans are, Popayan, Cartagena and Santia Marta, with a Monafterie of Dominicke and another of Franciscane Friers, and in her borders more then fiftie thousand tributarie Indiane 30 and the Lake of Gnatanita, which was a worth pping place of the Indians, where it is reported

was built for trafficke with the Pauche Indians, because being of a hot Countrie it did them burt to goe to Santia Fe, which is cold. The Citie of Tocapma fifteene leagues from Santia Fe, to the West, somewhat inclined to the North, with a Monasterie of Dominicke Friers, was inhabited the yeare 1 545, by the Captaine Hernando Vanegas, in the border of the maine River Pais, which runneth into the River Magdalene. It hath no gold, and is most hot, and by night there falleth no Deaw in it. In all the Kingdome there is no generall tongue, that which is most vinderstood, is that of the Panches. In the Province of the Mujor, and Columns, which by another name 40 are called Canapeir, fine and twentie leagues in length, to the North-welt of Bogota, a rough Countrie, found, plentifull of Pastures, Gold, and Emeralds : there are two Townes; the Citie of the Trinitie twentieleagues from Sancta Fe, to the North-welt, which the Captaine Lanchers inhabited the yeere 1582, when hee went to warre with the Indians " Molcas, a quicke and fearefull Nation : and in these bounds stands the rich Mine of the Emeralds, with

many Indians which yet are peaceable, and in the Province of Chiagnachi, which tignifieth

Fe to the North-weft, the Captaine Don Gutierre of Onalle built it 1972, in the Prounce of Tunia, which tooke the name of the Cazique, almost to the North, direct to that of Bogota, and 50

in all like vnto it : The Citie of Tania stands two and twentie leagues from Santta Fe, to the

North-east, on a high hill, a strong scituation, for the warre with the Indians. There goe out

of this Citie aboue two hundred Horse-men, and it is the most aboundant of Victuals of all

the Borders, and there is the greatest Market in all the Realme : it hathone Monasterie of Do-

minicke, another of Franciscane Friers. The Captaine Gençale Xuarez Rondon built it, for the Pre-

fident Gonzalo Ximenez of Pulfada. The Citie of Pamplona feuenty leagues frum Santta Fe to the

North-east, hath one Monasterie of Dominick Friers; much Gold is gotten in it, it hath abundance

of Catele: the Bachiller Miebael Diaz of Armendaria peopled it. The Village of Saint Christa-

pher is thirteene leagues from Pamplona to the North, the Captaine Franciscus of Caceres built it

The Village of Palma in the Colimas, of a temper hotter then cold, fifteene leagues from Saulta

The Village of Saint Michael in the bounds of Sanda Fe, twelve leagues from it to the North,

that they did cast great summes of Gold in offring to the Idols.

The Trimitie, Or Flitz.

Snailes, for there be many.

Tunia.

Pamplona,

"Or Ceping.

Merida.

neere the Prouince of " Grita, so called because the Indians came out of the high wayes to shoute and crie after the Spanuards, and to kill them : little Gold is gotten in it, and it hath commoditie, 60 The Citie of Merida, in the bounds of the government of Venequela, and the New Kingdome, fortie leagues from Pamplona to the North-east : it is a plentitual Countrie of Mines of

CHAP. I. Thunder bolts. R. Grande or Magdalen. Sancta Martha ber Provinces. 885

Gould, and of Wheate. The Citie of Belez thirtie leagues from Santha Fe to the North, and fiftrene from Tama, hath one Monasterie of Franciscane Fryers : the Captaine Goncalo Ximenez Rondon inhabited it. It is a Countrie where many thunderboults fell, and there fall not fo ma- Thunderboks ny fince the holy Sacrament of the Altar is there abiding; it hath one fierie mouth that caffeth many itones. The Citie of Mariquita of Thague, by another name Saint Sebastian of the Gould, Mariquita, is fortie leagues from Sautta Fe to the North-Welt, the Captaine Pedroso peopled it 1551. in certaine Meadowes, leaning to the hill, the temper is very hot. The Citie of Thaque is three han. Thaque dred leagues from Santa Fe, almost to the West : it is the first Towne of the New Realme, that doth confine with Popayan , the Captaine Andrew Lopez of Galarza peopled it 1551. by commission of the Counfell, for to eschew the harmes these Indians did with those of Tocarma. and Carrago, and for to open the way to the government of Panyan, it hath a Monasterie of

Dominicke Friers. The Citie of the Viltorie of the Remedies, fittie leagues from Santia Fe, to the North-well, Villoria delas is very rich of Mines. The Citie of Saint lobn of the Plaines, fiftie leagues from Santia Fe to Remedet. the South, is a Countrie of much Gould. The Citie of Tudela which the Captaine Peter of Vring built , by order of the Bachiller Don Michael Dinz of Armendariz was difinhabited, becaule the Indians \* Moxeas received hurt by it. And there are of the limits of the Coun- \*Or Fhee. tell of the new Realme, feuen Townes of the government of Papayan, Santia Fe of Antiochia, Caramanta, Arma, Anzerma, Cartago, Saint Sebattian of the Silver, and Saint Uncent

20 de las Pazes.

The Merchandize enters this Kingdome, by the great River of Magdaleus, from the Barenea \*Or Water-of Malemba, of the juridiction of Cartagena, and the first that sent to discover this River, was comple. Garcia of Lerma, Gouernour of Sanita Martha 1531. It encreth into the Sea fo broad and firong, Ris Grande on that at the passing, the Ships are wont to be in danger, if they goe not somewhat distant, for the Megalian River, combat of the current, and working of the Sea. It hath an Iland in the mouth, it is nauigated more then one hundred and fiftie leagues, and in more then three hundred it is not waded: it commeth from about Popayan from two Fountaines that are fortic leagues distant, by which inyning the River is made: it was called of Magdalene, because on that day was the mouth discovered, in 22. degrees of height, and fix and twenty leagues from Cartagena.

The Province and Government of Santia Martha in the coast of Terra firms is seventie leagues Santia Martha 30 in breadth and length, between: Carthagena and the River of Hache: it is a plentifull Countrie of Millet, and Potators, much Gordl, and Copper, and fome Emeralds, and other Stones: in it are fine Spanish Townes; and though there be many of the Countrie-men, the most are in warre. The Prefident Baftidas peopled the Citie of Santia Mariba 1 524. neere to the Sea, in 10. degrees of latitude, and 74. of longitude, one thouland foure hundred and twentie leagues from Toledo, where is resident the Gouetnour, and Officers Royall, and the Cathedrall fuffragan to the New Kingdome. The Port is reasonable. This Government hath soure Provinces, Pezignay, Betona, Chimica, and Tayrona, which fignifieth a Forge, and with great reafon, becaute in that Countrie are an infinite quantitie of discritie of Mettals, and Stones of great 40 esteeme and value.

Tenerife stands by the border of Rie Grands or the great River (which is that of Magdelene) Tenerife fortie leagues from Sanda Marha to the South-well, part by the Sea, and part by Land : Franeiscus Euriques did people it, by order of Gençale Perez which governed in Saulta Martha, by Tamaameque, Commission of the President Luge. Tamalameque, or Village of the Palmes is fixtie five leagues from Santia Martha to the South, and twentie from Tenerife, two leagues from the Great Riner ; the Captaine Barrholomew Dalma peopled it 1561. The Citie of los Reyes in the Valley of Vpari, The Kings. is plentifull of Millet, Prouision, and Cattle, and of much Copper, to the South-east of Santia Martha, fiftie leagues from it, and thirtie from the River of Hache : the Captaine Sault Anne peopled it, by commandement of the Bachellor Miebael Dinz., . La Ramada was built be- asanda Randda

50 fore, called first new Salamanca, fortie leignes from Santia Mariba to the East, and eight from the River of Plate, at the overflowings of the Snowie Mountaine, It stands in the Valley of Vpani, where there is as much Copper as Stone. The Merchandize of this Government goeth vp to the New Kingdome by the marth of this Citie, which is eight leagues from it by the Sea, and afterward twelue vnto the Barranca of Malambo, in the great River. Ocama is also in this Go- Ocama. uernment, which the Captaine Franciscus Hernandez inhabited 1572. and was first called Sante Anne. There is in the Coaft of this Gouernment the River of Bubia, necre Rama- bor Tong Pida, and the River of Piras, and that of b Palomine, where a Captaine of this name was drow- gen. da, and the River of Piras, and that of Palames, where a Captalle of the Agnia neere Santia of the River of Don Lames, the c Ancones of Burnaca, and the Cape of a Agnia neere Santia of the Needle. Martha, right against the hill of Bonda, and the River of Gayra, to the West.

The Province and Government of Cartagena, in the Coast of Terra firme, and the North Sea, hath in length East and West, from the River of the Magdalene, voto the River of Darien, eightie leagues North and South, and as many vnto the confines of the New Kingdome, though then fay it is more in Voyage. The Countrie is Mountainous of Hils and Valleys, of high Trees, rainie and moift : the feedes of Caftile beare no feede, there is no Wheate, nor Gould, but in fome places.

The Citie of Carthagena trands neare the Sea, two leagues from the Point of Canon, to the West, in tenne degrees of latitude, and feuentie fix of longitude, one thousand foure hundred and fixtie leagues from Toledo, of more then five hundred houtholds, among them about two thousand women. In it is resident the Gouernour, the Kings Officers, & treasurie Royall, and the Cathedrall Suffragan to the New Realme, with Monasteries of Dominick and Franciscan Friers. The scituation is plain, and almost like an Hand, the Sea compasseth is on the North fide, & it is a rough coast, and very shallow; and on the land side it hath an arme of the Sea which reacheth to a Marish, which is 10 the Lake of Canapote, which ebbeth & floweth after the order of the Sea, & at the fame hours, and they passe from the Citie to Terra sirme, by a Bridge and a manner of a Causie, which hath above two hundred and fiftie paces. The Citie is built on Sand, & within two fathoms they finde fresh water though sometimes it is vnwholesome, not so much as the coast of Nombre de Diers for the ayres in respect of the Marish are wont to cause diseases, but for the most part it is wholsome. The Hauen is one of the least of the Indies, though the great Ships doe ride farre from the Citie It hath at the entrie an Iland like that of Escombrera in Cartagena of Castile, whereby they called it Carta gena, and the Hand was called Codego, now they call it Cares, it hath two leagues in length, & little more then halfe a league in bredth: it was wont to be inhabited with Indian Fishers, & it hath no water. The first that law Carehagena, in the year 1502. was Roderick Bustidas, & the year 1504. 20 Inan de la Cofa or John of the Thing went a shore, and found Lewes Guerra, and they were the first that began the warre with the Indians, which were proud and bould, and both men and women fought, with venomed arrows. Afterward returned Alonfoof Oieda with lobn of the Thing for Pilot Maior, & Americo Ve foucio for Mariner, & some years after Gregorie of Obiedo took you him to inhabit Cartagena, & performed it not. The year 1 32, went Dan Pedro of Eredie born in Madrid, and inhabited it, and pacified a great part of the Countrie, though with labour and cunning, because the people were very warlike, and there was a woman that before they could take her, being about eighteene yeeres old, flew with her Bow eight Spaniards. The Village of Saint lames of Tolu, is fix leagues from the Sea to the South-west of Cartagena

two leagues from it, part by Sea (for by Land it cannot be gone) and part by the Marishes and 30

Mountaines. It is a found Countrie, of great breedings, and tillage, and fruits of Caffile: the Prefi-

to the South, is also the inhabiting of Don Peter of Heredia, in the yeare 1534. The Village of

" Sanita (ruz of Mopox is fewentie leagues from Cartagena by the Sea and River of Magdalme,

neere whose border it stands, & whereby they goe about, more then halfe the way, it is not found being among Quagmires. A Captaine of Don Pater of Heredia peopled it 1333. The yeare of 1503.

Alonfo of Heredia inhabited Saint Sebastian againe, for the Prefident his Brother, in certaine little 40

bils, almost halfe a league from the Sea. And in the yeare 1527, the Bachiller Iobn of Vadello went out of Saint Sebastian with a good number of Souldious, and pating many troubles, & most rough

Amazmian

The Village of dent Don Peter of Heredia peopled it. The Village of Marie thirtie two leagues from Cartagena.

the Bachiller Engine (as hath been faith/inlabited, 1945 4 Many, the ausmeint of the Dates, which is striples, in this Government for lain which light of the striples of Bone villa, which the fame Capaine Along de Oteds had inhabited, in the further place of Trade : & afterward the Capaine.

Mountains, & thick woods, came to the Citie of Antioquia, of the government of Popayam, & there was a Souldior that from thece came to the Citie of the Plate, in the Charca, which is 200, leag.

The Barranca of Malambo, which is a Custome house of the jurisdiction of Cartagena, thirtie leagues from it, on the border of the great River, and twenty from Santia Martha, & lix from the Sea, where the Merchandize that are carried by Land to the New Realme are valoaden. & from the Barranca are carried up by the River in Canaces. Lower then Nopox entreth the River of Canca into the River of Magdalene, which also (pringeth about Popayan : & more toward Cartagena and to the West, standers the Knobbe, and the point of Zamba, and Batrio del gate or Arbelera, and the 50 ieuen Cottages, and the point of the Canome, two leagues from Cartagena, and the point of Touces at the entrie of the port, right against the Hand of Carex, and the point of the Ship in Terra firme; at the other leffer entrie of the port, and almost to the North, is a little Hand which is called Sardina, and in the coast of Talu the Hands of Barn, which are fix, and at the entrie of the Gulfe of Vraba the fix, which are called of Saint Bernard, right against the River Zenn: and more within the Gulfe, the firong Hand, and the Tortoyfe. The port of Zenn stands five and twenty leagues from Carragena, it is a great Bay that hath his entrance by the East, it is secure : here they make store of

In the Provinces of the Darade, or new Estremadura, which circuit pertaines to the bounds of the Counsell of the New Realme) many Captains have entired by Sea, and by fundry parts of the 60 Land, and have never found the riches, which the same promifeth. They fall on the other side of the River of Saint Iohn of Amazones, by another name Orellana (which some erroniously wil have to be the Merangen) and here is the Qrinico, and other great Rivers, and the Gulfe of Paris which maketh the firme land, with the Land of the Trimitie, & the mouthes of the Serpent, & the Dragon,

Salt, and it tooke the name of the Towne Zens, which standeth on the River.

which the first Admirall named, where he saw himselte in great danger, for the conflict which the fresh waters make there with the falt, whereof he had yet no notice, and here beginneth the Great Tydes, flowing of the Sea to be very great, vnto the streight of Magellan, and goeth continuing through all the coast of Pira, and New Spaine.

The Prouinces of Pirm (whole name bath extended it felfe more than it was at the beginning) Pirm, or Pure, include all the Empire of the Ingas, or more; for when it was won it was divided in two goperments, that of Don Franciscas Pigarro, called the New Caffile, from the Quite vnto the Cuzco. fixtic leagues below the Chincha: and that of Don lames of Almagro, called the New Toledo, two hundred leagues toward the Streight from Chunche; which governments were distinct votil

to the Councell de los Royes was established, and a Vice-roy prouided for the Kingdomes of Prim, in whose government are included, the Councell of Saint Francis of the Quito, that of Lame (or de les Reges of the Kings) that of the Charces, the government of Chile, & countries of the Streights, the Hands of Salomen to the West, and for borders the Provinces of the River of Plate, and that which determinately is comprehended under the government of the Vice-roy. It hath in length North and South from two thousand leagues vpward, and East and West, that which is discouered from the South Sea thehe North Sea. The two Romes that have beene spoken of , doe paffe The two Romes red from the South Sea to the Peris North and South, that of the Ander from Popayan, and yet ma- of the Indies of the South. ny will haue, that from Terra firme and New Spaine, till it ends in the " Streight , and the other " Of Marillan. leffe, from the Quies vnto Chile, along the coaff, twelve leagues diftant, little more or leffe.

The two wayes passed betweene these two Mountaines, the one which they called of the In- The two great gas, by the Ander from Parts vato Chule , which hath nine hundred leagues in length , and fine wayes of Fine and twentie foote of Cawfie, and every foure leagues very fumptuous houles, which they call Tamber, where was prouison of victuals and apparell; and enery halfe league men that were in poites for to carry metages, and orders from hand to hand. The other way went through the Pofice. middeft of the Playnes, along the coaft of fine and twencie foote broad, betweene two walls of a mans height, from Piere vnto Chile, where both the swayes met. And it is to be noted, that all the Indies of the South are not to be waderstood by Pires, for as hath beene faid, it is not but Pire is not all that which beginneth from Saint Francis of Quite, which is under the EquinoCitall Line, and the Indies of runneth along, vnoc Chier, gaing out af the Tropicke; which may be tire hundred largers, the South.

30 and fiftie in breadth, though toward the Charlespape there is more, and it is duided in three

parts: The Players, which have ten leagues in breachir, and in parts leffe, they are the coalt Let Least.
of the Sea: The Hills, which have about twentie, and is all Hills and fome Valleys: and the Lea Steras. Ander other twentie, which are most thicke Groues and Woods, and in so little space as fiftie leagues equally diffant from the Line and Pole: there is fo great districte, that in the one place Districted almost it rayneth alwayes, and in the other almost neper; which is the Coast, and in the saure thir I which is the Mountaines that fall in the middelt of their extremes, fometime it raynith, and fometime not, for it hath his Summer and Winter as in Calible: and the causes of not rayning in the Coast, and rayne in the Andre, are spoken of in the beginning of

He bounds of the Councell refident in Quite, and confining Northward with that of Pana- Chap. 17. 1 ma, in the Port of Bonamentura, and on the North-east with the Now Realme, and on the Of the Coun-South wigh tias of Longs hath in length by the South coaft, which is the place where it leng. cell of Samt then smoll, about two hundred leagues from the Port of Bonanentane, which is in the Gulfe of Francis of the Panama, or of Saint Michael, the Port of Payta in the coast of Pirm, and from thence cruste to the vetermost of Popayan, more then other two hundred and fiftie, the Limits remayning open on the East fide: in it is included three Gouernments, besides those of the Councell , which are Papayan, Quixes, la Canela, and that of Inan de Salinas, of the Pacamoroc, and Gualfango, divided in " Or Critatwo Bishopricks.

The Protunce and Gonernment of Quesa, which the Councell government, hach in length eightic El Quita leagues , from neere the Equinoctiall to the other fide , and must their Townes of Spaniards following. The beauen and earth thereof, although it flands under the Equinoctiall, is like to that of Capitale, cleere and faire, rather cold then hot, and in parts where the flow continueth all the yeere, it rayneth from October to March, which they call the winter; and in the other mo- Aire and fesmeths they cut their Graffe, which though it be not long in to fit for the Cattell of Caftile, where fore. of there is great store; and of Wheat and Barley, and gold in some places : and in this Region they live pleasantly, for there is nothing more pleasant for burnane life, then to enjoy a wholetome and cleere skie, for they have no Winter to trouble them with cold, nor Summer to molest with heat. The Townes are, the Citie of Saint Franciscus of Ques , where Athanalpa Emperous of Pira A

was borne, it stands in halfe a degree of height from the Equinociall, and eightic two from the Meridian of Toledo, by a greater circle one thouland fixe hundred eightie fixe leagues from it, and fixthe from the South Sea ; it is of fine hundred housholds : In it is resident the Countell for matters of lattice, for shole of the Government are at the Vice-toy his chatge. There are also in this Citie the Officers of the Kings Rents and treasurie Royall, and the Cathedrall of this Bi-Dadd 2

shepricke, Suffragane to the Archbishop of The Kings (los Reyes) there are three Monastonies of . Friars dela Dommicke, Franciscan, and Mercenarie "Friars : and in her inridiction eightie seuen Townes.or mores, or our parcialities of Indians. In the fituation where this Citie was built, were certaine great lodgings which the King Topaynga built, and his sonne Guaynacapa beautified, and were called Into from whence the Citie tooke the mame; the Prefident Sebaftion of Belalcapar, a fouldier of Don Francifew Picarro built it, a loyall man to the King, by order of the Prefident Don Iames of Almaero, which left him for Governour of the Province when hee went vnto it, having ended the agree. ment with the Prefident Don Peter of Almarade.

Riner Bamba. Raine a wonder. Payta. Admirable bigh-way. LIB. V.

The River Bamba in the Province of the Parases, is a Countrie to Caffile in the temperature. of herbes, flowres, and other things: it is a towne of thepheards, it flands fine and twentie leagues 10 to the South-west of Saint Francisco of Quito, the way to the Kings, wherein are fortiethoufand head of cattell, the greatest part sheepe. Here the Tagas had certaine Royall houses, and here the President Belalcazar had a redious battaile with the Indians, and ouercame them, and in this place was the agreement rehearled of Don lames of Almagro and Don Peter of Almarado and in it was the Citie of Quite firit built. The citie of (wenca (weight the Marques of Canyete commanded to be built, being Vice-roy of

Pirm, which by another name is called Bamba, one and fritie leagues from Quito to the South) is a Corregidership provided of the Vice-roy, with one Monasterie of Dominicke, another of Fran-

cifean Friers. In her jurisdiction are rich mynes of gold, tome of filter, and rich mynes of quickfilter, copper, Iron, and Brienttone. The citie of Loxa, otherwise called la Zarca, eightit leagues 20 from the citie of Quito toward the South, and thirtie from Cuenca, is a Gouernourship provided by the Vice-roy; it hath Monasteries of Saint Dominicke and of Saint Francis, it stands in the way from Cuzco to Quito, from whence it is eightie leagues, in the faire Valley of Cuzibamba. betweene two Rivers. Captaine Antonie of Mercadillo built it in the yeere 1 46. for to pacifie the countrimen which were somewhat difordered. The citie of Zamera, which is called of the Alcaydes, is ninetic leagues from Quito South-eastward, bauing passed the Rome of the Andez: it is a Gouernment prouided by the Vice-roy: it bath a Monasteric of Franciscans; they reape no Wheat because the countrie is very raymer it hath nich Mynes of gold, wherin they find graines of foure pound waight and more : the Captaine Mercadollo peopled it the yeere 1 549. by a couenant with Captaine Bonamente : It stands ewentie lengues from Laze, hauing past the Rowe 30 which divideth the bankles of the South Seatrom the North, the Indian did call it Zamara : that part of the countrie is called Persauca , which fignifieth Indians of warre : much gold is gotten there, and there hath beene graines brought to his Maiettie of twelve pound waight, and there are Salt-pits of falt-water.

to the South H wthe tiners

taine lames Palemine bent it 1549, in the Prouinces of Chaquimaye, in that of Chaceprea. The citie of Saint Michael of Pinra is in the Prouince of Chila; one hundred and twenter leagues from Quite South-eastward, and fine and twentie from the Port of Payes, where the bounds of this Councell doth end, It is a Government at the providing of the Vice-roy; it hath one Monafterie of Mercenaries. Though in this countrie rayne is holden for a wonder, there are good wa- 40 tered grounds, that beare good Wheat and Miller, and the feedes and fruits of Castile. The port of Payes stands in the inristition of this Citie, in fine Southerne degrees, which is good, great, and secure, where the ships that goesfrom Guatemala to Pine doe touch. The Marques Doe Franciscae Picarro built it in the yeard 1931, the first of these Kingdomes, and where the first Temple was erected in the honour of God, and the holy Mother Church of Rome. All the Prouince and borders of the Valleys of Tumbez are drie, and the high-way of the Ingas passeth High-way ad- through these Valleys of Piera, betweene trees and pleasant shadowes, and betweene the principall Valley are joyined two or three Rivers : the Cities was built at the first in Tangarala, from whence it was remooued because it was a sickly situation, and now it stands betweene two Valleys, and yet is somewhat fickly, especially for the eyes, for the great windes and dusts of the Summer, and great moiftures of the Winter. The Citie of Saint lames of Guayaquibby another name las Culata, fixtie leagues from Duise, and fifteene from the Sea to the South-well; it is a Gouernment prouded by the Vice-roy: the

The citre of Jam is fine and fiftie leagues from Zoxa, and thirtie from the Chachapoyas; Cap-

President Belalcazar peopled it, and many of the indiane having rebelled, and slaine many Spamiards, the Captaine Franciscus of Orellana peopled it againe 1537. it is a most plentifull and pleafant Countrie, and hath great flore of hony in the hollow places of trees : The waters of this River which runne almost under the Equinoctiall, are thought healthfull for the French difeate, trace etothe and other sich like. Many people west tothe River to recover health, for the multitude of the reetes of Zarcaparrille that are in the River: it is not very great, nor those that run to the South choic dare de Sea are fo bigge as those that runne inta the North Sea, because they runne but a little way; but notwith thatiding they are flrorg and with tudden flouds, because they fall from the Mountaine. 60 The Indians doe vie many faires for to paffe them; they have in some places a rope over it, and a basket on it , and the pallenger being put into it , they pull him from the other fide. In other Rivers the Index goeth riding on a truffe of firaw, and carneth the paffenger behinde him in other places they have a great Net of gourds; your the which they lay the cloathes and the per-fons, and the *Instant* fattened with certaine courder goe fwimming and pulling as coach-hories; and a thouland other arees they vie for to paffe the Rivers. The Port of this Citie stands neere write it, for the River is very broad, whereby they bring vo the merchandife from the Sea, and they goe by land to Quite. The yeere 1 168. Captaine Contero planted the citie of Caltre, in the Cafre. Valley of Volt, the Licentiate Lope Garcier of Castro being Governour. Vis thin the Provinces of Ville Buniq ando, Imdiuono, and Gnalapa, which they call the Pronince of the Emeralde, and he went about it trom Guayaquil, and discovered all these Provinces from Passa vnto the River of Saint

John, which entreth into the South Sea. 10 The Citie of Puerte Pieje is about eightie leaguer from Saint Francis of Quite to the Welt, Oc old Ports though not of open way, and other fifte from Saint lames of Guayaquil, whereby yet goe from Quee: in her borders flands the Poffes, which is the first Port of the countrie of Pow, and from it, and from the River of Saint James, began the government of the Marques Don Francisco Escarsee and because this countries to neighbour to the Equinoctiall line, that it stands in one degree; some beleeue it is vnwholfome, but in other parts as neere the Line men line with much health, plentie and abundance of all things for the furtenance of man, against the opinion of the ancients and so it is that the Indians of this countrie doe not like long, and in many of them there breede certaine red warrs in the foreheads and nofes, and other parts, which beside the disease being grieuous, it disfigureth them very much, and it is beleeved that it proceedeth of rating fome fills. 30 In these bounds stands the towns of Masta, whither great riches have been hrought from wath- & said, in the Land; and it is held for certaine, that here is a Myne of Emeralds, which are tile best of How the Emein the Land; and they grow in a flone like Cribilli, and they making like a yening, and by little and rath do grow, the Indies, and they are the method and rath do grow, little congesting and refining them klues, and of halfe white and halfe greene, they goe tripening

and recourring their perfection. The Captaine Franciscus Pacheco peopled this citie 1535. by order of Don James de Almagro sit hath many Indians in waire : there is in it a Monatteric of Mercenerie Friars, they gather no Wheat for it rayneth the eight moneths in the yeere from O-

Stober forward, and there are many good flower of gold.

Robert forward, and there are many good moves of gold.

In the coalt of this Government are the Ports, Impdig and Points following. Friars. The President Sebaffian of Belalcattar peopled this citie 1537, the people of thele Pro. uinces are farre different from that of Pris, for thefe are of greater vader standing, and lived in more policie : the men of this government lived as in liberties. It was called Popayan, of the name of

the Cazague Lord of it: it hath part in the coast of the South Sea, and high Mountaines that goe

Eastward: and on another fide the Row of the Ander, and on both fides foring many Rivers, and

the River of the Magdalene is one, which runneth into the North Sea : in this government are

many coole and wholesome townes, and others hot and fickly. The Citie of Cale stands in foure degrees , and two and twentie leagues from Ropagas , and eight and twentie from the South Sea, it was inhabited 1537, by the Captaine Michael Musice, and Sebaftian of Belaleanar made it first in the townes which are called the Gorrous ; it bath the feate in a plaine Valley, leaning to the foot of a Hill, the temper is hot, the Gouernour, the Officers, and the Kings treasure are resident in it; a melting house, a Monasterie of Mercenning, another of Augustine Friars. The Port of Benauenture falleth in his juristiction in three degrees 10 and a halfe of altitude: in it are fome housholds retident for to receive the merchandize. The Is. dians of Cals are of a good condition, and good Christians, their old Lord, was called Ligagete The village of Saint Fe of Antiochia, is more then an hundred leagues from Pepparto the norther east, in the borders of the River Canca, of the bounds of the Councell of the New Realment Bithopricke of Popagar, rich in Mynes of gold, neere to the Hill of Baritaca famous for the much gold that was in it; it is feated in certaine Plaines. The countrie people are good folkes, well made and white, and the temperature is fuch that they goe to fleepe on the houses, without any offence of the deaw; they breede much Cattell, many truits, and the in the Ruers and Plathes: the Captaine Gaspar of Rhodes inhabited it by commission of the President Belalcazar, the

The Village of Caramanta is fixtic or feuentic leagues from Papayan to the North-east, necre to the great River Canca, of the bounds of the New Kealme, government and B shopricke of Pea payan, plentifull of Miller and other feedes, without Wheat, and with little Cartell, though they haue many Swine, they goe by the River in fine or fixe houres to Antiochia, though it bee fiftie leagues; for it runneth very swift; it is the plantation of the President Belalearar. The village of Saint lames of Arma, which hath many Mynes of gold, is fittie leagues from Popayan to the North-east, declining to the East, it is of the Council of the new Realme, the government and Diocese of Popayan; without Wheat or feedes of Caffile, but plentifull of the countrie feedes. The President Belalcarar inhabited this village, and here hee beheaded the Marshall George Ro. hed. It fains fixteen leagues from faceques, the people of the countrie are so busherly that 30 the quicke are the spulche of the dead, for it hath becar seen the suspend or care the wife, the brother or lifer, the some the father, and having fatned any captine, the day that they are to eate him, they bring him forth with many fongs, and the Lord commandeth that an they are they doe goe cutting off every member, age to alive they goe eating him, and after the inhabiting of Arms they have eaten more then eight thoughout Indiana, and tome Spaniard have also

fuffered this martyrdome.

The village of Saint Anne of Ancerma is fiftie leagues from Popayan to the North-east, in the border of Cauca, of the Councell of the new Kingdome, government and Bishopricke of Popagan; without Cattell or Wheat, very much annoyed wath thunder bolts : the Captaine George Rebledo built it by order of Laurence of Aldana. Likewise the men of this comitrie are eaters of 40 humane fiesh; they goe naked, they have no Idols, nor any thing to worship : there are in this iurisdiction good Mynes of gold; the climate is hot a and many thunder-bolts die fall. The citie of Carrago, fine and twentie leagues from Popayan about the North-east, is of the Councell of the New Realme, Gouernment and Bilhoprick of Popsyan, without Wheat or any feedes of Ga-file: it is a temperate and whole some countrie, of little gold, it rayneth much, they brede no other cattell but Kine, and Mates: they have many Mountaines, in the which breede many Lions, Tigres, Beares, and Dantas, and wilde Boares : they have a Monasterie of Franciscan Friers: Or Buffes. the Captaine George Robledo inhabited it, and it was called Cartaga, because all the inhabiters were of Cartagena. The village of Timana is fortie leagues from Papayan to the South-east, and fixtie from Santa Fe of Bogota, and thirtie from the Provinces of Dorado; here is a Lieftenant of 50 the Gouernour, which also hath at his charge Saint Sebaffian de la Plata: the Indians of their borders doe decay, for they are so inhumane that in many places they have publike shambles of men which they take captine. They have their feate in the beginning of the Valley of Nepus, the

Indian Paszes are neere, and the Pixaos, which also are " Caribes,

The Citie of Guadalaiara of Buga, is lifteene leagues from Popayan to the North-east, is of the bounds of the Councell of Onite, and Diocesse of Popayan. The Citie of Saint Sebastian of the humane flesh. Plate, in the confines of this Gouernment is thirtie fine leagues from Popayan, and thirtie to the South-west from Santa Fe, Diocesse of Popayan, where are many Mynes of filter, and in her bor-Southsweet from sans re, Dioceson e pagas, rente an inter, saying and interpretations; it is three leagues from the Port of Onda, in the great River of 69 Magdalen, where those that come vp from Cariagena doe landsit is built in a Plaine, neere to the

temper is most hot : in their bounds is a Mountaine where they digge the Load-stone, and the

Ruse Guster are many Enthquakes, and in Winter it is more hot then cold. The Countryc Or canish. raten goe to decay; because the \* Caribes which they call tel Rincardo eate them and have publike flambles of them, without any remedie for it : and the Prefident Belaleusar built this Citie. The Citie of Almaguer is twentie leagues from Popayan to the South-east; it is plentiful of Almaguer. Wheate and Millet, and other feeds, and cattle, and it hath Gold : the Captaine Alonfo of Fuommajor, by order of the Licentiate Brizenjo Guuernour, and d Indge of Accounts, of Popazan d Hip ludge of peopled it, heing feated in a Hill of Zahana, and the climate is fresh, and the people dbe weate Restantia

S. lobe of Truxille, and by another name Ticance is there leagues from Popayan to the South. Truille. eath. The Citie of Madrigall, or Chapanchica, thirtie fine from Popayan about the South, a rough Countrey, where they neither reape Wheate, nor breed cattell, though they gather Millet twice a yestein their jurisdiction : and for the roughnesse of the Countrey, the men are built to to pacific, and in this Citie, and in the Citie of Agreda, and Almagner, are Mynes of Gold. Agreda, Agreda

CHAP.I. Vulcans described. Government of Pacamoros and Gualfango.

and by amother name Maiga, stands forcie five leagues from Popayan to the South-west. The Citie of Saint lobn of the Pasture, focalled because it is a Countrey of many Pattures, it flands Sint lobu de fiftie leagues from Popayan, about the South-well, and as many from Quito about the North-east, Posts. and in the degree from the Equinoctiall Dioceffe of Quite, in a good toyle, of a good climite, and plentifull of Millet, and other prouisions, with Mynes of Gold; In her borders are 24000, bace. Indians of fee, which are not Caniballs, but of evill vifages, filthy, and fimple : they had no Idols Religional in the time of their Paginifme, they beleeved that after death they should goe to five in more joyfull places. The Riner which they call Whoate, is betweene Pasta, and Popayan, itis of a very delicate water, and pasted this River is the Mountayne whither Gorçalo Picarro did follow 20 the Vice-roy Blasco Numez Vela, and vnto the River Angasmaye, which is in this Province came

the King Guaynacapa. Beyond the River Caliente or hor River in a Mountayne, is a firie month, that casteth store of fmoake, and it brake forth in ancient times, as the Countreymen doe fay. The Philosophers being willing to declare what these firse mouthes or Atmaes are, doe fay, that as in the Earth are What the esplaces that have vertue to attract a vaporie substance, and to convert it into water, whereof the need are, and continual forings are made t there are also places that doe attract to themselves dry and hote exhalations, which are converted into fire and imoake, and with the force of them they cast also another groffe fubitance which is diffolued into aftes, or into stones, and these are the fierie mourhes, Saint lohn de Paffe hath Monasteries of Dominicke, Prancifcan, and Mercenarit Friers: 20 it is a cold Countrey, with abundance of victuals, it hath Sugar Mills, and many Fruites of the Countray and of Caftile : when the Capteine Lawrence of Aldona built it, het called it . Villa e Griberanie

viciol's de Pafto, it francis fortie leagues from the South Sea, towards the Hand Gorgodia. There hath beene difinhabited , or diminished irrehis Province, the Citie of Antiochia, the inere man better until the state of North, tentile factor from Tenseas, and it was through the North rigon of the Indian Paces, and Paces, and for the Manhos, in the Villey of Saldanda, and the Citie of Saint Vincent of the Passes, fixtie leagues from Saint lobe of the Plaines , in the confirms Saint Vincent of Popurar, which Dominger Lozane built, and the Citie of los Angeles, twentie two leagues The Arigels. from Tacapus, and nine from Neywa. There is in the Coaff which this government extendeth River Gapes. on the South Sea, from the Capref Corrientes, that stands in fine degrees Septentrionall from the and Rojbtso

40 Line, the River of Solinas, betweene the Cape of Corremes and the Hand of the Palmes in four the Good of degrees one chird pare, and in the Coaft that lyeth vnto Girgenia, the River of Saint 76m arriong thingonecemany other which make the Countrey boggie, and right against the mouth, the Iland of Gorge ment. ma two leagues compafe, where Don Prantifens Picarro was forfaken of all his men, with his threeene companions. The River of Same Lucar, and the River of Meards, before the River of f Zedrer, in two degrees front the Line, in which flands the He del Galle, and after the Port of the f Or Cedars. Croffe, and the point of Manglares, where beginneth the Coaft of Quite.

Of the gouernment of the Onices, and Canela, there is no more notice, but that it falls to the East of the Promince of Quito, and parcof the South, toward the government of John of Salow; there are in it three Spanish Townes, with a Gouernour which the Vice-roy of Pira pro-The Citie of nideth, and in Spirituali respect it is of the Brihopricke of Quito : the Countrey is rough and 30 Mountayrous, without Wheate, and little Miller, with certayne Trees which feement Cina-

mon. The full Towne is Barga, eighteene leagues from Bahit Francis of Tairo, toward the South east, where the Gonemon Reident : the Citie of Archidona's twentie leagues beyond Bases. the Citie of Anila Stands to the North of Archidons.

The government and Province of Pacameros and Gualfange or of lobs of Salina willoft found and ilmits are one hundred leagues, which were affigued that to the Eaff. from twintie flagues of the control of the Eaff. before the Cirie of Zamora, in the Rome of the Ander, and as many more North and South. It - core m is a good Countrey in temper and disposition for Wheat', feeds, and cattle, of rich Mynes of war distributed Gold where they have pieces of great bigheffe : there are in it foure Townes of the Billiopricke and and a

60 of Quito, for the Captaine lobe of Salinas did build theirs. The Citie of Valladolld is in falen degrees height, twentie leagues from Love to the Southeast, launing full the Robs of Frish the Citie of Loyala, or Cumbrusinia is fixteene flagues to the EMF thin Fallachtal the Oftis, of Saint Lames of the Mountaynes, fittie leagues from Lorola, roward the East, and in her Borders much gold, and very high in touch, and as touching the gold we need not intreat of his excellencies,

of the Indians of the borders of Arma.

being holden for the Supreame power in the World. It is gotten in these Mynes in three manners: The first is in Pippens, which are whole pieces without mixture of any other Metall, that need not to be purified by fire, and these graines commonly are like a Pompeon Seed, and sometimes bigger : of this gold is found but litle, in respect of the rest. The second fort is in flowe, which is avaine that groweth in the flone it felfe, and thefe flones are found in the government of loke of Salinas very great, all passed through with gold, and some which are halfe Gold, the which is found in Pits and Mynes, and it is hard to worke. The third, is gotten in powder, and is the great test quantitie, and this is found in Rivers, or in places where some streame of water hath passed. ter quantitie, since these lader have many, especially in the Kingdoms of Chile, Onite, New Reduce to of Granada, and in the beginning of the Discoueries, there were many in the & Weather I. lands. The highest in touch is that of Carabaya in the Pirm, and that of Valdinia in Chile, for it reacheth to twentie three Charracts and an halfe, and yet it paffeth.

Hat which is called Prin, is proper and particularly the bounds of the Councell of los Repos.

and is comprehended North and South, from fixe vnto feuen Southerne degrees of altitude, of the Counces which are two hundred and twentie leagues, though in Voyage they put three hundred from the or Audience of point del Agnia, beyond Payta, whereby it toyneth with the Councell of Quito, till paffing the The Kings, or Citie and Port of Areguipa, where beginneth the Councell of the Charcas, East and West. The inhabited part of this Councell hath about one hundred leagues from the Coaft of the South Sea toward the East, whereby her bounds remayne open vnto the Prouinces of the River of Plate, and 26 of Brafill, that which is from the Rowe, where, as hath beene faid, it rayneth continually, vnto the Sea, they call the Plaines of Pirm, in the which is neither rayneth nor thundreth, became cause that it rayneth not in the great height of the Mountain doth shelter the Plaines in such fort, that it permitteth no wind from the Earth to blow, whereby the Sea wind reigneth, which having no contrary doth not represse the vapours that doe arise to make raine, in fore that the shelter of the Hill hindereth the thickning of the vapours : and this want of matter caufeth that in that Coaft the vapoursare for thinne, that they make no more then a moy ft or dankish mist, which is profitable for their fowh Some are of ings, which have not without the h mift fo much vertue, be they never fo much watered. The epinion that Countrey is all fandie grounds, except the Valleyes which are made by courses of the Rivers, epinon that allplants and that descend from the Mountayne, where much Corne is gathered by the waterings, Wine, 10 Oyle, Sugar, and the other Seeds, and Fruits, of Castile, and of the Countrey. In the skirts and rithed by va-pours, yearhar hils tides of the Mountayne, are great Pastures and breedings of cattell, and the temper variable. pourty jest that in and as would be defired; for the height is sold, and the low hot, and the middlemoft partakers of the bloud nouthe extreames, as they are more or leffe neers them. The government of this Councel], and or Quito, and of the Charcas, is in the charge of the Vice-roy, and there are the Townes following Gen. 2 mift in the circuit of this Councell.

The Citie of the Kings (or of Lima, because the Valley is so called, which was the name of

the Cazique, and it is the greatest and broadest Valley, of all those that are from Tumber vnto

it) flands neere the South Sea, in twelue degrees of Southerne altitude, and eightie two from the

greater circle: it hath aboue three thousand housholds: the Marques Don Franciscus Picarro

built it, in the beginning of the yeere 1533. because suspecting that the President Den Peter of

Aluarado would come downe to the Sea coast, when her wene with an Host from Gnatemale

meanewhile that Don lames of Almarado went to refult him to the Proninces of Quite, hee went

to intercept him the passages of the Sea. Neere this citie, on the East fide, passeth a River from

whence all the houses doctake water, and their gardens, wherein are excellent fruits of Caffile

and of the Countrie, and it is one of the best Climates of the World, seeing there is neither fa-

mine nor peffilence; nor doth it rayne or thunder, nor fall there any thunder-bolts or light-

Meridian of Toledo, diffant from it about one thousand eight hundred and twentie leagues by a 40

The Citie of

nings, but the Heauen is alwayes cleere and very faire. In this Citie is refulent the Vice-roy, the Royall Councell, an affembly of chiefe Inflices, the so Officers of the Kings Rents, and treaturie Royall, the Tribunall of the holy and generall Inquifition, which was founded when the Inquilition of New Spains was. The Inquition general in their Kingdomes was then the Cardinall Don lames of Elpinofa Balhop of Signers, it having proceeded with mature deliberation, for the augmenting of our holy Catholike Faith, and Chriitian Religion, There is also in this Citie an Vniuersitie, where very learnedly the Sciences are Such hollantile read, and Schooles of divers languages of the Indians, in the which the Fathers of the Companie of Islus are very diligent, to reape fruit in the preaching of the Gospell. In this Citie is the Archfizhlish in force episcopall resident, whose Suffraganes are the Bishops of Chile, Charcas, Cuzco, Quito, Panama, guing has an Microsqua, and the Ruer of Plate. There are three Parishes, and fine Monasteries of the foure Lettic toge. Orders, and of the Companie of Icsus, and two of Nunnes. Cales which is her Port, is two 60 complyment. In the Companie of Icsus, and two of Nunnes. Cales which is her Port, is two 60 complyment. Valuerfitie and House, one Church, and one Monastene of Dominice Friars: here hath beene seeene the Wine and the Water fet to coole in the Sea in flaggons, whence it is inferred that the Ocean hath the vertue to temper and refresh the ouer-much heate. Many doe affirme that in this Citie are

twelve thousand Women of all Nations, and twensie thousand blacke-Moores. The Village of Armedo in the Valley of Chancas, is ten leagues from The Kings, and halfe a Negros. I ague from the Sea, with a Monafterie of Domenicke Friars, rich of Vines : the Earle of Numa built it. The Village of the \* Parrilla, or Santa, is by the Valley where it stands, fiftie fine leagues \* Or Gridinal from The Kings, and fifteene from Truxillo neere the Sea, neere to a great and faire River, with a good Hauen, in nine degrees, where the ships that faile by the coast of Pira doe touch. The Citie of Truxillo is in the Valley of Chimo, which Don lames of Almagro plotted fult, and after- Truxillo ward the Marques Don Franciscus Pigarro built it in the yeere 1533. It hath many Vines and fruits of Castile, and Wheat : it is all watered ground, and a wholelome Countrie, and there bee To great Orchards of Oranges, and breeding of Poultrie, It stands in seven degrees and a halfe, eightie leagues from Lime neere the Sea, with Monasteries of Saint Dominiche, Saint Francis, and Saint Angustine, and another of the Mercemaries, and Officers Royall, provided by the Vice-roy: and in her bounds about fiftie thousand tributarie Indians, in two and fortie repartitions. The and an active leagues off in an open Bay, early, and of little fecuritie. The Village of Miraflores is Miraflores

in the Valley of Zana, ninetic fine leagues from the Citie of The Kings to the North fide, and neere to the Sea. The Citie of Chachaperas, or Saint leber of the Frontier, is about one hundred chacharter and twentie leagues from the Citie of The Kings to the North-east, it hath one Monasterie of the Mercenaries, and another of the Franciscans: in her bounds are Wheat, Millet, and Flaxe, many Mynes of gold, and more then twentie thouland tributarie Indians, which held out valorously 20 a long time against the Ingu, but in the end they were ouer-come, and for greater quietnesse of the Countrie they carried many of them vnto (1200, and they inhabited in a Hill which is cal-

led Carmenga. These are the whitest and best fauoured Indians of all the Indies, and the Women Faire Indians, very faire. The Marshall Alfon of Alumando, entred in this Prouince the yeere 1536. by order of the Marques Don Francisco Picarro, and pacified it, and built the faid Citie in a throng lituation called Lenanto, and afterward he paffed to the Prouince of the Guancas. The Cirie of Saint Lames of the Valleys, or Moyobamba, more then one hundred leagues from Saint Lames of

The King: North-eastward, and five and twentie from Saint Iobs of the Frontier, stands in a ve- the Valleys. ry rayme foile, and plentifull of Cattell. The Citie of Liou of the Guaraco, fiftie leagues from Lion of Guathe Citie of The Kings to the North, neere the high-way of the Ingas, formwhat diftant towards men 30 the Eath, hath Monafteries of Dominicans, Franciscans, and Mercenaries, and in her bounds thirtie

thousand tributarie Indians, Anno 1539, for the warre that the Tyrant Thotops made to this Prouince, the Marques Don Franciscus Picarro sent Captaine Gomez of Alaarado which builcit, and afterward it was difinhabited, and Peter Borrofo reedified it, and after the battell of Chapas the Licentiate Vaca de Caftro, fent Captaine Pedro de Puelles to make an end of the plantation. It flands in a good and wholesome situation, abundant of victuals and Cattell: it hath Mynes of filuer, and the people is of good capacitie. They reape much Wheat, for the Indians have learned to be good husbandmen: for as before in thele Indies there was no Wheat, nor Barley, nor Millet, nor Panick, nor any feede of the bread of Caffile of Europe, and they knew other kindes of Graine and Rootes, only of the which May 20 Millet was the principall, being found in all of Graine and Rootes, only of the which May 20 Millet was the principall, being found in all the Index; the Countrimen have fine places where it is gathered , because the Mayz is not fo frong nor of so much substance as the the Millet, Wheat: it is fatter, and hot, and engendreth bloud, it groweth in Canes, and beareth one or two

bunches, and fome Spaniards doe eate it where they have no other fhift, The Citie of Guamanga, or Saint Iuan of the Victorie, fixtie leagues from Lima to the South- Guamanga eaft, in the way of the Ingas, Bishoprick of Cuzco, hath Monasteries of Dominicans , Franciscans, and Mercenaries, and one of Nunnes, and in her bounds more then thirtie thousand tributarie Indians : it is plentifull of Wheate and Wine , and rich of filter Mynes. The Marques Don Francifem Picarro built this Citie 1539, and placed it the first time in a towne of Indians called Guamanga, necre to the great Row of the Andes, and left for his Lieftenant the Captaine Francisco de

50 Cardenses. Afterward it was removed to the Playne where now it is, neere to certaine small Hills on the South fide, and nigh to a Brooke of good water. In this Citie are the best houses in Pirs. of stone and bricke; the seate is healthfull, without offence of the Sunne, the Aire, the Deaw, or the Moilture, or the Heate. There are found in her borders certaine great buildings Great boff-(which the Indians lay certaine white men with beards, which came thither before the Inga, dings, did build) much differing from the building of the Inga : the most of the Countrimen of this Countrie are Mitmaes, which is to fay, Transplanted, for the Ingas did vie for the greater fecu- Transplanting ritie of the Empire, to take from one Prounce the people they did not truft, and fend them to as of Egyptians liue in another.

Guamanga is fixtie leagues from Cuzco, and in the way are the Hills and Playne of Chapas, Ifinities, 2 Reg. where Vaca de Cafro, and Don lames de Almagro the yonger did fight; and forward are the buil Bab. &c. 60 dings of Vilcaf, in the high way in Andahaylas, eleven leagues from Gnamanga, which was the centre of the Ingus; and here was the great Temple of the Sunne. The Prounce of the Anda Temple of the baylar is long and hath much tame Cattell, and victualls; from thence they come to the River of Sunner Abancay, nine leagues neerer Cazco, where the Prefident Don lames of Almagro the elder over-

threw and apprehended Alfonso of Aluarado, Generall of the Marques Don Francisco Picarro. There followeth the River of Aparima, eight leagues from Paffado, or the Paffage, which is very great; and then the Hill of Vilcaconga, where the faid Prefident Almagro ouer-came a great battell of the Indians, before he won Cuzco, and the Valley of Xaquixaguana is neere betweene two rowes of Hills, not broad nor long, where the President Pedro la Gasca, by the vertue of those valiant and faithfull Captaines Trojofa, Peter of Valdibia, Gabriel of Rojas, Alfonfus of Aluarado. and others (of the which in their place shall be made mention parcicularly) did ouer-throw Gongalo Pigarro, and tooke him : and from this Valley to the Citie of Cazco are fine leagues : and in this Valley they gather great store of Wheat, and have great store of Cattell.

remayneth of of the Kings.

I Ight or ten leagues from the Citie of Guamanga, fomewhat North-westward, are the Mynes ct Guancabelica, which they call El Assento de Oropesa, where ordinarily are refident more then three hundred Spaniards. The Indians did worke in them to take out the red Oaker, to paint themselves when in the time of their Paganilime they went to warre, which is the Vermillion : and the Licenciate Lope Garcia of Caftro, governing in Pirs in the yeere 1566, a Ports. gall called Henrie Garces, confidering that of the Vermillion the quick-filuer is gotten, went to make a triall, and found it to be fo. This metall the Romanes carried from Caftile in Stone, and out of it they got quick-filter, and held it for great riches. The Indians knew it not, nor minded any more then the vermilion. The greatest profit it yeeldeth, is to purifie the filter from the earth. Profit of quick Lead, and Copper, wherewith it groweth : it eateth all the other metals, and pierceth them as 30 the Tin, Iron, and Lead, and therefore they carry it in leather, or veilels of earth. Quick-filuer

Spring turning k lling.

Bashes.

Salt ipring.

In this teat of Guavia Velica is a spring , that as it springeth it congealeth in a soft stone: of into flone, and the which they make their houles , and the Men or Beafts that doe drinke it, die : for within the body it converteth into a stone. In the Bathes that are called of Inga neere the Cuzco, are Hot and cold two spouts of water the one neere the other, the first is hot, and the second cold, that it seemeth God did place them there for to temper themselves. In the same bounds is a Spring, that as it springeth it becomes good and white falt : in this place the two great Rowes doe begin to feparate themselves, and make in the middest a great Champaine ground, which is called the rowes dinided. Province of Collao, where are very many Rivers, and there is the great Lake of Titicaca, and 30 great pasture grounds. Though it be a plaine Countrie, it hath the same height and distemperature of the Hills ; it hath no Trees, nor Wood; the bread that is eaten are rootes that are called Papas, which grow also in all Pirm; it is a healthfull Countrie, and much inhabited, and multiplieth enery day; it hath flore of Cattell of all forts.

feruethalio for other effects, and medicinall matters.

The Lake of Titicaca compaffeth eightie leagues, and in some places it hath eightie fathom deepe, and in this, and in the waves are rayled when there is any winde, so that it seemeth as a Bay of the Sea, from which it stands about fixtie leagues, twelue or thirteene Rivers enterinto it, and many Brookes, and from it goeth a River into another Lake, which they call the Anlagas, which hath no voyding place, though because some Eyes of water have beene seene that winder ground goe into the Sea, it is judged that it might bee the water of 40 these Lakes did goe, opening a way through the entrailes of the Earth vnto the Sea. Round about the great Lake are many Townes, and in it great Ilands, with great Tillage in them , and there were the Indians wont to keepe their most precious things for greater

The great Citie of Cuzco, Seate Royall of the Ingas, and Head of their Empire (and now of the Kingdomes of Pirm, by a Title which it hath of it from the Kings of Caffile and Lion) ftands in thirteene degrees and a halfe height, feuentie eight of longitude, one hundred and fine and twentie leagues from the Citie of The Kings to the South-east, of more then one thoufand Spanifb housholde; the Marques Don Franciscue Picarro founded it. It hath eight Parishes, and foure Monasteries of the foure Orders, of Saint Dominicke, Saint Francis, Saint Augustine, 50 the Mercenaries, and the Companie of Ielus, and one of Nunnes. Heere is refident the Cathedrall. Suffragane to the Archbishopricke of The Kings. There goe from this Citie since the time of the Inga from the Market place foure high wayes towards the foure parts of the world; one called Chinchafayo to the North , toward the Playnes and Province of Quito : another Condefugo , to the West toward the Sea : the third called Collaosuyo , to the South and Chile: and the fourth to the East, which they call Andefuye, which goeth to the Andes and skirts of the Mountaine. It thanks in a foile of a good temper, moderately fresh and healthfull, irre Novementour from all venemous wormes, and plentifull of all things, with a thousand kindes of fruits of Castile, and imelling herbes and flowres at all times which are of great delight. In her writdiction is the Valley of Toyma: there is great trafficke of Coca, and showes of Gold, Silver, 60 and Quick-filuer; and there may bee in her borders about an hundred thousand tributarie Indians. It all the parts of these Indies the Indians have a great delight in carrying ordinarily in the mouth Rootes, Boughes, or Herbes, and that which they most vie in all Pra, is the Coca, for as they fay, they facle little hunger, and finde themfelues with great vigour

Foure high wayes most admired.

CHAP. I. Earthquaket, from Whence they proceed. Fertiliete without raine.

chewing it alwaies, though it rather feemeth a custome inherited, or a vice, This is planted, and groweth to small trees, which are cultinated and obershed, and yeeld a leafe like myrtle, and dried they carry it in baskets to fell, and much mony is gotten by it. In the Valley of Valcabamba, Stands Saint Francis of the victorie in Andefujo, between the Row Saint Francis

of the Ander, about twentie leagues from Cuzer to the East fide, with a Governour provided by the Vice-roy: it is of the Bilhapricke of Cases, in a rough ground, and of great Mountaines,

The village of Saint Island Toro, is in the Province of Carabaya eightic leagues from Caraba to Saint Islands the East South-east, and thirtie to the East from the Lake of Colles, and it is called del Oro, of the the Gold. Gold, for the great store that win her borders. The Citie of Arequipe is in fixteen degrees some- Arequipe to what more, one hundred and thirtie leagues from the Citie of The Kings , almost to the South-

eaft as the Coast runnetts, and fixtie from the Citie of Careto, of the Bilhopricke of Careto : it hath Monafteries of Danissiches, Prantificate, and Moreinaries; it hath fiftie thouland tributaries mainst, and is of most pleasant compensates to line in of all places in Pirs. They gather in her borders great flore of Wine, and Wheat The Port is at the entrie of the River Chile, which calfeth neereshe Citie where the merchandine is valaden.

Arequipe Bands in the Valley of Quiles, fourteene leegues from the Sea. In her jurifdiction is the Promuce of Condes me, the Townselof the Hubina, Gollagua, Chequiquanta, and Quimiflaca; the Marques Don Francisco Picarro built it 1934. it is very tubitet to earth-quakes as all thefe Indies, especially the Sea coasts. In the yeere 1582, there was an earth-quake that almost Earth-quaket ao minated this Citie, and fince there hath beene another, and a breaking out of a fierie month, in the limite

whereof they tell firange things, in the yeare 1 586. There was another in the Citie of the Kings very terrible the ninth of July, which ran one hundred and feuentie leagues in length by the Sea fide, and fittle and trange. within the Land; it spoyled the Cirre, indangered few people, because they went out into the fields, and a little after the earth-quake was path, the Sea went out of her bounds, and entred a great way within the Land fourteene fathom deepe. Such another earth-quake was in Quito the next yeere, in the Citie of la Paz in the yeere 1981, a great high Rocke fell which tooke vnder it a great many Indian witch trees, and the earth which fell did run one league and a halfe. In Chile was another great earth-quake that oner-threw Mountaines and Valleys, stopped the Current of the Riners, brought the Sea out of her limits the space of some leagues, cast downe whole rem or use allow many men. The Philosophern fay that the earth-quake proceedeth from the From whence 10 Towner, and illust many men. The Philosophern fay that the earth-quake proceedeth from the From whence heate of the Sunne, and of other celeficial Bodies, which not onely doe draw the exhibition to the earth-

themselves, and the vapour of the superficies of the earth, but that also which is in the bowels of quakes doe it, which comming out engendreth winker and rayner; and if it happen that the earth is fo close proceeds. that the exhalation cannot come out my way, then it moueth from one part to another through the pores of the earth, with great violence breaking forth, as the powder in a Myne', tearing with such a furious rage , that impendeth the cases where it is , and openeth it selfer way with great furie, and fo much more furious in it, how mach more the exhalation inclosed is greater. The Village of Saint Michaelide la Rebera is fixe leagues from the Sea , in the Valley of Cas Saint Michael

maya, one hundred and thirteene leagues from The Kings, two and ewentie from Arequips to the of the Riber. 40 part of the Equinochiall, of the Bishopticite of Cases. The Village of Valverde in the Valley of Valverde. Toa, fine and thirtie leagues from the Citie of The Kingis, ten from the Port of Sangallis, is of the inrillitition of The Kings, and of the Archbilhopricke; herborders are plentifull of Wheat, Millet, and Fruits, and of much Wine.

The Village of Campete, or of Guarce, by the Valley where it familes is diffant from The Kings Guard. fine and twentie leagues to the South, one league and a mafe from the Sea her bounds are plentifull of bread the best of this Kingdome, whence is carried great quantitie of meale to Terra firme. Before the comming to this Valley, are the Valleys of Chiles, and Male; in the first it neuer rayneth, neither, paffeth any Fourtaine nor Brooke through it; and they drinke of the Wells, and it is full of arable grounds, and fraits, which grow onely by electeese of the Heauen. Fertilite with 50 They catch many Pilcherds in the Sea, and with every graine of artible they not into the hole outraine.

where it is fowen one or two of the heads; and with that moy flure is groweth well. In the Pikhards, Valley of Mala , Don lames of Almagra, and Don Franciscon Picarre being in quartel, the father Bonadilla of the Merced or Merconarie Order , as an Arbitrator reiolued their differences ; through this Valley paffeth a great River, which doet them great pleafure. Fine leagues forward is the River of Guarco in a Valley most plentifull in all things, where the Countrimen maintayned the warre foure yeeres against the Ingar, and to preferue in they caused to build a Citie, and called it Cueco, and erected for the triumphos the victorie a great Forreste on a Hill, that the waves of the Sea doe beate upon the flayres, Sixe leagues from Gaard is the Valley of Chineba, famous, pleatant, and very plentifull; where a Monatteris of Dominite Frairs was 60 built in flead of the Temple of the Sunne which the Indanio had , with the Monasterie of the

Virgins. Then followeth the Valley of Tea, which is no leffe, nor leffe plentifull ; going out of the Valleys, and Rivers of the Nafea, and the principall is called Canamales, where excellent Wines are made. They goe from the le Valleys to that of Hacari, where thands Ocame; famania. Oca and Quilce, which is the Port of the Citie of Arequipe, and forward are the Valleys of Chattand

of The Kings.

dung for their grounds, wherewith of a barren, they make a plentiful ground. There are in the coast of this Councel from the Point del Agua, of the Needle, where's invrieth with that of Queto, in fixe degrees of Southerne altitude, the Handa and Ports following two Hands which they call de Labor in feuen degrees, the one foure leagues from the Couff, and the other more to the Sea; and forward another called of Saint Rente to the South eaft; niere to Parcamajo, and forward Puerto de Mai Abrigo, con leagues beforeshe Port of Tranilei, in feuen degrees and a halte, and feuen leagues from the Port of Gnampes and of Santhe in mine des grees, and five leagues from this to the South, Porte Formel; and fixe from it that of Commes and afterward eight leagues the Port of Guarmey at the mouth of a Rintr ; and the Bernisca twentis leagues to the South; and the Port of Game where is a very great Sale pit; and after this the Hand of Line, at the entrie of the Port of Coller; and swenter langues; to the South the Point of Guarco, and one Hand de Lobes Marines, or Seale Bibes merrettris, and the Point of Chica in fittene degrees, and neere to the Nafes; and forward the Point of Saint Lawrence, in the Valley of Quilca, and meere the River of Arequipa and the Crevke of Challen; and after-ward the River of Numbre de Diss, where the limits doe nowie by the Coaft of the Counfels of The Kings, and of Charcas.

Tambopalla, and the Deylo, and them of Tarapaca, Rivers and plentifulls: with good Mynes of filner, and neere the Sea : the Indians of the Hands of The Seales doc carry great flore of Fowler

Chap. 21. The bounds of the Counfell of Charcas (which parteth limits with that of The Kings, stands of the Bounds in twentie degrees and a halfe of Southerne altitude, by the Ruser of Nombre de Dies, and the beginning of the Lake of (ollas ) hath in length three hundred loagues vnto the Valley of the Plate, or of Copiago, beginning of the Province of Chile in eight and twentie degrees of height . though in voyage they are reckoned neere foure hundred leagues East and Well, that which is betweene of the South Sea vnto the North Sea, or South which answereth to the Provinces of the River of Place, which though it is not altogether discourred, it is understood that by placing all the Comtrie of this Counfell in much altitude, it is more cold then hot.

The Government of this Counfell, is at the charge of the Vice-roy of Pirs, as that of the Countell of Quao, and of The Kings: there are two Gouernours, and two Bishopricks, that of Charces and Tacumer. The Prouince of the Charces ( which commonly is named that which is to from the bounds of the Counfell of The Kings ; all show passe Perof ) bath in length North and South about one hundred and fiftie leagues, and as many East and West; a Countrie not very plentifull, though abundant of Cattell, especially in Calles, that is from the Lake of Taicons ynto Charcas, where the Winter and Summer are constant to Europe: it is a plentiful Countrie of all Cattell, especially of theepe, which are many, and of a very fine woolk

In this Prouince are foure Townes of Specialist of one Bishopricke, which are the Cirie of the Plate, which the Captaine Peraneures inhabited, in the yeemog \$3. by order of the Marques Des Franciscus Picarro. It stands in seventie two degrees of longitude from the Meridian of Tolelo, from whence it may be diffant by a greater circle one choufandifenen hundred and eightie leagues, and in mineteene degrees of latitude, one hundred feventie find leagues from Cazes to the South, or 40 Antartick Pole within the Tropicks, in the ettermost of the Torrid Zone. There are in the ber ders of this Citie in Change (which are manured grounds) eight hundred Spanish housholds. It is a Countrie extreme cold, whereas it should be temperate or bot, according to the height of the Pole it flands in : the Counfell and the Cathedrall is refident in this Citie; and there are Monafteries of Dominicky, Franciscan, Angufines, and Mercenarie Friers, and in her inrifdiction fixtie thousand tributarie Indians, divided in nine and twentie repartitions, and the feedes of Caftile doe grow well, and there are many rich mynes of fauen. The Citie of our Lady of the Peace, by another name the New Towns, and Chuquiabe, in the

Our Lady of

middeft of the Collas, one hundred leagues from Cares, and eightig from the Plass, hath Monafluries of Franciscame, Augustines, and Adercenaries, with flore of Wines and Cattell. Captaint 40 Alfonfau of, Mendeça built it 1949, when was Prefident the Governour of Pira, the Licenciate Pedro de la Gafea, atterward Bilhop of Signança. The Promince of Chicaite in Collas, formewhat North-east from the Pronince of Plata, more then an hundred leagues from it, inhabited by Indians, with a Spanish Gonernour, of the Bithopricke of Charcas, and one Monalterie of Dominicks.

Chicuita Orașefa,

> Place: their husbandrie is crops of Wheat, Millet, and Cattell. The Imperial Towns of Patofi is in mineteene degrees of altitude, eighteene leagues from the Citie of the Plate, and about eight from the Lake of the Anlager to the East, in the skirt of the Hill of Posafi, that looketh to che North-east ; it hath five hundred housholds of Spaniards 60

hath raugh Carrell, and it flands at the builder of Thioses. Oropefas, is a plantation of the Vice-roy, Dan Francisco de Toleda, in the Valley of Cachabamba, twentie leagues from the Citie of le

which doesetend the mystes, and of Merchants, and about 10000, ladiant of ordinarie goess and comment to the trafficke of the filter. And though it be a Towne of it felfe, it hath no Ruler, but State of the citie de la Place. There refide the Officers, and Royall treasurie of this Protince, for the mynes of the Hill of Patel, which a Castillan discounted 3 445 called Fillared, by meaning of cer-

taine Indians; and it is called Posofi, because the Indians doe to call Hills and high places; and the filter was fo much that they got at the beginning in the yeere 1549, every Saturday, that when they cast it, there came to the Kings fifts from fine and twentie to thirtie thouland Pefos. The Hill is flat and bare, their habitation drie and cold , vnpleafant , and altogether barren. It bringeth forth no fruit, graine or herbe, and because of the filter it is the greatest inhabiting of the Indies, which hath about two leagues in circuit, and where all kinde of dainties are found. and plentie, though brought thither by carriages. The colour of the ground of the Hill draweth towards red, darke. The forme is like a Sugar loafe, that ouer-peareth all the other Hills that are neere it: the going vp is rough, and yet they goe vp on horie-backe; it extended to a league, and from his top to the foote is about a quarter of a league. It hath on all sides rich veines of fibury from the top to the foote, and the Port of Arica whereby the merchan. dries

dize come, and the filter of this Hill is carried, is from it about ninetic leagues, almost West. Sixe leagues from the aforefaid Hill in the way of the Port of Arica, is the Hill of Porce, an Porce ancient feate of Mynes of filuer: whence it is affirmed the Ingas got the greatest part of the filuer that was in the Temple of the Sunne of Curionebe, whence yet is and will much filter be gotten.

Sauta Craz de la Sierra ftands one hundred leagues from the Charcas to the Eaft, in the way The holycroffe whereby they goe from the Charcas to the Affumption; in the Prouinces of the River of Plate, of the Hill. whicherto they make three hundred leagues sourney, with a Gouernour prouided by the Viceroy , of the Dioceffe of the Charens , and one Monafterie of Mercenaries , in a Countrie fcarce

of water, though plentifull of Wheat, Wine, and Millet. This Province hath neighbourhood with many Nations of Infidell Indiant, and many of them are alreadie baptized, and the first that Brooke a denotion in the Countrimen , was a Spanish Souldier, "that was among them, " This Apostle fied for faults; which for a great anguish they were in for water made them a great Croffe, after his miraand perswaded them to worship with great denotion that same Crosse, and to aske water; cles, many was and God for his mercy heard them, and fent them much raine in the yeere 1960. The Cap- for wickedner taine Nuflo of Chaues went out of the Citie of the Afention in the River of Plate, to difco uni Set Active mer, and comming to Santis Cross of the Hill, having made great discourries, the people came east, which him, and feeming to him that hee was never to Pirm, went to the Cirie of The Kings; where the Marques of Campete was Vice-roy, and with his order, and for Lieftenant of his 30 fonne Don Garcia of Mendoga, the Captaine Nufle of Chanes went againe to inhabit this Citie.

though he came out of the River of Plate, with purpose to discover the Provinces of the Dorade In the Coast of this Councell, which beginneth in seventeene degrees and a halfe in the Ri. Ports & Points uer of Nombre de Dies , or Tambopalle ; is the Port of Hilo neere to a River, in eighteene de. ofthis Coungrees and a halfe, and more to the South, El Morro de les Diables, and the Port of Arica in nineteene degrees one third part, and that of Tacame in one and twentie, and the Point of Tarepers to the South, and more forward the River of Pies, and that de la Hois, or of the Leafe, and of Montele, the Port of Medilinar; and more to the South the Point of the Beacones, or La Farallenes, Morte Morene, before the Bay Mid River of Sanda Clara, and more to the South the Breach, and the White point , and the Doepe breach , and the River of Santa Clara ; about thirtie Panta Blenca. 40 leagues from the River of Copiago, where the Coaft of Chile beginneth, and the Coaft of the Quebrada House Charess endeth. The Province and Government of Tuchanan, is all Mediterrane; her bound Province of

begins from the Countrie of the Chichas, which are of she surifdiction of the Imperial Village of Tacamer. Potof: it flands in the same Line of the Citie of the Affamption of the River of Plate, about an hundred leagues from the South Sea couft; it doth confine with the Province of Chile; it is a Countrie of a good temper, reasonably plentifull, and wntill now without Mynes of filter. or gold. There is in it some Spanis Townes in one Bishopricke, which are of the Citie of Saint Lago del Estero, which at the beginning they named del Varco, or of the Boate, in eight and Saint Lames of twentie degrees of altitude, one hundred eightie fine leagues from Potofi to the South, declining the Marth. formewhat to the East: the Gouernour and the Officers of the goods, and treature Royall, and the Bishop, and the Cathedrali are resident here.

The Citie of Saint Merie of Talaura, is fine and fortie leagues from Saint James to the North, Saint Michael. and fortie from Potof in fixe and twentie degrees. The Citie of Saint Michael of Tucuman New Landon eight and twentie leagues from Saint lames to the Welt, in the way of the Charcas in feuen and h Hiff. Nueva twentie degrees. There were inhabited in this Gouernment in the time of Don Garcia of Mens Cudana. doga, his father the Marques of Campete being Vice-roy, the New London, and Calebaque, Thifle that which they called a New wifedome, in the Province of the lawiss, and Draguita, which after growth energy ward were dishabited within a few yeeres. The people of this Countrie goeth clothed in wool- dempie four len, and in wrought leather, made by arte like the guilt or wrought leather of Spaine: they breed inches fluitre; much Cartell of the Countrie, by reason of the profit of their wooll they have the Towner ve and we high at a mon holds.

60 ry neere the one to the other, and the Towners are small, because there is but one kindred in eue-back, and the Towners are small, because there is but one kindred in eue-back, and the towners are small, because there is but one kindred in eue-back, and the towners are small the towners are small the towners are small the towners.

ry one, they are compassed round about with I Cardones, and thornic trees for the warres that keth much they had among themselves. They are great husbandmen, and it is a people that is not drunke, ground, has for they are not given to drinke, as other Nations of the Indies. There are in the Province feven there grow mayne Rivers, and more then eightie Brookes of good waters, and great pastures ! the Winter many our of

Chap. 22. Don Diego de Almagro was prouided the yeere 1 5 34. in Toledo for Gouernour of two hun-Of the bounds Don Francisco Picarro, toof the King-ward the Streight of Magellan, intituling this part, The new government of Toledo. Hee went to pacifie this Countrie, and because he fortooke it, it was given in charge to the Marques Dow Franerfeo Picarro 1537, and he commended it 1540, to the Captaine Peter of Valdinia; who were thither with one hundred and fiftie Spaniards. All the Countries of this Kingdome lye to the to South of the Equinoctiall, in a more Southerne altitude then the Kingdome of Pirm, and her Prouinces within the Torride, from the Equinoctiall vinto the Tropicke of Capricone, which peffech a Defare, which they call of Atacama, which is from twentie three to twentie fixe degrees, and then beginneth the Kingdome of Chile, which the Indians call Chille, and before the inhabited Countrie is the River of The Salt, in three and twentie degrees and three quarters, which from the East fide of the Row of Mountaines, runneth to the West into the Sea, through a very deepe Valley, and though it hath the water very cleere; all that the Horses are wet with it when they drinke, is congealed with the heate of the Sunne; and it is so meere falt that it cannot bee drunke, and in the borders it is congealed : the River is before the entring in the first Province of Chile two and twentie leagues where the Xagueyes are, which are Wells of water, for there is 20 no other in the two and twentie leagues, and all the Kingdome stands within the Zone, which the ancient men called Deferte, which is inhabited with white Indians, and it is situated on the borders of the South Sea, which is Mare Magnum, which is included betweene her Coaft and

de Heredia; they discouered on this fide the River of Plate vnto the Fortreffe of Gabas.

This Government taken largely unto the Streight, bath in length North and South, from the Valley of Copuspo where it beginnethan feuen and twentie degrees, fine hundred leagues, and in breadth East and West, from the South Sea to the North Sea, from foure hundred to fine hundred of ground to be pacified, which does ftraighten it felfe, till it remayneth by the Streight in ninetie or in an hundred leagues. That which is inhabited of this Gouernment, may bee three hundred along the North Sea coaft, and the breadth of it twentie leagues and leffe, vnto the Rose 30 of the Andes, which doe end neere the Streight, and it passeth through this Kingdome very high, and almost couered at all times with snow. All the Countrie is plaine, at the least there is mo great roughnesse, except where the Rome of Pira doth reach, and doth end within two or three leagues of the Coast.

The temper and qualitie of it (though it bee not without some difference for the varieties of the heights it standeth in altogether) is of the best, and most inhabitable that is in the ladies, in temperature like vnto Castile, in whose opposite altitude in thirth almost all, and in abundance and goodnesse of victuals, and plentie of all things, riches of Mynes and Metals, and force and vi gour of the Countrimen, which for being to great warriors have alwayes beene enill to pacific, and there bee many out in the Mountaines, and Breaches of the end of the Rowe, the Prouinces of 40 Arauco, Tucapel, and the Valley of Paren, the bounds and borders betweene the Citic of the Conception, and los Confines, and la Imperial.

In this Government are eleven Spanis Townes, with a Governour placed in the matters of the Government to the Vice-roy, and Councell of Pira, after the Councell that was in the Countrie was taken away; and theroisin it two Bishopricks Suffraganes to the Archbishoprick of the Kings. In the Bishopricke of Saint James are foure Towness. The Citie of Saint James in the time of the first inhabiting of Chile, founded by Captaine Peter of Valdinia, it stands in thirtie foure degrees and a quarter of alcitude, feuentie feuen of longitude, one thousand nine hundred and eightie leagues from Toledo by a direct Line, fifteene from the Sea, and ten beyond the Valley of Chile, which they named at the first New Extreame. In it is the Cathedrall resident 50 with Monasteries of Dominicke, Franciscan, and Mercenarie Friars, in a plentiful foile of wheat, Wine, and other things, and of very rich Mynes of gold, and in her inridiction more then eightie thousand Indians in fixe and twentie repartitions. This Citie is ferued of the Port of Valarayle at the mouth of the River Topocalma, which paffeth neere vnto it.

Captaine Valdinia peopled also la Serena in the yeare 2544. neere to a good Hanen; it is the first Towne of Spaniards, at the entire of Chile lixtie leagues from the Citie of Saint Lames, somewhat North-weit neere to the Sea in the Valley of Coquimbo, with Monasteries of Franciscan . and Mercenarie Friars. It raymeth in it but three or foure times a yeere, and in the Countries before it were rayneth. The Port which they call of Coquimbed, flands in two and thirtie degrees, it is a good Nooke where the fluips of Pirm doe make a stay. In the Prouince of Chucuto, 60 which is on the other fide of the Rome of the Andre, in a cold and barren Countrie, doe fland the Cress of Mendoga, and of Saint lobusofthe Frontier; for Don Garcia of Mendoga peopled them both. The Citie of Menders is of the fame height with Saint Lamer, about tortie leagues from it of a difficult way, for the inow that is in the Andre. The Citie of Saint lobe of the Frontier fands to the South of the Citie of Mendesa

In the Bishopricke of the Imperial are leven Spanife Townes, which are the Citie of the and the Summer are at such times as in Spaine; it is a healthfull Countrie and of a good temper. Conception in feuen and thirtie degrees of height, feuentie leagues to the South of the Citie of and the first that entred in it, were the Captaines Diego de Rojus , Philip Gutierres , and Nicolas Saint lames, neere to the Sea, Peter Valdinia inhabited it in the yeere 1550. The Gouernours arrecident in it; fingeshe Commit (this was these from the yerrs 1977, 1910 1132, two taken away. There are Manulesses of Demission, Interface, and Messonse Ricog. The Port of this Citie fands in a mooke as the finger of art land. 'Age Cities' fine new willage of As Forton the Charles of the Company Don Varies of Mendage peopled in and the Cournous Calagore Norvillagued commanded it to be faciled as for Confined. It hand there are legales from the Configure content of the Configure to the the Manual Course of the Configure to the the Manual Course of the Configure to the Configure to the Course of 10 along the Coatt. It hath one Mounterie of Dominicous, another of Principan Prince. The war-like Indian come to the bounds of this Citie, and the mayne River Bishio by those, and others which doe enter into it, and the River Ninequinten.

Peer of Paldinia pecifical site Critico of the Imperial 3507, which is in nine and thirtie de. The Imperial 1507 which is in nine and thirtie de. The Imperial 1507 which is in nine and thirtie degree from the Consequence toward the Strieghts fider direct leagues from the Sea, where the Cathedrallia servicion with one Mondattie of Pressicion, and the of Mercennia Prints 13 ml in her bounds are more then eightie thousand Industry, with many other that in her bounds are in armes. The River Cauten paffeth neere it , which is nauigable to the Sea, though the Hauen bee not good not fecure. Expraine Paldrye geopled allo the \* Rich Village, fixteene leagues from Imperiall, about the South-eastwarth, and \* Big villa 20 about foure and force from the Conception, neere to the Snowy Rom 4, with one Monafte- res. rie of Franciscaus, another of Mercenaries, in a Countrey cold and barren of Bread and d Cordifera

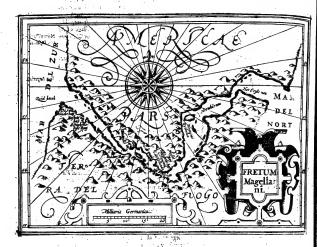

The Citie of Uddans a two leagues off the Sea, and fiftie from the Concepton to the Valdinia, Streight ward : peopled alto by Captaine Ualdinia, with Monafteries of Dominicans, Franeifcans, and Mercenaries, in's plentifull Countrie of Wheat, and Seedes, and in places of good pastures for Cattell, and without Vines. The merchandize comes vp by the River of Valdais, which passeth mere it, and the Fort stands in the mouth of it in fortic degrees of Official hight. The Citie of Office; Don Garia of Mendiga peopled, first league or more from the Goodpreas to the port of the Streight, seem leagues from the Sci. It hath one Monasteric 30 of Dominicans, another of Franciscans, with another of Nunnes, in a cold Countrie, scarce of victuals, but of much gold, and in her bounds two hundred thouland Indians of repartition. The Citie of Castro, which was inhabited by the Licenciate Lope Garcia de Castro, being Go- Castro uernour of the Kingdomes of Pirm, the which is called in the Indian tongue Chilae, which is the last of the inhabited in Chile, in an Hand of those that are in the Lake of Ancud, or Chiles, and the Archipelagus stands in three and fortie degrees of altitude, one and fortie leagues to the South of Oferno, with a Monasterie of Franciscans, with twelve thousand Indians of repartition in her bounds, for it is an Iland of fiftie leagues in length, and from two vntill nine in breadth, which the Sea made with other great ones, tearing the Land vnto the Row of the Andes. It is a mountaynous Countrey, and close, plentifull of Wheate, and 40 of Millet, and Mynes of flying & Gold, on the Strand a thing fewe times, or fel- g Ore bulador.

The Governour Villagram tooke away the name of the Citic which was Canyete, that Don Pormand Ri-Garcia of Mendoca inhabited, and commanded to call it Tucapel, and afterward difinhabited versof this goit. There are in this Government which beginneth in two and twentie degrees, the Port and vernates. River of Copeapo, and to the South of it, the Port of Guafsoin another River, and the River of Coquimbe in two and thirtie degrees ; and past this the Port of the Cigus in the River, and the Port of Quinters at the mouth of the River of Concagua, before the Port of Saint lames, or Valparay [o, and the Port of Topocalma in the River of Maypa: and past the River of Maule the Port of the . Herradura, at the mouth of the River liata, before the Port of the Conception e Or Horis 50 in the great River of Biobio to the North , the Hand of Saint Marie right against the State of shoot. Arance, and the Port of Campete, and the Hand of Mecha more to the South, and the Port of Causen, which is that of the Imperial, and to the South the landing place and the River of Tolten before the Port of Valdinia, and past this the Point of the Galley, and more to the South the great Bay or Port of Oforno in the River de las Canoas , and to the South of it about thirtie leagues to the Lake de les Coronades the broadest River of this Realme, and at the end of this

Realme the Lake of Ancud.

En doe call the Streight of Magellanes, that which is past the River of Place by the South Chap. 24. MEn doe can the Streight of Programmers, that we hundred leagues before it, from two Of the Programmers of t and fortie or three and fortie degrees of altitude, vato two and fiftie and more, for although ces of the 60 men haue fayled through both the Seas divers times, and feene people in them vnto the Streight Streight. it felfe, it hath not beene pacified, nor made inhabiting, but that which the fleete that Diego Flores de Valdes carried to the Streight left in the mouth of the Streight on the North fide, in the yeere 1582, which was called the Citie of Saint Philip, which for being in fo much altitude could

HONDIVS bis Map of the MAGELLAN Streight.

not be preferred for the great cold, and therefore that natigation is difficult and dangerous for the continual tempelis, and great stormes of windes that are at all times.

The Ports, Capes, and Points of the Coast of the one and the other Sea vnto the Streight, although they be many, and some are not pointed in the Cardes of Nauigation, it appeareth not wholly, neither is there any certaine relation of all. And the most knowne of the Coast from Chile vnto the Streight, which runneth from Valdonia about an hundred leagues to the West South-west are, the Cape of Saint Andrew in seuen and fortie degrees, from whence the Coast turneth directly to the South vnto the Streight, by the Cape of Saint Roman in eight and fortie degrees, and neere vnto it the Iland of Saint Catalina, neere to the great Bay which they call B Harrichoked, and within it the Bay of our Lady, and the Hand of Santa Barbara, and more forward the Ports of Hernan Gallego in eight and fortie degrees two third parts, and the Bay of The Kings eighteene leagues from the Port of Hernan Gallego, and the Bay of Saint lobs in hitie do fi grees one third part, the Cape of Saint Francisco in one and fiftie, whereby some Channels doe enter into the Land, and the Iland de la Campana, or of the Bell, eleven leagues from Saint Franes: also with some Channels which have not beene navigated within the Land, and the Bay of Saint Lazarse in two and fiftie degrees, with Channels on the fides, which enter very broad and long to the one and the other parts, which have not beene navigated, and a great Sea of le lands which alwayes was faid to bee at the South fide neere to the mouth of the Streight, the which Sir Richard Hawkins denyeth; for hee faith, That at this mouth of the Streight on the South fide, he found no more then foure imall Ilands, and one in the middeft like a Sugar loofe, and that at the least they are distant from the mouth of the Streight fixe leagues, and the great Sea is on the one fide, and he holdeth for certaine it is that which they fay is the firme Land of & the South fide of the Streight, and that there is no firme land. The Streight though they have past it from the South to the North fide, by order of the Vice-roy Don Prancifcus of Toledo, Per ter Sarmiemo , and Antonie Pablo Corfo , and it is knowne it stands from 52. to 53. degrees of altitude, where it draweth most to the South, and that in length it hath one hundred and ten

CHAP. I. Herreras description of the Magillane Straits, and the River of Plate. 901

.eagues, or one hundred and fifteene, little more or leffe, and in breadth from one to tenne: it hath never beene nauigated to an end from the South Sea to the North Sea, nor the Pyrats that This is not have past it from the North to the South, are vaderstood to have returned by it. The above faid true: for Caphave past it from the worth to the South, are videntitied to the Straight, and affirmeth that all the caine Water & Sir Richard Hawkins faith, that he failed many dayes by the Straight, and affirmeth that all the others have Countrie on the South fide is no firme Land, but many Hands which reach to 56 degrees; the done it which which he might know, because he sayled to the same 36. degrees through the middest of those howoeuer he Ilands, and feeing he found nothing but Sea, hee followed his course againe through by the cals Prints, yet Straight, and that this cannot be fo tarre, the differences of Seas, which the many entrings doe they have ber-Straight, and that the habiting of them is of people on the North fide, ter descoured these straights which doe passe to those llands to sustaine themselves of fishings, and in their seasons returne to then the Straights their Countries; and that he comprehended this of many things especially of not having seene ad. any feated inhabitating, but some Cabbins which the Indians doe make for a time. The same said Sir Prancis Drate, that it hapned him when he passed the Straight, the yeare 1 579. who after his comming out into the South Sea, he ran along with temperts compating this Sea, vnto the mouth of the North Sea, and by the fame way he had runne, he made fure his nauigation to the

The parts most famous of the Straight at the entring of the South are the Cape Desseado, or Defired, in 53. degrees, and the Channell of all Saints, two and twentie leagues from the mouth. very broad, and large, and pattit the port of the Treasim, and afterward another great large Channell which runneth to the North-west, and Rowlands Bell, a great Rocke in the middest at the beginning of a Channell. They gaue it this name of one of Magellanes fellowes called Rowland. who went to reacknowledge it, which was a Gumner: the point of possession which is foure leagues from the Cape of Virgenes, at the entring of the North Sea in 52. degrees and a halfe of leagues from the Cape of 1 1500 and Antonie Pable Corfe by order which they had to reknow- "Or VineTwigi ledge the Straight, for it had beene commanded long before for to fee if it were amore eafie nauigation to the South Sea, then that of Panama . they viewed the two narrow places, that at the entrie of the North, and it feemed to Peter Sarmiente that the one was fo narrow , that with Artillerie it might be kept, and so much he persweded it, that although the Duke of Alna Ocordinanes. affirmed it was impossible, the Armie which James Flower carried vastruitfully was lent about it. and in the end was knownethat that naugation is dangerous, and the flowing of two Seas which come to meete in the middeft of the Straight, doe withdraw themselves with such furie, ebbing in some places more then fixtie fathoms, that when the Shippes did carry nothing but Cables to preserve themselves from looking that which they had sayled, they would goe full

In foure hundred leagues, there is of Coast from the mouth of the Straight, vnto the River of Plate, which runneth altogether North-east and South-west, there is the River of Saint Ilefon su ruse, which manuscript the Virgense, the a Galletian Ruor, and the Bay of Saint Lones, \*nifp. in Galletine Ruor is a compared to the Ruor of Santia Craz, in 20. degrees, and at the mouth an Iland called go. of the Lyons, and the Port of Saint Intimin 49:degrees, and the River of Iohn Serrana to the South 40 of the Hands of Ducker, in 47, degrees, the River of Cananor in 45, degrees, the Cape of Saint Dominicke, before the Cape of three Points, and the Land de les Humes or of the Smoakes, in 38.degrees, the Point of Santa Hellem, and of Saint Apallonia, in 37.degrees before the White

Cape, at the entrie of the River of Plate on the South fide.

Ohn Dias de Solie discouered the River of Plate 1515, and Sebastian Gaboe an English-man, going ces of the Riwith an Armie by order of the Emperour, in purluit of the Fleete which Frier Garcia de Lo-uer of Plate & ay a Commander, had carried to the Hands of the Malness, and conceiuing hee could not ouer of Brafile. take them, he thought good to buse himselfe in something that might be profitable; and entred Schaffing Gabethe yeare 29. discovering the River of Plate, where he was almost three yeares; and being not the River of 50 feconded, with relation of that which he had found, returned to Castile, having gone many Solis, which is leagues vp the River, he found Plate or Silveramong the Indians of those Countries, for in the called of the warres which these Indians had with those of the Kingdomes of Pirm they tooke it, and from Plate He was warres which these Indians had with those of the Kingdomes of Time they occur to the Provinces by breeding.

These Provinces by breeding. nence it is called the King.

see joyned with those of Brafil: by the line of the markes they have no determined bounds, but bornes Tener by the Coast of the Sea that falleth to the North, and entrance of the River of Plate, of the which tien, but spenthe Countrie hath taken the name, and the mouth of this River may Rand fixteene hundred dingmost part leagues from the Bay of Saint Lucar of Barrameda.

igues from the Bay of Saint Lucar of Darrameda.

All these Prounces are very plentifull of Wheate, Wine, and Sugar, and all other seedes and English imploy fruites of Castile doe grow well : they have great Pastures for all forts of Cartle, which have ments. 60 multiplied infinitely, especially the Horses, and though they have beene many yeares without See the former thinking there were any Minesof Gold, or of Silver, they have already found a showe of them, Booke. and of Copper, and Iron, and one of very perfect Amathifts, All these Provinces are of one Gouernment, with title Royall, subordained for nearenesse to the Vice-roy of Pira, with one Bi-Shopricke wherein are three Spanish Townes, and a great multitude of the Countrie men, of big net of Plate.

bodies, and well conditioned. And the Townes are; the Citie of our Lady of the Affumption, the The Affamp: first inhabiting, and the head of this Prounce, it stands in 25 degrees and a halfe of altitude the Captaine lohn of Salazar built it by order of the Gouernour Don Peter Anndoga, The territory thereof was first called Gurambare : it hath Brafil at the right hand two hundred and eightie leagues, and in this compasse it hath the Citie Royall at eightie leagues, which the Indians call Guayra. And on the fide of Pirm, which is East and Well, it hath at foure hundred and eightie Him leagues, the Citie of la Plata, and at two hundred and eightie, the Citie of Santa Cruzde la Sierra or of the Hell, which Nufle of Chanes built. To the South fide which is toward the Straight of Magelane, it hath very great and rich Countries, and this Citie flands three hundred leagues from the mouth of the River of Plate, built neere to the River Paraguage, on the East like 1 with foure hundred Spanife Housholds, and more then three thousand children of those than were bonne to them in the Countrie (which they call Method) in it are refident the Governour, and Officers Royall, and the Cathedrall which is called the Bifbopricke of the Plate, luffre. gan to the Archbishoprick of the Kings, and in her jurisdiction more then 400000. Indians, which

Cirdad real.

Citte Royall was called by another name Omineros, built by Ruidias de Melgareio; it stands eightie leagues from the Affamption North-east, toward the Land of Brafil, neere to the River Parana; it stands in a good soyle of Victuals, and Vines, and much good Copper, and great number of Indians , which also doe much increase. In this River Parana , neere the Citie Fallor Cata- Royall, there is a great fall, that no man dare come neere it by Land within two hundred ract very terri- paces, for the great noyle, and mift of the water, and by the River no Canoe, nor Boatedare come neere by a league; for the furie of the water doth carry it to the fall, which is about two hundred fadomes off a fteep Rock, and it is to narrow, and the water goeth to close, that it feemes

ye may throw ouer it with a dart.

\* Buenos agres is a Towne which in old time was difinhabited neere the place where now it is built againe, in the Province of the Morocotes, in the borders of the River of Plate, in a plentifull foyle, where all things of Castile doe grow very well; the Gouernor Don Peter of Mendaça buile it 15 35, which caufed all that which Gabote forfooke to be discouered. All this Countrie is commonly plaine: for except the Cordilleras or Romes (which are on the Sea coast, and may be twentie leagues toward Brafil, afterwards compassing all the Countrie toward the River Marange and 30 the Rowes of the Kingdomes of Pres, all is plaine, except some small hils.

There are knowne in the Coast of these Provinces from the Land of Brafil, vnto the River of Plate five or fix reasonable Ports; the Port of Saint Vincent, in 33.degrees height, right against Buenabrigo, an Iland where the line of the repartition paffeth; and fix leagues to the South the Riuer Vbay, and the Port, and the Hand de la Cananes in 35. degrees; and forward the River de la Barca, before the Port of Babia or River of Saint Francis, and the Hand of Santta Catalina by another name the Port of Yers, or Port of the Duckes (de Peres) and the Port of Don Rederigo, twen-Hill-Premiers tie leagues to the South from South Caralina, an Hand 29 degrees and more to the South fine rate hispatian, leagues of lofe Hauen, and fifteene the b Inhabited River, and as much the Deepe-Boy from this, and the River Traqueri, in 32 degrees and a halfe, before the Cape of Saint Marie, which is in 35. 40 degrees at the entrie of the River of Plate.

This River is called in the Indian language Paranaguage, and commonly Parana, hath his entrie and mouth in the South Sea, from thirtie fine voto thirtie fix degrees of altitude, between the Capes of Saint Marie, and Cape Blanke, which is from the one to the other about thirtie leagues of mouth, and from thence inward other tenne leagues in breadth, with many Ilands in the middeft, and many very great maine Riuers, which enter into it by the East and West side, vnto the Port of the Kings, which is a great Lake called of the Xarages, little leffe then three hundred leagues from the River of Plate, where enter many Rivers that come from the skirts of the Andes and they may be of those Rivers that proceede in the Provinces of the Charens and Cuzes, which runne toward the North, whereby entreth another maine arme into the faid Lake, which hath guen occasion to thinke that this River doth communicate with the River of Saint 166s of the Amazones; others fay that it commeth from the Lake of the Dorado, which is fifteene iournies from the Lake of the Xarayes, though there be opinions that there is no Darado.

The chance of the Captaine the yeare 1545. a Spaniard being in his bed and his wife by him on the out fide, in the night

there came a Tigre and gaue the man a blow that he killed him, and carried him away, and betweene certaine Caues he did denoure him: in the morning the Captaine Salazar went forth with fiftie Souldiours to feeke the Tigre, and going through a wood, hee went alone by a path, and as foone as hee discoursed the Tigre, hee being slefth fee vpon him, and at the time hee lifted up the pawe for to ftrike him, the Captaine let flee the Shaft out of his Croffebowe, and itrooke him to the heart, and it fell downe dead: an exploit of great courage, 60 heede and dexteritie.

The Captaine Salatar governing in these Provinces by the death of Don Peter Mendoga,in

He Provinces and Countrie of Brasil in the Coast of the North Sea, and Terra firme, is called

Chap.25.

All that which falleth to the East from the line of the repartition, from twentie nine degrees of longitude from the Meridian of Toledo, vnto thirtie nine, which are two hundred ces and Counleagues from East to West, and soure hundred and liftie North and South, from two degrees of trie of Brasil. Southerne altitude, by the Cape de Humos or of Smeakes, wnto hue and twenty, by the lland of Ruenabrigo or Good barbour. And from the first inhabiting, vnto the last of Brafil, there are Pinzon borne three hundred and fiftie leagues. Vincent Tanes Pinzon discouered first this Countrie by comman- in the Village dement of the Kings Catholike, and presently after him lames of Lepe, in the yeare 1500, and of Palos difco-10 fix moneths after Poraluarez Cabral, going with a Portugall armie to India, which to avoide veredithe Brafil the Coast of Guinea did put so much to the Sea that he found this Countrie, and called it Santia de Lepe. Cres, becaute on that day he discouered it. All of it is very hot in Winter and Summer, and very rainie, and compafied with Woods and Milts, whicalthfull, and full of venemous Wormes, plentifull in Pastures for Cattle, and not for Wheate, nor Millet; there are in it great thowes of Silver and Gold, but as the Portugals, have no stocke to make any profit of the Mines, they leave

The principall foode of this Countrie is the Cazabi which they make of the Tuca, and the greatest trafficke is Sugar, and Cotten Bumbast, and Brasil Wood, which was at that gaue it the name. There are in all the Prouince nine Gouernments, which are called Captainthips, and 23 in them seuenteene Portugal Townes: init may be about three and thirtie hundred housholds. and great multitude of warlike Indians, which have not fuffered the Portugals to build but on the Coaft, in which are many Rivers, Landings, and many Ports, and very fate, where any Ships may

come in, be they never to bigge. The Colonie of the first Captainship, and the most auncient is Tamaraca, the second Pernam- Inhabitings of buco, fine leagues from Tamaraca to the South, in eight degrees of altitude, and there is a house the Coastol of the Fathers of the Companie of Lefis : the other is, that of all Saints, one hundred leagues Braft, from Pernambuce in thirteene degrees, and there the Gourmour, the Bilhop, and the Auditour generall of all the Coasts are resident, and it bath a Colledge of the Company: the fourth Captain- Many Iestates thip of the Hands is thirtie leagues from the Bry of All Saints, in foureteen degrees & two shird Colledges.

30 parts, it hath a House of the Fathers of the Companie. In this Captainship is tound a Tree where out they take a precious Balme. The Captainship of the Sure-banen is thirtie leagues from the I. Punte fegino. lands in fixteene degrees and a halfe: it hath three Inhabitings, and a House of the Fathers of the Companie. The Captaineship of the Holy-Ghoft fiftie leagues from Puerto feguro , in twentie degrees, where they gasher much Brafil, and there is one house of the Company. The Captainthip of the River of Genero is fixtic leagues from the Haly-Ghoft, in twentie three degrees and one third part, with a house of the Fathers of the Company, and they cut in their intifdiction much Brafil Wood; the River is very faire, with fine and profitable borders. The last Captaineship is Saint Vincent, fixtie leagues from the River of Genero, in foure and twerme degrees, it hath a fortreffe in an Hand for a defence against the Indians and Pirates, and a house of the faid Fathers,

40 which have done great profit in the inhabiting of this Countrie, and convertion of the Indians, and their libertie. The Cattle that are in the le Promite safe many and great breeding of Swine. and Hens, they gather much Amber which the Sea cafted up with Hormes at the foring tides, Ambarand many persons have inriched themselves with it, Then Summer is from September to February, and the Winter from March vnto August; the doges are almost as long as the nights, they increase and diminish onely an houre, in the winter the winders alwaies at South and Southeaff,in Summer North-east and East North-east.

There are in this Coast eight or tenne Pores more principali then the rest, which are the River The principalof Saint Dominicke and de las Unrudes to the North-east of Pernambuce, and Tamaraca, which this Cooft. is an Iland, and as it is faid, the first Plantation, and before the Cape of Saint Aufline, which stands in nine degrees, the River of Saint Francis in ten degrees and a halfe, which is great and 50 mightie : the Bay of All Saints three leagues broad, and thirteene into the Land vato Sarit' Saminer, the River and Port Trenado, where the Ships doe couch that goe this Voyage, and the River of Canaman in chirteene degrees and a valte, the River of obe Beader or of Saint Auftine is foureteen degrees and a halfe; and the River of the Virgenes in fixteene. Porteficine in feventeen degrees: the River of Parayua in twentie degrees, neere to Santh forman: the Bilact of Gos Cabo Frie. nere necre to Saint Seballien , and Gold Cape in three and twentie degrees beyond Saint

Notice of the West, are all the Hands and firme Land comprehended within the marker of the Of the fewhich
Crowne of Cafile and of Lyon, a the Occidentall end of the faid bounds; whole line as is Indian of the faid palleth on the other side the world, through the Citie of Malaca from whence toward well, waich are the East, and New Spaine, is a great Gulle of infinite Hands great and small, and marry pieces of the Lands Phi Goalts, and firme Land, which are disadell into the Ilands of the Spicerie, or of the Malnos, I. lippmas, coult of lands Philipmas, the Coast of China, Hands of the Legund and Lapones, Coast of themew Garnes, the Leguns.

Ilands of Salomon, and of Ladrones or the Theenes: the temper of all these Ilands and Lands in generall is moitt, and temperately hot, plentifull of Victuals, and Beafts, with some Gold, but base no Silver, flore of Wax, and the people of fundry colours, and the ordinary colour like Indian, and iome white among them, and iome cole-blacke.

The Ilands of the Spicerie (which properly are called so, because all the Pepper, Cloues, Sing. mon , Ginger, Nutmegs, and Masticke that is spent in Europe , is brought from them) are ma. ny, though the molt famous of that Gulfeare fine fmall Hands vnder the Equinochiall in one hundred nintie foure degrees from the Meridian of Toledo, included in the morgage which the Emperor Charles the fit made of them to the King of Poringall for three hundred and fiftie thous Of these tee L fand Duckets, which are Terrenate of eight ornine leagues compasse, with a Port called Tales. In Orthete ree i. ac., and other game, and in it raigned Corala, which yeelded himfelte for subject to the King of Castile, when English winges the Shippes that remained of Magelanes fleete found their llands. The Iland of Tadore flands one league from Terrenate to the South, it hath tenne leagues compaffe. The Hand of Mail, or Musier is of foure leagues compasse, and is vnder the Equinoctiall, and Magnin three leagues to the South, of feuen in compaffe, and tenne leagues to the South. Batan or Bagnian is twent tie leagues in compelle. In the lland of Tidore raigned Almanzor, which also gave himselfe for Certaine Tree subsect of the King of Castile, the which, and Carala did write and Iohn Sebastian of the Cana. bearing a kind borne in the Village of Guitarea, in the Province of Guipuzcea brought their Letters; the which departing from Tidore in the yeare 1522 touched in the Hand of Zamatia, and going vp toalmost fortie two degrees toward the Antarticke Pole, he arrived at the Iland of Saint level of 20 the Greene Cape or Cabo Verde, and from thence to Simil with the Shippe called the Vittorie. having spent leven moneths time little lesse in comming from the lland of Tidore. Patien is the fift Iland like the other; Moores inhabited in it, and Gentiles also, which knew not the immortalitie of the foule. And when the Shippe of the fleete of Fryer Garcia of Loay fa came. Re. iameraigned in Tidore of thirteene yeares of age, and againe acknowledged the King of Callile. and also the King of Gilolo called Sultan Abderta meniani, and confirmed it with an oath. Gilolo is an lland under the line foure leagues diffant from thole rehearfed; it is of two hundred leagues compafie, without Spicerie: the Iland of Ambon in three degrees and a halfe to the South, from the Hand of Gilolo without Spicerie. The Hands of Bandan are in foure degrees of Southernealtitule, where the Nutmegge is gathered, and Mace; and the Burro, which is to the Weftof Ambon, and Timor, another Hand to the South-west from Bandan, almost one hundred leagues,

a fortreffe im Terrenate, and other in the Citie of Malaca at the entrie of the Arthipelarus. The Hands Philippinas are a Sea of thirtie or fortie great Hands, befides many other small ones which are together in leffe then two hundred leagues in length North and South, and one hundred in breadth betweene New Spaine, and the Gulfe of Bugala, and they are about seventeene for hundred leagues from the Port of the Nationie in New Spaine, from fix to fifteene or fixteene degrees of Septentrional altitude, of a reasonable temperature; and plentiful of victuals, specially Cinamon and of Rice, and some base Gold in some places, and in some Hands are Cinamon trees, and long long Pepper. The Countriemen are of a good shape, and in some Ilands they are blacke, and those which line in the center of the Countrie are whiter then those that line in the Sea coasts. There are good Ports, and Timber for Shipping, the names of the principalleit Ilands are Mondaw, which is the greatest, and most Southward, of a hundred leagues in length, and three hundred in compatte, a rough Countrie, but plentifull of Millet, Waxe, Rice, Ginger, and some Cinamon, and Mirres of Gold, with good Hauens, and Rodes : the Hand of Good tokens, and Saint lohn leaning to Mundanas, on the East fide; of twenty leagues in length North and South; Bebol, ten leagues more 10 to Mindanes on the North fide, nineteene leagues in length.

without Spicery, but richtof Sandale, Zeinda, fiftie leagues from Timor, to the North-well of forty

leagues compasse, plentiful of Pepper, and the Iland of Celebes, which is very great, & Borney great

ter, neere the straight of Malaca, which is made in the firme Land; & Zamatia, which in old cime they called Taprobana. There be other manie great Hands, and small, which remaine to the South

fide, neere lana Maior & Miner and to the North toward the coaft of Chyna: the Portneals have

The lland of Buglas or of Negros, by reason of those that are in it, is in the middest of that Sea to the West, of forcie leagues in length North and South, and foureteen in breadth, and in her coaft are some Pearles: the Hand of Zubs in the middest of all, of thirtie leagues in length North and South, and in it a Spanish Towne, called the Village of Iefes, on the East fide, with one good Hauen, beides other that are in the Iland, the Captaine Perdinando Magellanes disconered this !land, in the yeare 1520, the King yeelded then himselfe for subject to the Crowne of Castile, and before hediscouered the Hands, which he called de las Velas Latinas, because they failed in In Mater it was their Shippes with fayles of Mats made of Palme tree leaves after the Latine fashion; and from where others. Zubn Magellanes went with the King, to warre against the King of Maran, in a little Hand close 60 to that of Zubu on the South fide, where being too valiant and confident he was flaine; and the Spawiards following their Voyage in demaild of the Hands of the Spicerie, they discovered Quepinds, Pulsan, and Burney, which is a great, rich, and plenefull Hand of Rice, Sugar; Goates, Swme, Cammels : it wants Wheate, Affeajand Sheepe; it hath Ginger, Camphire, Mirabolane,

and other Diugges. Aluaro of Saanedra discouered also the Philippines , and tooke possession of them in the years 1527, for the Crowne of Cafale, which by order of the Marqueffe of the Val- Alamoof Same ler went from the Port of Civillaneio in New Spaine, in demand of the Ilands of the Sprierie, and fellion of the particularly he was in Mindanao : and this digrettion hath not bin out of purpose.

CHAP.I. Ilands of the Spicerie. Tandayala, Masbat, Mindoro, Manila.

Returning to the order of the Phillippines, there followeth the about faid Abino, or Babay thirtie the Crowne of leagues in length North and South, and tenne in breadth, in which are good Mines, and Pearles, Calite, in the in her coult : Tandayala most famous of all, which for being first discouered, is called Phillipine, Yeare 1527. of which all take the name, in memory of the inuincible King Don Philip the fecond, the Pracdent, It hath fortie leagues on the North fide, and of the East North North-east, and South South-

west, and twelue leagues in breadth where most, waste good Hauens and Roades : Marhat 2 meane Hand to the West of Tandaya, of seventeene leagues in length, and fifteene in breadth, with one Hauen : Mindoro of frue and twentie beagues in length North and South, and halfein breadth; there is Pepper in it, and Mines of Gold the Iland of Luzan, called the New Coffte, as great or greater then Mindanao, the most Septentrionall of the Phillipmes, in the which is built Manila, a The Citiest Citie of Spaniards, with title of Famous, where the Governour, Officers of the goods, and cheft Manille Royall, and the Cathedrall are refident; it is a plentifull foyle of Victuals, with many Mines of Gold: the Hauen of this Citie is bad, and for all that there is great trafficke with the Chynas, which bring Porcelane Veilell, Tinfels, coloured filkes, and other Merchandize : Lucon hath in

length two hundred leagues, and it is very narrow. In all these Hands are many Mahometanes, wither they came by the East India, and could ea-20 fily plant their falshood among it those blinde Gentiles. Captaine Magellanes as aboue faid discouered their Ilands, the yeare 1,20. going with an Armie of the Crowne of Caftile, in fearch of the Hands of the Malucoes, and tooke possession of them, and afterward Michael Lopez of Legazai made an end of discouering them, the yeare 1564. with an Armie which hee tooke from hause before.

New Spaces, by order of the Vice-roy, Don Lewis of Velasco: it is judged that those Ilands 11000.llands. doe amount to eleauen thousand great and small. There are pacified about fortie of them, and converted more then a Million of men vnto the Catholike Faith, with fo many expences of the Growne Royall, not having had vntill now any profit from those Countries: for every Religious man of thore that are fent thither, doth coft to fet there one thousand Duckets. Those which hitherto havelaboured in that Vineyard, with most great fruite of the soules, are

30 the Religious Dominicans, Pranciscans, Barefooted, and Austine Fryers, and the Company of lefus; and from these ilands hath beene begun to bridle the Mahometanis, which from the Coast of After went by little and little extending through these, and other Hands, and also to the (bi. Since, the Holmas and lapones, and the Portugals had already loft the flands of the Malacos, if the Spaniards landers have of the Prominces of the Philippines had not holpen and fluctoured them divers times and ma- portueals.

There is already a plainer notice had of the Chymas; by the commerce of the Philippines, and China: fee our their riches and plenty is knowne: it is of the richest and mightiest Kingdomes of the World, former Relaand from Manila may be to the coast of China three hundred leagues, of eight dayes fayling, and tion,

40 the coast of that Countrie goeth running as to the North-east, more then feuen hundred leagues. from twentie one to twenty two degrees of Septentrional latitude, and vpward, and it is known that crosse over the Countrie inward is a Voyage of fine or fixe moneths, to the confines of Tara turis; being a Countrie of great Cities, with many Townes, and the people politicke, and prepared for their defence, but not warlike, and the Coast much inhabited with maine Riuers, and good Hauens : it extends from feuenteene vnto fiftie degrees North and South , and East and West it occupieth two and twentie: the Citie of Pagnin, where the King bath his Court, stands in fortie eight degrees of our Pole, it is diuded in fifteent Prounces, fixe Maritime, and nine Moditerranejand the one are desided from the other with certains Mountaines like the Pirineis, and there are but two passages whereby they doe communicate.

Thomas Perez Ambaffadour of the King of Portugal, was from Cantan to Nanghi four The Proninces Moneths, travelling alwayes to the North : and to the largenesse of this Kingdome is joyned the and Kingdom plentie of the Countrie, which is great; for the which the multitude of the nauigable Ribers of theme. that do water it, are a help, where with it feemes a pleasant Forrest or Girden, and the abundance is doubled by many wayes, for the Kings spare no cost to make the Countrie watered in every place, outling great hile) and making great Valleys plaine; and the heate not wanting in any place, for all the Countrie simple is contained in the bounds of the temperare Zone, nor the moiflore by the clemencie of tracure, and by the industrie of men it is incredibly all multiplied, and all being compelled to bush themselues in Genething, there is not one foote of ground left vn-profitable. In Comma among other notable things they say there are a great number of blinde

men that doelabout in formerhing, every one as he is able, and being forbidden the going out of the Kingdome without literice, the which't never granted, but for a limited time it is necessary that the propagation increasing continued, the number of the people be without end, elpecially that they hold for a certaine, that for flue persons that doe dye, there are seuen bidrate, and the purenelle of the ayre is so much, that they doe not remember, there hath beene any vni-

See Martimes

verfall plague, and with all these good things they have their troubles also, for there are earth. quakes that destroy whole Cities, disinhabit the Countrie, and suppresse the auncient Rivers and raise others, and doe make great Mountaines plaine, with a miserable misfortune of

The yeare 1555, there burst out of the intrailes of the earth such abundance of water, that is ouer-flowed the ipace of fixtie leagues, and deftroyed feuen Cities with their iurifdictions. And this as touching the continent of Chma. There is through all the Coast a multitude of !landathe greater part are vnto vs vnknowne. Not farre from Nanqui, is the Cape of Lampo, the lland of Auesiga, Abarda, Sumbar, Lanqui, and the Iland of Horfes, of the which no particular notice is had. Passing the Citie of Chunches, stands Lannes, and a great number of Ilands are sent about Cantan, and these are the most celebrated, Lantao, Macao, Veniaga, where is the Port of Tamo Lampacao, Sancoan, in all the which the King of China hath Garrifons on Sea and Land except in Lampacao which is not inhabited.

In Macao, by another name Macan, the Portugals have a Towne, and the Chinas knowing the valour of the Portugals, and the fauour they have of the Castillans of the Phillipines , fuffer it with an euill will, but the Portugals feeke to preferue themfelues, for their profitable commerce in China. Sancon is thirtie leagues from Cantan, where fornetimes the Portugali have touched, and no Iland of China is of greater importance then Anian in the mouth of the Gulfe of Canchine, five leagues from the Firme Land, and one hundred and eightie from the Philli-Or Terra firme pines, and it is so bigge, that they affirme it to have thirtie Fortreffes; in it is a fishing 20 for imail Pearles. It is aboundant of Victuals, and of many Fruits : vnder the Government of Cantan, the principall Port of China, and the Countrie men are stole and

I apan is many Hands divided with small armes of the Sea, in three and thirtie Kingdomes whole head is the Citie of Meace, distant variable from China; and they count from the fland of Goto in Iapon to Liampo in China fixtie leagues, which is the neerest. The lapones doe greatly moleft the Chinas, more with piracies, and thefts, then with just war, because lapar being divided in fundry Ilands, and divers Princes, they can make no warre against the China, but with weake forces. They are more warlike and valiant then the Chinas: it is a temperate Countrie, plenti-30 full of Seedes, Cattle and Fowle of Europe, it hath Mines of Iron and Steele : the Countrie men are firong, valuant, and for much labout : those Hands stand in thirtie five degrees of the Pole, little more or leffe, according to the diffance of enery Hand. The Impones doe not understand the Chiwas but by writing, because of the Characters, or Letters being one for them all, and though they fignifie the fame, they have not the fame name, for they are to declare things, and not words, a Characters as

> understand it, that it signifieth 9. but every one doe name it after their owne fashion. By another fide the Lapones doe confine with the Phillippines, from whence there is commerce with them, and a great incouragement is given to the Fathers of the Company, for to labour in the concertion of the people of those Kingdomes, where notable fruite thath beene getten, for to the which these Ilands are much celebrated in the world, and by the comming of the Ambasiadours of the new Christendome to the Pope, and to the King Philip the Jecond, the Prudent: and foas nature placed them in a scituation separated from the rest of the Land, the men of that Region are differing in customes from other people. In the yeare 1592. Nobunanga which caufed himselfe to be called Emperour of Impen, interprised with eightie Vessels, and 20000, men, certaine Provinces tributarie vnto China, and wan it.

the figures of Anthmeticke, that if a 9, be fet, the Prench, the Castillan, and the English man doe

From the lland of Simo, which is among them of Impan the greatest, is extended a row of small flands, called the Leguiss, and doe prolong themselves toward the Coast of China; the two greater, which is every one of fifteene or twentie leagues, neere the Coaft of lahan, are called the greater Leguna, and other two also great, though not so much, which are at the and of the Rowe, they call Legue the leffer : fome are inhabited of well shaper people, white, politicke, well apparel. 50 led, warlike, and of good reason, they abound in Gold more then others of that Sea, and not leffe in Victuals, Fruits, and good Waters. Neere vnto the lefter Lequio flands. Hermo fa,or the beautiful Hand, which hath the fame qualitie, and fay it is as big as Sieilie.

Chap. 27. He Coast of new Guiena beginneth one hundred leagues to the Bast of the Iland of Gilolo, in Of the new Guinea, Uands I little more then one degree altitude, on the other fide of the Equinoctiall, from whence it is of Salamon, and prolonged toward the East three hundred leagues, till it come to fue or fix degrees. It hathbeene doubted vntill now, whether it be an lland or firme Land, because et doth enlarge it felte in fo great a Voyage from being able to loyne with the Countries of the Ilands of Salamon, or Provinwhich hey cal Crs of the Straight of Mingellanes by the South fide; but this doubt is refolled with that which thole do affirme that failed on the South fide of the Straight of Magelanes, that that is not a fontinent, but Hands, and that prefently followeth a spacious Sea, and smong those that decastismest: Sit & Haven, is Sit Richard Hawkins, an English Knight, which was fine and fortic dayes, among the there is a summer of the second

From the Sea the Land of this coult of Guines feemeth good, and the men that have been feene are cole black, and in the coast are many flands with good roads, and ports whereof is no particu- flands and lar notice; for having failed it few times, whose which are found in some cards are Aguada or the watering to the East thirty fine leagues from the first Landwish one degree of Southern altitude; and eighteene forward the port of Saint lames, and the Hand of the Crespos of fixteene leagues long neere the coaft, right against the Port of Saint Modrow, and neere to it the River of Saint long figure the coat, in the Port of Saint kerom, and a final Hand heere the shruft ont Point, a Or could, 40. leagues from S. Anstm, which they call of Good perce, and more forward from it, theb Shelter, bille Puntifeand Enill people, two little Hands, and the Bay of Saint Nicholms, fiftie leagues from Prostafalida, lida, and among other I lands one of white men, and the Mother of God before Good Baye, and of the Burna per Natinitie of our Lady, the last of come which is disconcred, and as to the North from it the Care

mana, an Hand without in the Sea among others which have no name. The Meridionall coaft is not yet known, the first that discovered the new Guine was Aluaro of Samedra being loft with many fromes from his course, returning to new Spain, when in the year 1527 the Marques of the Valley tent him that on that fide he frould feek the llands of the Spicerie. The Hands of Salomon are eight hundred leagues from Pre, & the opinion that is field of their Hands of Sale riches, gaue them this name, the which properly are called of the West, because they fal to the West from the Proninces of Pire, from the place that Almere of Mendoga made discourry of them by order of the Licentiata Lope Garcia de Caftro his Vnckle, Gouernor of the Kingdomes of Pira, in the

20 years 1567, the first that saw the Land of these Hands was a young man, called Treso, in the top of a Ship : they are from feuen degrees of altitude on the other side of the Equinoctiall about 1 500. leagues from the Citie of the Kings, they are many in quantity & greatnes, and eighteen the most famous, some of 300. leagues in compasse, and two of 200 and of 100 and of 50 and thence downward, befides many which are not yet made an end of coaffing, and they fay that they might beacontinent with the coast of the new Guiney, and the Countries to be discoursed toward the West of the Braight: the Countrie of these Hands feemeth of a good temper, and habitable, plentifull of victuals, and Cattell there were found in them fome fruits like those of Caltile, Swine & Hens in great number: the Countrie men tome of a brown colour like Indians, others white & ruddie, and fome cole blacke, which is an assument of continuance with the Countries of the new Guinie. whereby there may fo many differences of people be mingled of those which refort to the Hands of the Spicery.

The greatest and most renowned are Santha Tfabel, from eight to nine degrees of altitude, of more then I co. leagues in length, and eighteene in breadth, and one good port called of the Star : Saint George or Borbi to the South of S. I abel one league and a halfe, of thirty leagues compalle, Saint Marcos or Saint Nicholas of one hundred leagues compatie to the South-east of Saint Habel; Ide Arrentes the Mand of the Shelnes as great as the former to the South of Saint I abel and Saint I erome to the West of 100 leagues compasse; and Guadaleanell to the South-west greater then all : and to the East of Saint If abel, the Hand of Buenauifta, and Saint Dimas , and the Hand of Florida of twenty d Or Good Films. leagues circuit every one; and to the East of it, the Hand of . Romer of 200. leagues compasse, and e Qr Boughes. 40 necre to it Malayta, and f Atreguada of thirty, and the three Maries, certaine little Hands, & the for Francice. Hand of Saint lohn of twelve leagues compafie between the Arreguada and the Hand of S. lames to the South. Malata of 100. leagues circuit, and to the South-east of 1t, the Hand of Saint Christopher as bigge as it : and Saint Anne, and Saint Catherine, two small Hands fall by it: the Name of God a small Iland diffant from the other fiftie leagues, in fewen degrees of altitude, and in the same

Rumbe to the North of Saint Habel, the Shelmes, which they call of & Candeloria. There is in the voiage that is made from Pow to the Hands of Salomon, an Hand called of S. Paul, B. Or Gandh. in fifreen degrees of altitude, 700. leagues from Pow, nineteen degrees, 200. leagues of Land, others which may be those that they called of Salomon, and they say also that they might be others which this little while have beene discovered in the same Rombe of Chite.

The llands of the Theenes are a row of 16. smal Hands together which runne North and South, with the middelt of the coast of Guiney, from twelve degrees of alritude vitto fenenteene Septentrionall or more, not farre from the Phillippines to the East. They are all barren ground, and miferable, without Carcle, or Mercals, fcarce of Victuals, inhabited with poore people, well shapen, naked, and much inclined to steale, essen to the nayles of the Shippes that came there, pen, nacco, since and them of the Thomas, in the years 1 120. when he came to them go-ing in demand of the Spicerie. Their names are, the English, the most North, and aries it Oral Ladoust the M.10, Chemechoa Gregua, Agan, or Pagan, Oramagan, Gugnum, Chareguan, Natan, Sachan, Bo- La Inviere. ta. Uolia. There are among their llands Phillipmes, other eightreene or twenty, called of the The Kner. Kings, Archipelagus, or Hands of the Corral, and the Gardens, another quantity of little Hands, Hands of Corral and Pialogo, Saint Vilan, another little Hand, the Gardens, and the Hand of the Matalores, and that The Gardon. of the Shelues, and of Saint lown, or of Palmes, weere the Malaces, and on the North file of the hor Enill bane Theenes, fine or fix little Hands together, called the h Volcanes, where is store of Cochittilla; and "A Tree so I Malpelo another small Iland, where are "Cinaloes very fine, and on the East fide of the Theories, colled. the two Sifters, two little Hands in ten degrees, and Saint Bartholomen in foureteene and more Two steel.

wherewith en-

to ward

toward new Spaine, the Sheines, Look bow shon goeft, Take away fleep, or See show fleep not; & neure to them the Hand of Martine, and Saint Paul, another small Hand with shelues, and the inhabited the Maria. Item the training and toward new Spaine, Almare of Saanedra was also in the Hand of the Theener, in the yeare 1527 returning from the Hand of Spicerie to new Spaine.

Chap. 28. Of the uprem the fpirituall and Ecclefiafti-Counfell of

"He Catholike King of Castile, and of Lyon continuing in their auncient, and Christian piete. pretently after these new Countries were discourred, and joyned with this faire Monarchie Of the uprem
Counfel of the procured to plant, and fettle the Catholike Religion in them, and temporall pollicie, with 10 mach procures commenced to prainty and writest men of these Kingdomes. For as the discoveries did increase the care and aduce of the witer measor times an appearance and Councellours, that buffing is buffiness, they formed a particular Councell with Prefident and Councellours, that buffing is themicles in no other thing, with more diligence they might refore to that which so much pa and Ecclefication call Royall Pa. tained to the feroice of our Lord God, and government of that Orbe. And because hereafter mention shall be made of the persons which from the beginning have laboured, and served in the lupreame Countel of the Indies, which hath carried to great a waight vinto this prefent hour, first shall be spoken of the spiritual and temporal government, and the rest worth the knowing that the order of that Monarchie may be understood, with all bremitie.

The first thing clear these godly Kings did charge and command the first Discouerer, and from The matterning was to man commanded the other Discouerers and Gouernours of that new World with very fraight orders, was, that they should procure that the people which they carried, with the Chris flian life, and with their good customes, should give such example to the Indians, that they might a be glad to imitate them, and should binde them voto it, entring first according to the Econgelicall Law, the religious men preaching it, that fo rather with the iweetness of it, then with the force and noy se of Armes it should be admitted, and that instice should be administred with sixth equalitie to all men, that it might be much respected & esteemed All went forward, the towns went augmenting in such manner, that with the zeale of the service of God, and good of the men's hath come to fuch a point, that at this day there are found built and effablished in all that Ore of this Crowne posteffed, as before hathbeene feene, fine Archifhoprick, swentie fenen Bifoprick two famous Vinnerfices, where with great learning and doctrine al the Sciences are read more than force bundred Monasteries of religious Dominicks, Franciscans, Augustines, Mercenaries, and the fore commerce aromateries as engineer community, a aneignous, angujumes, reservances, and we Companie of Islus, with some Admosferies of Numees, and Colledges, infinite Hespasi, and France, incurrentle force of beneficed Cures, which are called Dollrines, for to teach those new Converts, and Heremites, and Chappels in the bigh-way erected on pillars, bearing Crucifixes in them, without number. All the which was begun at the charge of the Crowne, and at this day it goeth forward where there is no maintenance for it. In effe &, this Catholike pietie by the clemency of God goeth from good to better, augmenting with to much reverence and honour of God, that in no place of Christendome it is done with more order or care, by the care of the supreme translator had, Councell of the Indee. Of the which is inferred, that the Concession of the Apostolike Roman Set String in the made to the Crowne of Cafile, and of Lion, of the Patronage Ecclesiaficall of that new World was a very great remedie, in the which our Lord God (as Hee which onely is Hee that feeth, and presentethall things to come) did a thing worthy of His greatnesse, (seing Hee hathshewed the 40 experience that if this had beene gouerned otherwise, it had beene impedible to have proceeded with the harmonie, and even concent as it hath, of Religion, Justice, and Government, with so

granflator had.

The Eccletiasticall Patronage is governed in the same manner that in the Kingdome of Graneda, the Kings Cath. like prefenting to the chiefe Bishop onely the Archbishops, and Bishops, that from his holy hand they may receive these Prelacies, and may dispatch their Bulls, procuring alway that they be persons of a religious life, and great learning. All the other Dignities and Bonefices are prouided by the King, and confultation of the supreme Councell of the Indees, and they go not to Rome for Buls : and their reats confift in tuthes and first fruits which arise of the Spans inhabiters. For in the most places of thefe Indies the Countrie men paie not, and where the tithe 10 are wanting, it is supplied out of the goods royall: and touching the tithes and first fruits that are to be paied, many ordinances and rates are made according to the stile of these Kingdomes, that the men of each Colony, it is infl it fould follow her cuftomes. And though the Kings of Callila and of Lyon, are Lords of the tithes by Apoltolike concession, & might take them so himfelfe, supplying where it wanteth with that which in other places doth exceede, he leaueth them to the Prelates & Chusches, promiding of his own goods Royall with the liberality of to Catholik Prine ces, to all the necessities of the poore Churches, giving to every one that is built anew the greatest part of that which is fpent in the building, with a Chaliz, a Bell, and a painted Table.

or Pictures

That the distribution of that which proceedeth of the titles, and of that which is bestower out of the goods Royall in maintenance of the Prelates, Dignities, and Canons of the Cathedrall 62 Churches and Benefices, Cures, and persons that are occupied in the divine Service, and instructing of the Indian, may be fruitfully imploied according to the holy intention of the Kings; the fupreme Counfell hath made good ordinances. First, that all the faid persons be of an approved life and cultomes, & especially those that doe medite in the Dostrines, being first examined touching

CHAF. 1. Ecclefissticall Government and spirituall provisions in and for the Indies. 900

learning, and after in the language of the Indians; for it would little anaile, that the Ditciples should not vinderstand the Mariter : and that these do continually reside : and that no Curate, or Teacher may have two Benefices; and that those which shall from these parts passe to the Indies be more appround, it is commanded that no Priest doe passe without licence of his Prelate and of the King, and that if any be there found without it, prefently they should send him to Spaine,

And that the manner how the Royall Fatronage is gouerned may better be understood, feeing He con interth it appertaineth to this Crowne, because that it hath discovered and acquired that New World; and the governehath also built and endowed, out of the goods Royall, so many Churches, & Monasteries, as by the Apostolike concession, that for no cause the said patronage, nor any part of it, either by custome, or Patronage, to prescription, or other title may be separated from itsit is ordained what care the Vice-roies Coun-

isls, Gouernors, & Rulers, are to have in it, and what penalties the transgressors should incur. First, that no Cathedrall or Parish Church, Monasterie, Hospitall, nor votine Church, should be founded without confent of the King. That when in the Cathedrall Churches there are not foure "Bene- "Or Pentissent ficed men refident, prouided by royall presentation, & canonicall provision of the Prelate, because the other Prebends be voide, or absent for more then eight moneths (though for a lawfull cause.) The Gid Prelate, till fuch time as the King doth prefent, may chuse to the accomplishing of the foure Clarks (befides those that are prouided and resident) of the most sufficient of those that shall offer themselves, without that the faid provision be in Titulo (to be removeable at pleasure) & that they have no feate in the Q ire, not voice in Countell. That no Prelate may make canonicall inthitution, nor give possession of any Prebend, or Benefice, without presentation Royall. & in such a

case that without delay they make the prouision, and command to refort with the fruits. That in all the dignities, & Prebends, the learned be preferred before the vulcarned, and those which have ferued in the Cathedral Churches of Cafile, and have more exercise of the feruice of the Quire, before them that have not ferued in them. That at the least there be prefented for every Cathedrall Church a graduate Lawyer, & a Dinine for the Pulpet, with the obligation that in the feKingdoms the doctoral Canons, & Magistrates haue; & another learned Dinine to read the facred Scripture and another Lawyer or Dinne for the Cannonship of Pennance, according to the facred Counsell of Trent. That all the other Benefices, Cures, and timples, secular, and regulars, and the Ecclesiaticall Offices that shall be voide, or prouided anew. That they may be made with leffe delay, and the an Royall patronage may be preferred, it is commanded that they be made in the forme following.

That any of the about aid Benefices, or Offices being voide, the Prelate shall command to make edicts with a competent tearme, and of those that shall offer themselves having examined them, and being informed of their behaulor, shall name of the best; and the Vice-roy or Gouernor of the Province, that chuse one and remit the election to the Prelate, that he make the provision, Collation on, and Cannonicall inflitution by way of recommendation, and not in a perpetuall title, so that when the King doth make the presentation, and in it shal be expressed that the collation be made in a perpetual citle, the Canonicall inflitution shall be in title, and not in recommendation a and the presented by the King be alwayes preferred before the presented by his Ministers.

That in the repartitions, and Towns of the Indians, and other places where they have no bene- Provision of 40 fice to elect, or means to place one to administer the Sacraments, the Prelates shall procure there the Prebends be one to teach the Doctrine, making an edict, and having informed himselfe of his sufficiency and and Benefices goodnes, he shall lend the nomination to the Ministers Royal, that they do present him one of the two nominated, and if there be but one, that, and in the vertue of such a presentation the Prelate shall make the proussion, giving him the instruction how he is to teach, and commanding him to give notice of the fruits. That in the presentations of all the dignities, offices, and benefices, the best descruing, and that most exercised in the conversion of the Indians, and the administration of the Sacraments shall be prouided; which, & those that best speak the language of the Indians, shall be preferred before the other. That he which shall come or fend to request his Maiestie to prefent him to fome dignitie, office, or benefice, shall appeare before the Ministers of the Protince, and de-50 claring his petition, he shall give information of his kindred, learning, customes & sufficiency, and the Minister diall make another of his office, and with his opinion to send it, and that the pretendant do bring also an approbation from his Prelate; for without these diligences those that come shall not be admitted. That none may obtaine two Benefices, or dignities in one, or in fundry

Belides that which is rehearfed, it is prouided that they doe not permit any Prebendary in the of Medice o the Benefices of the Indians be Cures, and not timples, and that in the new discoueries, and plan- married; and 60 tations that shall be made, there be presently an Hospitall built for the poore, and sicke persons, of the boy of ficknesses that are not contagious, which shall be placed neere the Temple, and for a Cloyster fact of the holy of the same; that for the sicke of contagious diseases, the Hospitall shall be set that no hurtfull winde passing by it doe strike in the other inhabiting, and if it be built on a high place it will builting of an be better. And because the King being informed that goods of the descassed in those parts do not Hospital.

the Prelate, it shall be voide, and they may not make him a Cannonicall institution,

Churches. That the prefented not appearing before the time contained in the prefentation before Chap. 29. Of the Spring all Gouerne-

come fo wholly as they might, nor to foone to the hands of the heyres, by will of the faid Jeces fed, for many causes, whereby the heires received great damage, and the testaments were not per Orders for the formed: for a femedy, it was prouided, that what foeuer Spaniard shall come to any Vallage, of Towns of shole parts, he shall present himselfe before the Chrke of the Countell, where he shall Register the name, and furname of fuch a one, with the place of his aboad or birth, that his death happening, it may be knowne where those that are to be his heires may be found. That the ordinate nary fustice, with the most auncient Ruler, and the Clark of the Counfell shall take charge of the goods of the persons that shall dye, and shall set them in an Inventorie, before a Scrivener and Wit. neffes and the debts that he did owe, and were owing him, and that which is in Gold & Silver. finall Peafle, and other things shall be fold, and put in a Choft of three Locks, whose Keyes the three perfons about aid thall keepe. That the goods be fold in a publike out-cry, with the Teffmony of a Scriuener : that if neede be an Acturney shall be constituted. That the faid Justices do take occompt of all those that have charge of dead mens goods, and recover all that they are be hinde hand without any appeale, and doe put it in the Cheft of the three Keyes. That having any Will of the deceased where he dyeth, and the Heires or Executors, the luftice final not medile any thing, neither take the goods, taking only notice who be the Heires of the faid deceased That the faid Institutes, Rulers, and Scriveners doe fend also to the Contratation-house of Sewill, all that which they shall recover of the goods of the deceased, declaring the name, surname, and about of of every one deceased, with the Copy of the Inventory of his goods, that they may be given to his Herres, by the order that touching the same is given. That when they take accomps of those that haue had goods of men deceased, it shall be sent to the supreme Counsell of the Indies, with a very particular relation, and reason of all. That the suffices doe with care enforme themselves carefully of those which have in possession the goods of men deceased, whether they have done any fraude and prejudice to the goods they have had in possession, & fend to the Counsel notice thereof, that they may give accompt with paiment to the Iultices about faid. That accompt be given energy yeere and the memoriall of the dead that have beene that yeere shall be shewed to the Governor of the Country, & of the goods they had, that they may be fent to Senil, & be given to his heires, and the Testaments be fulfilled, with good accompt and reason that is behoovefull. For in every Counfell, one of the Justices is Judge of the goods of the deceafed, the one fucceeding another, from the yongest to the eldest, by their turne, which doth send his Commissaries through the bounds to take accompt of the houlders, and there be any careleffeheffe, the Iustices are charged therewith in the vilitations which are made of them, and before when there are any Plaintifes.

ried men.

Those Catholike Kings being informed that in the Indies were many married Spaniards, which hued separated from their wives, of the which, besides the offence that was done to our Lord God, there followed agreat inconnenience to the Plantation of those Countries, for that such not litine feated in them, were not continued, neither did they attend to build, plant, breed, nor fowing, nor doing other things, which the good inhabiters are wont to doe, whereby the Townes doe not increase, as is behoofefull, and as they would do if there came inhabitors with their wines & chifdremas true Townsmen; being willing to remedy the abouefaid, commanded that all and every person or persons that should be found to be married, or betrothed in these Kingdomes, should to come vnto them for their wives, and not returne to the Indies without them, or with fufficient proof that they are dead. And the fame order was given for all the Kingdomes, of that new world, and fundry times hath beene reiterated, and commanded to be executed voon grieuous penaltus.

The holy Of-

Proceeding from the yeare 1492, when the discovery of this Orbe was begun, in directing and feeling the spirituall gouernment, as hath beene seene, for greater perfection, and enduring of it; The Catholike King Don Phillip the second, called the Prodont, confidering that among the great benefits that the Indians have received, their illumination to receive the Evangelicall Doctrin was the greatest, which hath extended it selfe, and considering also the singular grace which God for his mercy hath vied with them, in gining them knowledge of our holy Catholike Faith; that it was necessary to have a speciall vigilancy in the conserving of the deuotion, and reputation of the so inhabitors, and Caftillane pacifiers, which with fo many labours procured the augmenting of the Religion, and exalting of the Catholike Faith (as in those parts like faithful & Catholik Christians, and good naturall and true Castillers they have done) & feeing that those which are out of the holy Catholike & Apostolike Rossaw Church, obstinate, and stubborne in their errors, and heresies, do alwayes procure to peruere the faithful Christians, labouring to draw them to their falle opinions, scattering certain damned Books, wherof hath followed great hart to our sacred Religion; and beuing fo certain experience that the best meanes to preuent these euils, confisteth in the separating the communication of heretical persons, punishing their errors, according to the disposition of the facred Canons & laws of these Kingdoms (which by this holy means, by the dinine elemency have beene preserved from this wicked contagion, and is hoped they will be preserved hereafter) to the end that the Orbe doe not receive so much hurt, where the inhabiters of these Kingdomes have given to good example of Christianity, & the Country-born have not percerted themselves with erronious doctrines of the hereticks: It feemed good to his Mare file, with the aduice of the Cardinal D. James of Espinosa, Bushop of Signer ca, Inquisitor generall in these Kingdoms, a man of great

prudence, and of many rare parts and vertues, for the which he hade election of his person, to help him to beare the burden of io many Kingdomes, and Lordinips, and of the Counsels of the holy. and generall Inquisition, and of the supreame Counsell of the Indies (for it behoued to place one Counfell of the holy Office in Mexico; for the Kingdomes of New Spaine, and the reft of the Indies of the North, and another in the Citie of the Kings, for the Kingdomes of Pirm, and the adherents, which are called the Indies of the South) which the authority that the Councels of thefe Kingdomes have, to that as yet they should not meddle with the cases of the Indians, but onely of the Castillares, & other Nations that should be found in the Indies, and so that the appeals should come to the supreame Counsell that is relident in this Court, as it is done in Spaine, and in the accomplithing thereof, in the yeare 1570, the King Don Phillip the fecond, called the Prindent, gaue a generall power to the Towne of Madrid, the 16.0f August, that the Apostolike Inquisitours that

should be named for the present, and for hereafter against the hereticall peruersnesse, & Apostacie : and the Officers and Ministers necessary for this holy Office, which was commanded to be feated in the Cities of Mexico, and of the Kings, should exercise & vie their Offices, and royall warrants, that Don Martin Euriques, and Don Franciscus of Toledo, Viceroyes, and Captains generall in the Kingdomes of New Spaine, and Pirm, and the Counfels, and Inflices, Gouernours, and other persons should give all aidetand fauctur to the holy Offices, and the inquisitors, and Officers were nominated; as in their owne place shall be spoken more at large.

Hale Catholike Kings, most wifely constituted the Supreme Counfell of the Indies, that they Chap. 20. might helpe them to beare to great a hurden, as is already the government of that Orbe, and Of the form the Counfell conflitted in one Profident, and eight or more Counfell conflitted in one Profident, and eight or more Counfell conflitted in one the government of the government of the government of the counfell conflitted in one Profident, and eight or more Counfeller, as necessaries and of the government of the counfell conflitted in one profident and the counfell conflitted in one profit conflitted one Atturner, Secretaries, Clerkes of the Chamber, Relators, and other Officers, and an Office of Ac- ment of the fuone Attentey, over the state of all the goods Royall of those parts. And that proceeding might fell of the inbe according to rule and order, they declared first that the Counsell should meet three hours eue- dies, and of the ry day in the morning, and two in the afternoone, three dayes in the weeke that bee no holy Infliction of dayes, and that they should firme the Warrants that should be delinered for these Kingdoms; but the Countels, that those that were for the duller, should have the feale Royall : and that in those parts it should and Chanceries have supreme jurisdiction, and might make Lawes, and Decroes, to see and examine whatsoetter parts. 20 Statutes, Conflictutions of Prelates, Senates, Chapters, and Consents of the Religious, and of the Vice-royes, Courts, and Counfels; and that in the Indies, and in these Kingdoms, in matter de-

pendant of them it should becobeyed: that the government of the Indies should bee like this of these Kingdomes, and that more in particular the Counsell doe occupie it selfe in the matters of government. That in Susten remitted those of the Conneel Royall shall come to give their voyces Appealen to that of the Indies, and that two voyces thall make a Sentence infinites of 500. 4 Pefos, or vnder. That there be a fecond Supplication in weafe of 10000. Pelos : that they deale not in the reparti- dWhich is 1000 That there be a tecono supplication in a value of receiving well perufed in the Courts according to a pound English, tions of the Indians in those parts, but the Processes well perufed in the Courts according to a taking two Ry Law, called of Malinas (for there it was made) they shall come to the Supreme Counfell: touch- als for one shill. ing order to be held in matters of feruices, that the Counfell doe fee them all ; and in matters of ling. 40 rewards, that which the greatest part doth determine, shall be done, and that in these there be a

Supplication, and that no expedient fuite be feene the third time : and that in the matters they doe resolute with breuitie, that the charges be given to the best deserving, and that they be not giuen to the allied and kinfmen of them of the Counfell ; neither may fuch bee Solicitors, nor Atturneys; in the prouidings of the Offices no price shall be admitted: nor that they of the Counturneys; fell have any Indians of repartition, and they shall assist in their houses, that the Suiters may find them there, when they goe not to Counsel: and that due fettery be kept in all things, and about eWhich as we all that the Council haue a particular care of the Connersion and good Instruction of the Indians, accompt 441: and of the spiritual government; and that of . 600000. Marinediz voward the appeale shall come pound 3 shdto the Counsell; that they may appeale from the Sentences in the fine Cases of naturall death, or lings and one so mayming of a member, or other bodily punithment, publike shame, or racking, and the appeales third penning of a member, or other bodily punithment, publike shame, or racking, and the appeales

shall come to the Countell, with many other laudable orders, which are omitted for breuities fake. That the President being a learned man, shall have a voice in matters of Government, gratuities, He continued and fauouirs, relitations, and accompts, and not in fuits, because he may be the more free for the the order of government of the Counfell; and being valearmed he shall have no voice, but in matters of grace, the suprement of the Counfell; and being valearmed he shall have no voice, but in matters of grace, the suprement of the Counfell; and have a Counfell in his name house, and have a gouernment, and fauour, and that he may affemble the Counfell in his owne house, and have a poate of the businesses, and that the Counsellours doe not accompany with the Suitors. And because it seemed a necessary thing that one Fiscal or Atturney should affift in Counsell, it was commanded he should have the fame stipend that the Counsellours, and that they deliver him the dis-60 Patches of the Office, that he have a care to know how that is accomplished which is prouided for the Indies; that necessary Papers be given him for his Office, that he doe fee the visitations

before Counfell: that he have a book to register all the capitulations that are taken with the King. another wherein he may fet down the Atturneys Pleas : that he delay not the fults: that his demands or those that are against him be admitted, if the Counsel think it good: that he keep a book of that which is concluded for the cafes; that he have a care to know the Officers that doe omie to tend a relation enery yeere to the Counfell. Ffff 3

Ir flicution of the Courts royall of the

Hauing ordained all that which appertaineth to the Counfell, which is the head of this Gouernment, with many other orders which are not rehearfed for breuitie; they proceeded in officring all the Provinces of the Indies, in the matters of inflice, as neede required; and there Catholike Kings defiring the common good of that new world, that their subjects that should possesse it, hauing a zeale to the fernice of our Lord God, good, profit, & eafe of the faid Subjects, & to the Peace and quietnesse of the Towns, as the King is bound vnto God, and to them, for to accomplish with the Office that he hath in earth, hee thought good to command to place the Cours and Royall Chanceries, that (as hath beene faid) are in the Indies, with the Statutes, and orders that hath beene giuen them, that the Ministers may doe their office, and intircebe well administred, and the Townes obtained the benefit pretended.

The Court of Inflice, oc. The Court of

Mexico.

The first Court that was established, was in the Citie of Saint Dominicke in the Bland Hilliams. la, with one Prefiden: a learned man, though now because of the warre he is a Souldiour, Wiehti-\* Or Ordinary the of Captaine Generall, and foure suffices that beare rods, like an \* Alcalde, and deale in cities and criminall matters, in a degree of apeale, and in the inftance in matter of Court, and the fire uernment is onely commended to the President (which now is Iri Don Antonio Offore) and the limits thereof. The fecond Court was established in the Citie of Mexico, in New Spaine: the first President which was Numyo of Guzman, had no authoritie, for he was placed butfor she fon: with the fecond Court, the Bilhop D. Sebaltian Ramirez (for he was fo in the Cource of His pinyola) he had the Gouernment of the Kingdomes, and the supreame authoritie, and hee left that, effablished that which belonged vito it, and vito inflice, as at this prefent it is. The Pres- 20 dent of clis Court is the Vice-roy (which now is the Earle of Momerney) there are eight lethics. which doe in gein civil matters, and in the appeale of the cases of government which the Vice. roy ettablishers. There are three lust ces of criminal cases, which bearerods, and deale in criminal cales, and two Atturnies, one of civill; another of triminal causes, and hee providerh the Rolers charges that are not referred to the King, and the other Officers, and helpes of coft in release, and vacacions in the limits of this Court of Mexico, and in that Countell of new Galicia, The third Court was that of Panama in Terra firmetforehis name was given to it, because it was

wherewith the Kings commanded it should be called: and when the affaires of Pers grew grea-

ter, in the yeare 1542. It was thought good that this Court should be removed to the Citie of

The Kongs, where the Vice-roy (which now is Dor Louis of Velageo) hath at his charge thego-

of the Kings eight luthces, three luftices of Court, and twee Atturneys; in the fame order as in

The Court of

Mexico: and the Vice-roy is resident in the Citie of the Kings, and is the President of this Court, and shall be in the other two, when he is prefent in them; and doth disside all the reparcitions of Indians that are voide in the bounds of them. The fourth Court was established in the Province of the Confines; and feeming it was needlesse it was difficued, and the years 1 570. it was established againe in the Citie of Saint lames, of 4 the Kingdome of Guatemala: init is one President which is the Doctor Creato of Castile: foure Iuftices with rods, and one Attorney. They fit on civill and criminal cales; in appeales, and in the first instance : in matters of Court the President onely hath the Government, and assigneth the Indians, proudeth the Rulerships, and other Offices temporall. The fift Court was established in the Citie of Santia Fe de Bogatu, arelienew. Kingdome of Granada, with one Prefident (which now is the Doctor Francisco de Sande) foure Inflices with rods, and one Actorney, with the same the new King authority that the former. The fixt was established in the Citie of Guadalaura, of the new Kingdome of Gallicia, with one Regent, three chiefe Iuftices, which dispatched a great while withthe new King- out Seale, and the matters increasing, the Seale was given, and a Register, and a President was pladome of Galicia ced, which now is Doctor Sandrage de Kera; and three Inflices with rods, one Accorney, and the Viceroy of New Spain hath the Government. The federath Court, was placed in the Citie of Sail The Court of Francis of Quite, of the Province of Pine, where there was alfo a Regent, chiefe Iustices without Seale, and afterward the Court was established with a President (which now is the Licentist · Miguel de Vuarar) with three luitices with rods, &cone Atturny with the fame faculty of Guadalaiare, the government, & the reft remaining to the Vice-roy of Pirm, as about aid. The eight Court was in the Citie of the Plate, in the Province of the Chareas, with a Regent and chiefe Inflices:after there was placed a Prefident, foure Inflices with rods, Atturney, Seale, and Register, and nowis Precident the Licentiat Cepeda, with refernation of the promiding the charges, and the reft to the Sea Soldiour. Vice-roy of Prim. The ninth Court, is that which was elablished againe in the Citie of Panama. The Controf with a President of Sword and Cloake, became of the matters of warre, which is now Don Alons & the Phillipme. de Setomayer, with the title of Captaine Generall of Terra firme : there are three Iustices with roddes, which doe deale in Appeales of civill and criminall cases, and at first instance in matters of Court, and it hath onely the Gouernment. In the Citie of Saint Lawes, of the Prouince of Chile, was placed the tenth Court, and because it seemed needeleste, it was disolned, and a Governour was: provided, which dependent on the Vicesoyof Birn. In the Citie. of the Philippinas, called Manila, was a Court, and it was ulfiblioed, because it beemed needelettle: a few yeares fince it was established againet, with a Captaine. Generall which is Don Peter of Acres which is President, and Source luffices, and one Acturney, with the fame authorseis that the other Courts. For the Catholike Kings of Caffile, wasts the adulte of the Supreme Councell of the Indies, doe alwayes proudle with a fincere and just minde; that which is commented for the preferencion and augmenting of the spirituall and temporall things of thole. parts, without any spare of expendes, or labor and every Court hath according to the wie of their Kingdomes, Secretaries, Relators, Sergeauts, Porters, and the Officers which are necessaries.

The hardingite in Lagreement of this great Monarchier in the hate, o every a minister hash. Chop. 27. The hardisplie and agreement of this great Monarchie yis a uson quarto acceptance finding. Of the things the been given the authoritie that as well by readon of whate, as for the reputation of indine. Of the things the property of the pro hath feemed tobe conneniene, referning to the fupreme Maiefte that which hath brene indged that are provito be necessarie to his authoritie. For to the Vice-roges and Presidence, that they may have to preme Counreward the well-deferuing, and they be more respected, there are Offices affigned which they cell of the Inmay proude, and matters wherein they may gratine, under the prouding of the Perfou Royall die with rod have remayned, with confidention of the furreme Counsell of the linder the offices following.

For the Kingdome of Chilea Gouern our and a learned Luttice; with hacaline to incommend or Kingson ... authorifexhe Indians, another for Tuenman, with the fame facultie : another for the Provinces of The Coulenauthoritiente, matant, another authoritient and another and Frague, with their Gouernour ment which in every one with the same power. In the Provinces or Nicaragua, and the Rich Coaft, one: in und Mirria the lland of Cabe one Gouernour, and Captaine which is relident in the Citie of Saint Christe- ladies. pher of the Autre : there are bendesthe Gouernours of the Hand of Saint John of Porte-rico, Venezuela, Soconusco, Tucatan, Cozumed, and Tabusco, which is all one government with authoritie to commend the Indians. His Maieftie promiderh alto the governments of Hondaras, the Margarite, Florida , new Bifquie, Dorado, those of the new Realme of Lion, and that of Pacamoras, Tonale (ango, which are for terme of life, and thefame in the Proninces of Choco; Quixos, the Conamon, Hands of Salomon, Sandia Cruz of the Hill, and the last is that of the new Andalufia. Likewale there are prouided by his Marethe the Rulerships following. The Cuzco, the Citie ThoRulerships

30 of the Plate, and the feate of the mynes of Poses, and the pronince of Chicuito, the Ander of Curco, the citie of Truvilla, Arrequipa, Saint lames of Guayaquil, Guamanga, the citie of the Peace, flie doth pro-Chiquialio, Saint John of the Frontier, Lion of Guanuco, Old Hauen, Zamora, the inhabiting of the uide, mynes of the Zacatecas in new Galista, Cuenca, Loxa, Tunja, the citie of Mexico, the citie of the -Kings, the province of Nicoya. Chiefe Inflicelhips, are thost of the village of Saint Saniour of the prouince of Gnatemain, the inward parc of Hift anialis, Nombre de Dios, the village of Chulutera, prounce of the Chiana, Zapotlican, the village of Nata, Santia Marie of the victorie in Tabafca. of God. And the chiefe Bayliwickes are, in the citie of Sains Dominicke in Mexico, in Guadalajara, Saint lame: of Guatemala, Panama, holy Faith of Bogota, Saint Francis of Quito, the citie of the Kings, the Plata, In the Cities recited in every one is a chiefe Bayliefe, which hath a voice in Councell 40 as a R. ler, and Deputies named, for the vicof his Office, and in every Court is another chiefe

Bay liefe with facultie to name other two Deputies. For the government of the goods Royall are provided by his Maieflie; with the opinion of the fupreme Councell of the Indies, many Officers, Factors, Treasurers, Tellers, and Ouer-feers, which all doe give affurance in Caffile and in the Indies, of good and faithfull administration : and because this new Commonwealth doth augment so much; it seemed behoofefull to the service of God, and of the King, to ennoble and authorize it more, with placing two Vice-royes, one in New Spaine, another in the Kingdomes of Pira, that in the Kings name they should governe and provide the things belonging to the feruice of God, and of the King, and to the convertion and infitraction of the Indians, fultayning, continuing, inhabiting, and ennobling of the faid Kingdomes, which experience hath thewell charit hath beene convenient : to the which Vice-royes anitractions are given very particular of that which is recited, and that they may have in prote-Stion the holy office of the Laquistion, and with their strong arme to defend and protect it, that this conformitie as a fast knot, may be the pure and true preservation of the spirituall and temporall Estate, which is the best and truest estate, and most according to the Evangelical estate.

The Vice-royes are commanded also, and likewise the Judges, not to have houses proper, nor That whichis to trafficke, nor contract, nor be ferued of the Indians, neither have any "Grangeries, nor meddle forbidden the in Armies, nor Discoueries; that they receive no guifts nor presents of any person; nor borrow Vice roges, in Armies, nor Discoueries; that they receive no guites nor pretents of any period; and sudges, mony, nor any thing to eate; nor pleade, nor receive arbitrements. That no Lawyer may plead "Whereherds where his father, father in law, brother in law, coufin, or fonne is Judge. That no Vice-roy, of Cattellare 60 President, Iulice, Judge of the criminall Cases, Solicitor, nor their children may marry in the In- bred. dies. That no Gouernours, Rulers, nor their Deputies , may buy Lands , nor build Houses , nor trafficke in their iurisdiction. That they may not farme the Bayliwickes, nor Iaylorships, nor

other offices. That no Gouernour, Ruler, nor chiefe Bayliefe, during the time of his office, may

marry in the bounds of his jurisdiction. That no Judge be prouided for a Ruler, neithershall the

faid ludges, or Bayliefs, baue any charge in which they are to make any abtence from their caees: neither shall any office of justice be given to the sonnes, sonne in law, brothers in law, no fathers in law of Presidents, Iustices, nor Solicitors, nor to the Officers of the Courts, and of the goods Royal, neither to servants nor allied of theirs: and the same is commanded the Vice-roye; goods Anyas, according to the about faid Minusters, doe accept warrant for recoveries nor other things. nor ferue themselves of the Indians without paying them. That no Advocate, Scrivener nor Relator, doe dwell in the house of Judge, nor Bayliefe, nor the Suiters serve the Judges. That the ludges of Panema, doesnot accompanie themselues with the Dealers, nor give leave to their wings to accompanie them. And that no luftices of all the Courts, shall have much communication with the Suiters, Aduocates, nor Atturneys: neither in body of a Court to goe to Marriages, Fuwith the succes, the except it be a very weighty matter: neither wifite any Neighbour for any caufe. That they doe not meddle in matters of the Commonwealth, nor any luffice, nor other minister of the Court, may have two offices in it. And besides these many other Ordinances, and good Lawes, which are all concerning administration of inflice.

Chap. 32, Wherein bee continueth the matter of the good gotterament of the Indies.

No because these Catholike Kings have left nothing which most wifely they have not pro-A mided for according to their dutie, the first thing they command the Vice-royes; endall the Ministers in generall and particular is, the good viage of the Indians, and their preference, and the accomplishing of the Orders which are made as touching this; for to punish the Offenders the accomplishing or the Grows who as cannot be Caffillas policie, and can complaine, and grant grour; and as the Judeou doe learne the Caffillas policie, and can complaine, and grant groups and grant groups and grant groups and grant groups and grant groups. know in what things they receive wrong, for their greater cale it is provided, that they give no place that the ordinarie writings be made in the fuites betweene, or with the Indiany, mether make any delayes, as it is wont to happen, by the malice of some Adoocates, and Attorneys, but mane any delayer, and the manned, keeping their vies and customes, not bring manifelly in-Interpreters, iuft, and that by all meanes possible, they doe prouide the good and shore dispatch of them. And having notice that in the interpretation of the Indian; languages, there were some fraudes; forto present all, it was ordayned, that every interpretation be made by two Interpreters, which shall not confer both together about that which is controuerted by the futies and that before they be received to the vie of the office, they shall take their oath to administer it faithfully, and that they receive no guifts of the Indians fuirers, nor of others. That they doe affift at the Agree. 10 ments, Courts, and visitations of the Prifons. That in their housesthey heare not the Indiana but to carry them to the Court. That the Interpreters be not Solicitoss, not Atturneys of the Indians. That they aske them nothing. And for their greater good, it is prouded, that the Atturney of the supreme Councell of the Indies, bee Protector of the Indiens, and defend them in their fuites, and aske in the Councell all the necessarie things for his instruction, preservation, and politike life : and now there are appointed Protectors in the Kingdomes of Pinn, and Nim Spaine, with new orders for their better vizge.

It is also commanded, to fee up Schooles of the Caffilians tongue, that the Indian may learne it, and may doe it from their childhood; and that so vagabond Spaniard doe dwell or remaying in the Townes of the Indians, nor among them, but that the Vice-royes and the Courts, doe put & learne the Spe- all diligence in driving fuch out of the Land, thipping them for Ceffule: and the "Countrie borne afterongue.

So of the Ca
So of th Ss. of the Ca-fillener, and the Courts, Gouernours, and Rulers, and other what focuer Ruffices, is ordivined, and particular care is had they doe accomplish it, that they doe prouide how the offences that were done to God may cease, in the Indiana marrying whiles they are children, without having respect of age: the Caziques marrying with more then one woman, though he be an Infidell: in hindering that when some Cazique did die they should kill another to bee buried with him , and other like abominuble vies. That it be permitted to the Indians that they may dispose of themselves what they lift, as free men, and exempted from all manner labour, though it shall bee procured that they doe labour and not be idle, and may have libertie to difpose of their goods, the Lands being set to fale by out-cry thirty dayes, and the moueable nine, the luftice being prefent. That the Lands remayning of any Indian deceasing without a Will, shall remayne in the Townes where they dwele. That they make the Markets freely, and fell in them their merchandize. That their good vies and ancient customes be approued. That they may fend to these Kingdomes Indian Attur-Or accounts neys for three yeeres. That the 'Refidencies be published in the Indian Townes, to fee if any will demand inflice. That in enery Towne of the Indians there bee an Hospitall with the things

or luftices, That they be

In this matter of the Indian flaues, there were in the beginning of the Discoueries divers opinions, and orders, governing them selves as the time required and the state of the things : but after the Bishop Don Sebastian Ramirez came for Preident of New Spaine, this vie was absolutely 60 abolished, not with standing the ancient one which the Indians had to make themselves slaves one to another : neither might they buy of them , nor receive them , neither that any person may bring to these Kingdomes any Indian in title of a slave, though he be taken in Lawfull warre : and for this are so straight orders given that they are effectually kept, and so in no place of the Indies

are Indian flaves, though they be out of the bounds of Castile and Lion. And to cichew this inconvenience the more, the bringing Indians to thele parts for whatfoeuer title it bee, is

And the quietnesse for the Commonwealth being about all very necessarie, ficultie is given to About viquiet the Vice-royes, Prefidents, Gouernours, and other Inflices, that they may drive away, and ba- persons. nish from the Indies all vinquiet persons, and fend them to their Kingdonies, Judging it fo to bee convenient for the quietnetie of thole, but that it bee not for hatrad or patient it nor for an

And that it may be some bridle to the Superiors, they are commanded, that they himberlind man the writing to the King, to his Councell, and to other persons, what they will'! heither of pen, nor take any papers, or letters, vnder great penalties, and that they permit to paffe and repaile through the Council them that will, prouiding wayes and beidges in the places where they are wanting.

As touching the matters of Warre, it is also prouided with great deliberation, for the Vatel Maners of roves greater authoritie, facultie is given them to haue a Guard on foot, and on Horfe backe to warre. make a casting place for Ordnance and Bullets, and a building for munitions, to leuv men, aime thips, and make fortifications, and prouide all the reflectionnent for the defence of those Kingdomes, and how the excelles of the Souldiers may be eschewed, as well by Land as by Sea; and to them that goe in the fleeres, committing the punishing of them to whom it belongeth, for to

excule competencies of jurisdiction. It hath clready beene faid how all the Government of this Orbe, depends of the furreme and The house of Royall Councell of the Indies, that are neere the Perfor Royall But as it is necessarie that the exe- contrations cutions of those parts have correspondence in these and here also there be they that may brounde of Sund. in effecting that is behoofefull for the matters there : it was necessarie to place in Sinil, where all the trafficke of the Indies doth come, a house Royall of contrataction of it, that medich not but in the dispatching of those businesses, and dependants of them , without any person nor Instice doe intermeddle in any thing belonging to the Indian affaires : and it is in substante, a Tribunal of great authoritie, in the which is a President, which now is Don Bernardino Delgaditto of Anellaneda, a Teller, a Tresturer, one Factor, timee learnet hitiges , one Solkiror, one Relator , one

30 Sergeant, Scriueners, Porter, Isylor, and other Officers. In the llaids of Tenerife and Palma, are placed two learned ludges, called Officers Royall, or Judges of the Registers . to cause Orders to be kept that are ginen for the lading and Registers of those Blands, and Nauigation of that voy age. The house of the Contrataction hath her instruction and ordinances, how her furiful tion is to be governed and exercised, and the learned sudges have it also for their vie and exercise, keeping in the leeing of the plea, betweene parties, the order that is held in the Court's of Valladaid, and Granada: and because the particular care of the officers of this House, is the disparch of the Fleetes and Armies, that they may depart in due times, they employ themselves in it with great diligence, and in receiving them that come, and feeting in fafeguard the Gold, Silver, Tewels, and other things that doe come, with a diffinction of the waight and carracts, charging themselnes

40 with all, that there may be more account and reason, and for to make the proussons of the Fleetes and Armies. There are fo good orders given, that neither the Ministers doe exceed, nor the Subiects receive wrong, for all passeth very conformable to the intention of these Godly and Catholike Kings, by meanes of the great diligence of the fupreme Councell of the Indies.

And because the businesses of the Indies have increased so much', that the supreme Councel Instruction of could not dispatch them with the brentie convenient to the good government of that Orbe, and the benefit of the Suiters, with the aduice of the Prefident and supreme Councell; the King Don of Housbold Philip the third our Lord, in imitation of his Catholike and Godly Predecessors, for the greater good of his subjects, hath instituted a Prime Connecll, where all the businesses of spiritual and temporall warrants, favours and rewards may bee conferred and dispatched : and besides this, there

10 are two Halls inflituted, where on dayes appointed they may intreat of matters of Warre, with the Prefident and three Counfellors of the Indies, and two or three of the Counfell of warre, and other dayes, of the matters of the goods, by the Prefident and Counfellors of Indies, and two of the Counfell of the goods, Atturney, and Secretarie of the Counfell of the Indies, the Prefident naming those that he first thinke best for it.

And as these Catholike Kings doe alwayes looke to the benefit of the people of that Orbe, That the sailer confidering that the propagation of the holy Gospell in no part of it could goe more prosperously shall not bee by any other hands then his, nor bee attended for his prefernation, and to have the Conquerous alienated. and Inhabiters of those parts more fatisfied, feeing all were his Subjects, and borne in these Kingdomes, declared by their Royall warrants, dated the yeere 1 420. in Valladolid, and in the yeere

60 1523. in Pamplona, that their Maiesties , nor any of their Heires , in no time shall alienate from the Crowne Royall of Caffile and Lion, the Hands and Prouinces of the Indies, Towne, or any part of them, and so they promised it and gaue their Royall word.

The Presidents, Counsellors, Secretaries, and Atturneys, which unto this present day bane ferned, and doe ferne in the Supreme Councell of the Indies, from their first Discouerie.

PRESIDENTS.

I Obu Rodriguez of Fonsecs, brother to the Lord of Coca and Alacjos, Archbishop of Refane, and Buhop of Burges, being Deane of Simil, governed that which appertayned to the dispatching of the Fleets and Armies of the /#dies, till the Catholike King Don Fernando V. called him, to the end that in his Court hee might take charge of the Indian affaires, and he did it till the Emperor came to reigne, which commanded that the Doctor Mercurino Gatiwere his great Chancellor, should be Superintendent of all the Councels, and all the dispatches paffed through his hands, and intermedled in all the Atlembles that were made.

Friar Garcia of Loay fa Generall of the Order of Saint Dommicke, the Emperours Confeffor, B.shop of Ofma, which was Archbishop of Singland Cardinall.

Don Garcia Maurique, Earle of Oforno, which being Affiltant of Sinil, did gonerne till the Cardinall came from Rome.

Don Lewis Hurtade of Mendoça, Marques of Mondeier, which after was Prefident of the Royall and supreme Councell of Castile.

The Licensiate Den Franciscus Telle of Sandonal, which having beene of the Councell of the Indies, went for President of the Royall. Chancerie of Granada, and from thence came to governe in the Councell of Indies.

The Licenciate Don Iohn Sarmiento was alfo of the Councell of the Indees, and after went to governe in the Royal Chancerie of Granada. from whence he returned to be Prefident of the Royall and supreme Councell of the Indies.

Lewis Quixada, Lord of Villagarcia, and of the Councell of Warre.

The Licenciate Iohn of Obando, of the fupreme Councell of the holy Inquisition, did prefide in the Councell of the Indies, and of the goods Royall.

The Licenciate Don Ansonio de Padella, of the Royal and supreme Counsell of Castale, pasfed to be Prefident of the Councell of the Orders, and after to the supreme Councell of the

The Licenciate Hernando of Vega and Fonfees, of the supreme Councell of the holy and generall Inquisition, passed to the Councell of the goods Royall, and from it to the Royall and supreme Councell of the Indies.

Lib.t. cap.s.

Any in Europe demand, of what forme and falhion Heaven is in the Southern parts for that there is no certaintie found in ancient Books, who although the grant there is a Lieuven of this other part of the World, yet come they not on any knowledge of the forme of hereof, although in much they make mention of a goodly great Statute Logies in Hospic garts, which shey call Graspus. Those which of Jacc Layes, have fayed into these parts, have accustomed to write strange

things of this Heauen; that it is very bright, having many goodly Starres : and in effect, things which come fure, are commonly described with encrease. But it seemes contrarie vinto me, holding i for certains, sign in our Region of the North, there is a greater number and higger than indiging that the state of The ignosant impose this crosse to hat the Southerne Pole, for that they see the Naugators take their heigh shareby, as were are accustomed to doe by the Northstarre. But they are deceived, to their high finerty, as wer are accurations to one of our newspanners. Our cuty are continue, and displacing, why wayles done in in this fort, is for that in the South parts after is no fined flarre that markes the Pole, as the Nighth flarre done to our Pole. And therefore they take their height by the flarre at the foote of the Croffle, dishare from the true and fixed Pole Antarticle height by the flarre at the foote of the Croffle, dishare from the true and fixed Pole Antarticle height great, at the North flarre is dishare from the Pole Antarticle three degrees or luttle more And for its more difficult to take the height in those parts, for share the faid flarres the foote of the first more difficult to take the height in those parts, for share the faid flarres the foote of the Croff mult be right, the which chanceth but in one houre of the night; which is in duers Teafons of the yeere in divers hours, and oftentimes it appeareth not in the whole night, fo as it is very difficult to take the height. And therefore the most expert Ellots regard not the Cross, taking the height of the Sunne by the Astrolabe, by which they know in what height they are: wherein commonly the Peringali are more expert, as a Nation that hath more shiftourie in the to Arte of Natigation then any other. There are all on the flares in chele Southerne parts, which in tome fort relemble those of the North. That which they call the Millen way, is larger and more resplendent in the South parts , appearing therein those admirable blacke spots , whereof we have made mention.

canfeth greateft quantitie of waters when it is fartheft off; and con-

Via lettea:

Confidering with my felte oftentimes, what thould caufe the Equinocial to bee fo moift, as reason why the I have faid; to refute the opinion of the Anciente, I finde no other reason, but the great force of Sunne without the Sunrie in those parts , whereby it drawes vinto it a great abundance of vapours from out of the Ocean, which in those parts is very great and spacious: and having drawne vnto it this great abundance of vapours, doth suddenly dissolute them into raine, and it is approved by many tried experiences, that the raine and great flormes from Heaven proceed from the violent heate to of the Sunne: first (as we have faid before) it raines in those Countries, when as the Sunne casts his beames directly wpon the earth, at which time he hath most force : but when the Sunne retires, the heate is moderate, and then there falls no raine : whereby wee may conclude, that the force and heate of the Sunne is the cause of raine in those Countries. Moreover we observe both when it is need in Perm, new Spaine, and in all the burning Zone, that the raine doth vitally fal in the afternoone, reft, La. chep. 7. when as the Sunne beames are in their greatest force, being ftrange to fee it raine in the morning." And therefore Trauellers forefeeing it, begin their iourneys early, that they may end and reft before noone, for they hold that commonly it raines after noone. Such as haue trequented and trainfied those Countries, can sufficiently speake thereof. And there are, that (having made some about there are, that the greatest abundance of raine is, when the Moone is at the full; 60 but to fay the truth, I could never make fusicient proofe thereof , although I have observed it. Moreouer, the dayes, the years, and the moueths, the w the truth hereof , that the violent heave of the Sunne caufeth the raine in the burning Zone: experience teacheth vs the like in artificiall things, as in a Limbecke, wherein they draw waters from herbs and flowers; for the vehe-

mency of the fre forceth and driueth vp an abundance of vapours, which being preffed, and finding no iffue, are converted into liquor and water. The like wee fee in gold and filter, which we refine with quick! filter, the fire being small and flow, we draw out almost nothing of the quickfilter, but if it be quick and violent, it doth greatly emporate the quick-filter, which encountring the head aboue, doth prefently turne into liquer, and begins to drop downe : Even to the violent heate of the Sunne produceth thefe two effects, when it findes matter dif poled, that is, to draw wp the vapours on high, and to distolute them prefently, and turne them into raine, when there up the vapours or sign, and the season of the season of the season of the season of the season is any obtacle to confume them. And although their chings feeme constraint; that one Season is within the burning Zone, being neere, should esuferaine, and without the Zone starre off should within the burning Zone, being neere, should esuferaine, and without the Zone starre off should within the summing Zone, being neere, should esuferaine, and without the Zone starre off should within the summing Zone, being neere, should esuferaine, and without the Zone starre off should within the summing Zone, being neere, should esuferaine, and without the Zone starre off should be sufficiently as the summing Zone, being neere, should esuferaine, and without the Zone starre of should be sufficiently as the summing Zone, being neere, should esuferaine, and without the Zone starre of should be sufficiently as the summing Zone, being neere, should esuferaine, and without the Zone starre of should be sufficiently as the summing Zone, being neere, should esuferaine, and without the Zone starre off should be sufficiently as the summing Zone, being neere, should esuferaine, and without the Zone starre of should be sufficiently as the summing Zone. breed the like effect; fo it is, that all well confidered, there is no contrarictie. A thousand ef-

feels in naturall causes proceed of contrarie things by divers meanes: we drie linnen by the fire, and in the aire, and yet the one heats and the other cooles; Passures are dried and hardened by the Somne and with the Frost; moderate exercise prouokes sleepe, being too violent, it hinderetha if you lay no wood on the fire, it dyeth ; if gon lay on too much, it likewife quencheth; for the onely proportion entercaines and makes it to continue. To well discerne a thing, it must not be too neere the eye, nor too farre off, but in a reasonable distance proportionable; being too farre off from any thing we lofe the fight, and too neere likewife we cannot fee it. If the Sunne beams be weake, they draw up no fogge from the Rivers, if they be violent, having drawne up the vapours, they prefently dissolue and confume them; but if the heat be moderate, it drawes up and 20 preferres it : for this reason the vapours rise not commonly in the night, nor at noone, but in the

morning, when as the Sunne begins to enter into his force. There are a thousand examples of naturall causes vpon this lubicet, which wee see doe often grow from contrarie things: whereby we must not wonder, if the Sunne being neere, engenders raine, and being farre off, works the like effect : but being of a moderate and proportionable distance, causeth none at all. Yet there remaines one doubt, why the neernesse of the Sonne caufeth the raine under the burning Zone, and without when it is farthest off. In my opinion the reason is, that in Winter without the Tropicks, the Sunne hath not force & ficient to continue the vapours which rife from the Land and Sea; for these vapours grow in great abundance in the cold Region of the aire, where they are congealed and thickned by the extremitie of the cold; and after being prefled, they diffolio 30 and turne into water. Therefore in Winter when the Sunne is fartheft off, the dayes thort, and

the nights long, his heat hath (mall force: but when the Sunne approcheth, which is in the Summer time, his force is such as it drawes up the vapoors, and suddenly consumes and disperfeth them; for the heat and the length of the dayes grow through the neernelle of the Sunne-But within the Tropicks vnder the burning Zone, the farre diffance of the Sunne workes the fame effects that the neerneffe doth without the Tropicks ; by reason whereof, it raines no more under the burning Zone when the Sunne is farre off, then without the Tropicks when it is neereft, for that in this approching and retyring, the Sunne remayns alwayes in one diffance whence proceedes this effect of cleerneffe. But when the Sunne is in the period of his force in the burning Zone, and that he cast his beames directly upon the Inhabitants heads, there is neither cle er-40 nefie nor dryneffe, as it feemes there should be, but rather great and strange showers : for that by

this violent heat, he drawes up fuddenly a great abundance of vapours from the Earth and Ocean, which are so thicke, as the winde, not able easily to disperse them, they melt into water, which breedeth the cold raine in fo great abundance; for the excessive heat may soone draw vp many vapours, the which are not fo toone diffolued ; and being gathered together through their great abundance, they melt and dissolve into water. The which wee may easily discerne by this familiar example : roaft a piece of Porke, Mutton, or Veale, if the fire be violent, and the meate neere, wee see the fat melts suddenly and drops away, the reason is, that the violent heat drawes forth the humour and fat from the meat, and being in great abundance cannot diffolue it, and fo it diffils more away : But when the fire is moderate, and the meat in an equall distance, wee fee

50 that it roafts handfomly, and the fat drops not too fiddenly, for that the moderate heat drawes out the moifineffe which it confumes fuddenly. And therefore Cookes make a moderate fire, and lay not their meate too neere nor too farre off, lest it melt away. The like may bee seene in anoother experience in candles of tallow or waxe, if the wike bee great, it melts the tallow or the waxe, for that the heat cannot confume the moultnesse which rifeth, but if the flame bee proportionable, the wax melts nor drops not, for that the flame doth waste it by little and little

But this is not to hinder the exceptions which Nature bath given to this Rule, making some Exceptions to Regions of the burning Zone extremely drie. The which is reported of Ethiopia, and wee have general rules. feene it in a great part of Pern, where all that Land or Coaft , which they call Playnes , wants 60 raine, yea, land waters, except some Vallies where Rivers fall from the Mountaines; the reft is a fandie and barren foile, where you shall hardly finde any Springs, but some deepe Wells. But

with the helpe of God, we will shew the reason why it rayneth not in these Playnes (the which many demand;) for now I onely pretend to shew, that there are many exceptions to naturall Rules, whereby it may happen, that in tome part of the burning Zone it raines not when the

Sunne is neerest, but being farthest off, although winto this day I have neither seene nor heard of it : but if it be fo, we must attribute it to the particular qualitie of the Earth aand alfo, if sometimes the contrarie doth chance, we must have regard that in naturall things there happens many contrarieties and lets, whereby they change and diffolue one another. For example, it may be the Sunne will canfe raine, and that the winder will hinder it; or else cause more abundance then liath beene viuill.

When I paffed to the Indies, I will tell what chanced vato mee: having read what Poets and Philosophers write of the borning Zone, I perswaded my selfe, that comming to the Equino-Stiall, I should not indure the violent heate, but ie fell out otherwife ; for when I paffed, which was when the Sunne was there for Zenith, being effered into Aria, in the moneth of March, I 10 felt to great cold, as I was forced to goe into the Simhe to warme me what could I elfedoe then, but laugh at Ariffoiles Meteors and his philosophie, sceing that in that place, and at that season, when as all should be scortched with heat, according to his rules, I, and all my companions were a cold : In truth there is no Region in the world more pleasant and temperate then under the Equinochiall, although it be not in all parts of an equal temperature, but have great diversities. The burning Zone in fome parts is very temperate, as in Quitto, and on the playnes of Perm; in fome parts very cold, as at Potozi, and in some very hot, as in Ethiopia, Brefil, and the Molucquet. tempers of the This diversitie being knowne and certaine vnto vs, wee must of force seeke out another cause of cold and hear then the Sunne beames, seeing that in one season of the yeere, and in places of one height and diftance from the Pole and Equinoctiall we finde fo great divertitie, that some are in- 20 uironed with heat, fome with cold, and others tempered with a moderate heat.

Confidering this matter generally, I finde two generall causes, which maketh this Region

temperate : the one is that before mentioned, for that this Region is very moist and subject to

vnder the Line raine, and there is no doubt but the raine doth refresh it , for that the water is by nature cold; and within the and although by the force of the fire it be made hot, yet doth it temper this heat proceeding one-

ly from the Sunne beames. The which wee fee by experience in the inner Arabia, the which is burnt with the Sunne, having no showres to temper the violence thereof. The cloudes and milts are the cause that the Sunne offends not so much, and the showres that fall from them . refresh both the Aire and the Earth, and moisten likewise how hot soener it be. They drinke raine water, and it quencheth the thirst, as our men have well tried, having no other to drinke. So as 20 realon and experience doth teach vs, that raine of it felfe doth temper the heat; and having by this meanes shewed, that the burning Zone's much subject vato rame, it appeares that there is Second caufe, matter in it, to temper the violence of the heat: To this I will adde an other reason, which deferues to be knowne, not onely for this matter, but for many others; for although the Sunne be very hot and burning under the Equinoctiall, yet is it not long, fo as the heat of the day being there shorter and of lesse continuance; it causeth not so violent a heate; the which it behooses to specific more particularly. Such as are practifed in the knowledge of the Spheare teach very well, that the more the Zodiake is oblique and traueting our Hemisphere, the more vnequall are the dayes and nights; and contrariwife, where the Spheare is ftraight, and the fignes mount directly, there the dayes and nights are equall. And therefore in all that Region 40 which is betweene the two Tropicks, there is leffe inequalitie then without them, and the more wee approch the Line the leffe inequalitie we finde, the which wee haue tried in those parts. Those of Quitto, for that they are vnder the Line, have not throughout the whole yeere the dayes and nights more short at one season then at an other, but are continually equall. Those of Lima being distant almost twelve degrees, finde some difference betwixt the dayes and the nights, but very little, for that in Decomber and Ianuarie the dayes increase an houre or little leffe. Those of Porozi finde much more difference both in Winter and in Summer, being almost under the Tropicke. But those that line without the Tropicks finde the dayes in Winter shorter and in Summer longer : the more remote they are from the Equinoctiall and come neere the Pole, as wee lee in Germanie and in England, the dayes are longer in Sum- 50 mer then in Italie and in Spaine. It is a thing which the Spheare doch teach , and experience doth plainly shew vs. Wee must adde an other Proposition, which is likewise true and very considerable for all the effects of Nature to understand the persenerance and continuation of the efficient cause to worke and mooue. This presupposed, it any one demand of me, why winder the Equinoctiall Line the heat is not so violent in Summer, as in some other Regions (as in Ande-That there bee loufis in the moneths of July and August ) I will aniwere, that in Andeloufis the dayes are lonother reasons per and the nights shorter; and as the day being hot, inflames and causeth heat; so the nights being cold and moift, give a refreshing. According to the which , at Pers, there is no such great heat, for that the dayes in Summer are not long, nor the nights short; so as the heat of the

ned, which burning Zone

shew, that the day is much tempered by the freshnesse of the night. Being a thing concluded, that the two fore-named properties are common and universall to all the Region of the burning Zone : and yet in the same there are found some places very hot, longst the O. and other exceeding cold : Alio, that the temperature is not there equall in all places, but vnder gean, chep. 11. one climate, one part is hot, another cold, and the third temperate, all at one feafon; wee are

forced to feeke out other reafons, whence this great directive thould proceede in the burning Zone. Discoursing therefore upon this question, I dot finde three apparant and certaine causes. and a fourth more obscure and darke. The apparane and servaine causes bee : The first, is the Ocean : the second, the firmation of the Land and the third, the nature and propertie of many and fundrie windes. Befides there three which I hold for manifest, I believe there is a fourth hidden and leffe apparant, which is the propertie of the fame Land inhabited, and the particular influence of the Heasens. Among the special causes and reasons, I have first placed the Sea , for without doubt, the neernelle thereof doth helpe to remper and coole the heat : for although the Water be falt, yer is it alwayes water, whose nature is cold.

But it wee thall yet fearth more particularly; wee thall not finde in all this Land an equall In temperature of heare, although it bed in equali diffance from the Sea , and in the fame degree, feeing thapin forme parest there is great beine; and in forme very little. Doubtleffe , the cause thereof is, that the one is lower, and therether higher | Which canfeth that the one is hot, and the other colde Le is most icertaine, that the tops of the Mountaines are colder then in the bottome of the Vallice, the which processies; not onely for that the Stittne beames have greater reperculions voon lower places, alchooghe be a great reason; yer there is another, which is, that the Region of the aire is colder when it is farthest from the ground. The cause why the middle Region of the aire is more cold, buth beone shewed before : for that the Region of the aire next to the fierie exhalation, the which (according to Ariffele ) is vpon the Spheare of the aire, repells and thruits backe all thoughd, the which retires it felfe into the middle Region of the aire, by Antiporitafis, as the Philosophers speaker Now, if any one should question with

me in this manner; If it be fa that the sire is hot and moilt , as Arifotle holds, and as we commonly fav; whence then proceedes the rold which is congealed in the middle Region of the aire, feeing it cannot come from the fierie Spheare ! Porif it come from the Water, or the Earth , by wift to this reason the lower Region of the aire should be colder then the middle.

To answere truly what I shinke, I will confess, that this Argument and Objection is so difficult, as I am almost readie to follow the opinion of fuels as reproue the qualities , agreements and difagreements, which a Authorie ginds visto the Elements, laying, they are but imaginations, who for this occasion hold the aire to bee dold by nature. And to this end they vie many arguments and reasons, whereas we will proposed one very familiar and well knowne, leaving the 30 reft apart. In the Canicular dayes we are accultomed to beartiche aire with a fan , and wee hinde

that it dotto refresh ve; so as ahese Authors, affirme, that heave is no private propertie of any other Element, but of fire onely, which is differed and mingled with all things (as the great Do- Dien), ers, de doth teach vs.) But whether it be fo, crotherwife (for I will not contradict Aristotle, but in eathers); that which is most certaine) in the end they signee all, that the middle Region of the aire is colder then the lowest next to the Earth, as experience doth snew vs; seeing that in this middle Region are congealed, Snow, Haile, Frosts, and other signes of extreme cold. The middle Region then which they call the burning Zone, having on the one fide the Sea, and on the other the

Mountaines, we must hold them for sufficient causes to temper and coole the heate.

The temperature of this Region ought chiefly to be attributed to the propertie of the winde Thus she cold that blowes in that Country; the which is pleasane and fresh. The providence of the great God winder bee the Creator of all things hath beene fuch, as he hath ordayned fresh and coole windes in that Region to make the where the Sunne makes his course ( which seemes should be burnt up ) that by their coolenesse burning Zone the excessive heate of the Sunne might be qualified. Wee see in one climate, some Regions and temperate. Cities hotter then others, onely for that they feele leffe winde to refresh them. The like is in Chap.13. other Countries where no winde blowes, the which are all on fire like vato a furnace. If we thall le is dotted by neerly looke into the confideration of the winde, whereof we have spoken, we may refelire many doubts which fome object, and which feeme strange and wonderfull : wherefore the Sunne winds fames at casting his beames upon the burning Zone; and particularly at Pers, and that more violently times near then in Spaine in the Canicular dayes, yearhey defend the heat with a light covering, fo as with Balfore and Orthen in Spage in the Cantoniar payer, yes they determ the heat with a fight courting, in as with "mis will a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting of mats or itraw, they are better preferred from the heate, then in Spage was "mis will be a flender courting the mis will be a fl

der a roote of wood, or a vault of stone. Moreouer, why are not the nights in Summer at Perm mens b as hot and troublesome as in Spaine? Wherefore on the highest cops of Mountaines, even amongst and sude the heapes of inowe, you hall formetimes facle great and insupportable heat ? Wherefore in all kinden, Lathe Prounce of Coles, when yee come into the hade, now little focuer, you feele cold i Bue febier oblem the Promince of Color, when yee come into the hade, now little localer, you receive the at Garthe wind comming into the Sunne beames, you prefently finde the heate excellent. Enery morning the to blow median winde from the Sea doth ceale, and the Sunne begins to east his beames; and for this region they bours from feele the greatest heat in the morning, vntill the returns of the same winder, which otherwise the Sei, and they call the tyde or winde of the Sea, which makes them first to feele cold. Wee home crieffall other twelve 6c this , whileft wee were at the Ilands of Birlanante , where in the mornings weed id sweat for confiant heat, and at noone we felta fresh aire ; for that then, a North Easterly winde which is fresh and

coole, doth commonly blow. Considering with my felfe, the pleasing temperature of many Countries at the Indet, where Temper of the they know not what Winter is , which by his cold doth freeze them , not Summer which Joth Indies

trouble them with hear, but that with a Mat they presente themselves from the interies of all weather, and where they fearce have any neede to change their garments throughout the veere-I say, that often confidering of this, I find that if men at this day would vanquill their passions. and free themselves from the saires of couetousnesse, leaving many truitlesse and permitions deand the remainer from the survey. It is at the fulles very pleatant and happily for that whichous on the rocts fing of the Elifam fields & of the funous Tomps, or that which Pimperports or frigure of his Atlantic lland; mentiould finde in the Elifam, if with a generous fpirit they would choose rather to command their filter and their defires, then to remayine to it flaues as they are.

Haung discoursed in the two former Bookes of that which converses the Heauths, and the habitation of the Indies 'in generall, it behoopes we now to treat of the three elements, Aire, and ces properties and sentence and cause in Water, and Land, and their compounds, which be metals, plants and beafts; for, as for the fire, generall dist. I fee no special matter at the Indies which is not in other Regions; whies se forms will dist, that the manner to firike fire in rubbing two ftones one against another, as fome Indian ele, orto boile any thing in gourds, cafting a burning stone into it, se other such like things, are remarkable, to present te- whereof I have written what might bee spoken. But of those which are in the Pulsant and diousnesse cur Mouthes of fire at the Indies, worthy doubtlesse to be observed, I will speake in their order, trestine of the discritte of grounds, whereas they finde thefe fires or Valeans. Therefore to begin with the windes, I fay, that with good reaford, Salomer in the great indgement which God had fronting in with the winder, 1393, start with good reasons, more a to be a seen suggested winder and has the two former given him, offeness much the knowledge of the winder; and their properties being very admit bootes, sales rable; for that some are moift, others die; some yawholkome, others sound; some hot, others and uing handled cold; fome calme and pleafant, others rough and tempefluous; some barren, and others fertile with infinite other differences. There are some windes which blow in certaine Regions, and are Pilgrimage L8. as it were, Lords thereof, not admitting any entrie or communication of their contraries. In thewedwhence fome parts they blow in that fort, as fometimes they are Conquerors, fomtimes conquered; ofmen and beatls ten there are divers and contrarie windes, which doe minne together at one instant, dividing the way betwire them, fomtimes one blowing about of one fort, and another below of an other forts fomtimes they incounter violently one with another, which puts them at Sea in great danger; there are fome windes which helpe to the generation of Creatures, and others that hinder and on of the worlds value opposite. There is a certaine winde, of such a qualitie, as when it blowes in some Countrie. it cauleth it to raine Fleas, and in fo great abundance, as they trouble and darken the sire, and co. 39 uer all the Sea-shoare : and in other places it raines Frogs. These diversities and others which are fufficiently knowne, are commonly attributed to the place by the which thefe winder paffe. For they fav, that from these places they take their qualities to be cold, boe, drie, or meift, fickly or found, and fo of the rest, the which is parely true, and cannot be denyed; for that in a small distance you shall see in one winde many diversities. For example, the Selange or Easterne winde is commonly hot and troublefome in Spann; and in Marrie it is the cooleft and healthfulleft that is, for that it passeth by the Orchards, and that large charapaine which wee fee very fresh. In Carbagew which is not farre from thence, the same winde is troublesome and viewholsome. The first course of Meridionall (which they of the Ocean call South , and those of the Mediterranean Sea , Meze giorno) commonly is raynie and boy flerous, and in the fame Citie whereof I fpeake, it is whole, 40 iome and pleasant. Plane reports that in Africke it raines with a Northerne winde, and that the Southerne winde is cleere. He then that thall well confider what I have fooken of thefe windes. he may conceine, that in a small diffance of Land or Sea, one winds hash many and divers qualiries, yea fometimes quite contrarie; whereby wee may inferre, this hee draweth his propertie from the place where it passeth, the which is in such fort true (although we may not fay infallibly) as it is the onely and principall cause of the discritise of the winder. It is a thing we eafily find there and forcer that in a River contaying fiftie leagues in circuit (I put it thus for an example) that the winder for many life: which blowes of the one part, is hot and moift; and that which blowes on the other, is cold and drie. Notwithstanding this describin is not found in places by which it paffeth, the which makes me rather to fay, that the windes bring these qualities with them, whereby they give vnto them the names of their qualities. For example, we attribute to the Northerne winds otherwile called Cierce, the propertie to be cold and drie, and to diffolue mifes; to the Southerne winde his contrarie, called Lenefebe, we attribute the contrarie qualitie, which is moift and hot, and ingenders milks. But it is needfull to feeke further, to know the true and originall cause of these so trange differences which we fee in the windes. I cannot conceine any other, but that the fime efficient cause which bringeth forth and maketh the winds to grow, doth withell gine them this original qualitie : for in truth, the matter whereon the winds are made, which is no other thing (accombing to Arifotle) but the exhibition of the interior Elements, may well clinie in effect a (accompany) of the district, and the many party group, more limited, more drie, and more most, But yet this is no pertinent reason, seeing that we see in one driggion, where the vapours and exhalations so are of me fort and qualitie, that there nile windes and effects quite contrarie. We must therefore

der co the Authour himfelfe, Occasionally our notestipall clusistate those things also, which are in the Test omitted. \* Paleira sea of the See full fluorence carrie whose for its clusion of the See full fluorence carrie whose for its clusion. us earth whence fire iffueth. Generall winder. Montons. Windes receive their qualities from the

referre the cause to the higher and celestiall Efficient, which must be the Sunne, and to the motion and influence of the Heauens, the which by their contrarie motions, giue and cause diuers influences. But the beginnings of these motions and influences are so obscure and hidden from men, and on the other part, fo mightie and of fo great force, as the holy Prophet Desid in his propheticall Spirit, and the Prophet Ieremie aunthring the greatnesse of the Lord, speake thus, Qui profert ventor de thefauru fait. Hee that drawes the windes out of his Treatures. In truth Pfalme 134. there principles and beginnings are rich and hidden treasures: for the Author of all things holds leaves to. them in his hand, and in his power; and when it pleaseth him, sendeth them forth for the good or chastistement of men, and tends forth such windes as he pleateth : not as that Eolus whom the to Poets doe foolishly feigne to have charge of the windes, keeping them in a Caue like vnto wilde beads. We see not the beginning of these windes, neither doe we know how long they shall con-

tinue, or whither they shall goe. But wee see and know well the discrete effects and operations they have, even as the supreme Truth, the Author of all things bath taught vs , saying , Sprine whi walt first, & vocem cim andis, & nefeis unde vent, ant que vadet.

It is true, that the Northerne winde is not viually cold and cleere there as here. In some parts of Pers., as at Lima, and on the Playnes, they finde the Northerne windes troublefome and vnwhollome, and all along the Coast which runnes about fine hundred leagues, they hold the Southerne windes for healthfull and coole, and (which is more) most cleere and pleasant; yea it nener raines, contrarie to that wee fee in Europe, and of this file the Line. Yet that which chan-20 ceth voon the coaft of Pers is no generall rule, but rather an exception, and a wonder of Nature, the wed the neuer to raine vpon that coaft, and euer to haue one winde, without gluing place to his contra-

rie, whereof we will hereafter speake our minde. It is no generall rule there, that the Northerne me, whether we make there, as the South winde is on this fide; but contrariwife, it winds connines when as the South winde blowes there, as wee fee in all the Sierre or mountaine of Pers. flacey and in Chile, and in the Countrie of Cange, which is on the other fide of the Line, and farre advanced raines ranises into the Sea. And in Potozi likewite, the winde which they call Tomahani (which is our North) if my memorie faile me not, is extremely cold, drie, and unpleafant, as it is here with vs. Yet doth not the Northerne winde difperfe the cloudes viually there, as it doth here : but contrariwife, if I be not deceived, it doth often cause raine. There is no doubt, but the windes doe bor-30 row this great disertitie of contrarie effects, from the places by which they paffe, and the neere Regions where they are bred, as wee fee by daily experience in a thouland places. But speaking

in generall of the qualitie of the windes, we must rather looke to the coasts or parts of the World from whence they proceede, then to observe, whether they be on this side or beyond the Line, as is feemes the Philosopher held opinion. These capitall windes, which be the East and West, have no fuch valuerfall qualities, nor fo common in this Continent, nor in the other, as the two former. The Solumes or Easterne winds, is commonly here troublefome and vnwholfome, and the Westerne or Zephirm, 1s more milde and healthfull. At the Indies, and in all the burning Zone. the Easterne winde which they call Brife , is contratiwise very healthfull and pleasant. Of the West. I cannot speake any thing certaine or generall, for that it blowes not at all, or very seldom West, 1 cames speak any state and the natigation betwixt the two Tropicks, the Easterne winde is rainethbe-

ordinarie. And for that it is one of the admirable workes of Nature, it shall bee good to under-twist the Tro-The wayes at Sea are not as at Land, to returne the same way they passe. It is all one way That the bar-

fland the cause and the beginning thereof.

(faith the Philosopher) from Athens to Thebes, and from Thebes to Athens; but it is not foat ning Zone, the Sea, for wee goe one way and returne by another. The first which discoursed the East and West flerly windes, Indees, laboured much with great difficultie to finde out their courfe, wntill that Experience (the docominual Mittrelle of these fecrets) had taught them, that to faile through the Ocean , is not like the pal- ly blow, and fage in Isabe, through the Mediterranean Sea, where in their returne, they observe the lame Ports without the fage in Italia, through the Mediterranean Sea, where in their returns, they conclude the latter Police Zone the Weather and Capes they had fight of in their paffage, attending full the benefit of the winde, which chan-flerne, and that 30 geth instantly, and when that failes, they have recourie to their Oares; and to the Gallies goe the Easterly and come daily, osafting along the shoare. In some parts of the Ocean, they may not looke for areordinarie any other winde then that which blowes, for that commonly it continues long. To conclude, alwayes there. that which is good to goe by, is not fit to returne with : for in the Sea beyond the Tropicke, and within the burning Zone, the Eafterly windes raine continually, not suffering their contraries. in Decade 1. In the which Region there are two strange things, the one is, that in that Zone (being the great lib. 4. cap. 6. teft of the Fue, into the which the World is disided) the Easterly windes ( which they call Bri- They goe one (as) doe reigne, not fuffering the Westerne or Southerne (which they call lower winds) to have way to the Intheir course at any season of the yeere : The other wonder is , that these Easterly windes neuer dies and return cease to blow, and most commonly in places neerest to the Line ( where it seemes that Calmes 60 should be more frequent, being a part of the World, most subject to the heat of the Sunne, but

it is contrarie, for you shall hardly finde any Calmes there, and the winde is cold and continues longer, which hath beene found true in all the Nauigations of the Indies. This is the reason, why the voyage they make from Spaine to the West Indies is shorter, more case, and more affured then the returne to Spaine.

The Fleetes parting from Simil, have more difficultie to passe the Canaries, for that the guile of Tegues or of Mares, is variable, being beaten with divers windes, but having passed the Canaries, they faile with a Westerne winds vntill they come to the burning Zone, where presently they finde an Easterly winde, and so they faile on with full windes, so as they have scant any need to touch their failes in the whole voyage : for this reason they called this great guife, the gulfe of Dames, for the calmnesse and pleasantnesse thereof. Then following their course, they come to the llands of Guadelupe Dominique, Defired, Marigualante, and the rek, which in that place, be as it were, the Suburbs of the Indies. There the Fleetes separate and duide themselves. whereof fome (which goe to new Spame) take to the right hand towards Hifpaniola; and hauing discourred Cape Saint Anthony, they passe vnto Saint lobn Delna, alwayes vling the same 10 Easterly windes. Those for the mayne Land, take the left hand, discouering the high mountaine of Tayrone, then having touched at Carrbagene, they paffe vnto Nombre de Dies, from whence they goe by Land to Panama, and from thence, by the South Sea to Pers. But when the fleetes returne to Spaine, they make their voyage in this fort : The fleete of Pern discouers Cape Saint Anthony, then they enter into the Hamana, which is a goodly Port in the Iland of Cuba. The fleet of new Spaine doth likewise touch at the Hanana, being parted from Vera Craz, or from the Iland of Saint Iohn Delna, the which is not without difficultie, for that commonly Easterly windes blow there, which is a contrarie winde to goe to the Hanana. These fleetes being joyned together for Spaine, they feeke their height without the Tropicks, where prefently they finde Westerly windes, which serue them vitill they come in view of the Acres, or Terceres, and 20 from thence to Simil. So as their voyage in going, is of a small height, not about twentie degrees from the Line, which is within the Tropicks. But the returne is without the Tropicks, in eight and twentie or thirtie degrees of height at the leaft, for that within the Tropicks, the Easterne windes continually blow, the which are fitteft to goe from Spaine to the West Indies, for that their course is from East to West; and without the Tropicks (which is in three and twentie degrees of height) they finde Westerly windes, the which are the more certaine and ordinarie, the farther you are from the Line, and more fit to returne from the ladies; for that they are windes blowing from the South and West, which serve to runne into the East and North.

The like discourse is of the Nauigation made into the South Sea , going from new Spaine or Pers, to the Philippines or China, and returning from the Philippines or China to new Spaine, the 30 which is easie, for that they faile alwayes from East to West, neere the Line, where they finde the Easterly windes to blow in their Poope. In the yeere 1984, there went a thip from Callon in Lima to the Philippines, which fayled two thousand and seven hundred leagues without fight of Land, and the first it discourred, was the Hand of Laffen, where they tooke Port, having performed their voyage in two moneths, without want of winde or any torment, and their course was almost continually vnder the Line; for that from Lina (which is twelve degrees to the South) he came to Manilla, which is as much to the North. The like good fortune had Aluaro de Mandana, when as he went to discouer the Hands of Selomon, for that he had alwayes a full gale, vntill he came within view of these Ilands, the which must bee distant from that place of Pers, from whence hee parted, about a thousand leagues, having runne their course alwayes in one 40 height to the South. The returne is like wnto the voyage from the Indies vnto Spaine : for those which returns from the Philippines or China to Mexico, to the end they may recouse the western windes, they mount a great height, vntill they come right against the Hands of Lapon, and discouering the Caliphornes, they returne by the couft of new Spaine to the Port of Acapuice, from whence they parted. So as it is proued likewise by this Nauigation, that they faile easily from East to Welt, within the Tropicks for that their Bafferly windes doe raine : but returning from West to East, they must seeke the Westerne windes without the Tropicks, in the height of seuen and twentie degrees. The Portuguis proue the like in their Nauigations to the East Indies, although it be in a contrarie courfe.

Cause of the

Let vs now speake of that which toucheth the Question propounded, what should be the rea- 50 fon why under the burning Zone was faile eafily from East to West, and not contrarie : wherein we must presuppose two certaine grounds. The one is, that the motion of the first Moouer, which they call Dimmall, not onely drawes and mooues with him the celeftiall Spheares, which are inferiour vifto him , as wee fee daily in the Sunne, the Moone , and the Starres ; but also the Elements doe participate of this motion, insomuch as they are not hindered. The Earth is not mooned, by reason of her heavinesse, which makes it immoveable, being farre from this first mozor. The Element of water mooues not likewise with this Diurnall motion, for that it is united to the Earth and make one fpheare, so as the Earth keeps it from all circular motion, But the other two Elements of Fire and Aire, are more subtill and neerer the heavenly Regions, so as they participate of their motion, and are driven about eircularly, as the fame celeftial bodies. As for the Fire, without doubt it hath his fpheare (as Aristotle and other Philosophers have held) but for the Aire (which is no point of our fubiect) it is most certaine that it moones with a motion Diernall, which is from East to Welt, which wee see plainly in Comets that moone from the East vnto the West, mounting, descending, and finally turning in the hemispheare in the

fame fort as the Starres move in the firmament; for otherwise these Comets being in the region and sphere of the ayre, whereas they ingender, appeares consum'd. It should be impossible for them to moue circularly, as they doe, if the element of the aire doth not moue with the fame motion that the first motor doth. For these elements being of a burning substance, by reason they thould be fixt, without mouing circularly, if the fphere where they are did not moue; if it be not as we faine, that fome Angell or intellectual Spirit doth walke with the Comet, guiding it cir-lo colarly. In the yeare 1577, appeared that wonderfull Comet (in forme like vnto a feather) from The Comet

the horizon almost to the middest of heaven, and continued from the first of November, vntill 1577. seene the eight of December: I say from the first of November, for although in Spaine it was noated eight dayer but the ninth of November (according to the testimonie of Writers of that time) yet at Pers, fooner in Pers where I was then, I remember well, we did fee it, and obierue it eight dayes before, and all the time after. Touching the cause of this discritie, some may delate vpon it particularly: I will onely thew, that during those fortie dayes which it continued, wee all observed (both such as were in Spaine, and we that lived then at the Indies) that it moved daily with an vniverfall motion, from Eaft to Weft, as the Moone and other Planets, whereby it appeares that the Sphere of the aire, being its Region, the element it felfe muft of necessitie moue after the same fort. We noted alfo, that besides this vinueriall motion, it had another particular, by which it moved with the planets from West to East, for euery night it turned more Eastward, like vitto the Moone, Sunne, and Planets of Venus. We did also observe a third particular motion, whereby it moved 20 from the Zodiacke towards the North; for after some nights it was found never vote the Septentrionall lignes. And it may be this was the reason why the great Comet was somer feene by

thole that were Southerly, as at Fern, and later discoursed by them of Emple: for by this third motion (as I haue faid) it approached neerer the Northerne Regions. Yet every one may well obferue the differences of this motion, to as we may well perceive, that many and fundry celeftiall bodies, give their impressions to the sphere of the ayre. In like fort it is most certaine, that the avre moues with the circular motion of the heaven, from East to West, which is the first ground before mentioned. The second is no lesse certaine, which is, that the motion of the syre in those 20 parts that are vader the Line, or neere vato it, is very swift and light, the more it approacheth

to the Equinoctiall; but the farther off it is from the Line, approaching neers the Poles, the more flow and heavis this motion is. The reason hereof is manifest, for that the mount of the celeftiall bodies, being the efficient cause of the mouing of the ayre, it must of necessitie be mote quicke and light, where the celeficall bodies have their swiftest motion.

Alon (o Sanches was of opinion that this motion of the ayre was not a winde, but the ayre moned by the Sunne. This is learnedly spoken, yet can wee not deny it to be a winde, seeing The Brize for there are vapours and exhalations of the Sea; and that we sometimes see the Brise, or Easterly motion of the windes thronger, fometimes more weake, and placed in that fort, as fometimes they can hardly air with the carry all their tayles. We must then know (and it is true) that the agre moved, draweth vnto it heavens) is a the vapours it findes, for that the force is great, and findes no refiftance, by reafon whereof the winde. Easterne and Westerne windes are continual, and in a manner alwayes alike, in those parts which 40 are neere the Line, and almost vader all the burning Zone, which is the course the Sun followes

betwixt the two circles of Cancer and Capricorne. Who so would neerely looke into what hath bin spoken, may likewife whiterstand, that going the Zone, is a from the West to the East, in altitude beyond the Tropikes, we shall finde Westerne windes, for that the motion of the Equinoctiall being fo fwift, it is a cause that the ayre moueth wnder it tude me finde according to this motion, which is from the East to West, drawing after it the vapours and alexander exhalations that rife of either fide the Equinoctiall or burning Zone, in countring the course and first winders motion of the Zone, are forced by the repercussion to returne almost to the contrary, whence grow the South-west windes so ordinary in those parts. Euen as we see in the course of waters, the which if they be incountred by others of more force) returne in a manner backe: So it feemes 50 to be like in vapours and exhalations, whereby it growes that the windes doe turne and fepa-

rate themselues from one part to another. These Westerly windes doe commonly raine in a meane altitude, which is from twenty and leuen to thirty and feuen degrees, though they be not fo certaine nor foregular as the Brifes that are in a left altitude. The reason is, for that the South-west winds are no causes of this proper and equal motion of the heaven, as the Brifer are, being neere to the Line. But (as I have faid) they are more ordinary, and often more furious and tempestuous. But passing into a greater altitude, as of fortie degrees, there is as small assurance of Ofthe excepwindes at Sea as at Land; for sometimes the East or North winde blowes, and sometimes the tions to the South, or West: whereby it happeneth their nauigations are more vacertaine, and more foresaid Rules

That which we have spoken of windes, which blow ordinarily within and without the Zone, both at Land must be understood of the maine Sea; and in the great gulphes; for at land it is otherwise, where and at Sea. we finde all forts of windes, by reason of the inequalitie which is betwixt the Mountaines and Chap. 8. the vallies; the great number of Rivers and Lakes, and the divers feituations of Countries, Caufe of the whence the groffe and thick vapours arife, which are moved from the one part or the other, ac winders

cording to the diversitie of their beginnings, which cause these divers windes the motion of the

ayre, caused by the heaten, hatting not power enough to draw and moue them with it. And

this varietie of winder is not onely found at land, but also you the Sea coast, which is under the burning Zone, for that there be forraine or land windes which come from the land, and many which blow from the Sea; the which windes from the Sea, are commonly more wholefome and more pleasant then those of the land, which are contrariwise troublesome and vn wholesome. although it be the difference of the coast that causeth this diversitie : commonly the land windes blow from mid-night to the Sunne rifing, and the Sea windes vntill Sunne fetting. The reason perhaps may be, that the earth, as a groffe fubitance, fumes more when as the Sunne thines not vpon it , euen as greene wood, or fearfe dry, imoakes most when the slame is quenched. But 10 the Sea, which is compounded of more fubtile parts, engenders no fumes, but when it is hot. euen as straw or haie, being moist and in small quantitie, breedes smoake when it is burnt, and when the flame failes, the fume fuddenly cealeth. Whatfoeuer it be, it is certaine that the Land winde blowes by night, and that of the Sea by day. So that even as there are often contrary, violent, and tempe fluous windes vpon the Sea coaft, fo doe we fee very great calmes. Some men of great experience report, that having failed many great passages at Sea under the Line, wet did they never fee any calmes, but that they alwayes make way little or much, the ayre being moued by the celestiall motion, which is sufficient to guide a Shippe, blowing in poope, as it doth. I have already said, that a Shippe of Lima going to Marilla, sailed two thousand seven hundred leagues, alwayes under the Line, or not about twelve degrees from it, and that in the moneths of February and March, when as the Sunne is there for Zenith, and in all this space they 20 found no calmes, but alwayes a fresh gale, so as in two moneths they performed this great voyage. But in the burning Zone and without it, you shall viually see great calmes upon the coasts. where the vapours come from the Ilands, or maine land. And therefore stormes and tempests, and the fudden motions of the ayre, are more certaine and ordinary upon the coasts, whereas the vapours come from the Land, then in full Sea, I meane vnder the burning Zone, for without it and at Sea, there are both calmes and whirlewindes. Notwithstanding, sometimes betwixt the two Tropickes, yea, vnder the Line, you shall have great raine and sudden showers, weafarre into the Sea; for the working whereof, the vapours and exhalations of the Sea, are fufficient, which moving fometimeshaftily in the ayre, cause thunder and whirlewindes, but 30 this is more ordinary neere to the Land and vpon the Land. When I failed from Pers to new Spaine, I observed, that all the time we were voon the coast of Pers, our voyage was (as it was ordinary) very calme and easie, by reason of the Southerne winde that blowes, having alwayes a fore winde, returning from Spaine and new Spaine. As we passed the gulph, lanching farther into the Sea, almost wader the Line, wee found the seaion coole, quiet, and pleasant, with a full winde, but comming neere to Nicaragna, and to all that coast, wee had contrary windes, with great store of raine and fogges. All this Nauigation was vnder the burning Zone: for from twelue degrees to the South, which is Lima, we failed to the seuenteenth, which is Gautulce, a port of new Spaine and I believe, that fuch as have observed their navigations, made under the burning Zone, shall finde what I have said, which may suffice for the windes which raigne 40 at Sea, under the burning Zone.

uellous effects of the winder, which are in killed wich South-weft windes. Iotz 4. Ofte 13. Dan.3. The like Linf. ueth in the

Sea fickneffe

It were a very difficult matter, to report particularly the admirable effects which fome windes capfe in diners regions of the world, and to give a reason thereof. There are windes, which naturally trouble the water of the Sea, and makes it greene and blacke, others cleere as Christall, fome comfort and make glad, others trouble and breede heauinesse. Such as nourish Silke-wormes, have great care to flut their windowes, when as the South-west windes doe blow, and to open them to the contrary : having found by certaine experience, that their wormes diminish and dve with the one, and fatten and become better with the other : and who so will neerely obferue it, thall finde in himfelfe, that the divertities of windes, cause notable impressions and changes in the body, principally in ficke parts and ill disposed, when they are most tender and 50 Exaction 14. weake. The holy Scripture calleth one aburning winde, another, a winde full of dewe and fweetneffe. And it is no wonder if we lee luch norable effects of the winde, in Plants, Beafts, and Men, feeing that we fee it visibly in Iron, which is the hardest of all mettals. I have seene Grates of Iron in some parts of the Indies, so rusted and consumed, that pressing it betwixt your fingers, it dissoluted into powder, as if it had beene hay or parched straw, the which proceedes onely from the winde which doth corrupt it, having no meanes to withstand it. But leauing apart many other great and notable effects, I will onely make mention of two. The one, although it causeth pangs greater then death it felfe, yet doth it not breede any further inconuenience. The other takes away life without feeling of it. The ficknesse of the Sea, wherewith fuch are troubled as first begin to goe to Sea, is a matter very ordinary; and yet if the nature 60 thereof were vnknowne to men, we should take it for the pangs of death, seeing how it afflicts and tormenes while it doth last, by the casting of the stomacke, paine of the head, and other Agitation and troublefone accidents. But in truth this ficknesse for common and ordinary happens vinto men by the change of the ayre and Sea. For although it be true that the motion of the Ship helpes much,

in that it mones more or left: and likewife the infections and ill fauous of things in the Ship; yet the proper and naturall cause, is the agree and the vapours of the Sea, the which doth to weaken and trouble she body and the florache, which are not accultomed thereunto, that they are wonand trasses are accountable, which are not accommon to require the year won-derfully anoued and changed: for the syre is the Element, by which we line hid breath, draw-ing a into our entrailer, she which we bathe therewithall. And therefore there is nothing that foliadenly, and with fo great force doth alter vs, as the change of the ayre we breathe, as we for in those which dygor sie plague. It is approved by many experiences, that the ayer of the Sea, is the chiefe cante of this strange indisposition; the one is, that when there blower from the Sea asthman breath, we fee them so the Land as it were Sea-ficke, as I my felfe hade often 30 found. Anather is, the farther wee goe into the Sea, and fetyre from Land, the said wee at southed and dezeled with this fickness. Another is, that coafting 'abidy any Iland', had after notions are the mains, we thail there finds the aye more thanking into the mains, we thail there finds the aye more frong. Tee will I not dirty, but the suction and against on any case this fiducation from that we fee form my taken there with plaffing motion and against on any case this fiducation. motion immagination may came tune manners term can we set to one are caren the rewning painting.

Riners in Barkes: others in like fort going in Couche and Carotches, according to the diores complexious of the Scenarius: as contrarrante, there are found how boilthroun and troubletone focuer the Seabe, doe never reele it. Wherefore it is a matter certaine, and tried, that the ayre of the Sea, doth commonly cause this effect in such as newly goe to Sen. I thought good to speake this, to haw a ftrange effect, which happens in fome parts of the falle, where the syre and the wande that raigns makes men dazle, not leffe, but more then at Sea. Some hold is for a fable, o-

wante time and addition feet my part I will speake what I have tried.

20 there say it is an addition feet my part I will speake what I have tried.

There is no Parts, a high mountains which they call Parkages, soil having heard speake of the Strangepall. alteration othered, I were as well prepared as I could, according to the instructions which was on at Parisage siteration to real, 1 white as were prepared as a count, according to the introduces which was a straight ginerime, by fuch as they call Veguiness, or expert men; but not withflanding all my pround-there on, when I came to mount whe degrees, as they called cheft, which is the top of this mountaine, Iwas furdienly furnized with to mortalf and to firange a pang, that I was ready to fall from the

ridge of mountaines is, for the most part, defart, without any Villages or habitations for men, so as you shall caree finde any small Corrages to lodge such as doe putto by night: there are no Beaffs, good or bad, but fome Vicames, which are their Countrie Muctons; and haue a ftrange and wonderfull property, as I thall thew in his place. The Graffe is often burnt, and all blacke with Great Defirte the ayre, and this Defart runs fine and twenty or thirty leagues ouerthwart, and in length about fine hundred leagues.

Punas ayre killing.

There are other Defarts or places inhabited, which at Pers they call Perse (Speaking of the fecond point we promifed) where the qualitie of the ayre cutteth off mans life without feeling. In former time the Spaniards went from Pern, to the Realme of Chille by this Mountaine. but at this day, they doe passe commonly by Seasand sometimes alongst the side of it. And though so the way be abortous and troublefome, yet is there, not so great tanger as by the Mountaine, where there are Plaines, on the which many men have periffied and dyrad, and formstimes have scaped by great hap, whereof some haue remained lame, There runs a small breath, which is not very fitting por violent, but proceeds in fuch fore, that men full downe dead, in a mainter with-our feeling, or at the leaft, they toofe their feete and bands; the which may feeme fabulous, yet Strange Story, is it most true. I have knowne and frequented long the Generall Iwome Coffile, the aurocent peoplet of ("see, who had lost ti ree or four e toes, which fell off in passing the Defart of Chile, being persisted with this ayee, and when he came to looke on them, they were dead, and fell off without any paine, euen as a rotten Apple falleth from the tree. This Captaine reported, that of a good armie which he had conducted by that place, is, the former yeares, fince the difcourry of this Kingdome by Almegre, a greet part of the men semained dead there, whose bodies he found lying in the Delart, without any thinke or corruption; adding thereunto one thing very strange, that they found a yong Boye alue, and being examined how hee had fined in that place, the fail, that he lay indee in a large grain, whence her came to cur the fell of a dead Horie with a little Knife, and thus had be nounthed himselfe a long time, with I know not how Hoffe with a little Knife, and thus had be nounthed himselfee a long zines, with I know not how many companions that liqued in that for him one they some all these, one dying this day, & another properties of the properties of the control of the

mong all waters the Ocean is the principall, by which the lader have beene discous-ted, and are injureded therewith, for either they be Hands of the Ocean Segar maine Land, the which whereforem it ends, is bounded with this Ocean. To this day they Haue not discourred at the Indias any Mediterranean Sea, as in Europe, Afia, and Affrica, into the which there enters forecarme of this great Sea, and makes diffunct Seas , taking their names from the Proginces they wash : and almost all the Mediterranean Seas continue and toyon together, and with the Ocsan it lefts, by the firnight of Gibratian, which the Ancients called, the Pillery of Firmatical although the Ancients called the Pillery of Firmatical although the Pillery of Pille the lader we finde not any other Sea then this Ocean, which they divide into two, the one de they call the North Sea, and the other the South; for that the Indies which were first discovered by the Ocean, and reacheth voto Spaine, lies all to the North, and by that Land thereafter discoursed a Sea on the other lide, the which they called the South Sea , for that they decline vntill they have passed the Line; and having lost the North, or Pole-articke, they called it South.

#### CHAP. 2. S. 2. Supposed Streights to the South Sea Ebbing and flowing of the Sea. 929

For this cause they have called all that Ocean tile South Sea, which lyeth on the other lide of the East Indies, although a great part of it be feated to the North, as all the coast of new Spaine. Magrarna, Guatemala and Panama. They fay, that he that first discoursed this Sez, was called Blalcomunes of Bilbe , the which hedid by that part which we now call Maine Land, where it Terra firms. growes narrow; and the two Seas approach to neere the one to the other, that there is but fepen leagues of distance : for alchough they make the way eighteene from Nombre de Dir to Pa. Straightofland men leagues of distance florancough they make the way eighteen thom 2 wing a direct line the but cight league one Sea thall not be found more diffant from the other. Some have discoursed and propounded & South Seas.

to all through this paffage of fluin leagues, and to iny ne one Sea to the other, to make the pal-10 fage from Person more commodious and cafe, for that these eighteene leagues of Land betwint 1852 from testa mil Pasista, in more painetill und chargeable then 2 300: by Sea, whereupon fome would fay, it were a meanes to drowne the Land, one Sea being lower then another. As Handston. in times past we finde it written, that for the fame confideration, they gave ouer the enterprize to winne the red Sea into Nik, in the time of King Seffirk, and fince, in the Empire of the O. shousers. But for my pare, I hold fuch discouries and proportions for vaine, although this moon-lesses, uninence should not happen, the which I will not hold for affured. I believe there is no huminative nowerable to beate, and breake downe those fitting and impenetrable Mountaines, which God hath placed betwixt the two Seas, and hath made them most hard Rockes, to withfland the furie of two Seas. And although it were possible to men, yet in my opinion they should feare 20 punishment from heaven, in feeking to correct the workes, which the Creator by his great pro-

uidence hath ordained and disposed in the framing of this vinuerfall world.

Leauing this discourse of opening the Land, and joyning both Seas together, there is yet another less sain, but very difficult and dangerous to search out. Whether these two great gulfes doe iowne in any other part of the world, which was the enterprize of Fernando Magellan a Portugall Gentleman, whole great courage and constancie in the refearch of this subject, and happy fuccesse in the finding thereof, gaue the name of eternall memory to this straight, which fully they call by the name of the discourer Magellan, of which straight we will intreate a little, asof one of the greatest wonders of the world. Some have believed, that this Straight which Magellan had discoursed in the South Sea, was none, or that it was straightned, as Don

20 Alonfo d'Arfile writes in his Amacane: and at this day there are some that fay, there is no such Experience for Straight, but that they are Hands betwirt the Sea and Land, for that the maine Land ends Draige and there, at the end whereof are all flands, beyond the which the one Sea toynes fully with the Base found other, or to speake better, it is all one Sea. But in truth it is most certaine, there is a straight them no; and a long and ftretched out Land on either fide, although it hath not yet beene knowne how fraights but farre it ftretcheth of the one fide of the ftraight towards the South. After Magellan, a Shippe of broken lland the Bishop of Plaisance passed the Straight, Don Guitteres Carnaial (whose Maste they say is yet to the South, at Lima, at the entrie of the Pallace) they went afterwards coasting along the South, to disconer the Straight, by the commandement of Don Garcia of Mendoca, then Gouernor of Chille, here. according to that which Captaine Ladrillers found it and passed it. I have read the discourse and 40 report he made, where he faieth, that he did not hazard himselse to land in the Straight, but

haning discourred the North Sea, he returned backe, for the roughnesse of the time, winter being now come, which caused the waves comming from the North, to grow great and swelling, Secos this Sir and the Sea continually forming with rage. In our time, Francis Drake an Englishman , passed Francis Drakes this Straight. After him, Captaine Sarmiento paffed it on the South fide. And laftly, in the yeere Voyage.to.1.12 1587. other Englishmen paffed it, by the instruction of Drake, which at this time run along all I have omitthe coaft of Peru.

Euen as Magellan found out this Straight vpon the South, fo some haue pretended to disco- The supposed uer another Straight, which they say is in the North, and suppose it to be in Florida, whose coast Straight in runnes in such fort, as they know no end thereof. Peter Melendez, the Adelantade, a man very Florida.

runnes in tuan tota, a diety and the there is a Straight, and that the King had commande expert a sea, a firment for certaine, that there is a Straight, and that the King had commanded to the seasons to prote his and flowing of ded him to discouer it, where in he shewed a great defire; he propounded his reasons to prote his and flowing of opinion, faying, that they have feene fome remainders of Ships in the North Sea, like vnto those the Indian O. the which the Chinois vie, which had beene impossible, if there were no passage from one Sea cean. Chap. 14. vnto another. Moreouer, hee reported, that in a certaine great Bay in Florida (the which runs The Philoso-300. leagues within the Land) they see Whales in some season of the yeare, which come from Phers in Search the other Sea.

One of the most admirable secrets of Nature is the ebbing and slowing of the Sca, not onely for slowing haue this strange property of rising and falling, but much more for the difference there is thereof in easily erred, this strange property of rinng and rating, our mountmore to the difference Seas that have no daily following the divers Seas, yea in divers coasts of one and the same Sea. There are some Seas that have no daily following the 60 flowing nor ebbing, as we fee in the inner Mediterranean, which is the Thyrene Sea, and yet it flowers and obbes enery day in the upper Mediterranean Sea, which is that of Venice, and inftly knew nor the giueth cause of admiration, that these two Seas being Mediterranean, and that of Venice being Ocean, and no greater then the other, yet hath it his ebbing and flowing as the Ocean, and that other Sea could not therof Italie none at all. There are some Mediterranean Seas, that apparantly rise and fall enery fore know the

931

moneth, and others that neither rife in the day, nor in the moneth. There are other Seas, as the Spanift Ocean, that have their flux and reflux every day; and besides that, they have it mos nethly, which commeth twice, that is to fay, at the change, and at the full of enery Moone. which they call Spring-tides. To fay that any Sea hath this daily ebbing and flowing, and not monethly, I know not any. It is strange, the difference we finde of this subject at the Indian; for there are some places whereas the Sea doth daily rise and fall two leagues, as at Parama and at a high water it rifeth much more. There are other places where it doth rife and fallufo little, that hardly can you finde the difference. It is ordinary in the Ocean Sea to have a daily flowing and ebbing, and that was twice in a naturall day, and ever it fals three quarters of an houre fooner one day then another, according to the course of the Moone : fo as the tide fals not 10 alwaies in one houre of the day. Some would fay, that this flux and reflux proceeded from the locall motion of the water of the Sea; to as the water that rifeth on the one lide, fals on the other that is opposite vnto it : so that it is full Sea on the one side when it is a low water on the oppolite, as we see in a Kettle full of water, when we mooue it, when it leanes to the one side the water increaseth, and on the other it diminisheth. Others affirme, that the Sea riseth in all parts at one time, and decreaseth at one instant; as the boyling of a Pot, comming out of the centre it extendeth it felie on all parts, and when it ceaseth, it fals likewise on This fecond opinion is true, and in my judgement, certains and tried, not fo much for the

make. For to fatisfie my telfe vpon this point and question, I demanded particularly of the 20 had gone to

"Hernando A. fard Pilot, how he found the tides in the straight, and if the tides of the South Sea did fall long which when as those of the North did rife. And contrariwise (this question being true) why the inwith Sarmiente crease of the Sea in one place, is the decrease thereof in another, as the first opinion holdeth. He answered that it was not so, but they might see plainely, that the tides of the North and South Seas rife at one instant, fo as the waves of one Sea incountred with the other, and at one instant likewise they began to retire, every one into his Sea, saying, that the rising and falling was daily feene, and that the incounter of the tides (as I have faid) was at threefcore and tenne At the Downes leagues to the North Sea, and thirtie to the South. Whereby we may plainely gather, that the on our coaft ebbing and flowing of the Ocean is no pure locall motion, but rather an alteration t whereby all 30 waters really rife and increase at one instant, and in others, they diminish, as the boyling of a Pot, whereof I have spoken. It were impossible to comprehend this point by experience, if it were not in the Straight, where all the Ocean, both on th'one fide, and on th'other iownes together: other from the for none but Angels can see it, and judge of the opposite parts: for that man hath not so long a fight, nor so nimble and swift footing as were needefull, to transport his eyes from one part to another, in so short a time, as a tide will give him respite, which are onely fix houres.

reasons which the Philosophers give in their Meteors, as for the certaint experience wee may

much varietie. Of fundry F:thers, and of fifbing at the

The Manatia frange fift. The Whales alfobring

There are in the Indian Ocean, an infinite number of fishes, the kindes and properties whereof the Creator onely can declare. There are many fuch as we have in the Sea of Europe, as Shads, and Aloles which come from the Sea into the Rivers; Dorads, Pilchards, and many other, There 40 are others, the like I doe not thinke to have feene in these parts, as those which they doe call Cabrillas, which doe somewhat resemble the Trowt, and in new Spaine they call them Bobos, they mount from the Sea into the Rivers. I have not feene any Befuguer there, nor Trowts, although fome fay there are in Chille. There are Tonins in some parts upon the coast of Peru, but they are rare, and some are of opinion, that at a certaine time they doe cast their spawne in the Straight of Magellan, as they doe in Spaine at the Straight of Gibratar, and for this reason they inde more upon the coast of Chile, although those I have seene there, are not like to them in Spaine. At the Hands (which they call Barlomente) which are Cuba, Saint Dominiche, Port rique, and Iamaique, they finde a fish which they call Manati, a strange kinde of fish, if we may call it fift, a creature which ingenders her yong ones aline, and hath teates, and doth nouriff so them with milke, freding of graffe in the fields, but in effect it lines continually in the water, yong alue, and and therefore they eate it as fish; yet when I did eate of it at Saint Dominique on a friday, I assurish them had some scruple, not for that which is spoken, but for that in colour and taste it was like vnto incredible rauening of the Tiburous, or sharkes, when as I did fee drawne from one (that was taken in the Port) out of his gullet, a Butchers great Knife, a great Iron hooke, and a piece of a Cowes head with one whole horne, neither doe I know if both were there, or no. I did fee in a creeke made with that Sea, a quareer of a horse for pleasure hanging woon a stake, whicher presently came a company of these Tiberens, at the smell thereof: and for the more plealure, this Horfe-flesh was hung in the ayre, I know not how many hand breadth from the wa-60 women. Their ter; this company of fift flocke about it, leaping vp, and with a strange nimble nesse cut of both foode is also fleth and bone off the Horse legge, as if it had beenethe stalke of a lettuce; their teeth being as far words. sharpe as a rasour. There are certaine small fishes they call Rambos, which cleaue to these Tiber ross, neither can they drive them away, and they are fed with that which falles from the

There are other small fishes, which they call flying fishes, the which are found within They have the tropickes, and in no other place, as I thinke: they are purfued by the Dacader, and to escape rough heads them they leape out of the Sea, and goe a good way in the ayre, and for this reason they are called whereby they fixing Fifter: they have wings as it were of linner cloath, or of parchment, which doe support cleave and flying Filter: they have wings as it were of finite relocation to the Ship wherein I went, the which the Shirke. I did fee, and observe the falhion of his wings.

In the Indian Hiltories there is often mention made of Lexards or Caymans (as they call them) which thus are and they are the very fame which Plane and the Auncients call Crocodiles, they finde them on them with their the Sea fide, and in hot Rivers, for in cold Rivers there are none to be found. And therefore they fwift motion 10 finde none vpon all the coalts of Pers vnto Persa, but forward they are commonly feene in the of whole of all finde none vpon all the coaits of rem vice 1 47%, but to the and heavie. Hee goes hunting and also they line. Rivers. It is a most fierce and cruell beast, although it be flow and heavie. Hee goes hunting and Crocodiles. feekes his prey on the Land, and what he takes aline, he drownes it in the water, yet dothle not \*Yet fo as cuer eate it, but out of the water, \* for that his throate is of fuch a falhion, as if there entred any wa- and anon hee ter, he should easily be drowned. It is a wonderfull thing to see a combat betwixt a Caymant dipsit in the and a Tigre, whereof there are most cruell at the Indies. A religious man of our company told water his and a Tigre, whereof there are most cruest at the transfer. As rengious man of our company one to the had feene these beafts fight most cruelly one against the other; when the Sea shoare the tongue being to short, that Caymant with his taile gaue great blowes wnto the Tygre, striuing with his great force to carry o harvise he him into the water : and the Tigre with his pawer relited the Caymant, drawing him to Land. could not water In the end the Tigre vanquished, and opened the Lezard, it seemes by the belly, the which is most low it. 20 tender and penetrable, for in every other part he is so hard, that no Lance, and scarce a harquebuze Tigre hils a can pierce it. The victory which an Indian had of a Caymant was yet more rare : the Caymant Crocodile. had carried away his yong childe, and fodainely plunged into the Sea, the Indian moved with choller, cast himselfe after him, with a knife in his hand , and as they are excellent (wimmers choller, calt numeric area min, where any and divers, and the Caymant swimmeth alwayes on the toppe of the water, hee hurt him in mians explor and citiers, and the Caymant feeling himselfe wounded, went to the shoare, lead on a Crocodile uing the little infant dead. But the combat which the Indians have with Whales is yet more admirable, wherein appeares

the power and greatnesse of the Creator, to give so base a Nation (as be the Indiana) the industrie

and courage to incounter the most fierce and deformed beast in the world, and not onely to fight

30 with him, but also to vanquish him, and not to triumph our him. Considering this, I have often with min, our and to a define a foresting of the While, Drawife quem formalli ad illuden-remember date place of the Plalmes, speaking of the While, Drawife quem formalli ad illuden-dam cass: What greater mockerie can there be, then to fee in Indian leade a Whale as bigge as a Whale killed Mountaine, vanquished with a cord . The manner the Tabalan of Flivida vie (as some expert men by the Sausges have told me) to take these Whales (whereof there is great flore) is, they put themselues into a Canoe, which is like a barke of a tree, and in fwimming approach neere the Whales fide, "then with great dexteritie they leape to his necke, and there they ride as on horfe-back expeding his time, then he thrufts a sharpe and stong stake (which he carries with him) into the Whales nofirill, for fo they call the hole or vent by which they breathe, prefently he beates it in with another stake as forcibly as he can; in the meane space the Whale doth furiously beate the Sea, and 40 raifeth Mountaines of water, running into the deepe with great violence, and sprefently rifeth againe, not knowing what to doe for paine: the Indian full firs firme, and to give him full parmene for this trouble, hee beates another flake into the other vent or nofthrill, foas he stoppeth him quite, and takes away his breathing, then he betakes him to his Canoe, which he holds tied with a cord to the Whales fide, and goes to Land, having first tied his cord to the Whale, the which he lets run with the Whale, who leapes from place to place, whileft he finds water enough: being troubled with paine, in the end he comes neere the Land, and remaines on ground by the hugenesse of his body, viable any more to moue; then a great number of Indians come vinto the Conquerour, to gather his spoiles, they kill him, and cut his flesh in peeces, the which is bad enough : this doe they dry and beate into powder, wing it for meate, it doth last them long : owherein is fulfilled, that which is spoken in another Plalme of the Whale, Dedifti eum efcam pos pulis Ethiopum, Peter Mendez the Adelantade did often speake of this kinde of fifting. Where-

of Monardes makes mention in his Booke. There is another filling which the Indians doe commonly vie in the Sea, the which, although it beleffe, yet is it worthy the report. They make as it were faggots of bul-rulhes or dry fedges well bound together, which they call Balfat: having carried them vpon their shoulders to the Sea, they call them in, and presently leape upon them: being so set, they lanch out into the deepe, rowing vp and downe with small reedes of either side : they goe a league or two into the Seato fish, carrying with them their cords and nets upon these faggots, and beare themselves thereon. They call our their nets, and doethere semaine filhing the greatest part of the day 60 and night, vntill they have filled up their measure, with the which they returne well fatisfied. Truely it was delightfull to fee them fish at Callas of Lima, for that they were many in number, and every one fet on horie-backe, cutting the waves of the S:a, which in their place of filhing are great and furious, resembling the Tritons or Neptunes, which they paint vpon the water, and being come to Land, they draw their barke out of the water v pon their backes, the which they

presently vndoe, and lay abroad on the shoare to drie. There were other Indian; of the Vallies of Tea, which were accustomed to goe to fish in leather, or skins of Sea-wolues, blowne vp with winde, and from time to time they did blow them like bals of winde, left they flould finke. In the vale of Canete, which in old time they called Guaron, there were a great number of Indian fifthers; but because they relisted the Ingua, when he came to conquer that Land, hee made shew or peace with them, and therefore to reast him, they appointed a solemne fishing of many thoufam. Indians, which went to Sea in their veffels of reeds : at whose returne, the lugua (who had laid many Souldiers in ambush) made a cruell butcherie of them, so as afterward this Land remained vnpeopled, although it be aboundant and fertile. I did fee another manner of fishing, whereunto Don Francis of Toledo the Viceroy did leade me, yet was it not in the Sea, but in a River to which they call great in the Prouince of Charcas, where the Indians Chiragnanas plunged into the water, and iwimming with an admirable swiftnesse, followed the fish , where with darts and hookes (which they vie to carry in their right hand, onely fwimming with the left) they wound the fifth, and fo hurt they brought them forth, feeming in this more like vnto filles then men of the Land. But now that we have left the Sea, let vs come to other kinde of waters that remaine to be spoken of. In place of the Mediterranean Sea, which is in the old world, the Creator hath furnished this

at the Indies. Chap. 16.

new with many Lakes, whereof there are some so great, as they may be properly called Seas, feeing the Scripture calleth that of Palefina fo, which is not fo great as some of these. The most famous is that of Titicaca, which is at Pern, in the Province of Callao, the which as I have faid in 20 the former booke, containes neere fourescore leagues in compasse, into the which there runs ten or twelve great Rivers. A while tince, they began to faile in it with Barkes and Ships, wherein they proceeded foill, that the first Ship was split with a tempest that did rife in the Lake. The water is not altogether fower nor falt, as that of the Sea, but it is fo thicke, as it cannot be

drunke. There are two kindes of fishes breede in this Lake in great abundance, the one they call Suches, which is great and fluorous, but phlegmaticke and vn wholefores : and the other Bogos, which is more healthfull, although it be ! He and fuller of bones : there are great numbers of wilde-ducks and Wigens. When as the Indiana will feast it, or shew delight to any one that paffeth along the two bankes, which they call Churuyso and Omajugo, they affemble a great number of Canoes, making a circle and incuroning the fowle, vntill they take with their hands what 30 they please; and they call this manner of filling Choce. On the one and the oster banke of this Lake, arothe best habitations of Pers. From the issue thereof there growes a lefter Lake, although it be great, which they call Paris, woon, the bankes whereof, there are great numbers of

cattell, especially Swine, which grow exceeding far with the graffe vpon those bankes. There are many other Lakes in the high Mountaines, whence proceede Brookes and Rivers, which after become great flouds. Vpon the way from Arequippa to Callas, there are two Lakes, vpon the Mountaines of the one and other fide the way, from the one flowes a brooke, which growes to a floud, and fals into the South Sea; from the other, they fay the famous River of Aporima takes her beginning from the which some hold that the renowned River of Amazons, other wise called Maragness proceedes, with fo great an affembly and abundance of waters, which isyne in these 40 Mountaines. It is a question may be often asked, why there is to many Lakes in the tops of these Mountaines, into the which no river enters, but contrariwile, many great freames illue forth, and yet doe we scarce see these Lakes to diminish any thing at any season of the yeare. To imagine that thefe Lakes grow by the Snow that melts, or raine from heaven, that doth not wholly fatisfie me : for there are many that have not this abundance of Snow, nor raine, and yet wee fee no descrate in them, which makes me to beleeve they are Springs which rife there naturally, al-

though it be not against reason, to thinke that the Snow and raine helpe somewhat in some seafons. These Lakes are so common in the highest tops of the Mountaines, that you shall hardly finde any famous river that takes not his beginning from one of them. Their water is very pleere Great ft rivers and breedes little ftore of fift, and that little is very small, by reason of the cold which is there so flow from

Notwithstanding, some of these Lakes be very hot, which is another wonder. At the end of Hot Lake, and the Vallie of Tarapaya neere to Potozi, there is a Lake in forme round, which feemes to have many wonders beene made by compaffe, whose water is extreamely hot, and yet the Land is very cold : they are accustomed to bathe themselves neere the banke, for elle they cannot endure the heate being farther in. In the midit of this Lake, there is a boiling of above twentie foote square, which is the very Spring, and yet (notwithstanding the greatnesse of this Spring) is is never feene to increase in any fort : it seemes that it exhals of it felse, or that it hath some hidden and wnknowne iffue, neither doe they fee it decrease; which is another wonder, although they have drawne from it a great ftreame, to make certaine engines grinde for mettall, confidering the great 60 quantitie of water that iffueth forth, by reason whereof, it should decrease.

Likes of Mex-

But leaving Porn , and patting to new Spaine, the Lakes there, are no leffe tobe observed; especially that most famous of Mexico, where we finde two forts of waters, one salt Lakelike to that of the Sea, and the other cleere and sweete, by reason of the Rivers that enter into it.

In the midft of this Lake, is a rocke very delightfull and pleafant, where there are bathes of hoe water that iffue forth, the which they greatly elterme for their health. There are Gardens in the middett of this Lake, framed and fleeting wpon the water, where you may fee plots full of a thouland forts of hearbes and flowers, & they are in fuch fort as a man cannot well conceiue them without fight. The Citie of Mexico is leated in the fame Lake, although the Spaniards have filled up the place of the scituation with earth, leaning onely some currents of water, great and fmall, which enter into the Citie, to carrie fuch things as they have neede of, aswood, hearbs, ftone, fruites of the Countrie, and all other things. When Cortez conquered Mexico, hee caufed Brigandins to bemade, yet afterwards he thought it more fafe not to vie them : therefore they vie Caneer, whereof there is great flore. There is great flore of fifth in this Lake, yet have I not feene any of price: notwithstanding, they say the revenue of this Lake, is worth threehundred thousand Duckets a yeere. There are many other Lakes, not farre from this, whence they bring much fift to Mexico. The Prouince of Mechonaces is fo called, for that it aboundeth Reh Lakes greatly with fish. There are goodly and great Lakes, in the which there is much fish, and this Promince is coole and healthfull. There are many other Lakes, whereof it is not possible to make mention, nor to know them in particular, onely wee may note by that which hath beene discoursed in the former Booke, that under the burning Zone there is greater abundance of Lakes.

then in any other part of the world;

There is at the Indies as in other parts of the world, great diversitie of Springs, Fountaines, Ofmany and 30 and Risers, and some have strange properties. In Guancasilles of Pers (where the Mines of Quick-filuer be,) there is a Fountaine that easts forth hot water, and in running, the water Chapter enick-more or,) croce in a common case data outsines water, and in tunning, the water chapty, turnes to rocks, of which rocks or flows, they build in a manner all the houles of the Village, turnes to rocks, of which rocks or flows, they cut it as eafly with Iron as if it were wood, it mentions that the rocks of the is light and lafting. If men or beafts drinke thereof, they dye, for that it congeales in the Scone. very entrailes, and turnes into ftone, and for that cause some Horses have died, As this water turnes into stone, the which flowes, stoppes the passage to the rest; so as of neceffitie it changeth the course, and for this reason it runnes in divers places, as the rocke increaseth, At the point of Cape Saint Helaine, there is a Spring or Fountaine of Pitch, which Fountaine of at Pers, they call Copper. This should be like to that which the Scripture speakes of the faunge Pitch. Valley, where they did finde pits of Pitch. The Marriners vie thefe Fountaines of Pitch or Valley, where they do made pass or rects. I want a ferrues them as Pitch and Tarre in Spaine, 500 ppg 7, to pitch their ropes and tackling, for that it ferrues them as Pitch and Tarre in Spaine, When I failed into new Spaine by the coalt of Pros. the Polic thewed me an Iland, which they When I failed into new Spaine by the coalt of Pros. the Polic thewed me an Iland, which they when I failed into new Spaine by the coalt of Pros. the Polic thewed me an Iland, which they when I failed into new Spaine by the coalt of Pros. the Polic thewed me an Iland, which they were the prosecular to the property of the property of the Pros.

call the Ile of Wolses, where there is another Fountaine or Pit of Coppey or Pitch, with the which they anoint their tackling. There are other Fountaines and Springs of Goultranrozen, which the Pilot (an excellene man in his charge) told me he had feene, and that fometimes failing that wates, being to farre into the Sea, as he had loft the fight of Land, yet did he know by the smell of the Coppey, where he was, as well as if he had knowne the Land; fuch is the fauour that iffues continually from that Fountaine.

At the Bathes, which they call the Bathes of Ingua, there is a course of water, which Cold and hot 40 comes forth all hot and boiling; and ioyning vato it, there is another whose water is as cold Springs togeas Ice. The Ingua was accustomed to temper the one with the other; and it is a wonderfull then thing to fee Springs of fo contrarie qualities, fo neere one to the other. There are an infinite number of other hot Springs, specially in the Province of Charca, in the water whereof, you cannot indute to hold your hand the space of an Ane Maria, as I have seene tried by wager. In a Farme neere to Cufes, springs a Fountaine of Salt, which as it runnes turnes Salt Spring into Salt, very white and exceeding good, the which (if it were in another Countrie) were which yeeldes no fmall riches, yet they make very small account thereof, for the store they have there. The Sal, without waters which runne in Guayaquel, which is in Peru, almost vnder the Equinoctiall Line, are boiling. held to be healthfull for the French difease, and other fuch like, so as they come from many So places fatre off to be cured. And they fay the cause thereof is, for that in that Countrie there

is great aboundance of rootes, which they call Salepareille, the vertue and operation whereof is Pocke pringe To knowne, that it communicates her propertie to the waters wherein it is put to cure this difeafe. Bilcanota is a Mountaine the which (according to common opinion) is in the highest part of Pers, the top whereof is all couered with Snow, and in some places is blacke like coale. There flueth forth of it, two Springs in contrary places, which prefently grow to be very great brooks, and so by little and little become great flouds, the one goes to Calloa, into the great Lake Tucaca; the other goes to the Lands, and is that which they call Tucay, which toyning with another runnes into the North Sea, with a violent and furious courfe. This Spring, when it comes out of Smoak Springs the rocke Bilcanota, as I haue faid, is of the colour of lie, having an affine colour, and cafts a fame as a 60 thing burnt, the which runs far in this fort, vntil the multitude of waters that run into it, quench Inke, &c.

this smoak and fire which it drawes from the Spring. In new Spain I have feene a Spring as it were Ink, somewhat blew, in Perwanother, of color red like blood, where vpon they cal it the redRiver. Of Rivers. Among ft all Rivers, not onely at the Indies, but generally through the world, the River Ma- thep. 18. rageon, or of Amazon, is the chiefe, whereof we have fooken in the former Booke. The Spa. Margine c. H h h h 2

miards have often failed it, pretending to discouer the Lands, which by report are very rich. especially those they call Dorado and Payini, Ican de Salnies, the Adelantade, made a memorable entrie, though of small effect. There is a passage which they call Passe, one of the most dange. rous in all the world; for the River being there straightned, and forced betwixt two high steepe Rocks : the water fals directly downe with fo great a violence, that comming steepe downe, it caufeth fuch a boyling, as it feemeth impossible to passe it without drowning : yet the courage of men durit attempt to passe it, for the desire of this renowmed Dorado : they sipe downe from the top to the bottome, thrust on with the violence and current of the floud, holding themselves fast in their Canoes or barkes : and although in falling they were turned topfie turnie, and both they and their Canoes plunged into the deepe, yet by their care and industrie they recoursed 10 themselues againe; and in this fort the whole armie escaped, except some few that were drow-Galdenthirft, ned. And that which is more admirable, they carried themselves so cunningly, that they neither loft their Powder nor Munition. In their returne (hauing fuffered many croubles and dangers) they were forced, in the end, to passe backe that same way) mounting by one of those high Rocks.

flicking their Ponyards in the Rocke,

Captaine Peter d'Orfus made another entrie by the fame River, who being dead in the fame Voyage, and the Souldiers mutinied; other Captaines followed the enterprise, by an arme that comes into the North Sea. A religious man of our company told vs , that being then a fecular man, he was prefent in a manner at all that enterprise, and that the tides did flow almost a hundred leagues up the River, and whereas it enters into the Sez (the which is under the Line, or 20 very neare) it hath feuenty leagues breadth at the mouth of it, a matter incredible; and which exceeds the breadth of the Mediterranean Sea, though there be some others, who in their descriptions give it but twenty five or thirty leagues breadth at the mouth,

River of Plata. Next to this River that of Plata, or of Silver holds the fecond place, which is otherwife called increasing as Paraguay, which runs from the Mountains of Perm, into the Sea, in thirty fine degrees of altitude to the South : it rifeth (as they fay) like to the Riner of Nile, but much more without companion, and makes the fields it overflowes like vnto a Sea, for the space of three moneths, and after returneth agains to his course, in the which Shippes doe faile many leagues against the streame. There are many other Rivers that are not of that greatnesse, and yet are equall: yea they surpasse the greatest of Europe, as that of Magdalaine, netre to Saint Maribe, called the great River, and 30 that of Alwarado in new Spaine, and an infinite number of others. Of the South fide, on the Mountaines of Perm, the Rivers are not vivally fo great, for that their current is not long, and that many waters cannot ioyne together, but they are very fwift, descending from the Mountaines, and have sodaine fals, by reason whereof they are very dangerous, and many men have perished there. They increase and overflow most in the time of heate. I have gone over twenty and seuen Riuers vpon that coast, yet did I neuer passe any one by a foord, How they passe The Indians vie a thousand densies to passe their Rivers. In some places they have a long cord

that runnes from one fide to th'other, and thereon hangs a basket, into the which he puts him felfe

that meanes to paffe; and then they draw it from the banke with another cord, so as he paffeth in this basket. In other places the Indian paffeth, as it were on Horfe-backe, vpon a bottle of 40 straw, and behinde him he that defires to palle; and so rowing with a peece of a boord, carries him ouer. In other places they make a floate of gourds or pompions, upon which they fet men with their fluffe to carry ouer, and the Indians having cords fastned to them, goe swimming before, and draw this floate of pompions after them, as Horfes doe a Coach; others goe behinde thrusting it forward. Hauing paffed, they take their barke of pompions upon their backe, and returne Swimming : this they doe in the River of Saint at Pern, We passed that of Almarado in new Spain wpon a table, which the Indians carried wpon their shoulders, and when they lost their footing, they swamme. These denises, with a thousand other wherewith they vie to passe their Rivers, breede a terrour in the beholders, helping themselves' with such weake and vissure meanes; and Haire and Straw Bridges, yet they are very confident. They doe vie no other bridges but of haire or of ftraw. There are co now youn some Rivers bridges of Stone, built by the diligence of some Governours, but many fewer then were needefull in fuch a Countrie, where so many men are drowned by default thereof, and the which yeeldes to much Silver, as not onely Spaine, but also other strange Countries make fumptuous buildings therewith. The Indians doe draw from these flouds that runne from the Mountaines to the Vallies and Plaines, many and great Brookes to water their Land, which they vivally doe with fuch industrie, as there are no better in Murcia, nor at Millan it telfe, the which is also the greatest and onely wealth of the Plaines of Pern, and of many

other parts of the Indies.

of the qualitie of the Land at the Indies in generall. Properties of Peru, and of new Spaine, and other parts : Of Vulcanes and Earthquakes.

CHAP.1.S.3. Indians masted. Pastures and mines in bils. Coast-commerce and wine, 925

E may know the qualitie of the Land at the Indies, for the greatest part (seeing it is 1.3.0.19) the fall of the three Elements, whereof we have propounded to treate in this Booke) by the discourse we have made in the former Booke of the burning Zone, seeing that the greatest part of the Indies doth lye under it. But to make it knowne the more particularly, I have observed three kindes of Lands, as I have passed through those Regions: whereof there is one very low, another very high, and the third which holds the middle of these two extreames. The lower is that which lyeth by the Sea coasts, whereof there is in all parts of the Indees, and it is commonly very hot and moift, fo as it is not fo healthfull; and at this day we see it lesse peopled, although in former times it hath beene greatly inhabited with Indians, as it appeareth by the hittories of new Spane and Pers, and where they kept and lived, for that the folle was naturall vnto them being bred there. They lived of fishing at Sea, and of feeds, drawing brooks from the Rivers, which they vied for want of raine, for that it raines little there, and in some places not at all. This low Countrie hath many places vnhabitable, as well by 20 realon of the Sands which are dangerous (for there are whole Mountaines of these Sands) as also for the Marithes which grow by reason of the waters that fall from the Mountaines, which finding no slice in these flat and low Lands, drowne them, and make them vnprofitable.

And in truth the greatest part of all the Indian Sea coast is of this fort, chiefly upon the South Decay of pres-Sea : the habitation of which coasts is at this present so wasted and contemned, that of thirty pleinthe india sea: the indication of which the parts of the people that inhabited it, there wants twenty nine; and it is likely the reft of the by the Spanis parts of the people that inhabited it, there wants twenty nine; and it is likely the reft of the by the Spanis parts of the property of the people that inhabited with the parts of the people that inhabited it. this to divers causes: some to the great labour which hath beene imposed upon these Indians; o-

thers, vnto the change and varietie of meates and drinkes they vie, fince their commerce with the Spaniards: others, to their great excesse and drinking, and to other vices they have : for my 30 part. I hold this diforder to be the greatest cause of their decay, whereof it is not now time to difcourse any more. In this low Countrie (which I say generally is vnhealthfull, and vnfit for mans habitation) there is exception in some places which are temperate and fertile, as the greatest part of the Plaines of Pers, where there are coole vallies and very fertile. The greatest part of the habitation of the coast encertains all the traffike of Spain by Sea: whereon all the estate of the Indier dependeth. Vpon this coast there are some Towns well peopled, as Lines and Truxillo in Peru, Panama and Carthagena vpon the maine Land, and in the Hands Saint Dominique, Port Ricco, and Hanana, with many other Towns which are leffe then thefe, as the True Croffe in new Spain,

Tos, Arigus and others in Pers: the Ports are commonly inhabited, although but flenderly. The 40 fecond fort of Land is contrary, very high, and by confequent, cold and dry, as all the Mountainer are commonly. This Land is neither fertile nor pleasant, but very healthfull, which makes it to be peopled and inhabited. There are Pastures and great store of Cattle, the which, for the most part, entertaines life, and by their Cattell, they supply the want they have of Corne and Graine, by trucking and exchange. But that which makes these Lands more inhabited and peopled, is the riches of the Mines that are found there, for that all obeys to Gold and Silver, By reason of the Mines there are some dwellings of Spaniards and Indians, which are increased and multiplied, as Potozs and Gancanelicqua in Peru, and Cacatecas in new Spaine. There are also through all these Mountaines great dwellings of the Indians, which to this day are maintained; yea some will say they increase, but that the labour of the Mines doth consume many, 50 and some generall diseates haue destroyed a great part, as the Cocoliste in new Spaine : yet they

finde no great diminution. In this extremitie of high ground they finde two commodities, as I have faid, of Paffures and Mines, which doe well countervaile the two other that are in the lower grounds alongft the Sea coast, that is, the commerce of the Sea, and the abundance of Wine which groweth not but in the hot Lands. Betwixt thefe two extreames there is ground Corngregad of a meane height, the which, although it be in some parts higher or lower one then other, yet doth it not approach neither to the heate of the Sea coaft, nor the intemperature of the Mountaines. In this fort of foyle there groweth many kindes of Graine, as Wheate, Barley, and Mays, which growes not at all in the high Countries, but well in the lower; there is likewife for e of Patture, Cattell, Fruits, and greene Forrefts. This part is the best habitation of the three, 66 for health and recreation; and therefore it is best peopled of any part of the Indies, the which I

haue curioully observed in many Voyages that I haue undertaken, and have alwayes found it true, that the Province best peopled at the Indies be in this scituation. Let vs looke neerely into new Spaine (the which without doubt is the best Province the Sunne doth circle) by what part Soeuer you doe enter, you mount vp; and when you have mounted a good height, you begin to

d. III.

descend, yet very little : and that Land is alwayes much higher then that along the Sea

All the Land about Mexico is of this nature and scituation; and that which is about the Val can, which is the best foile of the Indies, as also in Pern, Arequipa, Guamangua and Cusco, although more in one then in the other. But in the end, all is high ground, although they descend into deepe Vallies, and clime vp to high Mountaines: the like is spoken of Quitte, Saint For, and of the best of the New Kingdome. To conclude, I doe beleeue that the wifedome and promience of the Creator would have it so, that the greatest part of this Countrie of the Indies should be hillie, that it might be of a better temperature : for being low, it had beene very hot vinder the burning Zone, especially being farre from the Sea. Also all the Land I have seene at the Indies, 16 is neere to the Mountaines on the one fide or the other, and sometimes of all parts : So as I have oftentimes faid there, that I would gladly fee any place, from whence the horizon did fashion it felfe and end by the heaven, and a Countrie ffretched out and even, as we fee in Spaine in a thousand champaine fields; yet doe I not remember that I have ever scene such fights at the Indies, were it in the Ilands, or vponthe maine Land, although I have travelled above feven hundred leagues in length. But as I haue faid, the neereneffe of the Mountaines is very commodious in this region, to temper the heate of the Sunne. To conclude, the best inhabited parts of the Indies are as I have faid: and generally, all that Countrie abounds in Graffe, Pastures, and Forrefts, contrary vnto that which Ariffotle and the ancients did hold. So as when we go out of Enrens, contrary via exceptions, and chiefly in the Land of Pers, which is of a strange nature among stall others. whereof we will now proceede to fpeake.

We meane by Pers, not that great part of the world which they call America, feeing that

of Quitto, which is vnder the Line, and runs in length to the Realme of Chille, the which is

without the Tropickes, which were fix hundred leagues in length, and in breadth it containes no more then the Mountaines, which is fiftie common leagues, although in fome places, as at Churbapayas, it be broader. This part of the world which wee call Pers, is very remarkeable, and containes in it strange properties, which serueth as an exception to the general rule of the 30

full of all others, yet in this Region it is maruellous pleafing, healthfull, and agreeable : fo as

we may attribute the habitation of that part thereunto, without the which it would be trou-

blesome and inhabitable, by reason of the heate, if it were not refreshed with the winde. The third propertiess, that it never raines, thunders, snowes, nor hailes in all this coast, which is

a matter worthy of admiration. Fourthly, that a little diffance from the coast it raines & fnowes

terribly. Fiftly, that there are two ridges of Mountaines which runne the one as the other and

part of the yeare, being very hot; and the other is all naked and bare, and very cold: fo as win-

ter and fummer are divided on those two Mountaines, and raine, and cleereneffe it selfe. For the

better understanding hereof, we must consider that Perwis divided as it were into three parts, long and narrow, which they call Lanos, Surras, and Ander; the Lanos runs along fi the Sea coast; the

Sierras be all hils, with some vallies; and the Ander be steepe and craggie Mountaines. The La-

more. The Sterra containes some twenty leagues in breadth : and the Ander as much sometimes

more. sometimes lesse. They run in length from North to South, and in breadth from East to

West. It is a strange thing, that in so small a distance as fiftie leagues, equally distant from the

place, and neuer in the other. It neuer raines vpon the coast or Lanes, although there fals some-

times a small dew, which they call Guarna, and in Castill Molling, the which sometimes thick-

ens, and fals in certaine drops of water, yet is it not trouble ome, nor fuch as they neede any co-

uering. Their couerings are of mats with a little earth vpon them which is fufficient, Vpon the Ander it raines in a manner continually, although it be formetimes more cleere then other.

In the Sierra which lies betwixt both the extreames, it raineth in the fame feafon as it doth in

Line and Pole, there should be fo great a contrarietie, as to raine almost continually in one so

in one altitude, notwithstanding on the one there are great Forrests, and it raines the greatest 40

ties of the land therein is contained Brefil, the Kingdome of Chille, and that of Grenade, and yet none of thefe of Peru. Chap. 20 Kingdomes is Peru, but onely that part which lies to the South, beginning at the Kingdome

936

Indies. The first is, that vpon all the coast it blowes continually with one onely winde, which is South and South-west, contrary to that which doth viually blow under the burning Zone, The second is, that this winde being by nature the most violent, tempestuous, and vnhealth-

the Ander. See nos or Sea coast, have some ten leagues in breadth, in some parts leffe, and in some parts a little

Raine almost

Spaine. which is from September voto Aprill, but in the other feating, the time is more cleere, which is when the Sunne is fartheft off, and the contrary when it is neerest. That which they call Andes, and Sierra, are two ridges of most high Mountaines, which runne about a thoufand leagues, the one in view of the other, and almost equally. There are an infinite number 60 of Vicagues, which breede in the Sierres, and are properly like vnto wilde Goates, very nim-Diners Beafts. ble and swift. There are also of those beafts which they call Guanacos and Pacos, which are sheepe, which we may well tearme the Alles of that Countrie; whereof we shall speake in their place. And vpon the Ander they finde Apes, very gentle and delightfull, and Parrots in great

CH AP.2. &2. Fruitfull Vallies. Indian bread. Caufe of raine. Peru wine. numbers. There also they finde the herbe or tree which they call Cocs, that is so greatly effecmed by the Indians, and the trafficke they make of it, is worth much monv.

That which they call Sierre, caufeth Vallies, where as it opens, which are the best dwellings of Perm, as is the Valley of Xanca of Andagnaples, and Thesy. In these Valles there growes Wheat, Mays, and other forts of fruits, but less in one then in the other. Beyond the Citie of Cufco (the ancient Court of the Lords of those Realmes) the two ridges of Mountaines feparate themselues one from the other, and in the midst leave a Playne and large Champaigne, which they call the Province of Calles , where there are many Rivers and great store of fertile Pattures: there is also that great Lake of Titicaca. And although it bee a full foile, and in the to fame height and intemperature, that the Sierre, having no more Trees nor Forreits, yet the

want they have of bread is counterwailed with the rootes they fow, the which they call Papar, and they grow in the earth. This roote is the Indians foode; for drying it and making it cleane, Their bread they make that which they call Chappe, which is the bread and nourilhment of thole Prosinces. There are other rootes and small herbes which they eate. It is a healthfull sole, best peopled, and the richeft of all the Indies, for the abundance of Cattell they feede, as well of those that are in Europe , as Sheepe, Neat, and Goates, as of those of the Country, which they call Guanacos and Paces , and there are Rore of Partridges. Next to the Prouince of Callas, is that of Charcas, where there are hot Vallies very fertile, and very high Rocks; the which are very rich in mynes, so as in no part of the World thall you finde better nor fairer.

30 For that it is rare and extraordinarie to fee a Country where it neuer raines nor thunders; The reason men defire naturally to know the cause of this strangenesse. The reason which some give that why irraines haue nearly looked into it, is, that vpon that Coalt there sile no vapours, sufficient to engen-along the Section 1. der raine for want of matter; but onely that there bee small and light vapours, which cannot coaff, thepate breede any other then mifts and deawes, as wee fee in Emope, oftentimes vapours doe rife in the morning, which are not turned into raine, but into milts onely; the which growes from the substance, which is not groffe and sufficient enough to turne to raine. They say, the reafon why that which happens but fome times in Europe, falls out continually vpon the Coaft of Pers, is, for that this Region is very drie, and yeekle no geoffe vapours. The drinefe is knowne by the great abundance of Sands, having neither Wells nor Fountaines, but of fifteene Stades 30 deepe ( which is the height of a man or more ) and that is neere wnto Rivers, the water where-

of, piercing into the Land, gives them meants to make Wells. So as it hath beene found by experience, that the course of Riners being turned, the Wells have beene dried up, writill they returned to their ordinarie courfe; and they gaie this reason for a materiall cause of this effect, but they have another efficient; which is no teffe confidenable, and that is the great height of the Sierre, which comming along the Coalt, thatlowes the Limes; fo as it fuffers no winde to blow from the Land, but aboue the tops of their Mountaines. By meanes whereof, there reignes no winde, but that from the Sea, which finding no opposite, doth not press nor straine forth the vapours which rife so engender raine; fo as the shadow of the Mountaines keepes the vapours from thickning, and converts them all into miffs. There are some experiences agree

40 with this difcourfe; for that it raines vpon some small Hills along the Coast, which are least shadowed, as the Rocks of Asice and Arequips. It hath rained in some yeeres when as the Northerne or Easterly windes have blowne : yea, all the time they have continued, as it happened in feuentic eight, vpon the Laws of Tragillo, where it rained abundantly, the which they had not feene in many ages before. Moreover, it raines vpon the fame Coast in places, where as the Bafterly or Northerne windes be ordinarie, as in Gueyaquit, and in places where as the Land rifeth much, and turnes from the shadow of the Mountaines, as in those that are beyond Ariqua, Some discourse in this manner, but let every one thinke as he please. It is most certaine, that comming from the Mountaines to the Vallies, they doe viually fee as it were two Heauens, one cleere and bright aboue, and the other oblicure, and as it were a gray vaile spread So vnderneath, which couers all the Coaft : and although it raine not, yet this mift is wonderfulk

profitable to bring forth graffe, and to raife vp and nourith the feed : for although they have plentie of water, which they draw from the Pooles and Lakes, yet this moisture from Heauen hath fuch a vertue, that ceasing to fall upon the Earth, it breedes a great discommoditie and defect of graine and seedes. And that which is more worthy of admiration, the drie and barren Sands are by this deaw so beautified with grasse and slowers, as it is a pleasing and agreeable sight, and very profitable for the feeding of Cattell, as we fee in the Mountaine called Sandie, neere to the Ci-

New Spaine paffeth all other Prouinces in paftur's, which breedes infinite troopes of Horfe, Of the proper-Kine, Sheepe, and other Cattell. It abounds in fruit and all kinde of graine. To conclude, it is a tie of new Segme, of the 60 Country the best furnished and most accomplished at the Indies. Yet Peru doth surpasse it in one Spaine, of the thing, which is Wine, for that there growes store and good; and they daily multiply and in- other Lands. crease, the which doth grow in very hot Vallies, where there are waterings, And although there chep.22. be Vines in new Spaine, yet the grape comes not to his maturitie, fit to make Wine. The reason Peru wine. is, for that it raines there in July and August, when as the grape ripens: and therefore it comes

not to his perfection. And if any one through curiofitie would take the paines to make wine, it should be like to that of Genna and Lombardie, which is very small and sharpe, having a taste like vnto Verjuyce. The Ilands which they call Barlouente, which bee Hift aniela, Cuba, Port Ricco. and others thereabouts, are beautified with many greene pattures, and abound in Cattell, as Neat,
Sugar workes and Swine, which are become wilde. The wealth of these llands, bee their Sugar-works and Hides. There is much Caffia fistula and Ginger. It is a thing incredible, to fee the multitude of these merchandizes brought in one fleete, being in a manner impossible that all Europe should waste so much. They likewise bring wood of an excellent qualitie and colour, as Ebone, and on thers, which ferue for buildings and loyners. There is much of that wood which they call Lignum fanctum or Guage, fit to cure the pox. All these Ilands and others thereabouts, which are many, have a goodly and pleafant aspect, for that throughout the yeere, they are beautified with graffe and greene trees, fo as they cannot difcerne when it is Autumne or Summer , by reason of continuall moisture ioyned to the heat of the burning Zone. And although this Land bee of a great circuit, yet are there few dwellings, for that of it felfe it engenders great Arcabnos, as they call them, which be Groues or very thicke Coppiles : and on the Playnes there are many man rifites and bogs. They give yet another notable reason, why they are so smally peopled, for that
Indians wasted, there have remayined few naturall Indians, through the inconsideratinesse and diforder of the first Conquerors that peopled it : and therefore, for the most part, they vie Negros, but they cost deare, being very fit to till the Land. There growes neither bread nor wine in thefe llands, for that the too great fertilitie and the vice of the foile, fuffers them not to feede, but cafts all forth in graffe, very vnequally. There are no Oliue trees, at the leaft, they beare no Oliues, but many greene leaves pleafant to the view , which beare no fruit. The bread they vie is of Cagane, whereof we thall hereafter speake. There is gold in the Rivers of these Ilands, which some draw forth, but in small quantitie. I was little leffe then a yeere in these Ilands, and as it hath beene told me of the mayne Land of the Indies, where I have not beene, as in Florida, Nicaraona, Guatimals, and others, it is in a manner of this temper, as I have described : yet have I not let downe every particular of Nature in these Provinces of the firme Land , having no perfect knowledge thereof. The Country which doth most resemble Spaine and the Regions of Europe, in all the West Indies, is the Realme of Chille, which is without the generall rule of these other Provinces, being feated without the burning Zone, and the Tropicke of Capitorne. This Land of it felfe is 40 coole and fertile, and brings forth all kindes of fruits that bee in Spaine; it yeelds great abundance of bread and wine, and abounds in Pastures and Cattell. The aire is wholsome and cleere, temperate betwixt heat and cold, Winter and Summer are very diffinet, and there they finde great ftore of very fine gold. Yet this Land is poore and fmally peopled, by reason of their continuall warre with the Amicanes, and their Affociates, being a rough people and friends

Of the ma West.Chap-23.

There are great coniectures, that in the temperate Zone at the Amarike Pole, there are great and fertile Lands : but to this day they are not discovered, neither doe they know any other Land and the diner in this Zone, but that of Chille, and some part of that Land which runnes from Ethiopia to the stice of a whole Cape of Good Hope, as hath beene said in the first Booke; neither is it knowne if there becamy 40 habitations in the other two Zones of the Poles, and whether the Land continues and firetcheth to that which is towards the Amarike or South Pole. Neither doe we know the Land that lyes beyond the Straight of Magellan, for that the greatest height yet discovered, is in fifthe fixe degrees, as hath beene formerly faid; and toward the Artike or Northerne Pole, it is not known how farre the Land extends, which runnes beyond the Cape of Mendogin and the Calipbornes, nor the bounds and end of Florida, neither yet how farre it extends to the Welt. Of late they have discovered a new Land, which they call New Mexico, wherethey say is much people that speake the Mexican tongue. The Philippine; and the following Ilands, as some report that know it by experience, ranne aboue nine hundred leagues. But to intreat of China, Cochinchina, Siam, and other Regions which are of the East Indies, were contrarie to my purpose, which is onely to discourse of the West : nay , they are ignorant of the greatest part of America , which lyes betwixt Pers and Brefil, although the bounds be knowne of all fides, wherein there is diverfitic of opinions; some fay it is a drowned Land, full of Lakes and waterie places; others affirme there are great and flourishing Kingdomes, imagining there be the Paysin, the Dorado, and the Calas, where they fay are wonderfull things. I have heard one of our companie fay , a man worthy of credit, that he had feene great dwellings there, and the wayes as much beaten as those betwixt Salamanca and Villadillis, the which he did fee, when as Peter d'Orfua, and after, those that incceeded him, made their entrie and discourrie by the great River of Amazons, who beleeving that the Dorado which they fought, was farther off, cared not to inhabit there, and after went both without the Dorade, which they could not finde, and this great Province which they left. 60 To speake the truth, the babitations of America are to this day vnknowne, except the extremities, which are Peru, Brefil, and that part where the Land begins to straighten, which is the Riuer of Silner, then Tuennan, which makes the round to Chille and Charcas. Of late we have vnderstood by Letters from some of ours which goe to Saint Croix in the Sierre, that they goe dif-

couring of great Provinces and dwellings, betwixt Brefil and Pers. Time will reneile them, for as at this day the care and courage of men is great , to compasse the World from one part to another; fo we may believe, that as they have difcourred that which is now knowne, they may likewise lay open that which remaynes, to the end the Gospell may bee preached to the whole World, seeing the two Crownes of Portugal and Castile have met by the Bast and West, joyning their discoveries together, which in truth is a matter to be observed, that the one is come to Chime and lapan by the East, and the other to the Philippines, which are neighbours, and almost ioyning vnto (bina, by the West: for from the llands of Luffen, which is the chiefe of the Philippia nes, in the which is the Citie of Marille, vnto Macco, which is in the lle of Canton, are but foure

to force or a hundred leagues, and yet we finde it strange, that notwithstanding this small distance from the one to the other, yet according to their account, there is a dayes difference betwine them; fo as it is Sunday at Macao, when as it is but Saturday at Manille, and fo of the reft. Those of Macas and of China have one day advanced before the Philippines. It happened to father Alonge Sanches, of whom mention is made before, that parting from the Philippines , hee arrived at Macas the second day of May, according to their computation, and going to lay the Mafie of Saint Athenafim, he found they did celebrate the feaft of the Invention of the boly Croffe, for that they did then reckon the third of May. The like happened wnto him in another voyage

Some haue found this alteration and divertitie strange, supposing that the fault proceedes from 20 the one or the other, the which is not fo: but it is a true and well observed computation, for according to the difference of wayes where they have beene, we must necessarily fay, that when they meet, there must be difference of a day; the reason is, for that layling from West to East, they alwayes gaine of the day, finding the Sunne rifing fooner : and contrariwife, thole that faile from East to West, doe alwayes lose of the day, for that the Sunne riseth later vnto them; and as they approach neerer the East or the West, they have the day longer or shorter. In Pers, which is Westward in respect of Spains, they are about fixe hours behinde; so as when it is noone in Spaine , it is morning at Perm; and when it is morning here , it is mid-night there. I haue made certaine proofe thereof, by the computation of Eclipses of the Sunne and Moone. Now that the Portugals have made their navigations from West to East, and the Castillans from 30 East to West, when they came to loyne and meet at the Philippines and Macao, the one have gayned twelve houres, and the other hath loft as much ; fo as at one inftant, and in one time , they

finde the difference of foure and twentie hours, which is a whole day.

Although we finde vents of fire in other places, as Mount Atms and Veficino, which now Of the votices they call Mount Some, yet is that motable which is found at the Indies. Ordinarily thefe Poleans or Ventson be Rocks or Pikes of most high Mountaines , which raise themselves about the tops of all other fire. Chep. 24 Mountaines; vpon their tops they have a Playne, and in the midft thereof a pit or great mouth, which descends even vnto the foote thereof; a thing very terrible to behold. Out of these mouthes there issues smoake, and sometimes fire : some cast little smoake, and have in a manner no force of Volcans, as that of Arequips, which is of an vnmeasurable height, and almost all fand.

40 It cannot be mounted up in leffe then two dayes, yet they have not found any flow of fire, but onely the reliques of fome facrifices which the Indians made while they were Gentiles, and fometimes it doth cause a little smoake. The Volcan of Mexico which is neere to the Village of Angels, is likewise of an admirable height, whereas they mount thirtie leagues in turning : from this Volcan issueth not continually, but sometimes, almost every day, a great exhalation or whirle-winde of smoake; which ascends directly up like to the shot of a Crosse-bow, and growes after like to a great plume of feathers, vntill it ceafeth quite, and is prefently converted into an obfeure and darke cloude. Most commonly it riseth in the morning after the Sunne rising, and at night when it fetteth , although I have feene it breake out at other times. Sometimes it doth cast forth great store of ashes after this smoake. They have not yet seene any fire come from it; 50 yet they feare it will iffue forth and burne all the Land round about, which is the best of all the

Kingdome : And they hold it for certaine, that there is some correspondencie betwixt this Unla can and the Sierre of Tlaxcala, which is neere vnto it, that caufeth the great thunders and lightnings they doe commonly heare and fee in those parts.

Some Spaniards have mounted up to this Volcan, and given notice of the myne of fulphur to make powlder thereof. Corres reports the care he had to discouer what was in this Volcan. The Volcans of Guatimals are more renowmed, as well for their greatnesse and height : which those that faile in the South Sea discouer afarre off, as for the violence and terrour of the fire it casts. The three and twentieth day of December, in the yeere 1986, almost all the Citie of Gnatimala Terrible earthfell with an Earthquake, and some people slaine. This Volcan had then sixe moneths together, quate at Gua-

60 day and night cast out from the top, and vomited as it were, a floud of fire, the substance falling timele. vpon the fides of the Volcan, was turned into aftes like vnto burnt earth (a thing paffing mans judgement, to conceive how it could cast so much matter from its centre during fixe moneths, being accustomed to cast smoake alone, and that sometimes with small stashes.) This was written vnto me being at Mexico, by a Secretarie of the Audience of Guatimala, a man worthy of

Pricft.

credit, and at that time it had not cealed to cast out fire. This yeere past, being in Quitte in the Citie of Kings, the Volcan which is neere thereunto, cast such abundance of ashes, that in many leagues compasse thereabout it dar kned the light of the day : and there fell such flore in Quitte. as they were not able to goe in the ftreets. There have beene other Volcans feene which caft nesther imoake, flame, nor yet aftes, but in the bottome they are feene to burne with a quicke fire without dying : fuch a one was that which in our time a couetous and greedie Prieft feeing, perfwaded himfelfe that they were heapes of gold he did fee burning, imagining it could be no other matter or substance, which had burnt to many yeeres, and not consumed. And in this conceit he made certaine kertles with chaines, and an inftrument, to gather and draw up the gold out of this Pit or Volcan: but the fire scorned him , for no sooner did his Iron chaine and Caldron ap 10 proach neere the fire, but fuddenly they were broken in pieces. Yet fome told me, that this man was still obstinate, seeking other inventions for to draw out this gold as he imagined,

Some have held opinion, that these Volcous confirms the inner substance they have of Nature and for this reason they believe, that naturally they shall end, when as they have consumed the fuell (as a man may fay) that is within them. According to which opinion wee fee at this day, some Mountaines and Rocks, from whence they draw a burnt stone which is light, but yery hard, and is excellent to build with, as that which is carried to Mexico. And in effect there are some shewes of that which hath beene spoken, that these Mountaines or Rocks had somtimes a natural fire, which hath died after the matter was confumed; and fo these stones have remayned burnt and pierced with the fire as wee fee. For my part, I will not contradict it, that in those places there hath not beene fire sometimes, or Volcans. But there is some difficultie to be- 20 leeue it should be so in all Volcans, considering the matter they cast out is almost infinite; and that being gathered together, it could not bee contayned in the same concavitie from whence it goes. Moreouer, there are some Volcans, that in hundreds, yea thousands of yeeres are alwayes of one fashion, casting out continually smoake, fire, and ashes. Plinie the historiographer of naturall things (as the other Plinie his nephew reports) fearthing out the fecret how this should paffe : and approaching too neere the exhalation of fire of one of these Volcans, died; and thinking by his diligence to find an end thereof, had an end of his life. For my part, vpon this confideration I thinke, that as there are places in the earth, whose vertue is to draw vaporous matter. and to connert it into water, which bee the Fountaines that alwayes runne, and have alwayes a matter to make them runne, for that they draw vnto them the substance of water. In like fort there are places that have the propertie to draw vnto them hot exhalations, and to convert them into fire and smoake which by their force and violence cast out other thicke matter which diffolues into alhes, into pumice ftone, or fuch like fubftance: and for a fufficient argument to prote it to be fo in these Volcans, they fometimes cast smoake, and not alwayes, and sometimes fire, and not alwayes, which is according to that it can draw vnto it, and digeft, as the Fountaines which in Winter abound, and in Summer decrease; yea some are quite dried up, according to the force and vigour they have, and the matter that is presented ; even so it is of these Volcans, which cast fire more or leffe at certaine seasons. Others fay, that it is Hell fire, which issueth there, to ferue as a warning, thereby to confider what is in the other life : but if Hell (as Diuines 40 hold) bee in the centre of the Earth, the which containes in diameter aboue two thousand Bafil.Pfd. 18. b leagues, we cannot judge that this fire is from the centre; for that Hell fire (as Saint Bafil and others teach) is very different from this which wee fee, for that it is without light, and burneth without comparison much more then ours.

Some have held, that from these Volcans which are at the Indies, the Earthquakes proceede, quakes, Capas, being very common there : but for that they ordinarily chance in places farre from thois Volcans, it cannot be the totall cause. It is true they have a certaine simpathy one with another, for that the hot exhalations which engender in the inner concauities of the Earth, feeme to be the materiall substance of fire in the Volcans, whereby there kindleth another more groffe matter, and makes these shewes of slame and smoake that come forth. And these exhalations (finding no ea- 10 sie issue in the Earth) moue it, to issue forth with great violence, whereby wee heare that horrible noise under the Earth, and likewise the shaking of the Earth, being stirred with this burning exhalation; Euen as Gun-powlder in mynes, hauing fire put to it breaks Rocks and Walls: and as the Chefnut laid into the fire, leapes and breakes with a noise, when as it casts forth the aire (which is contayned within the huske) by the force of the fire : Euen fo these Earthquakes doe most commonly happen in places neere the water or Sea. As wee see in Europe , and at the Indies , that Townes and Cities fartheft from the Sea and waters are leaft afflicted therewith; and contrariwife, those that are seated vpon Ports of the Sea, vpon Riners, the Sea coast, and places neere vnto them , feele most this calamitie. There hath happened in Pers ( the which is wonderfull, and worthy to be noted) Earthquakes which have runne from Chille vnto Quitto, 60 and that is aboue a hundred leagues, I fay the greatest that euer I heard speake of, for lesser be more common there. Vpon the coaft of Chille (I remember not well in what yeere) there was so terrible an Earthquake, as it ouer-turned whole Mountaines, and thereby itopped the courie of Rivers which it converted into Lakes, it beat downe Townes, and flue a great number of people.

Great careb.

canfing the Sea to leave her place fome leagues, fo as the ships remayned on drie ground;, farre from the ordinate Reade, with many other heatie and horrible things. And as I well remember, they fay this trouble and motion, caused by the Earthquake, ranne three hundred leagues a. longft the Coaft. Soone after, which was in the yeere eightie two, happened that earthquake of Arequipa, which in a manner over-threw the whole Citie. Since in the yeere eightie face, the ninth of luly, fell another earthquake in the Citie of Kings, the which as the Vice-roy did write, had runne one hundred threefcore and ten leagues alongst the Coast, and ouerthwart in the Sierre liftie leagues. The mercy of the Lord was great in this Earthquake, to forewarne the Noyle before people by a great noile which they heard a little before the Earthquake, who taught by former the carchquake, 10 experiences, prefently put themselves in fafetie, leaving their Houses, Streets, and Gardens, to goe into the helds; fo as although it ruined a great part of the Citie, and of the chiefeft buils dings, yet theredied not about fifteene or twentie persons of all the Inhabitants. It caused the like trouble and motion at Sea; as it had done at Chille, which happened prefently after the

Earthquake, fo athey might for the Sea furioufly to flie out of her bounds, and to runnt neere two leagues into the Land, rifing aboue fourteene fathom : it courred all that Playne, fo as the Ditches and pieces of wood that were there; fwam in the water. There was yet another earthquake in the Realmeand Citie of Quare ; and it feemes all these notable Earthquakes vpon that Coaft, have fucceeded one another by order, as in truth it is fubicet to the feinconueniences. And therefore although woon the coast of Pers, there be no torments from Heaten, as thunder and so lightning, yet are they not without feare vpon the Land; and so every one hath before his eyes. the Heralds of dinine luftice, to mooue him to feare God. For as the Scripture faith, Petit has ve time arm. Returning then to our purpole, I fay the Sea coast is most subject to these earthquakes, Why the Sea the reason is , in my judgement , for that the water doctoftop the conduits and passages of the coast is subject earth, by which the her exhalations thould paffe, which are engendered there. And also the humiditig thickning the superficies of the earth, doth could the fumes and herex halations to goe elofe together and encounter violently in the bowels of the earth, which doe afterwards breake

Some haue obferned; that fuch Barthquakes haue vitality hapned, when as a raytheleason falls after fomedirle verres. Whiteupon they fay, that the Barthquakes are most rare; where are 30 most Wells, the which is appround by experience. Those of the Citie of Marco hold bonnion. that the Lake whereon it is leated, is the cause of the Earthquakes that happen shere? atthough they be not very violent : and it is most certaine, that the Townes and Promites . fairs within they be not very violent; and it is more cortaine, that the 1900 was an of rounces, have virous the Land, and farthest from the Sea, receive forestimes great loss by these Rachequakes, as who contributed the Land, and farthest from the same and in Land that of Ferrare, admissionly open this should. It Earthquake at Chine of Cabengaya at the Indian, and in Lade that of Ferrare, admissionly Sea, though with the Earthquake at Chine of the Cabengaya at the Landse, and in Lade that of the Cabengaya at the Cabengaya cilled Angelogo (White many Indiant dwelt that were Sorceters and Idolaters) fell fuddenly to in segunge. ruine; fo as a great part thereof was rayled up and carried away , and many of the fudicion fino- : :: 40 thered, and that which feemes incredible (yet testified by men of credit) the earth this was ruinet and to beaten downe, did runne and flide vpon the Land for the fpate of a league and a halfe with a asit had beene water or wate holten, foas it fropt and filled up a Lake and remayard to foread with his

ouer the whole Countrie.

è. I I I I. Of Metals in the Indies and especially of the Gold and Silver, and Quick silver.

Ecal are (as Plants) hidden and buried in the bowels of the Earth, which hatte fome Metals grow as conformitie in themselues, in the forme and manner of their production; for that we plants, tee and diffeouer euen in them, branches, and as it were a bodie, from whence they grow and proceede, which are the greater veines and the leffe, fo as they have a knitting in themselves ; and it seemes properly that these Minerals grow like ynto Plants, not that they have any inward pregratified life, being onely proper to Plants; but they are engendered in the have any inward pregratified life, being onely proper to Plants; but they are engendered in the bowles of the drawing, by the eventua and torce of the Sunne and other Plants, and in long continuance of time, they increase and multiply after the manner of Plants. And even as metals bee plants hidden in the earth, to wee may lay, that plants bet living Creatures fixed in one place. 60 whose life is maintayned by the nourithment which Nature furnisheth from their first beginning. But lining Creatwes surpalle Plants, in that they have a more perfect being; and therefore Animala. haue neede of a more perfect foode and nouriffiment; for the fearth whereof, Nature hath given them a mooning and teeling to discouer and discerne it. So as the rough and barren earth is as a subflance and nutriment for metals; and that which is fertile and better featoned a nourishment

Ecclef. 10.

for Plants. The same plants serve as a nourishment for living creatures, and the plants and living creatures together as a nourishment for men, the inferiour nature alwayes ferning for the mainer nance and fuffentation of the superiour, and the lesse perfect yeelding vnto the more perfect; whereby wee may fee how much it wants, that gold and filuer and other things which men fo much efteeme by their couetouinesse, should bee the happinesse of man, whereunto hee should tend, seeing they bee so many degrees in qualitie inferior to man, who hath beene created and made onely to be a lubiect to ferue the univerfall Creator of all things, as his proper end and perfeet reft; and to which man, all other things in this world, were not propounded or left, but to gaine this last end.

The disertitie of metals, which the Creator hath that up in the closets and concasities of the earth, is fuch, and fo great, that man drawes profit and commoditie from every one of them. Some serue for curing of diseases, others for armes and for defence against the enemies, some are for ornament and beautifying of our persons and houses, and others are fit to make vessels and Lron-workes, with divers faffinons of infiruments, which the industrie of man hath found out and put in practice. But about all the wies of metals, which be simple and natural, the commumication and commerce of men hath found out one, which is the vie of money, the which (as the Philosopher (aith) is the measure of all things. And although naturally, and of it selfe, it beebut one onely thing, yet in value and estimation we may (ay, that is is all shings. Money is vnto vs as it were, meate, clothing, house, horse, and generally whatsoever man hath need of. By this meanesall obeyes to money, and as the Wiseman faith, to finde an invention that one thing to should be all. Men guided or thrust forward by a naturall instinct, choose the thing most durable and most maniable, which is metall, and amongst metals, gave them the preheminence in this invention of money, which of their nature were most durable and incorruptible, which is filter and gold. A Wileman faid, that what a father doth to marry his daughter well, is to give hera great portion in marriage; the like hath God done for this Land fo rough and labourfome, gie uing it great riches in mynes, that by this meanes it might be the more fought after. At the west Indies then there are great store of mynes of all forts of metals, as Copper, Iron, Lead, Tinne, Quick-faluer, Siluer, and Gold: and among ft all the Regions and Parts of the Indies, the Realmes or Permabound most in these metals, especially with Gold , Silver, Quick-silver, or Mercurie, whereof they have found great flore, and daily discouer new mynes. And without doubt, ac. 30 cording to the qualitie of the earth, those which are to discover, are without comparison, farre more in number then those which are vet discovered ; yea, it seemes that all the Land is fowed with these metals, more then any other in the world that is yet known vnto vs, or that ancient

The reason why there is so great abundance of metals at the Indies (especially at the west of

writes, faying, that gold, filuer, and metals, grow naturally in land that is most barren and vn-

fruitfull. And wee fee, that in Lands of good temperature, the which are fertile with graffe and

fruits, there are feldome found any mynes; for that Nature is contented to give them vigour to 40

Of the onalitie and nance of Pers, as I have faid) is the will of the Creator, who hath imparted his gifts, as it pleafed him, the earth wher But comming to a naturall and philosophicall reason, it is very true, which Philosophical and philosophical reason, it is very true, which Philosophical and philosophical reason, it is very true, which Philosophical reason, it is very true, which Philosophical reason, and the property of ployed at the bring forth fruits more necessaries for the preservation and maintenance of the life of beatts and fed them, L4. ртарат снапу.

Writers have made mention of.

men. And contrariwile to lands that are very rough, drie, and barren (as in the highest Mountaines and inacceffible Rocks of a rough temper) they finde mynes of filtuer, of quick-filter, and of gold, and all those riches (which are come into Spaine fince the West Indies were discovered) have beene drawne out of such places which are rough and full, bare and fruitlesse : yet the taste of this money, makes these places pleasing and agreeable, yea, well inhabited with numbers of people. And although there be, as I have faid, many mynes of all kindes of metals as at the Indies, yet they vie none but those of gold and filter, and as much quick-filter as is necessarie to refine their gold and filuer. They carry Iron thither from Spaine and China. As for Copper, the Indians have drawne of it, and yied it for their armes, the which were not viually of Iron, but so of Copper. Since the Spaniards possessed the Indies, they have drawne very little, neither doe they take the paines to feeke out these mynes, although there bee many busying themselves in the fearch of richer and more precious metals, wherein they fpend their time and labour. They vie no other metals, as Copper, and Iron, but onely that which is fent them from Spaine, or that which remaines of the refining of gold and filter. Wee finde not that the Indians in former times vied gold, filuer, or any other metall for money, and for the price of things, but onely for ornament, as bath beene faid, whereof there was great quantitie in their Temples, Palaces, and Tombes, with a thouland kindes of veffels of gold and filter, which they had. They vied no gold nor filter to trafficke or buy withall, but did change and trucke one thing for another, as Plin. lib. 32.63. Homer and Plinie report of the Ancients. They had some other things of greater effeeme, which 60

went current among it them for price, and in stead of coine : and vnto this day this custome con-

tinues amongst the Indians, as in the Provinces of Mexico, in stead of money they vie Cacas,

(which is a small fruit) and there with buy what they will. In Pers they vie Coca, to the same end (the which is a leafe the Indians efterme much) as in Paraguay, they have stamps of Iron for

60 Now we will flew how they discouer the mynes of Silver, their veines, rootes ; and begin- Of the Silver ning: whereof lob speakes. And first I will fay, that the reason why they give silver she second at the Indian place among all other metals, is, for that it approcheth never to gold then any other, being more Chap.5. durable and leffe indamaged by the fire, and more mallable then any other: yea it patieth gold in brightnesse, beautie, and found, the which is cleere, and agreeable, for the colour is more confor-

coine, and cotton women in Saint Grace of the Sierre. Finally, the manner of the Indiane trafficke, and their buying and telling, was to exchange, and give things for things; and although there were great Martesand famous Faires, yet had they no neede of money, nor of Brokers, for that every one had learned what he was to give in exchange for every kinde of merchandife. Since the Spaniards entred, the Iudians have vied gold and filter to buy withall and in the beginning there was no coine; but filuer by weight was their price and money; as they report of the ancient Romans. Since, for a greater benefit, they have forged colores Mexico and Pers, yet Plin, lib. 33.5.4. vito this day they have not in the West lastes coyned any money of Copper or other metali but onely of filter and gold : for the richnesse of that Countrie bath not admitted nos received to fuch money as they call builtion, not other kindes of alloy, which they wie in Italie, and in other Prouinces of Europe; Although in fome llands of the Indies, as Saint Dominique, and Pere Ricce.

CH AF. 2. S.4. Lother coine Gold why the best mettall how drawne Silver.

they vie coine of leather, which is fquare, the which are current onely in those Hands phaning Coine of leather, little filuer or gold. I fay little, although there be much, for that no man digges it and refines it. there. But for that the riches of the Indies, and their manner to labour in the mynes, confifts of gold, fituer, and quick filter, I will speake something of thele three metals, leating the reft for the time. Gold amongst other metals bath beene alwayes held the most excellent; and wish reason, Of gold which being the most durable and moorruptible of all others; for fire which confluines and dismissible they siggs and her reft, amends it, and lungs it to perfection. Gold which hath often passed through the sire, refuse as the keepes his colour, and is most fine and pure; which peoperly is called (as Plinie faith ) Obrife, an whereof the Scripture makes to often mention and vie, which confumeth all other metals ( as

the fame Plane faith) doth not any thing walte gold, nor yet huit it neither is it eaten nor grow- Plan lib 33.6.30 ethold. And although his subfrance and body bee firme and folid; yet doth it yeeld and bow wonderfully; the Beaters and Drawers of gold know well the force it hath tobee drawne one without breaking. All which things well confidered, with other excellent properties, will give men of indgement to vaderstand, wherefore the holy Scripture doth compare Charitie to gold, To conclude, there is little neede to relate the excellencies thereof to make it more definable, For Cant. 3. the greatest excellencie it hath, is to be knowne (as it is) among & men, for the supreme power Pfel. 67. and greatnesse of the World. Comming therefore to our fubiedt; at the takes there is great a. 1. Reg. 6. bundance of this metall, and it is well knowne by appeaued Histories, that the highest of Pers did an not content themselves with great and small vessels of gold, as Pots; Cups, Gobiers, and Flagons; yea with Kowles or great Veffels; but they had Chaires also, and Litters of maffie gold ;

and in their Temples they had let vp mayne Images of sure gold, whereof they finde tome yet at Mexico, but not such those as when the first Conq serous came into the operand the other King-dome, who found great treasure, and without doubt a britis was march more hidden in the earth by the Indians. It would feeme ridiculous to repore thise they have made their horseshoots of filter for want of Iron, and that they have paintained bundled troubles for a bottle of same; and other ftrange things; and yet in truth this hathrome to pafe, yea and greater matteris. They See before in draw gold in those parts after three fores : or at the least; I have feene all three viodo fore in 1, des Sentes. related to disclony view and in He ther they finde gold in graines, in powlder, or in stone.

40 The most famous gold is that of Caranaga in Pers, and of Valdinia in Chille, for that is reflect with his alloy and perfection, which is twentie three Carnats and a halfe, and fometimes more. They make account likewife of the gold of Verague to bee very fine. They bring much gold to Mexico from the Philippines; and China, but commonly it is weake and of bale alloy. Gold is commonly found mixt with Silver or with Copper; but that which is mixed with filver is commonly of fewer Carrats then that which is mixed with copper. If there be a fift part of fil-uer, Plane faith, it is then properly called Electrum, which hath the propertie to fhine more at Planting the light of the fire, then fine gold or fine filter. That which is incorporate with copper its commonly of a higher value. They refine powldred gold in basons, washing it in many waters, vne till the Sand falls from it, and the gold as most heavie remayneth in the bottome. They refine it 50 likewife with quick-filter and ftrong water, for that the allum whereof they make this water

hath the vertue to teparate gold from droffe, or from other metals. After it is purified and mobten, they make Bricks or small Barres to carry it vnto Spaine; for being in powlder, they cannot transport it from the Indies, for they can neither custome it, marke it, nor take fay, wntill it bee molten. In the fleet where I came, which was in the yeare 1,85, the declaration of the firme Land was of twelue Caffons or Chells of gold, every Caffon at the leaft weighted foure Arobes, that is a hundred weight; and a thouland fiftie and fixe Mates from new Spaine, which was for

the King onely, belides that which came for Merchants and private men being regulared; and much that came varegiftred. This may fuffice touching the gold of the Indies, and now were will

mable and relembling the light, and the found more piercing, more lively, and more delicate. The mynesof fakuer are commonly found in Mountaines and high Rocks very defare, although they have fometimes beene found in Playnes and Champaines. There are two different kindes, the one they call firaging, the other fixed and feeled. The firaging, are pieces of metali found in certaine places, the which drawne away, there is no more found. But the fixed veines, are those which have a continuance in depth and length, like to great branches and armes of Trees; and when they finde any one of them, they commonly finde many in the same place. The manner to purge and refine filter which the Indian have vied, was by melting, in diffolining this made of metall by fire, which casts the earthly drosse apart, and by his force separates Silver from Lead, Tin from Copper, and other metals mixt. To this end they did build small Furnaces in places where as the winde did commonly blow, and with Wood and Cole made their refining, the which Furnaces in Peru they call Guerra . Since the Spaniards entred befides this manner of refining which they vie to this day, they likewife refine filuer with quick-filuer, and draw more by this meanes then in refining it by fire. For there is some kind of filter metall found which can by no meanes be purged and refined by fire, but onely with quick-filter. But this kinde of metall is commonly poore and weake, the which viually they finde in greatest abundance. They call that poore which yeelds leaft filmer, and great quantitie of other metall, and that rich which yeelds most file uer. It is ftrange to foe, not onely the difference betwirt the refining of metall by fire, and without it by quick-filuer, but also that some of these merals, which are refined by the fire, cannot welk be molten with any artificiall winde, as with bellowes; but when it is kindled and blowne with the naturall aire, or naturall winde. The metall of the mynes of Porce is eafily refined with bellowes, and that of the mynes of Posses cannot bee molten with bellowes, but onely by the breath of their Guerras , which are finall Furnaces upon the fides of the Mountaines , built exprefly where the winde lies, within the which they mele this metall; and though it be hard to yeeld a reason for this difference, yet is it most certaine and approved by long experience : so as the greedie defire of this metall to much valued amongst men, hath made them seeke out a thoufand gentle inventions and devices, whereof we will hereafter make mention. The chiefe places of the Indies from whence they draw filter, are new Spaine and Peru; but the mynes of Peru

farre furnifie the reft; and among it all others of the World, those of Posses.

Different effects of artificiall and natural winds Potoris described. Lany

Of the Mountaine or Hill of Potoza for famous, is fituate in the Province of Chareas, in the King-

tained Hill of dome of Pers, diffant from the Equinochill towards the South, or Pole Antartike, one and Potent, and the gwentie degrees and two thirds : to as it falls under the Tropicke, bordering upon the burning thereof Change Zone, and yet this Region is extremely cold, yea, more then old Caffile in the Kingdome of Spaine, and more then Flanders it selfe, although by reason it should be hot or temperate, in regard of the beight and elemation of the Pole where it is feated. The reason of this so cold a temperature, is the height of the Mountaine, whereis cold and intemperate winds continually blow, especially that which they call Thomekani, which is boistrous and most cold. It raines most commonly in lune, July, and August. The ground and soile of this Mountaine is drie, cold, and very vnpleafant, yea altogether barren, which neither engenders nor brings forth any fruit, graffe, por eraine ; it is naturally unhabitable, for the intemperature of the Heaven, and the barrenness of the Earth. But the force of filter, which drawes voto it the defire of all things, bath peopled this Mountaine more then any other place in all these Kingdomes, making it so fruitfull of all kindes of meaces, as there wants nothing that can be defired, yea, in great abundance; and although there be nothing but what is brought by carriage, yet every place abounds fo with Fruit, Conternet, exquifite Wines, Silkes, and all other delicates, as it is not inferiour to any other part. This Mountaine is of colour darke red, and is in forme pleating at the first fight, refembling perfeetly the fashion of a Panilion, or of a Sugar-loafe. It exceeds all other Hills and Mountaines about it in height. The way whereby they afcend, is very rough and vneuen, and yet they goe vp on horse-back. It is round at the top, and at the foot it bath a league in circuit. It containes from the ton to the bottom 1680.common yards, the which reduced to the measure of Spando leagues, 50 makes a quarter of a league. At the foot of this Mountaine there is another small Hill that rifeth out of it, in the which there hath beene somtimes mynes of metall dispersed, which were found as it were in purfes, and not in fixed or continued veines; yet were they very rich, though few in number. This small Rock was called by the Indians, Guayna Parazi, which is yong Parazi; at the foot wherof begins the dwellings of the Spaniards and Indians, which are come to the riches and worke of Porezi, which dwelling may containe fome two leagues in circuit, and the greatest traffick and comerce of all Perm is in this place. The mynes of this Mountaine were not digged nor discovered in the time of their Ingus, which were the Lords of Peru, before the Spaniards entred, although they had digged and opened the mynes of Porco, neer to Potoxi, diffant only fix leagues.

An Indian called Gualpa, of the Nation of Chumbibilea, which is a Province of Cufco, going 60

one day cohunt for Venison, passing towards the West whither the beast was fled, hee began to runne vp against the Rocke, which at that time was covered and planted with certaine Trees they call Quienes, and with thicke bushes, and as he strived to get vp a way which was somewhat rough and vneafie, hee was forced to lay hold upon a branch, which issued from a veine of a

filter myne ( which fince they have called Rich) which hee pulled vp , perceiving in the hole or roote thereof, metall, the which he knew to be very good, by the experience hee had of the mynes of Porce; and after finding upon the ground certaine pieces of metall, which lay broken and dispersed meete to this verne, being scarse well able to sudge thereof, for that the colour was spoyled and changed by the Sunne and raine; he carried it to Porce to trie by the Guerras (which is the triall of metall by fire ) and having thereby found the great riches and his happy fortune, he fecretly digged and drew metall out of this weine, not imparting it to any man, vitall that an Indian called Guarca, of the Valley of Xaura, which is voon the borders of the Citie of Kings. who remayning at Porce neere vinco Gualpa of Chambibiles ; perceived one day that hee made a 10 refining, and that his Wedges and Bricks were greater then fuch as were vivally made in choic

places : and alfo increating in his expense of apparell, having till then lined but bafely. For this region, and for that the metall his Neighbour refined was different from that of Parca, hee thought to different this feeret; and wrought fo, that although the other kept it as incretas hee could, yet through importunitie hee was forced to carry him who the Rocke of Posse, having enjoyed this rich treature full two moneths, And then Gualpa the Indian willed Guarca for his part to take a verile, which he had discourred neere to the rich veine; which at this day is called the veine of Diego Contento, that was not leffe rich, but more hard to digge and to draw forth; and fo by agreement they divided betweene them the richest Rocke in the world. It chanced after , the Indian Guinea finding fome difficultie to digge and draw forth his metall

20 being most hard, and the other Gualps refusing to impart any of his myne wato him , they fell at debate; fo as Guanca of Xaura grieued therewith, and with fome other discontents, difcovered this fecret vnto his Mafter called Villared a Spaniard, who then remayned at Porco. This Villared defirous to vinderstand the truth , went to Poteza, and finding the riches his Tanacona or fernant had discourred vnto him, caused the Indian Guanca to be inrolled, vndertaking with him the faid veine, which was called Gentene, they call it Vndertaking, that is as much as to note and marke the myne, and so much ground in circuit for him, which the Law graunts vnto thole that discouer any myne, or vnto thole that digge them : by meanes whereof, having discovered them to the Iustice, they remayned Lords of the myne, todigge and draw forth the filter, as being their owne, paying onely their duties wanto the King; which is 30 a fife part. So as the first discounte and inregistring of the mynes of Passes, was the one and

twentieth of Aprill, in the yeere of our Lord 1545. in the Territorie of Porce, by the faid Fal larged a Spaniard, and Guanca an Indian. Prefently after they discovered another veine, which they called the Veine of Tome, the which is very rich , although it be rough and very painfull to worke in, the metall being as hard as flint. Since the thirtie day of August in the lame yeere 1545, the veine called Mendiese was inrolled, and these are the soure principall veines of Potoza. They fay of the rich veine, the first that was discourred, that the metall lawaboue the ground the height of a Lance, like vnto Rocks, rayling the superficies of the Earth, like vnto a crest of three nundred foot long , and thirteene foot broad , and that this remayned bare and vncouered by the deluge, this veine having refifted the violence and force of the water, as 40 the hardest part. The metall was sorich as it was halfe filter, and this veine continued in his

bountie fiftie or threescore Stades ( which is the height of a man ) and then it fayled. Bresently after that the discouerie of Petozi was knowne in Pero; many Spiniarde, and the most pare of the Bourgeois of the Silver Citie, which is eighteene leagues from Potoza, came thither to take mynes : yea, there came many Indians from diners Provinces, especially the Guayzadores of Porce, fo as within a shore space it was the best peopled habitation of all the Kingdome. When as the Licenciate Pollo gouerned that Province, the which was many yeeres after the discouerie of this Mountaine, they did enery Saturday enter a hundred and fiftie and two hun-

dred thousand pieces, whereof the Kings fift amounted to thirtie and fortie thousand pieces; and for every yeere a million and a halfe, or little leffe. So as according to that computation they did draw every day from this myne thirtie thouland pieces, whereof there came to the King for Every piece 50 his fift, fixe thousand pieces a day.

There is yet another thing to bee spoken of, to shew the riches of Potozi, that the account tenn Rials which hath beene made, was onely of filter that was marked and customed. And it is well knowne in Pers, that they have long vied filter in these Realmes, which they call Currant, which was neither marked nor customed. And they hold it for certaine which know their mynes, that in these dayes, the greatest part of filuer drawne at Potoni, was not customed, and this had course amongst the Indians, and much amongst the Spaniards, as I have seene continued to my time; fo as it may appeare, the third part of the riches of Potozi, yea the one halfe came not to light, neither was it customed. There is yet a more notable consideration, in that which 60 Plinie faith, they had digged a fifteene hundred pales in the myne of Bebelle; and that continu- Flin. 116, 23: 6,6,

ally they found water, which is the greatest hinderance they have to draw forth their metall. But in this of Potozs, although they have digged two hundred stades or heights of a man in depth; yet did they neuer finde any water, which is the greatest happinesse of this Mountaine. But the mynes of Porce, whose metall is good and very rich , are at this day left for the discom-

moditie of water, which they have found in their worke; for they are two insupportable lasbours in fearthing of the metall; first, to digge and breake the Rocks, and then to draw out the water all together. The first of them, that is, to cut through the Rocks, is paine enough; yes very hard and excessue. Finally, at this day the King receives for his fift yeerly, from the mynes of Poresi, a million of filner, befides the wealth that growes by quick-filner, and other Royall prerogetues, which is a great treasure, Some men of judgement having cast up the accounts, fay, that what hath beene brought into the custome House of Porezi, voto the years of our Lord 1586, amounteth who a bundred thousand millions of pieces of Estay, whereof every piece is worth thirteene Rials and a fourth part, not reckoning the filter which hath beene carried a way without custome, or that hath beene entred in other Royall custome houses, or the filter that Io hath beene wrought in the Countrie, which is not entred, the which is innumerable, although the first Registers of Entries are not so exactly kept as at this day; for that in the beginning and first discourries, they made their receit by Romans, so great was their abundance,

But by the instructions and remembrances of Don Francisco de Toledo the Vice-roy , in the yeere of our Saniour Christ 1574, they finde seventie and fixe millions to that yeere : and from that yeste to eightie five inclusive, it appeares by the Royall Registers, there were thirtie five Huge fummes millions more entred. They fent this accompt to the Vice-ray from Peret, in the years I have mentioned, being then in Perm; and fince the wealth that hath come from Perm by thip, hach amounted to much more. In that fleet where I came in the yeere 1, 87, there were eletien millions transported in the two fleetes of Peru and Mexico, whereof two thirds were in that 20

of Pers, and almost the one halfe for the King.

This Rocke of Potezs, containes as I have faid, foure principall veines, that is, the Rub veine, that of Concere, that of Time, and that of Mendicia, All these veines are of the East part of the Mountaine, as looking to the Sunne rifing, for on the West part there is not any. The foresaid veines runne from North to South, which is from Pole to Pole. In the largest place they have fixe foot, and in the narrowest a span breadth. There are others of diners fashions that runne out of the faid veines; like as out of the great armes of Trees, there commonly iprout forth leffe. Euery veine hath divers mynes which are parts and portions of the same , distinct and divided betwire diners Masters, by whose names they are commonly called. The great myne containes founcore yards, neither may it be more by the Law, and the least containes 30 foure. All these mynes are at this day very deepe. In the Rich myne they reckon seventic eight mynes, which are eightic yards deepe, or a hundred stades or height of a man, and in some places two hundred. In the veine of Contene are source and twentie mynes, whereof some are seuentie or eightie stades deepe, and so of the other veines of this Mountaine. For a remedie to this great profunditie, they have invented mynes, which they call Secabones, which are cause or vents made at the foote of the Mountaine, the which goe croffing till they incounter with the veines : for we must vadentand, that although the veines runne North to South, as hath beene faid, yet is it in declining from the top to the foote of the Mountaine, which may be as they believe by conjecture, aboue twelve hundred stades. And by this account, although the mynes extend in fuch a profunditie, yet there remaines fixe times as much frace vnto the bottome of roote, the which they fay, are most rich and aboundant, as the body and spring of all veines. Although wnto this day we have seene the contrarie by experience, for the higher the weine is to the superficies of the earth, the more rich they finde it : and the deeper it goes, the poorer it is, and of the baser aloy. They then invented the Socrabons, by which they enter to worke in the mynes very eafily, with leffe charge, paine, and danger. They have eight foot in breadth, and a stade in height, the which they shut with doores. By them they drawe forth their metall very easily, paying to the proprietatie of the Secreben, the fift part of all Preinsa poins the metall they draw forth. There are nine alreadie made, and others are begun. They were nine and twentie yeeres in making of one Soccabon, as they call it, of the venome that flowes from the rich veine. It was begun in the yeere 1550, the eleventh yeere of the discoverie, and se was ended in the yeere 1585, the eleuenth of August. This Soccabon croffed the rich veine thirtie fine flades from the roote or fpring, and from thence where it met to the mouth of the myne, were a hundred thirtie fine stades. So as they must descend all this depth to labour in the myne. This Soccation containes from his mouth vnto the veine of Crufero as they call it , two hundred and fiftie yards, in which worke were fpent nine and twentie yeeres, whereby wee may fee what great paines men take to draw filter out of the bowels of the earth. They labour in their mynes in continuall darknesse and obscuritie, without knowledge of day or night. And foraimuch as those places are neuer visited with the Sunne; there is not only continuall darknesse, but alto an extreme cold, with fo groffe an aire contrarie to the disposition of man, so as, such as newly enter, are ficke as they at Sea. The which happened to me in one of their mynes, where 60 I felt a paine at the heart, and beating of the stomacke. Those that labour therein, vie candles to light them, dividing their worke in tuch fort, as they that worke in the day, rest by the night, and to they change. The metall is commonly hard, and therefore they breake it with hammers, splitting and hewing it by force, as if they were flints. After they carry up this metall

paines and darkneffe in the Mynes. and if in the Mindes farte more intolerable remay-

ypon their shoulders, by Ladders of three branches, made of Neats leather twisted like pieces of wood, which are croffed with staues of wood; so as by euery one of these Ladders they mount and descend together. They are ten stades long a piece : and at the end of one beginnes another of the same length, every Ladder beginning and ending at plat-formes of wood, where there are feates to reft them, like vnto galleries, for that there are many of thefe Ladders to mount by one at the end of another. A man carries ordinarily the weight of two Arrobes of Euery Arebe is metall vpon his shoulders, tied together in a cloth in manner of a skip, and so mount they three 25, pound, and three. He that goes before carries a candle tied to his thumbe : for (as it is faid) they have no light from Heauen, and so goe they up the Ladder holding it with both their hands, to nount fo great a height, which commonly is about a hundred and fiftie flades : a fearfull thing, and which breedes an amazement to thinke vpon it, fo great is the defire of Siluer, that for the game thereof, men endure any paines. And truly, it is not without reason, that Plinie treating of this fubiect, exclaimes and fayes thus, Wee enter even into the bowels of the Earth, Plin. in troom and goe busting after riches, even to the place of the dammed. And after in the same Booke hee 160,33,000. haith : Those ibat seeks for metals , performe worker more then Giants , making holes and caues in the darie of the Earth, parteing Mountagnes so deepe by the light of Candles, whereas the day and the night are able, and an many moments they see no day. So as often the malls of their myses fall, smothering many of them that labour therein. And afterwards hee addes, They pierce the hard Rocke with barmers of the medicine one hundred and fiftie panels, and draw out the metall upon them
with barmers of the medicine on branched and fiftie panels, and draw out the metall upon them
you foundars, the barriers day and subst, one elements but charge to another, and all in darksoff, onely to
all fees the light: with Wedget and Hummers they breaks the Fluit, how hard and firing feeser, for the burger of gold is yet were there and from the view of the transfer of the same of the The Chafe, whereof the one is commonly as hard as flint, and the other foft and eafie to breake. fine the metall This metall is not always equall, and of the tame bountie, for you shall find in one and the same of the tame to write, one for of metall very rich, which they call Caeille, or Tacesse, from which they draw Chep-

much filter; and another is poore, from whence they draw little. The most rich metall of this Mountaine, is of the colour of Amber, and the next is that which inclines to blacke. There is other fomewhat red, and other of the colour of albes; finally, of divers and fundrie colours, which 30 feeme to fuch as know them not, to bee finnesof novalue. But the mynera doe prefently know his qualitie and perfection, by certaine fignes and small raining they finde in them. They carry all this metall they draw out of these myses, Pyon Indian sheeps, which serve them as Asses are carry it to the Mills; the reithest metall is refused by melting in these small Furnaces, which they call Guerras, for that is most leadie, by reason whereof, it is most subject to melt, and for the better melting thereof, the Ludian caft in a matter, they sall Soroche, which is a metall full of Lead. The metall being in these Furnaces, the filth and satthie droffe, through the force of the fire, remaines in the bottome, and the Silner and Lead mele; to as the Silner farinment upon the Lead, vatillit bee purifici; then after they refine the filter many times after this manner of melting. They have visally drawne out of one Quintall of metall, thirtie, fortie, and fiftie pieces 40 of filter, and yet I have feene fome most excellent that have beene shewne me, where they have drawne in the melting two hundred, yea two hundred and fiftin pleees of filter of a Quincall of

metall; a rare wealth, and almost incredible, if we had not seene the trail thereof by see, but fuch metals are very rare. The poorest metall is that which yeelds two, there, fine, or like pieces, or little more. This metall hath commonly little Lead , box is drie , and therefore they cannot refine it with fire. And for this reason in Press, there was great ftose of shele poore metals, whereof they made no great account, but were rejected like firm, and suche skum of the good metall, vntill they found meanes to refine it by quick-filter; whereby the skum they called Omine be was of great profit, for the quick-filter by a frange and wonderfull propertie, purifies the tiluer, and is apt for these metals which are drie and poore, wherein they consume less quick-fil-So uer then in the richer : for the richer they are, the more need of quick-filter they have. At this

day the most vivall manner of refining in Posses, is by quick-filter, as also in the myner of Cacatecus, and others of new Spains. There were in old time upon the fides and tops of Passes, about fixe thouland Gaegree, which are small Furnaces where they melt their metall, the which were nee mounts oney in which are the bold by night; cating a light after of like a fame of placed like lights (a pleafant fight to behold by night) cating a light after of like a fame of fee. But a think say there are no about two thouland, for that (as I hair faid) they will limit fee. melting, but refine it by quick-filter, the which is the greatest profit. And for that the properties of quick-filuer are admirable; and that this manner of refining of filuer is remarkable, I will discourse of Quick-silver, of the Mynes and Worke, and what is requisite for that subject.

Quek-filter, to called by the Lainer, for that it runnes and flides finddenly from place to place; 60 among it all other metals hath great and wonderfull vertues. The first is, although it bee a true metall, yet is it not hard, neither hath it any terraine forme nor subfiftance like to other metals. but is liquid, not like vntogold and filter molten, but of his owne proper nature; and although it be a liquor, yet is it more heavie then any other metall : and therefore all others favim about and finke not to the bottome, being more light. I have feene two pounds of Iron put into a Iiii 2

Sympathic

barrell of quick-filter, the which did fwimme about like vnto Wood or Corke vpon the Wa-Pin. 1.33.66. ter. Plinie gives an exception bereunto, faying, That gold alone doth finke and not fwimme aboue it. I haue not feene the experience; but it may bee this growes, by reason that quickfilter by nature doth inuiron gold, and couers it, which is one of the most important properties it hath; for it joynes with gold in a ftrange manner, it feekes it where it lyes, and innirons it in fuch fort, as it doth diffinguish and separate it from any other body or metall wherewith it is mixt: for this reason such take gold as will preserve themselves from the dangers and discommodities of quick-filter. They have vsed a remedie to those (in whose cares they had put quick filuer, to cause them to die secretly) to put little plates of gold into their eares (for put quick-filter, to cause them to use section; you promise a grow that one that the vertice to draw out Mercurie) and after they drew out these plates all white that Gold bath the vertice to draw out Mercuries. Being made use of Mercuries. I went to fair to 10. with the quick-filter, it did flicke vnto them, Being one day at Madril, I went to fee the with the quiese which Leases do Trees (a rare works man of Miller) made for Saint Lear-exquitite works which Leases do Trees (a rare works man of Miller) made for Saint Lear-rence the Royal, it was my hap to be there one day, when as they gilded certains pieces of a countertable of braffe ; which is done with quick-filter; and for that the fume of Mercurie is mortall, he told me that the worke-men preferred themselves from this venome, by swallowing a double Duckat of gold rolled vp; the which being in the ftomacke, drawes vnto it all the quick-filter that enters in fume by the Eares, Eyes, Nostrils, and Mouth, and by this meanes freed themselves from the danger of quick-silver, which the gold gathered in the stomacke, and after call out by the excrements: a thing truly worthy of admiration. After the marke, and are that of the state of the stat separated from the gold his friend by the heate of the fire, the which purifies it from all quick-Plin.1.33. c.6, filuer. Plinie fayes, that by a certaine arte and invention they did separate gold from quickfilter. It feemes to me the Ancients had no knowledge to refine filter by quick-filter, which at this day is the greatest vie, and chiefe profit of quick-filier; for that he sayes plainly, that quick-filter toynes with no other metall bue with gold; and when hee makes mention of refining of filuer, hee speakes onely but of the manner of melting; whereby wee may interre that the Ancients had no knowledge of this fecret. In truth, though there be a league and fimpathy betwixt gold and quick-filuer, yet where as the Mercurie findes no gold, it ioynes with fil uer , though not in the like manner as with gold; but in the end , it doth clenle and purge it ter, accept to the terms and Lead, among free which the filter grower, without any needs of fireto melt it; yet muit they wis fire to sparate it from the filter, as I will flew hereafter. Quick-filuer holds no account of other metals, but of Gold and Silver; but contrariwife, it doth corrupt them, force and confume them, and flyeth from them as much as may bee. The which is likewife admirable, and for this carfe they put it in earthen veffels, or in beafts skins, For if it bee put in veffels of Copper, of Iron, or other metall, it prefently pierceth and corrupts them. And therefore Plinie callethic the poyfon of all things, for that it confumes and spoiles all. Wee finde quick-silver in the graves of dead men, which after it hath consumed the bodies, comes forth pure and whole. There hath beene likewise found in the bones and mar-Dones, comes force pure must write.

The word Men and Bearts; who that high referred it in films by the mouth and notifile, congeales washing them and piercech euro write be Bones! Therefore it is a different ching to frequent 6 40 perilloss got mortals creature. I that Nanother propertie, which is, to runne and make a hundred thou and final drops, whereof Notonor is full, bee they never to little, but they return energy way no their Juston. It is almost incorreptable, having nothing in a manner that may

Of the place filuer, and how red thefe rich mynes in Gu-

Quick-filter is found in a kinde of stone, which doth likewise yeeld Vermillion, which the Ancients called Museum, and at this day they call the Images of crystall Miniades, which are painted with quick-filuer. The Ancients made great account of this Minimus or Vermillion, holding ichor a facred colour, as Plinie reports, faying, That the Romans were accustomed to paint the face of Inputer, and the bodies of shofe that triumphed in Erbiopia: yes, their Idols and their Gouernours likewife had their faces coloured with this Minimum. And this Vermillion was 62 so esteemed at Rome (which they brought onely from Spaine, where they had many pits and mynes of quick-filuer, which continue there to this day) that the Romans fuffered it not to be refined in Space; left they should steale some of it, but they carried it to Rome, sealed up in a masse as they drew it out of the myne, and after refined it. They did yearly bring from Spains, especially

confume it. And therefore Plinis calls it the eternall fiweat. It hath yet another propertie, that

althougher doch leparate Gold from Copper, and rif other metals, yet they that will gild Cop-per, Braile, or Silver, wir quick aliverate the meanes of this vinion; for with the helpe thereof

they gildmetals. Amongst all the wonders of this firinge liquor that feemes to mee most wor-

thy obligation, than although it bes the weightieft thing in the world, yet is it converted in-

to the lightest of the world, which is imoske, and suddenly the same smooke which is so light

comming into a cold Ragion, fuddenty it thickens and is converted into quick-filter; and if you

fer him once againe to the fire, he doth likewife returne into fmozke, to be refolked againe m-

a thing, turnes againe into to heavie a fubftance, so is the proper liquide of quick-filter, where into it is distoluted; for this smoute encountring the metall on high, being a folid body, or

from Andalufie, about cen thouland pound weight, which the Romans valued as an infinite treasure, I have reported all this out of that Author, to the end that those which doe see what passeth at this day in Pera, may have the content to know what chanced in former ages, among the mighrieft Lords of the world. I speake for the Inguas Kings of Pern, and for the natural Indians thereof, which have laboured and digged long in these Mines of Quick-filter, not knowing what Quick-tiluer was, forking onely for Cinabrium or Vermillion, which they call Limps, the which they efteeme much, for that same effect that Plinie reports of the Romans and Ethiopians, that is, topaint the face and bodies of themselves and their Idols ; the like hath beene much practifed by the Indians, especially when they went to the warres, and wife it at this day in their feafts and dancing, which they call subbering, supposing that their faces and visages so subbered, did much terrifie, and at this day they field it for an ornament and beautifying; for this cause there were strange workes of Mines in the Mountaines of Guancauites, which are in Peru, neere to the Citie of Gamangua, out of the which they drew this Mettall it is of such a manner, that Labinith

if at this day they enter by the caues or Soccabones, which the Indians made in those dayes, they looie themielues, finding no passage out : but they regarded not Quick-Gluer, which naturally is in the same substance or mettall of Vermillion, neither had they knowledge of any űich matter.

The Indians were not alone for fo long a time without the knowledge of this treasure, but likewife the Spaniards, Who vntill the yeare 1566, and 1567. (at fuch time as the licentiate Ca-Stro gouerned in Perse discouered not the Mines of Quick-filter, which happened in this manner. 20 A man of judgement called Henrique Guarces, a Portugal borne, having a piece of this coloured Metrall, as I have faid, which the Indiani call Limpi, with which they paint their faces, as he found

beheld it well, found it to be the fame which they call Vermillion in Cafile : and for that hee knew well that Vermillion was drawne out of the fame mettall that Quick-filuer was, he con-

jectured thele Mines to be of Quick-filuer, went to the place whence they drew this Mettall, to make triall thereof. The which he found true, and in this fort the Mines of Palcas. in the territorie of Guamangua, being discouered, great numbers of men went thicker to draw out Quick-filter, and to to carry it to Mexico, where they sefine Silver by the meanes of Quick-filuer, wherewith many are inriched. This Countrie of Mines which they call Guarcaniles, was then peopled with Spaniards and Indians that came thirther, and come ftill to worke in thefe 30 Mines of Q ick-filuer, which are in great numbers, and very plentifull : but of, all thele Mines, that which they call a Manufor de Cubrera, or of Saints, is goodly and notable. It is a Rocked most hard Stone, interfaced all with Q isk-filter, and of that greatnesse, that it extends about fourescore Vares or yards in length, and fortie in breadth : in which Mine they have many pits, and ditches, of threefcore and tenne stades deepe, to as three hundred men may well worke together : fuch is the capacitie thereof. This Mine war discoursed by an Indian of Amader of Ca brera, called Nameropa of the Village of Acoria, the which Amador of Cabrera cauled to by registred in his name. He was in suite sgainst the Procurer ficall, but the viustrate was adjude ed to him by fentence as the diffouerert Since he fold his interest to another, for two hundred 40 and first chousand Decares, and afterwards chinking the had bindescened in the late. In spenimenced an action against the buyer, being worth at they lay, about find incaded thousand buyers, yea, lone holds to be worth a Million of Gold, a fact thing to be a Mine of

When as Don Francisco of Toledo gouerned in Pern, there was one which had bin in Mexica and observed how they refined Silver with Mercury, called Pero Fernandes de Valefco, who offred to refine Silver at Perezi, with Mercury : and having made triall thereof in the yeare 1.571.performed it with credit; then began they to refine Silver at Potozi with Quick-filger, which they transported from Guancanelicqua, which was a goodly helpe for the Mines; for by, the meanes of Quick-faluer they drew an infinite quantitie of mettall from thele Mines, whereof they made

so no accompt, the which they called Scrapings. For as it hath beene faid, the Quick, filmer purifies the Silver, although it be drie, poore, and of bale alloy, which cannot be done by melting in the fire. The Catholike King drawes from it Quick-filger mines, without any charge or hazard, almost foure hundred thousand pieces of a Mine, the which are foureteene rials a peece, or little leffe, befides the rights that rife in Potozi, where it is imployed, the which is a great riches. They doe yearely one with another draw from these Mines of Guancauilea, eight thousand quintals of Quick-filuer, yea and more.

Let vs now speake how they draw out Quick-filter, and how they refine Silver therewith. The manner They take the flone or mettall where they finde the Quick-filter, the which they put into the how to draw fire in porsof earth well luted, being well beaten, so as this mertall or stone comming to melt user, and so by the heate of the fire, the Quick-sider separates it selfe, and goes forth in exhibitation, and they chan the common than the c fometimes even with the smoake of the fire, vntill it incounters some body where it stairs and sin r. congeales, and if it paffe up higher, without meeting of any hard fubftance, it mounts up with Chap.12. it be cold, and then congeated, it tals downe againe. When the melting, is fullified, they visflop the pots and draw forth the mettall, sometimes staying vntill it be very cold, for it there

working.

remained any fume or vapour, which should incounter them that should vistop the pots, they were in danger of death, or to be benummed of their limbes, or at the least to loofe their teeth. And for that they Thend an infinitie quantitie of wood, in the melting of these mettals, a Miller called Rodrigo de Tores found out a profitable invention, which was, to gather certaine firaw which growes throughout all those Mountaines of Pera, the which they call Tebo, it is like vnto a hard reede wherewith they make their fire. It is a strange thing to see the force which this ftraw hath to melt and diffolue these mettals, the which fals out, as Plinie fales, that there is gold which melts more eafily with the flame of firaw, then with hot burning coales. They put the Onick-filuer thus molten into skinnes, for that it keepesbeft in leather, and in this fort they lav it into the King's flore-house, foom whence they carrie it by Sea to Arigns, and so to Potezi to by Land vpon their sheepe. There is yeerely spent in Potoze for the refining of Mettals, about fix or feuen thousand quintals of Queck-filter, besides that they draw from the Plates (which is Force of Straw the earth or droffe of the first walkings of these Mettals, which are made in caldrons.) The which plates they burne in their furnaces, to draw out the Quick-filter which remaines in them and there are ahoue fiftie of these Furnaces in the Citie of Potoxi, and in Tarpaya. The quantitie of mettals which they refine, (as some men of experience haue made the account) doth amount yearely to aboue three hundred thousand quintals; from the earth and droffe whereof being molt and refined, they may draw yearely about two thousand quintals of Quick-filuer, We must voderstand there are divers forts of mettals, for some yeelde much Silver, and waste little Quick-filuer : others confume much Quick-filuer, and yeelde little Siluer : aud there are others which confume much Quick-filuer, and yeeldes much Siluer; and others that confume little 20 Quick-filuer, and also yeelde little Siluer: and as men incounter in these mettals, so they grow rich or poore in their trafficke. Although tommonly the rich mettall yeeldes much Silver, and confumes much Quick-filuer; and likewise that which is poore, yeeldes little Siluer, and confumes as little Mercurie. They first beate and grinde the mettall very small, with hammers and other infruments, which beate this Stone like vnto canne Mils, and being well beaten, they fearce it in a copper fearce, making the poulder as small and fine, as if it were horse haire : these fearces being well fitted, doe lift thirtie quintals in a day and a night; then they put the poulder of the mettall into the veffels woon furnaces, whereas they anoint it and mortifie it with brine. putting to every fifthe quintals of poulder, fine quintals of Salt. And this they doe for that the 30 Salt seperates the earth and filth, to the end the Quick-filuer may the more easily draw the Silner vnto it. After they put Quick-filuer into a peece of Holland and preffe it out vpon the mettall, which goes forth like a dewe, alwaits turning and fluring the mettall, to the end it may

be well incorporate. Before the invention of these furnaces of fire, they did often mingle their mettall with Quick-Tiluer, in great troughes, letting it fettle fome daies, and did then mixe it, and ftir it againe, vir till they thought all the Quick-filter were well incorporate with the Silter, the which contimued twentie daies and more, and at the leaft mine daies. Since they discouered (as the defire to get is diligent;) that to shorten the time fire did much helpe; to incorporate Siluer the sooner with Quick-filter, they invented thefe furnaces, whereon they fet veffels to put in their mettall, 40 with Salt and Quick-filuer, and underneath they put fire by little and little, in furnaces made for the nonce vinderneath; fo as in fine or fix daies the Quick-filter is incorporate with the Siltier. And when they finde that the Mercurie hath done his part, and affembled all the Silver, leauing nothing behinde, but is well imbrued as a Spunge doth-water, diurding it from the Earth, Lead and Copper, with the which it is engendered. Then after they seperate it likewise from the Quick-filger, she which they doe in this lore; they put the Mettall in Galdrons, and veffels full of water, where with certains wheeles they turns the mettall round about, as if they should make Multard, and so the earth and drosse goes from the Mettall with the water that runnes away : The Silver and Quick-filver as most ponderous remaining in the bottome; the Mettall which remaines, is like vato Sand : then they take it out and wash it agains in great platters of 50 wood, or keelers full of water, still drawing the earth from it, untill they leave the Silver and Quick-filtier well clenfed. There flippes away also some small portion of Siluer and Quick-filter with the earth and drosse, which they call masters, the which they after wash againe and draw out the remainder. When the Silver and Quick-filver are clenfed and begin to fine, and that there remaines no earth, they put all the Mettall into a cloth, which they ftraine out very forcibly, fors all the Quick-filter paffeth out, being not incorporate with the Silver, and the reft remaines as a loafe of Siluer, like to a marke of Almonds prefled to draw oyle. And being thus preffed, the remainder containes but the fixt part in Silver, and five in Mercurie. So as if there remaines a marke of threefcore pounds, ten are of Siluer, and fiftie of Mercurie. Of these markes they make pinnes (as they call them) like pine apples, or fugar loanes, hollow within, the which 60 they commonly make of a hundred pound weight; then to separate the Silver from the Quickfillet, they put it into a violent fire, which they couer with an earthen veffell, like to the mold of a Sugar-loafe, or vnto a capuchon or bood, the which they couer with coales, and fet fire vntoit; whereby the Quick-filuer exhals in smoake, the which striking against the capuchon of

earth, it thickens and diffils, like vnto the smoake of a pot couered; and by a pipe like vnto a limbecke, they receive the Quick-filter which diffils, the Silver remaining without changing the forme, but in weight it is diminished five parts of that it was, and is spungious, the which is worthy the observation. Of two of these loanes they make one barre of Silver, in weight fixtie five or fixtie fix markes: and in this fort they carrie it to the touch, cuftome, and marke. Silver drawne with Mercurie, is so fine, that it neuer abates of two thousand three hundred and foure- Fine Silver for force of alloy, and this lo excellent, that the worke-men are enforced to alayit, putting fome worke must be mixture to it, as they doe like wife in their Mints, whereas their monie is ftampt. Siluer indures alloyed, all thefe martyrdomes (if we may to call it) to be refined, the which if we confider well, it is a to body framed where they grinde, fift; kneade, lay she leuen, and bake the Silver : befide, all this,

they wash it and wash it againe; they bake it and bake it againe, induring the petitis, sines, troughes, furnaces, caldrons, peedes : and finally, by the water and fire. I speake this, for that Mat 4. trongers, unitaces, care, I did confeder what the Scripture [peakes of the jult, Colobit ent is per Eccles. gabit quafi argentum: And that which they fpeake in another part. Sieut argentum pargatum Filit. terra, purganno feptuplum. So as to purific Silver, to refine and clenfe it from the earth and flone where it engenders, they purge and purifie it fluentimes; for in effect it passeth their hands feuen times, yea oftner, untill it remaines pure and fine; fo is it in the word of God, where the

foules must be purified, that stall inioy the heauenly perfection. To conclude this subject of Silner and of Mettals, there remaines yet two things to speake of To conclude this subject of squeer and or AMELERS, there remaines yet two tamings of operate or, gins to grade the one is of their Engins and Mils, the other of their elky or triall : I have faid before, how the Merail. they grinde their Mettall: for the receiuing of the Quick-filter, which is done with divers in- and of their fruments and Engins, fome with Hories like vnto hand-mile, others like Water-mile; of which triallof Silvers two forts there are great numbers. But for that the water they doe vie commonly, is but of Chap. 13. raine, whereof they have not sufficient but three months in the yeare, December, January, and Rebruary: for this reason they have made Lakes and standing Pooles, which contains in circuite about a thousand and fix hundred rods, and in depth three stades; there are seven with their fluces : fo as when they have neede of any water, they raife vp a fluce, from whence sunnes a little ftreame of water, the which they ftop voon holy dayes. And when the Lakes and Pooles doe fill, and that the yeare abounds with raine, their grinding doth then continue fix or feuen 30 moneths; fo as euen for Silver fake mendefire a good yeare of raine in Perezi, as they doe in other places for bread. There are some other Engine in Tarapaya, which is a valley three or foure leagues diffant from Potozi, whereas there runnes a Rineras in other parts. The difference of thefe Engins is, that some goe with fix pettels, some with twelve, and others with sourceene. They grinde and beate the Mettall in Morters, labouring day and night; and from thence they carry it to be firted, vpon the bankes of the brooke of Potoza. There are fortie eight Watermils, of eight, ten, and twelue peffels, and foure on the other fide, which they call Tanassonumns; in the Citie of Tarapaya, there are two and twentie Engine all vpon the water; besides there

are thirtie goe with Horfes in Potozi, and many others in diners parts, fo great the defire of man is to get Siluer, which is tried by deputies appointed by the King. To give the alloy to everie piece, they carrie the bars of Silver vnto the Affay Master, who give to every one his number, for that they carrie many at once, hee cuts a small peece of everie one, the which he weighs juffly, and puts them into a Crofes, which is a small vessell made of burnt bones beaten; after he placeth euery crufible in his order in the furnace, giuing them a violent fire, then the Mettall melteth, and that which is lead, goes into smoake, and the copper and tinne diffolues, the Siluer remaining most fine, of the colour of fire. It is a strange thing, that being thus refined, although it be liquid and molten, yet it neuer fpils, were the mouth of the crufible turned downewards; but it remaineth fixed, without the loffe of a droppe. The Affay Mafter knoweth by the colour and other figues, when it is refined, then doth he draw the crufibles from the fire, and weighes every peece curiously, observing what every one wants of 50 his weight; for that which is of high alloy, wastes but little, and that which is baser, diminisheth much; and according to the waste, he sees what alloy he beares, according to the which

he markes every bar punctually. Their ballance and weights are so delicate, and their graines so fmall, as they cannot take them vp with the hand, but with a small paire of pincers : and this triall they make by candle-light, that no ayre might moone the ballance. For of this little the price of the whole barre dependeth. In trueth it is a very delicate thing, and requires a great

Of Emeralds, Pearles, Indian Bread, Trees, Fruites, Flowers raturall, and carried thisher from Spaine.

Pli Ub.37. ca. 3.

T shall not be from the purpose, to speake something of Emeralds, both for that it is a precious thing, as Gold and Silver, as also that they take their beginning from Mines and Mettals, as Plinie reports. The Emerald hath bin in old time in great effectine, as the same Author writes, giving it the third place amongst all Iewels and precious to

Rones, that is , next to the Diamond and Pearle. At this day they doe not fo much effeeme the Emerald, nor the Pearle, for the great abundance brought of these two sorts from the Indiesonely the Diamond holds the principalitie, the which cannot be taken from it. Next, the Rubies come in price and other Stones, which they hold more precious then the Emerald. Men are fo delirous of fingularities and rare things, that what they fee to be common, they doe not effeeme. They report of a Spaniard, who being in Italie when the Indies were first discouered, shewed an

A pretty florie Emerald to a Lapidary, who asking him the value thereof, after he had well viewed it, being of an excellent luftre and forme, he prized it at a hundred Duckets: he then shewed him another greater then it, which he valued at three hundred Duckats. The Spaniard drunke with this difcourfe, carried him to his lodging, shewing him a Casket full. The Isalian feeing fo great a num- 20 ber of Emeralds, faid vnto him, Sir, thefe are well worth a crowne a peece. The Kings of Mexic co did much efteeme them; fome did vie to pierce their nostrils, and hang therein an excellent Emerald : they hang them on the vifages of their Idols. The greatest store is found in the new

Kingdome of Grenado, and Peru, neere vnto Manta and Port Vieil. There is towards that place How Emeralds a foile which they call, the Land of Emeralds, for the knowledge that they have of abundance to be there : and yet vnto this day they have not conquered that Land. The Emeralds grow in stones like vnto Christall; I have seene them in the same stone, fashioned like a veine, and they feeme by little and little to thicken and refine. I have feene fome that were halfe white, and halfe greene; others all white, and some greene and very perfit. I have seene some of the bignesse of a Nut, and there have bin some greater found : but I have not knowne that in our time an they have found any of the forme and bigaeffe of the plat or Iewell they have at Genes, the which they esteeme (and with reason) to be a lewell of great price, and no relique; yet with-

out comparison, the Emerald which Theophrasisus speakes of, which the King of Babylon presented to the King of Agypt, surpasseth that of Genes; it was foure cubits long, and three broad, and they fay, that in Impiters Temple, there was a needle or pyramide, made of foure Emeralds fromes of fortie cubits long, and in some places foure broad, and in others two: and that in his time there was in Torss in Hercules Temple, a Pillar of an Emerald. It may be (as Plinie faieth) it was of some greene stone, somewhat like the Emerald, and they called it a false Emerald. Church of cor. As some will say, that in the Cathedrall Church of Cordone there are certaine Pillars of Eme-

rakls which remaine fince it was a Mefquite for the Kings Miramamolins Moores, which reig- 40 ned there. In the fleete, the yeare one thousand fine hundred eightie and feuen, in the which I came from the Indies, they brought two chefts of Emeralds, every one weighing at the least foure Arabes, whereby we may fee the abundance they have.

Now that we intreate of the great riches that comes from the Indies, it were no reason to forget the Pearle, which the Ancients called Magnettes, and at the first were in so great estimation, as none but royall persons were suffered to weare them : but at this day there is such abundance as the Negres themselves doe weare chaines thereof; they grow in thels or Oysters, in eating whereof I have found Pearles in the middeft of them. Thele Oysters within are of the colour of heaven, very lively. In some places they make Spoones, the which they call Mother of Pearle. The Pearles doe differ much in forme, in bigneffe, figure, colour and polithing ; fo co likewise in their price they differ much. Some they call Aue Mariaes, being like the small grains of beades: others are Pater noffers, being bigger. Seldome fliall you finde two of one greatneffe, Plin, lib. 3, ea. 35. forme, and colour. For this reason the Komaus (as Plinie writeth) called them Unions. When as they doe finde two that are alike in all points, they raise the price much, especially for eare-rings.

I have feene some paires valued at thousands of Ducars, although they were not like to Cleonatraes two Pearles, whereof Plane reports, either of them being worth a hundred thousand Ducates, with the which this foolish Queene wonne a wager she had made against Marc Anton, to spend in one Supper aboue an hundred thousand Ducates, so at the lait course sheedisfolued one of these Pearles in strong Vinegar, and dranke it vp. They say the other Pearle was cut in two, and placed in the Pantheon at Rome, at theares of the Image 60

They fish for Pearles in divers parts of the Indies, the greatest abundance is in the South Seas, Pearle filhings. neere vnto Panama, where the Ilands of Pearles be, as they call them. But at this day they finde greatest store, and the best, in the North Seas, the which is neere to the River of Hache.

C. HAR. 2. S. 5. Parkle-divers long-breathed Mays described, divers wees thereof. 953

rid fee them make their filling, the which is done with great charge and labour of the poore flaues, which dine fix, nine, yea twelne fadomest into the Sea, to feeke for Oyfters, the which commonly are faftened to the rockes and gravell in the Sea: they pull them vp, and bring them Manner the about the water to their canoes, where they open them, drawing forth the treasure they have of. within thems. The water of the Sea in this part is very cold, but yet the labour and toile is greatelt in holding of their bretth, fometimes a quarter, yea halfe an houre together, being under Long winded she water at their fishing: And to the end these poore stues may the better continue and hold flanes, their breachs, they feede them with drie meates, and that in small quantitie, so as concrousnesses makes them abitaine and fast thus against their wils. They imploy their Pearles to diners works, and they pierce them to make chaines whereof there is great flore in enery place. In the yeare of 10 our Lord 1 (81: I did fee the note of what came from the Indies for the King : there were eigh-

teene Maces of Pearle, beides three caskers, and for particulars, there were twelve hundred threefore and foure Marks, and befales them, foren caskers not pierced, which heretofore we would haue effeemed and held for a lye.

They have (as we have here) a proper name, whereby they note and fignific bread; which at Pers, they call Tests, and in other places by another name. But the qualitie and fubflance of Man.they.16. the bread the Indians vie, differs much from ours; for we finde nor they had any kinde of Wheat or Barley, nor any other kinde of graine which they vie in Emope to make Bread withall : in-Read whereof they vied other kindes of graines and rooses, among the which May holds the We tall it alie first place, and with reason, in Castile they call it Indian Wheat; and in Italie they call it Turkey Vogalanheat

20 grains. And even as W heate is the most common graine for the vie of man, in the regions of the oldworld, which are Europe, Afia, and Affrica : So in the new found world, the most common graine is Mays, the which is found almost in all the Kingdomes of the West Indies, as at Pern, new Spaine, in the new Kingdome of Granais, in Gaminalla, in Chille, and woon the maine Land, I doe not finde that in old time, in the Hands of Barlowente, 20 Cuba, Saint Deminique, Iamaique, and Saint lean, that they vied Mays : at this day they vie much Tues and Cacami, whereof we will presently intreate. I doe not thinke that this Mays is any thing inferiour to our Wheate, in frength nor fubstance, but it is more bot and groffe, and engenders more bloud, whereupon they that have not beene accultomed thereunto, if they extetoo much, they fwell and become fcab- Howit growed bed. It growes vpon Canes or Reedes; enerie one beares one or two branches, to the which the 30 graine is faltened, and although the graine be bigge, yet finde they great flore thereof , fo as in

forme clusters I have told feuen hundred graines. They must plant it with the hand one by one, and not verie thicke; it defires a hot and a moift ground, and growes in great abundance in ma- I have had it ny places of the Indies. It is not drange in choic Countries to gather three hundred Faingnes, or tipen reasons measures for one sowen. There is difference of Mayl'as there is of Wheate, one is great and b very nourithing, another fmall and drie; which they call Morecht; the greene leanes and canes den in affer, of May, is a good foode for their Males and Horfes, and it forces them for flraw when it is dried; the graine is of more nourifhment for Horles then Barley; and therefore in those Countries, they vic to water their Hories before they eate, for if they flould drinke after, they would Swell as when they eate Wheate. Mays is the Indians bread, the which they commonly eate 40 boiled in the graine hot, and they call it More, as the Chinois and Ispanois eare their Rice fod-

den with the hot water : fometimes they eate it baked. There is fome Mays round and bigge, as that of Lucina, which the Spaniards cate rofted as a delicate meat, and bath a better tafte then Buarbenfer, or rofted peafon. There is another kinde of eating it more pleafant, which is, to grinde the Mays, and to make small cakes of the flower, the which they put in the fire, and then bring them hot to the Table. In some places they call them Areps. They make also round bowles of this paste, and so trimme them that they continue long, eating it as a daintie dish. They have invented at the Indies (for friandise and pleasure) a certaine kinde of paste, they

doe make of this flower mixt with Sugar, which they call Bifcuits and mellinders. This Man ferues the Indians, not onely for bread, but also for wine : for they doe make their drinke there-50 of, wherewith they are sooner drunke then with wine of Grapes. They make this wine of Mage in divers forts and manners, calling it in Peru, Acua, and by the most common name of the Indies, Chiche. And the ftrongest is made like vnto Beere, steeping the graine vntill it breaks. Mak & strong After they boile it in such fore, that it growes so strong, as a little ouerthrowes a man. In Perm drinke made of they call this Sore, it is defended by the Law, for the great inconveniences that grow thereby, it, making men drunke. Bas this Law is ill observed, for that they vie it still; yez they spend whole daies and nights in drinking carowles.

There is another mauner of making this Acesa or Chieha, which is to champe the Mays, and make a leuen thereof, and then boile it : yea the Indians hold opinion, that to make good leuen, 60 it must be champed by old withered women, which makes a man ficke to heare, and yet they doe drinke it. The clerdiest manner, the most wholesome, and that which least harmeth, is to rouit the Mays, which the most civill Indians doe vie, and some Spaniards, yea for physicke: Chica good a For in effect they finde is a very whole tome drinke for the reines, to as you shall hardly finde gainst the any one at the Indies complaine of paine in the backe, for that they doe drinke of this Chicha. Stone.

Of the Indical

The Spaniands and Indians cate this Mays boyled and realted for daintiness, when it is tender in the grape like milke, they put it into the pot, and make fauces that are good to eate. The buds of Mays are very fat, and ferue inflead of Butter and oyle : for as this Mays at the lades ferues both for men and beafts, for bread, wine, and oyle. Of Yucas, cofa- In some parts of the Indies they vie a kinde of Bread they call Capani, which is made of a cor-

un Papa, Chunes taine roote they call Tuca. This Tuca is a great and groffe roote, which they cut in small morand Ru. Chap. 17. fels, they grate or scrape it, and then par it in a presse to straine, making a thinne and broad cake thereof, almost like vnto a Moores Target or Buckler; then doe they drie it : and this is the Bread they eate. It hath no taffe, but is healthfull and of good nourishment. For this reason we faid, being at Saint Dominieke, that it was the proper foodefor great eaters, for that they 10 might eate much, without any feare of furfetting. They must of necessitie water this Cacase before they eate it; it is flarpe, and eafely watered with water or broath, wherein it is very good, for that it (wels much, and so they make Capirotades, but it is hardly steeped in Milke. Hony of Canes, or in Wine, for that their liquors cannot pierce it, as it doch Bread made of Wheate. Of this Cagani there is one kinde more delicate then any other, which is that they make of the flower called Xauxau, which they doe much efteeme in those parts. For my Inice of Corani part, I efteeme more a morfell of Bread, how hard and blacke focuer. It is a ftrange thing that the muce or water that commeth from this roote when they firaine it, which makes the Carani, is a deadly poifon; and kils any that drinkes thereof : but the substance that remaineth, is a very

wholesome Bread and nourishment, as we have said. There is another kinde of Tuca, which they call Sweet, and hath not this poifor in the juyce:

those parts,

this is eaten in the roote boiled or roafted, and is good meate. Cagani will keepe long, and therefore they carrie it to Sea instead of Biscuit. The place where they vie most of this Bread, is at Wheat, why it the Handstof Barlonente, which are Saint Dominicke, Cuba, Port Ricco, lamaique, and fome ogroweth not in there thereabouts; for that the foile of thefe Ilands will neither beare Wheate, nor Mans; for when as they fowe Wheate, it comes up well, and is prefently greene, but so viegually as they cannot gather it; for of the feede fowen, at one inftant fome is ipindled, fome is in the eare, and some doth but bud, one is great and another little, one is in the graffe and another in the graine: and although they have carried labourers thither, to fee if there were any tillage or Art to be vfed, yet could they finde no remedy for the qualitie of the earth. They carry Meale from new 30 Spaine or the Canaries, which is fo moift, that hardly can they make any profitable Bread, or of good take. The Wafer-cakes wherewith they fay Maffe, did bend like to wet paper, by reafon of the extreame humiditie and heate which are joyntly in that Countrie. There is another extreame contrarie to this, which hinders the growing of Mays or Wheate in some parts of the Indies, as on the height of the Sierre of Pers, and the Provinces which they call of Colas. which is the greatest part of this Realme, where the climate is so cold and dry, as it will not fuffer any of thefe feedes to grow : inflead thereof the Indians vie another kinde of roote, which they call Papas : these rootes are like to ground Nuts, they are small rootes, which castout many leaues. They gather this Papas, and dry it well in the Sunne, then beating it, they make that which they call Chano, which keepes many daies, and ferues for bread. In this Realme 40 there is great trafficke of Chame, the which they carry to the Mines of Potoni: they likewise eate of their Paper boiled or roalted : there is one fweete of their kindes, which growes in hot places, whereof they doe make certaine fawces and minced meare, which they call Locro. To conclude, these rootes are the bread of that Land; so as when the years is good, they reloyce. much, for that oftentimes they freeze in the earth, fo great is the cold of that Region : they carrie Mays from the Valley or Sea-coast, and the Spaniards which are daintie, carrie likewise from the fame places Wheate-meale, whereof they doe make good Bread, because that the Land

Belides Papas, which is the principall, there is Ocas, Tanococas, Camotes, Vatas, Xiquimas, Tuca, Cochneba, Cami, Totora, Mani, and an infinite number of other kindes, as the Patatres, which 50 grow arthe in they cate as a delicate and toothsome meate. They have likewise carried fruites to the Indies from these parts, the which prosper better there, then the Indian Plants doe, brought into Europe, There are other rootes that ferue them for dainties, as the Cochucho: it is a finall fweete roote, which some proude for more delight. There are other rootes fit to coole, as the Piquima, which is the qualitie very cold and moift, and in Summer it refresheth and quencheth the thirit; but the Papas and Ocas, be the chiefe for nourishment and substance. The Indians efterme Garlike

bres.Pines.or

Of divers forus about all the rootes of Europe, and hold it for a fruite of great force. Seeing we have begunne with the leffer Plants, I might in few words, touch that which conand Pulles, and cernes Flowers and Pot-hearbes, and that which the Latines call Arbaita, without any mention of Trees. There are some kindes of these shrubbes at the Indies, which are of verie 60 good tafte. The first Spaniards named many things at the Indies with fuch Spanish names, as they did most refemble, as Pines, Concombrer, and Primes, although they be very different fruites to imall fruits of those which are so called in Spaine. The Pines, or Pine-aples, are of the same fashion and forme ontwardly to those of Castile, but within they wholly differ, for that they have neither Apples,

nor scales, but are all one siesh, which may be eaten when the skin is off. It is a fruite that hath an excellent smell, and is very pleasant and delightfull in taste, it is full of myce, and of a sweete Pines, and flarpe tafte, they eate it being cut in moriels, and fleeped a while in water and falt. They grow one by one like a cane or stalke, which rifeth among it many leaues, like to the Lillie, but fomewhat bigger. The Apple is on the top of euerie cane, it growes in her and moift grounds. and the best are those of the Ilands of Barlomente. I have seene in new Spaine, conference of these Pines, which was very good. Those which they call Concombres, are no trees, but shrubbes, continuing but one yeare. They give it this name, for that fome of this fruite, and the most part, is in length, and roundneffe like to the Concembres of Spaine: but for the reft they differ 10 much, for they are not greene, but violet, yellow, or white, neither are they thornie or rough, but pollished and euen, having a verie different tafte, and farre better then that of Spaine, for they have a sharpe sweete talte, very pleasant when it is ripe, yet is it not so sharpe as the Pine. They are very coole, full of liquor and of easie digestion, and in time of heate fit to refresh. They take away the rinde which is white, and all that remaines is meate. They grow in a temperate foile, and require watering. And although for the refemblance they call them Concombres, yet are there many of them round, and others of a different fathion : fo as they have not the figure of Concombres. I doe not remember to have feene this kinde of fruite in new Spaine, nor at the lands, but vpon the Lanes of Pers. That which they call the little fruite of (bille, is of the same fort, verie pleasant to eate, and comes neere the safte of Cherries, 20 but in all other things it differs much; for that it is no tree, but an hearbe, which growes little and spreads upon the earth, casting forth this little fruite, the which in colour and graines, resembles almost the Mulberie, when it is white and notripe, yet is it more rough and bigger then the Mulberie. They say this little fruite is naturally found in the fields of Chile, where I have seene of them. They let it vpon Plants and branches, and it growes like any other shrub. Those which they call Praises, are verily the fruits of trees, and have more refemblance then the reft to our Plumbs, But to returne to Pot-hearbs, I finde not that the Indians had any Gardens of divers Hearbes and Plants, but did onely till the Land in some parts for pulles, which they vie, as those which they call Frifoles and Palares, which serue them as our Lentils, Beanes, or Tares: neither haue I knowne that these Pulles, or any other kindes that be in Earspe, were there be-

30 fore the Spaniards entred, who carried Plants and Pulles from Spaine thither, where they now grow and increase wonderfully, and in some places exceeds greatly the fertilitie of these parts. As if we speak of Mellons which grow in the Vallie of There, in Peru, whose roote becomes a stalk Palics, Melons As it we speak or menons which grow in the values a manufacture root source becomes a and Pompens that continues many yeares carrying Mellons yearely, and they trimme it like vnto a tree; a carried out of thing which I doe not know to be in any part of Spaine. But that is more monftrous of the Ca- Emore and libules or Indian Pompions, and the greatnesse they have as they grow, especially those which their are proper to the Countrie, which they call Capalles, the which they ease most commonly in these. Lent, boiled and trimmed with some other sawce. There are a thouland kinder of Cathaf- These cathafes for, some are so deformed in their bignesse, that of the zinde out in the middest and clean- seemeth. Gainfed, they make as it were baskets to put in all their meate for their dinner. Of the my Gurras care to leffer they make Veffels to eate and drinke in, and doe trimme them handsomely for ma-

They have not found at the West Indies anie kinde of Spices, proper or peculiar to them, as Pepper, Clours, Cinamon, Nutmegs or Ginger, although one of our companie, who had trarepper, clours, chamon, reasons, sold vs , that in the Defarts of the Hand of Iamaigne he had chance found trees where Pepper grew. But they are not yet affured thereof, neither is there anic trade of these spices at the Indus. The Ginger was carried from the Indus to Hispaniala, and it hath multiplied fo, as at this day they know not what to doe with the great abundance they have. In the fleete the, yeare 1587, they brought 22053, quintals of Ginger to Senille: but the naturall spice that God hath given to the West Indies, is that we in Castill call Indian Pepper, and at so the ludies, Axi, as a genetall word taken from the first Land of the Ilands, which they conquered, In the language of Cufes, it is called Vobs, and in that of Mexico, Chili. This plant in well knowne, and therefore I will speake a little, onely we must winderstand, that in old time it was much eftermed amongst the Indians: that they carried into places where it grew not, as a Marchandise of consequence. It growes not upon cold grounds, as on the Sierre of Peru, but in hot Vallies, where it is often watered. There is of this Axi of diners colours, some is greene, some red, fome yellow, and fome of a burning colour, which they call Caribe, the which is extreamely tharpe and biting; there is another fort not fo tharpe, but is fo tweete, as they may eate it alone as any other fruit. There is some of st verie small and pleasing in the mouth, almost like to the fmell of Muske, and is verie good. That which is sharpe and biting in this Axi, be the veines

60 and the grain onely; the rest is not : for that they eate it greene & dry, whole and beaten, in the pot, and in fawces, being the chiefe fawce, & all the fpice they have at the Indies. When this And is taken moderately, it helps and comforts the stomack for digestion: but if they take too much, it hath bad effects, for of it felfe it is verie hor, fuming, & pierceth greatly, fo as the of thereof is presudiciall to the health of yong folkes, thisfely to the foule, for that it prouokes to luft, They

vie Salt to temper this Axi, having great force to correct it, and fo they moderate one with the other by the contrarietie that is in them. They vie also Tomates; which are cold and very wholesome. It is a kinde of graine great and full of inyce, the which gines a good tafte to sawce, and they are good to eate. They have generally throughout the Indian of this Indian Pepper, at the Hands, new Spaine, Porm, and all the rest that is discourred. And as Mays is the generall graine for Bread, so Axi is the most common spice for sawces.

tree,Chap.21.

956

The thing wherein was most resemblance, in my opinion, betwixt the Planes at the Indies. and those which the Ancients did celebrate, is the greatnesse of the leaves, for that these have them very great and coole. But in truth there is no more comparison nor relemblance of the one with the other, then there is (as the Prouerbe faith) betwixt an Egge and a Chefnut. For first, the ancient plane carries no fruite, at the leaft, they made no account thereof, but the chiefest reason why they efteemed it, was, for the shadow, for that there was no more Sunne vader a Plane than under a roofe. And contrariwife, the reason why they should regard it at the Indies, yea make great accompt thereof, is by reason of this fruite, which is very good; for they have little shade. Moreover, the ancient Plane had the body so bigge, and the boughs so spread, that Plinie Plin. lib. 2. 409.1: reporteth of one Licinius a Romane Captaine, who with eighteene of his companions dined at ease in th'hollow of one of these Planes; and of the Emperour Caine Caligula, who with eleven of his ghests feasted upon the top of another Plane, where he made them a sumptuous banquet. The Indian Planes have neither fo great nor hollow bodies, not fo broad boughs.

Pilibar eard. The leaves of the Indian Plane, are of a wonderfull bigneffe, and are, in a manner, fufficient to couer a man from the foote to the head. It is a Plant that makes a ftocke within the earth, out 10 of the which springs many and fundry siens and sprigges, divided, and not joyned together. These fprigges grow bigge, euery one making a small tree apart, and in growing they cast forth these leaues, which are of a fine, greene, smooth, and great as I have faid. When it is growne to the height of a stade and a halfe, or two, it puts forth one onely bough of fruite, whereon sometimes there are great numbers of this fruite, and sometimes lesse. I have told upon some of these boughs three hundred, whereof every one was a spanne long more or lesse, and two or three fingers bigge; yet is there much difference herein, betwixt some and others, they take away the rinde, and all the rest is a firme kernell and tender, good to eate, and nourishing. This fruite inclines more to cold then heate. They are accustomed to gather the boughes or clusters, as I have said, so being greene, and put them into vessels, where they ripen, being well couered, especially when there is a certaine hearbe mingled wish it, which ferues for this effect. If they fuffer them to ripen on the tree, they have a better tafte, and a very good fmell, like to Cambiffes or fweete Apples. They last almost all the yeare, for that there are atwaies your ones that grow out of this flocke; fo as when one ends, another beginnes to yeelde his fruite, the one is halfe ripe, and the other begins to bud answ, fo as one morgedes another, and the fruite continues the whole years. In gathering the cluster, they cut the forigge or stalke, for that it beares but one; and never but once that as I have said, the stalke remaines, and cash forth new stenes or stalkes, ontill it growes old and dies. This Plane continues many yeares, and requires much monfture, and a very hot ground. They put after at the foote of it, for the better entertaining thereof, and they make 10 imall groues and very thicke: the leafe is as broad as a sheete of Paper, or little lesse, and foure

Of Cacal and

Although the Plane be the most profitable, yet that Cacao is most esteemed at Mexico, and the Coes in Pers, in which two trees they have great superstition. The Caese is a fruite little lesse then Almonds, yet more fat, the which being roasted hath no ill laste. It is so much esteemed amongfithe Indian (yes and among the Spaniards) that it is one of the richeft and the greatest traffickes of new Spaine: for being a drie fruite, and that keepes long without cortuption, they carrie whole Ships loaden from the Bronince of Grantingalla: The laft years an Engall Pirat did burne in the Port of Guatules in news Spains, about a hundred thousand charges of Cacao. They vieit inflead of money, for with fine Cacaos they buy one thing, with thirtie another, and with 50 a hundred another, without any contradiction; and they wie to give it to the poore that beg for almes. The chiefe vierof this Caoso, is an adrinke which they call Chocholate, whereof they make great accompt in that Country, foolibly, and without realon; for it is loathfome to fuch as are not acquainted with it, having a skum or froth that is very upplealant to tafte, if they be not very well conceited thereof. Yet it is a drinke very much effeemed among the Indians, wherewith they feath Noble men as they paffe through their Countrie. The tree whereon this fruite prower, is of reasonable bigueffe, and well fashioned, it is so tender, that to keepe it from the burning of the Sunnit, they plant neere vnto it, a great tree, which feroes onely to shadow it, and they call it the mather of Cacao. There are places where they are like to the Vines and Oliuc trees of Spaine. The Promince where there is greatest abundance for the trafficke of Marchandis, 63 is Gustimalia. There growes none in Pers, but Coca, wherein they hold another great inperfittion which feemes to be fabulous. It is a kinde of Marchandife, by the which all their Markets and Faires are shade with great expedition. This Cocs whereof they make fuch account; is a small greene leafe, which groweth vpon I mall trees about a fadome high, and in hot and mostly grounds;

earry foure moneths it caffs forth this leafe, which they call Trefinites or Tremey; it requires great care in planting, being very tender, and much more to keepe it, when it is gathered. They lay it is order in long and narrow baskets, and fo lade their sheepe of the Gountry, which goe in troopes, with one, two, or three thousand baskets of this marchandise.

They bring it commonly from the Ander and vallies, where there is an extreame heate, and where it raines continually the most part of the yeare : wherein the Indians endure much labour and paine to entertaine it, and often many die; for that they goe from the Sterre and cold Of Maring The places to till and gather them in the Ander. Their vie is to carry it in their mouthes, chaw- nel carbenille. ing it, and facking out the juice, but they fivallow it not. They fay it gives them great cou- Ann, and co-20 rege, and is very pleasing ento them. They willingly imploy their money therein, and vie it as ton chep. 13.

Magney is a tree of wonders, whereof the Notaries or Chapetons (as the Indians call them) are Mayur. wont to write miracles, in that it yeeldeth Water, Wine, Oyle, Vinegar, Honie, Sirripe, Thred, Needles, and a thouland other things. It is a tree which the Indians' effectie much in new Spains, and have commonly in their dwellings fome one of them for the maintenance of life; it growes in the fields, and hath great and large leaves, at the end whereof is a strong and sharpe point, which ferues to faften little pins, or to few as a needle : and they draw out of this leafe as it were a kinde of thred which they vie. They cut the body which is bigge, when it is tender, wherein Manifold comis a great hollownesse, by which the subflance mounts from the roote, and is a liquor which they modifies of the

20 drinke like water, being fweeteand fresh. This liquor being fodden, turnes like Wine, which Magach growes to Vinegar, fuffring it to foure, and boiling it more, it becomes as home, and boiling it becames as frome; and boiling it halfs; it fermes as firrope: which is healthfull enough, and of good tafte; in my sudgement it is better then the firrope of Railons. Thus do they boile this liquor, and whe it in divers forts, whereof they draw a good quantitie, for that in some season they draw daily some pots of this liquor. There are also of these trees in Peru, but they are not so profitable as in new Spaine. The wood of this tree is hollow and foft, and ferues to keepe fire, like to the match of a harquebuze, and preferues it long : I have feene the Indians vie it to that end. The Tunall is another famous tree in new Spaine: if wee may call a tree a heape of leaves ga- Tunall tree.

thered together one vpon another, it is the ftrangelt falhiond tree of all other: for fift there 30 growes one leafe out of the ground, then another vpon it, and so one vpon one, till it commeth to his perfection; but as the leaves grow vp, and on the fides, those underneath doe become great, and loole in a manner the forme of leaves, making a body and branches, which are tharpe, pricking, and deformed, to as in some places they doe call it a Thiftle. There are Thiftles or wilde Tanalls, the which doe carrie no fruite, or elfe it is very pricking without any profit. There are likewife planted Tanalit which yeelde fraite mudi afteenied amongst the Indians, the which they call Tanas, and they are much greater then Plombes, and long. They open the shell which is far, and within it is meare and small graines, like to those of figgs; which be very sweetinely have a good taste, especially the white, which have a pleasing small, but the red are not visually to ood. There is another fort of Tanalls, which they esteeme much more, although it yeeldes no 40 fruit, yet it beares another commoditie and profit, which is of the graine, for that certaine small wormes breede in the leaves of this tree, when it is well husbanded, and are thereunto faffined, concred with a certaine small fine web, which doth compaffethem in daintily; and this is that Indian Cachenille, to famous, and wherewith they die in graine. They let it drie, and being dried, carrie it into Spane, which is a great and rich marchandife. The arobe of this Cochemile or graine is worth many ducats. In the fleete, the yeare 1587, they did bring fine thousand fix hundred fe-

and fiftie peeces, and commonly there comes every yeare as great a wealth. These Tweals grow in temperate grounds inclining to cold. In Pers there growes none to this day. I have feene some Plants in Spaine, but they deserve not estimation, I will speake some. I thinke hee 50 thing likewife of the Asir, although it comes not from a tree, but from an hearbe, for that it or Indico of ferueth for the dying of cloth, and is a marchandife which agrees with the graine; it groweth which fee To I, in great abundance in new Spains, from whence there came in the fleete I mentioned 5263.aro- 14 in Fiebel bes, or there abouts, which amounted to fo many peeces. Cotten likewife growes vpon fmall lournal. shrubs, and great trees like to little apples, which doe open and yeelde forth this webbe, which coun. being gathered, they ipinne to make stuffes : and the yeare that I spake of, there came 64000. arobes.

uentie feuen arobes, which amounted to two hundred fourescore three thousand feuen hundred

These Plants we have spoken of, are the most profitable of the Indies, and the most necessarie of Maneys.

for the life of man : yet there are many other that are good to eate, among the which the Ma- Guerram, and mers are esteemed, being in fashion like to great Peaches, and bigger, they have one or two stones Pattor. Chap. 240 60 within them, and their meate is somewhat hard. There are some sweete, and others some what fowre, and haue the rinde hard. They make conferues of the meate of this fruite. which is like to Marmelade. The vie of this fruite is reasonable good, but the conferues they make thereof, are better. They grow in Ilands. I have not feene any in Pers. It is a great tree, well falhianed, and a reasonable faire leafe. The Guanyanos be other trees which commonly

carrie an ill truite, full of fowre kernels, and are like to tittle Apples. It is a tree little effermed upon the firme Land and at the llands, for they tay it finels like to the Pannifer. The taffe and fauour of this fruite is verie groffe, and the substance vaholesome. In Saint Dominique and other llands, there are whole Mountaines full of these Gunyanor, and they fay, there was no functional kindes of trees before the Spaniards came there, but that they brought them they know not from whence. This tree hath multiplied infinitely, for that there is no Beaft that will ease the kernels or the graine, fo as being thus feattered on the earth, being het and moift, it multiplies in this fort. In Peru, the Guayaner differs from others, for that the fruite is not red, but white nelther bath at any ill fmell, but is of a very good take; and of what fore of Gueranes focuer it be. the fruite is as good as the best of Spaine, especially of those which they call Granamos de Mass, and of other little white Guagnilles. It is a fruite reasonably holesome, and agrees with the fin mack, being of a strong digestion, and cold. The Paliss commonly are hore and delicare. The Palis is a great tree, and carries a faire leafe, which hath a fruit like to great Peares : within it hath a great flone, and all the rest is soft meate, so as when they are full ripe, they are as it were Butter, and hane a delicate tafte. In Perm the Palias are great, and hane a verie hard skale, which may be taken off whole. This fruite is most vivall in Mexico, having a thinne skinne, which may be pulled like an Apple : they hold it for a very holelome meate, and as I have faid, it declines a little from heate. These Mamayer, Guayanos, and Palios, be the Indians Peaches, Apples, and Peares; and yet would I rather choole them of Europe.

The Marmalad is that which they call Capeter, or Chicocapotes, which have a sweete taste, and neere vnto the colour of Marmalade. Some Crollos (for fo they called the Spaniards borne at the Indees ) Cay that this fruite paffeth all the fruites of Spaine in excellencie : yet am I not of that opinion. Those Chicocapetes or Capetes, wherein there is little difference, grow in the hotest parts of new Spaine, neither haue I knowledge of any such fruite in the firme Land of Pern. As for the Blanckemanger, it is that Annona or Guananana, which growes in the firme Land, which is falhioned like vnto a Peace, a little sharpe and opened, within it is white, tender and soft like Butter, iweete and of a pleasing taste : It is no white meate , though they call it Blanche.

There are some grosse Fruites, as those which they call Lucumes (of which fruite they speake Of many forts in a Prougebe, that it is a counterfet price.) The Guenes, Pacayes, Hubes, and the Nuts which they call Imprismed: which fruites feeme to many, to be the fame kinde of Nuts we have in Spaine, I doe not thinke it good to passe away under filence the Cocos or Indian Palmes, by reason of a verie Ander, and Al- notable propertie it hath. I call them Palmes, not properly, or that it beares Dates, but that they are trees like to other Palmes. They are high and drong, and the higher they grow, the broader they firetch out their branches, These Coon yorld a fruite which they likewise call Cocos, whereof they commonly make veffels to drinke in and fome they fay have a vertue against poilon, and to cure the paine in the fide. The nutte and meate being dried, is good to eate, and comes neere in take to greene Chefnuts. When the Coco is tender vpon the tree, the fubflance within it, is as it were Milke, which they drinke for daintinesse, and to refresh them in time of heate. I have seene of these trees in Saint Ican de Port Risco, and other parts of the Indies, and they report a wonder-40 full thing, that every moneth or Moone, this tree casts forth a new branch of this Coces; fo as it yeeldes fruite twelue times in the yeare, as it is written in the Apocalips: and in truth this feemes like vato it, for that all the branches are of different ages, some beginning, others being ripe, and fome halfe ripe. These Cocos are commonly of the forme and bignesse of a small Melon. There is of another kinde, which they call Coquilles, the which is a better fruite, whereof there be fome in Chile. They are somewhat leffe then Nuts, but more round. There is another kinde of Cocos, which have not the kernell fo cylie, but within they have a great number of fmall fruits like Almonds. like voto the graines of a Pomgranat.

These Almonds are thrice as bigge as those of Castillo, and relemble them in taste, though they be more sharpe, and likewise moist and oylie. It is a good meate, they vie it also in feating, for yo lacke of Almonds to make Marchpanes, and such other things. They call them Almonds of the Andes, for that these Cocos grow abundantly vpon the Andes of Pern; they are so fireng and hard, as to open them, they must beate them with a great stone, when they fall from the tree. If they chance to hit any one on the head, he hath no more neede of any Surgeon. It is an incredible thing, that within the hollow of these Cocos, which are no bigger than the rest, or little more, there are fuch a multitude of these Almonds. But as touching Almonds and other fruits, all trees must veelde to the Almonds of Chachapeyas, which I cannot otherwise call. It is the most plea-Of many and fing, delicate and wholesome fruite of all that I have feene at the Indies.

diver- flowers, The Indians are great louers of flowers, and in new Spains more then in any other part of the world, and therefore they are accustomed to make many kindes of Nofegaies, which there they 60 yeelde onely a call Suebiller, with fuch prettie varietie and art, as nothing can be more pleasing. They have a cuflower, & how ftome among & them, that the chiefest man offer their Suebises or notegaves in honour to Nothe ladient doe blemen, and to their ghests; and they presented vs with such abundance as wee passed richem.ch.17. through that Countrey, as wee know not what to doe wish them; and at this day they vie

the principall flowers of Castile, to that end, for that they grow better there than here, as Gilliflowers, Roses, Islanins, Violets, Orange flowers, and other forts which they have transported out of Spaine. The Role tree groweth too fast in Tome places, fo as they beare no Roles. It chanced one day that a Role tree was burned, and the fermy which proved one, prefently but a submitted as under the fermy should prove the control of the flags of the fermy should be controlled the control of the flags flags have used are should be controlled the controlled t ches, fo as at this day they yeelde reasonable store of Roles; But besides these kindes of flowers, which have beene transported from hence, there are many others, whose names I doe not know. whereof fome are red, blew, yellow, violet and white, with a thousand different colours, which the Indians did vie to carry on their heads, as feathers for ornament. True it is, that may of their to flowers are onely pleasing to the fight, having no good lauour, either they are groffe, or elfe they have none at all; and yet there be some of an excellent fent. As those which grow voon a tree tearmed by them Floripondis or carry flower, which beares no frinte, but onely thele flowers, which are greater than the Lillie, and are like to little Bels, all white, which have within them fmall threds, as we fee in the Liffie; it leanes not all the yeare to beare thele flowers, whose smell is wonderfull sweete and agreeable, especially in the coole of the morning. The Whose times in womentum weeter and agreeaute, superanty in the cools of the impringer like Victory Don Francisco de Tulcalo fent of the letters with King Philip, as a thing worthy to be planted in royall Gardens. In new Spaine the Indians' effectine much of a flower, which they call Dubsachal, which fignifiest flower of the heart, for that it bears the forme of a heart, and a not much leffe. The flower of Granadille is held for anadmitable thing, and they fay, it hath in it the markes of the Passion, and that therein they note the nailes, the piller, the whips, and crowne of thornes, and the wounds, wherein they are not altogether without realon, and yet to find out and observe these things, it requires some pietie to cause beleefe : but it is very exquisite and

faire to the eye, although it have no imell, &c. The balme which comes from the West Indies, is not of the same kinde of right Balme which Of Balme, they bring from Alexandria or Caire, and in old time was in Indea, which Indea (25 Plinie Writeth) did of all the world possesse this greatnesse, vatisli the Emperour Vepasian brought it to pinelista.c.15, Rome and into Italie. At the Indies I have seene the Tree from whence they draw the Balme, chap.18. which is as big as a Pomgranae tree, and something neere the fashion ; and if my memorie failes me not, it hath nothing common with the Vine, although that Strabe writes, that the ancient Strab. 16.16. 20 tree of Balme, was of the bignefic of a Pomgranae tree. But in their accidents & operations, their Geograp.

liquors are alike, as likewise they be in their admirable smels, & in the cure and healing of wounds in colour and fubftance, feeing they report of other Balmes that there is some white, vermillion, greene and blacke, the which is likewife feene in that of the Indies. And as they drew forth the ancient in cutting and making incisions in the barke, to cause the liquor to distill out, so doe they with that at the Indies, although it diffils in greater abundance. And as in the ancient there is one kinde which is pure, the which they call Opobalfamum, which be the verie teares that distill, fo as there is another fort which is not fo exquitite, the which they draw from the barke and leaves ftrained and boiled on the fire, the which they call Xilobal Jamum. The like is also in the Indian Balmes; there is one pure that diftils from the tree, and others that the Indians draw out 40 by ftraining and boiling the leaues and wood. The Apostolike Sea hath given libertie to give Creame of Balme at the Indies, and that they should vie it in Confirmation and other ceremonies

Next to Balme, Amber holds the second place : it is another liquor which is likewise sweet Of Amber and and medicinall, but more thicke, and turnes into a paste of a hot complexion, and a good per-other Oyles, fume. This Amber comes from new Spaine, which hath that advantage aboue other Provinces Gummes, and in Gummes, Liquors, and juyce of Trees, whereby they have fuch abundance of matter, for per- Drugs, which in Giammes, Enquois, and juye of trees, whereof there comes great flore, [pad or substepad, which they bring from the Indies is another kinde, Stores and Internse, which have excellent operations, and have a very good smell charge.

fit for fumigations, Likewife the Tacamabaea and Carama, which are also very medicinall. They

bring likewife from this Prouince oile of Africke, which the Physicians and Painters vie much, the one for plainters, the other no vernish their pictures. They bring also for the Physicians (A) fis fistula, the which growes plentifully in Saint Dominique. It is a great Tree, which carries their caffifula Canes as his fruit, They brought in the fleet wherein I came from Saint Dominique fortie eight Sakeparille. Quintals of Calfia fiftula. Salcepareille is not leffe knowne, for a thouland remedies wherein it is yied. There came in the fame fleet fiftie Quintals from the fame Iland. There is much of this Salcepareille at Peru, and most excellent in the Province of Guayaquil, which is vnder the Line. Many goe to be cured into this Prounce, and it is the opinion of fome, that the pure water onely which they drinke, gives them health, for that it passeth by rootes as I have said, from whence it drawes this vertue, to as there needes no great couering or garments to make a man sweat in

60 that Countrie. The wood of Guayac, which they call Lignum faultum, or Indian wood, growes Lignum vita; abundantly in the same Ilands, and is as heavie as Iron, so as it presently finkes in the water; hereof they brought in the same fleet three hundred and fifcie Quintals, and they might have brought twentre, yea, a hundred thousand of this wood, if there were vie for it. There came in the same fleet, and from the fame Hand, one hundred and thirtie Quintals of Brefil wood, the which is Kkkk 2

fiery red, lo wall knowne, and much vied in dying and other things. There are at the Indies infinite numbers of other aromaticall Woods, Gummes, Oiles, and Drugs, fo as it is not possible to name them all, neither doth it now much import. I fay onely, that in the time of the Kings In-Auncient Phys. gwas of Cufes, and the Mexicane Kings, there were many great personages expert in curing of diteales with timples, and aid goodly cures, having the knowledge of the many vertues and areperties of Herbs, Rootes, Woods, and Plants, which grow there, and whereof the Ancients of Europe have had no knowledge. There are a thousand of these simples fit to purge, &c. Woods are formany and great, that it hath beene needfull ( passing through some parts of the

Indies, elpecially where they newly entred ) to make their way , in cutting downe Trees, and pulling vp Bulhes, fo that (as some religious men haue written that haue tried it) they could not fomerimes have passed about a league in a day. One of our brothers ( a man worthy of credit) reported vnto vs, that being frayed in the Mountaines, not knowing which way hee Strange trank. Should pale, he fell among such thicke Bulhes, that hee was forced to goe vpon them, without fetting foot to the ground by the space of fifteen whole dayes : and to see the Sunne, or to make some way in this thicke Forest full of wood, hee was forced to climbe to the top of the highest Trees to discouer. He that shall reade the discourse of his travell , how often he was loft , and the wayes hee paffed, with the ftrange adventures that happened vnto him, the which I have written briefly, being to worthy the knowledge, and having my telfe travelled a little over the Mountaines at the Indies, were it but the eighteene leagues betwirt Nombre de Dios and Pana-Mountaines at the langer, water foreffs there are. So as having no winter in those parts, to nip them with cold, and the humiditie of the Heanens and Earth being fo great, as the Mountaines bring forth infinite Forests , and the Playnes which they call Samanas , great plentie of graffe: there is no want of Pasture for feeding of Timber for building nor of Wood for fuell. It is imposfible to fet downe the differences and formes of fo many wilde Trees, for that the names of the

greatest parç are vnknowne. Cedars in old time fo much efteemed, are there very common, both for buildings and ships, and

they are of divers forts, fome white, and fome red, very odoriferant. There are great store of Bay trees, very pleatant to behold upon the Andes of Perm, upon the Mountaines, in the Hands of Nicaragua, and in new Spaine. There are also infinite numbers of Palmes and Ceiuas , whereof the Indians make their Canoes, which are Boates made of one piece. They bring into Spains 30 from the Hanana, excellent timber, In the lland of Cuba, there are infinite numbers of like trees, as Ebene. Caouana, Grenadille, Cedars, and other kindes which I doe not know. There are great Pine trees in new Spaine, though they be not fo strong as those in Spaine; they beare no pignous or kernels, but emptie apples. The Oakes as they call them of Guayaquil, is an excellent wood and fweet, when they cut it; yea there are Canes or most high Reeds, of whose boughs or small reedes they doe make Bottles and Pitchers to carry water, and doe likewife vie them in their buildings. There is likewise the wood of Mausle or Fire, whereof they make masts for their thips, and they hold them as ftrong as Iron. Malle is a tree of many vertues, which caffeth forth fmall boughes, whereof the Indians make wine. In Mexico they call it the tree of Peru, for that it came from thence : but it grows also in new Spaine, and better then those in Pers. There are 40 a thousand other Trees, which were a superfluous labour to intreat of, whereof some are of an exceeding greatnesse, I will speake onely of one which is in Tlaco Changa, three leagues from Guaraca in new Spaine: this tree being measured within, being hollow, was found to have nine fadome, and without, neere to the roote, fixteene, and fomewhat higher, twelve. This tree was frooke with lightning from the toppe to the bottome, through the heart, the which caufed this hollownesse: they say that before the thunder fell vpon it, it was able to shaddow a thousand men, and therefore they did affemble there for their dances and superfittions: yet to this day there doth remaine fome boughes and verdure, but not much. They know not what kinde of tree it is, but they fay it is a kinde of Cadar. Such as shall finde this strange, let them Plin. lib.iz. e.r. reade what Pliniereporteth of the Plaine of Lidia, the hollow whereof contained fourescore foot 50 and one, and feemed rather a Cabbin or a Houle, then the hollow of a tree, his boughes like a whole wood, the shaddow whereof couered a great part of the field. By that which is written

deformed, even as did the auncient Gentiles, as some Writers of our time doe report, The Indians have received more profit, and have bin better recompensed in Plants that have ber that have beene carried from Spaine to the Indies, prosper well and multiply greatly : I know not whether I shall attribute it to the bountie of the Plants that goe from hence, or to the

of this Tree, we have no great cause to wonder at the Weaver, who had his dwelling and Loome

in the hollow of a Chefnut tree and of another Chefnut tree, if it were not the very fame, into

the hollow whereof there entered eighteene men on Horfebacke, and paffed out without diffur-

bing one another. The Indians did commonly vie their Idolatries in these Trees, so strange and

fruites which bin brought from Spaine, then in any other Merchandife, for that those few which are carried have bin ciri- from the Indies into Spaine, grow little there, and multiply not, and con trariwise the great num- 60 goodnesse of the soyle that is there. Finally, there is at the Indies any good thing that Spaine brings forth i in some places it is better, in some worse, as Wheate, Barley, Hearbes, and all

CHAP.3. S.4. Spanish-Indian berbs and fruits. Strange fig. tree, Wines. Sugars: 961

kinds of Pulses, also Lettuce, Coleworts, Radilhes, Onions, Garlike, Parlley, Turneps, Parlepeps, Becengenes, or Apples of loue, Siccorie, Beetes, Spinage, Peale, Beanes, Fetches : and finally, whatforeer groweth here of any profit, to as all that have woyaged thither, have beene curious to carry Seeder of all forts, and all have growne, although diversly, fome more, fome leffe. As for thole trees that have most abundantly fructified, be Orenge-trees, Limons, Citrons, and other of that fort. In some parts there are at this day, as it were whole Woods and Forrests of Orange trees: tha which feeming strange vnto me, I asked who had planted the fields with fo many Orange trees : they made me arriwer, that it did come by chance, for that Oranges being fallen to Natures had the ground, and rotten, their feedes did ipring, and of those which the water had carried away bandrie into divers parts, thefe Woods grew fo thicke: which feemed to mee a very good reason. I have faid that this fruite hath generally increased most at the lades, for that I have not beene in any place but I finde Orange trees, for that all their foile is hot and moift, which this tree most depiace out 1 mass Grange seems to that an utility of the state and the state and the state of the feene any where: Peaches, Preffes, and Apricockes have greatly multiplied, especially in new Spaine. At Pern there growes few of these kindes of fruites, except Peaches, and much leffe in the Ilands. There growes Apples and Peares, yet but fearcely : there are but few Plumbs, but aboundance of Figges, chiefly in Pers. They finde Quinces in all the Countrie of the Indies, and in new Spaine, in such aboundance, as they game ve fittie choice ones for halfe a rull. There is 20 great flore of Pomegranats, but they are all fweete, for the sharpe are not there efterned. There are very good Melons in some parts of Pers. Cherries both wildeand tame haue not prospered well at the Indies, the which I doe not impute to want of temperature, for that there is of all

fores, but to careleineffe, or that they have not well observed the temperature. To conclude, I doe not finde that in those parts there wants any daintie france; As for groffe fruites, they have no Beilletter nor Chefnuts, neither doe I finde that any baue growne there to this day. Almonda grow there, but rarely. They carry from Spaine, for fuch as are daintie mouthed, both Almonds, Muts, and Filberds: but I have not knowns they had any Medlers or Seruices, which im-

orts little.
There growes no Wine nor Grapes in the Ilands, nor firme Land, but in new Spaine, there Of Grapes, are fome Vines which beart Grapes, and yet make no. Wines: The cause is, for that the Grape ri- Vines, Oliuesa pens not well, by reafon of the raine that tale in the Mondalis of Iuly and August, which him. Muberies, ders their ripening, to as they serve onely to cates. They carry Wine out of Spaine, and from and Canes of the Conaries, to all parts of the Indies, except Perwand the Realme of Chille. There are fome Sugar Chap. 14. places where the Vinesare not watered, neither from heaven nor earth, and yet they increase an great abundance, as in the Valley of Tea, and in the disches that they call Villaceres, in which places they finde ditches, or th'earth funke downs among the dead Sands, which are thorowout the yeare of a wonderfull cooleneile, and yet is raines not shere at any time, neither is there any manner of meanes to water it artificially: the reason is, because the soile is spongious, and fucks up the water of the rivers that fall from the Mountaine, which mouthen these Sands, or tucks vp to evactor to the inclusion that the partial state, which motites the sands, or go did it it is the motificate of the Sea, as others hypofe, which pating out or this Sand, is the cute why it is not barren nor vaprofitable, as the Philosopher teaches. The Vines have so increased there, as for this cause onely the tithes of the Ghurches are multiplied fine or fix times double

within thefe twentie yeares. And it is strange, that in the Citie of Cases you shall finde ripe Grapes all the Grapes all the yeare long : the reason is (as they say) for that those Vallies bring forth fruits in years. divers moneths of the yeare, either for that they cut their Vines in divers feafons, or that this rarietie proceedes from the qualitie of the foile : but whatfoeuer it be, it is most certaine, there are some Vallies which carrie fruite all the yeare. If any one wonder at this, it may be he will wonder much more at that which I shall fay, and perchance not beleeve it. There are Trees in Pers, whereof the one part yeeldes fruite one fixe moneths of the yeare, and the other halfe part Strangefruely To yeeldes fruite the other fix moneths. In Malla which is thirteene leagues from the Citic of fying.

Kings, there is a Figge tree, whereof the one halfe which is towards the South, is greene, and veeldeth his fruite one feafon of the yeare, that is, when it is summer vpon the Sierre, and the other moitie towards the Laws or Sea coast, is greene, and yeeldes his fruite in the other contrarie season, when it is summer vpon the Laner, which groweth from the diners temperature, and the ayre which commeth from the one part, and the other. The revenue of Wine there is not finall, but it goeth not out of the Countrie, But the Silke that is made in new Spaine is transported into other Countries, as to Perm. There were no Mulberrie trees in the Indies, but fuch as were brought from Spaine, and they grow well, especially in the Prouince which they call

Miffreque, where there are Silke-wormes, and they put to worke the Silke they garher, white-60 of they make verie good Taffataes : yet to this day they have made neither Damaske, Sattin, nor Veluet. The Sugar yet is a greater reuenue, for they not onely ipend it at the Indies, but allo they earrie much into Spaine, for the Canes, grow exceeding well in manie parts of the Indies. They have built their engins in the Hands, in Mexico, in Peru, and in other parts, which yeeldeth them a very great reuenue.

Olines but

It was told me, that the engine for Sugar in Nafea, was worth yearly about thirtie thousand pieces of reuenue. That of Chicama toyning to Trucalle, was likewife of great reuenue, and shofe of new Spaine are of no leffe; and it is a strange thing to see what store they consume at the Indies. They brought from the Bland of Saint Dominique, in the fleet wherein I came eight hundred minetie eight shefts of Sugar, which being (as I did fee) shipped at Port Ricco (every cheft (in my opinion) weighed eight Arobes, every Arobe weighing five and twentie pounds , which are two hundred weight of Sugar) is the chiefe reuenue of theie Hands, fo much are men given to the defire of fweet chings. There are likewife Olives and Olivetrees at the Indies, Lay in Mexic co and in Pers, yet bath there not beene to this day any Mill for Oile, for that they cate all their Olines, and dreffe them well : they finde the charge is greater to make Oile then the profit, and to therefore they carry all the Oile they doe fpend from Spaine. And here we will end with plants.

### ð. VI. Of Beafts and Fowles in the Indics.

and will paffe to fuch beafts as be at the Indies.

of Kine, Cap. 33. O

Of beafts beat Finde there are three kindes of beafts at the Indies, whereof fome have beene sarried from Spense; others are of the same kinde we have in Europe, and yet not carried by 20 the Spaniards; and others are proper to the Indies, whereof there are none in Spaine, Of the first kinde are Sheepe, Kine, Goats, Swine, Horses, Asles, Dogs, Cats, and on ther such beasts, for there are of all these kindes at the Indies. The smaller Cattell have greatly

multiplyed, and if they could make profit of their woolls by fending them into Europe, it were one of the greatest riches the Indies had, for there the flocks of sheepe have great pastuers, where Store of theep, as their feeding failes not. In Pers there is fuch flore of pattures and feedings, as no man hath any proper to himfelfe, but every man feedes his troups where he pleafeth. For this reason there is commonly great store of flesh, and very good cheape, and all other things that come from sheepe, as Milke, and Cheese. For a time they loft their woolls, vitill that some began to hulhereby, a satisfy and cheek, and couring a why of their woods, yithit that one negation in bashit, and to make cloth and courrings, which hash been a great help end to the poorie fort of 30 the Countrie, for that the cloth of cloth late is very dear there. There are many Clothiers in From, but more in new Spalen, yet the Cloth late counts from Spalen is fare better, whether the wooll but more in new Spalen, yet the Wooll. bee more fine, or the workmen more expert. In former times there were men that did possesse three score and ten, yea a hundred thousand sheepe, and at this day they have not many lesse. If this were in Europe, it were a very great fubiliance, but in that Countrie it is but a meane wealth. In many parts of the Indies , and I thinke in the greatest part, small Cattell doe not increase and profit well, by reason that the graffe is high, and the foile so vicious, that they cannot feede so well as great Cattell.

And therefore there is an infinite number of Kine, whereof there are two kindes. Some are

tame and goe in troups, as in the land of Charca, and other Provinces of Pera, as also in all new 40

Spaine: from these tame Kine they draw such profit as they doe in Spaine, that is, the Flesh, But-

ported at once, How rich might Virginia become, if 1

Horfes.

ter, Calues, and Oxen to till the ground. The other kinde is wilde, which live in the Mountains and Forests, and therefore they tame them not, neither have they any master to whom they are proper, both for the roughnesse and thicknesse of the Forest, as also for the great multitude there is, and he that first kills them is the master, as of any wilde beast. These wilde Kine have so multiplyed in Saint Dominique, and thereabouts, that they troupe together in the fields and woods by thousands, having no master to whom they appertaine. They hunt these beasts onely for their hales, they goe to the field on horfe-backe with their weapons to hough them, courling the Kine: and when they have ftrucken any and flayed them, they are their owne, they flay them and car-Killed only for ry the hides home, leaving the fiefh, which every one neglects for the abundance there is, fo as 40 fome have testified in this Iland, that in some places the aire hath beene corrupted with the abundance of these flinking carkasses. The hides they bring into Spaine, is one of the best revenues of the Hands, and of new Spaine. In the fleet the yeere 1587, there came from Saint Dominique 35444. hides, and from new Spaine 64350. which they value at 96532. pieces, fo as when they discharge one of these fleets . it is admirable to behold the River of Senile . and in the Arcenall (where they valade) so many hides, and so much merchandize. There are also great numbers of Goats, whose chiefe profit is their tallow, besides their Kid-milke and other commodities, for that both rich and poore vie this tallow for lights. For as 'ere is a great quantitie, fo doe they make very good account of it; yea, more then of oile, but all the tallow they vie is enery of the Males. They vie their skins for shooes, yet I hold them not so good, as those which are carried from Castile.

Horses have multiplyed there, and are very excellent in many places; yea in many parts there are Races found as good as the best in Spaine, as well for passing of a Carrier, and for pompe, as also for trauell : and therefore they vie Horses most commonly, although there bee no want of CHAPIZ, S.6. Dogs wild Indian banting & game European beafts bow known, 052

Moyles, whereof there are many . especially where they make their carriages by land. There is no great numbers of A fles, having no great vie for them, neither for tranell nor ferutee. There are Affes. tome few Cameis 4 I have teene fome in Perw, that were brought from the Camerer; and have Cameis nome to want there a lattle. In Saint Dominique, Dogs have so multiplyed in number and bigness, blyed no multiplyed there a lattle. In Saint Dominique, Dogs multiplyed no said this day it is the scoupe and affliction of that Illand : for they exist the Sheepe, and goe in comness. troupes through the fields. Such that kill them are rewarded like to them that kill Wolues in Spaine. At the fielt there were no Dogs at the Indies but some beafts like vnto little Dogs, the which the Indiana call Ales, and therefore they call all Dogs that goe from Spaine, by the fame name, by reason of the referablance that is betwire them. The Indiana doe so loue these little Indiana Dogs. go Dogs, that they will spare their meat to feed them, so as when they trauell in the Country, they carry them with them power their shoulders, or in their bostoms, and when they are licke, they

cary turns with them, without shy vie burnely for companie.

It is certaine that they have carried from Spains all their beath whereof I have fooken, of Offencebedies which kinder there were showed act he fadar 5 which kinder there were showed act he fadar 5 which thinder there were showed as the fadar 5 when they were fifth discoursed about a hundred of samps. which kinder there were contest the Industry Wint they were first undertoot and industree of Lawrence years (ince; for behinds that it may be well approved by winterflet at this day liming; It is also a which in distinct argument to for chief the Industrie in their roughly, have my proper worder to flynife they found to the Contest of the Industries of thing, they tooke the word common to those places from whence they came. I have found this how they a good rule, to different what things the Indians had before the Spanishs came there, and what should passe 30 they had not for they gave names to those they had and knew before, and have given new names thinker, Cap 34. to their that are newly come vnto them which commonly are the same Spanifo names, although Note. they pronounce them after their manner, as for a Horse, Wine, and Wheat. They found of some forts of beatts that are in Europe, and were not carried thither by the Spaniards. There are Lions, Tigres, Beares, Boares, Foxes, and other fierce and wilde beafts, whereby we have treated in the first Booke, to as it was not likely they should passe to the Indus by Sea, being impossible to swim the Ocean ; and it were a folly to imagine that men had imbarked them with them. It followes therefore that this world toynes with " the new in some part; by which these beafts might paste, " But where? and so by little and little multiplyed this world. The Lions which I have seen, are not red, nel- our Nasigati. ther have they such haireas they visitly paint them with. They are grey, and not so furious as ons beyond to they seeme in pictures. The stations affectable in troupes to dunt the Lion; and make as it were a so, have been also they seeme in pictures. The stations affectable in troupes to dunt the Lion; and make as it were a so, have been also they seeme an experience of the seemes and the seemes and the seemes are seemed as the seemes and the seemes are seemed as the seemes and the seemes are seemed as the seemes are seemes as the seemes are seemed as the seemes ar circle, which they doe call Chare, wherewith they interion them , and after they kill them with wide Seas beftones, states, and other weapons. These Lions wie to elimbe trees, where being mounted, the twint. Indians kill them with Lances and Croffe-bowes, but more easily with Harquebuzes. The Tigres Lions. are more fierce and crueit, and are more dangerous to meet, because they breake forth and affaile Circles are v. are more treates in cases, and are more sungerous to mere, occupie two present optimal and are fed in bind men in treation: They are aported as the hilltoning righten definible them. I have heard force re- by Peffini, port that the fe Tigres were very first against the Indians, yet would they not advanture as all Tanas, &c vpon the Spaniards, or very little; and that they would choole an Indians in the middleft of ma- Tigres.

ny Spaniards, and carry him away. The Beares which in Cujoo they call Orsioners, be of the fame kinde that ours are; and keepe Beares, an in the ground. There are tew (warmes of Bees, for that their hony-combs are found in Trees, or Beta under the ground, and not in Hines as in Castile. The hony-combs which I have feene in the Prouince of Charem, which they call Chiguana, are of a grey colour, having little juyce, and are more like vnto iweet flraw, then to hony combs. They fay the Bees are little, like vnto Flies; and that they swarme under the earth. The hony is sharpe and blacke, yet in some places these is better, and the combs better fashioned, as in the Pronince of Tacaman in Chille, and in Carthagene. I have not feene not heard fpeake of wilde Boares, but of Foxes and other wilde bearls that Foxes and eate their Cattell and Fowle, there are more then their Shepherds would willingly haue. Be- beats of fides these beasts that are furious and hurtfull, there are others that are profitable, and have not spoile. beene transported by the Spaniards, as Stags and Deere, whereof there is great abundance in all 50 the Forefts. But the greatest part is a kinde of Deere without hornes, at the least, I have never Deere with-

feene nor heard speake of other, and all are without hornes like vnto Corear. It seemes not hard out hornes. to believe, but is almost certaine, that all these beasts for their lightnesse, and being naturally wilde, have passed from one World to another, by some parts where they toyne, seeing that in the great Hands farre from the mayne land I have not heard that there are any, though I have

We may more easily believe the fame of birds, and that there are of the fame kindes that wee of powers haue, as Partri ges, Turtles, Pidgeons, Stock-doues, Qualles, and many forts of Falcons, which which are they fend from new Spaine and Pern, to the Noblemen of Spaine, for they make great account of intre and are them. There are also Herons and Engles of divers kindes; and there is no doubt but these birds at the Indies, 60 and fuch like, have fooner passed thit her then Lions, Tigres, and Stags. There are likewife at the could passe Indies great numbers of Parrots, especially vpon the Andes of Pern, and in the llands of Pors thinker, Cap. 35: Ricco, and Saint Dominique, where they fire by flocks, as Pidgeons doe here. To conclude, birds with their wings may goe where they will; and truly, many kindes might well paffe the Gulfe, feeing it is certaine, as Plinie affirmeth, that there are many that paffe the Sea, and goe into Plinib. 10.6 x3.

ftrange Regions, although I have not read that any Fowle hath paffed by flight fo great a Gulfe.

as is the Indian Ocean, yet hold I it not altogether impolible, feeing the common opinion of

Mariners, that you shall finde them two hundred leagues and more from the Land. And as Aria

forle doth teach, that birds endure the water easily, having little respiration, as wee fee in Sea fowle, which dise and remayne long vinder the water. Even fo wee may fay, that the Fowle which be at this prefent wpon the mayne land, and in the Ilands at the Indies , might passe the Sea, reiting themselues in iome small Hands, or upon some land which they discoursed by a na-Pind 10.6.25. turall inflinct (as Plane reporteth of some) or peraduenture falling into the water, when they were wearie of flying, and after began their flight anew when they had a little refted. As for the Fowles which weefee in the Ilands, where there are no beafts, I believe certainly that they pal- le fed by one of the forefield meanes. But for other birds which we finde upon the mayne land, especially those whose flight is short, it is more credible that they came thither as the beafts did. which are of the same kindes that we have in Europe. For at the Indies there are great birds very heavie, as Eftridges, whereof there are many in Pera; which doe vie fometimes to terrifie the Indian theepe as they doe goe with their burthens.

But leading these birds that governe themselves without the care of man, but onely for hawking, let vs now speake of tame Fowle. I wondred at Hennes, seeing there were some at the Indies before the Spaniards came there, the which is well approued, for they have a proper name of the Countrie, and they call a Hen Gualpa, and the Egge Ponto, and they vie the fame prouerbe we doe, to call a Coward, a Hen. Those that were at the discouerie of the Hands of Seloman, doe 20 report that they have feene Hennes there like vnto ours: wee may conceine that the Hen being fo tame a Fowle, and to profitable, men might carry them with them when they paffed from one place to another, as we fee at this day the Indians in their travell carry their Hen with them, or chicken upon the burthen they have on their thoulders; and likewife they carry them eafily in their Cages of reedes or wood. Finally, there be at the Indies many kindes of beafts and birds, fuch as wee haue in Europe, as I have specified, and other forts which I leave to others to difcourse of It were a matter more difficult, to shew, and proue, what beginning many and fundrie forts of

be possible that beafts had, which are found at the Indies, of whose kindes we have none in this Continent. For if the Creator hath made them there, we may not then alleadge nor flie to Noahs Arke . neither 30 be any forts of was it then necessarie to saue all forts of birds and beafts, if others were to bee created anew. beafts, whereof Moreoner, we could not affirme, that the creation of the World was made and finished in fixe the lize are no dayes, if there were yet other new kindes to make, and specially perfit beafts, and no leffe excellent then those that are knowne vnto ws : If we say then that all these kindes of Creatures were preserved in the Arke by Nonb, it followes, that those beasts, of whose kindes wee finde not any but at the Indies, have pasted thither from this Continent , as wee have faid of other beafts that are knowne vnto vs. This supposed, I demand how it is possible that none of their kinde should remayne here? and how they are found there, being as it were Trauellers and Strangers? Truly

beafts and fowles from all their native diverlifted relidencies there who hat ir carried them shither ? or how came they all the world to the Arket (which no neural linking it such anging, there 3, feeing there 25, no thew nor remaynder of this and at once, could do and kept them fair in the Arket did 166 ethem to their defigned abotic state. For I had it workfitting the them to be a feet of the state of the with Metators to Dry, Americana not dround a with the Flond, And in the fame forugh to might be made for bedaff, Action other parts the support the Arts, or of the place where the Attended, not agree in gaussially to the Zebes, Eliphant, Riuerbolf, Coccollis, and Pares and Gamerica may be failed of a thought different parts and the support of the Arts of the fail ing neutrany to me sone, neispann, nucetonies, vroconies, and Paeve and Gamesei may be fail of a thouland diffe-many other hours recentres of discipant to neisburg neculiar cres-ture of many when Regions. In things about nature (as is both the hiftoir and my fairs of the Arie) we must flee necessity or assper, have neuer beens known, neither in shape nor name; neurall cause, For except we would imagine the mess part of the and whereof there is no mention made, neither a- 50 natural came, rot except we would make the many that are mong the Latines, not Greekes, nor any other Nations the colded Parks sha that that is from 57, South bittinds, to about of the world. We must then fay, that though all states is income, and royages may in this world diluted which exchants a publishic of first passages that the states came out of the "Arks, yet by a natural limit world diluted which exchants a publishic of first passages that the states came out of the "Arks, yet by a natural limit of the states are not considered to the state of the states are not of the "Arks, yet by a natural limit of the states are not of the "Arks, yet by a natural limit of the states are not considered to the state of the states are not of the "Arks, yet by a natural limit of the states are not states are not of the "Arks, yet by a natural limit of the states are not states are not of the "Arks, yet by a natural limit of the states are not states are not of the "Arks, yet by a natural limit of the states are not sta especially such as cannot endure cold, as our Author imagineth. 60 witers and be carn; dby a higher consenting our runting grounders on proper and peculiar alone to the *ladier*, but generally to make the contract of the cont boands of their babitation, Ad. 17.20.

The first proit is a question that hath long held me in suspense. I say for example, if the sheepe of Pers, and
uldence which
those which they call Paces and Guanaces, are not found in any other Regions of the world, 40
those which they call Paces and Guanaces, are not found in any other Regions of the world, 40 certaine kindes of Creatures, that are not found in

other Regions, at the leaft if they be any where elfe, they are knowne to be carried from thence. Seeing then these Creatures came out of the Arke, as for example, the Elephant which wee finde onely in the East Indies, and from thence have beene imported to other Regions, wee may say as much of theie Creatures of Pers, and of others of the Inder, which are not found in any other

We may likewise consider well vpon this subject, whether these beasts differ in kinde, and essentially from all others, or if this difference be accidentall, which might grow by divers accidents, as wee fee in the linages of men , some are white , others blacke , some Giants , others Dwarfes : and in Apes, fome have no taile, others have : and in Sheepe, some are bare, others have fleeces; fome great and strong with a long necke, as those of Pon; others weake and little. having a short necke, as those of Castile. But to speake directly, who so would by this Discourse, thewing onely these accidentall differences, presente the propagation of beasts at the Indies, and reduce them to those of Europe, hee shall valertake a charge hee will hardly discharge with his honour. For if wee shall judge the kindes of beafts by their properties, those of the ladies are fo divers, as it is to call an Egge a Chefinut, to feeke to reduce them to the knowne kindes

#### Of Fowles that are proper to the Indies, and Venison.

20 THere are many kindes of notable Fowles at the Indies, either of the same fort that ours be, of of different. They bring certaine birds from China, that have no feete, and all their bodies See 106/101 are almost feathers. They sit not upon the ground, but hang upon boughs, by strings or feathers Tom. I. l.g. of which they have, and forest themselves like Flies or ayrie things. In Perm there are birds which such in Guinne they call Tommeior, to small, that often times I have doubted feeing them file, whether they Tommeior were Bees or Butter-flies; but in truth they are birth. Contrariwife, those which they call Condores, be of an exceeding greatnesse, and of such a force, that not only they will open a sheep Condores and eate it, but alfo a whole calfe. Those which they call Auras, and others Poullacier (which in my opinion are of the kinde of Runns) are of a strange lightnesse, and have a very quicke sight, Runns, being very sit to clense Cities, for that they leave no Carrion nor dead thing. They passe the discussions 30 night on Trees or vponRocks, and in the morning they come to the Cities and Towners, fifting 22 1134 on the tops of the highest buildings, where they attend their prey. Their yong hane white fea-

thers, as they report of Rauens, and to change into blacke. The Guacamague be birds bigger then Parrets, and relemble them fomething; they are effec-med for the varietie of their feathers, which be very faire and pleafing. In new Spains there are abundance of birds with excellent feathers, foas there bee not any found in Earste that comes neere them, as wee may fee by the Images of feathers they bring from thence, file which are (with great reason) much valued and effectmed, gruing cause of admiration, that with the feat Feather plant thers of birds, they fhould make fo excellent a worke, and fo perfectly equal , as they feeing cures, properly to be the true colours of a Painter, and haut fo lively and pleating a regard, as the Paint. 40 ter cannot exceede it with his pencill and colours. Some Indians which are good and experi

workmen in this Art, will represent perfectly in feathers, whatfocuer they fee drawne with the pencill, to as the Painters of Spaine, have in this point, no advantage over them. Dow Philip the Prince of Spains his Schoole-mafter, die gine vnto him three figures or portraitures made of feathers, as it were to put in a Bremarie. His Highneffe did fhew them to King Philly his father, the which his Maiestie beholding attentioely, laid, that he had never seene in so small a worke, a thing of so great excellency and perfection. One day as they prefented to Pope Sixtim Quinthe , another iquare bigger then it, wherein was the figure of Saint France, and that they had told him it was made of feathers by the Indians, he defired to make triall thereof, touching the table with his fingers, to fee if it were of feathers; for that it feemed firange, to fee them to properly 50 fitted, that the eye could not judge not differne whether they were naturall colours of feathers,

or artificiall done with the pencill. It is a goodly thing to fee the luftre which a greene, an orange tawnie like gold, and other fine colours doe cast, and beholding them another way they feeme dead colours. They make the best and goodliest figures of feathers in the Province of Ma chouse and in the village of Palearo: The manner is with fmall delicate Pinfors they pull the feathers from the dead fowles, and with a fine pattertiey cunningly loyne them together. They take the small and delicate feathers of those birds, which in Pera they call Tomingor, or others like vinto them, which have the most perfect colours in their feathers. The Indians (befiles thele Images) did vie feathers in many other most excellene workes, especially for the ornament of

50 Kings and Noblemen, their Temples and Idols. There are also other great birds, which have excellent and fine feathers, whereof they make plumes of fundriecolours, especially when they goe to warre, inriching them with gold and filuer very artificially, which was a matter of great price. They have the fame birds ftill, but they are not fo curious, neither doe they make fo many gentill deuices as they were wont. There are other birds at the Indies, contrarie to these of forich feathers, the which (besides that they are

app-0.33%

ill-fauoured) ferue to no other vie but for dung, and yet perchance they are of no leffe profit. I haue considered this, wondering at the prouidence of the Creator, who hath so appointed that all Creatures should serue Man. In some llands or Phares, which are inyning to the coast of Pro-The like is in rw, we see the tops of the Mountaines all white, and to fight, you would take it for Snow, or for the East Indies. forme white Land, but they are heapers of dung of Sea fowle which goe continually thither; and there is fo great abundance, as it rifeth many Elles, yea, many Lances in height, which feemes but a fable. They goe with boates to these Ilands, onely for the dung, for there is no other profit in them. And this dung is fo commodious and profitable, as it makes the earth yeald great a. bundance of fruit. They call this dung Gnane, whereof the Valley hath taken the name, which they call Limagnana, in the valleys of Pern, where they vie this dung, and it is the most ferrile 10 of all that Country. The Quinces, Pomegranets, and other fruits there, exceed all other in bountie and greatnesse; and they say, the reason is, for that the water where with they water it, pale feth by a Land compafied with this dung.

Of beafts for

Besides the Beasts of Chase, whereof wee have spoken, There are beasts called Saines, made like small Hogs, which have this fingular to themselves, to have their Nauil vpon the ridge of their backs : these goe by troupes through the Woods, they are cruell and nothing searfull, but contrariwise they assaile, and have their tallents sharpe as Rasors, wherewith they make dangerous wounds and incisions, if such as hunt them put not themselves in safetie. Such as hunt them (for the more fafer killing of them) climbe vp into Trees, whither the Saines or Hogs come prefently in troupes, biting the Tree when they cannot hure the man, and then with their Lances they kill what they will. They are very good to eate, but they must of necessitie ent off the round piece where the Naull growes vpon the backe ; for otherwife, within a day they corrupt. There is another kinde of little beaft like to fucking Pigges, and they call them Guadatinaiss. I am in doubt whether there were any Swine at the Indies, before the Spaniards came thither, like to these in Spaine, for that in the discouerie of the Hands of Soloman, it is \* These might said, they found " Hennes and Swine of Spatte. But how socuer it be, it is most certaine, that come from the this Cattell hath greatly multiplyed at the Indies. They eate the fielh fresh, and hold it to bee East parts this as wholesome and as good, as it it were of Mutton; as in Carthagene in some parts, they are of those llands become wilde and cruell, the which they hunt like wilde Boares, as wee fee in Saint Domiof those llands which you see mique, and other llands where the bearts line in the Forests. In some places they feede them 30

with the graine of Mays, and they grow wonderfully fat, to have the greafe, which they vie for want of Oile; infome places they make Gamons, as in Tollness of new Spaine, and in Paris at Pers. Returning then to such beasts as are peculiar there , even as the Saines are like vnto Swine, though somewhat leffe; even so the Dantes resemble small Kine, but more vnto Mules, having no hornes. The Hides of these beasts are much esteemed for jerkins and other couerings, they are so hard as they resist any blow whatsoeuer. And as the Dantes be defended by the hardnesse of their Hides , so those which they call Armadilles are by the multitude of their

feales, which open and thut as they please like to a Curaffe. There bee little beafts which goe through the Woods, called Armadulos, by reason of the defence they base hiding themselses within their scaler, and opening when they list: I have eaten of them, and doe not hold it 40 for a meate of any great worth; but the fielh of the Tomana is a better meate, but more horrible to the eye : for they are like to the very Linardes of Spaine, although they bee of a doubtfull kinde, for that they goe to the Water, and comming to Land they climbe the Trees wpon the bankes; and as they cast themselves from the Trees into the water, the Boates watch underneath to receive them. The Chinchiller is an other kinde of small beafts, like Squirrels, they have a wonderfull smoothe and fofe skin, which they weare as a healthfull thing to comfort the flomacke, and those parts that have neede of a moderate heate; they make Coverings and Russ of the haire of these (binebilles, which are found on the Sierre of Pern, where there is likewise a small beast very common, which they call (sier, and which the Indians hold for a very good

meate, and they are accustomed often to offer these Cayes in their facrifices. They are like small 50 Conies, and have their borrowes in the ground, and in some places they have undermined all the Land : fome are grey, fome white, and fome speckled. There are other small Animals which they call Viscachas, and are like to Hares, although they bee bigger, they hunt them and eate the fielh. Of common Hares there are great flore in some parts. There are also Conies in the Realme of Onitto , but the good are come from Spane. There is another france beaft, the which for his great heavinesse, and slownesse in mooning, they call Perso-ligere, or the little light Dogge, hee hath three nailes to enery hand, and moones both hand and feete, as it were by compaffe and very heavily : it is in face like to a Monkey, and hath a shrill crie; it climeth Trees,

Of Mices or

Throughout all the Mountaines, either of these llands of the firme Land, or of the Ander, 63 there are infinize numbers of Mices or Monkeys, which are a kinde of Apes, but very different, in that they have a taile, yea a very long one. And amongst them there are some kindes which are thrice, yea foure times bigger then the ordinarie; some are all blacke, some bay, fome grey, and some spotted. Their agilitie and manner of doing is admirable, for that they

CHAP.2.S.6. Rarities of Monkeys, Vicugnes, and Tarugues. Indians hunting, 057

feeme to have reason and discourse to goe voon Trees, wherein they feeme to imitate Birds. Going from Nombre de Dies to Panama, I did fee in Capira, one of thefe Monkeys leane from one Tree to an other, which was on the other fide of a Riner, making me much to wonder. Luftie leaper They leave where they lift, winding their tailes about a branch to flake it : and when they Strange fight will leape further then they can at once, they vie a pretie detice, tying themselves by the tailes one of another, and by this meanes make as it were a chaine of many : then doe they lanch themselves forth, and the first holpen by the force of the rest, takes hold where he list, and fo hangs to a bough, and helpes all the reft, till they be gotten up. It were long to report the fooleries, tricks, traueries, and pleafant sports they make when they are taught, which seeme

not to come from bruit beafts, but from a manlike understanding. I faw one in Caribagene in Monkey lastthe Gouernours house, so taught, as the things he did seemed incredible : they fent him to the ned Tauerne for wine, putting the pot in one hand, and the money in the other; and they could not possibly get the money out of his hand, before he had his pot full of wine. If any children met him in the fiseet, and threw any ftones at him, hee would fet his pot downe on the one fide, and caft from against the children till hee had affured his way, then would hee returne to carry home his pot. And which is more, although he were a good Bibber of wine (as I have oftentimes feene him drinke, when his Mafter hath given it him) yet would hee never touch it vntill leane was given him. They told me moreover, that if he faw any women painted, he Zealous.

would fall youn them, pull off their attire, and would fecke to bite them. 30 Among ft the most remarkable things at the Indies of Peru; be the Vicugnes, and sheepe of Or vicugnes the Countrie, as they call them, which are tractable beatls and of great profit; the Viengues and Tangaer of are wilde, and the Sheepe are tame. Some thinke that the Viengenes are those which Arifforle, Pera Chap 40. Plinie , and other Authors call Copress , which are wilde Goats , and in truth they have some drifter ib 3, de Plinie, and other Authors call Copress, which are write Goats, and is that they have some partit, animal refemblance, for the lightnesse they have in the Woods and Mountaines, but yet they are no fastibile 1678 Goates, for the Viengues have no hornes, as those have, whereof Ariffele makes mentione neither are they the Goates of the East Indies, from whom they draw the Bezar stone; for if they be of that kinde, it were a diverte one, as in the race of Dogs, the Maftife is diverte from the Grey-hound. The Vicugnes of Perm are not shofe beafts which carry the Bear Rone, in

the Pronince of new Spame, which there they call Bestare, for that they are a kinde of Stags 30 and Venifon ; yet doe I not know in any part of the World there the any of thefe beafts. but in Pern, and in Chille, which are Countries toy fling one Wandthet. These Viengues are greater then Goates, and lesse then Calues. Their halle is of the colour of dried Roses, somewhat clearer: they have no bornes like Stags and Goates. They feede voon the highest tops of the Mountaines, which they call Pagnes. The Snow nor Frost doth not offend them, but contrariwise they seeme to delight in it. They goe in troupes; and runne most lightly; when they meete with any Transliers or Beafts, they flie away, Teeming very fearefull, and in Bying they drive their young ones before them. They doe not finde that they multiply much t and therefore the Kings Ingues did defend the hunting of Viengues; if it were not for their feasts, or by their commandement. Some complaine, that fince the Speciards entred there, effer haut

so given too much libertie to hunt the Viengeer, and by this meanes they are much diminished. The manner the Indians wie in their hunting, they affemble many men together, to the num- Indian hunber of a thousand or two thousand, yes more, and invironing a great circuit of wood, they ting. hunt their game vntill they have compafied it in on all parts, and by this meanes they commonly take three or foure hundred, and so choosing what they lift; they let goe the reft, especially the Females for breede. They are accustomed to theere these beafts, and of their sleece to make Courrings and Rugges of great value, for that this wooll is like to white filke, which lasts long: and as the colour is naturall and not dyed, so is it perpetuall. The stuffes that are made of this wooll, are very fresh and good in Summer, and they hold them profitable for the inflammation of the reines, and other parts, tempering the excessive heate. This wooll hath

so the like versue when it is made in Quite, and therefore fome wie it to that end, for the triall they have made thereof. They lay moreover, that this woolf or conerings made thereof, is physicall for other indifpositions, as for the gowe : yet doe I not know that they have made any certaine triall thereof. The fiesh of these Victioner is not good, although the Indians earest; and drie it. For the effects of phylicke, I will tay what I have feene vpon the Sterre of Pera, come ming one night into a Tambe or Inne, being much afflicted with paine in mine eyes, thinking they would fall out (the which doth commonly happen in those parts) for that they palle Experiment through places covered with fnow, which is the cause of this accident. Being croubled with this for the eyes. paine, and out of patience, there came an Indian woman which faid to me, Father, lay this to thine eyes, and then fhalt bee cured. It was a piece of the fieth of Victories newly killed and all

60 bloudie. I vied this medicine, and prefently the paine ceafed, and foone after went quite awa. Beildes thele Chaces which is the most common manner of hunting at the Fidies , they have ve fed another more private to take them, which is, that comming neere, they doe cast certains lines with plummets of lead, which intangle their legges, fo as they cannot runne, and by this meanes they take the Viengne. The chiefe reason why this beaft is esteemed; is, by reason of

the Bexars stone they finde in them, whereof wee will intreate hereafter. There is another kinde of beafts, which they call Taragues, which likewife are wilde, and more nimble then the Viengenes. They are greater of body, and more hot. They have foft cares and hanging : they goe not in troupes as the Vicuoues. I have not feene them but alone, and most commonly in high places. They also draw Bezars stones from these Taxagues, which are greater, and have more on There is nothing at Pers of greater riches and profit then the Cattell of the Country , which

our men call Indian Sheepe, and the Indians in their generall language call them Leans. For all

things well confidered, it is a beaft of the greatest profit and least charge of any that I know : from

them they draw meate and clothing, as from the theepe of Spaine. Moreover, they have the be- to nefit to carry all things they have need of, ving them to beare their burthens and they have no need either of thooes or faddles, nor yet of cates, but he ferueth his Mafter for nought, feeding on the graffe he findes in the fields; foas God hath furnished them of Sheepe and Mares, and all in one beaft. And as it is a poore Nation, fo would hee in this point free them from charge, for that there is much pasture you the Sierre: and this kinde of Cattell bath no need of any other charge. There are two kindes of these Sheepe or Lamas, the one they call Pages, or theepe bear ring wooll, and the others are bare, and have little wooll, fo are they better for burthen; they are bigger then great Sheepe, and leffe then Calues, they have a very long secke, like to a Camel. whereof they have good need; for being high of flature, they have need of a long necke, else should they be deformed. They are of divers colours, some all white, others all blacks, some grey 20. and fome spotted, which they call Moromore. The Indians had great superstitions in choosing the beafts for facrifices, of what colour they thould bee, according to the disertitie of Seasons and Sacrifices. Their fielh is good, although it be hard, but that of their Lambs is the better. and the most delicate that can be eaten ; yet they eate not many , for that the chiefe fruit and profit they yeeld, is their wooll, to make clothes, and their feruice to carry burdens. The Indians make fluffes of this wooll wherewith they clothe themselves : the one is groffe and commen , which they call Hannes , and the other fine and delicate , which they call Combs , they make Carpets and Couerings, and other exquisite workes, which last long, and have a very faire luftre, like halfe filke : and that which is most rare, is their manner of wearing their workes, being both fides alike, fo as you shall not finde any end in a whole piece. The Ingue 30 King of Pera had many chiefe workmen, to make this worke of Cambo: and the which, for the most part, were refident in the Prosince of Capachica, loyning to the great Lake of Titeata.

They die this wooll into diners fine colours, with fundric kindes of herbs, whereof shey make many forts of workes both course and fine. All the Indians, both men and women, worke in the Sierre, and have their Loomes in their houles, having no need to buy any stoffes for their necef-farie vies. Of the fielh of their sheepe they make Cujchergui, or dayed fielh, the which will last very long, whereof they make great account. They are accustomed to drive thouses of these sheepe with burthens, and to goe in bands, three hundred, fine hundred, yes a thousand in a companie, with Wine, Mays, Coca, Chuno, Quick-faluer, and all other kindes of merchandise and of Silver, which is the best of all. They carry barres of Silver from Perent to Arigno, which 40 is three score and ten leagues. I have often wondered to fee these troupes of sheepe laden with a thouland or two thousand barres of Silver, and much more, which is above three hundred thoufand dugats, without any other guard or refore then fome Indians, which fears onely to guide thele theepe, and to lade and volade them, or at the most, some few Spaniards: and they steepe all night in the middeft of the fields, without other guard : and yet in fo long a way and to weake a guard, they never finde want or loss of any thing in so great a treasure of Silver, so safe in the way in Pers. The burthen which one of the safe sheepe doth commonly carry, is of four eor safe Sixe Arobes is Arrobes : when their woyage is long they goe nor about two, three, or four leagues at the most a hundred and on a day. Those that guide those troupes, have their ordinarie lodgings, where they are affirmed to have water and pasture, and there they valade and set up their Tents, making fire, and dref- co fing their meates, which is not painfull, although it be a flegmatike and flow manner of travell. When there is but one dayes iourney, one of these sheepe will beare eight Arrobes in weight, or more, and beares this burthen eight or ten leagues in a day, as the poore Souldiers were wont to doe, when they marched through Perm. This kinds of Cattell delights most in a cold aire, and for this cause they line vpon the Sierre, and die in the Lanes, by reason of the heave. Sometimes these sheepe are all courred with Ice and frost, and yet they continue found and wells The bare (heepe are pleafant to behold, for they will flay vponthe way, rayfing vp their necks, and will, looke vpen any one very willly, and so they remaine a long time, without mooning or any thew of feare, which gmeth occasion of laughter, freing them thus to fland. And yet

foractimes they doe grow amazed fodeinly, and runne away with their burthers, enen to the 60

highelf Rocks, to as not being able to come vnto them, they are confirmyned to kill them with an Harquebuze, left they should lote their barres of Silver, which they sometimes carry. The Pacor

will grow reaftie under their burthens, lying down, and will endure to be cut in a thouland pieces before they will rife when this humor takes them; wherof the prouerb growes in Perm, to fay that

is reaftie, to fignifie, he is obitinate; for that when any of these bealts is moodie, it is with exceffe : the remedie they have is, to stay and sit downe by the Pace, making much on him, vntill the fit be past, and that he rife : and sometimes they are forced to stay two or three houres. They haue a difeafe like to fcabs, which they call Carachs, whereof they commonly die. The Ancients had a remedie, to burie them quicke that had the Carache, left they should infect the rest, being a very contagious disease, and goes from one to another. An Indian that hath one or two of these sheepe, is not reputed poore, for one of them is worth fixe or seven pieces of allay, and more, according to the time and places.

The Bezauer from is found in all these beasts before mentioned, which are proper to Pers, Of the Bezaur 10 whereof fome Authors of our time have written whole bookes, which they may reade that de- flone, Chep. 42 fre to have a more particular knowledge. For the prefent subject it shall be sufficient to say, that

this stone which they call Bezaser, is found in the stomacke and belly of this beast, sometimes one alone, sometimes two, three, and fourt. They are very different in forme, greatnesse and colour, for that some are small like Filberds, and lesse; others like Walnuts; some like Pidgeons egges, and others as bigge as a Hens egge : and I have feene some as bigge as an Orange; in forme fome are round, others in fashion like to Lentils, and many other formes. For their colour, some are blacke, some white, some grey, darke greene, and others, as if they had beene gilded. It is no certaine rule to judge the best and most fine by the colour or forme. All these stones are made and fashioned of divers films and skins one vpon another. In the Province of Xaura and 20 other Prouinces of Peru, they finde these stones in divers kindes of beafts, both wilde and tame. as in the Guaracos, Pacos, Vicugues, and Tarugues, some adde an other kinde, which they say are wilde Goates, which the Indians call Cypris. These other kindes of beasts are very well known in Pern, whereof we have alreadie discoursed. The Guaraces or Countrie sheepe, or Paces, have commonly the leffer flones, and blacke, neither are they fo much approved for the vie of phyficke. They draw the greatest Bezas stones from the Viengues, and they are grey, or white, or of a darke greene, which are held for the better. They efteeme those of the Tarngues for the most excellent, whereof there are some reasonable bigge : they are commonly white, inclining

to grey; and they have the filmes commonly bigger and thicker then the reft. They finde the Bezaar stone equally both in Male and Female. All beafts that ingender it. 30 chaw the cuid, and commonly feede vpon the Snow and Rocks. The Indians report and teach by tradition from their Fathers and Ancients, that in the Prouince of Xaura, and in other Prounces of Pers, there are many herbs and venemous beafts, which poison the water and the paflures where they eate and drinke, and where they breathe : amiddeft which venemous herbs there is one very well knowne of the Vicepne, by a natural inflined, and of other beafts that ingender the Bease flone, which eate this herbe, and by meanes thereof they preferue themfeloes from the postoned waters and pastures: and they say, that of this herbe the flone is compoundant. ded in the stomacke, whence it drawes all the vertue against poison, and other wonderfull effects. This is the opinion and tradition of the Indians, discovered by men of great experience in the Kingdome of Pern, which agrees with reason, and with that which Plinte reports of the Plin, L 10, 1,714

40 Mountaines Goats, which are nourished and fed upon poison without suffering any harme. The Indians being demanded, why the Sheepe, Kine, Goats, and Calues, fuch as are in Caffile, haue not the Bezaer stone, seeing that they feede on the same Rocks: their answere is, That they believe not, that those beatts of Caffile eace of that herbe, or that they have found the Bezaste stone in Stags and fallow Deere. This seemes to agree with our knowledge, for that in new Spaine they finde the Bezaar stone, although there be no Viengnes, Pacos, Taringues, not Guaraces, but onely Stags, in some of which they finde these stones.

One thing is worthy admiration, that they grow and are fashioned vpon very strange things, as voon the tagge of a Point, vpon a Pin, or a piece of Wood, which they finde in the centre of this stone, and yet doe they not hold it falle, for that the beast might swallow 50 it, and the flone thicken woon it, and growes one woon another, and fo it increaseth, I did fee in Pern, two stones fathioned upon Pignons of Castile, which made us to wonder much, for that in all Pern, wee had not feene any Pines or Pignons of Castile, if they were not brought from Spaine, which feemes to mee very extraordinarie. This little may fuffice touching the Bezaars frome. They bring other physicall fromes from the Indies, as the stone of Hyinda, or of Rate, the bloud ftone, the ftones of Milke, and of the Sea. Those which they call Corneria was, for the Heart, whereof there is no neede to speake, having nothing common with the subject of beasts, whereof wee have intreated : which gives vs to understand how the great Master and Author of all, hath imparted his benefits and wonderfull secrets, to all parts of the World; for the which he is to be glorified for euer.

R Eader, I have here added this works, for the better and over particular knowledge of the Naturalli Historic of the Wast Indies. Thu Authors Gonzalo Fertimando de Ouicdo did first sortie a Summarie to Charles the fifth (out of which the most part of this is taken) An. 1925, and after that
Lill 2

writ his Generall Historie, enlarging what he had written before this Summarie ; and in the dimiding it was store Parts: the first of which contenting principally the Spanish alls and N is aware 16 among a tell land, in twenthe Bodgs; we have in Ramulios that I may of Fonges: the feemd (in which have write of the Continent of New Spanne, and the third of Pen and the Southern America, with about four elundred pictures of the Plants, Beafts, and other Creatures of those parts, were never published; to the great lesse of natural knowledge of those parts. As for the Spanish acts we have them sufficience. ly written by others. But Acofta and Outedo have bett deserved of the studious of Nature, that is, of the knowledge of God in his workes. In which respect I have added many things omitted by Master E. den, and Master Willes in the former publication, both examining this, and translating the rest from

#### CHAP. III.

Extracts of Gonzalo Ferdinando De Oviedo his Summarie and Generall Historie of the Indies.

#### Of the mynes of gold, and the manner of working in them.

His particular of the mynes of Gold, is a thing greatly to be noted, and I may much better speake hereof then any other man, forasmuch as there are now twelve 20 yeeres past fince I ferued in the place of the Surueyor of the melting shops, pertayning to the gold mynes of the firme Land, and was the Gouernor of the mynes of the Gatholike King Dow Ferdinando, after whole departure from this life, I fee ued long in the same roome in the Name of your Maiestie. The myne or veine

recompenced with gaynes. The greatest part of the wrought gold which the Indians have, is base, and holdeth iomewhat of Copper: of this they make Bracelets and Chaines, and in the fame they close their Iewels which their Women are accustomed to weare, and esteemed more then all the riches of the World. The manner how gold is gathered, is this, either of fuch as is 30 found in Zanana, that is to fay; in the Plaines and Rivers of the Champaine country being without Trees, whether the Earth be with graffe or without, or of fuch as is fometimes found on the Land without the Rivers in places where Trees grow, fo that to come by the same, it shall be requifite to cut downe many and great Trees. But after which focuer of these two manners it be found, either in the Rivers or Breaches of waters, or else in the earth, I will shew how it is found in both these places, and how it is separate and purged. Therefore when the myne or veine is discourred, this chanceth by fearthing and prouing in such places as by certaine signes and to-

kens doe appeare to skilfull men apt for the generation of gold, and to hold gold : and when they

haue found it, they follow the myne, and labour it, whether it be in the River, or in the Playne

as I have faid. And if it be found on the Playne, first they make the place very cleane where they 40

intend to digge, then they digge eight or ten foot in length, and as much in breadth : but they

goe no deeper then a span or two, or more, as shall feeme best to the Master of the myne, digging

equally, then they washall the earth which they have taken out of the said space, and if herein

they finde any gold they follow it, and if not, they digge a span deeper, and wash the earth as

they did before : and if then also they finde nothing, they continue in digging and washing the

earth as before, untill they come to the hard rocke or ftone; and if in fine they finde no gold there, they follow no further to feeke gold in that place, but goe to another part. And it is to be

vnderstood, that when they have found the myne, they follow it in digging, in the same mea-

fure in levell and depth, vntill they have made an end of all the myne which that place contay-

which ought to be followed, ought to be in a place which may fland to faue much of the charges

of the Labourers, and for the administration of other necessarie things, that the charges may bee

Manner of Searching for

Gold in

viage of

neth, if it appeare to be rich. This myne ought to confift of certaine feet or pales in length or 10 breadth, according to certaine orders determined, and within that compasse of earth, it is not lawfull for any other to digge for gold: And where as endeth the myne of him that first found the gold, immediatly it is lawfull for any other man that will, with a flaffe to affigne himfelfe a place by the fide of the same, inclosing it with stakes or pales as his owne. These mynes of Zamone (that is, fuch as are found in the Playnes) ought euer to bee fought neere to some River of Brooke, or Spring of water, or Dike, or standing Poole, to the end that the gold may be washed, for the which purpose they vie the labour of certaine Indians, as they doe other in digging of the myne. And when they have digged out the myne, they fill certaine Trayes with that earth, which other Indians have the charge immediatly to receive at their hands, and to carry those Trayes of earth to the water, where it may be washed : Yet doe not they that bring it wash it, 60 but deliver it to other, putting it out of their owne Trayes into theirs, which they have readie in their hands to receive it. These Washers for the most part are the Indian women, because this worke is of leffe pame and trauell then any other. These women when they wash, are accustomed to fit by the water fide, with their legges in the water even up to the knees, or leffe, as the

place serueth their purpose : and thus holding the Trayes with earth in their hands by the handles thereof, and putting the fame into the water, they moone them round about after the manner of fifting, with a certaine aptnelle, in fuch fort that there entreth no more water into the Traves then ferueth their turne, and with the felfe fame apt moting of their Traves in the Water, they ever avoid the foule water with the earth out of the one fide of the Veffell, and receine in cleane water on the other lide thereof, fo that by this means by little and little, the water walheth the earth as the lighter fabitance of the Trayes, and the Gold as the heavier matter refleth in the bottome of the same, being round and hollow in the middest like vnto a Barbars Bafen. And when all the earth is avoided, and the Gold gathered together in the bottome of the to Tray, they put it a part, and returne to take more earth, which they wash continually as before.

Furthermore it is to be noted, that for every two Indians that walh, it is require that two o, Other Labouther ferue them to bring earth from the Mine, and other two to breake the fame Thall, and fill rers. their Trayes therewith. Also beside these Labourers, it is necessarie that there be other people in the place where they worke and reft in the nighte: these are such as make their bread, and pronide for victuals, and other necessaries. So that to conclude, there are in all, fine persons ordinarily affigued to every Tray of walhers.

There is another manner of working the Mirres, in Rivers or Brookes of running waters: and this is, that in anoyding the water of his courfe, after that the beds of the Rivers are dry and vtterly emptied, they find Gold among the breaches, clifts, and ifts of stones, and among all that 20 is in the bottome of the Channell, and where naturally the Rouer runners of greatest force 150 Gold in Rivers that it chanceth fometime, that when the bed of the River is good and rich, they find in it great or poulder, quantitie of Gold. And therefore your Maiestie ought to understand for a generall rule, as it appeareth in fact, that all Gold is ingendred in the tops and highest places of the Mountaines; and Goldenge in continuance of time 15 by little and little brought downe to the Vales and Plaines by thowers dred on hill of raine, and the fals of Springs, Rivers, and Brookes, having their originall in the Mountaines, tops. and descending from the same, notwithstanding it is oftentimes found inthe Plaines farre from the Mountains. But when it chanceth to be found in great quantity, it is for the most past among the Mountaines, and in the Ruers, or their branches, more then in any other part of the Plaines and in these two manners it is commonly found most abundantly. And for the better proofe

30 that Gold is ingendred on high; and is brought downe into the low places, I have one great toten de constant de la breaking a Mine in the earth, where it had beene broken before, and having now digged one or two or three Poles in measure, the Miners found certaine coler of wood under the same level! where they found Gold, and this I fay in the earth which was taken for a Virgin , that is to fay, fuch as had not before beene opened for any Mine : the which coles could not naturally bee ingendred there, or enter in by any meanes, but when the superficiall part of the earth was equall with the leuell where the coles were found, it is like that the coles were left there by fome occa-

40 fion of fire, and that they faftened there in time, and that afterward in long continuance of time, they were by listle and little couered with the earth, which the often thowres of raine walned from the Mountaines, fo that by the course of yeeres the earth overgrew the coles vinto the faid levell and measure, which had before time beene the superficiall part of the earth, where the Some man coles and Gold were found together: whereby it may appeare that the Gold was no more in- thinks the gendred there then were the coles, but brought thither from the Mountaynes by the falls of wa- coles, theis # ters as we have faid, forafmuch as the Mountaines are the Matrices and Bowels of all rich Metals. other lucibid Further and beside this, I say that in how much more the Gold is gone faire from the naturall salue, natural place of his generation to the place where it is found, it is so much the more purified and fined, there. and of a better caract, and the neerer that it is found to his proper Mine or veine where it is in-50 Bendred, it is fo much the bafer, fouler, and more crude, and of a bafer alay and caract, and doth

walte fo much the more in melting, and remayneth more Brickle.

Sometimes there are found graines of Gold of great quantitie, and of great weight about Gold in the earth, and flometimes allo voder the earth: And the greatest of all other that was found to graines this day in the Indies, was that which was lost in the Sea about the Hand Bease, which weighed one had a sea about the Hand Bease, which weighed one had a sea about the Hand Bease, which weighed one had a sea about the Hand Bease, which weighed one had a sea about the Hand Bease, which weighed one had a sea about the Hand Bease, which weighed one had a sea about the Hand Bease, which weighed one had a sea about the Hand Bease, which weighed the sea about the Hand Bease, which we will be sea about the Hand Bease, which weighed the sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the Hand Bease, which we will be sea about the sea a three thouland and two hundred of Cafellans of God, which are in value foure thouland a hundred thirtie and eight Ducats of Gold, which weigh one Arrowa and leven pound, or thirtie and two pound, after twelve ounces to the pound, which make threefcore and foure Markesof A' Marke is a Gold. And I faw in the years 15. in the hands of Michel Paffamonie Treaturer to your Mas pound of 8. ieitie, two graines, of the witich one weighed feuen pounds, which are fourteene Markes, and ounces flumma, 60 are in value about three foore and fine Ducats of Gold enery Marke : the other was of ten Marks, 16, pound weight cith

which are fine pounds of like value, and of very good Gold of two and twentie caracts, and bet ounces, and ter : There are also found many other great graines, although not equal vinto thele in bignefle. 12. ouncests And for a function of Gold, I have thought good to declare former has how the In. the pound, of dismount very excellently gild fach Veffels of Copper and base Gold as they make for they can indian claims.

give them to faire and flourishing a colour, that all the maffe which they gilt, appeareth as though it were Gold of two and twentie caracts, and better. This colour they give with a certaine hearbe, as though it were wrought by the art of any Gold-Imith of Spaine or Italie, and would of them be effeemed as a thing of great riches and a fecret manner of gilding. For the define that our men haue to Gold, they nothing efteeme the Copper, although there might great commoditie and profit be had thereby, and also by other Metals, which they nothing regard, except Silver, which is found abundantly in that part of the firme Land which is called New Spaine,

Of the manner of fishing for Pearles.

He Indians exercise this kind of fishing for the most part in the Coasts of the North in Ly 10 bagua and Cumana, and many of them which dwell in the Houles of certaine particular Lords in the Hands of San Dominico and Santi Isbannis, refort to the Hand of Cubagua, for this purpole. Their cultome is to goe fine, fixe, or feuen, or more in one of their Canoas or Barkes, earely in the morning to some place in the Sea thereabout, where it appeareth vnto them than there should be great plentie of those shell fishes (which some call Muscles, and some Oysters) wherein Pearles are ingendred, and there they plunge themselves under the water, even vito the bottome, fauing one that remayneth in the Canoa or Boat, which hee keepeth still in one place as neere as he can, looking for their returne out of the water : And when one of them hath beenea good while vader the water, he rifeth vp, and commeth swimming to the Bost, entring into the same, and leaving thereall the Oysters which he hath taken and brought with him (for an in these are the Pearles found) and when he hath there rested himselfe a while, and eaten pare of the Oysters, he returneth agains to the water, where hee remayneth as long as hee can endure, and then rifeth againe, and swimmeth to the Boat with his prey, where hee resteth him as before, and thus continueth course by course, as doe all the other in like manner, being all most expert Swimmers and Divers : and when the night draweth neere, they returne to the Iland to their houses, and prefent all the Oysters to the Matter or Steward of the house of their Lord, who hath the charge of the faid Indians, and when he hath given them fomewhat to eate. he layeth vp the Oysters in fafe custodie, untill he haue a great quantitie thereof, then he causeth the fame Fishermen to open them, and they find in every of them Pearles, other great or small, 30 two, or three, or foure, and fometimes fine or fixe, and many small graines, according to theliberalitie of nature. They faue the Pearles both small and great which they have found, and either eate the Oysters if they will, or cast them away, having so great a quantitie thereof, that they in manner abhorre them. These Oytters are of hard flesh, and not so pleasant in eating as are ours of Spaine. This Iland of Cubagua, where this manner of fifting is exercifed, is in the North Coast, and is no bigger then the Iland of Zeland. Oftentimes the Sea increased greatly, and much more then the Fishers for Pearles would, because whereas the place is very deepe, a man cannot naturally reft at the bottom, by geafon of the abundance of airie fubftance which is in him, as I have oftentimes proped. For although he may by violence and force descend to the bottome, yet are his feet lifted whegaine, forthat hee can continue no time there : and therefore where the Sea is very deepe, thele Indian Filhers whe to tye two great stones about them with a coard, on 40 each fide one, by the weight whereof they descend to the bottome, and remayne there vntill them lifteth to rife againe, at which time they valofe the flones ; and rife var at their pleasure. But this their apt neffe and agilicie in fivinming, is not the thing that caufett men most to mar-Men continue uell ; but rather to copfider how many of them can fland in the bottome of the water for the space of one whole hours, and some more or leffe, according as one is more ape hereunto then an other. An other thing there is which feemeth to me very stranger and this is, that whereas! have oftentimes demanded of some of these Lords of the Indian; if the place where they are at customed to fish for Pearles, being but little and narrow, will not in short time be veterly within out Oysters, if they confume them to fast: They all answered mee, that although they be confumed in one part, yet if they goe a filhing in an other part, or an other Coast of the Iland, or aren 50 other contrary wind, and continue fifthing therealfo votill the Oviters bee like wife confumed; and then returns agains to the first place, or any other place where they fished before, and emptied the same in like manner, they find them agains as full of Oyflers as though they had never ther, as doe other fifthes, or elfe that they are ingendred and increase in certaine ordinarie places. This Iland of Cumara and Cubagua, where they fish for these Pearles, is in the twelfth degreeof

beene filhed. Whereby we may judge, that thele Oysters either remove from one place to an ob the part of the faid Coast which inclineth toward the North. Likewife Pearles are found and gathered in the South Sea, called Mare del Sar, and the Pearles of this Sea are very bigge, yet not fo bigge as they of the lland of Pearles, called de las Perlas, or Margarita, which the Indiani call Terarequi, lying in the Gulfe of Saint Michael, where greater Pearles are found, and of 60 greater price, then in any other Coast of the North Sea, in Camana, or any other part. I speake this as a true testimonic of fight, having beene long in that South Sea, and making curious inquifition to be certainly informed of all that percayneth to the fifting of Pearles. From this Iland of Huge Pearle. Terarequi, there was brought a Pearle of the fallaion of a Peare weighing thirtie and one

Caracts, which Petrus Arias had among a thouland and fo many pounds weight of other Pearles, By the compuwhich he had when Captaine Galpar Morales (before Petrus Arias) possed to the taid Iland in ration of the the yeare 1315, which Pearle was of great price. From the faid Iland also, came a great and ve-nice, four ry round Pearle, which I brought out of the Sea, this was as bigge as a small pellet of a Stone- graines make bow, and of the weight of twentie and fixe Caracts : I bought it in the Citie of Panama, in the a Caract, Sea of Ser, and paid for it fixehundred and fiftie times the weight thereof of good Gold , and and it three yeeres in my custodie, and after my returne into Spaine, fold it to the Earle of Nanfor Marquefie of Zeneta great Chamberlaine to your Maieftie, who gave it to the Marquefie his Wife, the Ladie Memia of Mendoza. I thinke verily that this Pearle was the greatest, fairest, and roundeft that hath beene feene in those parts. For your Maiettie ought to vinderstand, that in the Coast of the Sea of Sir, there are found a hundred great Pearles round after the fashion of Peare pearles a Peare, to one that is perfectly round and great.

Of the familiaritie which certagne of the Indians bane with the Deuill, and how they receive answere of him of things to come, and other Superstitions.

Hen the Indians beginne their batraile, or goe to any combate, or attempt any other great mater, they have certaine elect men, whom they reverently efteeme, and call them Teguma, which in their tongue is as much to lay as Mafters: not with standing that they call enery man, that is cunning in any Science, by the fame name, as Fishers, Fowlers, Hunters, or makers of Nots. Their Tequinas therefore, they call the Mafters of their Answeres, because they speake with Tayra, that is, the Denill, and bring them answere what he faith, either as touching fuch things as they have to doe, or shall chance to them the day following, or many dayes sture. to come, For the Deuill, being fo ancient an Aftronomer, knoweth the times of things, and feeth how they are naturally directed and inclined, and maketh them believe that they come so to palle by his ordinance, as though he were the Lord and mooner of all that is and shall be and that he giveth the day light, and raine, cauleth ten pelt, and ruleth the stations of times, guang life, or taking away life, at his pleasure: By reason whereof, the Indians being deceived of him, and feeing alfo such effects to come certainly to passe as he hath told them before, believe him in all other things, and honour him in many places with Sacrifices of the bloud and lives of men, and adoriferous Spices : And when God difposeth the contrary to that which the Deuil hath spoken in Oracle, whereby he is prooued a Lyer, bee caufeth the Toquinas to perswade the people that he bath changed his mind and fentence for some of their sing, or denileth some such lye as liketh him best, being a skilfull Master in such subtill and crastic desices, to deceive the simple and ignorant people, which hath small defence against to mighrie, and craftis an Aduersarie. And as they call the Deutli Tayra, fo doe they in many places call the Christians by the same name, thinking that they greatly honour them thereby, as indeed it is a name very fix and agreeable to many of them, having laid apart all honeftie and vertue, huing more like Dragons then men,

among thele fimple poole,

Before the Inhabitants of the Iland of Historical had received the Christian Faith, there was among them a School non, which lived folicarily in the Defarts and Woods, and led their life in Silence and Abstinence more streightly then ever did the Philosophers of Pythagoras S. Ct, Pythagoras in Stitute in Stitute manner has the eating of all things that live by bloud, contented onely with Places, fuch Fruites, Herbes, and Kates, as the Deferts and Woods ministred voto them to eate: The Professor of this Seet were cand Piaces. They gave themselves to the knowledge of naturall things, and vied certaine feees a gicall Operations and Superfitions, whereby they had familiaritie with Spirits, which they dured into their owne bodies, at such times as they would take whon them to tell of things to o me, which they did in manner as followeth. When any of the Kings had occasion b call any of them out of the Defarts for this purpose, their custome was to fend them a portion their fine Bread of Casabi or Mais , and with humble request and fuite to defire them toell them of fuch things as they would demand. After the request granted, and the place at day appointed, the Piaces commeth with two of his Differeles wayting on him, where the one bringeth with him a Veffell of a fecret Water, and the other a little Silver Bell. When hee commeth to the place, hee fitteth downe on a round feate

other on the other, euen the presence of the King and certaine of his Nobles (for the common rings or conpeople are not admitted thele Mysteries) and turning his face toward the Delart, he bee sultations. gameth his Inchantmet, and calleth the Spirit with loude voyce by certaine names, which no man underndeth but hee and his Disciples. After hee hath done thus a while, if the Spirit yet dere his comming, hee drinketh of the faid Water, and therewith waxeth hot and furisand inverteth and turneth his Inchantment, and letteth himfelfe bloud with a thorne, maruvally turmoiling himfelfe, as we read of the furious Sybils, not ceafing

made for him of purposewhere having his Disciples the one standing on the one hand, and the lading entitled

untill the spirit be come : who at his comming entreth into him, and ouerthroweth him. as it were a Greyhound should ouerturne a Squerell, then for a space, he seemeth to lye as though be were in great paine, or in a rapte, wonderfully tormenting himfelfe, during which agonie, the other Disciple shaketh the Silver Bell continually. Thus when the agonic is past; and he lyeth quietly (yet without any fence or feeling) the King, or some other in his stead, demandeth of him what he defired to know : and the forrit answered him by the mouth of the rapte Piaces, with a direct and perfect answere to all points: Infomuch that on a time certaine Spaniards being prefent at these mysteries with one of the Kings, and in the Spenish tongue demanding the Piaces of their Ships which they looked for out Spains, the spirit answered in the Indian tongue, and told them what day and houre the Ships departed from Spaine, how many they were, and what In they brought, without failing in any point. If he be also demanded of the eclipse of the Sunne Prognoficati- or Moone (which they greatly feare and abhorre) he giveth a perfect answer, and the like of tem pests, famine, plencie, warre or peace, and such other things. When all the demands are finished, his Disciples call him aloud, ringing the Silver Bell at his eare, and blowing a certaine powder into his nostrils, whereby he is raised as it were from a dead sleepe, being yet somewhat heavy headed and faint a good while after. Thus being againe rewarded of the King with more bread, he departeth againe to the defarts with his Disciples. But fince the Christian faith hath

beene dispersed throughout the Hand, these discellish practifes have ceased, and they of the members of the Discell, are made the members of Christ by Baptisme, forsaking the Discell and his works, with the vaine curiofity of defire of knowledge of things to come, whereof for the most an Reafon why men kill themfelues to feru

part it is better to be ignorant, then with vexation to know that which cannot be avoided. Furthermore, in manie places of the firme Land, when any of the Kings dye, all his houshold feruants, as well women as men, which have continually served him, kill themselves, beleeving as they are taught by the Diuell Tayra, that they that kill themselves when the King dyeth, goe with him to heaven, and ferue him in the same place and office as they did before on the earth while he hued : aud that all that refuie fo to doe, when after they dye by their naturall death or otherwife, their foules to die with their bodies, and to be diffolged into ayre, and become nothing, as doe the foules of Hogges, Birds, Fishes, or other bruite beafts: and that onely the other may enjoy the primiledge of immortalitie for euer, to serue the King in heaven. And of this falle opinion commeth it, that they which lowe come, or fer rootes for the Kings bread, 20 and gather the same, are accustomed to kill themselves, that they may enjoy this priviledge in heaven, and for the same purpose, cause a portion of the graine of Maiz, and abundle of larca (whereof their bread is made) to be buried with them in their graues, that the fame may ferue them in heaven, if perhaps there should lacke feedes to sowe, and therefore they take this with them, to begin withall, vntill Tayes (who maketh them all these faire promises) prouide them of greater quantitie. This have I my leffe feene in the top of the Mountaines of Guaturo, where having in prilon the King of that Province (who rebelled from the obedience of your Maieffie) and demanding of him to whom percained those Sepultures or graves which I faw in his house: he answered, that they were of certaine Indians which flew themselves at the Jeath of his Father. And because they are oftentimes accustomed to bury great quantities of wrought gold 40 with them, I canfed two graves to be opened, wherein was nothing found but a veilell full of the grains of Maiz, and a bundle of Incea, as I have faid. And demanding the cause hereof, of the King and the other Indians : they answered, that they that were bried there, were the labourers of the ground, and men skilfull in fowing of feedes, and makis of bread, and fernants to the Kings father, and to the end that their fortes should not dye with their bodies, they flue themsellers at the death of the King their Matter, to line with fining hearen, and to the intent that they might ferre him there in the same office, they referre that Matte, and Incea, to sowe it in heaven. Whereunto I answered them in this manner, Bold how your Tayra deceiueth you, and how all that he teacheth you is falle. You fee how a follong a time fince they are dead, they have not yet taken away this Mair and Incomwhich is now purified and worth nothing, so and not like to be fowen in heaven. To this the King replied, faying In that they have not taken it away, nor fowen it in heaten, the caufe is, that they chanced a finde enough there, by reason whereof they had no neede of this. To this errour many thingwere faid, which seemed officiel force to remoue him from his falle opinion, and especially anyuch as at that age are oc-cupied of the Diuell, whom they paint of the felfe fame fornite and cohe, as he appeared vino them in divers shapes and formes. They make also Images of Gold, Capter, and Wood, to the fame smilitudes, in terrible shapes, and so variable, as the Painters are austomed to paint them at the feete of Saint Miebael the Archangell, or many other place, whe they paint them of moltzorrible portrature. Likewise when the diuell greatly intendeth thate them, he threatneth to fend them great tempelts, which they call Furacanas, or Hanrabnas, and are foveltemene, that they ouerthrow many houses, and great trees. And I have seen Mountaines, still of 60

many and great trees, that for the space of three quarters of a league the luntaine bath Beens Suburrted, and the tree ouerthrowne, and plucked out of the earth with thootes.

The gulfe of Vraba, is diftant from the EquinoStiall line, from an hundrand twentie, to 2

hundred and thirty leagues, and three quarters of a league, after that accompt of leuenteen leagues and a halte for eutrie degree from Pole to Pole; & thus for a little more or left, goeth all the coaft. By realon wherof, in the Citie of Santa Maria, Antique, in Dariene, and in all that course of the forefail gulfe of Fraba, at all times of the yeere the daies and nights are in manner of equal length; and if there be any difference betweene them by reason of this small distance from the Enunoctiall, it is so little, that in foure and twentie houres, making a naturall day, it cannot be perceived but by the inigement of speculative men, and such as understand the sphere. From hence the North Starre is feene verie low.

Of diners particular things, as Wormes, Serpents, Beafts, Foules, Trees, orc.

T Will first speake of certaine little and troublesome Beasts, which may seeme to be engendred of nature to molest and vexe men, to shew them and give them to vinderstand, how small and vile a thing may offend & disquiet them, to the end that they may remember the principall end for the which they were created, that is, to know their maker. In manie parts of the firme, Land, by the which as wel the Christians as the Indians do trauaile, there are such marishes & waters in Small Wormes the way, that they are faine to go without breeches among the hearbes & weeds, by reason wher woshlesome, ene way, that enery are tained by withhold envenues among the netwern weeding by realon where of, certain small bealts or wormers (which they call Gerepater) much like with Ticks, cleaue fast to their legs. These worms are as little as the pouder of beaten Salt, & cleaue so fast, that they can by 20 no meanes be taken away, except the place be nointed with oyle; & after that the legs be nointed a while with oyle, or the other parts where these little Tickes are fastened, they scrape the place with a Knife, & to take them away. But the Indians which have no oyle, smoake them, and burne them with fire, and abide great paines in taking them away by this means. Of other little

Beafts which trouble men, and are engendred in their heads or other parts of their bodies, I fay that the Christian men which trauaile into these parts, have them but seldome times, and that not past one or two, and this also very seldome: For passing by the line of the Diameter where the compaffe maketh difference of failing by the winde called Greeo (that is, North-eaft) and Magistral (that is, South-west) which is in the course of the llands of Azors, they faile but a little way following our voiage by the West, but that all the Lice which the Christians carrie 30 with them, or are engendred in their heads, or other places of their bodies, die and vtterly conwhich them, or are enganated in them heads, or other places of their books, or and wherely con-fume by little and little, and are not engendred in Issue, except in the heads of little children Lies forlike in those parts, as well among the children of the Christians which are borne there, as also among them,

the natural Indians, who have them commonly in their heads, and fometimes in other parts of their bodies, and especially they of the Prounce of Cuena, which is a region containing more then a hundred leagues in length, and embraleth the one and the other coaft of the North Sea, and of the East. When these Indians are intected with this filthinesse, they dresse and cleanse one another: And they that exercise this, are for the most part women, who eate all that they take, and have herein such dexterity by reason of their exercise, that our men cannot lightly take, and naue never num descently by thing greatly to be confidered : and this is, how the Lice finde 40 Christian men, being there cleane from this filthineffe of India, as well in their heads as the reft them against

of their bodies, yet when they returne to come agains into Europe, and begin to arrive in that place of the OceanSea where we faid before that thefe Lice died and for fooke them, fodainely in their repairing by the fame clime (as though these Lice had tarried for them in that place) they can by no meanes avoide them for the space of certaine daies, although they change their Shirts two or three times in a day. These Lice are at the first as little as Nits, and grow by little and little, vntill they be of the bigneffe that they are in Spaine. This haue I oftentimes proued, having now foure times passed the Ocean Sea by this voiage. Beside these wormes and vermin wherof we have fpoken, there is another little mischieuousworm, which we may number among where we have specifience the Indians call Nigua, and is much leffe then a Flea; it pear- Nigua, 50 ceth the flesh of a man, and so lancheth or cutteth the same (while in the meane time it can

neither be feene nor taken) that from some it hath cut off their hands, and from other their feete, vntill the remedy was found to annoint the place with Oyle and scrape it with a Raior. In the firme Land in golden Castile or Beragua, there are many Vipers like vnto them of Spaine? they that are bitten of them, dye in fhort space, for few line to the fourth day, except present remedy. Of these some are of lesse kinde then other, and have their taile somewhat round, and leape in the aire to affaile men; and for this cause, some call this kinde of Vipers Tyrestheir biting is most venomoust, and for the most part incurable. One of them chanced to bite an Indian Maide which ferued me in my houfe, to whom I caufed the Surgians to minister their ordinary

60 low water, lo that the dad the third day for lacke of remedie, as the like hath chanced to dinner. others. This Maide was of the age of foureteene yeares, and loake the Spanish tongue as if the had beene borne in Caffide the faid that the Viper which bit her, on the foot, was two spans long, or little leffe : and that to bite her, the leapt in the aire for the spaces more then fix paces, as I have heard the like of other credible persons. Ihaue

Addets.

979

I have also seene in the firme Land a kinde of Adders, very small, and of seven or eight food long; these are so red, that in the night they appeare like burning coles, and in the day seeme as red as blood, these are also venemous, but not so much as the Vipers. There are other much lesse and shorter, and blacker a these come out of the Rivers, and wander sometimes farre on the Land and are likewise venemous. There are also other Adders of a russet colour : these are somewhat bigger then the Viper, and are hurtfull and venemous. There are likewise another fort of mae ny colours, and very long : of thefel iaw one in the years of Christ 1515 in the lland of Hills. mola, neere vnto the Sea coafts, at the foote of the Monntaines called Pedernales. When this Adder was flain I measured her, & found her to be more then twenty foot long, and somewhat more then a mans fift in bignesse: and although she had three or four deadly wounds with a Sword, 13 yet dyed fhe not, nor flunke the fame day, in so much that her blood continued warme all that time. There are also in the Marilhes and defarts of the firme Land many other kindes of Lylarts.

Spiders huge.

Dragons, and diners other kindes of Serpents, whereof I intend not here to speak much, because I haue more particularly entreated of these things in my generall historie of the West Indies. There are tho Spiders of marueilous bignesse, and I have seene some with bodie and legges bigger then a mans hand extended every way, and I once faw one of fuch bigneffe, that onely her body was as bigge as a Sparrow, and tull of that Laune whereof they make their webbes : this was of a darke ruffet colour, with eyes greater then the eyes of a Sparrow, they are venemous, and of terrible (hape to behold. There are also Scorpions, and divers other such venomous wormes. Furthermore in the firme Land, there are many Toades, being verie noious and hurtfull by reason an of their great multitude, they are not venemous, they are feene in great abundance in Darcena where they are so big that when they die in the time of drought, the bones of tome of them (and especially the ribs) are of such greatnesse, that they appeare to be the bones of Cats, or of some o-

Toades.

Their renging, ther beafts of the same bignesse. But as the waters diminish, &the moisture consumeth in the time of drought (as I have faid) they also consume therewith, vntill the yeare next following when the raine and moisture encrease, at which time they are seene againe. Neuerthelesse, at this prefent there is no fuch quantitie of them, as was wont to be, by reason that as the Land is better cultured by the Christians, as well by the felling of Woods and Shrubs, as also by the Pasture of Kine, Horses, and other beasts, so is it apparant that this poison diminisheth daily, whereby Singing. that region becommeth more holesome and pleasant. These Toades sing after three or source 30 fort, for some of them sing pleasantly, other like ours of Spaine, some also whistle, and other some make another manner of notic: they are likewife of divers colours, as some greene, some ruflet or gray, and some almost blacke, but of all forts they are great and filthie, and noious by reason of

their great multitude, yet are they not venemous as I have faid. There are also a strange kinde of Crabbes, which come forth of certaine holes of the earth, ther Torroifes, that they themselves make : the head and bodie of these make one round thing, much like to the hood of a Faulcon, having foure feete comming out of the one fide, and as manie out of the other: they have also two mouthes, like vnto a paire of small Pincers, the one bigger then the other, wherewith they bite, but doe no great hurt, because they are not venemous : their skin and bodie is smooth, and thinne, as is the rkinne of a man, fauing that it is somewhat harder; their 40 colour is ruffet, or white, or blew, and walke fidelong, they are verie good to be eaten, in so much that the Christians trauailing by the firme Land, have beene greatly nourished by them, because they are found in manner euerie where : in shape and forme they are much like vnto the Crabbe which we paint for the figne Cancer, and like vnto those which are found in Spaine in Andalufia in the River Guadalchiber, where it entreth into the Sea, and in the Sea coalts there about, fauing that thefe are of the water, and the other of the land: they are sometimes hurtfull. so that they that care of them dye, but this chanceth onely when they have eaten any venomous thing, or of the venemous apples wherewith the Caniball archers poilon their arrowes, whereof I will ipeake hereafter, and for this cause the Christians take heede how they eate of these Crabbes, if they finde them neere vnto the faid apple trees. Furthermore in thefe Indies, as well 50 in the firme land, as in the llands, there is found a kinde of Serpents, which they call Tuanat, which some call Inamas, these are terrible and searefull to fight, and yet not hurtfull, they are verie delicate to be eaten, and it is not yet knowne whether they be beafts of the land, or fishes, because they live in the water, and wander in the woods, and on the land : they have foure feet, and are commonly bigger then Connies, and in some places bigger then Orters, with tailes like Lylarts or Eutes : their skinne is spotted, and of the same kinde of smoothnesse or barenesse, although of divers colours : vpon the ridge of their backes, they have manie long prickes, their teeth are very sharpe, and especially their fangs or dogge teeth, their throates are I ng and large, reaching from their beards to their brefts, of the like skinne to the refidue of their bodies: they are dumbe, and haue no voice, or make any noite, or crie, although they be kept tied to the foote of a cheft, or any other thing, for the space of twentie or fine and twentie daies, without sny thing to exte or drinke, except they give them now and then a little of the bread of Cazabi, or

fome fuch other thing : they have foure feete, and their fore-feete as long as a mans finger, with clawes like the clawes of a bird, but weaker, and tuch as cannot grafple or take hold of any

thing : they are much better to be eaten then to behold, for few that fee them, will have define tung; they have by reason of their horrible shape, except such as have been a could need to the beats of their, by reason of their horrible shape, except such as have been a could need to the beats of their regions, which are more horrible and fearefull, as this is not, but onely in apparent rence : their fielh is of much better tafte then the fielh of Counies, and more holefome, for it Nete. harter's none but onely fuch as have had the Frencis poxe, in fo much, that if they have beene couched of that infirmitie, although they have beenewhole of long time, neuertheleffe they feeleburt, and complaine of the eating of these Imamas, as hath beene oftentimes proued by

CHAP.3. Wonders of the Tomineios Asmadillos, Beares Antes &c.

There are found in the firme land certaine birds, so little, that the whole bodie of one of them Small Birds.

to is no bigger then the top of the bigger finger of a mans hand, and yet is the bare body without Transition the feathers not halfe to bigge: This Bird, befide her littleneffe, is of fach velofice and swiftneffe in flying, that who fo feath her flying in the aire, cannot fee her flap or beate her wing safter amy other fore then doe the Dorres, or humble Bees, or Beetels : for that there is no man that feeth herstye, that would thinke her to be any other then a Dorre: they make their ness according to the proportion of their biguesse, and I have feene that one of these Birds with her neft par in a paire of gold weights altogether, hath waide no more then 2. Tomin, which are in nest put in a pair or good weights acceptance, make want no more such 2.2 somes, which are in polic 24 graines, with the feathers, without the which the should have waited formewhat leffer And doubtlesse, when I consider the finenesse of the thaws and force of their Birds, I know not whereunto I may better liken them, then to the little birds which the lymners of bookes are 20 accurlomed to paint on the margent of Church Bookes, and other Bookes of Dinine Seruice.

Their Feathers are of manie faire colours, as golden, yellow, and greene, befide other variable colours: their beake is verie long for the proportion of their bodies, and as fine and interior as a fowing needle: they are verie hardy, so that when they fee a man clime the tree where they have their nefts, they flye at his face, and firthe him in the eyes, comming, going, and returning with fuch fwiftness, that no man would lightly belease it, that hath not seene it: and certainly thefe birds are fo little, that I durit not have made mention hereof, if it were not that divers others which have seene them as well as I, can beare witnesse of my saying: they make their orners within these region, whereof there is great pleated in these regions, and ferrects well for their purpose. But as specing the Baila, Foslers, and Beasts of sheet Judges, because they are 30 innumerable, both little and great, I intend not to fprake much here, because I haus spoken more

largely hereof in my generall Historie of the Indies. There is another hinde of Bratte feene in the firme Land, which feemeth very firange and manifolds to the Christian men to behold, and much differing from all other Brasts which have beene inother parts of the World : shell Beafis are called Bardeti, and are found footed, having sherr tails and all the reft of their bodies too Bardeti or dit urred onely with a skin like the coperture of a barbed horse, or the checkered skid of a Lifart of maddles; a Crocodile of colour between white and rufat; inclining immercial since to white; This Beaft kind of Most is of forms and flaps much like took barbed seeds, with his birdes and flankers is all points, and from under that which is the barbe and coperture, the taile commeth forth, and the feere in their place, the necke alfo and the eares in their parts, and in fine all things in like fore as in a barbed

40 courfer: they are of the bignefic of one of these common Dogges, they are not herifull, they are filthie, and have their habitation in certaine hillockes of the earth, where digging with their feete, they make their dens verie deepe, and the holes thereof, is him manner as doe Connies: they are very excellent to be eater, and are taken with ness, and fokus also killed with Croft bowes : they are likewise taken of tasteimes when the Husbandmen burse the flusble in fowing time, or to renew the herbage for Kine and other Bearts. I have oftentimes eaten of their field which feemeth to me of better tafte then Kidder field, and holefome to be eaten. And if there Beafts had ener beene feene in thefe parts of the world, where the first barbed Horfes had theif originall, no man would isage but that the forme and fathion of the copertuse of Horses formitted ed for the warres, was first denifed by the fight of these Bearles,

There is also in the firme Land another beath, called Orfe Pornigues, that is, the Ante bear & Bearta I nere is among the action is a mark like on the Beath of Spating stands in minner of the fame making, face that he shade a much longer flower, and in of emithing to they are often only with flaues, without any other we apon, and are not insertible, they are blife taken with Dogges, because they are not naturally arresel, although they bits for ewhat, they are found for the molt part about and more to the hillockes where are green shouldance of shrees. For the the Regions is ingrediced a certains kind of Anton, were kerde and blacked; in the Fields sight Anton the Region of the strength of the Region of the strength of the Region of Plaines whereas grows no Trees, where by the inflinet of Neture blade Antis separate themfelues to ingender harse from the Woods for fease of thefe Bearest the which became they are fearefull, vile, and wasened (as I have faid) they harps ener in places foll of Trees, writh vely,

60 famine and necessitie, or the great delite that they have to feede out these Amas, tanse the Bell come out of the Woods to hunt for them : thefe Antes make a hillsthe of earth of the Reigh of a man, or fomewhat more or leffe, and as bigge as a great Cheft, and sometimes as bigge as a Big or a Hoghead, and as hard as a ftone, to that they seeme as though shey were cones, fee with the limit the ends and confines of certaine Lands. Within these hillockes, made of most hard earth,

are innumerable and infinite little Ants, the which may be gathered by bushels when the hillock is broken : the which when it is sometimes moy fled by raine, and then dried againe by the hear of the Sunne, it breaketh, and hath certaine small rifts, as little and subtill as the edge of a Knife, and it feemeth that Nature hath given fense to these Antes to find such a matter of earth, where-Johnstonenions with they may make the faid hillocke of fuch hardness, that it may seeme a strong patterness legistratementions what the lime and ftone; and whereas I have produced and caused fome of them to be broken, I haue found them of such hardnesse, as if I had not seene, I could not have beleeved, informach that they could scarsly be broken with Pikes of Iron, so strong Fortresses doe these hittle beafts make for their fafegard against their aductiarie the Beare, who is chiefly nourished by them, and make for their surgariangums them assurement and Protective which faith, Nove advance perform and given them as an enemie, according to the common Protective which faith, Nove advance perform to fibera, a chunanchi il fue Bargelle, that is, There is no man fo free, that hath not his Perfection Grentwonders or prime Enemie. And here when I confider the maruellous providence which Nature harh gi uen to the selittle bodies, I call to remembrance the wittie Sentence of Plinie, where speaking of tion to the electropouses, a case of temperature and water bounds as a more peaking of inch lettle beats, he faith that, 80% do we mercall at the Town-heaving flowders of inflormation and readow where Nature bath placed for many finite and fine inadpry in fine better bodes? Where in the third water is the bodes? Where is the control of the third water of the control of the third water in the control of the c beast can line or mone, in tonje jo insie omnes, morro j jone in vijo jonni som totir monte omnes can fearly bee seene of our opes: What shall we then say of the parts of the same? Tes even among these there are many of such so gacitie and industry, as the like is not seene in beasts of greater quantitie, no

But to returne to the Historie. This Enemy which nature hath given to these little Beasts, wieth this manner to affaile them : When he resorteth to the Hillocke where the Antes lychid as in their fortreffe, he putteth his tongue to one of the rifts whereof we have spoken, beeing as subtill as the edge of a Sword, and therewith continuall licking, maketh the place most, the foame and froth of his mouth being of such propertie, that by continual licking the place, it inlargeth the rift in such fort by little and little, that at the length he easily putteth in his rongue, which he hath very long and thinne, and much disproportionate to his bodie, and when he hath thus made free passage for his tongue in the hillocke, to put it easily in and out at his pleasure, then he thrusteth it into the hole as farre as he can reach, and so letteth it rest a good space, vntill agreat quantitie of the Antes (whose nature reioyceth in heat and movifure) have laden his 30 tongue, and as many as he can containe in the hollownesse thereof, at which time hee suddenly draweth it into his mouth , and exteth them, and returneth agains to the same practice in mediarly, vatill hee haue cater as many as him litteth, or as long as hee can reach any with his tongue. The fielh of this Beaft, is fifthy and unfanourie, but by reason of the extreame shifts and necessitie that the Christian men were put to at their first comming into these parts , they were inforced to prooue all things, and fo fell to the earing of these Beafts : but when they had found more delicate meates, they fell into hatred with this. These Antes have the appearance of the place of their entrance into the hillocke; under the ground, and this at folittle a hole. that it could hardly bee found, if certains of them were not feens to passe in and out : but by this way the Beares could have no fach power to hurt them as aboue at the faid rifes; as I 400

. There is anoother strange beast, which by a name of contrary effect, the Spaniards call Cagmole loggiere, that is, The Light Dogge, whereas it is one of the floweft beatts in the World. and fo heatie and dull in mooning, that it can fearfly goe fiftie pafes in a wholeday : thefe beafts are in the firma Land, and are very strange to behold for the disproportion that they have to all other beafts: they are about two fpans in length when they are growne to their full bigneffe, but when they are very young, they are iomewhat more groffe then long : they have foure fubrill feet, and in energy of them four clawes like vnto Birds, and loyned together, yet are neither their clawes or their feet able to fufteine their bodies from the ground, by reason whereof, and by the heatine fe of their bodies, they draw their bellies on the ground their neckes are high and 50 fixeight, and all equall like the petite of a Morter, which is altogether equal even vnto the top, without making any proportion or fimilitude of a head, or any difference except in the moddle. and in the topa of their neckes : they have very round faces much like voro Owles, and have a marke of their owne haire after the manner of a Circle, which maketh their faces feeme fome-What more long then large: they have finall eyes and round, & noffrils like wnto Monkeyes: they haue little mouthes, and mooue their neckes from one fide to another, as though they were aftemilhed : their chiefe defire and delight is to cleave and tricke fast vnto Trees, or some other thing whereby they may climbe alofs and therefore for the most part, these beafts are found voon Trees, whereuneo cleauing saft shey mount up by little and little, staying themselves by their long claves, the colour of their stairs is betweene ruffet and white, and of the proper colour of 60 hairpof & Wefell ; they hatteno tayles, and their voice is much differing from other beafts, The dies tag analy in the night, and that consinually from time to time , finging over fixe notes can higher themenather, to saling with the fame, that the first note is the highest, and the other an abeler tune, wif a man thould fay, La, fot, fa, mi,re, set, to this beatt faith, Ha,habs,ba,ba,ba,ba

And doubtleffe, it feemeth to me, that as I have faid in the Chapter of the beaft called Bardais. that those bealts might be the onginall and document to imbarbe Horses: even fo, the first inuention of Musické might seeme by the hearing of this beast, to have the first principles of that Science, rather then by any other thing in the World, But now to returne to the Hiltone. I say that in a short space after this Beast hath sing, and hath pauled a while, thee returneth agains to the felfe-fame Song, and doth this onely in the night, and not in the day: By reason whereof, and also because of her euill sight, I thinke her to be a night Beast, and the friend of darknesse. Sometimes the Christian men find these Beafts, and bring them home to their houses, where also they creepe all about with their naturall slownesse, insomuch that neither for threatning or to pricking they will moone any faster then their naturall and accustomed pace. And if they finde any Trees, they creepe thither immediately, and mount to the top of the highest branch thereof, where they remayne continually for the space of eight, or ten, or twentie dayes, without eating of any thing, as farre as any man can judge. And whereas I my felfe haue kept them in my houte, I could never perceive other but that they live onely of Aires and of the same opinion, are in manner all men of those Regions, because they have never seene them eate any thing, but ever turne their beads and mouthes toward that part where the wind bloweth most, whereby may be confidered that they take most pleasure in the Ayre. They bite not, nor yet can bite, having very little mouthes : they are not venemous or noyous any way, but altogether brutifh, and vevery unprofitable, and without commoditie yet knowne to men, fauing onely to moone their 30 minds to contemplate the infinite power of God, who delighteth in the varietie of creatures. whereby appeareth the power of his incomprehensible wildome and maiestie, so farre to exceed

the capacitie of mans understanding. ne capacitie of mans vincental likewife found certaine Fowlesor Birds, which the Indians call Foules and Alearrat : there are much bigger then Geele, the greatest part of their feathers are of ruffic too- Birds. lour, and in some parts yellow, their bils or beakes are of two spannes in length, and very large Aleanar, neere to the head, and growing small toward the point, they have great and large throates, and are much like to a Fowle which I faw in Flanders, in Bruffels in your Maiefties Palace, which the are much that And I remember that when your Maiestie dined one day in your great Hall, there was brought to your Marefties presence a Caldron of water with certaine fishes a-30 line, which the faid fowle did eat vp whole, and I think verily that that fowle was a fowle of the Sca, because she had feet like fowles of the water, as have also these Alcatrazi, which are like wife fowles of the Sea, and of such greatnesse, that I have seen a whole coate of a man put into the throats of one of them in Panama, in the yeare 1921. And for a fmuch as in that Coast of Pama, there paffeth and flyeth a great multitude of their Alestrani, being a thing very notable, I Passans will declare the manner hereof, as not onely I, but also divers other now present in your Maie-Ries Court have oftentimes feene. Your Maiestie shall therefore understand, that in this place (as I have faid before) the Sea of Sur rifeth and falleth two leagues and more from fixe houres to fixe houre : fo that when it increafeth, the water of the Sea arriveth fo neere to the houses of Panama, as doth our Sca (called Mare Mediterraneum) in Barzalona, or in Naples: and when 40 the faid increasing of the Sea commeth, there commeth also therewith such a multitude of small fiftes called Sardines, that it is fo maruellous a thing to behold, that no man would beleeve it that Pilchards

hath not feene it. Infomuch that the Cacique (that is) the King of that Land, at fuch time as I dwelt there, was bound daily, as he was commanded by your Maiefties Gouernour, to bring ordinarily three Canoas or Barkes full of the faid Sardines, and to valade the same in the Market place, which were afterward by the Ruler of the Citie divided among the Christian men, without any coft or charge to any of them : Infomuch that if the people had beene a much greater multitude then they were, and as many as are at this prefent in Toledo, or more, and had none o. ther thing to live by, they might have beene sufficiently susteined by these Sardines, beside the overplus which should have remayned. But to returne to the fowles, whereof wee have spo-50 ken. As the Sea commeth , and the Sardmer with the fame , euen foglikewise come the said Alcatrazzi therewith, and flye continually over it in fuch a multitule, that they appeare to couer the vpper part or floore of the water, and thus continue in mounting and falling from the ayre to the water, and from the water to the ayre, during all the time of their fishing and af-Some as they have taken any of these Sardines, they flye about the waters, and eate them incontinently, and fuldenly returns against to the water for more, continuing thus course by course

without ceafing : in like manner when the Sea falleth , they follow their fishing as I have faid. Theregoeth allo in the company of these fowles another kind of fowles, called Coda inforcata. (that is) the forked tayle, whereof I have made mention before, and assome as the Alestrate moun-60 teth from the water with her prey of the Sandnes, findently this Code inforcase given her fo many strokes, and so periccuteth her, that shee causeth her to let fall the Sardnes which shee hath in her mouth: the which affoone as they are fallen, and before they yet touch the water. the Coda inforcata catcheth them even in the fall, in fuch fort, that it is a great pleasure to behold the combat betweene them all the day long. The number of thefe Alcatrazza is fich, that the Christian men are accustomed to lend to certaine Hands and Rockes which are neere about Pa-

cannot flie, and kill as many of them with staues as they will, votill they have therewith laden their Barkes or Canoas : thefe young ones are fo fat and well fed, that they cannot bee eaten, and are taken for none other intent, but onely to make Grease for Candles to burne in the night, for the which purpose it serueth very well, and gineth a cleere light, and burnetheastly. After this manner, and for this purpole, innumerable of them are killed : and yet it feemeth that the number of them that fish for Sardines doe daily increase. There are other fowles called Paffere sempie, that is, simple Sparowes : these are somewhat less then Seamewes, and have their feet like voto great Malards, and stand in the water fometimes, and when the ships saile fiftie or a hundred leagues about the Ilands, thefe fowles beholding the thips comming toward them, to

nama, with their Boates or Barkes to take thele Alcatrazzi, while they are yet young, and

uier then bo.

breake their flight, and fall downe vpon the Saile yards, Masts, and Cables thereof, and are fo simple and foolish, that they carrie vntill they may easily bee taken with mens hands, and were therefore called of the Mariners simple Sparrowes : they are blacke, and vpon their blacke. have their head and shoulders of feathers of a darke russet colour : they are not good to bee eacen. although the Mariners have sometimes beene inforced to eate them. There is another kind Picuti, Birds of Birds in the firme Land, which the Christians call Picuti, because they have very great beakes. in respect of the littlenesse of their bodies, for their beakes are very heavie, and weigh more then their whole bodies beside : these Birds are no bigger then Quailes , but haue a much greater bulhment of feathers infomuch that their feathers are more then their bodies: their feathers are very faire, and of many variable colours; their beakes are a quar- 30 ter of a yard in length or more, and bending downe toward the Earth, and three fingers broad necre vnto the head : their tongues are very quils, wherewith they make a great hiffing: they make holes in Trees with their beakes, in the which they make their Nefts. And furely these Birds are maruellous to behold, for the great difference which they have from all other Birds that I have seene, aswell for their tongues (which are quils as I have faid) as also for the strangenesse of their fight and disproportion of their great beakes, in respect of the rest of their bodies. There are no Birds found that provide better for the fafegard of their young in the time of their breeding, to be without danger of wilde Cats, that they enter not into their Nests to defroy their Egges or young, and this aswell by the strange manner of building their Nests, as also by their owne defence : and therefore when they perceine that the Cats approach toward 30 them, they enter into their Nests, and holding their beakes toward the entrance of the same, stand at their defence, and so vexe the Cats, that they cause them to leave their enterprize.

Foolish Spaprouident.

There are also other Birds or Sparrowes, which the Christmans by contrary effect call Matti, that is Fooles: Whereas neuerthelessethere is no Bird that sheweth more wit and crast in defending her young from perill. These Birds are little, and in manner blacke, and somewhat bigger then our Thrushes; they have certaine white feathers in their neckes, and the like fagacitie or sharpnesse of sense as have the Birds or Pyes called Gazzanle: they seldome times light woon the earth: they make their Nests in Trees separated from other, because the Monkeyes are accultomed to leape from Tree to Tree, not descending to the ground for feare of other beafts, except when they are enforced by thirft to come downe to drinke, at fuch times as they are fure 40 not to be moleited, and for this cause doe not these Birds make their Nests but in Trees farre diuided from other, they make them of a Cubit in length, or more, after the manner of bagges or little fackes, large at the bottome, and growing narrower and narrower toward the mouth, whereby they are fastened, having the hole whereat they enter into the facke, of such bignesse as may onely suffice to receive them. And to the end that the Monkeyes may not devoure their young, if they chance to mount vpon the Trees where they have their Nests, they vie another craft, which is, to make their Neits in thicke branches of Trees, and to defend the same with sharpe and strong thornes, implicate and set in such order, that no man is able to make the like, fo that the Monkeyes can by no meanes put their legges into the hole of the Neit to take out the young Birds, aswell for the tharpnesse of the thornes, as also for the depth of the Nests in the to bottome whereof, the young Birds reft without danger of their enemie : for some of their Nests being three or foure spans in length, the leg of the Monkey cannot reach to the bottome thereof. They vie also another policie, which is, to make many of their Nests in one Tree, the which they doe for one of these two causes: that is, that either of their owne naturall disposition they are accustomed to goe in great multitudes, and reioyce in the company of their owne generation, as doe the Birds which we call Stares, or elfe to the intent that if it should so chance that the Monkeyes should climbe the Trees where they make their Nests, they might bee a greater company to relift and molest the Monkeyes, at whose approach they make a fearefull and terrible cry, whereby the Monkeyes are put to flight. Furthermore, in the firme Land, and in the llands, there are certaine Birds called Piche, or Gazzuole, iomewhat like wato those which we call Wood-wals, or Wood-peckes, being lesse then ours of Spaine : these are altogether blacke, and goe hopping and leaping, their beakes are also blacke, and of the fame falhion as are the Popingiayes beakes, they have long tayles, and are somewhat bigger

There are other Birds called Pintadelli, which are like vnto certaine greene Birds, which the Pintadelli. Itelians call Fringuelli, and are of feuen colours: these Birds for feare of the Monkeyes, are ever wont to make their Nests ouer the bankes of Rivers, or the Sea, where the branches of Trees so reach ouer the water, that with a little weight they may bow downe to the water : their Nofts are made fo neere the tops of the branches, that when the Monkeyes come thereon, the branches bend roward the water, and the Monkeyes turne backe againe for feare of falling: For although no beaft in the World be more malicious then this, yet whereas the most part of beasts are naturally inclined to fwimme, this Monkey hath no manner of aptnesse thereunto, and is therefore foone drowned or strangled in the water, and by a prime fense of Nature feareth the danger to which he cannot escape. These Birds make their Nests in such fort, that although they bee wet and filled with water, yet doe they so suddenly rife up againe, that the young Birds are not thereby hurt or drowned. There are also many Nightingales, and other Birds which fing maruellous ly with great melodie and difference in finging; these Birds are of maruellous divers colours the one from the other, some are altogether yellow, and some other of so excellent, delectable, and high a colour, asit were a Rubie, other are also of divers and variable colours, some of few cos lours, and other some all of one colour, being all so faire and beautifull, that in brightnesse and thining they excell all that are in Spaine, or Italie; or other Provinces of Europe. Many of these are taken with Nets, lime-twigs, and Springes of divers forts. Divers other forts of great fewles. like vnto Eagles, and fuch other as live of prey, are found in the firme Land, of fuch divertitie.

20 that it is in manner impossible to describe them all particularly : and for a much as I have more largely intreated hereof in my generall Historie of the Indies, I thinke it not requifite heere to make any further mention of the same.

#### Of Trees, Fruits, and Plants.

"Here is both in the firme Land and the Ilands a certaine Tree called Coco, being a kind of coco. Here is both in the firme Land and the frames of the felfelame greatnesse, as have the Date Trees which beare Dates, but differ much in their growing, for the leaves of this Coco grow out of the trunkes of the Tree, as doe the fingers out of the hand, wreathing themselves one within ano-30 ther, and fo foreading abroad : their Trees are high, and are found in great plentie in the Coast of the Sea of Sur, in the Prouince of Cacique Chiman, These Date Trees bring forth a Fruit after this fort : being altogether write as it groweth on the Tree , it is of greater circumference then the head of a man, and from the superficial part to the middelf, which is the fruit, it is involved and couered with many Webs much like vnto those Hirds of Towe which they vie in Andalusia. Of this Towe or Web, the East Indians make a certaine kind of Cloth, of three or foure forts, and Cordes for the Sayles of Ships : but in thefe Indies of your Maieftie, they paffe not for shele Coards, or this Cloth that may be made of the Fruit of Coco, by reason of the great plentie that they have of the Bombage or Cotton of Gossampine Trees, The Fruit which is in the middeft of the faid Tow, is (as I have faid) as bigge as a mans fift, and fometimes twice as bigge, and more : 40 It in forme like voto a Walnut tome other round thing, fomewhat more long then large, and very hard, the rinde or burke hereof, is as thicke as the circle of Letters of a Rull of Plate, and within, there cleaueth fast to the rinde of the Nut a carnolitie or substance of coornell, of the

thicknesse of halfe a finger, or of the least finger of the hand, and is very white, like vnto a faire Almond, and of better tafte and more pleasank. When this Fruit is chewed, there remayne certaine crummes, as doe the like of Almonds : Yet if it be swallowed downe, it is not unpleasant. For although that after the juyce or moyfture be gone downe the throat before the faid crummes be swallowed, the rest which is eaten, seeme somewhat sharpe or sowre, yet doth it not so greatly offend the tafte, as to be caft away. While this Cocas is yet fresh and newly taken from the Tree, they vie not to eate of the faid carnofitie and Fruit, but first beating it very much, and then 50 strayning it, they draw a Mikethereof, much better and sweeter then is the Milke of Beasts.

and of much substance, the which the Christian men of those Regions put in the Tartes or Cakes which they make of the grain of Maix whereof they make their Bread, or in other Bread I Ihaue Gene Cakes which they make of the grain or MAILE WHETEOT they make their bread, or in other bread one of thefe as we put Bread in Pottage: fo that by reason of the said Milke of Coem, the Tartes are more exas we pure the state of the sta atwell farished as thought it had ocene designed with many designed by the forest possible of the further, your Maieltie shall viderstand, that is in the place of the stone or cornell, there is in the whole if it further, your Maieltie shall viderstand the stone of lent water, in such quantitie as may fill a great Egge shell, or more, or lesse, according to the big- hardshogge nesse of the Cocos, the which water surely, is the most substantiall, excellent and precious to bee therein as it 60 drunke, that may be found in the World; infomuch that in the moment when it passeth the pa. were in a Bot-

late of the mouth, and beginneth to goe downe the throate, it feemeth that from the fole of the tle, but in time foot, to the crowne of the head, there is no part of the bodie but that feeleth great comfort was partly thereby : as it is doubtlesse one of the most excellent things that may bee tasted upon the earth, congcaled into and fuch as I am not able by writing or tongue to expresse. And to proceed yet further, I say that a fix substance Mmmm 2

when the meate of this fruit is taken from the Vessell thereof, the vessell remayneth as faire and neate as though it were polished, and is without of colour inclining toward black, and thineth or glistereth very faire, and is within of no lesse delicatenesse. Such as haue accustomed to drinke in from Collicks these Vessels, and have beene troubled with the Disease called the fretting of the guts, say that they have by experience found it a marvellous remedie against that Disease, and that it breaketh the stone, and prouoketh vrine. This fruit was called Coca, for this cause, that when it is taken from the place where it cleaueth failt to the Tree, there are feene two holes, and aboue them two other naturall holes, which altogether doe represent the griture and figure of the Cattes called Mammon, that is, Monkeyes, when they cry, which cry the Indians call Coca, but in very deed, this Tree is a kind of Date Tree, and hath the same effect to heale fretting of the guts, that Plinis describeth all kinde of Date trees to have. There are furthermore in the firms Land, Trees of such bignesse that I dare not speake thereof, but in place where I have so many witnesses which have seene the same as well as I. I say therefore, that a league from Darieng or the Gitie of Santa Maria Antiqua, there passetha River very large and deepe, which is called Cut, ouer the which the Indians laid a great Tree, fo traverling the same, that it was in the flead of a bridge, the which I my felfe with divers other that are at this prefent in your Majeflies

Court, have oftentimes paffed over. And forafmuch as the faid Tree had Iyen long there, and by

the great weight thereof was so shrunke downeward, and partly coursed with water, that none

could paffe ouer it, but were wet to the knee, I being then in the yeere 1522, the officiall or lu-

place, which in like manner trauerled the Riuer, and reached more then fiftie foote oner the

further fide : This Tree was exceeding great, and rested about the water more then two Cubits,

in the fall, it cast downe all such other Trees as were within the reach thereof, and discourred certaine bynes, which were fo laden with blacke Grapes of pleafant tafte, that they fatisfied

more then fiftie persons which are their fill thereof. This Tree, in the thickest part thereof, was

more then fixteene spannes thicke, and was neuertheleffe but little in respect of many other trees

flice in that Citie at your Maiesties appointment, caused another great Tree to bee laid in that ap

which are found in this Prouince. For the Indians of the Coast and Prouince of Cartagenia, make Barkes or Boates thereof (which they call Canous) of fuch bigneffe, beeing all one whole

Great Canoas Tree, that some contains a hundred men, some a hundred and thirtie, and some more, having neuertheleffe fuch void space within the same, that there is left sufficient roome to passe to and fro to throughout all the Canous. Some of these are so large, beside the length, that they conteine more then tenne or twelve spannes in breadth, and faile with two failes, as with the Master faile and the trincket, which they make of very good Cotton. The greatest Trees that I have seene in these parts, or in any other Regions, was in the Prouince of Gnature, the King whereof rebelling from the obedience of your Maiestie, was purfued by me, and taken Prisoner: at which time I with my company, passed ouer a very high Mountaine, full of great Trees, in the top whereof, we found one Tree, which had three roots, or rather divisions of the roote above the Earth, in forme of a Triangle, or Treuet, fo that betweene every foot of this Triangle or three feet, there was a space of twentie foot betweene every foot, and this of such height above the Earth, that a laden Cart of those wherewith they are accustomed to bring home Corne in time of Haruest in 46 the Kingdome of Toledo in Spaine, might early have passed through emery of those partitions or windoores which were betweene the three feet of the faid Tree. From the Earth vpward to the trunke of the Tree, the open places of the divisions betweene these three feete, were of such height from the ground, that a Footman with a lauelin was not able to reach the place where the faid feet joyned together in the trunke or bodie of the Tree, which grew of great height in one piece, and one whole bodie, or euer it spread in branches, which it did not before it exceeded in height the Towre of Saint Romane in the Citie of Toledo: from which height and vpward, it spread very great and strong branches. Among certaine Spaniards which climbed this Tree, I my felfe was one, and when I was afcended to the place where it begunne to ipread the branches, it was maruellous thing to behold a great Countrey of fuch Trees toward the Pro- 50 uince of Abrarme. This Tree was easie to climbe, by reason of certaine Besuchi, (whereof I haue spoken before) which grew wreathed about the Tree, in such fort that they seemed to make a scaling Ladder. Every of the foresaid three feet which bore the bodie of the Tree, was twentie spannes in thicknesse, and where they joyned altogether about the Trunke or bodie of the Tree, the principall Trunke was more then fortie and fine spannes in circuite. I named the Mountaine where thefe Trees grow, the Mountaine of three footed Trees. And this which I have now declared, was seene of all the company that was there with mee when (as I have faid before) I took King Guaturo Prifoner in the yeere 1 ; 22. Many things more might here be ipoken as touching this matter, as also how there are many other excellent Trees found of divers forts and difference, as sweet Cedar Trees, blacke Date Trees, and many other, of the which some are 60 so heavie that they cannot float about the water, but finke immediately to the bottome, and other againe as light as a Corke. As touching all which things I have written more largely in my generall Historie of the Indies. And for as much as at this prefent I have entred to entreate of Trees, before I passe any fur-

ther to other things, I will declare the manner how the Indians kindle fire, onely with Wood Kindling of and without fire, the manner whereof is this. They take a peece of wood, of two fpannes in fire without length, as biggers the least finger of a mans hand, or as an arrow well pullished, and of a strong fire, kinde of wood which they keepe onely for this purpole; and where they intend to kindle any fire, they take two other peeces of wood, of the drieft and lightest that they can finde, and binde them fail together one with another, asclose as two fingers loyned : in the middelt or between there, they put the point of the first little staffe made of hard and strong wood, which they hold in their hands by the top thereof, and turne or rubbe it round about continually in one place betweene the two peeces of wood which lye bound together vpon the earth, which by that vn-

10 ceffant rubbing and chafing, are in fhort space kindled, and take fire. I have also thought good Purified word here to speake somewhat of such things as come to my remembrance of certaine Trees which nicht. are found in this Land, and sometime also the like have beene seene in Spaine. These are certaine putrified trunkes, which have lien fo long rotting on the earth, that they are very white, and shine in the night like burning firebrands, and when the Spaniards finde any of this wood, and intend privily in the night to make warre and invade any Province, when case so requireth that it shall be necessarie to goe in the night, in such places where they know not the way, the formost Christian man which guideth the way, affociate with an Indian to direct him therein, taketh a little starre of the faid wood, which he putteth in his cap, hanging behinde on his shoulders, by the light whereof he that followeth next to him, directeth his journey, who also 20 in like manner beareth another starre behinde him, by the shining whereof the third followeth the same way, and in like manner doe all the rest, so that by this meanes none are lost or stragle

out of the way. And for as much as this light is not feene very farre, it is the better policie for the Christians, because they are not thereby disclosed before they inuade their enemies, Furthermore, as touching the natures of Trees, one particular thing feemeth worthy to be noted, where- Plinter of Plinie maketh mention in his naturall Historie, where he faith that there are certaine Trees which continue euer greene and neuer loofe their leaues, as the Bay-tree, the Cedar, the Orangetree, and the Olive-tree, with such other, of the which in altogether he nameth not past five or fix. To this purpose, I say, that in the Hands of these Indies, and also in the firme land, it is a Almost Illiathing of much difficultie to finde two Trees that lofe or cast their leaves at any time for although 30 I have diligently fearched to know the truth hereof, yet have I not feene any that lofe their greene. leaves, either of them which we have brought out of Spaine into these regions, as Orange-trees,

Limons, Cedars, Palmes, or Date-trees, and Pomegranate-trees, or of any other in these regi- Caffic. ons, except onely Caffie, which lofeth his leaves, and hath a greater thing appropriate to it Erth hot loss felle onely; which is, that whereas all other Trees and Plants of India spread their rootes no er then a fadeeper in the earth then the depth of a mans height, or formewhat more, not descending any dome. further into the ground, by reason of the great heare which is found beneath that depth, yet Raicell most doth Cassia pearle further into the ground, vntill it finde water: which by the Philosophers of the case pinion flould be the cause of a thinne and watery radicall molfture to such things as draw their nourithment thereof, as fat and vnetuous grounds with temperate heate, yeelde a fast and firme 40 moisture to such things as grow in them, which is the cause that such Trees lose not their leages, as the faid thinne and waterish moisture is cause of the contrarie, as appeareth by the faid effect which is teene onely in Caffia, and none other Tree or Plant in all these

Of Reedes or Canes.

IN the firme land there are many forts of Reedes, fothat in many places they make their houles thereof, couering them with the tops of the same, and making their wals of them in like manner, as I have faid before ; and among these kindes of Reedes, there is one so great, that the Canes thereof are as bigge as a mans legge in the knee, and three spans in length from loynt to 50 inynt, or more, in fo much that enery of them is of capacitie to containe a little bucket of water. In this kinde, there are found some greater, and some lesse, of the which some they wie to make quivers for arrowes. There is found another kinde, which furely is marueilous, being lite Reed-springs tlebigger then a lanelin, the Canes whereof are longer then two fpannes : these Reedes grow or fountaints one faire from another, as iometimes twenty or thirty pices, and fometimes allo two or three of water-leagues: they grow in manner in all Prounces in the Indust, and grow neere to very high Trees, whereunto they leane, and creepe up to the top of their branches, which they imbrace, and descend againe downe to the earth. Their Canes are full of most cleare water, without any manner of taffe or fauour, either of the Canes, or of any other thing, and fuch as if it were taken out of the freshest Spring in the world, nor yet is it knowne that ever it hurt any that 60 drunke thereof. For it hath oftentimes fo chanced, that as the Christian men haue transited in thefe regions in defolate waies, where for lacke of water they have beene in great danger to dye with thirst, they have escaped that perill by reason that they found the sand Reedes, of the water of whole Canes they have drunke a great quantity, without any hurt thereof enfung. Therefore when they finde thele in any place, they make water veffels of the Canes thereof, and carry

as many of them full of swater as may fuffice for one dayes journey; and fometime they carrie fo many, that they take for every man two or three quarts of water, which may ferue them for many duies, because it doth not corrupt, but remainer's still fresh and good,

Playani, or

Figges.

There are also certaine Plants, which the Christians call Platani. They are as high as trees. and become as bigge in the trunke as the knee of a man, or more. From the foote to the top, they beare certaine long and large leaves, being more then three spans in largenesse, and about ten or twelue in length : the which when they are broken of the winde, the stalke remainerh whole in the middett. In the middett of this Plant, in the highest part thereof, there groweth a cluster with fortie or fiftie Plantans about it, every of them being a span and a halfe in length. and as bigge as a mans arme in the imall, or more, or leffe, according to the goodnesse of the foile to where they grow: they have a rinde not very thicke, and easie to be broken, being within altogether full of a substance like vinto the marie of the bone of an Oxe, as it appeareth when the rinde or barke is taken from the fame. This cluster ought to be taken from the Plant, when any one of the Plantans begin to appeare yellow, at which time they take it, and hang it in their houses, where all the cluster waxeth ripe, with all his Plantans. This cluster is a very good fruite, and when it is opened, and the rinde taken off, there are found within it many good drie Figges, which being rofted, or flewed in an Ouen, in a close pot, or some such other thing, are or pleafant tafte, much like to the conferue of Hony : they putrifie not on the Sea fo foone as some other fruites doe, but continue fifteene daies and more, if they be gathered somewhat greene : they feeme more delicate on the Sea then on the Land, not for that they any thing encrease in goodnes on the Sea, but because that wheras on the Sea other things are lacking, whereof is plencie on the Land, those meates seeme of best tatte, which satisfie present necessitie. This trunke or fprig which bringeth forth the faid cluster, is a whole yeare in growing and bringing forth fruite, in which time it hath put forth round about in ten or twelue fprigges, as bigge as the first or principal, and multiplieth no life then the principall in bringing forth of clusters, with fruits likewife at their time, and also in bringing forth other and many sprigges, as is said before. From the which iprigges or trunkes, as foone as the cluster of the fruite is taken away. the Plant beginneth to drie and wither, which then they take out of the ground, because it doth none other then occupie it in vaine, and without profit. They are so many, and doe so marueiloufly encrease and multiplie, that it is a thing in manner incredible. They are excee. 30 ding moult, in so much that when they are plucked up from the place where they grow, there iffueth forth a great quantity of water, as well out of the Plane, as out of the place where it grew, in such fort, that all the moisture of the earth farre about, might seeme to be gathered together about the trunke or blocke of the faid Plant, with the truites whereot, the Antes are fo farre in loue, that they are feene in great multitudes in the branches of the Plants : fo that for the multitude thereof, it fometime fo chanceth, that men are entorced to take away the Plants from their possession : these fruites are found at all times of the yeere. There is also another kinde of wilde Plants that groweth in the fickles, which I have not feene but in the Iland of Hilpamela, although they be found in other Ilands of the Indies: these they call Tunas. They grow of a Thiftle full of thornes, and bring forth a fruite much 40 like vnto great Figges, which have a crowne like Medlers, and are within of a high colour, with graines and the rinde like vnto a Figge; they are of good tafte, and grobe abundantly in the fields in many places : They worke a strange effect in such as eate them, for if a man eate two, or three, or more, they cause his wrine to be of the very colour of bloud, whith thing chanced once to my felfe. For on a time as I made water, and faw the colour of my Vrine, I entred into a great suspition of my life, being so assomished for feare, that I thought the same had chansed to me vpon some other cause, in so much that surely my imagination might have done me hurt, but that they which were with me did comfort me immediately, declaring the cause thereof, as they knew by experience, being auncient inhabitours in those regions. There groweth also another Plant, which the people of the co Countrie call Bibsor: this putteth forth certaine ftraight branches, and very broade leaves, which the Indians vie for divers purpofes; for in some places they cover their houses with the leaves thereof, couched and laid after the manner of thatch, whereunto it serueth very well : Sometimes also when it raineth, they cast these ouer their heads, to defend them from the water. They make also certaine chefts, which they call Hanas, we aued after a strange fort, and intermixt with the leaves of this Bibass. These Chests are wrought in fuch fort, that although it raine vpon them, or they chance to fall into the water, yet are not fuch things wet as are within them : they are made of the branches of the faid Bihass, with the leaves weared together therewith. In these they keepe falt, and other subtile things. They vie them also for another purpole, which is this : that finding them in the fields at such time as 60 they have scarfenesse of victuals, they digge up the rootes of these Plants while they are yet yong, or eate the Plant it selfe, in that part where it is most tender, which is from a foote vnder the ground, where it is as tender and white as a Reede or Bulrush. And for as much as we are now come to the end of this narration, it commeth to my remembrance to make mention

of another thing, which is not farre from my purpole; and this is, how the Indians doe staine or dye cloath of bombage cotton, or any other thing which they intend to dye, of divers colours, Dying of 25 Blacke, Tawny, Greene, Blew, Yellow, and Red, which they doe with the Barkes, or Rindes, and Leaues of certaine Trees, which they know by experience to be good for this practice t and by this are they make colours in such perfection and excellency, that no better can be de- A firange wied. But this feemeth a ftrange thing, that they doe all this in one felfe fame Veffell : fo that things when they have caused the faid Rindes and Leanes to boile together, they make in the same Vessell without any change (as I have fail) as many colours as them lifteth. Which thing I suppose to come to passe, by the disposition of the colour which they have first guen to the to thing that they intend to dye or colour, whether it be Thred, Web, or Cloth, or any thing that they intend to colour.

# Of venemous Apples, wherewith they poylon their Arrows.

He Apples wherewith the Indian Cambals invenome their arrowes, grow on certaine Trees courred with many Branches and Leaues, being very greene, and growing thicke. They are laden with abundance of these cuill fruites, and have their Leaves like the Leaves of a Peare-tree, but that they are leffe and rounder ; the fruite is much like the mulcadell Peares 20 of the lland of Sicilie or Naples in forme and bigneffe, and are in some parts stained with red spots, and of very sweet sauour : these trees for the most part, grow ever by the Sea Coasts, and neere vnto the water, and are so faire and of pleasant sanour, that there is no man that feeth them, but will defire to eate thereof, infomuch that if it may bee fooken of any fruit yet growing on the earth, I would say that this was the wnhappy fruit whereof our first payes give Adam and Ene tafted, whereby they both loft their whicitie, and procured death to . It was not a them and their posteritie. Of these truits, and of the great Ants whole byting cauteth venemousiace fwelling (whereof I have spoken elsewhere ) and of the Emes, or Lyfarts, and Vipers, ofthe frumbat fwelling (whereof I have footen ellewhere 1 and or the Emis, or Lojarri, and v pers, or consideration and fuch other venomous things, the Canished which are the chiefe Archers among the Indie Bedience in st., are accustomed to poylon their Arrowes, wherewith they kill all that they wound: earing containing the containin These venomes they mingle together, and make thereof ablacke Maste or composition, which it to Gods. appeareth like vnto very blacke Pitch. Of this poyfon I canled a great quantitie to ber turn; commin ein Santa Maria Antique, in a place two leagues and more within the Land, with a great mul. ment, which titude of their intenced Airowes and other manitaons with also the house wherein they populated were referred : This was in the yeere 1 5 1 4 at fuch time at the Armie arrived there withinnegh with Captaine Pedrarias de Uilla, at the commandement of the Catholike King Dass wages whereaf with Captaine course of the fillionie. The Apples (as I have Sayle ) grow neers in dath in our one for a tree Christian which ferue your Majerie in the fe patries, suppose that there considering must be considered. write the Seatthe Curiftians which ierus year manurus in muce patters, suppore time causte nomether is no remedie fo profitable for fuch as are wounded with their Arrowse; as is die wa- Arrows. ter of the Sea, if the wound bee much waited therewith , by which meanes forms have pririe dries. 40 escaped, although but few : yet to say the truth, albeit the water of the Sea, haue a certaine caustike qualitie against poyson, it is not sufficient remedie in this case, nor yet The water of

to this day have the Christians perceived that of fiftee that have beene wounded, three the Sea, have recourred. But that your Maiestie may the better consider the force of the venome of these trees, you shall further understand, that if a man doe but repose himselfe to sleepe a little while under the shadow of the same, he hath his headand eyes so swoke when he resett, that the eye lids are joyned with the cheekes, and if it change one drop or more of the deaw of the faid tree to fall into the eye, it viterly destroyeth the fight. The pestilene nature of this tree is fuch, that it cannot be declared in few words. Of thefe, there groweth great plentie in the gulfe of Praba, toward the North coath, on the Wighand Eaft fide. The wood of these trees when it The gulfa of 50 burneth, maketh fo great a flinke, that no man is able to abide it, by reason it causeth fo great a Prass.

paine in the head. Among other trees which are in thefe Indier, as well in the Hands, as in the firme land, there is another kind which they call Xagua, whereof there is great plentie: they are very high , and Xagua ftreight, and faire to behold. Of these they wie to make Rikes, and I agelins of divers lengths and bignefic: they are of a faire colour, betweene ruffet and white : this tree bringeth forth a great fruit as big as Papamer or Poppis, and much like thereunto, Strickery good to be eaten when it is ripe. Out of this they get a very cleare water, where with they wash, their legs, and sometimes all their bodies, when they feele their fiesh weary, faint; or loofe : the which water, befile that it hath a binding qualitie, it hath all of this propertie, that whatfour it 60 toucheth, it thineth it blackeby little and little, vntill it beas blacke as fire, which colour Blackefisines,

cannot bee taken away in left space then tenne or twelve dayes : And if the nayle bee but touched therewith, it is fo stained, that it can by no meanes be taken away, wreill it either fall of, or growout, and be clipped away by little and little, as I my felfe have ofteneimes feene by experience...

Som: thinke

There is another kinde of Trees which they call Hobis: these are very great and faire, and cause wholesome aire where they grow, and a pleasant shadow, and are found in great abundance; their fruit is very good, and of good taite and fauour, and much like vnto certaine Damfons of their fruit is very good, among good suite and salous, and among the properties and pulled and yellow, but their flone is very geret, by reason whereof they have but little meare: their Barke or Rinde boyled in water, maketh a wholefome Bathe for the legges, because it bindeth and stayeth the looienesse of the fiesh, fo sensibly that it is a married to come der. It is furely a wholetome and excellent Bathe against fuch fainenesse, and is the best Tree that may be found in those parts to sleepe under: For it canseth no heavinesse of the head, as doe divers other Trees, which thing I speake, because the Christians are much accustomed in those Regions to lie in the fields. It is therefore a common practice among them, that wherefoeuer in they finde these Trees, there they spreade their Mattrelles and Beds wherein they sleepe,

The Inhabi-Sea of Sur.

There are also a kinde of high Date trees, and full of thornes: the wood of these is most excellent, being very blacke and thining, and to heavie that no part thereof can fwim about the water, but finketh immediatly to the bottom. Of this wood they make their Arrowes and Darte. alio Iauelins, Speares, and Pikes: and I fay Pikes, because that in the coasts of the Sea of Sur, beyond Esquegue and Uracha, the Indians vie great and long Pikes, made of the wood of these Date trees. Of the same likewise they make Clubs, and Swords, and divers other weapons Also vessels and houshold stuffe of divers forts, very faire and commodious. Furthermore of this wood the Christians vie to make divers musicall instruments, as Claricymbals, Lutes, Gitterns, and such other, the which beside their faire shining colour like vnto jeat, are also of a good found, and very durable, by reason of the hardnesse of the wood.

An herbe that cordes.

After that I have faid thus much of Trees and Plants, I have thought good also to speake somewhat of Herbs. You shall therefore understand, that in these Indies there is an herbe much like vnto a yellow Lilly, about whose leaves there grow and creepe certaine Cordes or Laces, as the like is partly feene in the herbe which we call Laced favory, but thefe of the Indies are much bigger, and longer, and so ftrong that they tie their hanging beds thereby, which they cell Hame-Cabaisand He- cas, whereof we have spoken elsewhere : these Cordes they call Cabais, and Henequen, which are all one thing, fauing that Henequen is lefte and of a finer substance, as it were Line, and the other is groffer, like the wike or twift of Hempe, and is imperfect in comparison to the other: they are of colour betweene white and yellow, like vnto abarne, and some also white. With Henequen, which is the most subcile and fine threed, the Indises faw in funder Fetters, Chaines, or barres of Iron, in this manner: They moone the threed of Henequen vpon the Iron which they intend to faw or cut, drawing the one hand after the other as doe they that faw , putting our now and then a portion of fine Sand spon the threed, or on the place or part of the Iron, where they continue rubbing the faid threed, to that if the threed be worne, they take another, and continue in their worke as before, vntill they have cut in funder the Iron, although it bee never fo

bigge, and cut it as if it were a tender thing, and eafie to be fawen.

A ftrange

Leaues.

These trees are to full of thornes, that there is no tree or plant that seemeth more wilde and de- 40 formed: fo that I cannot well determine whether they bee Trees or Plants : they have certaine branches full of large and deformed leaves, which branches were first leaves like vnto the other. As the branches made of these leaves grow forth in length, there commeth other leaves of them: fo that in fine it is a difficult thing to describe the forme of their trees, except the fame should be done by a Painter, whereby the Eye might conceine that wherein the Tongue faileth in this be-Aleafcofgrest halfe, The leanes of this tree are of fuch vertue, that being well beaten and fpred vpon a cloth, after the manner of a plaister, and so laid to a legge or arme that is broken in many pieces, it healeth it in fifteene dayes, and maketh it as whole as chough it had neuer beene broken: During the time of this operation, it cleaveth to fast to the sells, that it cannot without much difficultie be taken away, but afficone as it hath healed the fore, and wrought his operation, it loofeth it felfe to from the place where it was laid, as I my felfe, and diners other which have proued it, know by experience.

And forasmuchas the leaves of Trees may be counted among Herbs, I will here speake some-

what of the qualitie of the leanes of certaine Trees which are found in the Iland of Hispaniela.

### Of Fishes, and of the manner of fishing.

IN the Sea coasts of the firme Land, there are diners and fundrie kindes of fishes, much diffe-I ring in shape and forme. And although it be impossible to speake of all, yet will I make mention of some. And first to begin at Sardines, you shall understand that there is found a kinde of thele fishes very large and with red tailes, being a very delicate fish. The best kindes of other fishes are these, Mozarre, Diabace, Brettes, Dabaos , Thornbacks , and Salmons : All these , and 60 diversorher which I doe not now remember, are taken in great quantitie in Rivers. There are likewife taken very good Cremibes. There are also found in the Sea, certaine other fishes, as Soles, Macherels, Turbuts, Palamite, Lauze, Polpi, Chieppe, Xaibas , Locusts , Oisters , exceeding great Tortoifes, and Tiburons of maruellous bigneffe : alfo Manates, and Marene, and many other filhes,

## CHAP. 2. Torsoifes and Sbarkes bow taken. Defeription of them and the Manate. 087

which have no names in our language, and thefe of such diversitie and quantitie, as cannot bee expressed without large writing and long time. But to let passe to intreate particularly of the multitude of fishes, I intend to ipeake chiefly, and somewhat largely, of three fores of most notable fifthes : whereof the first is, the great Torsoifes, the second is called Tiburon, and the third Great Torsoifes Menate. And to begin at the firit, I fay that in the lland of Gube, are found great Torresfer fet. (which are certaine shell fishes) of such bignesie that ten or fifteene men are scarsly able to life one of them out of the water, as I have beene informed of credible persons dwelling in the same Hand. But of that which I my felfe have forne, I can teftifie, that in the firme Land , in the village of Aela, there are of this fore some taken and killed of such bignesse, that sixe men with 10 much difficultie could fearly draw them out of the water , and commonly the leaft fort of them are as much as two men may carry at a burden : that which i w lifted up by fixe men, had hef shell a yard and a quarter in length , and in breadth more then hue yards. The manner of taking them, is this : It fometimes chanceth that in their great nets (which they call shoote nets) there are found certaine Tertailes of the common fort, in great quantities, and when they come out of the Sea, and bring forth their egges, and goe together by companies from the Sea, to feede on the Land, the Christians or Indians tollow their steps which they finde in the Sand , and some overtake them, because they are very heatie and flow in going, although they make all the hafte they can to returne to the Sea, affoone as they efpy any body. When they that purfue them have ouertaken them, they put a stake or staffe under their legs, and ouerturne them on their backs as 20 they are yet running, to that they can goe no further, nor yet rife agains or turne, and thus they fuffer them to lye ftill while they follow after the polt, which they ouerturne in like manner: and by this meanes take very many, at fuch times as they come forth of the Sea, as I haue faid: This

fish is very excellent and wholesome to be eaten, and of good tafte. The fector of the three fifthes whereof lhaue fooken, in the Theorem: this is a very great fifth, 7 thomas of and very quick and fwift in the water, and a cruell Decourer: these are oftentimes taken, stwell Sharles, when the ships are under faile in the Ocean, as also when they lye at anker, or at any other time, and especially the least kinde of these fishes, When the ships are under saile, the biggest fore are taken after this manner. When the Thurs feetn the ship fayling, hee followeth it swimming behind, the which things the Mariners leeing, caft forth all the filth of the ship into the Sea for 20 the fift to eate, who neverthelefic followeth them with equall pase, although they make never fuch hafte with full winde and failes , and wallo weth on every fide and about the thip , and thus followeth it sometime for the space of a hundred and fiftie leagues, and more, and when the Mariners are disposed to take them, they cast downe by the steme of the ship a hooke of Iton, as bigge as the biggeft finger of a mans hand, of three spans in length, and crooked like a fifth-hooke, with beards according to the bigueffethereof, and fattned to an Iron chaine of five or fixe linkes neere vnto the end, and from thence tyed with a great rope; faitning also on the hooke for a bait, a piece of some fish, or hogs fieth, or tome other fieth, or the bowels and intrals of another Tibus ron which they have taken before, which may rafily bedone, for I have feene nine taken in one day, and if they would have taken more, they might alfo. Thus when the Tohuron hath pleafants 40 ly followed the thip a long voyage, at the length he fwalloweth the bait with the hooke, and aswell by his thriting to flee or escape, as also by the swift passage of the ship, the hooke over-

thwarteth and catcheth hold of his chaps: the which fift when it is taken, it is of fuch huge bigneffe, that twelve or fifteene men are carry able to draw it out of the water, and lift it into the ship, where one of the Mariners gueth it many knocks on the head with a club or beetle, wittill he haue flaine it: they are fometimes found of ten or twelue foote long, and of five, fixe, or feuen spans in breadth, where they are broadest : they have very great and wide mouthes, to the proportion of the reft of their bodies, and have two rowes of teeth, the one somewhat separate from the other, of cruell shape, and shanding very thicke. When they have slaine this fish, they cut the body thereof in small pieces, and put it to drie, hanging it three or foure dayes at the 50 Cordes of the saile clothes to drie in the winde, and then eate it: It is doubtlesse a good fift, and of great commoditie to ferue the ships for victualls for many dayes : the least of these fishes are most wholesome and tender, it hath a skin much like to the skin of a Sole whereunto the faid Ti- Plinice burrow is like in flape : Which I fay , because Plunie hath made mention of none of these three fifthes, among the number of them whereof he writeth in his Naturall historie. Thele Tiburous some forth of the Sea, and enter into the Rivers, where they are no leffe perillous then great Lin

zards or Crocodiles, whereof I have spoken largely betore : For they deutere Men, Kine, and Hor- crostiles Ses, even as doe the Crasodiles: they are very dangerous in certaine walking places or Pooles by the Rivers fides, and where they have denoured at other times. Divers other fiftes both great and fmall, of fundrie forts and kindes, are accustomed to follow the ships going under faile, of the which I will speake somewhat when I have written of Manue, which is the third of the three Manuer whereof I have promifed to entreat. Manute therefore, is a fish of the Sea, of the biggert fort, and much greater then the Tiberon in length and breadth, and is very brutish and vile, so that it appeareth in forme like vnto one of those great vestels made of Goats skins, wherein they vie to sarry new wine in Medina de Campo, or in Arenalo: the head of this beaft is like the head of an

Oxe, with also like eyes, and hath in the place of armes, two great stumps wher with he swimmeth : It is a very gentle and tame beaft, and commeth oftentimes out of the water to the next thoure, where if he finde any herbes or graffe, he feedeth thereof. Our men are accustomed to kill many of thele, and divers other good files, with their Croffe-bowes, purfuing them in Barkes on Canoas, because they swim in manner about the water : the which thing when they see, the draw them with a hooke tyed at a small corde, but somewhat strong: As the fish fleeth away, the Archer letteth goe, and prolongeth the corde by little and little, vntill he have let it goe many fathoms: at the end of the corde, there is tyed a corke, or a piece of light wood, and when the fifth is gone a little way, and hath coloured the water with his bloud, and feeleth himfelfe to faint and draw toward the end of his life, he reforteth to the shoare, and the Archer followeth, gathe- to ring up his corde, whereof while there yet remaine fixe or eight fathoms, or somewhat more or leffe, he draweth it toward the Land, and draweth the fift therewith by little and little, as the waves of the Sea helpe him to doe it the more easily : then, with the helpe of the reft of his companie, he lifteth this great beaft out of the Water to the Land , being of fach bigneffe, that to conney it from thence to the Cities it shall be requifite to have a Cart with a good yoke of Oxen. and sometimes more, according as these fishes are of bignesse, some being much greater themother some in the same kinde, as is seene of other beasts: Sometimes they lite these nithes into the Canoa or Barke, without drawing them to the Land as before, for as foone as they are flaine, they flote about the water: And I believe verily that this fifth is one of the best in the world to the tafte, and the likest vnto fieth, especially so like vnto beefe, that who so hath not feene it whole 20 can judge it to be none other when hee feeth it in pieces then very Beefe or Veale, and is certainly to like vinco flesh, that all the men in the world may herein be deceived: the taste likewise, is like vnto thetaste of very good Veale, and lasteth long, if it be powdred : so that in fine, the Beefe of these parts, is by no meanes like vnto this. This Manate hath a certaine stone, or rather bone in his head within the braine, which is of qualitie greatly appropriate against the difeale of the stone, if it be burnt and ground into small powder, and taken fasting in the morning when the paine is felt, in such quantitie as may lye vpon a peny, with a draught of good while wine : For being thus taken three or foure mornings, it acquieteth the griefe, as divers have told me which have proved it true, and I my felfe by testimonie of fight, doe witnesse that I have feen 30 this stone sought of divers for this effect.

The Sword

The fill Ma-

A remedie a-

Tarbut.

The Sea fome-

There are also divers other fishes as bigge as this Manate, among the which there is one called Vibrella. This fifth beareth in the top of his head a fword, being on every fide full of many tharp teeth; this (word is naturally very hard and strong, of foure or fine spans in length, and of proportion according to the same bignesse: and for this cause is this fish called Spada, that is, the Sword fifb. Of this kinde fome are found as little as Sardines, and other fo great, that two yokes of Oxen are fearly able to draw them on a Cart. But whereas before I have promifed to speake of other filhes, which are taken in these Seas while the ships are under faile, I will not forget to speake of the Tunny, which is a great and good fish, and is oftentimes taken and kild with Trout speares, and hookes, cast in the water; when they play and swim about the ships. In like manner also are taken many Turbuss, which are very good fishes as are lightly in all the Sea. And here is 40 to be noted, that in the great Ocean Sea, there is a strange thing to be considered, which all that have beene in the Indies affirme to bee true : And thisis, that like as on the Land there are fome Provinces fertile and fruitfull, and some barren, even se doch the tike chance in the Sea : So that at some windes the thips faile fiftie, or a hundred, or two hundred leagues and more; without raking or feeing of one fish : and againe, in the felfe same Ocean in some places, all the water is feen tremble by the mooning of the fifthes, where they are taken abundantly. It commeth further to my remembrance to speake somewhat of the flying of fishes, which is doubtlesse a strange thing to behold, and is after this manner. When the thips faile by the great Ocean, following their viage, there rifeth fometimes on the one fide or on the other, many companies of certaine little filhes, of the which the biggelt is no greater then a Sardine , and so diminish leffe and leffe from @ that quantitie, that some of them are very little : these are called Volatori, that is , flying filbes : they rife by great companies and flocks, in such multitudes that it is an aftonishment to behold them : Sometimes they rife but little from the water, and (as it chanceth) continue one flight for the frace of an hundred paces, and fometimes more, or leffe, before they fall against into the Sea, fometimes also they fall into the thips. And I remember, that on an evening when all the companie in the ship were on their knees, singing Salue Regina, in the highest part of the Castle of the poope, and failed with a full winde, there passed by vs a flocke of these flying fishes, and came for neere vs, that many of them fell into the ship, among the which, two or three fell hard by mee, which I tooke aline in my hand, so that I might well percomment they were as biggers Sardines, and of the lame quantitie, having two wings or quils growing out of their finnes, like vnto thole 60 wherewith all fithes fwim in Rivers; these wings are as long as the fithes themselves. As long as their wings are moift, they beare them up in the aire, but alsone as they are drie, they can contimue their flight no further then as I have faid before, but fall immediatly into the Sca, and fo rite againe, and the as before from place to place. In the yeere 1515, when I came first to enforme

your Majestie of the state of the things in India, and was the yeere following in Flanders in the time of your most fortunate successe in these your Kingdomes of Arragon and Castile, whereas at that voyage I fayled about the Hand Bermuda, otherwise called Garza, being the furthest of all The Hand of the llands that are found at this day in the world, and arriving there at the depth of eight yards Bermuda. of water, and distant from the Land as farre as the thot of a piece of Ordinance, I determined to fend some of the thip to Land, as well to make fearch of such things as were there, as also to leave in the lland certaine Hogs for increase. But the time not seruing my parpose by reason of contrarie winde, I could bring my ship no neerer the Iland, being twelve leagues in length, and sixe in breadth, and about thirtie in circuit, lying in the three and thirtieth degree of the North fide, 10 While I remay ned here, I faw a ftrife and compat betweene thefe flying fifnes and the fifnes mamed Gilt heads, and the fowles called Sea-meines, and Cormorants, which furely feemed vnto me a thing of as great pleasure and solace as could be deuised, while the Gilt beads swam on the brim of the water, and sometimes lifted their shoulders about the same, to raise the flying fishes out of the water to drive them to flight, and follow them I wimming to the place where they fall, to take and eate them suddenly. Againe on the other fide, the Sea-mewer and Cormorants, take many of these flying fishes, so that by this meanes they are neither fafe in the Aire, nor in the Wa- Notwo bie ny of these stying sines, so that by this meanes they are neither and in the Atte, and in the felle sine perill and danger doe men line in this mortall life, wherein is no certaine Nortoo low fecuritie, neither in high effate, nor in lowe. Which thing furely ought to put vs in remembrance of that bleffed and fafe refting place which God hath prepared for fuch as love him, who 20 finall acquiet and finish the trausiles of this troublesome world, wherein are so many dangers, and

bring them to that eternall life where they shall finde eternall securitie and rest.

# Of the increase and decrease (that is) rising and falling of our Ocean Sea, and South Sea, called the Sea of Sur.

Will now speake of certaine things which are seene in the Prouince, or at the least in the Citie of Golden Castile, otherwise called Beragua, and in the coasts of the North Sea, and of the Beragua. South Sea, called the Sea of Ser, not omitting to note one singular and maruellois thing which I have considered of the Ocean Sea, whereof hitherto no Cosmographer, Pilot, or Mariner, or any 20 other, haue satisfied me. I say therefore, as it is well knowne to your Maiestie, and all such as have knowledge of the Ocean Sea, that this great Ocean casteth from it selfe the Sea Mediterraneum by the mouth of the Straight of Gibralterra, in the which the water, from the end and The West furthell part of that Sea, even voto the mouth of the faid Straight, either in the East toward the Ocean. coast commonly called Lenante, or in any other part of the said Sea Mediterraneum, the Sea doth The Sea Medit. not so fall nor increase, as reason would judge for so great a Sea, but increaseth very little, and a torraneum. small space : Neuerthelesse, without the mouth of the Straight in the mayne Ocean, it increaseth and falleth very much, and a great space of ground, from fixe houres to fixe boures, as in all the coasts of Spaine, Britaine, Flanders, Germanie, and England. The selfe same Ocean Sea in the firme Land newly found, in the coasts of the same lying toward the North, doth neither rise nor fall, 40 nor likewife in the Hands of Hift aniels and Cabs, and all the other Hands of the famelying to. Hifteniels. ward the North, for the space of three thousand leagues, but onely in like manner as doth the Cocan without Sat Meliterraneous in Italie, which is in manner today, a declare refrect to that increase and decrease obbing and which the faid Ocean with nathin intensities of Spains at Flanders. But this is yet a greater thing, sowing that all the felfer fame Ocean into coafts of the fair furne Land lying toward the South, in the Citie of Panama, and also in the coast of that Land which lyeth toward the East and West from The ebbe at that Citie, as in the Iland of Pearles or Margarita, which the Indians call Tarrarequi, and also in Panama falleth Taboga and Otoque, and in all other Ilands of the South Sea of Sur, the water rifeth and falleth fixe miles so much, that when it falleth, it goeth in manner out of fight, which thing I my selfe haue seene

oftentimes. And here your Maieftie may note another thing, that from the North Sea to the The South South Sea, being of fuch difference the one from the other in rifing and falling, yet is the Land Sea.

in the infinite power and wisedome of God is seene to be such, as may allure all good Natures to reverence and love to divine a Majettie. Of the straight or narrow passage of the Land lying betweene the North and South Sea, by the which Spices may much somer and easilier be brought from the Ilands of Molucca into Spaine by the West Ocean, then by that way whereby the Portugals faile into the East India.

50 that divideth them not past eighteene or twentie leagues in breadth from Coast to Coast : So

that both the faid Seas, being all one Ocean, this strange effect is a thing worthy greatly to bee

confidered of all fuch as have inclination and defire to know the fecret workes of Nature, where-

THe firme Land in some parts thereof is so straight and narrow, that the Indians say, that from the Mountaines of the Province of Esquegua or Viraca ( which are between the one Esquegua and Sea and the other) if a man afcend to the top of the Mountaines, and looke to ward the North, Virain.

trarie way, may on the other fide (towards the South) fee the Sea of Ser, and the Peouine

ces which confine with it, as doe the Territories of the two Lords or Kings of the faid Prouin-

ces of Vrraca and Efquequa. Some measure this way in this part, to bee from Sea to Sea eigh. teene leagues, which I suppose to bee rather twentie, not for that it is any more by meature.

but because it is rough and difficult, as I have faid, and as I have found it by experience; has

uing now twile passed that way by foote, counting from the Port and Village of Nombre the

teene leagues from the faid Port, endeth the roughnesse of the way : then from hence to the maruellous Bridge are two leagues, and beyond that, other two, vnto the Port of Panama:

So that all together, in my judgement, make twentie leagues. It is a maruellous facilitie to bring

Spices by this way which I will now declare. From Panama to the River of Chapte, are foure

leagues of good and faire way, by the which Carts may paffe at pleasure; by reason that the

Mountaines are but few and little, and that the greatest part of these foure leagues is a plaine ground void of Trees : and when the Carts are come to the faid River, the Spices may be carried

in Barkes and Pinales. For this River entreth into the North Sea five or fixe leagues lower then The Hand Ba- the Port of Nomen Dei, and emptieth it felfe in the Sea neere vnto an Hand called Ballimente,

where is a very good and fafe Port. Your Maiestie may now therefore consider, how great a

Chagre, having his original onely two leagues from the South Sea, continueth his course, and

emptieth it felte into the other North Sea. This River runneth faft, and is very great, and io

commodious for this purpose as may bee thought or defired : the maruellow Bridge made by the

worke of Nature, being two leagues beyond the faid River, and other two leagues on this fide

the Port of Panama, so lying in the mid way betweene them both, as framed naturally in

fuch fort, that none which palle by this voyage doth fee any fuch Bridge, or thinke that there

thing, and what commoditie it may be to convey Spices this way, foralmuch as the River of 20

Diss, vnto the Dominion of the Cacique of Inanaga, otherwise called Capira, eight leagues.

The River of and from thence to the River of Chapra, other eight leagues. So that at this River, being fix-

is any fuch building in that place, vntill they be in the top thereof, in the way toward Panama: But affoone as they are on the Bridge, looking toward the right hand, they fee a little Riuer under them, which hath his Channell distant from the feete of them that walke outrit, the space of two speares length or more. The water of this River is very shallow, not passing the 30 depth of a mans legge to the knee, and is in breadth betweene thirtie and fortie paces, and falleth into the Riner of Chagre. Toward the right hand, standing on this Bridge, there is nolength thereof about threefcore or fourfcore paces : The Arch is fo made of most hard stone, that

Naturall flone thing feene but great Trees. The largenesse of the Bridge contayneth fifteene paces, and the no man can behold it without admiration, being made by the High and Omnipotent Creator

> How things that are of one kinde, differ in forme and qualitie, according to the mature of the place where they are engendred or grow, and of the beafts called Tigres.

IN the firme Land are found many terrible beafts, which some thinke to be Tigres. Which I thing neuerthelesse I dare not affirme, confidering what Authors doe write of the lightnesse and agilitie of the Tigre, whereas this beaft, being otherwise in shape very like vnto a Tigre, is notwithstanding very slow. Yet true it is, that according to the marualles of the World, and differences which naturall things have in divers Regions under Heaven, and divers constellations of the same, under the which they are created, wee see that some such Plants and Herbes as are hurtfull in one Countrie, are harmelesse and wholesome in other Regions. And Birds which in one Prouince are of good taile, are in other fo vnfauourie that they may not bee eaten. Men likewise which in some Countries are blacke, are in other places white : and yet are both 50 these and they, men. Euen so may it be, that Tigres are light in some Region, as they write, and may nevertheleffe be flow and heavie in thefe Indies of your Maiestie, whereof wee speake. The Sheepe of Arabis draw their tailes long and bigge on the ground, and the Bulls of Egypt haue their haire growing toward their heads: yet are those Sheepe, and these Bulls. Men in fome Countries are hardie and of good courage, and in other naturally fearfull and bruitish. All these things, and many more, which may be said to this purpose, are easie to bee prooued, and worthy to bee beleeved, of such as have read of the like in Authors, or travelled the World, whereby their owne fight may teach them the experience of these things whereof I speake, It is also manifest that Iucca, whereof they make their bread in the Iland of Hispaniela, is deadly poison if it be eaten greene with the juyce : and yet hath it no such propertie in the firme Land, 60 where I have eaten it many times, and found it to be a good fruit. The Bats of Spaine, although they bite, yet are they not venemous : but in the firme Land, many die that are bitten of chem-And in this forme may fo many things be faid, that time thall not fuffice to write, whereas my

intent is onely to produe that this beaft may be a Tigre, or of the kinde of Tigres, although it

Bats.

The Kingis lers. The principal Cacique, bath twelve of his most strong Indians appointed to beare him, when boine on mens he remove to to any place, or goeth abroad for his pleasure. Two of them carrie him fitting vpon a long peece of wood, which is naturally as light as they candinde, the other ten follow next with him as footemen; they keepe continually a trotting pale with him on their shoulders. When the two that carrie him are wearie, other two come in their places, without any disturbance or flavi And thus if the way be plaine, they carry him in this manner for the space of fifteene or twenty leagues in one day. The Indians that are affigned to this office, are for the most part flates or Na.

Letting of bloud.

borns, that is, such as are bound to continual fernice. I have also noted that when the Indians perceme themselves to be troubled with too much bloud, they let themiel es bloud in the cafe of their legges, and brawnes of their armes : this doe they with a very tharpe stone, and sometimes with the small cooth of a Viper, or with a sharpe reede or thorne. All the Indians are commonly without Beards, in so much that it is in They have no a manner a maruell to fee any of them either men or women to have any downe or hairs on

their faces, or other parts of their bodies: Albeit I faw the Cacique of the Province of Cataraps, who had haire on his face and other parts of his body, as had also his wife in fuch places as women are accustomed to have. This Cacique had a great part of his body painted with a blacke colour, which neuer fadeth, and is much like vnto that wherewith the Moores paint themselves in Barbarie in token of Nobilitie. But the Moores are painted specially on their vilage and throate, and certaine other parts. Likewise the principall Indians vie these paintings on their armes and breafts, but not on their vifiges, because among them the slaues are to formarked. When the sadient of certaine Prouinces goe to the battaile (especially the Canibal 10 The Canibals Archers) they carrie certaine shels of great welkes of the Sea, which they blow, and make therewith great found, much like the noise of Hornes: they carrie also certaine Timbrels.

which they bore full of holes on both fides, fo that the Rings hang vpon their lippes. Some

of these Indians are poulde and rounded; albeit commonly both the Men and Women take it for a decent thing to weare long haire, which the women weare to the middest of their

shoulders, and cut it equally, especially about their browes : this doe they with certaine hard

well wrought, and of fuch bigneffe that some of them weigh more then two hundred Caste-

lans or Ducades of Gold: these barres have holes at both the ends , whereat they tye two

fmall cords made of Cotton at every end of the barres : one of these cords goeth over the

shoulder, and the other vinder the arme holes, where they tye both together, so that by this

meanes the barre beareth vp their teates. Some of these chiefe Women goe to the battaile with

their Husbands, or when they themselves are regents in any Prouinces, in the which they have

Scones, which they keepe for the fame purpole. The principall Women, when their teates fall, 60 or become loofe, beare them wp with barres of Gold, of the length of a spanne and a halfe,

which they vie in the stead of Drummes: also very faire Plumes of Feathers', and certains A:mor of gold, armour of gold, especially great and round peeces on their breasts, and splints on their armes. Likewife other peeces, which they put on their heads and other parts of their bodies : For

Their gallants they efferme nothing to much as to appeare gallant in the warres, and to goe in most comely

order that they can deuile, gliftering with precious Stones, lewels, Gold, and Feathers. Of the least of these welkes or perewincles, they make certaine little Beades, of divers forts and colours: they make alfo little Bracelets, which they mingle with gandes of Gold, theft they roule about their arms from the elbow to the wreft of the hand. The like also doe they on their legges from the kness to the foles of their feete, in token of Nobilitie, especially their Noble Women in divers Provinces are accostomed to weare such Iewels, and have their neckes in manner laden therewith: these Beades and Iewels, and such other trinkets, they call Caguiras. Beside these also, they weare certaine Rings of Gold at their eares and nostrels.

How the women beare vo zheir toares with bars of

The Iland ot

all things at commandement, and execute the office of generall Captaines, and cause themselves to be carried on mens backs, in like manner as doe the Cariques, of whom I have spoken before. The flaure & lands they are for the more Land are much of the fame flature and colour as are they of the lands they are for the most part of the colour of an Oliue : if there be any other difference, it 10 is more in bignefle then otherwise, and especially they that are called Coronati, are fronger and biggert hen any other that I have feene in thefe parts, except those of the Iland of Giants, aus mazon called Corenais. Which are on the South fide of the Iland of Hifpaniola, neere vnto the coasts of the firme Land. and likewife certain other which they call Incates, which are on the North fide. All which chiefly, although they be no Giants, yet are they doubtlesse the biggest of the Indiansthat are known to this day, and commonly bigger then the Flemings; and especially many of them, as well women as men, are of very high stature, and are all archers both men and women. These Coronate inhabit thirtie leagues in length by these coasts, from the point of Canaa to the great river which they call Guadalchiber, neere vnto Sanita Maria de gratia. As I traversed by those coasts, I filled 2 60 butt of fresh water of that river, fix leagues in the Sea from the mouth thereof where it falleth into the Sea. They are called Coronati (that is Crowned) because their haire is cut round by their cares, and poulde lower a great compaffe about the Crowne, much like the Friers of Saint Angustines Order. And because I have spoken of their manner of wearing

wheir haire , here comments o my remembrance a thing which I have often imes noted in thefe Indians and this is, than they have the bones of the foods of their heads foure times thicker, and The foods of much ftronger then ours, for that in comming to handfroakes with them, it shall be require not Indian heads. to ftrike them on the heads with fwords, for fo have many fwords beene broken on their heads, with little burt done.

of the chiefe Ilands, Hispaniola and Cuba.

He Indians which at this prefent inhabit the Hand of Hispaniola, are but few in number. In and the Christians not to many as they ought to be, for as much as many of them that were in this Iland, are gone to other Ilands, and to the firme Land. For being for the most Men are defepart yong men vimarried, and delirous daily to fee new things, wherein mans nature delight- roug of new eth, they were not willing to continue long in one place, cipecially feeing daily other new things. Lands disputed, where they thought they might former fill their Purfer, by being prefent at the first spoile: Wherein neaertheiesse their hope deceined many of them, and especially such as had houses and habitations in this Iland : For I certainely believe, confirming my selfe herein with the judgement of many other, that if any one Frince had no more feignories then onely The commo this Iland, it flould in hort time be fuch, as not to give place cither to Sicilie or England, dives of Higher whereas even at this present there is nothing wherefore it would malice their prosperity, not be mide her and 20 ing inferiour to them in any felicity, that in manner the lieauens can grant to any Land : being

furthermore such as may inrich many Prouinces and Kingdomes, by reason of many rich Gold Gold Mines Mines that are in it, of the best Gold that is found to this day in the world, and in greatest quantitie, In this lland, nature of her felfe bringeth forth fuch abundance of Cotton, that if it Cotton were wrought and maintained, there should be more and better then in any part of the world. There is fo great plentie of excellent Caffia, that a great quantitie is brought from thence into Caffia Spaine, from whencee it is carried to divers parts of the world, &c.

In this lland furthermore are many Sheepe, and a great mumber of Hogges, of the which (as Sheepe and allo of the Kine) many are become wilde, and like wife many Dogges and Cats, of those which Hogs. were brought out of Spaine: These (and especially the Dogs) doe much burt among the Cartell, Dogs and Care 30 by reason of the negligence of the Eldard-men. There are also many Horses, Mares, and Mules, broome wilde. and such other Beatts as serue the vie of men in Spaine, and are much greater then they of the

first broade brought thicker out of Spaine. Saint Daminge was built by line and rule: the Houses of Stone very faire, There is also a Ca- A Cathedrall thedrall Church builded of late, where as well the Billiop according to his dignity, as also the Church and Canons are well endowed. This Church is well builded of Stone and Lime, and of good work-in Hispanish manhip. There are furthermore three Monafteries bearing the frame of S. Dominisky, S. Francis, and S. Marie of Mercedes, the which are all well builded, although not to curiouslyss they of Spain. There is also a very good Hospital for the aid & succor of poore people, which was found by Mi- An Hospitall chael Paffement treatures to your Maiestie. The people of this Hand are commonly of somewhat 40 leffe staure then arethe Spaniards, & of a shining or cleare brown color: they have Wines of their The people own, and abstaine from their Daughters, Sifters & Mothers: they have large foreheads, long black haire, and no beards or haire in any other parts of their bodies, as well Men as Women, except ve-

ry few, as perhaps scarsly one among a thousand. They goe as naked as they were borne, except that on the parts which may not with honestie be feene, they weare a certaine leafe as broad triat on the parts which nevertheleffe is not kept close with such diligence, but that sometimes a man may fee that they thinke sufficiently hid. In this Iland are certaine Glowormes, that of Glowormes fhine in the night as doe ours, but are much bigger, and give a greater light: In fo much that when the men of the lland goe any journies in the night, they beare some of these wormes made fast about their feete and head, in such for that he that should fee them a farre, and ignorant of 50 the thing, would be greatly aftonished thereat. By the light of these also, the women worke in their houses in the night. These wormes they call Cunas. Their light lasteth for the space of three dayes, and diminisheth as they begin to drie vp. There is also a kinde of Crowes, Crowessinhwhose breath flinkethin the morning, and is sweete in the afternoone : the excrement which ing and week they auoide, is a living worme.

In Cuba, is a certaine kinde of Partridges, being very little, with their feathers much of the partridges, colour of Turtle Doues, but are of much better taile to be eaten: they are taken in great. number, and being brought wikle into the houses, they become as tame within the space of three or foure dayes as though they had beene hatched there : they become exceeding fat in short space, and are doubtleffe the most delicate and pleasant meate that euer I have eaten. But 60 to let passe many other things that might be here said, and to speake of two marueilous

things which are in this Hand of Caba: whereof the one is, that a Valley containing two rnings which are in length betweene two Mountaines, is full of a kinde of very hard Stones, Bullets for of fuch period roundnelle, and like vnto Pellers of Gunnes, that no art can make bet. Guns wrought ter or more exactly polithed. Of thele, fome are as small as Pellers for Handgunnes, and by naure. Nnnn 2

Artillerie, although they be of big nelle to receive one or two or more Quintales of powder. Their Pellets are found thoughout all the Valley within the earth, as in a Mint, which they digge, and take our fach as they need of all force. The other manuelloin thing of this Iland is this: That farre from the Sea, there iffueth out of a Mountaine a certaine liquor, much like the Clay of Babylon, called Bitmer, or like voto Pitch, in great quantitie, and fach as is very commodious for the calking of Shippes : this falleth continually from the Rocke. and runneth into Sea, in such abundance that it is seene floting about the water on every fide and runnects into Sea, in that a support of the Sea thereabout, as it is driven from place to place by the winde, or course of the water. Quintus Currius Quintus Currius writeth in his Historie, that great Alexander came to the Citie of Memi, where is a great Caue or Denne, in the which is a Spring or Fountaine that continually auri-

other fo encreasing bigger and bigger from that quantitie, that they may serue for all fores of

Bitumen of Ba- deth a great quantitie of Bramen, in fuch fort, that it is an easie thing to beleeue that the stones of the walso Babylon might be laid therewith, according as the faid Author writeth. I have feene this Mine of Bitumen, not onely in the lland of Cuba, but also such another in new Spaine, in

I bus farre I have ginen you from Master Eden his Edition; wherein bacause many things necessary to the natural History of the Indias are in the Ambers Summarie, and in his 20. Books of a larger Historie. I have added hither (such thenes as I thought fitteft. The Visus are like great Rats, and the Cories like Cories, of which the people in Hispaniole 20

bunt with-

eate, as also of the Tuends. Chemi and Mohni are lived creatures also in that Iland : which and their little mute Dogges were all the foure footed Beafts they had, faue that of Rats there is some question. The Indians of Iamaica and Cuba vie to catch fish with the fish Rours 6, as ftrange filt to Huntimen or Falconers vie Hounds or Hankes in their game. The Indians take it formetimes in their Nets, of which I have eaten : and when they will bring up one of them they feede it in the Sea and carrie it tied to their Canar by a strong line, which when they fee a fish fit for pray, they loofen and vie words to excite courage and valour in this fift; which prefently flies like an arrow at that fifth and faftens thereon, and the Indian lets the line runne out at length (being oiled, of many fadomes, and having a peece of wood at the end to buoy it,) till the fifth be weati-Rauge's is the direction of the little fifth (little aboue a panne long, vnfightly to looke on) ftill holding fatt, till the sociates to the frequent of the factors of the Sharke and is tion and words of encouragement to this chafe-fish, perswading him to let goe his hold, which by him carried otherwise should sooner by violence breake in peeces this Huntiman, then force him to vinfain all his Cha- sten. Thus will he fasten on the belly of a Tortule so great that two Indians and sometimes fes, feeding on fixe have enough to doe to carrie the fame to their houses. This fish Roserfo hath scalles Staire fashioned or like the roofe of a mans mouth, and on them certain prickles very sharpe and strong, whereby he fastens himselfe to what fish him pleaseth : and their prickly scales he hath on the most pars of his body.

They have likewife a cunning wild-goofe-chale, in a great Lake cashing in certaine great emptie Pompons in the feafon when Geefe refort thither, wherewith they being accustomed 40 grow out of feate and will see on them to bee carried. Being thus acquainted, the Indian puts one of these emptie Pompons on his head, and with much dexteritie of swimming enters amongst the Geese, and when one hath made him his Porter, no part of his body being seene, he swimmes from the rest, and then with his hand pulls her in, and hangs her thus strangled at

his girdle, and begins a fresh game. When their Caciques are dead they lay them on a piece of wood or stone, and make a firea-

bout the same which may not burne them, but by degrees draw forth all the moy sture in fweat, leaving onely the skin and bones, and then in a place separate repose the same with the Anceftors which before had beene so dealt with; this being their best Booke of Heraldrie to recount the Names and feuerall Descents in that Pedegree, If any die in battell, or fo that they cannot to recover his body, they compose Songs which the Children learne touching him, and the manner of his death, to supply that memoriall. These Songs they call Areyter. As for Letters they were fo ignorant, that feeing the intercourse of Spaniards by Letters, they thought that Letters could fpeake, and were very cautelous in their carriage of them, left the Letters might accuse them of ill demeanor by the way. When they will disport themselves, the Men and Women meet and take each other by the hand, and one goeth before which is called Tegnine or their Mafter, with certaine paces measured to his singing in a low voice what commeth in his minde, and after him all the multitude answereth in a higher voice with like measures proportioned to the tune, and fo continue they three or foure houres, with Chiebs or Mayz-wine among; fometimes also changing the Tequina and taking another with a new tune and long. Their Houses are com- 60 monly round like a Tent, and fometimes with a double water passage ( which they call Bubis) of good Timber, thatched with Straw or long Graffe, the Walls of Reed pitched into the ground In the Prouince of Abrayne in Golden Caftile and thereabouts, there are many Villages of Indi-

ans which dwell on the tops of Trees in Houses or Roomes there made, to which they ascend

Houles of

by certaine staires of Beface, which growes about " Trees, and is vied to binde their Walls and " Beface scemes by certains that houses before mentioned. Beneath, the ground is femny and concerd with war.

Timbers in their houses before mentioned. Beneath, the ground is femny and concerd with war,
be as third,

the standard mentioned beneath the standard mentioned beneath the standard mention of the sta Land to low their Mays and Ineca, Battatas and Aies. In those houses they are secured from wild but stronger Beafts, Enemies and Fire. They are not Archers, and vie Clubs. In the Gulfe of Vraba where and more Rise Grands enters the Sea, are many Palme trees in the middest of the River growing neere together, on the tops whereof are houses made as the former and much bigger, in which many Inhabitants dwell together, and haue their beds tyed to the lower parts of the faid Palme trees: There beds they call Hamaca, being couerlets of Cotten of good threed and well wouten, of 10 two or three braces long, but narrower, with cordes at the ends. The cordes are of Cotton, or of Henequen or Cabuya, this the courser threed, that the finer and able to cut Iron; made of the leafe of a certaine herbe. These Indians fight also with Clubs, and did much harme to Captaine

Vasco Nunes di Balboa his men, which returned with loss not able to ouer-come them. I have allo obterued that thefe Indians have the bones of their skulls foure times as thicke as those of the Christians, fo that to strike them with a Sword must be warily done, the Swords being thereby Besides the Tigre and other beasts besore mentioned, in the firme Land are the Beeri (the The beastion

CHAP.3. Hard-headed Indians, Beafts and fowles of America.

Christians call them Dants, not that they are such, but for some resemblance, as is also said of the those paris. Tiere ) of the bignesse of a meane Mule, without hornes, ash-coloured : they know not to dresse 20 and tanne their hides. They take them with Dogs, but if they take water, they are fierce and cruell. The Gatto Cermiero is as bigge as the Tigre and very fierce, more dreadfull to the Christi- Gatt termini.

ans, the (wiftest beaft yet found in those parts. The Lions are a little leffe then those of Barbarie and not fo full of courage, but fearfull and fugitiue, and hure none but fuch as affault them. The Leopards are like those of Barbarie, and are swift and fierce, but neither these nor the Leons have Leopards. vet done Christians any harme, nordor they eate the Indians as the Tigres doe. The Foxes are Foxes like those of Spaine, but in colour blacker then blacke veluet, and somewhat less then of Spaine. The Red Deere are as those of Spaine, but not so twift. Their Fallow Deere are like those of Spaine, Red and falbut both Red and Fallow exceed the Spacifib in tafte. Their Conies or Harres are somewhat like low Deere; ours, but liker Hares then Conies, yet leffe then the Conses of Spaine. The Marterns are like to Matterns. 30 those of Spaine in bignesse, biting and otherwise: some of them are kept tame and are as full of

foort and leffe filthy then the Monteys. The Monteys are of innumerable forts and fhapes: Monteys. fome of them fo futtle as they imitate the actions of men , as breaking of Pine-apples and Almonds with stones : tome will throw stones at passengers, or breake boughs to fall on them as they palle by to breake their heads, and retort the arrowes shot at them, and doe other things incredible. Some are as little or leffer then a mans hand, and some as great as a meane Mastiffe. The Indian Dogs are little and barks not, some hayrie and some bare, but wagge the taile and leape on Dogs. those which feede them, and are not so tameas ours. The Churchie is as bigge as a small Conie, churchie tawnie, (harpe-snowted, dog-toothed, long-tayled and eared like a Ret. They doe great harme to their Hennes, killing sometimes twentie or more at once to sucke their bloud : And if they

40 then haueyoung, thee carrieth them with her in a bagge of skin vnder her belly, tunning along ft the famelike a Sarchell, which shee opens and shuts at pleasure to let them in and out : and if any come with light when the Damme and young are at their Hen-bloud dainties, thee receives them into this bagge, and runneth away with them : and if thee finde the way stopped, thee climbeth vp about the Hen-rooft, and is sometimes taken aliue or dead in this manner, as I have feene. Her Teats are within her bagge. It is a ftinking creature.

Of Fowles, they have Eagles, Hamber, Buzzands, Ranens, &c. as in Spaine. Other differing Fowles. forts they have so many that they need rather a Painter then Relator to describe them. Of Par. Parent rots I carried ten or twelve forts at once to King Ferdinand. They flie by couples, a Male and Female together: and doe much harme to their Corne grounds. There are Night-fharrowes which Night-fharrows

of flie by night onely, and strike at the Bass, holding a pleasant puriote after them. They are bigger and swifter then Swallowes, having a row of white feathers overthwart the wing, The Bats Bats, draw much bloud by their bitings; and if they bite one man amongst an hundred persons, the Graw much mode by the mights following till fingle the fame perfor. They franch the blood with hot albes, or water as hot as may be endured, and fo I have been cured. There are Peaceet, fome hot albes, or water as hot as may be endured, and fo I have been cured. There are Peaceet, fome yellow, some blacke, with tailes like those of Spaine: they are better meat: some are wilde, and fome tame, which are brought home young. Other Peacocks they have, of which the Hens are Peacocks and ill shaped, the Males have not so great a taile as ours : their necke also is bare of feathers, but Turien. coursed with a skin which they change after their phantafie into diuers colours. They have a horne as it were on their front, and haires on the breast (she last forme Turkeys.)

The Sea-Crowes are so many which on the coast of Panama follow the Pilchards or Sardines Sea crows; (as is before faid of the Alcarrazzi) that lighting or houring on the Sex, they feeme to couer the same with a blacke carpet of cloth or veluer, going and comming with the Sea. There are Wilde Hour as great as Peacocks, blacke, the head part of the necke gray skins, and not feathe. Wilde Homes. red : they eate Carrion and are of vnfaqoorie tafte to be eaten; fmell like muske whiles they are

feather arrowes. They are defirous to line about places inhabited to feede on Carrion. The Par-Parmiches. triebes are gray, as fauourie as those of Spaine, and as great as the Spains Hens: they have their brawnes or fielh double, one ouer the other. Their egges are as bigge as Hens egges, but rounder. and coloured like a fine Turkesse flone. The Indians making a found like theirs, draw them to theirs nets. There are alfo a leffe kinde. The Pheafants are not in feathers like those of Spaine.

nor so goodly, but very sauourie meate like the great Partriches, but are not so great; they are gray, have long legs and railes, make a loud whittling noife, and are eafily floc.

Flies and Wiffs, Flies are not there fo many as in these parts of Europe. Their Waspes are greater and fling Fire, and William Bees, Aste, See more dangeroully. Their Bees are almost as small as slies, and sting not. They have great Hives and Combes which hold foure times as much Honie as ours : their Honie is white, Anti are great, many, and doe much damage to the Trees, Sugars, and other provisions. There are of many torts, some little and black (of which and the Ant-heare is spoken before)some called Conixon halfe Ant, halfe Worme, very hurtfull; they carry earth on their heads, and therewith on trees. walls, or where they pleate build their nefts, three or foure ipans large, and are as burtfull to houses as Moths to clothes. There are others greater of divers lorts, some as bigge as Bees with vs, so poysonfull that herewith the Indian; infect their arrowes so remedilese, that not foure of an hundred which are wounded escape : and if this Ant bite a Man he presently falls into a grienous feauer, and the place swelleth much. There are others red, yellow, and some winged. Of

Mill G. l. t f. c.t. Hornets or Horfe-flies (Tafani) are many forts, tedious to expresse. There are also Scorpions in 10 the firme Land. An. 1519, and two yeeres after the Ants destroyed in Hispaniola their Canna-Historia Gen. fistola, Oranges, and fruit Trees, neither in their houses could they keepe victualls for their mul-42,034. titudes, dettroying all like the African Graffe-hoppers, in fo much that Saint Domingo was nigh difpeopled by them.

Lib.3.6.6.

They laugh in India to heare the discase called French by the Italians, and Nespolitan by the French, which may indeed be called Indian, where the best remedie Lignum Sanctum, and Gnaiacan grow; God to in judgement remembring mercy, that where our finnes produce a punishment, he also tends a remedie. I had acquaintance with divers which went in the first and second voyages of Columbia : of which was Peter Margarite Commendator in the second voyage, of most respect with the King and Queene, who complay ned of those paines. Soone after, in the yeere 30 1496. began the difease to arrest some Courtiers; but in those beginnings, it was onely amongst bater persons of small authoritie : and it was thought that they got it with having to doe with common women. But afterwards it extended to principall Persons, and the Physicians could not tell what to thinke of it, so that many dyed. When after this Gonz ale Fernandes de Cordona was fent with a great Armie by the Catholike Kings, in behalfe of Fordinand the fecond King of Naples , against Charles the French King, some diseased persons went with that Armie , and by dealing with the women, and by conserting, foread the disease to the Italians and French-men, which thence got the names aforesaid, but indeed came from Hispanials: where it is ordinarie, and the remedie allo. Our Author 1. 17. c.4. and Ramufio in his Preface to his third Tome fay , That the Souldiers of Pamfilo de Nauaz baning the fmall pocks infelled the Indians, which never before 40 bad beard of that disease: in so much that of 1600000. Soules in that Iland there are so few left, as by and by you shall beare. The Niguas also, creatures leffe then Fleas , which eate in the fielh very dangerously, are rife in that Iland. The people of that Iland when first they were divided a-

mongst the Spanish Planters, were deemed a Million or more ( some fay 1600000. of which and of their posteritie in the yeare 1535, were not aboue fine hundred left, little and great, the rest which then were there being Slaues brought thither from other parts. The couetoulnesse of the Myne-workers, neglect of Diet, change of Gouernours growing worfe and worfe, canfed them to poyfon, kill, and hang themselves, besides those which were consumed by insections \* Thosebefore or pestilentiall pocks \* and other diseases : Their owne vices, also Sodomitrie, Idolatrie, &c. mantioned out prouoked dinine Inflice against them. No provision could hinder their consumption. The King 50 fent Religious men of divers Orders , but this I know that the Dominicans and Franciscans contradicted each other, and what one approved the other difallowed, although after the other had

left that opinion, the Contradictors would embrace it, still agreeing in difagreeing : which caufed much danger not onely to new Conuerts, but also to old Christians: whiles one Order would nor absolue them except they franchised the Indians, and the other absolued them neverthelesse. Much diffrutation hath beene about the Indians feruice amongst the Thomists, Canonills, and famous Lawyers and Diuines, but their differences have done little good to the Indians or the plantation; and in a short time both this Iland and the three adiopning, Saint John, Jamaica, and Cuba, remayned defolate, being by the Friars meanes (which I thinke, meant well) disperied

thorow the Iland, to leffen their labours, which the Gentlemen imposed on them. I am of opinion that if a Christian Prince had this Iland of Hispaniala onely, hee might make it as good as either England or Sicily: fuch is the store of Gold, the prosperous successe of things carried from Spaine, the Beeues (which I knew first carried thither from Spaine) being alreadie so multiplyed that they kill them for the Hides, leaving the field in the fields of five hundred at once :

C H A P.2. Strange Huracans, Spont, Monfter, Hawk. Great burts by least Dermin. 997

and Roderigo di Bastidas Bishop of Venesuela hath therein 16000. Beeues, and the Treasurer Pasamonte as many; others 8000, or more, likewise in other Beatts, Seeds, Oranges, Limons, Figs, Pomegranets, &c.

Of their Zemes, Idols, Sepulchres, and other things concerning their Religion, the Reader may fee Outedos file enough in the minth Booke and fourteenth Chapter of my Pilgrimage; and of the Spanish first wojages Booke is of this ber in the beginning of this worke, which Quiedo bandleth in his former Bookes.

Their Huracans (to they call tempetts of winde and raine together) are very excelline. An. 1508, on the third of August, all the thatched houses in Saint Domingo were throwne to the Lib.6.63. ground, and some also of stone; all the houses also in the Towne Bonanentura, which might to thence be named Malauentura: in the Hauen were funke twentie Ships and Caruels, a North-

wind first and after a South-wind playing their furious prizes, one carrying out the Vessels in despight of all prouisions to Sea, and the other as terribly forcing them agains to the Hauen (it the losse of ships and men may permit that name) yea on Land many men were carried in the streets and fields divers bow-shots before they could stay themselves. Hell seemed to have Superstances beene opened, and the Deuils to have carried things to and fro. Yet in July following was a conceitof the worse, which now are allayed and not for violent fince the Bleffed Sacrament hath beene placed in Churches. I have seene the space of a Crosse-bow shot or two, all the ground coursed in Churches. I have seene the space of a Crosse-bow shot or two, all the ground coursed against a contract of the space of a Crosse-bow shot or two, all the ground coursed in the space of a Crosse-bow shot or two, all the ground coursed in the space of a Crosse-bow shot or two, all the ground coursed in the space of a Crosse-bow shot or two, all the ground coursed in the space of a Crosse-bow shot or two, all the ground course in the space of a Crosse-bow shot or two, all the ground course in the space of a Crosse-bow shot or two, all the ground course in the space of a Crosse-bow shot or two, all the ground course in the space of a Crosse-bow shot or two, all the ground course in the space of a Crosse-bow shot or two, all the ground course in the space of a Crosse-bow shot or two, all the ground course in the space of a Crosse-bow shot or two and the space of a Crosse-bow shot or two with Trees plucked up by the Windes from the Rootes , and ours have sometime by dangers of the Hardaness the way beene forced to climbe from tree to tree outr fuch a passage, with rents and perills of the confei-20 enough.

The Cocks in Spaine crow at mid-night and towards day: but herein the shutting in of the e- Lib.7. c.10. pening, or two houres within night, and two houres before day, and not at all at mid-night : Cocar & Cars some crow in the first watch and not else all night. Their Cats also vie their lusts all the yeare differing from and without walling noise, which in Spaine, France, Sicily, and other places in Europe and the Spains and without waiting noise, which is open, and wherein our Afrike which I have seen goe on Catter-walling onely about Februarie. In the Ile of Nanaza shift doe Weltward from Hiftaniola in the way thence to lamaca, the Rocks are feene under the water: much agree and among it them a fathome and five foote under the falt water there ariseth a spring of good with the ladies fresh water vpon the Sea, spowting vp bigger then a mans arme, higher then the salt water Strangewater that it may eatily be taken in. I have not feene it, but Stephen Rocca a person of credit testifieth pour,

30 this of his owne fight and tafte. But I have feene in the Iland Domnics at the River Acquata, twentie paces wide, and not deeper then the arme pits, there is a hot spring, that if one take vp the Sands they feeme like embers in his fift, and to is the water a foan deepe about the Sands, which on the top is fresh and like other water.

Outedos 8.9.10. and 11. Bookes are of Plants and Trees in those parts. The 12. of Creatures Lib.13. c.s. before mentioned: the 13. of Fishes, in which he tellets that An. 1529. going from the Gulfe of Orotigus to Panama two hundred leagues Eastward , neere the mouth of the Gulfe , wee faw a Filhor great Water-monfter, which at times lifted it felfe right vp aboue the Water fo farre Sea Monfter that the head and both the armes might bee feene, which feemed higher then our Carauell and flupendious all her Mafts. Thus did fhee rife and fall divers times beating the water strongly, not casting

40 any water one of the mouth. A younger or lesse of the same kinde did likewise, swimme a little distant from the greater. Some judged it to bee a Whale with her young one, which others denyed, faying, a Whale had no armes. To my judgement each arme might be five and twentie foote long, and as bigge as a Butt or Pipe: the head fourteene or fifteene foote high and much more in breadth; and the rest of the body larger. That of her which appeared about water, was about fue times the height of a meane man, which make fue and twentie paces." Loren- "15, 10ff, 20 Marsimo Canon of the Church of Golden Caffile, Sancio di Indola, &c. were with me: and we which found were all afraid when thee came neere our finall Caruell. Shee feemed to difport her felfe at a temperature pelf approching, which fuddenly arofe much to our purpofe, from the Weit, and brought vs in

few daves to Panama. In Hispaniola and the neighbouring Hands is a strange bird of prey, as bigge as a great " Gania Lib.14-2-7. and much like it : fhee preyeth on the Land on birds , &cc, and on fifth in the Water, fhee is An Italian footed like water-fowles and goeth like a Goofe, but hath talons like Hawkes, and fastens fowle. there with on the fifthes which thee eates ( fo taken ) either in the Water or on the Rocks , or Water hawkes, as thee flyeth in the Aire holding it betweene her feete. The Christians call them Afters

What feath the Ants did in Hispaniola, is before mentioned, in the yeere 1519. and the next L.tf.c.t. following, and the Citic of Saint Domingo, was almost dishabited by this great Armic of little Greatshame creatures, as in Spaine a Citic was dispeopled by Conie; and which lately happened to the Ile by leaft creatures. Saint jumped (which almost tell out to the English Colonie in Bernauda) to another unces. 60 Citie by Rats, to the Atarita by Frogges, to the Minnimes by Fleas, to Amuele in Italie by

Serpents, and to another part thereof by Sparrowes; to divers places of Africa often by Locusts: fo can the Great God arme the least creatures to the destruction of proud vaing lorious men. And this miferie fo perplexed the Spaniards, that they fought as strange a remedie as was the difease,

Vocertainty of which was to chuse some Saint for their Patron against the Antes. Alexander Giraldine, the Bi-Superfluon. Superfluon. Superfluon flop having sung a solemne and Pontificall Masse, after the Consecration and Elevation of the Sacrament, and demout Prayers made by him and the people, opened a Booke in which was a Catalogue of the Saints, by lot to chuse some he or the Saint, whom God should please to appoint their Aduocate against that Calamitie, And the Lot fell vpon Saint Saturnine whose Feath is on the nine and twentieth of November : after which the Ant-damage became more toleran ble and by little and little diminished, by Gods mercie and intercession of that Saint : I note it the rather, because the Bishop and that Saint were both Romanes, and as that Martyr had made mute the Idols in Toledo, (as is written in the Hillorie of his Martyrdome) fo now was Idolatry (and I pray what was this?) destroyed in Hispaniela? Hee might have faid exchanged ! a pitie 10 full case that when God bath Sont his owne Sonne made of a woman, made under the Law, Go, Who hath dyed for our (yea, that Martyrs) finnes, rifen for our Instification, ascended on high to give gifts to men; and is there, and therefore, fet downe at Gods right hand to make intercoffion for vs finners, to take possession for vs mortals, to accomplish as our Amen, all the promises of this life, and that which is to come, whether against Ants or Deuils; and in him it hath pleased the Father that all falnelle Should dwell; yea (beyond and it pleased) in him dwelleth the fulnesse of the Godbead bodily, and we are compleate in him, and he is all in all, yesterday, to day, the same for ever; which bath loved vs, and gin men bimfelfe for us, which is lone, which hath inuited vs, Come to me all ye that labour, which hath incited vs by all attractives : that after all this, men, Christian men should goe cast Lots for an Interceffor, and neglecting Christ, dreame of Romane carnall phancies, or runne mad with Romale 20 fuperstitious phrenfies; wherein if the bodie be deliuered , as happened to the lufting I fraelites. with their Quaile-flore, the burthen is made double to the foule, when God heareth in his anger. Such Cifternes doe they digge which forfake the Fountaine of lining waters, enen broken Cifternes which can bold no waters: the best of Saints like the wife Virgins, having no more Oslethen will fuffice their owne Lampes, and that also received out of anothers fulnesse, of whose fulnesse wee all have received grace for grace; faid a principall Saint,

There are Caterpillers, which shine in the night fiftie or a hundred paces off, only from that part of the bodie whence the legges iffue: others only have their head shining. I have seene iome a spanne long very fearefull, but for any thing I have heard, harmelesse. Flies are lesse, but more hurtfull then in Spaine : but thefe in kindes and colours are fo divertified that it is impoffi- 20. ble to write them : and fo may be faid of other small creatures in those parts.

Lawyers dan-

In his fixteenth Booke he declareth the Conquest of the Ile Borichen, or Saint John and the quarrels betwixt the Spaniards, the learning of fome breeding fuch diffentions, that not without cause (faith our Author) in Golden Castile and in other parts, the King forbad Law-learned gérous in the Spanifo Indies. men and Proctors should passe thither, as men infectious by sowing strife where they ought not. In this Ile, the people and other things are at before is faid of Hifpaniola; there are more Birds in Saint lobe, rich Mineralls of Gold, certaine Battes which the people eate; and Lignum Santtum groweth there , more excellent then the Guaiacan for the French Difease and others.

Filthy Mar-

In his feventeenth Booke he writeth of Cuba. The people and other things are much like to 40 Hift aniola, Intheir Mariages, all the guelts of the Bridegroomes ranke (as Caciques, if hee bee a Cacique or Principall, or Plebeians as he is) lye with the Spoule before he himfelfe may doe it: after which she with her fift bent comes crying with a loud voyce, Manuato, Manuato, that is forced and full of force, as glorying in her thame. They are in vices like those of Hopaviola, and will be no better Christians then other Indians, whatforuer Peter Martyr writeth from Encifes Relations. For I have feene more Indians then they both, and by experience of those Nations know, that none or very few of them are Christians of their owne will and accord : and when any are baptized being of age, he doth it more for some by-purpose then for zeale of the faith: for there remaines to him nothing but the name, which also soone after he forgets. Perhaps there are some faithfull, but I believe they are very rare.

Oniedas reflimony of Indian Christianury. He thinkes it a Fahle that is cold of Croffes found in I wea-

The Creatures and Plants of Spaine profper well there, as doe the natural which are the fame which are in Hifpaniola. The people were exhaufted when they first went into New Spaine, and with the second Armie of Grigialus, and with the third of Cortese, and with the fourth of Pamphilo di Narbaez, all by order of Lieutenant Velafeo: whereby (uba was in manner difpeopled, and by the former causes mentioned of Hispaniela, and by the contagion of the small Pockes which was vniuerfall in all these Ilands : So that the Great God hath in manner wholly extinguished them for their (not without others) sinnes. They have much Gold and Brasse: vie to fifth much with the Roser fo before mentioned, as also that Wild-goode chase. There are innumerable Cranes, fuch as are in Spaine; the Boyes take infinite Egges and young ones. There ges of Fowles, are Turtles greater then in Spaine. Euery yeare there passe from the end of Cuba infinite numbers 60 of divers forts of Birds, which come from the North of the firme Land, and croffe over the Alacrain Hands and Cuba, and flye ouer the Gulfe Southwards. I have feene them paffe ouer Darien and Nombre de dies and Panama in divers yeeres, in the Firme Land; fo many that they coper the Skie : and this paffage or march continueth a moneth or more about the moneth of March. I thinke they flie sound about the World; for they never are feene to returne toward Lives 5. the West or North : and we see them not every yeers one after another; from morning to night the aire is courred, and fome flie fo high that they cannot bee feene, others lower yet higher then the Mountaines tops. They come from the North-west and North to the Southwards, and then turne South-west, occupying in length more then the eye can disceme, and a great space in breadth. The lowest are Eaglets and Eagles, and all seeme Birds of prey of many kinds and plumes : The higher cannot bee discerned in their plumes, but in manner of flying and quantitie appeare of divers forts.

10 There have beene Serpenes killed in Caba, as bigge as a mans thigh , and five and twentie, or thirtie foot long and more. They are tame, and the ladious cate them, and find fomttimes it their bellies fixe or feuen creatures bigger then Conies, which they swallow whole.

I am loth to lead you with this Author along with Grigialia, in his long Expedition from Lizate hence to Incatan and other parts. Neere to Parts de termini, he found two Trees feeming let by hand, standing alone, and sitteene paces off discres Idole of Chalke. They faw two Images made of the wood Copes, in manner of Sodomitical villenies together; and another of Chalke deue Lus, with his circumcifed member betwixt his hands.

Lamaics was in people, vices, creatures and other things like the former : they were the In. Lis.c.s. uentors of the reserfe-fishing and Goose-catching with Gourds or Pompions aforefaid, which

20 fometimes they practifed allo with leaves and greene boughes on their heads, and vied that Garland, as is before faid of the Pompions. Of Cubagua the Pearle Hand and of the Pearle-filling L 19.64. is spoken before. In Cubague is a bituminous Fountayne, hauing otherwise no water to drinke, Pi ch Found nor Hearbes, nor Trees but a few of Gasiscan, nor any liming creatures; though at first comming tains. of the Christians there were a few Conies. At the East point is the Fountayne running into the Sea with an Oily substance floating on it, profitable fee Medicine there called Desils Dang. They that live there, fetch their water feuen lesgues off from Commans , on the firme Land, and wood from Margarita. The Kings fifth of the Pearle-filling hath yeelded 1,000. Duckets yeerly : a thing not knowne that fo many Pearles have beene taken from fo fmall a space , the illand of Cubagua not compating about three leagues. In the Guife of Oresigna, and the Illands 4.9.
30 therein in the Prouince of Nicaragua on the South Seaware many shel-fishes of a long forme, Twoshel-fishes fome a Cubit long, fome leffe, created, growing broader and broader to the end when they are o- which yield pened they have a fishie substance within them and thine within as the Pearle-oysters doe, Pearles

halfe their length, thence by degrees looking that thining toward the broader end. The Pearles within them are not fo fine as the other. The Indian vio the their to digge their look ground, faitning the shell to a handle of wood, binding it fast and making a kind of Spade thereof taiting the incit to a mande of wood, opining it has an assume a said of speak selected.

In the yeare 1517. An Englishman " videt colour, of Ducousy, came with a great thip toto the Win
wards Braillon the Firm Land, and thence transfed to Hispaniola, and came neere the Hauen India, A.1517. of Saint Dominge, and fent his Boat full of people on fhoter, and defined Trade. But the Cap-Lay. Little taine of the Fort that from the Caftle at the Boate, because thee came directly to the Port; and "Hecals bind

an thereupon they returned to their fining. The Englis feeing this entertainment, tooke their a Parate, tur courfe towards the lland of Saint Iohn, and entred the Port of Saint German, and there demann resson of their resons of the courfe towards the lland of Saint Iohn, and entred the Port of Saint German, and there deman resson of their resons of their courfe towards the lland of Saint Iohn, and entred the Port of Saint German, and there deman resson of their courfe towards the lland of Saint Iohn, and entred the Port of Saint German, and there deman resson of the saint Iohn of their courfe towards the lland of Saint Iohn, and entred the Port of Saint German, and there deman resson of the saint Iohn of ded victuals and provisions for their ship, complaining of the wrong done them at Saint Domingo, comming thither for Trade, to buy with their Mony, and to barter Commodities. There they Pentet. got some victuals for which they paid in wrought pieces of Pewter and other things: and so returned towards Europe, where it is likely they came not; for there was never any more heard

The next yeare a French Pirat guided by a Spanish Pilot, came to trade in the Hand of Pearles L.20, and a Portugall Carauell which he had taken on the Coaft of Brafil, and would have landed his Boats full or men,but was relifted, and a Battel betwixt both parts followed, in which thirteene to Frenchmen were flaine, and two of ours. Three or foure Naturrois and Biskainers fled from them and faid the French were Theeues and came to take the Iland: whereupon they went with all their frength, and tooke her Boat, and the fhip fled out of fight, &c.

Oniedes twentieth Booke is of thipwrackes and difaduentures which have happened to the Spenierds in those parts. One which happened 1914, is admirable, the thip finking and five and twentie persons escaping in the Boat, hast forbidding prouision of Card, Compasse or vi-Quall, to faue their lines. Thus lived they twelve dayes at Sea ; neither had they any thing to eate or drinke : only a young man had faued two pounds of Bisket, which beeing divided amonest them, he which had most had not aboue an ounce and halfe. Vrine, or the Sea was their drinke. In this case they made Vowes to our Ladie of Antica in Sinul: and on the twelfth day

60 having made a Saile of their shirts, they came to Silver-port in Hispaniola. Their Pilot Auto Caluo told me the Storie. The same yeare in the Pleet of Pedrarias de Anilla a Portugal youth, being scoffed at, and flouted by the Spaniards, leaped into the Sea in a fresh gale, and not without the wonder of all men was taken vp by another ship aline, whom after I saw vaunting of this folly, and faying that no Cathlian durit have done it ; which I easily believe, as having more wit then this

Ouledo writ Land, which

Foole. Yet will I imitate alittle this foolish Portugall, and leape out of Oniedos Spanifo thin (for who will not feare such dreadfull ship wrackes as this Booke, the last which hath come to other hands, is full of?) and fwim alhoare, or feeke other passage with edeste, in a new or rather an old Voyage for Discourre of the Mexican Antiquities.

### CHAP. IIII.

## Mexican Antiquities gathered out of the Writings of Ios E-PHYS ACOSTA a learned lesuite.

Very Historie well written is profitable to the Reader: For at the Wifeman faith, That which hath beene, is, and that which shall bee, is that which hath beene : Hawhich hard notene, is, and that which hall bee, is that which hard heene: Hamane thing them much of submisses in termfilms, and fome grow mift it has been to be
happened to others. There is no Nation, born barbarous forms, that have not some
thoug in them, good, and worthy of commendation; and commenweale fould nedver, than has hos sessions that have now they are the secontrolled. If therefore there
were no atter finit in the Historic and Narvaism of the Deed and Geft of the Indians, but this com-

mon utilitie, to be a Relation or Historie of things, the which in the effect of truth bane happened, it 20 described to be received as a profitable thing, neither ought it to bee rejected, for that it concernes the Indians. As wee fee that those Authors that treate of naturall things, write not onely of generous Beasts, notable and rare Plants , and of Precious Stones , but alfo of wilde Beasts , common rous Beatt, notable and ever a times, many a comment of the property of many or properties worthy offer. Hearbs, and also and world so Stenes, for that there is always in them fome properties worthy offer nation, If therefore there were unbing elfe in this Diffeourfe, but that it is Aliffore, and so false nor fillians, it were no vinworthy Subiest to be written, or read. There is yet another more particular reason, which is, that we ought berein to esteeme that which is worthy of memorie, both for that it is realon, which us, that we anger acreem to present cons more to sworing of memoria, noth for that it is.

Nations little determed, and also Subsict different from that of our Europe, a thefe Nations bee,
wherein mee should take most pleasure and content, to conderstand the ground of their beginning, then 30
memory of life, with their bappin and workspie Admentates. And this subsett is not only pleasant and
agreeable, boat also profitshes, especially 30 subset boats the beauge termle and governe them; if or the
knowledge of their Astinianies vs to gink credit, and darb partly teach how they ought to be intreased. yea, it takes away much of that common and foolifb contempt wherein they of Europe hold them, fup. yea, it is less earny much of that common and foolife cintemps there in they of Europe hold a time, fig., poling that those Nations have his feeling of roofen. For in truth we cannot cleare this errors better, than by the true report of the Alix mid deed of this people. I wall therefore as briefly at I can, instruct of the beginning, proceedings and notable death of the Mexicanes, whereby nee may know the time and the displication that the high Gat would choose, be find votes these Rations that the high Gat would choose, be find votes these Rations that the thing they fine Caspelled Lefin Christ the Law of Same our Eard, whoma I before to second our small labour, that it may been the glorie of his Dinine greatnesse, and some prosit to these people, to whom he hath imparted the Law 40 of his boly Gaftell.

Of the ancient Inhabitants of New Spaine, and of the fixe Linages of the Nauatlacas, Of the Mexican Exodus, and Adventures by the way : the foundation of Mexico, their first King and Tribute.

He ancient and first Inhabitants of those Prouinces, which wee call New Spaine were men very barbarous and fauage, which lived onely by hunting, for this reason they were called Chichimecas. They did neither fow nor till the ground, neither hued they together; for all their exercise was to hunt, wherein they were very expert. They Their fanage together; for all their exercise was to nunt, wherein they were very expert. They could of life, lived in theroughest parts of the Monntaynes beast-like, without any policie, and they went all

naked. They hunted wilde Beafts, Hares, Conies, Weezels, Mowles, wild Cats, and Birds, yea vncleane beafts, as Snakes, Lizards, Locusts and Wormes, whereon they fed, with some hearbs and roots. They slept in the Mountaynes, in caues and in bushes, and the wives likewise went a hunting with their husbands, leaning their young children in a little panier of Reeds, tyed to the boughes of a Tree, which defired not to fucke vntill they were returned from hunting. They 60 had no Superiours, nor did acknowledge or worthip any gods, neither had any manner of Cere-

There is yet to this day in New Spaine of this kind of people, which line by their Bowes and Arrowes, the which are very hurtfull, for that they gather together in troopes to doe mil-

whiefe, and to rob : neither can the Spaniards by force or cunning reduce them to any policie or obediende: for having no Townes nor places of residence, to fight with them, were properly to hunt after lauage beatts, which scatter and hide themselves in the most rough and covered places of the Mountaynes. Such is their manner of living even to this day, in many Provinces of the Judies. Tholein New Spaine, which they call Ottomies, were of this fort, being commonly Ottomies poore Indians, inhabiting a rough and barren Land, and yet they are in good numbers, and line speecher with some order, and such as doe know them, find them no lesse apt and capeable of matters of Christian Religion, then others which are held to be more rich and better gouerned. Comming therefore to our libiech, the Chichimeca and Ottomies which were the first Inhabito rants of New Spaine, for that they did neither till nor fowe the Land, left the best and most fertile of the Countrey unpeopled, which, Nations that came from farre did possess, whom they called Nanatalcas, for that it was a more civill and politicke Nation; this word fignifies a people the footer well, in refpet of other barbarous Nations without reason. These second peoplers Namatalene, came from other farre Countreyes, which live toward the North, where now they have discouered a Kingdome they call New Mexico.

unte unconcrete a surgest of the Country, the one called dulas, which is to say a place of dulas.

There are two Proutines in this Country, the one called dulas, which is to say a place of dulas.

There are the other Tacubasaca, which signifies a Land of fuch, whife Grandfathers were duine. Taulasses The Inhabitants of these Provinces have their houses, their Lands tilled, Gods, Customes, and Ceremonies, with like order and government to the Namataleas, and are divided into Jemen Tribes 30 or Nations rand for that they have a custome in this Protince, that every one of these Linages hath his place and private Territorie, the Nanataleas paint their beginning and first Territorie in figure of a Caue, and fay that they came forth of fener Canes to come and people the Land of Mexico, whereof they make mention in their Hiftoric, where they paint feuen Caues and men

comming forth of them. By the supputation of their Bookes , it is aboue eight bundred yeares Their beginfince thele Naustaless came forth of their Country, reducing which to our accompt, was a nings 900. bout the yeere of our Lord 720. When they left their Countrey to come to Mexico, they haved yerre ages, fourescore yeares voon the way; and the cause of this their long stay in their Voyage, was, that their Gods (which without doubt were Deuils, and spake visibly vnto them) had perswaded them to feeke new Lands that had certaine fignes. And therefore they came discouring the 30 whole Land, to fearch for these tokens which their Idols had given them; and in places where wrote Land, to teach the teach of the teach

better country extra the state of the state tred the Land of Mexico, in the yeere 902, after our computation. These seven Linages I have spoken of, came not forth altogether : the first were the Sachimel. How the fix

cos, which fignifie a Nation of the feeds of flowers. Those peopled the bankes of the great Lake of Linages of Ha est, which nighted a values of the press of powers a time proposed the countries of the great hate of Mexics towards the South, and did binida Citie of their name, and many Villages. Long time special special proposed from the proposed of the countries of the fector and the proposed of the countries of the coun were the Topanecans, which fignifies people of the bridge : they did inhabite upon the banke of Submillers the Lake towards the Weft, and they increased so, as they called the chiefe and Metropolitane of Chairbean their Prouince, Accapanales, which is to fay, an Arts Noft, and they continued long time Accapanales, mightie. After them came those that peopled Tefenco, which be those of Culbua, which is to say, Tefenco a crooked people : for that in their Countrey there was a Mountaine much bending. And in this Culbus. fort this Lake was enuironed with these foure Nations, these inhabiting on the East, and the Tepanecas on the North. These of Tescaco, were held for great Courtiers, for their tongue and pronunciation is very (weet and pleafant. Then arrived the Tlalluicans, which fignifies men of 50 the Sierre or Mountaine. Those were the most rude and groffe of all the rest, who finding all The interest

the Plaines about the Lake possessed even vnto the Sierre, they passed to the other side of the Mountaine, where they found a very fertile, spacious and warme Countrey, where they built many great Villages, calling the Metropolisane of their Pronince Quahunachua, which is as Quahunathua much to fay, as a place that founds the voice of an Eagle, which our common people call by corruption, Omeranaca, and at this day they call this Prouince, the Marquifate. Those of the fixt Generation, which are the Tlascattecous, which is to say, Men of bread, passed the Moun- Tuscattecous, taine towards the East, croffing all the Sierre, or Mountaine of Menade, where that famous Tulem is betwixt Mexico and the Citie of Angels, where they did find a good Countrey, making many buildings. They built many Townes and Cities, whereof the Metropolitane was called

60 by their name Tlafcala. This is the Nation which fauoured the Spaniards at their entrie, by whose helpe they did winne this Countrey, and therefore to this day they pay no Tribute, but enioy a generall exemption. When all these Nations peopled these Countreyes, the Chuchimecans being the ancient Inhabitants, made no refiftance, but fled, and as people amazed, they hid themselves in the most obscure of the Rockes. But those that inhabited on the other side of the

Mountaine where the Tlascaliecans had planted themselves, did not suffer them in quiet, as the Mountaine where the taiseanceau has plants and the first of the Chelemeras in define to preferre their Country, and being Gunts as the Histories report, they lought to expell the last Commers, but they were vanquisht by the policy of the Tlascaliesans, who counterfeiting a peace with them, inuited them to a great banquet, and when they were buileft in their drunkennesse, there were some laid in ambush, who secretly stole away their weapons, which were great Clubs, Fargets, Swords of wood, and other fuch armes. Then did they fuddenly fet vpon them, and the Chichimecons fee. king to defend themselves, they did want their armes, so as they fled to the Mountaines and Forefts adjoyning, where they pulled downe Trees, as if they had beene figlikes of Lettuces. But in the end, the Tiascaliecans being armed, and marching in order, they defeated all the Giants, not is leauing one aline. We must not hold this of the Giants to be strange, or a fable; for at this day we finde dead mens bones of an incredible bigneffe,

When I was in Mexico, in the yeere 1586, they found one of those Giants buried in open our Farmes, which we call lefus du Mont, of whom they brought a tooth to bee feene, which (without augmenting) was as bigge as the fift of a man, and according to this, all the reft was proportionable, which I faw and admired at his deformed greatnesse. The Tlasaltecans by this victorie remay ned peaceable, and so did the rest of the Linages. These fixe Linages did always entertaine amitie together, marrying their children one with another, and diuding their limits quietly : then they studied with an emulation to encrease and beautifie their Commonwelle, The barbarous Chichimecans, seeing what passed, began to vie some government, and to apparell to Beginnings of themselues, being ashamed of what had passed : for till then they had no shame. And having a bandoned feare by their communication with these other people, they began to learne many things of them, building small Cottages, having some policy and government. They did also choose Lords, whom they did acknowledge for their Superiors, by meanes whereof they did in a manner quite abandon this bruitish life, yet did they al wayes continue in the Mountaines dist-

Three hundred and two yeeres after the former two Linages had left their Country, to inha-

case departure, bite New Spaine, the Country being now well peopled, and reduced to some forme of governof their jours ment, Those of the feuenth Caue or Line arrived, which is the Mexicane Nation, the which like vnto the reft, left the Prouince of Azslan, and Tenenibnacan, a politike, courtlike, and war- to ping the Pro-nince of Me. like Nation. They did worthip the Idoll Vizzliputzle, the Deuill that was in this Idoll spake, chouses that, and gouerned this Nation easily. This Idoll commanded them to leave their Country, proming to make them Princes and Lords over all the Provinces which the other fixe Nations did pol-Deuilis emula, feffe, that he would give them a Land abounding with gold, filter, precious ftones, feathers, and rich mantels : whereupon they went forth, carrying their Idoll with them in a Coffer of Reedes, supported by foure of their principall Priests, with whom he did talke and reueale vnto them in fecree, the successe of their way and voyage, aduiting them of what should happen. He likewise gaue them Lawes, and taught them the customes, ceremonies, and facrifices they should observe. They did not advance nor mooue without commandement from this Idoll. He gave them notice when to march, and when to flay in any place, wherein they wholly obeyed him. The first thing to they did wherefoeuer they came, was to build a House or Tabernacle for their false god, which they fet alwayes in the middest of their Campe, and there placed the Arke vpon an Altar, in the fame manner as they have vied in the holy Christian Church. This done, they fowed their land for bread and pulles, which they vied : and they were so addicted to the obedience of their god, that if he commanded them to gather, they gathered, but if he commanded them to raise their Campe, all was left there for the nourishment of the aged, ficke, and wearie, which they left urposely from place to place, that they might people it, pretending by this meanes, that all the

worke of God in bringing Egypt, and pasthe defert to Tabernacle.

of customes more superstitious, nor sacrifices more cruell and inhumane, then those which hee to taught them. To conclude, they were invented by the enemie of mankinde. The Chiefe and Captaine whom they followed, was called Mexi, whence came the name of Mexico, and of the Mexican Nation. This people marching thus at leifure, as the other fixe Nations had done, peopling and tilling the Land in divers parts, whereof there is yet fome shewes and ruines; and after they had endured many trauels and dangers, in the end they came to the Province of Mechonacan, which is as much to fay, as a land of fish, for there is great abundance in goodly great Lakes, where contenting themselves with the situation and temperature of the ground, they refolued to flay there. Yet having confulted with their Idoll voon this point, and finding him vnwilling, they demanded license to leave some of their men to people to good a Land, the which he granted, teaching them the meanes how to doe it, which was, that when the Men and Wo-62 men should be entred into a goodly Lake called Pafenare, to bathe themselves, those which remayned on Land, should steale away all their clothes, and then secretly raise their Campe, and depart without any bruit, the which was effected, and the rest which dreams not of this deceit (for the pleafure they tooke in bathing) comming forth and finding themselves spoyled of their

We may well indge what this Vuzlipuzli was, for that there was never seene nor heard speake

Land should remaine inhabited by their Nation.

garments, and thus mocked and left by their Companions, they remayned diffeontented and vexed therewith : fo as to make shew of the hatred they had conceined against them , they say that they changed their manner of life and their language. At the leaft it is most certaine, that the Mechanicans have beene alwayes enemies to the Mexicans, and therefore they came to congratulate the Marqueffe De Valle, after his victorie obtayned when he had conquered Mexico.

From Mechonacan to Maxico, are aboue fittie leagues, and vpon the way is Malinalco, where Of that which it happened, that complaying to their Idoll of a woman that was a notable witch, which came happened in in their company carrying the name of their fifter to their god, for that with her wicked artes Mainaice Tale, thee did them much harme, pretending by certaine meanes to bee worthipped of them as their tener. Chap. 5. to goddeffe : the Idoll spake in a dreame to one of those old men that carried the Aske, commanding

him to comfort the people, making them new and great promises, and that they should leave this his fifter with her family, being cruell and bad, rayling their Campe at mid-night in great fi-lence, leauing no flew what way they paffed, So they did, and the Witch remayning alone with Witch for the her family in this fort, peopled a Towne which they call Malmales, the Inhabitants whereof, ken, are held for great Sorcerers, being issued from such a mother. The Mexicans for that they were greatly dimunished by these divisions, and by the number of sicke and wearied persons, which they had left behinde, meant to repayre themselves, and to stay in a place called Tale, which fignifies a place of Reedes. There their Idoll commanded them to ftop a great River, that it might couer a great Playne, and by the meanes he taught them, they did inuiron a little Hill called 20 Costepes, making a great Lake, the which they did plant round about with Willowes, Elmes,

Sapines, and other Trees. There began to breede much fish, and many birds came thither : fo as it became a very pleasant place. The fittuation of this place, seeming pleasant vnto them, and being wearied with trauell, many talked of peopling there, and to passe no farther: where with the Deuill was much displeased, threatning the Priests with death, commanding them to returne the River to her course, faying, that hee would that night chastile those which had beene Deui's proud turnethe Ruer to her counte, 12/mg, that new would use high the state of the under the duline causianon is lighted each often fuffer fuch to be deliuered into the hands of fuch a Tormentor, that choose punishing difficult of the high the state of the delivered into the hands of fuch a Tormentor, that choose punishing difficult is stated in the state of the delivered into the hands of fuch a Tormentor, that choose punishing difficult is stated in the state of the delivered into the hands of the state of the Campe, and in the morning going thither, they found those dead that had talked of staying therous facti-20 there. The manner of their death, was, that their fromacks were opened, and their hearts pul- fices.

there. I he manner out out a vest which was a man their tomass were opened, and then said pol-led out. And by that meanes, this good god eagle their poor e miserable Creatures; the kinder of factifices that pleaked him, which was, in opening the flowards, to pull out the barn's, as they have time practified in their horrible factifices. Seeing this punishment, and that the Playne was dryed, the Lake being emptied, they asked counfell of their god what to doe, who commanded them to paffe on, the which they did by little and little, vntill they came to Chapatespee, a league Chapatespee; from Mexice, famous for the pleafantneffe thereof. They did fortifie themselves in these Mountaines, fearing the Nations which inhabited that Country, the which were opposite vnto them, especially for that one named Copil, sonne to this Sorcereffe, left in Malinales, had blamed and spoken ill of the Mexicans : for this Copil by the commandement of his mother, awhile after 40 followed the Mexican course, labouring to incense the Tapanecas, and other neighbours against

them, even vnto the Chalcus: so as they came with a strong Armie to destroy the Mexicans. Capil in the meane space stood vpon a little Hill in the middest of a Lake, called Acopiles, attending the destruction of his Enemies, and they by the aduice of their Idoll, went against him, tooke him fuddenly, and flue him, carrying his heart to their god, who commanded them to caft Metamorphod it into the Lake, fayning that thereof did grow a plant called Tanal, where fince Mexico was fite built. They came to fight with the Chalcas, and other Nations, having chofen for their Captaine, a valiant man, called Vitzilonilti, who in an encounter, was taken and flaine by the Enemies. But for all this, they were not discouraged, but fought valiantly; and in despight of their Enemies they brake the fquadrons, and carrying their Aged, their Women, and young Children in

the midft of their battaile, they passed on to Allaconyanaya, a Towne of the Culbuans, whom they Atlanguage found solemnising of a Feast, in which place they fortified. The Chalcar, nor the other Nations did not follow them, but grieved to be defeated by fo small a number of men; they being in so great multitudes retyred to their Townes.

The Mexicans, by the aduice of their Idoll, fent their Meffengers to the Lord of Culbracan, Of the warres to demand a place to dwell in, who after her had imparted it to his people, granted them the Mexicons place of Tocaspon, which fignifies white maters, to the end they should all perish there, being full that against of Vipers, Snakes, and other venemous beafts which bred in a Hill neere adioyning. But being buscen. Cheese perswaded and taught by their Deuill, they accepted willingly what was offered, and by their Treasen. deuillisharte, tamed these beasts, so as they did them no harme; yea, they vied them as meate, 60 eating them with delight and appetite. The which the Lord of Culhuacan feeing, and that they

had tilled and fowed the Land, he refolued to receive them into the Citie, and to contract amitie with them. But the god whom the Mexicans did worship (as he is accustomed to do no good. but ill) faid vnto his Priests, that this was not the place where hee would have them stay, and that they must go forth making warres. Therefore they must seeke forth a Woman, and name her

Dicord made his daughter to be Queene of the Mexicans, and mother to their god, who received this amballage be the King or willingly, lending his daughter prefently gorgeoutly arrived and well accompanied. The fame night thee arrived, by order of the murtherer whom they worthipped , they killed her chiefly and having flayed her artificially as they could doe, they did clothe a young man with her sking. and thereupon her apparell, placing him neere their Idoll, dedicating him for a Goddeffe and the mother of their god, and ever after did worthip it, making an Idoll which they called Tocer, which is to fay, our grand mother. Not content with this crueltie, they did maliciously innite the Kine of Culbuacan, the father of the young Maid, to come and worthip his danghter, who wis now of Culturatan, the father of the young with great Prefents, and well accompanied with his preple, he was led into a very darke Chappell where their Idoll was, that he might offer facrifice to his daughter that was in that place. But it chanced that the Incense that was woon the harth, according to their cuftome, kindled in such fort, as he might diferre his daughters fraire, and hauing by this meanes discouered the crueltie and deceit, he went forth crying aloud, and with all his men he fell voon the Mexicans, forcing them to retyre to the Lake, foas they were almost drowned. The Mexicans defended themselves, casting certaine little darts; which they vied in the warres, wherewith they much galled their enemies. But in the end they got Land, and leauing that place, they coafted along the Lake, very weary and wet; the Women and little Children crying and making great exclamations against them and their god that had brought them into this distresse. They were inforced to passe a River that could not bee waded thorow, and 30 therefore they aduited to make small Boates of their Targets and of Reedes, wherein they paffed. Then afterwards, baning left Culbuacan, they arrived at Izzacalco, and finally to the place where the Hermitage of Saint Anthony now is, at the entrie of Mexico, and to that quarter which they

now call Saint Paul. During which time their Idoll did comfort them in their travels , and in-

couraged them, promiting great matters. The time being now come, that the Father of lyes should accomplish his promise made to his dation of Mex- people, who could no longer fuffer fo many turnings, trauels, and dangers, it happened that fome old Priefls or Sorcerers, being entred into a place full of water-lillies, they met with a very faire and cleere current of water, which feemed to be filter, and looking about, they found the Trees, Meadowes, Fifh, and all that they beheld to be very white: wondering hereat, they remembred 30 a prophese of their god, whereby he had given them that for a token of their place of rest, and to make them Lords of other Nations. Then weeping for ioy, they returned to the people with these good newes. The night following, Unaliquiali appeared in a dreame to an ancient Priest, faving, that they should feeke out a Timal in the Lake, which grew out of a stone (which as hee told them, was the same place where by his commandement they had cast the heart of Copil, fonne to the Sorcereffe their enemie) and voon this Timal they should see a goodly Eagle, which fed on certaine small birds. When they should fee this, they should believe it was the place where their Citie should be built, the which should surmount all others, and be famous throughout the World. Morning being come, the old man affembled the whole people, from the greatest to the least, making a long speech vnto them, how much they were bound vnto their god; 40 and of the reuelation, which (although vnworthy) he had received that night, concluding that all must feeke out that happy place which was promifed them; which bred fuch denotion and ioy in them all, that prefently they undertooke the enterprife, and dividing themselves into Bands, they began to learch, following the fignes of the reuelation of the defired place. Amiddeit the thickest of these water-lillies in the Lake, they met with the same course of water they had seene the day before, but much differing, being not white, but red, like bloud, the which diuided it felfe into two streames, whereof the one was of a very objeure azure, the which bredadmiration in them, noting some great mysterie, as they fail. After much search here and there, the Tunal appeared growing on a stone, whereon was a Royall Eagle, with the wings display-Eagleglorious ed towards the Sunne, receiving his heat. About this Eagle were many rich feathers, white, red, sa yellow, blue, and greene, of the same fort as they make their Images, which Eagle held in his tallants a goodly bird. Those which saw it and knew it to bee the place foretold by the Oracle, fell on their knees, doing great worthip to the Eagle, which bowed the head looking on every fide. Then was there great cryes, demonstrations, and thankes unto the Creator, and to their great god Vitzliputzli, who was their father, and had alwayes told them truth. For this realon they called the Citie which they founded where, Tenexistran, which fignifies Tunal on a flone, and to this day they carry in their Armes, an Eagle vpon a Tunal, with a bird in his tallant, and flanding with the other vpon the Tanal. The day following, by common confent they made an Hermitage adiopning to the Tunal of the Eagle, that the Arke of their god might reit there, till they might have meanes to build him a fumptuous Temple : and io they made this Hermi- 60 tage of Flagges and Turfes couered with straw. Then having confelted with their god, they refolued to buy of their Neighbours, Stone, Timber, Lime, in exchange of Fish, Frogs, and young Kids, and for Ducks, Water-hens, Courlieus, and divers other kindes of Sea fowles. All which things they did fifth and hunt for in this Lake, whereof there is great abundance. They went

Tabernacle for their Deuils Arke.

with these things to the Markets of the Townes and Cities of the Tapanecaus, and of them of Telemes their neighbours , and with policy they gathered together by little and little; what was necessarie for the building of their Citie: so as they built a better Chappell for their Idoll of lime Stone Chapand itone, and laboured to fill up a great part of the Lake with rubbish. This done, the Idoll pell. spake one night to one of his Priests, in these termes; Say unto the Mexicans, that the Noble- Oracle men divide themselves every one with their Kinsfelks and Friends, and that they divide themselves into foure principall quarters, about the bouse which you have built for my rest, and let every quarter build in his quarter at his pleasure. The which was put in execution : and those be the foure principall quarters of Mexico, which are called at this day Saint Iean , Saint Mary the round , Srint Paul, to and Saint Sebaftian. After this, the Mexicans being thus divided into these four quarters, their god commanded them to duide amongst them the gods he should name to them, and that they should give notice to every quarter, principall of the other foure particall quarters, where their gods should bee worshipped. So as under every one of these foure principall quarters, there yvere many leffe comprehended, according to the number of the Idols which their god commanded them to worship, which they called Calpalterco, which is as much to fay as God of the quariers. In this manner the Citie of Mistice Tenoxillian was founded, and God of the

grew great. This diuftion being made as aforefaid, fome old Men and Ancients held opinion, that in Of the fedicion the divition, they had not respected them as they deserved : for this cause, they and their of those of Tilathe duntion, they mad not respected than as they determed not this cauch, they and their reliates and of the first kines. And as they went through the Lake, they found a small piece of Ground or Terrasse, which they call Tlotelos , where they the Mexicos inhabited, calling it Tlatellules, which fignifies Place of a Terrafe. This was the third division did choose. of the Mexicans, fince they left their Country. That of Mechonacan being the first, and that chass. of Malinalco the fecond. Those which separated themselves and wene to Tlatellulco, were tamous men, but of bad disposition : and therefore they practifed against the Mexicans their neighbours, all the ill neighbourhood they could. They had alwayes quarrels against them and to this day continues their hatred and old leagues. They of Tenoxiltan, feeing them of Thatellules thus opposite vntothem, and that they multiplyed, feared that in time they might

furnount them : hereupon they affembled in countell , where they thought it good to thoose a 30 King, whom they should obey, and strike terrour into their Enemies, that by this meanes they should bee more writed and stronger among themselves, and their Enemies not prefume too much against them. Being thus resolued to choose a King, they tooke another aduce very proficable and affured, to choose none among themselves, for the auoyding of differtions, and to gayne (by their new King) fome other neighbour Nations, by whom they were inuitoned, being destitute of all iuccours. All well considered, both to pacifie the King of Culbuscan, whom they had greatly offended, having flaine and flayed the daughter of his predecessor, and done him fo great a fcorne, as also to have a King of the Mexican bloud, of which generation there were many in Culbnacan, which continued there fance the time they lived in peace amongst them; they resolved to choose for their King, a young man called Acamapizell, Acamapizell 40 some to a great Maxican Prince, and of a Lady; daughter to the King of Calbinata. Pre- int King of

fently they fent Ambaifadors with a great Prefent to demand this man, who delittered their Ambastage in these termes; Great Lord, wee your Vassats — Servants, placed and shut up its the Weeder and Reeder of the Lake, alone, and abandoned of this the Nations of the World, led oncly and guided by our god to the place where wee are, which falls in the imifaction of your limits of Ascaputalco, and of Tescuco: Aliboned you have suffered us to line and remayne there, jet will weens, mether is it reason to line without a Head and Lord to command, correct, and gowerne us, instructing us in the course of our life, and defending us from our Enemies: Therefore wee come to your humming that in your Court and House, there are Children of our generation, linchs and allied with yours iffied from one entrailes, and yours, of our blond and yours, among the whith we blue 50 knowledge of a Grand-child of yours and ours, called Acamapixth. Wee befaceb you therefore, to gime bim vs for Lord, wee will esteeme bim as bee defernes , feeing bee is of the Linage of the Lords of

Mexico, and the Kings of Culhuacan.

The King having confedred upon this point, and finding it nothing inconvenient to be allied to the Mexicans, who were valiant men, made them answere. That they should ake his grand-child in good time, adding thereunto, that if he had beene a woman, hee would not have given her, noting the foule fact before fpoken of , ending his discourse with these wordes , Lee guen nes, noung en cours sou octor sportion, sanua in monotife wird talet worses, Let my grand-child gosto forme your god, and be bit Lieutenant, to rule and gostere the Texturent photom we line, who it the Lord of Night, Day, and Winder: Let him goe and be Lord of the Water and Land, and possesses the Mexican Nation, take him in good time, and of him at my some and grand-60 child. The Maxicans gave him thankes, all loyntly deliring him to marry him with his owne hand, to as hee gaue him to wife, one of the nobleft Ladies among ft them. They conducted the new King and Queene with all honor possible, and made him a solemne reception; going all in generall forth to fee the King, whom they led into Palaces which were then but meane;

and having seated them in Royall Thrones, presently one of the Ancients and an Orator

Ocon a

much eftremed among ft them, did rife vp, speaking in this manner, My some, our Lord and King, thou art welcome to this poore House and Citie, among it the seweds and mud, where thy poore sa. thers, Grand-fathers, and Kinsfolks, endure what it pleaset's the Lord of things created. Remember Lord thou commest bilber to be the defence and support of the Mexican Nation, and to be the resemblance of our god Vitzliputzh, whereupon the charge and government is given thee. Thou knowest wee are not in our Country, seeing the Landwe possife at this day is anothers, neither know we what shall be come of us to morrow, or another day : Confider therefore that thou commest not to reft or recreate the selfe, but rather to indure a new charge under so beany a burden: wherein thou must continually labour, being flame to this multisude, which is fallen to thy lot, and to all this neighbour people, whom then must firme to gratific, and give them contentment, seeing thou knowest we live upon their Lands, and within 10 their limits. And ending, he repeated these wordes; Thou art welcome, Thou and the Queene our How Orations Miftris, to this your Realme. This was the speech of the old man, which with other Orations (which the Mexican Hiltories doe celebrate) the Children did vie to learne by heart, and so they

were kept by Tradition, some of them deserve well to bee reported in their proper termes. The King answering, thanked them, and offered them his care and diligence in their defence and aide in all he could. After they gaue him the Oath, and after their manner fet the Royall Crowne vpon his head, the which is like to the Crowne of the Dukes of Venice: the name of Acamapixeli their first King, tignifies a handfull of Reedes, and therefore they carry in their Armouries a hand holding many arrowes of Reedes,

Of the strange tricure the Mex. cans payed to hem of Azcapuzalca.

coronation.

The Mexicans hapned to well in the election of their new King, that in thort time they grew 20 to have fome forme of a Commonweale, and to bee famous among strangers; whereupon their neighbours mooued with feare, practifed to fubdue them, especially the Tapanecans, who had Aze capuzalco for their Metropolitane Citie, to whom the Mexicans payed tribute, as ftrangers dwelling in their Land. For the King of Azcapuzalco fearing their power which increased, fought to

oppresse the Mexicans, and having consulted with his subjects, he sent to tell King Acamapixili, that the ordinarie tribute they payed was too little, and that from thenceforth they should bring Firre trees, Sapines, and Willowes for the building of the Citie; and moreover, they should make Garden in the him a Garden in the water, planted with divers kindes of Herbes and Pulies, which they should bring onto him yeerly by water, dreffed in this manner, without fayling; which if they did not. he declared them his enemies, and would roote them out. The Mexicans were much troubled at this commandement, holding it impossible : and that this demand was to no other end, but to feeke occasion to ruine them. But their god Vitzliputzli comforted them, appearing that night to an old man, comanding him to say to the King his sonne in his name, that he should make no dif-ficultie to accept of this tribute, he would helpe them and make the meanes ease, which after happened : for the time of tribute being come, the Mexicans carried the Trees that were required, and moreover, a Garden made and floating in the water, and in it much Mays (which is their Corne) alreadie grayned and in the eare : there was also Indian Pepper, Beetes, Tomates, which is a great fappy and fauourie graine, French Peafe, Figs, Gourds, and many other things, all ripe, and in their featon. Such as have not ieene the Gardens in the Lake of Mexico, in the middeft of the water, will not beleeue it, but will say it is an inchantment of the Deuill whom they wor- 40 ship: But in tryth it is a matter to bee done, and there hath beene of the seene of these Gardens floating in the water; for they cast earth upon Reeds and Grasse, in such fort as it neuer wastes in the water; they fow and plant this ground, to as the graine growes and ripens very well, and then they remoue it from place to place. But it is true, that to make this great Garden eafily, and

to have the fruits grow well, is a thing that makes men judge there was the worke of Vizzliputz-

li, whom otherwise they call Patellas, specially having never made nor seene the like. The King

of Azcapuzalco wondred much when he faw that accomplished which he held impossible, saying vnto his fubicets, that this people had a great god that made all case vnto them, and he faid vn-

to the Mexicans, that feeing their god gaue them all things perfect, he would the yeere follow-

fayling of a minute, vpon paine of his indignation. The Mexicans were much troubled and hea-

uie with this proud and strict command: but their god, as he was accustomed, comforted them

in the night, by one of his Priests, saying, that he would take all that charge voon him, willing

them not to feare, but beleeve that the day would come, when as the Azcapuzalcos should pay

with their lives this define of new Tributes. The time being come, as the Mexicans carried all

New Phareming, at the time of tribute, they should bring in their Garden a milde Ducke, and a Heron, string so safe unce.

on their egges, in such sort, that they should hatch their young ones as they should arrive, without

that was demanded of their Gardens, among the Reedes and Weedes of the Garden, they found a Ducke and a Heron hatching their egges, and at the fame inflant when they arrived at Azes-puzates their young ones were difclosed. Whereat the King of Azeapuzates wondring beyond measure, hee faid againe to his people, that these were more then humane things, and that the 60 Mexicans began as if they would make themselves Lords over all those Provinces. Yet did hee not diminish the order of this tribute, and the Mexicans finding not themselves mightie enough, endured this subjection and flauerie the space of fiftie yeeres. In this time the King Acamapanis died, having beautified the Citie of Moune with many goodly buildings, fireets, Conduits of

wrater, and great abundance of munition. He raigned in peace and rest fortie yeeres, having beene alwayes zealous for the good and increase of the Commonweale.

As he drew neere his end, he did one memorable thing, that having lawfull children to whom he might leave the fuccession of the Realme, yet would be not doe it, but contrariwise hee spake freely to the Common-weale, that as they had made a free Election of him, fo they should choose him that should seeme sittest for their good Government , adming them therein to have a care to the good of the Common-weale, and feeming grieved that he left them not freed treen Tribute and lubicition, he dyed, having recommended his wife and children water them, he left all his people forrowfull for his death.

ò. II.

Of the second King VITZILOVITLI; and of his Successours and their Ads untill the Reigne of M Q T E Z V M A

He Obsequies of the dead King performed, the Ancients, the chiefe of the Realme, and some part of the people assembled together, to choose a King, where the propounded the necessitie wherein the chiefe of the Realme, and tome part or tree proper ancimere ungerner, ou never a mark has tir me modeful to choose for propounded the necessities wherein they were, and the he it me a modeful to choose for chost of their Citie, a most that had site of age, of Widdown, and Orphans, and no be a Factor of the Common meale: for in vary dead they should be the students of his wings, the syndrowes of his eyes, and the beard of his face, that is was necessary lice were valiant, being needfull shortly to of out eyes, and not ordered out just, to the sound of the reduction in the end was to choose a form to vie their forces, as their God had prophisfied. Their reduction in the end was to choose a form to the Predection, ving the like good office in accepting has forme for Successor, as hee had done to

the Common-weale, relying thereon. This young man was called Fitzslowith, which lignifieth a rich feather. They fet the Royal virginish of Growne vpon his head, and anointed him, as they have beene accustomed to do to all their Kings, lecked King. 30 with an Ointment they call Disame, being the fame vocation wherewith they did anoint their

Idoll. Prefently an Orator made an eloquent speech, extraving him to arme benefit with com-gage, and free them from the transle, flauris and mifrire they, suffered, being apprefied by the Anna-tory, which done, all did hum homage. This King was not married, and his Counsell held pundless: which done, all did hum homage. This King was not married, and his Counsell held opinion, that it was good to marry him with the Daughter of the King of Acceptacity, to have him a friend by this alliance, and to obtain from diminution of their heavie burthen of Tributes imposed upon them, and yet they feared left he should distaine to give them his Daughter, by reason they were his Vasals 1 yet the King of Azemusahe yeelded thereunto, hauing humbly required him, who with courteous words gave them his Daughter, called Anachystal, whom they led with great pompe and toy to Meries, and performed the Ceremonie and Solematic of Marriage, which was to tie a corner of the mann Clouke to a part of the womans Veile, in figure of the band of Marriage. This Queene brought forth a sonne, of whose name they demanded Marriage to

advice of the King of Azeapszales, and cafting Lots as they had accustomed (being greatly given re to Southfayings, especially upon the names of their children) here would have his Grandachilde Lots and to southery may, open any time as the many finely. The Queten his Daughter feeing the Southering contentment to King of Acapazate had of his Grand-childe, tooke occasion to intreate him to relieue the Markens, of the heatie burtheri of their Tributes, feeing hee had now a Grandchilde Mexican, the which the King willingly yeelded vnto, by the aduice of his Counfell, granting (for the Tribute which they paid) to bring yeerely a couple of Duckes and some fifth, in ligne of subjection, and that they dwelt in his Land. The Mexicans by this meanes remained

o much eated and concent, but it lafted little, For the Queene their Protectrix died foone after: and the yeere following like wife Versilemiti the King of Mexico died ; leaning his fonne Cht. Kings death malpopeca tenne yeeres old; he reigned shirteene yeeres, and died thirtie yeeres old, or little more. He was held for a good King, and carefull in the feruice of his Gods, whofe Images hee held Kings to be; and that the honour done to their God , was done to the King who was his !mage. For this cause the Kings haue been so affectionate to the service of their Gods. This King was carefull to winge the love of his neighbours, and to trafficke with them, whereby hee augmented his Citie, exercifing his men in Warrelike actions in the Lake, disposing them to that

which he pretended, as you shall see presently. The Meaneant for fucceffor to their deceded King did choole his fonne Chimalpopoea, by com-60 mon confent, although he were a child of ten yerres old, being of opinion that it was alwayes King, and his necessary to keepe the fauour of the King of Azenpurales, making his Grand-childe King, crucildesh,& They then let him in his Throne, giving him the Enlignes of warre, with a Bow and Arrower in the occasion one hand, and a Swerd with Rafers (which they commonly vie) in the right, figuifying thereby in Marie which 0000 3

(as they doe fay) that they precended by Armes to fed them felucrat libertie. The Mexican bad great want of water, that of the Lake being very thicke and anuildie, and therefore ill to drinke, so as they caused their infaint King to define of his Grand of a the King of Azennades, the water of the Mountaine of Chapalteper, which is from Maxico a league, as is faid before, which they bafely obtained, and by their indultris made an Aquaduct of faggoes, weeds and flaggest by

the which they brought water to their Citie. But because the City was built within the Lake. and the Aquaduct did croffe it, it did breake forth in many places, to as they could not enjoy the water, as they defired, and had great fearcitie: whorsupon, whether they did exprelly feeke it toquarrel with the Tapanecans, or that they were moved vpon small occasion, in the end they fent a resource Ambassage to the King Azeapuzalco, saying they could not vie the water which he had grac soully granted them, and therefore they required him to provide them, wood, lime, and stone, and to lend his Workmen, that by their meanes they might make a Pipe of stone and lime that should not breake. This message nothing pleased the King, and much lesse his subir as feeming to be too prefumptuous a message, and purposely insolent, for Vasials to their Lord. The chiefe of the Countell distayning thereat, said it was too bold, that not contest with permission to line in anothers Land, andro have waver given them, but they would have them you to ferne them; what a matter was that? And whereon prefumed this flightime Nation, shut up in the mud? They would

let them know, bow fit they were to worke, and to abate their pride, in taking from them their Land

In these tearnes and choller they left the King, whom they did somewhat suspect, by reason to of his Grand-childe, and confulted agains anew, what they were to doe, where they retolned to make a generali Proclamation, that no Tapanenar should have any commerce or traffique with any Mexican, that they should not goe to their Citie, nor receive any into theirs, vpon paine of death. Whereby we may understand that the King did not absolutely command over his pegple, and that hee gourned more like a Confull, or a Duke, then a King; although fince with their power, the command of Kings increased, growing absolute Tyrants, as you shall fee in the last Kings.

The King of Acceptuales feeing the refolution of his fubicats, which was to kill the Mexicans, intreated them first to steale away the young King his Grand-childe, and afterwards doe what they pleafed to the Mexicans. All in a manner yeelded hereunto, to give the King con- 10 tentment, and for pittie they had of the childe; but two of the chiefest were much opposite, inferring, that it was bad counfell, for that Chimapapaca, although hee were of their bloud, yet was it but by the Mothers fide, and that the Fathers was to be preferred, and therefore they concluded that the fift they must kill was Chimbalopoee King of Maxico, protesting fo to doe. The King of Azeaparales was fo troubled with this contradiction, and the resolution they had taken, shut loone after for very griefe he fell ficke, and dyed. By whose death the Tapanecanti. nifling their confultation, committed a notable Treason: for one night the young King of Maxi-King murbes see fleeping without guard, or feare of any thing, they of Acceptuates entred his Palace, and the hum findelntly, returning yorkeen. The morning being come, when the Nobles went to falore the King, as they were accultomed, they found him flane with graze and crede the wounds; then go they cryed out and filled all their Citie with teares : and transported with choller, they prefence ly fell to Armes, with an intent to revenge their Kings death. As they ranne up and downe full of farie and diforder, one of their chiefelt Kinghts flept forth, labouring to appeale them, with a grass admonition: Whither gow yee (fail he) O yee Maxicans! quiet your felture, comfair that things done without confidentation are out well qualified are come to good and it fapperly many regist, comfair that the control of the confidentation are out well qualified are come to good and it fapperly many regist, comfairing that although your King be dead, the Noble blond of the Mexicans is not extinct in him. We mering than automyte your Ang se team, to exonecomment on secrement and existing in distinct the secrement of the secrement o farther, but flayed to make the Obsequer of their King, whereunto they immed the Lords of Telemon, and Culbracon, exporting vnto them this foule and cruell fact, which the Tapanerans had committed, moouling them to have pittig on them, and incerding them against their enemies, concluding that their refolution was to die, or to bee revenged of fo great an indignitie, intreating them not to favour so vajusta fact of their enemies; and that for their part, they defired not sheir aide of armes or men, but onely to be lookers on of what should passe, and that for their maintenance, they would not ftop nor hinder the commerce, as the Tapanecans had done. At therespeeches they of Tescene and Culbuacan made them great shewes of good will, and that they were well latisfied, offering them their Cities, and all the Commerce they defired, that they defired, that they defired, that they might prouide victuall and Munition at their pleasure, both by land and water. After this, the Mexicon intreated them to flay with them, and affift at the election of

their King; the which they likewife granted, to give them contentment.

## CHAP. S. Inauguration of Mexican Kings. Threadless middome et valour. 1011

. The Electors being affembled, an old man that was held for a great Orator , role up, who (as Of the furth the Histories report) frake in this manner, The light of your eyes, O Mexicain, is ther kened, but not King calcol of your hearts: for although you house tof this that was the light and guide of the Mexican Common - Income, and of reade, yet that of the bear termines: to conflict; that albumpt they have flative man, yet there are the wre-seders that may supply with administry, the same we have of him: the hierarch Nobelian's set extin-gain the latguilhed thereby, nor the blend Ropall decoyed. Turne year yes and looke about you, you shall fee the chapite Nobilesis of blexico fee in order, not one or two but many and excellent Princes, Sons to Acamapixili, our tree and lawfull King and Lord. Here you may choose at your pleasure, saying, I will thu man, and not than I from have lost a Pather, heave you may find both Father and Mother: make occann O

here can, but to Same is cusped and advensed for a time, and will returne findings, If Mexico bath been during and to the cusped sound advensed for a time, and the cusped cusped greater King, the Same wall found flow, in thousing another King. Lodg to boss, and open whom you find call you reys, and tourist whom you beat as inclined that is to be more just of the cusped to be the cusped to the cusped greater than the cusped greater tha to the latisfaction of all men. In the end, by the confert of this Counfell, Izcoalt was chosen King, which figuities a Snake of Rafors, who was Sonne to the first King Jeamspixth, by a flave of his: and although he were not legitimate, yet they made choice of him, for that hee exceeded the rest in beliausour, valour, and magnanimitie of courage. All seemed very well fatisfied, and about all, thefe of Tefence, for their King was married to a lifter of Afrents. After the King had beene crowned and fee in this Royall Seat, another Orator flept up, diffourfing how the 20 King was bound to his Commonweale, and of the courage he ought to thew in travell, speaking thus, Behold that day we depend on thee, it may be then wilt let fall the burthen that liet upon thy Soul-

control and laffer the old man med opinion, the Orphin and the middle to perfect Tide patte of the Indian the general part of the Indian to the general part of the Indian their second part of Indian their second part of Indian their second part of Indian the Indian the Indian the Indian the Indian to Indian the Indian the Indian to Indian the Indian the Indian the Indian to Indian the Indian to Indian the Indian th presto Jores my cleaner, my Leran, we come regat request of your my producers, women over the power and the comments people, subs the affired of inder the fluidate of thy broad? and of the fluidate of the context woods whom this (therefor the which, (all have faith they learne by heart, for the exercise of their chalchem, and after did teach them as a Leffon to those that began to hearns the facultie

In the meane time , the Tapanicans were refolme to deftroy the Mexicans, and to this end 20 they had made great preparations. And therefore the new King tooke counfell for the proclaming of Warre, and to fight with those that had so much wronged them. But the common people, feeing their Aductionies to exceed their farre in numbers and munition for the water, they came amazed to their King, prefing him not to vudertake fo dangerous a warre, which would define their poors Citie and Nation: whereupon being demanded what admice were fit. teft to take, they usude antweet; that the King of Ascapusator was very pittifull; that they should demand peace, and offer to ferce him; diswing these forth those Marting, and flist hee flould give them heates and lands among his fabjects, that by this meanes they might depend all voos one Lord. And for the obtaining fiereof, they frould carrie their God in his Little for an Intercessor. The price of the people were of (sich force that ing fome Nobles that appropried an intercount. man was called Tilearder, Nephew to the King, he was the most valiant Captaine and greatest Counsellor that ever she Maxicans had, as you shall see hereafter. Izcoals encouraged by that his Nephew had (a wifely spoken) retained the people, saying they should first fuffer him torry another better meaner. Then turning towards his Nobilitie, he faid water them, Tou are all beers my Kinfinen, and the best of Mexico, be that birth the courage to carrie a meffage to the Tapanecans, In him rife up. They looked one voon another , but no man flired nor offered himselfe to the word. Then this young man Tlacaellee rifing, offered himselfe to goe, saying, that feeling hee multidie, it did import little whether it were to day or to morrow : for what reason should hee fo carefully preferue himfolfe? he was therefore readie, let him command what he pleafed. And although all held this for a rafh attempt, yet the Ring refound to french him, that he might there on walerthan the will and disportion of the Ring of Assignitudes and of his people; holding it better to halten his Nephewel death; then to hazard the honour of his Common-weale. The

60 caellec being readie, tooke his way, and being come to the Guards, who had commandement to kill any Mericans that came towards them, by cumning or otherwise : hee perswaded them to fuffer him to paffe to the King, who wondred to fee him, and hearing his Ambaffage, which was to demand peace of him under honest conditions, answered, that he would impart it to his subjects, willing him to returne the next day for his answere. Then Threaellee demanded a

pasport, yet could be not obtaine any, but that he should wie his best skill : with this he returned to Mexico, giving his words to the guards to returne, And although the King of capazaleo defired peace, being of a milde disposition, yet his Subjects did so incense him, as his answer was open warre. The which being heard by the Messenger, he did all his King commanded him, declaring by this ceremony, to give armes, and annointing the King with the vnction of the dead, that in his Kings behalfe he did defiehim. Hauing ended all, the King of Azeapuzalco luftering himfelfe to be anointed and crowned with Feathers, giving goodly armes in recompence to the Meffenger, wishing him not to returne by the Pallace gate, whereas meny attended to cut him in peeces, but to goe out fecretly by a little false Potterne that wasto. pen in one of the Courts of the Pallace. This yong man did fo, and turning by secret waies, got to away in fafetie in fight of the Guards, and there defied them, faying, Tapanecans and Azcapu. Zalcans, you doe your office ill, vuderfland you fhall all dye, and not one Tapanecan fhall remains aline. In the meane time the Guards fell voon him, where he behaued himielfe fo valiantly, that he flew fome of them : and feeing many more of them come running, he retired himfelte gallant. ly to the Citie, where he brought newes, that warre was proclaimed with the Tapmerans, and that he had defied their King.

gaue to the Chap.13.

The defie being knowne to the Commons of Mexico, they came to the King, according to their accustomed cowardife, demanding leave to depart the Citie, holding their ruine certaine. The King did comfort and incourage them, promiting to give them libertie if they vanquished The king did constort and incourage them, promiting to gue them libertie if they vanquified their enemies, willing them not to fear. The people replied, a draid was to amoughed, what find 100 mee doe? I five to concrow, (antwered the King,) no will be bound professly to peake our folus into your boards to fight a death, eater fight is you and place and the removed of v. It flash be for them (iny they) if you loafe the villavie, and if you obtained the villavier, we does prefently offer our falses to be your Tribusaries, to labous in your banks of your growth out our carries your sense and hopegage when you got to be source for each, was and nor defendant; after vs. These accords made between the Donle and the Middle is which they will a for the Workshop of the State of the S the People and the Nobilitie (which they did after fully performe, either willingly or by conftraint, as they had promifed) the King named for his Captaine Generall Tlasseller: the whole Campe was put in order, and into fquadrons, giving the places of Captaines to the most valiant of his kinsfolkes and friends: then did he make them a goodly peech, whereby he did greatly is incourage them, being now well prepared; clusteding all men to obey the commandement of the Generall whom he had appointed; he dissided his men into two parts, commanding the most valiant and hardie, to give the first charge with him, and that all the rest should remaine with the King Izcoalt, untill they should fee the first affaile their enemies. Marching then in order, they were discovered by them of Azcapuzalco, who presently came furlously forth the Citie, carrying great riches of Gold, Silver, and Armes of great value, as those which had the Empire of all that Countrie. Izcools gave the figuall to battaile, with a little Drumme he carried on his shoulders, and presently they raised a generall showt, crying, Mexico, Mexico, they charged the Toponecon, and although they were farre more in number, yet did they descate them, and force them to retire into their Citie, then advanced they which remained behinde, or ying Tiscaellec Villarie, Villarie, all fodainly entred the Citie, where (by the Kings commande. ment) they pardoned not any map, no not old men, women, nor children, for they flew them all and spouled the Citie being very rich. And not content herewith they followed them that fled, and were retired into the craggie rockes of the Sierres or neers Mountaines, striking and making a great flaughter of them. The Tapareeaus heing retired to a Mountaine east downe their Armes, demanding their lines, and offering to ferue the Mexicane, to give them Lands and Gardens, Stone, Lime and Timber, and to hold them alwayes for their Lords. Voon this condition Tlasaelles retired his men and ceased the battaile, granting them their lives voon the former conditions, which they did folemnely (weare. Then they returned to Azesputaleo, and fo with their rich and victorious spoiles to the Citie of Mexico. The day following the King affembled the Nobilitie and the People, to whom hee laid open the accord the Commons had to made, demanding of them, if they were content to perfift therein : the Commons made answer, that they had promiled, and they had well deferred it, and therefore they were content to ferue them perpetually. Whereupon they tooke an oath, which fince they have kept without

This done, Izeals returned to Azeapuzales (by the aduite of his Counfell) he divided all the Lands and Goods of the conquered among the conquerours, the chiefest pert fell to the King, then to Tlacaellee, and after to the reft of the Nobles, as they best deserved in the Battaile. They also gave Land to some Plebeans, having behaved them selves valiantly; to others they distributed the Pillage, making small account of them as of cowards. They appointed Lands in common for the quarters of Mexico, to every one his part, for the Service and Sacrifices of their 60 Gods. This was the order which afterwards they alwayes kept, in the division of the Lands and spoiles of those they had vanquished and subdued. By this meanes they of Azcapuzalco remained fo poore, as they had no Lands left them to labour, and (which was worfe) they tooks their King from them, and all power to choose any other then him of Mexico.

Although

Although the chiefe Citie of the Tapanecanes, was that of Azcapuzalco, yet had they others with their private Lords, as Tuenda and Cupacan. These seeing the storme passed, would Of the warre gladly that they of Azespuzalco had renewed the watre against the Mexicans, and seeing Mexicons had them danted, as a Nation wholly broken and defeated, they of Cuyoacan refolued to make against the Ciwarre by them selues; to the which they laboured to draw the other neighbour Nations, who tie of capeacan would not ftirre nor quarrell with the Mexicans. In the meane time the hatred and malice in- Chaptacreating, they of Cayoacan began to ill intreate the women that went to their Markets, mocking at them, and doing the like to the men ouer whom they had power: for which cause the

King of Mexico defended, that none of his should goe to Capacan, and that they should receive 10 none of them into Mexico, the which made them of Coyoacon retolue wholly to warre : but first they would prouoke them by some shamefull scorne, which was, that having inuited them to one of their tolemne Feasts, after they had made them a goodly Banquet, and feasted them with a great daunce after their manner, they fent them for their fruite, womens apparell, forcing them to put it on, and fo to returne home like women to their Citie, reproaching them, that they were cowards and effeminate, and that they durft not take armes being fufficiently prouoked. Those of Mexico say, that for revenge they did vnto them a foule scome, laying at the gates of their Citie of Capacan certaine things which smoaked, by meanes whereof many women were delinered before their time, and many fell ficke. In the end, all came to open war, and there was a battaile fought, wherein they imploied all their forces, in the which Tlacaelice,

20 by his courage and policie in warre, obtained the victorie. For having left King Izcoals in fight with them of Cuyoacan, he put himselfe in ambush with some of the most valiant Souldiers, and so turning about, charged them behinde, and forced them to retire into their Citie. But Temple, feeing their intent was to flie into a Temple which was very itrong, he with three other valiant Soul liors, pursued them eagarly, and got before them, seising on the Temple and firing it, fo as he forced them to flie to the fields, where he made a great flaughter of the vanquished, purfuing them two leagues into the Countrie, vnto a little hill, where the vanquished casting away their weapons, and their armes a croffe, yeel ded to the Mexicans, and with many teares craued pardon of their ouerweening folly, in ving them like women, offering to be their flaues : fo as in the end the Mexicanes did pardon them. Of this victory the Mexicans did carry away 30 very rich spoiles of Garments, Armes, Gold, Silver, Jewels, and rich feathers, with a great number of Captines. In this Battaile there were three of the principals of Culbuscan that came to

aide the Mexicans, to win honour, the which were remarkeable about all. And fince being knowne to Tlacaellec, and having made proofe of their fidelity, he gave them Mexican deuiles, and had them alwayes by his side, where they fought in all places very valiantly. It was apparant that the whole victory was due to the Generall, and to these three; for among so many captiues taken, two third parts were wonne by these foure, which was casily knowne by a policie they yied : for taking a Captine, they prefently cut off a little of his haire, and game it to others, so as it appeared that those which had their haire cut, amonnted to that number, whereby they wonne great reputation and fame of valiant men. They were honoured as Con-40 querours, giving them good portions of the spoiles and Lands, as the Mexicans have alwaies vied

to doe, which gaue occasion to those that did fight to become famous, and to win reputation

The Nation of the Tapanecans being subdued, the Mexicans had occasion to doe the like to Of the wase the Suchimileos, who (asie hath beene faid) were the first of the seuen Caues or linages that and victory peopled this Land. The Mexicans fought not the occasion, although they might prefume as which the Mexicans Conquerours to extend their limits, but the Suchmileos did moue them, to their owne ruine, as icess had a Conquerours to extend their limits, but the Suchimiles did moue them, to their owner ruine, as gainst the Suit happens to men of small sudgement that have no forelight, who not preventing the mischief chimiles 60,15. they imagined, fall into it. The Suchimiles held opinion, that the Mexicans, by reason of their victories past, should attempt to subdue them, and consulted hereon among themselues. Some

50 among them thought it good to acknowledge them for superiours, and to applaud their good fortune, but the contrary was allowed, and they went out to give them battaile : which Izcoalt the King of Mexico understanding, he sent his Generall Tlacaellec against them, with his armie: the battaile was fought in the same field that divides their limits, which two Armies were equall in men and armes, but very divers in their order and manner of fighting; for that the Suchimileos charged all together on a heape confutedly, and Tlacaellee divided his men into fquadrons with a goodly order, fo as he presently brake his enemies, forcing them to retire into their Citie, into the which they entred , following them to the Temple whither they fled, which they fired, and forcing them to flye to the Mountaines: in the end they brought them to this point, that they yeelded with their arme acrosse. The Generall Tlacaellec returning in Temple siked 60 great triumph, the Priests went forth to receive him, with their musicke of Flutes, and giving

incense. The chiefe Captaines vied other Ceremonies and shewes of ioy, as they had beene accustomed to doe, and the King with all the troupe went to the Temple to give thankes to their

The day following, the King I zonalt went vnto the Citie of Suchimiles, causing himselfe to

# 1014 Tlacaellecs Distory by Children. Immane cruelty in humane Sacrifices. LIB. V.

be fworne King of the Sachimileos: and for their comfort he promifed to doe them good. In to. ken whereof he commanded them to make a great Cawley stretching from Mexico to Suchi. Caufrymade. miles, which is foure leagues, to the end there might be more commerce, and trafficke among them. Which the Suchimiles, performed, and in thort time the Mexican government feeded fo good vnto them, as they held themselues happy to have changed their King and Common weale. Some neighbours pricked forward by enuie, or feare, to their ruines, were not yet made wife by others mileries.

Cuillanaea was a Citie within the Laket which though the name and dwelling be changed continueth yet. They were softine to fwim in the Lake, and therefore they thought they might much indomage and annoy the Mexicans by water, which the King understanding, hereiol. 10 ued to fend his Armie presently to fight against them. But Tlacaelles little esteeming this ware, holding it dishonorable to lead an Armie against them, made offer to conquer them with the children onely; which he performed in this manner; he went vnto the Temple and drew out of the Couent such children as he thought fittelt for the action, from tenne to eighteene yeares of age, who knew how to guide their Boates, or Canoes, teaching them certaine pollicies. The order they held in this warre, was, that he went to Cuitlanaca with his children, where by his pollicie he preffed the enemy in fuch fort, that he made them to flye; and as he followed

them, the Lord of Cuitlanaca met him and yeelded vnto him, himfelfe, his Citie, and his people, and by this meanes he stayed the pursuite. The children returned with much spoyle, and many Captines for their Sacrifices, being folemnely received with a great Procession, Musicke 20 and Perfumes, and they went to worthip their gods, in taking of the earth which they did eate, and drawing bloud from the forepart of their legs with the Priests Lancets, with other superfittions which they were accultomed to vie in the like folemnities. The children were much honored and encouraged, and the King imbraced and kiffed them, and his kinfmen and allies accompanied them. The brute of this victory ranne throughout all the Countrie, how that Tlacsellee had subdued the Citie of Cuitlanaca with children: the news and consideration whereof opened the eyes of those of Tescace, a chiefe and very cunning Nation for their manner of life: So as the King of Tesenco was first of opinion, that they should subject themselves to the King of Mexico, and inuite him thereunto with his Citie. Therefore by the adulte of his Counfell, they fent Ambassadours good Orators with honorable presents, to offer themselves vnto 30 the Mexicans, as their Subjects, defiring peace and amity, which was graciously accepted; but by the aduise of Tlacastlee he vied a Ceremony for the effecting thereof, which was, that thole of Tescue should come forth armed against the Mexicans, where they should fight, and presently yeelde, which was an act and ceremony of warre, without any effusion of bloud on either fide. Thus the King of Mexico became foueraigne Lord of Tefenco, but he tooke not their King from them, but made him of his Privie Counfell; fo as they have alwaies maintained themselves in this manner vntill the time of Mosecuma the second, during whose raigne the Spaniards entred. Having subdued the Land and Citie of Teseuco, Mexico remained Lady and Multris of all the Lands and Cities about the Lake, where it is built. Izcoals having Results death, enloyed this prosperitie, and raigned twelve yeares, dyed, leaving the Realme which had 40

beene given him, much augmented by the valour and counfell of his Nephew Theselee. For almuch as the election of the new King, belonged to foure chiefe Electors, and to the of Mexico, cal. King of Toseneo, and the King of Tacubu, by especiall priviledge: Tlacaellee assembled these led Mategame, fix perfonages, as he that had the fourraigne authority, and having propounded the matter view the fift of that to them, they made choise of Moreguena, the first of that name, Nephew to the same Theories. same. Chap. 6. His election was very pleasing vnto them all, by teason whereof, they made most kelemne featls, and more flately then the former. Prefently after his election they consticted him to the Temple with a great traine, where before the dinine barth (as they call it) where there is continual tie, they let him in his royall throane, putting voon him his royall ornaments. Being there, the King drew blood from his eares and legs with a Giffons talons, which was the Sacrifice where- 52 in the distill delighted to be honoured. The Priests, Ancients, and Captaines, made their Ora-

Griffons ta.

tions, all congratuling his election. They were accustomed in their elections to make great Feaths and Dances, where they wasted many lights. In this Kings time the custome was brought

Bloody and die in, that the King should goe in perion to make warre in some Province, and bring Captines to utlish aufture folemnize the feath of his Coronation, and for the folemne Sacrifices of that day. For this caste King Motecuma went into the Province of Chalco, who had declared themselves his enemies: from whence (hauing fought valiantly) he brought a great number of Captines, whereof he did make a notable Sacrifice the day of his Coronation, although at that time he did not fubdue all the Prouince of Chales, being a verie warlike Nation. Manie came to this Coronation from diuers Prounces, as wal neere as faire off, to fee the feeft, at the which all commers were verie go bountifully entertained and clad, especially the poore, to whom they gaue new garments. For this cante they crought that day into the Citie, the Kings tributes, with a goodly order, which confifed a Souries to make Garments of all forts, in Cacao, Gold Silver, rich Fearings great burthens or Cotton, Carumbers, fun irie forts of Paites, many kindes or Sea uffr, and of the errih

CHAP.4.S.2. Wilde fortisude. Tlascalla, Tlacaellecs great spiris. Deuils Temple, 1015

warer, great flore of Fruits, and Venison without number, not reckoning an infinite number of Prelenes, which other Kings and Lords fent to the new King. All this Tribute marched in order according to the Provinces, and before them the Stewards and receivers, with divers markes and Enlignes, in very goodly order: fo as it was one of the goodlieft things of the feaft, to fee the entrie or the Pribate. The King being crowned, he implosed himfelfe in the conquelt of mamy Prountices, and for that he was both valiant and vertuous, he still increased more and niore, ving in all his affaires the counfell and industrie of his Generall Tlacaellee, whom he did al water loge and effeeme very much, as he had good reation. The warre wherein he was most troubled and of greatest difficultie, was that of the Province of Chalco, wherein there happened great matters, whereof one was very remarkeable; which was, that they of Chalcas, had taken a brother 10 of Morecumaes in the warres, whom they relolued to choole for their King, asking him verie curteoutly, if he would accept of this charge. He answered (after much importunitie, still perfifting therein) that of they ment plunely to choose him for their King , they should plant in the Market-place, a Tree or very high stake, on the top whereof, they should make a little scaffold, and meanes to mount voco it. The Chaleas supposing it had beene some ceremonie to

make himtelfe more apparant, presently effected it : then affembling all his Mexicans about the flake, he went to the top with a garland of flowers in his hand, speaking to his men in this mannet, O vallant Mexicans, thefe men will choose me for their King, but the gods will not permit, Horrible conthat to be a King I should commit any treason against my Countrie, but contrarinise, I will that you rage.

20 learne by me, that is beboneth ve rather to indure death, then to aide our enemies Saying these words, he cast himselse downe, and was broken in a thousand peeces, at which spectacle, the Chalcas had so great horror and despite, that presently they fell upon the Mexican and slew them all with their Lances, as men whom they held too proud and inexorable, flying, they had discribing hearts. It changed the night following, they heard two Owles making a mournfull cry, which they did interpret as an unfortunate figne, and a prefage of their neere destruction, as it succeeded : for King Moregams went against them in person with all his power, where he vanquished them, and ruined all their kingdome : and passing beyond the Mountaine Menade; the conquered Will even vnto the North Sea. Then returning towards the South Sea, he subdired many Provinces; fivas he became a mighty King: all by the helpe and counfell of Tlacaellee, who 10 in a mainer conquered all the Mexican Nation. Fer he held an opinion (the which was con-

firmed) that it was not beliconeful to 'conquer the Promince of Tinfanta, that the Markens Tinfanta a might have a frontier chemy, to keepe the youth of Mekkes in exercise and allarme : and that Mekes, as care they might hand numbers of Capetures to Sacrifice to their Idols, wherein they did wafte (as fight thate to Rome. beene (and) infinite numbers of men, which should be raken by force in the wars. The honor must be giuen to Moteguna, or to fpeak truly, to Tlacaller his Generall, for the good order and pollicy fetled in the Realme of Mexico as alfo for the Colinels and goodly enterprises, which they did execute: and likewise for the mimber of Judges and Magistrates, being as well ordered there, as in any Common-weale; yea, were it in the most flourishing of Europe. This King did also greater ly increase the Kings house, guing it great authoritie, and appointing many and fundry Offito cers, which served him with great pompe and ceremony. He was no less remarkable touching the denotion and fernice of his Idols, increasing the number of his Ministers, and inflituting new

ceremonies, whereunto he carried a great respect:

Hebuilt that great Temple dedicated to their god Paziliputili, whereof is fpoken in the o- Great Temple ther Booke. He did Sacrince at the dedication of this Temple, a great number of men, taken in built. fundry victories: finally, inioying his Empire in great prosperitie, he fell sicke, and died, having Deuillish deraigned twentie eight yeares, volike to his ficceffor Ticocco, who did not refemble him neither in valour, nor in good fortune.

The foure Deputies affembled in counfell, with the Lords of Tefonco and Tacuba, where Tla: How Ilucariles The foure Deputies attempted in countries, with the Lords of Petute and Account where the refused to be caelled was Prefidence in the election, where by all their voices Tlacaelled was chosen, as defer-King, and of to uing chischarge betrerthen any other. Yet herefifed it, perfwading them by pertinent rea the election fons, that they thould choose another, faying, that it was better, and more expedient to have and deedes of

another King, and he to be his infirmment and affiliant, as he had beene till then , and not Tiescis, Chapar to lay the whole burthen v pon him; for that he held himfelfe no leffe bound for the Common. weale, then if he wire King; feeming to him, though he were not King, yet in a manner, that he commended Kings fuffering him to carry cereaine markes, as a Tiers or ornament for the head, which belonged briefy to the milelues: as m'a Comedie he deferues most commendation that represents the personage that imports most. In recompence of his modesty, and for the reipect which the Mexican Electors bare him, they demanded of Tlacaellee ( that feeing he would not raigne) whom hee thought most he: Whereupon he gaue his voyce to a Sonne

60 of the decealed King, who was then very young, called Ticocio : but they replied, that his (houlders were very weake to beare to heatite a burthen. Tlacaellee answered that his was there to helpe lum to beare the burelien, as he had done to the deceafed : by meanes whereof, they tooke their resolution, and Treacte was chosen, to whom were done all the accultomed ceremonies.

No@hrils pier-

They pierced his nofthrils, and for an ornament put an Emerald therein: and for this reason. in the Mexican Bookes, this King is noted by his nofthrils pierced. Hee differed much from his Father and Predecessor, being noted for a coward, and not valiant. He went to make warrefor his Coronation, in a Prouince that had rebelled, where hee loft more of his owne men then hee tooke captines; yet he returned faying, that he brought the number of captines required for the Kingpoyloned Sacrifice of his Coronation, and to hee was crowned with great folemnitie. But the Mexicans discontented to haue a King so little disposed to warre, practifed to hasten his death by poison. For this cause he continued not about four eyeres in the Kingdome. But this losse was well tepaired by a Brother of the deceafed, who was also sonnerto great Mosseuma, called Azona ca, who was likewise chosen by the aduice of Tlacaellee, wherein hee happened better to

Of the death the deeds of feuench King

razed.

Now was Tlacaeller very old, who by reason of his age, was carried in a chaire vpon mens shoulders, to affift in counsell when businesse required. In the end he fell ficke, when as the King (who was not yet crowned) did visit him often, shedding many teares, seeming to loose in him his Father, and the Father of his Countrey. Tlacaellee did most affectionately recommend his children vnto him, especially the eldest, who had shewed himselfe valiant in the former warres. The King promifed to have regard vnto him, and the more to comfort the old man, in his prefence hee gaue him the charge and enfignes of Captaine Generall, with all the preheminences of his Father; wherewith the old man remained so well satisfied, as with this content he ended

The Mexicans made his Funerall as the Founder of that Empire, more sumptuous and state. 20 ly, then they had done to any of their former Kings. And presently after Axanca (to appeale the forrow which all the people of Mexico flewed for the death of their Captaine ) refolued to make the voyage necessary for his Coronation. He therefore led his Armie with great expedition into the Province of Tequantepes, two hundred leagues from Mexico, where he gave battell to a mighty Army, and an infinite number of men affembled together, as well out of that Prouince, as from their Neighbours, to oppose themselues against the Mexicans. The first of his Campe that advanced himselfe, to the combate was the King himselfe, defying his enemies, from whom he made show to flye when they charged him, vntill hee had drawne them into an Ambuscadoe, where many Souldiers lay hidden under straw, who suddenly issued forth, and they an which fled, turned head : fo as they of Tiquantepee remayned in the midft of them, whom they charged furiously, making a great slaughter of them : and following their victorie, they razed their Citie and Temple, punishing all their Neighbours rigorously. Then went they on farther, and without any flay, conquered to Guatales, the which is a Port at this day well knowns in the South Sea. Axagaca returned to Mezico with great and rich spoiles, where he was honourably crowned, with fumptuous and stately preparation of Sacrifices, Tributes, and other things, whither many came to see his Coronation. The Kings of Mexico received the Crowne from the hands of the King of Tefence, who had the preheminence. Hee made many other Enterprises, where he obtained great victories, being alwayes the first to leade the Armie, and to charge the enemie; by the which he purchased the name of a most valiant Captaine; and not content to 40 subsets that the fibble strangers, he also suppressed his Subjects which had rebelled, which never any of his Pre-

which they called Tlatelulco, whereas now Saint laques is. These being revolted, held a faction apart, and encreased and multiplyed much, refusing to acknowledge the Kings of Mexico, nor to yeeld them obedience. The King Axeyaca fent to aduise them, not to live divided, but being of one bloud, and one people, to joyne together, and acknowledge the King of Mexico: wherupon the Lord of Tlatelulco made an answer ful of fride and difdaine, defying the King of Mexico, to fingle combate with himfelfe : and prefently muftred his men, commanding some of them to hide themselves in the weeds of the Lake; and the 50 better to deceive the Mexicans, he commanded them to take the shapes of Ravens, Geele, and other Beafts, as Frogges , and fuch like , supposing by this meanes to surprize the Mexicans as they should passe by the wayes and cawfies of the Lake. Hauing knowledge of this defie, and of his Adversaries policie, he divided his Armie, giving a part to his Generall, the sonne of Thesaellee, commanding him to charge this Ambulcadoe, in the Lake; and hee with the reft of his people, by an unfrequented way, went and incamped before Tlatelules. Prefently he called him who had defied him, to performe his promife, and as the two Lords of Mexico, and Tlatelulco advanced, they commanded their Subjects not to mooue, vntill they had feene who should bee Conquerour, which was done, and prefently the two Lords encountred valuantly, where having fought long, in the end the Lord of Tlatelules was forced to turne his backe, being vnable to indure the furious charge of the King of Mexico. Those of Tlatelulco feeing their Captaine flye, fainted, and fled likewife, but the Mexicans following them at the heeles, charged them furiously; yet the Lord of Tlatelulco elcaped not the hands of Axapaca; for thinking to faue himselfe, hee fied to the top of the Temple, but Argaca followed him fo neere, as hee feized on him with

decessors euer could doe, or durst attempt. Wee have alreadie shewed how some seditions of

Mexico had divided themselves from that Common-weare, and built a Citie neere vnto them,

C H A P. 4. S. 2. Tlatelulco Frogs. Autzols conqueffs. Cuyoncon cunning Sorcerer. 1017

great force, and threw him from the top to the bottome, and after fet fire on the Temple, and

Whileft this paffed at Tratelules, the Mexican Generall was very hote in the revenee of those Thickies that pretended to defeat him by policie, and after hee had forced them to yeeld, and to cre for fired. mercy, the General faid he would not pardon them, vntill they had first performed the Offices of those figures they represented, and therefore hee would have them cry like Frogges and Rauens, every one according to the figure which he had undertaken, elfe they had no composition : which thing he did to mocke them with their owne policie. Feare and Necessitie bee perfect Teachers, fo as they did fing and cry with all the differences of voices that were commanded 10 them, to faue their lines, although they were much grieued at the sport their enemies made at them. They fay that voto this day, the Mexidans vie to jealt at the Tlatelulcans, which they beare impatiently, when they put them in minde of this finging and crying of bealts. King Acases tooke pleasure at this toone and this grace, and prefently after they returned to Mexico with great joy. This King was effectived for one of the best that find commanded in Mexico. Hee

Among the foure Electors that had power exchange whom they pleafed to be King, there was Of the deeds one endued with many pertections, named Aurad. This man was chosen by the reft, and this of Aurad the one endued with many pertections, named Assess. I his man was cnoten by the rett, and this cight king of election was very pleating to all the people to checkles that he was valuet, all held him coursists as a second space of the control of the c teous and affable to every man, which is one of the chiefe qualities required in them that com- The Picture

20 mand, to purchase love and respect. To celebrate the Feath of his Coronation , hee refolived to flory cals him make a Voyage, and to punth the pride of those of Quaralation, a very rich and plentifull Pro- Tifectuarti. nince; and at this day the chiefe of New Spame: They had robbed his Officers and Stewards, that Quexulation carried the Tribate to Mexica, and therewithall were rebelled. There was great difficultie to reduce this Nation trobedience, lying in such fort, as an arms of the Sea Ropt the Mexicans malfate : copalie the which Augol (with a ftrange device and industry) caused an Hand to be made in the water, of fagots, earth, and other matter; by meanes whereof, both hee and his men might paffe to the enemie; where giving them battell, he conquered them, and pumified them at his pleasure. Then returned he vato Chexico in triumph, and with great riches, to bee crowned Ring, according to their custome: Autod extended the limits of his Kingdome farre, by many

30 Conquests, enemants Guatimatas, which is three hundred teagues from Metrico. Hee was no lass liberall their value faid came in great abundance, heavenisforth of his Palace, gathering conether all the people into one place, then commanded he coming all the Tributes, which he dissides much first had head. To the poore he gaus Stuffestomake chem apparell, and moste, and whatbeare stuy had need of in great abundance, and shirigs of value, as Gold, Silner, lewels, and Reathers, were divided among the the Captaines, Sousilers, and Servants of his House according to every mans merit. This Matzel was likewise a great Politician, hee pulled downe the houses ill bulle, and built others very

It feemed voto him that the Citie of Morno had too little water, and that the Lake was 40 very muddle, and therefore hee refolued to let in a great course of water, which they of Cupeacan vied. For this cause hee called the chiefe man of the Citie vinto him, beeing a famous Sorcerer, having propounded his meaning vnto him: the Sorcerer withed him to bee well advised what he did, being a matter of great difficultie, and that he understood, if hee drew the River out of her ordinary courte, making it paffe to Mexico, hee would drowne the Citie. The King supposed these excuses were but to frustrate the effect of his Designe, being therefore in choler. he difmiffed him home, and a few dayes after he fent a Pronoft to Capacion, to take this Sorceper's who having understanding for what incent the Kings Officers came, he caused them to enter his house, and then he presented himselfe vnto them in the forme of a terrible Eagle, wherewith Famous Sor the Prouost and his companions being terrified, they returned without taking him. Auzal in-

censed herewith fent others, to whom he presented himselfe in forme of a furious Tigre, so as they durft not touch him. The third came, and they found him in the forme of a horrible Sergent, whereat they were much afraid. The King mooued the more with these doings, fent to tell them of Cayoacan, that if they brought not the Sorcerer bound voto him, hee would raze their Citie, For feare whereof, or whether it were of his owne free will, or being forced by the people, he fuffered himfelfe to be led to the King, who preferrly caused him to bee strangled, and then then did he put his resolution in practice, forcing a channell whereby the water mighe paffe to Mexico, whereby he brought a great current of water into the Lake, which they brought with great Ceremonies and Superfittions, having Priefts casting Incense along the bankes . others facrificed Quiles, and with the bloud of them sprinkled the channel bankes, others soun-

60 ding of Cornets, accompanied the water with their Musicke. One of the chiefe went attired in a habit like to their Goddeffe of the water, and all faluted her, faying, that the was welcome. All which things are painted in the Annalls of Maxico: which Booke is now at Rome Mexicos And in the holy Library, or Vatican, where a Father of our Company, that was come from Mexico, nalls in the did fee it, and other Histories, the which he did expound to the Keeper of his Holineffe Library, Varican,

He that in his election made fuch frewe of humility and mildnesse, feeing himselfe King; bes How Merge can prefently to discouer his aspiring thoughts. The first was, her commanded that no plebeian ma ordered gan presently to the dot in the printing starting and presently to the starting the fertile of thould ferue in his house, nor beare any Royal Office, as his Predependers had wheel til them; blaming the fertile of his house, and them that would be fecuted by men of bale condition, commanding threall the noble and most famous men of his Realme should line within his Palace, and exercise the Offices of his Court, and made for his Houfe, Whereunto an old man of great suctionate (who had formine this his Schoolernafer for constion, poled himfelfe, adming him, to be exceed swhethe did, and not to thrush himfelfe sate the danger ches. 1. of a great inconcenience, an iterataine himself e from the longer and common people, for since Price before 30 food of our clooke, him in the face, item gatemble we foresteed by himself and were the talk it was his refolution, and that he would not allow the Piebeians thus to goe mingled among the Salaka and the since the salaka and t Nobles, as they had done, laying, that the libraire the wild, was according to their condition; to as the Kings got no reputation, and thus he continued friend in his refolution. Her prefently

commanded his Counsell to difmile all the Plate and from which charges and offices as well those of his Houshold as of his Court, and to promide Khigher, the which was done. After hee went in perion to an entreprise necessary for his Coronacion. At these time a Prouince lying farre off towards the North Ocean, was atualted from the Crowing whither heled the flower of his peop ple, well appointed. There he watred with such valour and dexteritie, that in the end hee libdued all the Prouince, and punished the Rebels feverely, returning with a great number of 40 Capsines for the Sacrifices, and many beher fpoyles. All the Cities made him folernine receptions at his setume, and the Lords thereof gase him water to walk, performing the biffices of lea-uants, a king now the day any of his Paedecelors. Social was the feare said refiged they bare him. In Maries, they made the Featle of his Cornotton with great preparations of Danes, Comedia, Banquets, Lighes, and other inventions for many dayes: And there eams fo great a wealth of

Tributes from all his Countreyes, that firingers vinknowne came to Mexico, and their very e-

nemies reforted in great numbers difguifed to fee thefe Feafts, as those of Tlafcalla, and Mechena-

can: the which Motoguna having discourred, he commanded shey should be lodged and gently intreated, and honoured as his owne person. He also made them goodly Galleries like vnto his owne, where they might fee and behold the Feafts. So they entred by night to those Feafts, as So the King himfelfe, making their Sports and Maskes. And for that I have made mention of thefe Proninces, it shall not be from the purpose to understand, that the inhabitants of Mechanican, Tlafcalla, and Tapeaca, would never yeekl to the Mexicans, but did alwayes fight valiantly against them; yea, sometimes the Mechevacans did vanquish the Mexicans, as also those of Taneaca did. In which place, the Marquelle Don Ferrand Cores, after that hee and the Spaniards were expelled Mexico, precended to build their first Citie, the which hee called (as I well remember) Segmedela Frontiere: But this peopling continued little: for having afterwards reconmember) Segure dela Frontiere: But this peopling contraued little; for naung afterwards recon-quered Mexico, all the Spaniards went to inhabite there. To quelude, those of Tapasea, Tlafealla, Frontiere. and Mechanican, have been alwayes enemies to the Mexicant; although Motecume faid vito Corres, that heedid purpotely forbears to subdue them; to have occasion to exercise his men of Of the bebe

so warre, and to take numbers of captines. . . warre, and to take numbers of capturer.

This King laboured to be erefected, year, to be worthipped as a God. No Plebeian might looke greatestiff of him in the face; if he did, he was pussified with death; he did never lie his foot on the ground, but determine the history of the did not be was alwayes carried on the shoulders of Noblemen; and if he lighted, they laid rich Tapistrie His proud whereon hee did goe, When hee made any Voyage, hee and the Moblemen went as it were flate.

and greatest Successor of all the Mexicans.

taking great delight to understand this Booke, which before hee could never comprehend. Finally, the water was brought to Mexico, but it came in fuch abundance, that it had welneere drowned the Citie, as was foretold : and in effect it did ruine a great part thereof, but is was presently presented by the industry of Ameel, who caused an after to bee made to draw forth the water : by meanes whereof hee repayred the buildings that were fallen , with an exquifite works, being before but poore Cottages. Thus he left the Citie invironed with water, like another Venice, and very well built : he reigned eleuen yeeres, and ended with the last

Hee was livele connerfamewith his people, and feldome feene, very ring himfelfe most commonly to care for the government of his Realme. Besides that, he was a great lufticier and very Noble, he was very valuant and happy, by meanes whereof, her obtayined great victories, and came to this greathedle, as is written in the Spande Listories, whereon it feemes needleffe to write more. I will onely have a care bereafter to write what the Books and Hiftories of the Autier make mention of the which the San wift Writers have not objected, having not fufficiently understood the fecrets of this Countries. the which are things very worthy to be knowne, as we shall see hereafter.

the which are things very worten, to obtain the same and the profession of the same and the pure very in the chanced they deferent uning retigned many yeers in great profession, and the pure very in his connects as the confiss himselfe to be ferred and feared, year to be worthingped as a Good, that the Almighty Lord began to chaftice him, and also to admonish him, suffering even the very Devils whom helworthipped, to tell him there heavy tydings of the rune of his Kingdome, and to tor-ment him by Vifions, which had neuer beene seene; wherewith hee remayned to melancholy

and troubled, as he was void of judgement.

Querrassall, " The Idolkof those of Cholole, which they called Querrassalt, declared, that a firange peoplecame to posselle his Kingdomes. The King of Tefenes (who was agreat Magitian, and had conference with the Deuill) came one day at an extraordinary houre to vifit Morecuma, affusing him that his Gods had toldbim, that there were great loffes preparing for him, and for his whole Resime : many Witches and Sorgerers went and declered as much, amongst which there was one, did very particulary foretel them what should happen and as hee was with him hee told him that the pulles of his feete anti hands failed him. Metepuna troubled with their 30 newes, commanded all those Sorgerers to be apprehended : but they wimifhed prefently in the Prion, wherewith he graw into such a rage, that he might not kill them; as her put their wites and children to death, define ying their kilden and Eamlies. Seeing himselfe importuned and troubled with thefe advertilements, hee lought to appeale the anger of his Gods : and for that taule hee laboured to bring a huge flone, thereon to make great Sacrifices : For the effecting whereof hee lent a great number of people with Engiris and Infiroments to bring it : which they could by no meanes moone, although (being oblimate) they had broken many Infiroments. them to repen. But as they strong still to raise it, they heard a voyce joyning to the stone, which faid they laboutance: the De ted in vaine, and that they should not raise it, for that the Lord of things created would no more 40 uille fill them infer those stages to be dope there. More summer winder standing this; commanded the Secrifice perfidious and to be performed in that place, and they lay the voyce spake againe; Hame I not told you, that it is cruell realou. not the pleasure of the Lord of things created, that it should bee done? and that you may well know fies, supertious that it is fo, I will suffer my felfe to becreausported a little; then after jon fhall nat moone mee. fhits, and to Which happened fo indeed, for prefently they carried it a small distance with great facilitie; then after wards they could not moone it, till that after many Prayers, it suffered it felfe to bee dinining, fee. transported to the entry of the Citie of Mexico, where fuddenly it fell into the Lake, where feeking for it, they could not find it, but it was afterwards found in the fame place from whence king to prooue his dininity(al they had remooned it, wherewith they remayned amazed and confounded.

At the same time there appeared in the Element a great flame of fire, very bright, in the forme of a Pyramide, which begame to appeare at midnight, and went ftill mounting writh the Sonne riling in the morning, where it flayed at the South, and then vanished away. It shewed it lets him know felfe in this fort the space of a whole yeere, and euer as it appeared the people cast forth great he will do to cryes as they were accustomed, beleeuing it was a prefage of great misfortune. It happened also that fire tooke the Temple, when as no body was within it, nor neere vinto it, neyther did there fall any lightning or thunders whereupon the Guards crying out, a number of people ranne Product of fall any lightning orthunder; whereupone are constrained; and they lay the fire feemed Dushin Ma. with water, but nothing could helps, for an it was all confirmed; and they lay the fire feemed Dushin Ma. with water has the cafe toon it. to come forth of pieces of timber, which kindled more by the water that was call upon it, There was a Comet seene in the day time, minning from the West to the East, casting an infinite number of sparkles , and they say the forme was like to a long tayle , having 60

The great Lake betwixt Maxion and Tesenco, without any minde, earthquake, or any other apparant figur, began fulsinly to swell, and the wants great in such fore as all the buildings necre vato it fell downe tothe ground. They fay at that time they heard many voices, as of a

woman in paine, which faid fometimes, O my children, the time of your destruction in come: and mber whiles it laid, O my chicaren, whither foal I carry you that you perift me peterly? There appeared likewife many Monfters with two heads, which being carried before the King, fudainly Monfters. vanished. There were two that exceeded all other Montkers, being very strange; the one was, the Fithers of the Lake tooke a Bird as bigge as a Crane; and of the same colour, but of a ftrange and volcene forme. They carried it to Minejamia, who at that time was in the pallace of reares and mourning, which was all hanged with blacke; for as he had many Pallaces for his recreation to had he also others for times of affliction, where with he was then heavily charged and tormented, by reason of the threatnings his gods had given him by these forrowfull adveron tifements. The Fithers came about noorid tetting this Bird before him, which had on the top

of his head a thing bright and transparent, in forme of a Looking-glaffe, wherein he did behold a warhke Nation comming from the Balt, armed, figheing, and killing. He called his Diumes and Aftronomers (whereof there was a great number) who having feene thefe things, and not able to yeelde any reason of what was demanded of them, the Bird wanished away, to as in was never more force : whereupon Motopums remained very heavy and forrowfull. The other which happened, was a Laborer, who had the report of a very honesteman; he came write him; telling him, that being the day before at his worke, a great Eagle flew towards him; and cooks him vp in his talents, without horeing him; carrying him atto a certaine Caue, where it lefe him; The Eagle pronouncing these words, Mask mights Lind; I have brought him whom then 30 haft commanded me : This Indian Laborer looked abone on every fide, to whom he fpike, but he faw no man. Then he heard a voyer which faid water him ; Dooft then not know this man. whom thou feet lying you the ground and looking therson, herperceized a mai to lye very heavy affeepe, with royall entignes, flowers in his hand, and a flaffe of perfumes burning, as

great King Moteçuma, and answered presently : Great Land, this refembles our King Motezuma. The voice laid againe, Thou sepest true, behold what he it, and how hee lies afterpe, carelesse of the great miseries and afficitions prepared for him. Is is now time that he pay the great number of offinces lbalt then finde him without feeling. The poore laborer dust rest approach neers him , not doe as

they are accustomed to vie in that Country : whom the Labourer behalding, knew it was the

jout tom joue one suscess freing. I so poole second uses one approach terrer at in, section in the was commanded, for the great fears that yill had of ellipseling. But the voice fail , Place so four for I am miltout comparifor greater than the King Mone drifting ham, and defined being and they what I command then. Wheneyou the Lichouse touchet the fall of a performed out of the King. hand, and put it burning to his note, but he mound thought the westerny feeling. This done the voice faid voto him, that feeing he had found the King for Sleepierthe should goe awake him, and tell him what he had feene. Then the Eagle by the fame commandement, tooke the man in hs talents, and fet him in the same place where he found him , and for accomplishment of that which he had fooken, he came to advertise him. They fay, that Motograms looking on his face. 40 found that he was burnt, the which he had not felt till then; wherewith he continued excee-

ding heavie and troubled.

In the foureteenth years of the raigne of Motegame, which was in the years of our Lord Of the news 1517. there appeared in the North Seas, Shippes, and men landing, whereat the Subjects of Mosesumare-Motecume wondred much, and desirous to learne, and to be better facisfied what they were, Spaniards artithey went abourd in their Canoes, carrying many refreshings of meases and stuffes to make ualinhis Coun apparrell, vpon colour to fell them. The Spaniards received them into their Shippes, and in ex- try, and of the change of their victuals and fluffes, which were acceptable vnto them , they gave them chaines Ambassage he of falle Stones, red, blew, greene, and yellow, which the Indians imagined to be precious stones. fint them, The Spaniard, informing themfelues, who was their King, and of his great power, difmifed to them, willing them to carry those Stones anto their Lord, saying, that for that time they could not goe to him, but they would prefently returne and vifite him. Those of the coast went pre-

fently to Mexico with this melfage, carrying the representation of what they had seene, pain- Relation of ted on a cloath, both of the Shippes, Men, and Stones which they had given them. King Mote- writingby Pie came remained very penfine with this medage, commanding them not to reveale it to any one. Autes. The day following, he affembled his Counfell, and having thewed them the painted cloathes and the Chaines, he confulted what was to be done; where it was refolued to let good watches voonall the Sea coafts, to give prefent addertifement to the King of what they should discover, The yeare following, which was in the beginning of the yeare 1518. they discovered a Flecte at Sea, in the which was the Marquise of Valle Don Fernande Cortes, with his companions,

newes which much troubled Motecuma, and conferring with his Counsell, they all faid that without doubt, their great and auncient Lord Queztzaleoult was come, who had faid, that he Effects of full would returne from the East, whither he was gone. The Indians held opinion, that a great perfluious le Prince had in times past left them, and promifed to returne. Of the beginning and ground of gends, which opinion shall be spoken in another place. They therefore sent five principali Amhasadors

then Christian held the Country in his name as his Lieutenant, that he knew well it was the Toulein which had beene promifed them many yeares fince, who should return againe voto them. And therethese begin-

with rich presents, to congratulate his comming, saying, they knew well that their great Lord Queetxascoals was come, and that his servant Mosecomes sent to visite him for so he accounted himselfe. The Spaniards understood this message by the meanes of Marina, an Indian woman whom they brought with them which understood the Mexican tongue. Fernande de Cartes findivine worthip ding this a good occasion for his entry, commanded to decke his Chamber richly, and being fee. agreeing more in great state and pompe, he caused the Ambassadors to enter; who omitted no shewes of lumiliatie, but to worthip him as their god. They delivered their charge, faying, that his fernant Motecuma fent to visit him, and that he

> fore they brought him fuch Garments as he was wont to weare, when he did converse among ft them, befeeching him to accept willingly of them, offering him many prefents of great value. Corres receiving the prefents, answered, that he was the same they spake of, wherewith they were greatly farisfied, freing themselves to be curteously received and intreated by him. To conchude, the day after this Ambassage, all the Captaines and Commanders of the Fleete, came vnto the Admirall, where understanding the matter, and that this Realme of Motecume was mighty. and rich ; it feemed fit to gaine the reputation of braue and valiant men among this people, and that by this meanes (although they were few) they should be feared and received into Mexica. To this end they dicharged all their Artillery from their Shippes, which being a thing the Indian's had neuer heard, they were amazed, as if heaven had fallen upon them. Then the Span as mards beganne to defiethem to fight with them : but the Indians not daring to hazard themfelues, they did beate them and intreate them ill, shewing their Swords, Lances, Pertuisans, and other armes, wherewith they did terrifie them much. The poore Indians were by reason here-

of fo fearefull and amazed, as they changed their opinion, faving, that their Lord Topilein came. not in this troupe, but they were fome gods (their enemies) came to destroy them. When as the Ambaffadors returned to Mexico, Moreguma was in the house of audience; but before he would heare them, this miferable mancommanded a great number of men to be facrificed in his presence, and with their bloud to sprinkle the Ambassadors (supposing by this ceremony) which they were accustomed to doe in solemne Ambassages) to receive a good answer. But understanding the report and information of the manner of their Ships, Men, and Armes, he ftood per- 30 plexed and confounded : then taking counfell thereon, he found no better meanes, then to labor to flop the entry of these strangers, by Conjurations and Magicke Arts. They had accustomed often to vie this meanes, having great conference with the Deuill, by whose helpe they some-times obtained strange effects. They therefore assembled together all the Sorcerers, Magicians, and Inchanters, who being persweated by Morneums, they tooke it in charge to force this peo-Procean failts, ple to returne vnto their Country, For this confideration, they went to a certaine place which they thought fit for the inuocation of their Douils, and practifing their Arts (a thing worthy of confideration ) They wrought all they could; but feeing nothing could prevaile against the Chri-Stiess, they went to the King, telling him that they were more then men, for that nothing might hart them, notwithstanding, all their Conjurations and Inchantments. Then Moteca- 40 me aduled him of another policie, that faining to be very well contented with their comming, he commanded all his Countries to serve these calestiall gods that were come into his Land. The whole people was in great heatineffe and amazement, and often newes came that the Spaniards inquired for the King, of his manner of life, of his house and meanes. He was exceedingly vexed herewith : some of the people and other Negromanciers admised him to hide himselfe, offering to place him whereas no creature should ever finde him. This feemed base vnto him, and therefore he resolved to attend them, although it were dying. In the end he left his Houses and royali Prilaces to lodge in others, leaving them for these gods

I pretend not to intreate of the acts and deedes of the Spaniards, who conquered New Spaine, 50 nor the strange adventures which happened vnto them, nor of the courage and invincible valour of their Captaine Don Fernando Cortes : for that there are many Histories and Relations thereof, as those which Fernande Corses himselfe did write to the Emperour Charles the fift, although they be in a plaine stile, and farre from arrogancy, the which doe gine a sufficient testimony of what did passe, wherein he was worthy of eternall memory, but onely to accomplish my intention: Tam to relate what the Indians report of this action, the which hath not to this day beene written in our vulgar tongue. Moteçuma therefore, having notice of this Captains victories, that he advanced for his conquest, that he was confederate and loyned with them of Tlafcalls, his capitall enemies, and that he had feuerely punished them of Cholola his friends, he studied how to deceine him, or elfe to try him in fending a principall man vnto him, attyred with the lake ornaments and royall entignes, the which should take voon him to be Motecuma, which fiction being discourred to the Marquise by them of Tlascalla (who did accompany him) he tent him backe, after a milde and genule reprehension, in feeking so to deceive him: whereupon Motograme was to confounded, that for the feare thereof he returned to his first imaginations

## CHAP.4.S.3. Cortes entertained at Mexico. Spaniards perfidiently cruell; 1023

and practiles, to force the Christians to retire, by the innocation of Conjurers and Witches. And therfore he affembled a greater number then before, threatning them, that if they returned with out effecting what he had given them in charge, not any one should escape, whereanto they all promised to obey. And for this cause, all the Deulis officers went to the way of Charles, by the Trecalignes a which the Spaniards (hould passe, when mounting to the top of a hill, Tozcalipaca, one of their Denill god. principall gods, appeared vinto them, as comming from the Speniards campe, in the habit of Chalcas, who had his paps bound about eight fold with a cord of reedes, he came like a man befide himfelfe, out of his wits, and drunke with rage and furie. Being come to this troupe of Witches and Conjurers, he ftayed, and fpake to them in great choller, Why come you bither? what dorb Mo-

10 tecuma pretend to doe by your meaner? He had admifed himfelfe too late for it is now determined, that his Kingdome and humon [hall be taken from him, with all that he polififeth, for purobaneire of the pred tyramines he hash committed against his Subieths, having governed not like a Lord, but this a traition and syrant. The Inchanters and Conjurers hearing there words, knew it was their idolf, and humbling themselues before him, they presently built him an Altar of Stone in the same place, conering it with flowers which they gathered thereabouts, but he contrariwife, making no account of these things, began againe to chide them, faying ! White come jim bither to doe, O je traitom; ! Resurve presently and behold Mexico, that you may understand what shall become thereof. And they fay, that returning towards Mexico to behold it, they did fee it flaming on fire. Then the Des nill vanished away, and they not daring to passe any farther, game notice thereof to Motez.na

20 m4, whereat he remained long without speaking, looking heanily on the ground; then he faid, What shall we doe if god, and our friends it ease we, and contrarriss so, they being and faister our occurse?

I am now results, and we cought at 10 results in this point, that happen what may, we must not style
user bide our select. On some any segre of courses sight. I easely partie to appeal and informs, who bean entitle secret bands to defend themselects. Having spoken this, he held his peace, being transported into an extaite. In the end, the Marquelle approaching to Mexico, Moterama refolued to make of necessity a vertue, going three or foure leagues out of the Chie to receipe him with a great maiesty, carried upon the shoulders of foure Noblemen, under a rich Canapy of Gold and Feathers. When they met, Motezams descended, and they fainted one another very curteously. Don Fernando Cortes faid vinco him, that he should not care for any thing, and that he came not

20 to take away his Realme, nor to diminish his authority. Motezame lodged Corter, and his companions in his royall Pallace, the which was very fately, and he himselfe lodged in other priuate houses. This night the Souldiers for ioy discharged their Artillery, wherewith the Indians were much troubled, being vnaccuttomed to heare fuch Musicke. The day following, Corres caused Motezama and all the Nobles of his Court to affemble in a great Hall, where being set in a high Chaire, he laid vnto them, that he was seruant to a great Prince, who had fent them into these Countries to doe good workes, and that having found them of Tlafalle to be his friends (who complained of wrongs and greenances done wrote them daily by them of Mexico)he would Good fibing vnderstand which of them was in the blame, and reconcile them, that hereafter they might no in troub more afflict and warre one against another; and in the meane time, he and his breehren (which

40 Were the Spaniards) would remaine still there without hurting them : bur contrariwise, they would helpe them all they could. He laboured to make them all understand this discourse, whing his Interpreters and truchmen. The which being understood by the King and the other Mexican Lords, they were wonderfully well facisfied, and shewed great signes of lone to Cortes and his company, So it 15, that by some occasions, many complaints, griefes, and lealousies grew on either file. The which Cortes finding, & that the Indians mindes began to be diffracted from them, he thought it necessary to assure himselfe, in laying hand voon King Motecume, who was seized on, and his legges fettered. Truely this act was ftrange vnto all men, and like vnto that other of his, to have burnt his Shippes, and thut himfelfe in the midft of his enemies, there to vanquish frange ator to dye. The mischiefe was, that by reason of the vnexpected arrivall of Pamphilo Naruaes tempts. at the true croffe, drawing the Country into mutiny, Correr was forced to absent himselfe from

Mexico, and to leave poore Mateguma in the hands of his companions, who wanted different nor had not moderation like vnto him : fo as they grew to that diffention, as there was no meanes to pacifie it.

When as Cortes was absent from Mexico, he that remayned his Lieutenant, resolved to pu- Of the death nish the Mexicans severely, causing a great number of the Nobilitie to be staine at a maske, which of Mercuna, they made in the Palace, the which did so farre exceed, as all the people mutined , and in a fue and the Spanithey made in the Palace, the which did to tarre exceed, as all the people intuitied, and the partial rious rage, tooke Armes to be reuenged and to kill the Spaniards. They therefore belieged them out of Mexica, in the Palace, prelling them fo neere, that all the burt the Spaniards could doe them with their chap.a6. Artillerie and Crosse-bowes, might not terrifie them, not force them to retyre from their enter-60 prife, where they continued many dayes, flopping their victuals, not fuffering any one to enter

or issue forth. They did fight with stones, and cast Darts after their manner, with a kind of Lances like vnto Arrowes, in the which there are foure or fixe very sharpe Rasors, the which are fuch (as the Hiltories report) that in these warres, an Indian with one blow of these Ralors, almost cut off the necke of a Horse, and as they did one day fight with this resolution and furie,

the Spaniarde to make them ceale, shewed forth Mategume, with an other of the chiefe Lords of Mexico, vpon the top of a plat-forme of the house, coursed with the Targets of two Sculdiers that were with them. The Mexicans feeing their Lord Moreguna, flayed with great alence, Then Macouna cauled the Lord to adulic them to pacific themselves, and not to warte against the Spaniards, feeing that (he being a prifoner) it could little profit him. The which being vaderithood by a yong man, called Queen tempe, whom they now refolged to make their King, her spake with a loudwoyce to Moteguma, willing him to retyre like a Villaine, that seeing he had beene such a Coward, as to fuller himfelfe to bee taken , they were no more bound to obey him, but rather should punula him as he descrued, calling him Woman for the more reproach, and then he began to draw his Bowe and to shoot at him, and the people began to cast stones at him, and 10 to continue their combate. Many fay that Motecuma was then burt with a flone, whereof her dyed. The Indians of Mexico affirme the contrarie, and that hee dyed as I will thew hereafter. Alsaro, and the reft of the Spaniards feeing themselves thus preffed, game intelligence to Captaine Corres, of the great danger they were in : who having with an admirable dexteritie and valour, given order to Narvaer affaires, and affembled the greatest part of his men, heeretumed with all speed to succour them of Mexico, where observing the time the Indians reft (for it was their cultonie in warre, to reff enery fourth day) Hee one day advanced with great policy and courage, fo as both he and his men entred the Palace, where as the Spaniar de had fortified themfelues : they then thewed great fignes of loy , in discharging their Artillerie. But as the Mexicans fury increased (being out of hope to defend themselves) Cortes resolved to passe away se. 20 cretly in the night without bruit. Having therefore made Bridges to palle two great and dangerous passages, about mid-night they issued forth as secretly as they could, the greatest part of his

people having passed the first bridge, they were discovered by an Indian woman before they

could palle the second, who cryed out their enemies fled, at the which voyce all the people ranne together with a horrible furie : fo as in passing the second bridge, they were so charged and purfied, as there remay ned aboue three hundred men flaine and hurt in one place; where at this day

there is a small Hermitage, which they viproperly call of Mariyrs. Many Spaniards ( to pre-

ferue the gold and jewels which they had gotten) perished, and others staying to carry it away,

were taken by the Mexicans, and cruelly facrificed to their Idols. The Mexicans found King

Motecome dead, and wounded as they fay with Poniards, and they hold opinion that that to night the Spaniards flue him with other Noblemen. The Marqueffe in his Relation sent to the Emperor, writes the contrary, and that the Mexicans killed him that night with a fonne of Me-

reft in warre.

Succession of fuperstition. Royall cou-

hearts. Quid. non mortalis. pectora cont

tecuma, which he led with him among it other Noblemen, faying, that all the treasure of gold, flones, and filmes, fell into the Lake and was never more feene. But how foener, Mstecume dyed miserably, and payed his deserts to the sust indgement of our Lord of Heaten for his pride and tyrannie; his body falling into the stades; power, they would make him no Obsequies of a King, no not of an ordinarie person, but cast it away in great disdaine and rage. A seruant of his having pitie of this Kings miferie (who before had beene feared and worshipped as a God) made a fire thereof, and put the alhes in a contemptible place. Returning to the Spaniards that escaped, they were greatly tyred and turmoyled, the Indians following them two or three dayes very refo- 40 lutely, giving them no time of reft, being so distressed for victuals, as a few graines of Mays were divided amongst them for their meate. The Relations both of the Spaniards and Indians agree, that God delivered them here miraculously, the Virgin Mary defending them on a little Hill, You here hear whereat this day three leagues from Mexico, there is a Church built in remembrance thereof. a Issuit. Gold called our Lady of succour. They retyred to their ancient friends of Tlafcalla, whence (by their aide, and the valour and policy of Cortes) they returned afterwards to make war against Mexico, by Water and Land, with an invention of Brigantines, which they put into the Lake, where after many compats, and about threefcore dangerous battailes, they conquered Mexico, on Saint Huppolines day, the 13. of August, 1521. The last King of the Mexicans (hauing obstinately maintayned the warres) was in the end taken in a great Canoe, whereinto hee fled, who being 50 brought with some other of the chiefest Noblemen before Fernando Cortes, this petie King with mes that for the strange close the strange course to the strange course to the strange course, that perce king with the strange colorist and courage, of awaing his algert, came never to Cortes, and faid write him, wrought mits. Further himself, the strange course from t eles in all the but to give thee this dagger tokill me therewith. Cortes ani wered, that he would not kill him, nei-Spanish indies, ther was it his intention to hurt them: but their obstinate folly was guitte of all the milerie and and full doth afflictions they had fuffered, neither were they ignorant how often he had required peace and aar Samts amicrons they had infered, neither were they ignorant new often he had required peace and a-firing, and in mitte at their hands. Hee then commanded them to be intreated curteously. Many strange and European pil. admirable things chanced in this Conquest of Mexico : for I neither hold it for an vitruth, nor gr miges, and an addition, which many write, that God favoured the Spaniards by many miracles. Purgatorie vi- It is most certaine by the Relations of many, and by the Histories which are written, that in 60

well at Perm as in New Spanne, when as the Christians first fet footing, that these Kingdomes (Hillians) in-10 and Monarchies were come to the height and period of their power. The Inquise of Pers, posses digras out face. fing from the Realme of Chille beyond Quieto, which are a thouland leagues, being most abuit restamen dant in gold, filuer, fumpenous feruices, and other things : as also in Mexico , Margania commanded from the North Ocean Sa, vnot the South, being feared and worthingoed not as a man, but rather as a god. Then was it, that the northingoed horses a man, but rather as a god. Then was it, that the northing hord had determined that thirthing to Bande, which dolloued the Realment and Kingdomics of the Word, finded also diddle fiblic of what, this new World. And as the Law of Christ came when is the Robbe Monarchie was at her come? greatnesse: fo did it happen at the West Inder, wherein wee see the full prodidence of our Lord! Words greatness solded it happen at the west smart wheter we see the said productive of the hely Swords, twist For being then in the World, I meane in Emisse, but one head and temporal Lord, if the hely Swords and Apolles and Doctors doe note, whereby the Gospell might more talify bee imparted to so many People and greedic Soul-20 Nations: Euen fo hath it happened at the Indies, where having given the knowledged Chirit diers? The to the Monarche of fo many Kingdomes, it was a meaney that afterwards the knowledge of the Princeofpeace to the Monateris of to many Eurogounes, it was a meaning and activates a monated and little people; yea, there is herein a 'pecial ching' to be oblegated, char to killbut to be as the Lordrof Curies and Mexics conquered new Lands, for they brought in their owner large little, december to the conditions of the conditi guage: for although there were (as at this day) great discription of tongues, yet the Courtly speech to bee a fisme of Cufes, did and doth at this day runneaboue a thousand leagues, and that of Mexico day not Lamb, that the extend farre leffe, which hath not beene of finall importance, but hath much profited in making World might the preaching easie, at such a time, when as the Preachers had not the gift of many tongues, as in slay a World old rimes. He that would know what a helpe it hath beene for the competition of this people in that binefield in the binefiel many other places, where they have not preuzyled to much by their preaching in first years, fauer and con-as they have done in Pers and new Spaine in leffe their fire. If they will in pure the castle to the or Alexander riches of the Country : I will not altogether denie it. Ter were it im possible to hape to great had been fitter wealth, and to be able to preferre it, if there had not beene a Monarchie. This is also a worke of Preachers in God in this age, when as the Preachers of the Gospell are to cold and without zeale, and Mer- this kinde ther chants with the heat of constroutinesse and define of command, fearth and distour new poole Pers and Past whither we passe with our commo littles; for at Saint Angallow saith, the prophete of the campaigness whither we passe with our commo littles; for at Saint Angallow saith, the prophete of the saint and the saint saint

This is well knowne in Porn that the division between the two prothers Mahaalsa and Gual, the Swordhen on, the great King Guanacapa their father being newly dead, game entrie to the Marquelle Don the Word, as Francis Pixarre, and to the Spaniards, for that either of them defired his alliance being builed in bookes de ven warre one against the other. The like experience hath beene in new Spaine, that the side of those cwands ind. of the Prounce of Tlafcalla, by reason of their continual hatred against the Mexicans , gave the fall bath shewvictorie and fiegniorie of Mexico, to the M regielle Fernando Cortes and his men, and without ed, as is themthem it had beene impossible to have wome it, yea, to have maintayned themselves within the Country the Country

They are much deceived that fo livtle effective the Indians, and indge that (by the advantage days) ub. a. de the Spaniards haue over them in their Persons, Hories, and Armes, both offensue and defensive) som mang c,36. they might eafily con quer any Land or Nation of the Indies.

Chille Hands yet, or to lay better, Aranco and Tuecapel, which are two Cities, where our greatest helpe of the Semile Spaniards could not yet win one toot of ground, although they have made warre there about couquent indifine and twentie yeeres, without sparing of any cost. For this barbarous Nation , having once on quartels loft the apprehension of hoese and thot; and knowing that the Spaniards fall as well as other made that eamen, with the blow of a ftone or of a dart, they hazard themselves desperately entring the Pikes sie which their vpon any enterprife. How many yeeres haue they leuted men in new Spaine, to fend against the gold made de-60 Chrebymeques, which are a small number of naked Indians, armed only with bowes and arrowest Discres Nactyet to this day they could not be varquified, but contrarisvile, from day to day they grow more on which the desperate and resolute. But what shall we say of the Chicos, of the Chicagnamas, of the Piscoco-Spaniards wes, and all the other people of the Andes? Hath not all the flower of Pers beene there, bringing could never with them to great proution of Armes and Merias we have feene ! What did they ! With what this day.

fulfilled, in that the Church of Christ is excended, not onely to the right hand, but allo to the did certes and left : which is (as hee declareth) by humane and earth! y meanes, which they feeke those com- Prarro follows and monly then Islus Christ. It was also a great pronidence of our Lord, that when as the first Span and the Christian in the mands arrived there, they found aide from the Indians themselves, by reason of their partialities those parts

victories returned they Surely, they returned very happy in faving of their lines, having loft their baggage and almost all their hortes. Let no man thinke (speaking of the Indians) that they are men of nothing; but if they thinke fo, let them goe and make triall. Wee must thenatting bute the glorie to whom it appertaynes, that is, principally to God, and to his admirable difpolition : for if Moreguma in Mexico, and the lugua in Peru, had beene relogite to relift the Spaniards, and to ftop their entrie, Corter and Pizarre had prevayled little in their landing, atthough they were excellent Captaines. It hath also beene a great helpe to induce the Indiana to receive the Law of Chrift, the subjection they were in to their Kings and Lorde, and also the feruitude and flauerie they were held in by the Deuls tyrannies and insupportable voke. This was an excellent difpolition of the dinine Wiledome, the which drawes profit from ill to a good end, and receives his good from an others ill, which is hath not fowen. It is most certaine that le no people of the West Indies have beene more apt to receive the Gospell, then those which were most subject to their Lords, and which have beene charged with the heaviest burthens, as well of Tributes and Services, as of Cultomes and bloudie Practifes. All that which the Mexicon Kings and those of Para did possess, is at this day most planted with Christian Religion, and where there is leaft difficultie in the Gouernment and Ecclesia steal Discipline. The Indiana were so wearied with the heavy and insupportable yoke of Satans lawes, his facrifices and ceremonies. whereof wee have formerly fooken, that they consulted among themselves, to seeke out a new Law, and an other God to serue. And therefore the Law of Christ seemed vinto them, and doth at this day feeme inft, fweet, cleane, good, and full of harpineffe.

And that which is difficult in our Law, to believe so high and soveraigne Mysteries, hath been easie among them, fur that the Deuill had made them comprehend things of greater difficultie. and the lefte-fame things which hee had stolen from our Euangelical! Law, as their manner of Communion and Confession, their adoration of Three in One, and such other like, the which against the will of the Enemie, have holpen for the easie receiving of the Truth by those who before had embraced Lyes. God is wife and admirable in all his workes, vanquishing the Adversarie euen with his owne weapon, hee takes him in his owne snare, and kills him with his owne fword. Finally, our God (who had created this People, and who feemed to have thus long forgot them), when the houre was come, hee would have the same Deuils, enemies to mankinde, whom they fally held for gods; should give a testimonie against their will, of the true Law, 30 the power of Christ, and the triumph of the Crosse, as it plainly appeares by the presages, prophelies, fignes, and prodigies, here before mentioned, with many others happened in duers parts, and that the fame ministers of Satan, Sorcerers, Magicians, and other Indians have confessed it. And wee cannot denie it (being most euident and knowne to all the World) that the Denill dareth not hisse, and that the Practices, Oracles, Answers, and visible Apparitions, which were to ordinarie throughout all this Infidelitie, have ceased, whereas the Croffe of Christ hath beene planted, where there are Churches, and where the Name of Christ hath beene confessed. And if there be at this day any curfed minister of his, that doth participate thereof, it is in Caues. and on the tops of Mountaines, and in fecret places, faire from the name and communion of Christians. The Soueraigne Lord be blessed for his great mercies, and for the glorie of his holy 40 Name: And in truth, if they did gouerne this people temporally and spiritually, in such fort as the Law of Iesus Christ hath set it downe, with a milde yoke and light burthen, and that they would impose no more upon them then they can well beare, as the Letters Patents of the good Emperour of happy memorie doe command, and that they would imploy halfe the care they haue to make profit of these poore mens sweats and labours, for the health of their soules, it were the most peaceable and happy Christian part of all the World, &c.

#### CHAP. V.

Of the ancient superstitions of the Mexicans and Indians of America, gathered out of the fifth Booke of Iosermys ACOSTA.

Irft, although the darknesse of Insidelitie holdeth these Nations in blindnesse, yet in many things the light of Truth and Reason workes somewhat in them. And they commonly acknowledge a supreme Lord and Author of all things, which they of Peru called Vnachocha, and gave him names of great excellence, as Pachacamae, or Pachayachachie, which is, the Creater of Heaven and Earth : and U- 60

fape, which is, admirable, and other like names. Him they did worthip, as the chiefest of all, whom they did honor inbeholding the Heanen. The like wee see amongst them of Mexico, and China, and all other Infidels. Which accordeth well with that which is faid of Saint Paul, in the Alls of the Apostles, where he did see the Inscription of an Altar; Ignoto Dee:

to the onlymme God. Whereupon the Apolito tooke occasion to preach wate them, faying , Hee when you worth is mithent knowing, him dae I prace wate pan 3th like fort, thefe which as this day Affilia dee preacht the Godpell to the Bidisar, finde no great difficultie to perferable them; that there is a High God and Lord over ally and that this is the Christians God, and the true God, And yet it bath caused great admirationlypance, sharal shough they had this knowledge, yet had they no proper Name for God, if weethall feeke into the finding tongue for a word to an weet to this No proper Name of God, as in Latin, Dear; in Greeke, Theor, in Habrew; H/; in Arabike, Alla; but we minister thall not finde ampin the Cuffeen or Mericantonques. Some flich as preach or write to the Indiman, vic our Speilleaume Dies, fitting to trate acent to presintention of the Vaden tingues, the which differ intellegenders appeares the small knowledge they had of God, foring they cannot formuch as named him, if in the check to our kets a very an erach they had forms little known ledge, and closectors in Norm this frince thint; such Fermile; sedich they called Pachacoment which was the principal Candy and odding Resime . And as is flict become faid, this wood of Pachaco was the principal canegament command upon the state of the interest and interest and interest as much to fay, as the Creator, yet in this Temple they yet de their Idolates interesting to the Deuill and Figures. They likewife made Sacrifices and Offerings to Unrecebe, which held the Chiefe placetimengebbe working in which the Kaing's frynar made! Handel they falled the Sacrifices and Offerings to Unrecebe, which held the resident placetiment of the Sacrifices and Offerings to Unrecebe, which held the resident placetiment to the Sacrifices and Offerings to Unrecebe, which held the contribute of the Sacrifices and Offerings to Unrecebe, which held the Chiefe of the Sacrifices and Offerings to Unrecebe, which had been supported to the Sacrifices and Offerings to Unrecebe, which had been supported to the Sacrifices and Offerings to Unrecebe, which held the Sacrifices and Offerings the com, to would they offer a rifeeth water there; as vanis guidan and as the Acherists, of A. Ma-no lite ( which is ablant ) living that the Vipht and nor here also keep called him Good ?

Name to Mexicola, or their lipidena Golf, then unlikely of commonly they have said dae. Of the first adore amongst the Infidels, is the Same a and after, their chime unlikely. adore amongst the Infidels, is the Source; and after, those things which are most somarke kinde of Idoable in the celeficial or elementarie names, as the Monte, Searces, Sea, and Land. Instillage, supporting at to be a mass in heaven, swith a Sling and a Mace, and that in is in his power. Some their fe Institute, Upporting a 17 to Munder, and all the re il that appearance to the Riegiotraf the Aire, where cond God: and to caule Raine, plants, Thursder, and all the refer the colors the Colors expender. Je was a Grince (for inchery called their Oranories) general soi all the fisherenty Bo-30 these of Pers, off-ring vato himimany far ribres and in Gifes, which is the Cours and Masto-polican Citie disputed farifica children whose him, as to the Course. They did weather these, order.

Miracoche, the Sunse, and Thunder, after amother manner then all the reft, so Palla swrites , who had made thigh those of, they did pue as it were a Gamtlet de Glove vpondheir hande, when they Thouse their died life them IP 20 worthip thems. They died wrothip the Sarth ; which they celled Parhenems, Injustry falunt at the Ancients did the gedieth: Talan: and The first tike writ; which they call Administration in the Humans fa-Ancients worthippert Theries or Nepsane. Moreover, they did worthip the Laine Lower, which were the Armes and Blazons of the legua, in ith two Saakes Streeched out on either fide. A. Earth, Sea mongh the Scarres they all did commonly weethin that which they called Colen , and wer here monght the Starres they are minuted the starres to divers Starres, and those which had neede of their this ped. 40 fauour did worfing them, as the Shepherd did facrifice to a Scarre, which they called Freibilles which they hold to be a Sheepe of diners colours, signing the same to preferne their Cattell; and they imagine it is that which the Aftronomers call Lynn. Thele Shopherds worthin two other Starres, which walke neere voto them, they call them Camebillay, and Forachillay; and they favne them to be an Ewe and a Lambe. Others worthipped a Starre which they called Matheeney, to which they attribute the charge and power ouer Serpents, and Snakes; to keepe them from burring of them. They afcribe power to another Starre, which they called Cha chay (which is as much as Tigre) over Tigres, Beares, and Lions, and they have general ned, that of all the beafts of the earth, there is one slone in beanen like vinto them, the which bath care of their procreation and increase. And so they did obserue and worthin divers Scarres, as those 50 which they called Chasens, Topatarca, Manuseus, Meres, Magis quiesy, and many other, So as it feemed they approached forms hat neere the perspectitions of Phenes Idees. The Mexicans almost in the fame manner after the fupcome God, worthipped the Same : And therefore they called Metions Hornande Cortez (as he hath written in a Letter lent vatorhe Emperor Charles the fifth) Some flip the Single of the Sanne, for his care and courage to compalie the Earth. But they made their greatest adoration to an Idoll, called Vitzliputzis, the which in all this Region they called the most puttine, Distinutation and Lord of all things: for this cause the Missions built him a Temple, the greatest, the fairest, Temple, the highest, and the most sumptuous of all other. The stuation and beautie thereof, may well be conjectured by the raines which yet remains in the midft of the Citie of Mexico. But here the

Mexicans Idolatrie hath beene more pernicious and hurofull then that of the laguas, as wee shall

Idols, and not conacurall things, although they did actribute naturall effects to these Idolet, as Raine, multiplication of Cattell, Warre, and Generation, even as the Greekes and Latines have for-

ged Idols of Phebus, Mercurie, Impirer, Minerua, and of Mars. To conclude, who fo thall

neerly looke into it , shall finde this manner which the Deuill hoth weed to deceine the Indians,

60 fee playner hereafter, for that the greatest part of their adoration and Idolatrie, was imployed to

206 3I. Of the Idolas try the Indians vícd o parti-

to be the same where with he hath deceined the Greekes and Romans, and other ancient Greek tiles , giving them to vaderstand that these notable creatures, the Source, Monte, Seaver, and En lements, had power and authority to doe good or harms to men. Their manner to pray to Virginia dolwithwords seebs, to the Sunne, the Starres, and the reft of their Idols, was to open their hands and to make a certaine found with their mouthes thike people that killed) and to aske that which every one defired in offering his Sacrifices; yet was there great difference betwist the words they wied in speaking to the great Tremmercules, to whom they did attribute the chiefe power and commandement over all things; and those they virid to others, the which every one did worthippe prinately in his house, as Gods or particus. for Lords, faying, that they were their Interceffors to this great Tecomorecooks. This manner to oof worthip, opening the hands, and as it were "kiffing, hath formething like to that which lob had in horrour, as fit for Idolaters, faying, If have kiffed my heads such my mouth, bebolding the Summe when it frinet, or the Moone when it is light, the which is a great mignite, and to done the most great God.

> He Deuill hath not beene contented to make thefe blinde Indianato worthippe the Sunne. Moone, Starrer, Earth, and Sea, and many other generall chings in nature, but he hash pale. fed on turcher, gining them for God, and making them subject to base and shiect things, and for the most part, fithy and infamous: for they wouthipped Rivers, Fourtaines, the monthes of Rivers, entries of Mountaines, Rocket or great Stones, Hils and the tops of Mountaines, which they 20 call Apachnus, and they hold them for matters of great denotion. To conclude, they did worthin all things in nature, which feemed to them remarkable and different from the reft, as acknowledge. ing some particular deitico.

Theie thewed me in Caxamales of Nafea a little hill or great mount of Sand, which was the chiefe Idoll or Guace of the Ancients, I demaunded of them what diminity they found in it; They answered, that they did worship it for the wonder, being a very high mount of Sand, in the midft of very thicke Mountaines of Stone. We had neede in the Citie of Kings, of great ftore of great wood; for the melting of a Bell, and therefore they cut downe a great deformed Tree, which for the greatnesse and antiquity thereof had beene a long time the Oratone and Guaca of the Indians. And they believed there was a certaine Diminity in any thing that was to extraordinary and firange in his kinde, attributing the like vnto fmall Stones and Mettals; yea vnto rootes and fruites of the earth, as the rootes they call Paper. There is a firange kinde which they call Lallabuas, which they killed and worshipped. They did likewise worship Beates, Lyons, Tygres and Snakes; to thend they should not hurt them ; and such as their gods be, such are the things they offer vnto them in their worship. They have vsed as they goe by the way, to east, in the cross wayes, on the hils, and toppes of Mountaines, which they call Apachittat olds floors, Feathers, and Coca chemed, being an hearbe they vie much. And when they have nothing left, they call a Stone as an offring, that they might paffe freely, and have greater force, the which they fay increaseth by this meanes, as it is reported in a provinciall Counfell of Pe-. And therefore they finde in the hie-waies great heapes of Stones offred, and fuch other 40 things. They vied another offring no lesse pleasant and ridiculous, pulling the haire from the eyebrowes to offer it to the Sunne, Hils, Apachittas, to the Windes, or to any other thing they feare. Such is the mileries that many Indians have lived in, and doe to this day, whom the Demill doth abuse like very Babes, with any foolish illusion what soener.

They report of one of the Kings Ingmis, a man of a fubtile spirit, who (seeing that all his predeceffours had worshipped the Sunne) faid, that he did not take the Sunne to be God, neither could it be, for that God was a great Lord, who with great quiet and leafure performed his workes, and that the Strine doth never cease his course, faying, that the thing which laboured fo much could not feeme to be God.

They came to the height of Idolatry by, the fame meanes the Scripture maketh mention of : 50 first they had a care to keepe the bodies of their Kings and Noblemen whole, from any ill scent or corruption about two hundred yeeres. In this fort were their Kings Ingmas in Cufco, every one in his Chappell and Oratory, foas the Marqueffe of Canerse beeing Viceroy, to root out Idolatry, caused three or foure of their Gods to be drawne out and carried to the Citie of Kings. which bred a great admiration, to fee thefe bodies (dead fo many yeeres before) remayne to faire and also whole. Every one of these Kings Ingues left all his Treature and Revenues, to entertayne the place of worthip where his body was laid, and there were many Ministers with all his Family dedicated to his feruice : for no King Successor did viurge the Treasures and Place of his Peedeceffor, but he did gather all new for himfelfe, and his Palace. They were not content with this Idolatry to dead bodies, but also they made their figures and representations: and euery King in his life time caused a figure to be made wherein he was represented, which they called Gnasigni, which fignifieth Brother, for that they should doe to this Image, during his life and death, as much honour and reuerence as to himfelfe. They carried this Image to the warres, and so procession for raine or faire weather, making fundry Feasts and Sacrifices vinto them. There have

CHAP, S. Wily Portugall escapes Indian cruelty. Their Purgatory and Funerals. 1029

heene many of these Idols in Cusco, and in that Territory, but now they say that this Superfition of worshipping of stones hath altogether cealed, or for the most part, after they had beene discouered by the diligence of the Licentiate Pollo, and the first was that of the Ingine Roche, chiefe of the faction or race of Hanam Cafes. And we find that among other Nations they had in great estimation and reuerence the bodies of their Predecessors, and did likewise worthip their Images.

"He Indians of Permbeleeued commonly that the Soules lived after this life, and that the Of Superflitte He Indians of Perm Beteened commonly that the Land in 10 these Articles. But they are not yet come to the knowledge of that point, that the bodies should to the dead, rife with the Soules. And therefore they did vie a wonderfull care, as it is faid, to presente the Immorality of bodies which they honoured after death: to this end their Successors gaue them Garments, and soules become made Sacrifices vnto them, especially the Kings Inguar, being accompanied at their Funerals, ued but not rea with a great number of feruance and women for his feruise in the other life : and therefore on the furredion of ; day of his decease, they did put to death the woman he had loued best, his Servants and Officers, the bodies: that they might ferue him in the other life.

When as the Guesacapa dyed (who was father to Aingualpa, at what time the Spaniards entred) they put to death about a thouland persons of all ages and conditions, for his seruice to actual one

company him in the other life, after many fongs and drunkennesse they slew them; and these deadman, 20 that were appointed to death, held themselves happy. They did facrifice many things vnto them, especially yong children, and with the bloud they made a stroake on the dead mans face, from one care to the other. This superstition and inhumanity, to kill both men and women, to accompany and ferue the dead in the other life, hath beene followed by others, and is at this day yfed among it some other barbarous Nations. And as Pollo waites, it hath beetle in a manner generall throughout all the ludies. The reuerent Beda reports, that before the Englobmen were Superflino conserted to the Goipell, they had the same custome, to kill men to accompany and ferne of the old hadthe dead. It is written of a Portugall, who being captive among the Barbarians, hallbeine of hurt with a dark, so as he loft one eye, and as they would have sacrificed him to accompany a Paringit wile. Nobleman that was dead, he faid vuto them; that those that were in the other life, would 30 make (mall account of the dead, if they gave him a blinde man for a companion; and that it were better to give him an attendant that had both his eyes. This reason being found good by the Barbarians, they let him goe. Besides this superfittion of Sicrificing men to the dead, being wied but to great Personages, there is another fatre more generall and common in all the Indies, which is, to fet meate and drinke upon the graue of the dead, imagining they did feede thereon: the which hath likewife beene an errour amongst the American, as Saint Austine writes, and therefore they gave them meate and drinke. At this day many Indian Infidelado fecretly draw their dead out of the Churchyard, and bury them on hils, or upon passages of Mountaines, or else in their owne houses. They have also wied to put Guld and Silver in their mouth, hands, and bosome, and to apparell them with new Garments durable, and well lined under the herfe. They believe that the foules of the dead wandred up and downe and indure cold, cies as in Po-

meate and drinke.

chirft hunger and travel, and for this cause they make their anniuersaries, carrying them cloathes, pith legends.

Hauing reported what many Nations of Post have done with their dead, it shall not be from Ofthe manner the purpose, to make particular mention of the Mexicans in this point, whose mortuaries of burying the were much folemnifed, and full of notable follies. It was the office of the Priefts and religious dead among were much lotermined, and min or notable rollies. It was the once of the Priess and rengious the Sterices of Mexico (who lined there with a strange observance, as shall be said hereafter) to interre the and sindy of dead, and doe their obsequies. The places where they buried them, was in their Gardens, and ther Nations. in the Courts of their owne houses : others carried them to the places of facrifices which were chap. 8. to done in the Mountaines : others burnt them, and after buried the afhes in their Temples ; and Places of but they buried them all, with whitefocuer they had, of dipparell, Stones and lewels. They did riall put the after of fuch as were burnt into pots, and with them, the Lewels, Stones, and Earerings of the dead, how rich and precious foeder. They did fing the Funerall offices, like to ant weres, and did often lift up the dead bodies, doing matry ceremonies. At these mortuaries they did eate and drinke; and if it were a person of quality, they gave apparell to all such as came to the interment. When any one dyed, they kild him open in a chamber, wntill that all his kinffolks and friends were come, who brought prefents with othe dead, and faluted him as if he were lining. And if he were a King or Lord of fome towns, they offered him flanes to be put to death with him, to the end they might ferue him in the other world. They likewife put to death his

60 Prieft, or Chaplaine (for every Mobleman had a Pereft which administred these ceremonies with in his house) and then they kalled him, that he might execute his office with the dead. They other Officers likewife killed his Cook, his Burler, his Dwarfes, and deformed men, by whom he was most fer-killed. ued:neither did they spare the very brothers, of the dead, who had most served them; for it was a greatnesse amongst she Noblemen, to be served by their brethren and the rest. Finally, they

put to death all of his traine, for the entertaining of his house is, the other world; and left pouerty should oppresse them, they buried with them much wealth, as Gold, Silver, Stones, Curtins of exquifite worke, Bracelets of Gold, and other rich peeces. And if they burned the dead, they vied the like with all his Servants, and ornaments they gave him for the other world. Then tooke they all the ashes they buried with very great solemnity. The obsequies continued tenne dayes with fongs of plaints and lamentations, and the Priests carried away the dead with so many ceremonies, and in fo great number, as they could scarce accompt them. To the Captaines and Noblemen they game trophees and markes of honour, according to their enterprifes and valor imployed in the wars and governments; for this effect they had armes and particular blafons. They carried these markes or blazons to the place where he desired to be buried or burnt, marching before the body and accompanying it, as it were in procession, where the Priests and officers of the 10 Temple went with divers furnitures and ornaments, fome casting incense, others finging, and fome founding of mournfull Flutes and Drums, which did much increase the forrow of his kinffolkes and fubices. The Priest who did the office was decked with the markes of the Idoll which the Nobleman had represented; for all Noblemen did represent Idols, and carried the name of Come one; and for this occasion they were esteemed and honoured. The order of Knighthood did commonly carry these foresaid markes. He that should be burnt, being brought to the place appointed, they inuironed him with wood of Pine trees, and all his baggage, then fet they fire ynto it increasing it faill with goomie wood, vntill that all were connerted into after, then came these forth a Priest attired like a Deuil, having mouthes upon every joynt of him, and many eyes an of glasse, holding a great staffe, with the which he did mingle all the ashes very boldly, and with so terrible a gesture, as he terrified all the assistants. Sometimes this Mimister had other difference habits according to the quality of the dead.

dols.Chap.g. fourth kinde of Indian Ido.

The fourth & There hath beene great curiotity at the Indies in making of Idols and Pictures of divers formes and matters, which they worshipped for Gods, and in Perw they called them Guacas, being commonly of foule and deformed beafts, at the leaft, fuch as I have feene, were fo. beleque verily that the Deutl, in whose honour they made these Idols, was pleased to especially the belegue verily that the Deuils, in whole honour they made these Idols, was pleased to Mexicantol cause himselfe to be worthipped in these deformities, and in truth it was found so, that mages and I- the Deuill spake and answered many of these Gnaces or Idols, and his Priests and Ministers came to these Oracles of the father of lies, and such as he is, such were his Counsels and Prophe 30 fies. In the Prouinces of New Spains, Mexico, Tescue, Tlascalla, Cholula, and in the neighbour Countries to this Realme, this kinds of Idolatry bath beene more practifed than in any other Realine of the world. And it is a prodigious thing to heare the fuperfittions rehearfed that they have vied in that points of the which is shall not be unpleasant to speake something. The chiefest ldoll of Maries was, as I have faid # neibparth, It was an image of wood like to a man, let vpon a floole of the color of azure, in a beankerd of litter, at every corner was a piece of wood in forms of a Serpentschead. The stoole signified that he was set in heaven : this Idoll had all the forehead Azure, and had a band of Azure vider the nose from one eare to another : vpon his head he had a rich plume of Feathers, like to the beake of a small Bird, the which was coursed on the top with Gold burnished very browne : be had in his left hand a white Target, with the figures 40 of fine pine A pples, made of white Feathers, feein a croffe: and from aboue iffued forth a creft of gold, and at his fides he had fouredarts, which (the Mexicans fay) had beene (ent from heapen to doe those acts and prowesses which shall be spoken of : In his right hand he had an Azured staffe, cut in fashion of a waining snake, All these ornaments with the rest he had, carried this sence as the Mexicans doe thew the name of Vitziliput2li fignifies the left hand of a frining Feather.

I will speake hereafter of the proud Temple, the Sacrifices, Feafts and Ceremonies of this great Idoll, being very notable things. But at this prefene we will onely frew, share this Idolf-clus richly apparelled and deckt, was fet vpon an high Altar, in a small peepe groboxe, well covered with linnen cloathes; lewels, Feathers, and ornaments of Gold, with many randles of Feathers, the faireft and most exquisites that could be found : he had alwaies a curtaine before him for the greater veneration. Lowning to the chamber or chappell of this idell, there was a peece of leffe worke, and not fo well beautified, where there was another Idoll the wealled Malee. Thefe two Idols were alwaies together, for that they held them as companions, and of equal power. There The Deuils was another Idoll in Mexico much effeemed, which was the god of repentance, and of Inbilies and pardons for their finnes. They called this Idoll Texeallipses, he was made of a blacke finning from like to layel, being attired wish some Gentile deuises after their manner; it had earerings of gold and filter, and through the nether lip a small canon of Christall, in length halfea foote : in the which they fometimes put a greene feather, and fometimes an azured, which made it refemble fometimes an Emerald, and fometimes a Turquois : it had the haire broided and bound vp with a haire-lace of gold burnished, at the end whereof did hang anielee of gold, with two firebrands 60 of smoake painted therein, which did signifie the praiers of the lafflicted and sinners that he heard, when they recommended themselves voto him. Berwixt the two eares hanged anumber of small herons. He had a Iewell hanging at his necke, so great that it covered all his stomacke : vpon his armes bracelets of Gold; at his nauill a rich greene ftone; and in his left hand a

CHAP.S. Indian Nemelis, Indulgences, Mercury, Adonis, Goddeffer, Feafts. 1031

Raine of precious Feathers, of Greene, Azure, and Yellow, which came forth of a Lackingglaffe of Gold, faming and well burnished, and that signified, that within this Looking elaste he faw whatfoeuer was done in the world. They called this Glaffe or Chafton of gold in the same which fignifies his Glaffe for to looke in. In his right hand he held foure darts, which fignified the chaftelement he gaue to the wicked for their funes. And therefore they feared this Idolk molt, least he should discouer their faults and offences. At his feast they had pardon of their mon, realt ne mount ameters were yeares, as shall be declared hereafter. They held this I- Their Newsons doll Tefcatiques for the god of drought, of famine, barrenneffe and petitience : And therefore they painted him in another forme, being fet in great maietly vpon a ftoole compafied in with a red

To Curtin, painted and wrought with the heads and bones of dead men. In the left hand it liad a Target with fine Pines, like vnto pine Apples of Cotton: and in the right a little dart with a Personakes threatning countenance, and she arme firetche out, as if he would caft it; and from the Target this difference came foure dares. It had the councenance of an angry man, and in choller, the body all painted bereist R. licame foure darts: It had the connectance or an angry man, and it country, the constant of blacks, and the head full of Quilles feathers. They vide great fuperfittion to this ideal, for the gions and space that the head full of Quilles feathers. They vide great fuperfittion to this ideal, for the gions and space of the constant of th Idell which was the god of Marshandife, being to this day greatly given to trafficke. They cal-

led it Quetzaeleoalt. This Idoll was in a great place in a Temple very high : it had about it, Gold, Silver, Iewels, we before very rich Feathers, and habits of diuers colours. It had the forme of a man, but the vilige of a lit-

no tle Bird, with a red bill; and aboue a combe full of warts, having rankes of teeth, and the tongue hanging out. It carried upon the head, a pointed myter of painted paper, a fithe in the hand, and many toyes of gold on the legges; with a thouland other foolish inventions, whereof all had their fignifications, and they worthing it, for that he enriched whom he pleased, as Memnon and Plutos. In truth this name which the Chomanos gaue to their god, was very fit, although they vnderstood it not : they called it Quetrastooale, fignifying colour of a rich Feather, for fuch is the denill of conetoufnesse. These barbarous people contented not themselues to have gods onely, but they had goddeffes also, as the Fables of Poets have brought in, and the blinde gentility of the Greekes and Romans worthipt them. The chiefe goddeffe they worthipt was called Toxe, which Goddeffes, is to fay, our Grandmother, who as the Histories of Mexico report, was daughter to the King of 30 Culbuscan, who was the first they stayed by the commandement of Prizippuzili, whom they facri- See former ficed in this fort, being his fifter; and then they began to flay men in their facrifices, and to clothe Chape

the liuing with the skins of the facrificed, having learned that their gods were pleafed therwithas also to pul the hearts out of them they facrificed, which they learned of their god, who pulled out the hearts of fuch as he punished in Tule, as shall be said in his place. One of these goddestes they worship thad a son, who was a great hunter, whom they of Tulesalls afterwards tooke for a god and thoic were enemies to the Mexicans, by whole side the Spaniards won Mexico. The Projunce of Tlafealla is very fit for hunting, and the people are much given therunto. They there fore made a great feast vnto this idoll, whom they painted of such a forme, as it is not now needfull to loofe any time in the description thereof. The feast they made was pleasant, and in this 40 fort : They founded a Trumpet at the breake of day, at the found whereof they all affembled with their Bowes, Arrows, Nets, and other infiruments for hunting : then they went in procefsion with their Idoll, being followed by a great number of people to a high Montazine, your the top whereof they had made a bower of leases, and in the middeft thereof an Altar richly deckt, where-vpon they placed the Idoll. They marched with a great bruit of Trumpets, Cornets, Fluces & Drums, and being come vnto the place, they inuironed this Mountain on all fides, putting fire to it on all parts: by meanes whereof many beafts flew forth, as Stage, Conies, Hares, Foxes, and Woolnes, which went to the top flying from the fire. These hunters followed after with great cries and noise of diners instruments, hunting them to the top before the Idoll, whither fled fuch a number of beafts, in fo great a preffe, that they leaped one vpon another, vpon 50 the people, and woon the Altar, wherein they tooks great delight. Then tooks they a great nume

ber of these beatts, and facrificed them before the Idoll, as Stagges and other great beatts, pulling out their hearts, as they vie in the facrifice of men, and with the like ceremony: which done, they tooke all then prey upon their shoulders, and retired with their Idoll in the same manner as they came, and entered the City laden with all these things, very joyfull, with great store of mulick, Trumpets, and Drums, vntill they came to the Temple, where they placed their Idoll with great reuerence and folemnity. They presently went to prepare their venison, wherewith they made a banquet to all the people; and after dinner they made their playes, reprefentations, and dances a banquet to all the people; and after dinner they made their playes, reprefentations, and dances a before the Idoll. They had a great number of other Idols, of gods and goddelies; but the chiefe to eate and were of the Mexican Nation, and the neighbour people as is faid.

S we have faid that the Kings Inguas of Peru caused Images to be made to their likenesse, Of a firange Awhich they called their Guaces or brothers, causing them for to be honored like themselues: manner of idoeven to the Mexicans have done of their gods, which was in this fort. They tooke a captive, fuch larry profiled even to the reserve and factore they did facrifice vnto him their Idols; they gave him the name of Mexica, (6,10

They far down drinke and rofeup to play.

1032

the Idoll, to whom he should be sacrificed, and apparelled him with the same ornaments like their Idoll, faying, that he did represent the same Ivoll. And during the time shat this reprefentation lasted, which was for a yeare in some Feasts, in others fix moneths, and in others lesse. they reverenced and worthipped him in the fame manner, as the proper Idoll; and in the meane time he did eate, drinke, and was merry. When he went through the streetes, the people came forth to worship him, and enery one brought him an almes, with children and ficke tolkes, that he might cure them, and bleffe them, fuffering him to doe all things at his pleasure, onely he was accompanied with ten or twelue men left he should flye. And he (to the end he might be reuerenced as he passed sometimes sounded vpon a small Flute, that the people might prepare to worship him. The feast being come, and he grownesat, they killed him, opened him, and eate 10 him, making a folemne facrifice of him. It followes that we treate of their Religion, or rather Superfitition, which they wie in their Sacrifices, Temples, Ceremonies, and the reft.

That which God by his wifedome hath decreed for his honour and feruice, and for the good How the Deuil and health of man, the Deuill striues to imitate and to peruert, to be honored, and to cause man hath bloomed to be damned; for as we see the great God hath Sacrifices, Priests, Sacraments, Religious Proto make hour phets, and Ministers, dedicated to his divine Service and holy ceremonies: fo the Deuill hath his to God, and to Sacrifices, Priefls, his kindes of Sacraments, his Ministers appointed, his secluded and fained holi-

imitate him in neffe, with a thousand forts of false Prophets.

Sa raments. Chap. II. Of the Tem-

Religion and

 $\mathbf{B}^{\text{Eginning}}$  then with their Temples, even as the great God would have a house dedicated, 20 where his holy name might be honoured, and that it should be particularly vowed to his feruice; euen fo the Deuill, by his wicked practifes, perfwaded Infidels to build him proud Temples, and particular Oratories and Sanctuaries. In enery Prounce of Pers, there was one principall Guica, or house of adoration; and besides it, there was one Generall throughout all India, Chapate, the Kingdome of the Inguas; among the which there hath beene two famous and notable, the one which they called Pachamana, is foure leagues from Lima, where at this day they fee the raines of a most auncient and great building, out of the which Francis Pizarre and his people drew infinite treasure, of vessels and pots of Gold and Siluer, which they brought when they tooke the Ingna Aliagnalpa. There are certaine memories and discourses which fay, that in this Temple the Deuill did speake visibly, and gaue answers by his Oracle, and that sometimes 30 they did fee a spotted Snake; and it was a thing very common and approued at the Indies, that the Deuill spake and answered in these sales Sanctuaries deceiuing this miserable people. But where the Gospell is entred, and the Crosse of Christ planted, the father of lyes becomes mute, Flu lib. de traft, as Platarch writes of his time, Cur cuffauerit Pithias fandere or acula : and Infine Martyr treates Inflin apolito amply of the filence which Christimposed to Denils, which spake by Idols, as it had been before much prophefied of in the holy Scripture. The manner which the Infidell Ministers and Inchanters had to confult with their gods, was as the Deuill had taught them. It was commonly in the night, they entred backward to their Idoll, and to went bending their bodies and head, after an vgly manner, and so they consulted with him. The answere he made, was commonly like vnto a fearefull hiffing, or to a gnashing which did terrifie them; and all that he did aduer- 40 tife or command them, was but the way to their perdition and rume. There are few of these Oracles found now, through the mercy of God, and great power of Jefus Chrift. There hath beene in Pers another Temple and Oratory, most effeemed, which was in the Citie of Cusco, where atthis day is the Monastery of Saint Dominice. We may fee it hath beene a goodly and a stately worke, by the panement and stones of the building, which remaine to this day. This Temple was like to the Pantheon of the Romans, for that it was the house and dwelling of all the gods; for the Kings Inguas did there behold the gods of all the Nations and Provinces they had conquered, enery Idoll having his private place, whither they of that Province came to worthip it with an excelline charge of things which they brought for his femice. And thereby they supposed to keepe fafely in obedience, those Provinces which they had conquered, holding 50 their gods, as it were in holtage. In this same house was the Pinchao, which was an Idollof the Sunne, of most fine Gold, wrought with great riches of Stones, the which was placed to the East, with so great Art, as the Sunne at his rising did cast his beames thereon : and as it was of most fine mettall, his beames did reflect with fuch a brightnesse, that it feemed another Sunne. The Inemas did worship this for their god, and the Pachayacha, which signifies the Creator of Heanen. They say, that at the spoile of this so rich a Temple, a Souldier had for his part this goodly plate of gold of the Sunne. And as play was then in request, he lost it all in one night at play, whence came the prouerbe they have in Peru for great gamefters, faying, that they play the Sunne before it rifeth.

He Superflitions of the Mexicans, have without comparison beene greater then the rest, as well in their ceremonies, as in the greatnesse of their Temples, the which in old time the Spaniards called by this word Ca, which word might by taken from the Ilanders of Saint Do-Lieuco, Cha. 13. minique, or of Cuba, as many other words that are in vie, the which are neigher from Spaine,

nor from any other language now viuall among the Indians, as is Mays, Chico, Vaquiano, Chapston, and other like. There was in Mexico, this Cu, the famous Temple of Vitzliputali, it had a very great circuit, and within a faire Court. It was built of great itones, in falhion of Snakes tyed one to another, and the circuit was called Contepantle, which is, a circuit of Snakes : vpon the top of every Chamber and Oratotie where the Idols were, was a fine Pillar wrought with fmall itones, blacke as jeat, fet in goodly order, the ground rayfed up with white and red, which below gaues great light. Vpon the top of the Pillar were battlements very artificially made. wrought like Snailes, supported by two Indians of stone, sitting, holding Candle-sticks in their hands, the which were like Croifants garnished and enriched at the ends, with yellow and greene 10 feathers and long fringes of the fame. Within the circuit of this Court, there were many Cham-

bers of religious men, and others that were appointed for the feruice of the Priefts and Popes, for Mexical fo they call the fourraigne Priefts which serve the Idoll. This Court is so great and spacious, as Popes. eight or ten thousand persons did dance easily in round, holding hands, the which was an vitall

custome in that Realme, although it seeme to many incredible.

There were foure Gates or Entries, at the East, West, North, and South; at every one of these Gates began a faire Cawfey of two or three leagues long. There was in the midft of the Lake where the Citie of Mexico is built, foure large Cawfeys in croffe , which did much beautifie it; vpon enery Portall or Entrie, was a God or Idoll, having the vifage turned to the Cawfey, right against the Temple gate of Visaliguezdi. There were thirtie fteps of thirtie fathome long, and

20 they divided from the circuit of the Court by a ffreet that went betwixt them; vpon the top of their fteps there was a walke of thirtie foot broad, all play ftered with chalke, in the midft of which walke was a Pallisado artificially made of very high Trees, planted in order a fathome one from another. These Trees were very bigge, and all pierced with small holes from the foote to the top, and there were rods did run from one Tree to another, to the which were chayned of tyed many dead mens heads. Vpon outry rod were twentie Sculls, and these rankes of Sculls continue from the foot to the top of the Tree. This Pallifado was full of dead mens Sculls from one end to the other, the which was a wonderfull mournfull fight and full of horror. These were the heads of fuch as had beene facrificed; for after they were dead, and had eaten the fielh, the head was delinered to she Manisters of the Temple, which tyed them in this fort vntill they

30 fell off by morfels; and then had they a care to fee 8thers in their places. Vpon the top of the Temple were two Stones or Chappels; and in them were the two Idols, which I have fooken of. Vizzilipmezis, and his companion Tlate. These Olimpels were carried and graven very artificially, and so high, that to ascend up to it, there was a staire of stone of six score steps. Before these Chambers or Chappels there was a Coure of fortig bod Topare in the midft whereof, was a high flone of fine hand breadth, pointed in falhior of a Pyramide, it was placed there for the facrificing of men; for being laid on their backs, it made their bodies to bend, and fo they did open them and pull out their hearts , as I shall shew hereafter. There were in the Citie of Mexico, eight or nine other Temples, the which were joyned one to another within one great circuit, and had their private Stayres, their Courts, their Chambers, and their Dortoires. The entries of

40 fome were to the East, some to the West, others to the South, and some to the North. All these Temples were curiously wrought, and compelled in with divers forts of Battlements and Pichures, with many figures of thones, being accompanyed and fortified with great and Lirge Spurres or Plat-former. They were didicated to divers gods : but next to the Temple of Vizzalipurali, was that of Tescalipuca, which was the god of Penance and of Punishments, very high and well built.

There were four steps to ascende on the top was a Flat or Table of six score foot broad, and ioy. ning vnto it was a Hall hanged with Tapiffrie and Curtins of diners colours and workes. The Doore thereof being low and large, was alwayes couered with a vaile, and none but the Priests might entering. All this Temple was beautified with divers Images and Pictures most curiously; so for that thefe twed Temples were as the Cathedrall Churches ; and the reft in respect of them as

Parifles and Herminges : they were fo spacious, and had so many Chambers, that there were in them places for the Ministerie, Colleges, Schooles, and Houses for Priests, whereof wee will intreat hereafter.

The Deuil counterfaiting the vie of the Church of God, hath placed in the order of his Priefts, Of the Priefts fome greater or imperiors, and fome leffe, the one as Acolites, the other as Leantes, and that which and their bath made me most to wonder, was, that the Deuill would viurpe to himselfe the service of The Deuil God ; yea, and wie the same name : for the Mexicans in them ancient tongue called their high had his Popes Priests Papes, as they should say Someraigne Bisbops, as it appeares now by their Histories. The or Vicars at Priefts of Vitalipanile fucceeded by Linages of certaine quarters of the Citie, deputed for that Mexico for the 60 purpole, and those of other Iduls came by election, or being offered to the Temple in their infan- new World, as cie. The daily exercise of the Priests was to east Incense on the Idols, which was done foure old and now times in the space of a naturall day. The first at breake of day, the second at noone, the third at for both

Sunne fetting, and the fourth at mid-night. At mid-night all the chiefe officers of the Temple Mid-night did rife, and in flead of Bells, they founded a long time upon Trumpets, Cornets, and Flutes Martins

1035

very heavily, which being ended, he that did the office that weeke, ftept forth, attyred in a white Robe after the Dalmatike manner, with a Cenfor in his hand full of coales, which bee tooke from the harth burning continually before the Altar; in the other hand he had a Purfeful of Incense, which he cast into the Censor, and as he entred the place where the Idoll was, he incenfed it with great reserence, then tooke he a cloth, with the which he wiped the Altar and the Curtins. This done, they went all into a Chappell, and there did a certaine kinde of rigorous and auftere penance, bearing themselues, and drawing of bloud, as I shall shew in the Treatise of Penance, which the Deuill hath taught to his Creatures; and hereof they neuer fayled at these Mattins at mid-night. None other but the Priests might entermeddle with their facrifices, and enery one did imploy himselfe according to his dignitie and degree. They did likewife preach to the people at some feasts, as I will shew when wee treat thereof. They had Reuenues, and great Offerings were made vnto them. I will speake hereafter of their Vnction in consecrating their Priefts. In Peru the Priefts were entertayned of the Reuenues and Inheritance of their god, which they called Chacaras, which were many, and also very rich.

Of the Mona. fteric of VIIgins which the Douill back inuented for histerurce. Chap.15.

There were in Peru many Monasteries of Virgins (for there are no other admitted) at the least one in euery Prouince. In these Monasteries there were two forts of women, one ancient, which they called Mamacomas, for the instruction of the young; and the other was of young Maidens. placed there for a certaine time, and after they were urawne forth, either for their gods or for place there is a state of the state of Monasterie Aclagmagi, which is to Gry, the Honfe of the Cholen. Eurry Monasteric had his Vicar or Governour called Appopulace, who had inhertice and 20 power to choose whom he pleased, of what qualitie soeuer, being vinder eight yeeres of age, if they feemed to be of a good stature and constitution.

Theil Virgins thus thut up into theie Monasteries, were instructed by the Monacoma, in digins, or Nunns uers things needfull for the life of man, and in the customes and ceremonies of their gods; and afterwards they tooke them from thence, being aboue fourteene, fending them to the Court with fure guards, whereof fome were appointed to ferue the Guacas and Sanchuaries, keeping their Virginities for euer : fome others were for the ordinarie facrifices that were made of Maidens, and other extraordinarie facrifices, they made for the health, death, or warres of the Ingua; and the reft ferred for Wines and Concubines to the Ingua, and vnto other his Kinsfolks and Captains, 30 vnto whom hee gaue them, which was a great and honorable recompence: This diffribution was vied energy yeere. These Monasteries possessed Rents and Renenues for the maintenance of these Virgins, which were in great numbers. It was not lawfull for any father to refule his daughters when the Appropriate required them for the service of these Monatteries. Yes, many fathers did willingly citer their haughters, suppoing it was a great merit to be facificed for the Ingua. If any of these Momacomias of Aclias were found to have trespassed against their honor, it was an ineutable chaftifement to burge them alue, or to put them to death by some other kind

The Deuil hach euen in Mexico had some kinde of religious women, although their possesfion was but for one yeere, and it was in this fort : Within this great circuit whereof wee hale 40 spoken, which was in the principall Temple, there were two Houses like Claffers, the one oppolite to the other, one of Men, the other of Women: In that of women, they were Virgins onely, of twelve or thirteene yeeres of age, which they called the Maides of Penance. They were as many as the men, and lived chastely and regularly, as Virgins dedicated to the service of their god. Their charge was, to sweep and make cleane the Temple, and every morning to prepare meat for the Idoll and his Ministers, of the Almes the religious gathered. The foode they propared for the Idoll were small loaues in the forme of hands and feet, as of March-pane; and with this bread they prepared certaine fawces which they cast daily before the Idoll, and his Priests did eate it, as those of Baal, that Daniel speaketh of. These Virgins had their haire cut, and their they let them grow for a certaine time: they rofe at mid-night to the Idolls Mattins, which they daily celebrated, performing the fame exercifes the Religious did. They had their Abbiffes 50 who imployed them to make cloth of divers fashions for the ornament of their Idolls and Temples. Their ordinarie habit was all white, without any worke or colour. They did their penance at mid-night, facrificing and wounding themselves, and piercing the top of their eares, they laid the bloud which issued forth vpon their cheekes : and after (to wash off the bloud) they bathed themselves in a Poole which was within their Monasterie. They lived very honestly and difcreetly; and if any were found to haue offended, although but lightly, preiently they were put to death without remission, saying, she had polluted the House of their god. They held it for an augure and advertisement, that some one of the Religious, Man, or Woman, had committed a fault, when they faw a Rat or a Mowfe paffe, or a Bat in the Chappell of their Idoll, or that they had gnawed any of the vales, for that they fay , a Rat or a Bat would not adventure pcommit 60 fuch an indignitie, if some offence had not gone before, and then they began to make search of the fact, and haung discouered the Offendor or Offendors, of what qualitie source they pre-

None were received into this Monasterie, but the daughters of one of the fixe quarters, named

for that purpose : and this profession continued, as I have faid, the space of one whole yeere : during the which time, their fathers, and they themselves had made a vow to serve the Idoll in this

manner, and from thence they went to be married. I doe not know that in Pers there is any proper houses for men, but for the Priests and Sorce- Of the M-narers, whereof there is an infinite number. But it feemeth, that in Mexico the Deuill hath fet fleriks of relinets, whereof there is an infinite number. But a terminal had a cherration for within the circuit of the great Temple there were two Monafterias, as be. Sous men, but fore hath beene faid, one of Virgins, whereof I have fooken, the other of young men feeladed of eighteen or twentie yeeres of age, which they called religious. They were fluided crowness as the function of the control of the cont Friars in these parts, their haire a little longer, which tell to the middelt of their eare, except the Chip.16. hander part of the head, which they let grow the breadth of foure fingers down to their shoulders Indian shauen and which they tyed vp in treffer. Thete young men that ferued in the Temple of Vischpatch library, & their and which they tyed vp in treffer. There young men that ferued in the Temple of Vischpatch library, & their down of flooding of poor and chaffly, and did the Office of Leutes, ministring to the Prieffs and chiefe of the own of flooding of the prieffs and chiefe of the chief, who was the prieff of the chiefe of th Temple, their Incenie, Lights, & garments; they swept and made cleane the holy places, bringing ty, hafter, &c. Wood for a continuall fire to the harth of their god, which was like a lampe that full burnt before the Altar of their Idoll. Besides these young men, there were other little boyes, as novices, that ferued for manuall vies, as to deck the Temple with boughs, rofes, & reeds, give the Priests water to wash with, give them their rasors to facrifice, and goe with such as begged almes to carry it. All these had their superiors, who had the government over them, they lived so honeftly, as when they came in publike, where there were any women, they carried their heads very low, with 20 their eyes to the ground, not daring to behold them: they had linnen garments, and it was lawfull for them to goe into the Citie foure or fixe together, to aske Almes in all quarters : and when they gaue them none, it was lawfull to goe into the Corne fields, and gather the eares of Corne, or clufters of Mays, which they most needed, the Master not daring to speake, nor hinder them. They had this libertie, because they lived poorely, and had no other revenues, but Almes. There might not be about fiftie line in penance, rifing at midnight to found the Cornets and Trumpets to awake the people. Every one watched the Idoll in his turne, left the fire before the Altar should die : they gaue the Cenfor, with the which the Priest at midnight incenfed the Idoll, and also in the morning at noone, & at night. They were very subject and obedient to their superiors. and passed not any one point that was commaunded them. And at midnight after the Priest had ao ended his centing, they retired themselves into a fecret place, apart, facrificing, and drawing blood from the calres of their legs with sharpe bodkins : with this bloud they rubbed their temples, and vader their eares : and this facrifice finished, they presently washt themselves in a little poole appointed to that end. These young men did not annoint their heads and bodies with any Perum as the Priests did their garments were of courle white linnen cloth they doe make there. There exercifes and strict nesse of penance continued a whole yeere, during which time they lived with great aufteritie and folitarineffe.

It hath beene faid that the Priests and religious of Mexico, rose at midnight, and having cast Of Pessance & It man occur and the ability retired themishes into a large place, where they were many the attended in Incentice force the labil, they retired themishes into a large place, where they were many the attended Light; and fitting downer, curry one tooks a point of Mangang, which is like vato an awle or he lability to the property of the public of the pu 40 sharpe bodkin, with the which, or with some other kindes of Launcets or Rasors, they pierced the the Deuils per calfes of their legs neere to the bone, drawing forth much bloud, with the which they anointed (wasion, Ch. 17. their temples, and dipt these bookins or lancets in the rest of the bloud, then set they them vpon the battlements of the Court, flickt in gloabes or bowles of ftraw, that all might fee and know the penance they did for the people : they doe wash off the bloud in a lake appointed for

that purpose, which they call Ezapangue, which is to say, water of bloud. There were in the Temple a great number of bodkins or lancets, for that they might not vie one twice. Moreover, their Priefts and Religious men, vied great Fastings, of fine or ten dayes Their scuere together, before any of their great Feafts, and they were vnto them as our foure Ember weekes : Fafts, they were fo firset in continence, that some of them ( not to fall into any sensualitie) slit their

50 members in the midit, and did a thousand things to make themselues vinable, lest they should Monsters of oftend their gadsa They drunke no Wine, and flept little, for that the greatest part of their exer- Wil-worthipe cifes were by night, committing great cruelties and martyring themselues for the Deuill, and all to bee reputed great fatters and penitents. They did vie to discipline themselves with cords full of knots, and not they onely, but the people also vied this punishment and whipping, in the procession and feast they made to the Idoll Textalipnes, the which (as I have faid before) is the god of penance; for then they all carried in their hands new cordes of the threed of Manguer a fadome long, with a knot at the end, and wherewish they whipped themselves, giving great lathes over their thoulders. The Priefts did fait fine dayes before this Feath, eating but once a day. and they hard apart from their wines, not going out of the Temple during those fine dayes, they fodid whip themselves sigorously in the manuer atorelaid.

In Perm to folenmize the feath of the Tta, which was great, all the people fasted two dayes: during the which, they did not accompanie with their Wives , neither did they eate any meate with Saltor Garleeke, nor dranke Chica. They did much vie this kinde of fasting for some fine, and did penance, whipping themselues with sharpe stinging Nettles, and often they strooke

themselues over the shoulders with certayne stones. This blind Nation, by the perswasion of the Deuill, did transport themselves into craggie Mountaynes, where sometimes they sacrificed themselves, casting themselves downe from some high Rocke.

Of the Sacrifices the Indiave made to the Deuill, & whereof. Chap. 18.

Wee may draw all the Sacrifices the Infidels vie into three kindes, one of infentible things : another of beafts, and the third of men. They did vie in Pers to facrifice Co. ca. which is an hearbe they efterme much, of Mays, which is their Wheate, of coloured feathers, and of Chaquira, which otherwise they call Mollo, of shelsor Oysters, and sometime Gold and Silver, being in figures of little beafts. Also of the fine stuffe of Combi, of carved and fweet wood, and most commonly Tallow burnt. They made these Offerings or Sacrifices for a prosperous winde, and faire weather, or for their health, and to be deliuered from some dangers to and mishaps. Of the second kind, their ordinary Sacrifice was of Cayes, which are small beads like Rabbets, the which the Indians eate commonly. And in matters of importance, or when they were rich men, they did offer Pacos, or Indian freepe, bare, or with Wooll, observing the rioutly the numbers, colours, and times. The manner of killing their Sacrifices, great or imall. which the Indians did vie according to their ancient Ceremonies, is the same the Moores vie as this day, the which they call Algulble, hanging the beaft by the right fore-legge, turning his eves towards the Sunne, speaking certayne words, according to the qualitie of the Sacrifice they flue : for if it were of colour, their words were directed to ( buquille , and to the Thunder , that they might want no water: if it were white and I moothe, they did offer it to the Sume with certaine words. if it had a fleece, they did likewise offer it him with some others, that he might 20 thine vpon them, and fauour their generation : It it were a Gamaco, which is gray, they dire-Ged their facrifice to Viracocha. In Cufco they did every yeare kill and facrifice with this Ceremony, a shorne sheepe to the Sunne, and did burne it, clad in a red Waste-coate, and when they did burne it, they call certayne small baskets of Coca into the fire, which they call Vilcaronce: for which Sacrifice, they have both men and beafts appointed which ferue to no other yfe, They did likewife facrifice fmall Birds, although it were not fo visuall in Pers as in Mexico, where the

facrificing of Quailes was very ordinary. Those of Pern did facrifice the Birds of Puna, (for

fo they call the Defart when they should goe to the Warres, for to weaken the forces of their

aduerlaries Guacas.) They called these Sacrifices Cuzconicca, or Contenicca, or Huallanicca, or

and gathered a great deale of a thorny wood, which they call Taulli, the which beeing kindled,

Playne, with certayne Ceremonies, cauting fome kinde of men to eate this flesh, the which Sa-

Sophanicea, and they did it in this manner: they tooke many kinds of imall Birds of the Defart, 10

they gathered together these small Birds. This affembly they called Quice, then did they cast them into the fire, about the which the Officers of the Sacrifice went with certayne round flones carued, whereon were painted many Snakes, Lions, Toades, and Tygres, vetering this word F. fachum, which fignifies, Let the victorie be ginen onto us, with other words, whereby they fayd Blacke theepe, the forces of their enemies Guacas were confounded. And they drew forth certayne blacke sheepe, which had beene kept close some dayes without meate, the which they called Pres, and in killing them they spake these words; As the hearts of these beafts bee weakened, so let our enemies be weakned. And if they found in these sheepe that a certay ne piece of siesh behind the hear were not confumed by falling and close keeping, they then held it for an ill Augure. They 40 brought certayne blacke Dogges, which they call Apparor, and flue them, cafting them into a

fire appeared, crifices they did, left the Ingua should bee hurt by poyfon : and for this cause they fasted from

morning vntill the starres were vp, and then they did glat and defile themselves like to the Morres. This Sacrifice was most fit for them to withfland their enemies Gods : and although at this day a great part of these customes have ceased, the warres being ended, yet remaynes there some Relikes, by reason of the private or generall quarrels of the Indians, or the Caciques, or in Shel-offerings, their Cities. They did likewise offer and facrifice shels of the Sea, which they call Molle, and they offered them to the Fountaynes and Springs, faying, that these shels were daughters of the Sea, the mother of all waters. They gave vnto their thels fundry names, according to the colour, and also they wie them to diversends. They wied them in a manner in all kinde of Sacrifices, and yet to this day they put bearen fhets in their Chica, for a superfiction. Finally, they thought it convenient to offer Sacrifices of every thing they did fow or raise vp. There were Indians appointed to doe these Sacrifices to the Fountayne, Springs, and Rivers which passed through the Townes, or by the their Charcas, which are their Farmes, which they did after Seed time, that they might not cease running, but alwayes water their grounds. The Sorcerers did conjure, to know what time the Sacrifices should be made, which beeing ended, they did gather of the contribution of the people, what should be facrificed, and delinered them to such as had the charge of these Sacrifices. They made them in the beginning of Winter, at such time as the Fountaynes, Springs, and Rivers, did increase by the mouthures of the weather, which they did 60 attribute to their Sacrifices. They did not facrifice to the Fountaynes and Springs of the Defarts. To this day continues the respect they had to Fountaynes, Springs, Pooles, Brookes, or Reners, which paffe by their Cities or Chareau, even vnto the Fountaynes and Rivers of the Detaces. They have a speciall regard and reverence to the meeting of two Rivers, and there

they wash themselves for their health, annoynting themselves first with the slower of Mays, or some other things, adding thereunto divers Ceremonies, the which they doe likewife in their Bathes.

The most pittifull disafter of this poore people, is their slavery vato the Deuill, sacrificing Of the Sacrific men vnto him, which are the Images of God. In many Nations they had vsed to kill (to of men, the 15, and 16, a accompany the dead, as hath beene declared) fuch persons as had beene agreeable vnto him, and whom they imagined might best ferue him in the other World. Besides this, they vied in Park, to factifice young children of foure or fixe yeeres olde vito ten : and the greatest part of to these Sacrifices were for the affaires that did import the Ingua, as in ficknelle for his health : and when he went to the warres for victory, or when they gave the wreathe to their new Ingua, which is the mark of a King, as here the Scepter and the Crowne be. In this Solemnitie they facrificed the number of two hundred children, from foure to ten yeeres of age, which was a cruell and inhumane spectacle. The manner of the Sacrifice was to drowne them and bury them with certayne representations and ceremonies : sometimes they cut off their heads annoynting them- ficed.

felues with the bloud from one eare to another. They did likewise sacrifice Virgins, some of them that were brought to the Ingua from the Monalteries, as hath beene faid. In this cafe there was a very great and generall abufe : If any Indean qualified, or of the common fort, were ficke, and that the Divine told him confidently 20 that he should dye, they did then facrifice his some some to the Sunne, or to Vracheca, defiring Patricide. them to be fatisfied with him, and that they would not deprine the father of life. This crueltie is like to that the holy Scripture speaks of which the King of Most vied in facrificing his first-born

Sonne you the wall, in the light of all Ifrael, to whom this act feemed fo mournfull, as they would not prefie him any further, but returned to their houses. Lthough they of Pers have furp-fled the Mexicans in the flaughter and Sacrifice of their Of the horri-

A Children (for I haue not read nor vnderstood that the Mexicans vsed any such Sacrifices) of men which vet they of Mexico have exceeded them, yea all the Nations of the World, in the great num- the Mexican

ber of men which they had facrificed, and in the horrible manner thereof. And to the end wee vied. Chap. 20. 20 may feethe great milery wherein the Denill holds this blind Nation, I will relate particularly the custome and inhumane manner which they have observed : First the men they did facrifice were taken in the warres, neyther did they wie thefe folemne Sacrifices but of Captiues: fo as it Captiues only feemes therein they have followed the custome of the Ancients. For as some Authors fay, they facrifized. called the Sacrifice Victima, for this reason, because it was of a conquered thing : they also called Victima & it Hostia quasi ab boste, for that it was an Offering made of their enemies, although they have applyed this word to all kinds of Sacrifices. In truth the Mexicians did not facrifice any to their Idols, but Captiues, and the ordinary warrestlery made, was onely to have Captiues for their Sacrifices; and therefore when they did fight, they laboured to take their enemies aline, and not to kill them, to enjoy their Sacrifices. And this was the reason which Moreguma gaue to the 40 Marquife du Val, when he asked of him, why being so mightie, and having conquered so many Kingdomes. he had not subdued the Prouince of Tlascalla, which was to neere! Motecu-

ma answered him, that for two reasons he had not conquered that Prouince, although it had bin easie, if he would have undertaken it : the one was for the exercise of the youth of Mexico, lest they should fall into idlenesse and delight : the other and the chiefe cause why hee had referred this Prouince, was, to have Captines for the Sacrifices of their Gods. The manner they yied in Manner of his these Sacrifices, was, they affembled within the Palistadoe of dead mens Sculles (as hath beene mane (insmanc) facrification of the sacrifices and the sacrification of the sacri faid) such as should be sacrificed, vsing a certayne Ceremony at the foot of the Palisladoe, placing cing. a great guard about them. Prefently there stept forth a Priest, attyred with a short Surplice full of taffels beneath, who came from the top of the Temple with an Idoll made of Parle of Wheate and Mays mingled with Honey, which had the eyes made of the graines of greene glaffe, and the teeth of the graines of Mays, he descended the steps of the Temple with all the speed he could, and mounted on a great stone planted upon a high Terraffe in the midst of the Court. This stone was called Quancicalli, which is to fay, the flone of Eagle, whereon he mounted by a little Ladder, which was in the fore-part of the Terraffe, and descended by another staire on the other file. full imbracing his Idoll. Then did he mount to the place where those were that should be facti-

went in procession voto the place where they should bee facrificed, where they found the Minifters ready for that Office. The ordinary manner of facrificing was, to open the ftomake of him Bloudic Rices, 60 that was facrificed, and having pulled out his heart halfe aline, they tumbled the man downe the staires of the Temple, which were all imbrewed and defiled with bloud : And to make it the more plaine, fixe Sacrificers being appointed to this dispitie, came into the place of Sacrifice. foure to hold the hands and feet of him that should be facrificed, the fift to hold his head, and the fixt to open his stomake, and to pull out the heart of the facrificed. They called them Cha-

ficed, thewing this Idoll to every one in particular, faying vnto them; this is your God. And ha-

uing ended his she w, he descended by the other side of the staires, and all such as should dye,

chalmus, which in our Tongue is as much, as the Ministers of boly things. It was a high dignitie. and much efteemed among it them, wherein they did inherit and fucceed as in a Fee-fimple. The Minister who had the Office to kill, which was the fixt among ft them, was esteemed and honoured as the Sourreigne Priest and Bifop, whose name was different, according to the difference of times and Solemnities. Their habits were likewise divers when they came forth to the Sacrifice, according to the diversitie of times. The name of their chiefe dignitie was Papa and Topolo zin, their Habite and Robe was a red Curtayne after the Dalmarike fashion, with talkels below a Crowne of rich Feathers, greene, white, and yellow vpon his head, and at his eares like pendants of Gold, wherein were fet greene stones, and vnder the lip vpon the middest of the beard

he had a Peecelike vnto a small Canon of an azured stone. These Sacrificers came with their fa-The other fine ces and hands coloured with a shining blacke. The other fine had their haire much curled, and tyed vp with Laces of Leather, bound about the middest of the head : vpon their forehead they carried small Roundelets of Paper painted with divers colours, and they were attyred in a Dalmatike Robe of white, wrought with blacke. With this attyre they represented the very figure of the Deuill, fo as it did strike feare and terrour into all the people, to see them come forth with fo horrible a reprefentation. The Souereigne Priest carried a great Knife in his hand, of a large and sharpe flint : another Priest carried a coller of wood wrought in forme of a Snake : All fix put themselues in order, ioyning to this Pyramidall stone, wheref I have spoken, being directly against the doore of the Chappell of their Idoll. This stone was so pointed, as the man which was to be facrificed, being lad thereon, vpon his backe, did bend in such fort, as letting 20 the Knife but fall vpon his stomack it opened very easily in the middest. When the Sacrificers were thus in order, they drew forth such as had beene taken in warre, which were to bee facrificed at that Feaft, and being accompanied with a guard of men all naked, they caufed them to mount up these large staires in ranke, to the place where the Ministers were prepared : and aseuery one of them came in their order, the fix Sacrificers tooke the Prifoner, one by one foote. another by the other, and one by one hand, another by the other, calting on his backe upon this Deuillish dex. pointed stone, where the fift of these Ministers put the coller of wood about his necke, and the High Priest opened his stomack with the Knife, with a strange dexteritie and nimblenesse, polling out his heart with his hands, the which hee shewed smoking vnto the Sunne, to whom hee did offer this heate and fume of the heart, and prefently he turned towards the Idoll and did caft to the heart at his face, then did they cast away the body of the facrificed, tumbling it downethe staires of the Temple, the stone being fet so neere the staires, as there were not two foote space betwixt the stone and the first step, so as with one spurne with their foote, they cast the bodie

from the top to the bottome. In this fort one after one they did facrifice all those that were ap-

pointed. Being thus flaine, and their bodies cast downe, their Masters, or such as had taken them,

went to take them vp, and carried them away : then having divided them amongst them, they

did eate them, celebrating their Feast and Solemnitie. There were ever fortie or fiftie at the

least thus facrificed, for that they had men very expert in taking them. The neighbour Nati-

ons did the like, imitating the Mexicans in the Cuitomes and Ceremonies of the Service of

their Gods.

Of other kinds Here was another kind of Sacrifice which they made in divers feafts, which they call Reca-A ripe Velio ali, which is as much as the flaying of men. They call it fo, for that in some Feasts the Mexicans they tooke one or more flaues, as they pleated, and after they had flayed him, they with that vied. Chapas. skinne apparelled a man appointed to that end. This man went dancing and leaping thorow all Flaying Sacri- the houses and Market places of the Citie, every one being forced to offer formething vnto him: and if any one fayled, he would firike him over the face with a corner of the skin, defiling him with the congealed bloud. This invention continued vntill the skinne did ftinke; during which time, fuch as went, gathered together much almes, which they employed in necessary things for the Service of their Gods. In many of thefe Feafts they made a Challenge, betwirt him to that did facrifice, and him that should bee facrificed thus: they tyed the slaue by one foote to Challenge fa cuficet. a Wheele of ftone, giuing him a Sword and Target in his hands to defend himfelfe : then cuficet. presently stept forth hee that sacrificed him; armed with another Sword and Target: if hee that should bee facrificed defends himselfe valiantly against the other, and relisted him, hee then remayned freed from the Sacrifice, winning the name of a famous Captayne, and fo was reputed : but if hee were vanquished, they then sacrificed him on the stone whereunto hee was was tyed. It was another kinde of Secrifice, when as they appointed any flaue to bee therepresentation of the Idoll, saying that it was his Picture: They every yeere gave one slave to the Priests, that they might neuer want the lively Image of their Idoll. At his first entry into the Office, after he had beene well washed, they attyred him with all the ornaments of the Idoll, 60 giving him the same name. Hee was that whole yeere reverenced and honoured as the Idoll it felfe, and had alwayes with him twelue men for his Guard, left hee should flye, with which Guard they suffered him to goe freely and where he would : and if by chance he fled, the chiefe of the Guard was put in his place to represent the Idoll, and after to bee factificed. This Indian

had the most honourable lodging in all the Temple, where hee did eate and drinke, and whither all the chiefe Ministers came to ferue and honour him, carrying him meate after the manner of great Perionages. When her went through the streets of the Citie, hee was well accompanied with Noblemen, hee carried a l'atle Flute in his hand, which fometimes hee founded, to give them knowledge when he passed: then presently the women came forth with their little children in their armes, which they presented voto him, saluting him as God. All the rest of the people did the like; at night they put him in a strong Prison or Cage, left he should flye; and when the Feast came, they facrificed him, as hath beene faid.

By these and many other meanes hath the Deuill abused and entertayned these poore wret-numbers sacrito ches, and fuch was the multitude of those that had beene facrificed by this infernal crueltie, as ficed. it feemes a matter incredible, for they affirme there were some dayes fine thousand or more, and that there were aboue twentie thousand sacrificed in diners places. The Deuill to entertaine this murther of men, vied a pleasant and strange invention, which was, when it pleased the Priests of Satan they went to their Kings, telling them how their Gods dyed for hunger, and Deuill hunger that they should remember them. Presently they prepared themselves, and advertised one a- formans fluth nother, that their Gods required meate, and therefore they should command their people to bee readie to goe to the Warres; and thus the people affembled, and the companies appointed went to field, where they mustred their forces; and all their quarrell and fight was to take one another for facrifice, ftriuing on either fide to take what Captines they could, fo as in thele battels they 20 laboured more to take, then to kill, for that all their intention was to take men aliue, to give

them to their Idols to eate, for after that manner brought they their Sacrifice voto their Gods. And wee must viderstand, that never King was crowned vitill he had subdued some Province. from the which he brought a great number of Captines for the Sacrifices of their Gods, fo as it was an infinite thing to fee what bloud was spilt in the honour of the Deuill.

Many of these Barbarians were now wearied and tyred with such an excession crueltie, in How the IsaMachine so much bloud, and with so tedious a Tribute, to bee alwayes troubled to get diams grew. Captines, for the feeding of their Gods, feeming vnto them a matter insupportable; yet left they weary, and Captines, for the feeding of their Gods, feeming white them a matter initiapportately yet left they could not en-not to follow and execute their rigorous Lawes, for the great awe the Ministers of these Idols dure the cruckso kept them in, and the cunning wherewith they abuled this poore people. But inwardly they tie of Satas, defired to be freed from so heavie a yoke. And it was a great providence of God; that the first Chapaza. which gaue them knowledge of the Law of Christ, found them in this disposition : for without doubt it feemed to them a good Law, and a good God, to bee ferued in this fort. Heereupon

a grave religious man in New Spaine told me, that when he was in that Countrey he had demanded of an ancient Indian, a man of qualitie, for what reason the Indians had so some received the Law of Iefus Christ, and left their owne, without making any other proofe, tryall, or dispute thereon, for it feemed they had changed their Religion, without any fufficient reason to moous them. The Indian aniwered him, Beleene not Father, that we have embraced the Law of Chrift fo rashly as they say for I will tell you, that we were alreadiewearie and discontented with such things 40 as the Idols commanded vs, and were determined to leave it, and to take another Law. But when as wee found that the Religion that you preached had no cruelties in it, and that it was fit for us, and but his t and good, we understood and beleened that it was the true Law, and so we received it willingly. Which answere of this Indian agrees well with that we reade in the first Discourse, that Fernand Cortes

fent to the Emperour Charles the fift, wherein hee reports, that after he had conquered the Citie of Mexico, being in Cuyoacan, there came Ambassadours to him from the Province and Common-wealth of Mechacan requiring him to fend them his Law, and that hee would teach them to understand it, because they intended to leave their owne, which seemed not good ento them, which Cortes granted, and at this day they are the best Indians, and the trueft Christians that are in New Spaine. The Spaniards that faw thefe cruell Sacrifices, refol-50 used with all their power to abolish so detestable and cursed a butchering of men, and the ra-

sher, for that in one night before their eyes they faw threefcore or threefcore and tenne Spamarde factificed, which had beene taken in a battaile given at the Conquest of Mexico: and ficed another time sher found written with a Coale in a Chamber in Tezenfeo thele wordes; Heere such a miserable man was Prisoner with his Companions whom they of Tezcusco did facrifice.

there happened a very strange thing vpon this subject, and yet true, beeing reported by men worthy of credit, which was that the Spaniards beholding these Sacrifices. lianing opened and drawne out the heartlot the lutte young man , and cast him from the rop of the stayres (as their custome was) when hee came at the bottome, hee faid to the Aman feeaker Spaniards in his Language, Knights, they have flaine mee, the which did greatly moone our arterhis heart men to horrour and pitie. It is no incredible thing, that having his heart pulled out, hee might is out. speake, seeing that Galen reports that it hath often chanced in the Sacrifice of beasts, after the Galen librates heart hath beene drawne out, and cast vpon the Altar, the beasts have breathed, year they did HE & Plate,

bray and cry out aloude, and sometimes did runne.

How the Dea will harh la-Indian Com-

In the first moneth, which in Peru they called Rayme, and answereth to our December, they made a most solemne feast, called Capacrayme, wherein they made many facrifices and ceremoboated to imi- nies, which continued many dayes : during the which, no stranger was suffered to becat the bolicus o fam. Court which was in Cufco. These dayes being past, they then gaue libertie to strangers to enter. terfair the Sat that they might be partakers of the feafts and facrifices, ministring to them in this manner. The erametes of the Manuscomes of the Sunne, which were a kinde of Nunnes of the Sunne, made little loaues of the flower of Mays, dyed and mingled with the bloud of white Sheepe, which they did facrifice that day; then presently they commanded that all strangers should enter, who set themselves that day; then pretently they commanded that an inaugus mount enter; who let themselves in order, and the Priests which were of a certaine Linge, defending from Lingappagain; gave to entry one a moriell of their imall loues, faying vnto them, that they gave thele pieces, to the end they flouid be control and confiderate with the lingua, and that they admitd them not to fixed nor O thinke any ill against the Ingua, but alwayes to beare him good affection, for that this piece should bee a witnesse of their intentions and will, and if they did not as they ought, bee would discouer them and bee aeainst them. They carried these small loaues, in great Platters of gold and silver appointed for that vie, and all did receive and eate these pieces, thanking the Sunne infinitely for so great a fauour which hee had done them, speaking wordes and making signes of great contentment and denotion: protefling that during their liues, they would neither doe nor thinke any thing against the Sunne nor the Ingua: and with this condition they received this foods of the Sunne, the which should remaine in their bodies for a witnesse of their fidelitie which they observed to the Sunne and to the Ingua their King. This manner of deuillish communicating they likewife vsed in the tenth moneth, called Cogaragms, which was September, in the folemne feaft which they called Citua, doing the like ceremonies. And befides this Communion (if it be lawfull to vie this word in so deuillish a matter) which they imparted to all strangers that came, they did likewise send of these loaves to all their Guacas, Sanctuaries, or Idols of the whole Realme, and at one instant they found people of all files, which came expressy to receive them, to whom they said (in delivering them) that the Sunne bad fent them that, in signe that bee would have them all to worship and boner bim, and likewise did send them in boner of the Caciques. Some perhaps will hold this for a fable and a fiction : yet is it most true, that since the Ingua Tupange (the which is heethat hath made most Lawes, Customes, and Ceremonies, as Nama did in Rome) this manner of Comnatur mase most navers, Sections, and Section of the Section of th tissic himselse more amply, let him reade the Relation which the Licenciate Polle did write,

ment vied in the Popish Church.

TI is a thing more worthy admiration, to heare speake of the Beast and solemnitie of the Comn.r. the Devill I munion which the Deuill himselfe, the Prince of Pride, ordained in Mexice, the which (alhath laboured though it be somewhat long) yet shall it not be from the purpose to relate as it is written by men of credite. The Mexicanes in the moneth of May, made their principall Feaft to their god Vitacounterrait the realf of the ziliputz.li, and two dayes before this Feaff, the Virgins whereof I have spoken (the which were flut vp and secluded in the same Temple, and were as it were Religione women) did mingle a quantitie of the feede of Beetes with roaffed Mays, and then they did mould it with honey, ma- 40 king an Idoll of that pafte, in bigneffe like to that of wood, putting in ftead of tyes, graines of greene glaffe, of blue, or white; and for teeth, graines of Mays, tet forth with all the ornament and furniture that I haue faid. This being finished, all the Noblemen came and brought it an exquilite and rich garment, like vnto that of the Idoll , wherewith they did attyre it. Being thus clad and deckt, they did fet it in an azured Chaire, and in a Litter to carry it on their shoulders. The morning of this feast being come, an houre before day, all the Maidens came forth attyred in white, with new ornaments, the which that day were called the fifters of their god Vitaliputali, they came crowned with Garlands of Mays reafted and parched, being like vinto Azahar or the flower of Orange, and about their necks they had great chaines of the same, which went bauldrickwise under their left arme. Their cheekes were dyed with Vermillion, their armes 50 from the elbow to the wrist, were coursed with red Parrots feathers. And thus attyred, they tooke the Idoll on their shoulders, carrying it into the Court, where all the young men were attyred in garments of an artificial red , crowned after the fame manner , like vnto the women. When as the Maidens came forth with the Idoll, the young men drew neere with much reuesence, taking the Litter wherein the Idoll was, voon their shoulders, carrying it to the foote of the staires of the Temple, where all the people did humble themselves, laying earth upon their heads, which was an ordinarie ceremonie which they did observe at the chiefe feast of their gods. This ceremonic being ended, all the people went in Procession with all the diligence and speede they could, going to a Mountayne which was a league from the Citie of Mexico, called Chapultoper, and there they made facrifices. Prefently they went from thence with like diligence, to 60 goe to a place neere vnto it, which they called Atlacnyanaya, where they made their fecond ftation : and from thence they went to another Burgh or Village a league beyond Curoacen, from whence they parted, returning to the Citie of Mexico, not making any other flation. They Went in this fort aboue foure leagues in three or foure houres, calling this Procession Tpsyna Vitza

## CHAP.S. Indian Transubstantiation, Communication, Confession, &c.

Louisie. Being come to the foot of the flaires, they fee downe the Brancard or Litter with the Idoll, tying great Cordes to the armes of the Brancard, then with great obferuance and reperence. they did draw up the Litter with the Idoll in it to the top of the Temple, fome drawing about. and others helping below, in the meane time there was a great noyfe of Flutes, Trumpets, Cornets, and Drummes. They did mount it in this manner, for that the stayres of the Temple were very steepe and narrow, to as they could not carry up the Litter upon their shoulders, white The Devill Hthey mounted up the Idolt, all the people flood in the Court with much reverence and feare, king that vn-Being mounted to the top , and that they had placed it in a little Lodge of Roses, which they then then tichnifian held readie, presently came the young men, which strewed many flowers of fundrie kindes, prodigious o 10 wherewith they filled the Temple both within and without. This done, all the Virgins came pinion of tranout of their Couent; bringing pieces of paste compounded of Beetes, and roasted Mays, subflantiation, which was of the same paste whereof their Idoll was made and compounded, and they were and the confeof the fathion of great bones. They deliuered them to the young men, who carried them vp tion adoration and laid them up, and laid them at the Idols feece, wherewith they filled the whole place, on telematithat it could receive no more. They talled these morsels of paste, the fielh and bones of Fire-on corpus this liquid. Having laid abroad these bones, presently came all the Ancients of the Temple, Priess, simuloiem-Leuites, and all the reft of the Ministers, according to their Dignities and Antiquities, for herein there was a strict order among it them, one after another, with their valles of divers ceffont with colours and workes, every one according to his Dignitie and Office, having Garlands woon rites beyond 20 their heads, and Chaines of flowers about their necks : after them came their gods and goddeffes any former whom they worshipt, of divers figures, attyred in the same liveries then putting themselves Paganisme, in in order about those motiels and pieces of paste, they vied certaine ceremonies with singing discace of the and dancing. By meanes whereof they were bleffed and confectated for the fielh and bones of ment, fallly This ceremonie and bleffing (whereby they were taken for the flesh and bones of the Idoll) be their Idoll and

ing ended, they honored those pieces in the same fort as their god. Then came forth the Sacrificers, who began the sacrifice of men, in the manner as hath beene spoken, and that day they cell so many did facrifice a greater number then at any other time, for that it was the most folemne feast thousand they observed. The facrifices being ended, all the young Men and Maides came out of the Tem- their bloud in

30 pleattyred as before, and being placed in order and ranke one directly against another, they fire and other-danced by Drummes the which founded in praise of the Feast, and of the Idoll which they did nistance. celebrate. To which fong all the most ancient and greatest noble-men did answere, dancing a disputing of bout them, making a great circle as their vse is, the young Men and Maides remayning alwayes. Christ nation the middelt. All the Citie came to this goodly spectacle, and there was a commandement versal body and ry friedly observed throughout all the Land, that the day of the feast of the Idoll Piradiputals, despiting and they should care no other meate, but this paste with hony, whereof the Idoll was made. And supplies the should be care at the point of day, and they should do no water not any other thing till syphash could be a should be sh after noone : they held it for an ill figne, yea for facrilege, to doe the contrarie: but after the nothing finer ceremonies ended, it was la wfull for them to eate any thing. During the time of this ceremonie, to transport 40 they hid the water from their little children, admonishing all such as had the vie of reason, not nothing more

to drinke any water; which if they did, the anger of God would come vpon them, and they contrarie to should die, which they did obserue very carrfully and Brielly. The ceremonies, dancing, and sense, reason, facrifice ended, they went to ynclothe themselves, and the Priefts and Superiors of the Temple religion, hutooke the Idoll of pafte, which they spoyled of all the ornaments it had, and made many pieces, manitie, or wherein more as well of the Idoll it felfe as of the Tronchons which were confectated, and then they gave to immuncho. them to the Communion, beginning with the greater, and continuing voto the rest, both Men, uer mankinder Women, and little Children; who received it with fuch teares, feare, and reverence, as it was an in all thefe, admirable thing, faving, that they did one the flesh and bones of God; wherewith they were grie- then this braued. Such as had any licke folkes demanded thereof for them, and carried it with great reue- and blondie So rence and veneration.

All fuch as did communicate, were bound to give the tenth of this feede, whereof the Idoll heredeferiwas made. The folemnitie of the Idolf being ended, an old man of great authoritie flept wp into bed. a high place, and with a loud voice preached their Law and Ceremonies.

THe father of Iyes would likewise counterfait the (Romish) Surrament of Confession, and in Of Confessions.

Of Confessions this Idolatries seeke to be honored with ceremonies very like to the manner of Christians. and Confessions. In Peru they held opinion, that all difeates and advertities came for the finnes which they had from which the committed : for remedie whereof they vied facrifices : moreouer, they confessed themselves ver- indistrivied. bally, almost in all Provinces, and had Confesors appointed by their Superiors to that end, there Reserved ea 60 were some sinnes reserved for the Superiors. They received penance, yea sometimes very sharply, see as in Papall especially when the Offendor was a poore man, and had nothing to give his Confesior. This of penance. fice of Confessor was likewise exercised by Women. The manner of these Confessor Sorceters whom they call Tchuri or Tchuri, bath beene most generall in the Provinces of Collassie. They hold opinion, that it is a haynous sinne to conceale any thing in confession. The Yeburs or Con-

olemnitie.

fessors discourred by lots, or by the view of some beast Hides, if any thing were concealed, and punished them with many blowes with a stone vpon the shoulders, vntill they had renealed all. chem after they gaue him penance, and did facrifice. They doe likewife rule this confession, when their children, wives, busbands, or their Caeques be icke, or in any great exploit. And when their Ingua was licke, all the Prounces confelled them jelues, chiefly those of the Prounce of Collas. The Contellors were bound to hold their Confethons fecret, but in certaine cafes limited. The finnes that they chiefly confest d, was first to kill one another out of warre, then to steale. to take another mans wife, to give poylon or forcerie to doe any harmer and they held it to be a gricuous finne, to be forgetfull in the reverence of their Gueca, or Oratories, not to observe the Fealts, or to I peake ill of the Ingua, and to disobey him. They accused not themselves of any se- 10 cret acts and linnes. But according to the report of iome Priefls, after the Christians came into that Country, they accused themselues of their thoughts. The Ingua confessed himselfe to no man, but onely to the Sunne, that hee might tell them to Wiracheca, and that hee might forgive them. After the /ngua had beene confessed, he made a certaine bath to cleanse himselfe in a running River, faying thele wordes : I have told my finnes to the Sunne, receive them, O thou River, and carry them to the Sea, where they may never appeare more. Others that confessed, vsed likewise these baths, with certaine ceremonies very like to those the Moores vie at this day, which they call Guadoy, and the Indians call them Opacuna. When it chanced that any mans children dyed, hee was held for a great linner, faying, that it was for his finnes that the fonne dyed before the father. And therefore those to whom this had chanced, after they were confessed, were bathed an in this bath called Opacuna, as is faid before. Then some detormed Indian, crooke-backt, and counterfait by nature, came to whip them with certaine Nettles. If the Sorcerers or Inchanters by their lots and distinations, affirmed that any ticke body should die, the sicke man makes no difficultie to kill his owne fonne, though he had no other, hoping by that meanes to escape death. faying, that in bis place be offered his sonne in sacrefice. And this crueltie hath beene practifed in of deuillish dis fome places, even ince the Christians came into that Country. In truthit is strange, that this custome of confesting their fecret sinnes, hath continued to long amongst them, and to doeso first penances, as, to fast, to give apparell, gold and silver, to remaine in the Mountagnes, and to receine many stripes upon the floulders. Our men fay, that in the Province of Chiquite, even at this day they meet with this plague of Confesors or Teburis, where as many ficke persons repaire vn- 30 to them : but now, by the grace of God, this people begins to fee cleerly the effect and great benefit of our Confession, whereunto they come with great deuction.

Penances.

I will report the manner of a ftrange confe ffion the Deuill hath invented at Ispon , as appeares by a Letter that came from thence, which is th thus : There are in Ocaca very great and high and fleepe Rocks, which have pricks or points on them, above two hundred fathorn high. A. mongst these Rocks there is one of these pikes or points to terribly high, that when the Xamabu. fis (which be Pilgrimes ) doe but looke vp vnto it, they tremble, and their baire stares, fo fearfull and horrible is the place. Vpon the top of this point there is a great rod of Iron of three fathom long, placed there by a strange denice, at the end of this rod is a billance eyed, whereof the scries are to bigge, as a man may fit in one of them : and the Goquis (which be Deuils in humane shape) 40 command these Pilgrimes to enter therein one after another, not leaving one of them : then with an engine or instrument which mooueth, by meanes of a wheele, they make this rod of Iron whereon the ballance is hanged, to hang in the aire, one of thele Kamabufir being fet in one of the feales of the ballance. And as that wherein the man is fet hath no counterposte on the other fide, it prefently hangeth downe, and the other rifeth vntill it meets with and toucheth the rod: then the Goques telleth them from the Rocke, that they must contesse themselves ot all the sinnes they have committed, to their remembrance, and that with a loud voyce, to the end that all the rest may heare him. Then prefently her beginneth to confesse, whilest some of the standers by doe laugh at the finnes they doe heare; and others figh, and at every finne they confesse, the other scale of the ballance falls a little, vntill that having told all his sinnes, it remaines equall with the 50 other, wherein the forrowfull penitent fits : then the Gogais turnes the wheele, and drawes the rol and baliance vnto him, and the Pilgrime comes forth; then enters another, vntill all have paffed. A laponous reported this after he was christned, saying, that her had beene in this pilgrimage, and entred the ballance feuen times, where he had confesfed himselfe publikely. Hee said moreouer, that if any one did conceale any finne, the emptie scale yeelded not : and if hee grew obitinate after inflance made to confesse himselfe, refusing to open all his sinnes, the Gognis cast him downe from the top, where in an instant he is broken into a thousand pieces. Yet this Chrinable Vocaion Itian, who was called Iohn, told vs, that commonly the feare and terror of this place is so great to all fuch as en er therein, and the danger they fee with their eyes, to fall out of the ballance, and to be broken in pieces, that feldom there is any one but discouers all his finnes. This place is called by another name Sangenotocore, that is to lay, the place of Confession.

The Priests of the Idols in Mexico were anointed in this lore; they anointed the body from the foote to the head , and all the haite likewise, which hung like treffes , or a Horie era techinate, for that they applyed this Voction wet and moit. Their haire grew to, as in time it

hung downe so their hammes, so heavily, that it was troublesome for them to beare it, for they Haire-Superdid neuer cut it, vntill they dyed, or that they were dispensed with for their great age, or being flicen. employed in governments or fome honorable charge in the Commonwealth. They carried their haire in treffes, of fixe fingers breadth, which they dyed blacke with the fume of Sapine of Pirre trees, or Roin; for in all Antiquitie it hath beene an offering they made vinto their Idols, and for this cause it was much esteemed and reverenced. They were alwayes dyed with this tincture from the foot to the head, fo as they were like vnto finning Negroes, and that was their ordinary Viction : yet when as they went to facrifice and give Incense in the Mountaines, or on the tops thereof, or in any darke and obfcure Caues, where their Idols were, they yied an other kinds of

vnction very different, doing certaine ceremonies to take away feare, and to give them courage. This vnction was made with divers little venemous beafts, as Spiders, Scorpions, Palmers, Salamanders and Vipers, the which the Boyes in the Colledges tooke and gathered together, wherein they were fo expert, as they were alwayes furnished when the Priet's called for them. The chiefe care of these Boyes was, to hunt after these beafts; if they went any other way, and by chance met with any of these beaits, they stayed to take them, with as great paine, as if their lives depended thereon. By the reason whereof the Indians commonly feared not these venemous beafts, making no more account then if they were not fo, having beene all bred in this exercife. To make an ointment of their beafts, they tooke them all together, and burnt them voon the harth of the Temple, which was before the Altar, untill they were confumed to affect then and did they put them in Morcers with much Tobacco or Petum (being an herbe that Nation vieth

much, to benum the fielh, that they may not feele their trauell) with the which they mingle the aftes, making them lofe their force; they did likewife mingle with thefe aftes, Scorpions, Spiders, and Palmers aliue, mingling all together, then did they put to it a certaine feede being grownd, which they call Ololuchqui, whereof the Indiant make a drinke to fee vitions, for that Vision ointe the vertue of this herbe is to deprive man of fenfe. They did likewife grinde with thefe afhes ment. blacke and havrie wormes, whole haire onely is venemous, all which they mingled together with blacke, or the fume of Rolin, putting it in small pots, which they set before their god, saying it was his meat. And therefore they called it a dinine meat. By meanes of this ointment Like lips, like they became Witches, and did fee and speake with the Devill. The Priefts being shibbered with Lettuce.

30 this ointment, loft all feare, putting on a Spirit of crueltie. By reason whereof they did very boldly kill men in their facrifices, going all alone in the night to the Mountaines, and into obfoure Caues, contemning all wilde beafts, and holding it for certaine and approped, that both Lions, Tigres, Serpents, and other furious beafts which breed in the Mountaines, and Foreits. fled from them, by the vertue of this Perum of their god.

And in truth, though this Petum had no power to make them flie, yet was the Deuils picture fufficient whereinto they were transformed. This Perum did also ferme to cure the ficke, and for children : and therefore all called it the duine Phylicke : and so they came from all parts to the Superiors and Priefts, as to their Saujours, that they might apply this dinine phyficke, wherewith they anointed those parts that were grieued. They faid that they felt hereby a notable ease,

40 which might be, for that Tobacco and Ololuchqui haue this propertie of themselves, to benum Benuming the fielh, being applyed in manner of an emplay fter, which must bee by a stronger reason being mingled with poyfons, and for that it did appeale and benum the paine, they held it for an effect of health, and a dinine vertue. And therefore ran they to these Priests as to hely men, who kept the blinde and ignorant in this error, perswading them what they pleased, and making them runne after their inuentions and deuillish ceremonies, their authoritie being such, as their wordes were fufficient to induce beliefe as an article of their Faith. And thus made they a thousand fuperfections among the vulgar people, in their manner of offering Incense, in cutting their haire. tving small flowers about their necks, and strings with small bones of Snakes, commanding them to bathe at a certaine time; and that they should watch all night at the harth, left the fire should

50 die, that they should eate no other bread but that which had beene offered to their gods, that they should upon any occasion repayre unto their Witches, who with certaine graines told for- Dissarious. tunes, and divined, looking into Keelers and Pailes full of water. The Sorcerers and Ministers of the Deuill vsed much to betmeare themselves. There were an infinite number of these Witches. Diginers, Enchanters, and other falle prophets. There remaynes yet at this day of this infection. although they bee fecret, not daring publikely to exercise their facrileges, deuillish ceremonies and superskitions, but their abuses and wickednesse are discovered more at large and particularly in the confessions made by the Prelates of Peru.

There is a kinde of Sorcerers among it the Indians allowed by the Kings Inguas , which are as Strange Sore it were Sooth-layers, they take vpon them what forme and figure they please, flying far through cores. 60 the aire in a short time, beholding all that was done. They talke with the Deuill, who answereth them in certaine stones or other things which they reuerence much. They serue as Conjurers, to tell what hath palled in the farthest parts, before any newes can come. As it hath chanced fince the Spaniards arrived there, that in the diffance of two or three hundred leagues, they have knowne the Mutinies, Battailes, Rebellions, and Deaths, both of Tyrants, and of

Of the abomiwhich the

those of the Kings partie, and of private men, the which have beene knowne the same day they chanced, or the day after, a thing impossible by the course of nature. To worke this distination, they that themselves into a house, and became drunke vntill they lost their senses, a day after they answered to that which was demanded. Some affirme they vie certaine Victions. The Indians fay, that the old women doe commonly vie this office of witchcraft, and specially those of one Province, which they call Coaillo, and of another Towne called Manchey, and of the Prouince of Guarochiri. They likewise shew what is become of things stollen and lost. There are of these kindes of Sorcerers in all parts, to whom commonly doe come the Anaconas, and Cine. which serve the Spaniards, and when they have lost any thing of their Masters, or when they defire to know the fuccesse of things past or to come, as when they goe to the Spaniards Cities for their private affaires, or for the publike, they demand if their voyage shall bee prosperous . if they shall be sick, if they shall die, or returne sate, if they shall obtaine that which they pretend: and the Witches or Corj rersanswer, Yea, or No, having first spoken with the Deuill, in an obfoure place : fo as these Anaconas do well heare the found of the voyce, but they fee not to whom these Conjurers speake, neither doe they understand what they say. They make a thousand ceremonies and facrifices to this effect, with the which they mocke the Deuill and grow exceeding drunke, for the doing whereof, they particularly vie an herb called Villen, the juyce whereof they mingle with their Chica, or take it in some other fort.

"He Indians had an infinite number of other ceremonies and customes, which refembled to 10

the ancient Law of Mefes, and some to those which the Moores vie, and some approched

necre to the Law of the Golpell, as their Bathes or Opacuna, as they call them : they did walh

Of other Ceremoni sa d Customes of th : Indians. which are like vnto curs. Chap. 27-Mexican Bap-

themselves in water, to clente them from their finnes. The Mexicans had also amongst them a kinde of Baptifme, the which they did with ceremonie, cutting the eares and members of young children new borne, counterfaiting in fome fort the Circumcifion of the Jewes. This ceremonie was done principally to the formes of Kings and Noblemen : prefently upon their birth the Priefts did wash them, and did put a little Sword in the right hand, and in the left a Target, And to the Children of the vulgar fort, they put the markes of their offices, and to their Daughters inftruments to fpin, knit, and labour. This ceremonic continued four dayes, being made before Marriage co fome Idoll. They contracted marriage after their manner, whereof the Licenciate Pollo hathe in written a whole Treatife, and I will speake somewhat thereon hereafter. In other things their cultomes and ceremonies have fome thew of reason. The Mexicans were married by the hands of their Priests in this fort, The Bridegroome and the Bride stood together before the Priest, who tooke them by the hands, asking them if they would marry ; then having understood their wills, he tooke a corner of the vaile wherewith the woman had her head couered, and a corner of the mans gowne the which he tyed together on a knot, and foled them thus tyed to the Bridegroomes house, where there was a harth kindled, and then he caused the wife to goe seven times about the harth, and to the married couple fate downe together, and thus was the marriage contracked. The Mexicans were very jealous of the integritie of their wives : fo as if they found they were not as they ought to bee (the which they knew either by fignes or dishonest wordes) they 40 prefently gave notice thereof to their fathers and kinsfolks of their wives, to their great shame and dishonor, for that they had not kept good guard over them. When they went to the house they made an Inventorie of all the man and wife brought together, of prouisions for the house, of land, of jewels and ornaments, which Inventories every father kept, for if it chanced they made any divorce (as it was common among it them when they agree not) they divided their goods according to the portion that every one brought, every one having libertie in fuch a case, to marry whom they pleased : and they gave the Daughters to the Wife, and the Sonnes to the Husband. It was defended upon pame of death, not to marry againe together, the which they observed yesy strictly. And although it seeme that many of their ceremonies agree with ours, yet differ they much for the great abomination they mingle therewithall. It is common and generall to 50 have vivally one of these three things, either Crueltie, Filthinesse, or Slouth : for all their ceremonies were cru: Il and hurefull, as to kill men and to spill bloud; or filthy and beastly, as to eate and drinke to the name of their Idols, and also to pille in the honour of them, carrying them vpon their shoulders, to anoint and befmeare themselves filthily, and to doe a thousand fores of villanies, which were at the leaft, vaine, ridiculous, and idle, and more like the actions of children. then of men. Whereas the temporall power was greatest, there superstition bath most increafed, as we fee in the Realmes of Mexico and Cufeo, where it is incredible to fee the number of Idols they had : for within the Citie of Mexico there were about three hundred. Mango Ingus Tupa gui, among it the Kings of Cufco, was he that most augmented the service of their Idols, inuenting a thousand kindes of sacrifices, feasts, and ceremonies. The like did King Iscoals in 60 Mexico, who was the fourth King. There was also a great number of superstitions and facrifices in other Nations of the Indians, as in the Province of Guatimala, at the Hands in the new Kingdome, in the Prounce of Chille, and others that were like Commonwealths and Comminalties. But it was nothing in respect of Mexico and Cufco, where Satan was as in Rome, or in his

Manges man-

The Inquas Lords of Peru, had two kindes of Feaths. Some were ordinarie, which fell our Feeth cerebras in certayne moneths of the yeere : and others extraordinarie , which were for certayne toddy themes caules of importance, as when they did crowne a new King, when they begame callo unin. fome warre of importance, when they had any great need of water or drought, or or the Duili ther like things. For the ordinary Feafls, wee mult vnderfland, that enery moneth of the the myftryof yeere they made Feafts, and divers Sacrifices, and although all of them had this alike, that the holy Frinte they offered a hundred sheepe: yet in colour, and in forme they are very diners. In the first rive charges moneth which they call Rayme, which is the moneth of December, they made their first Feast. Report teath. which was the principall of all others, and for that cause they called it Capacrayme, which is to 10 fay, A rich and principall Feast. In this Feast they offered a great number of sheepe and Lambes

in Sacrifice, and they burnt them with fweet wood, then they caused Gold and Silver to bee brought vpon certayne theepe, fetting vpon them three Images of the Sanne, and three of the Thunder, the Father, the Sonne, and the Brother. In their Fealls they dedicated the Inguas children, putting Guaras, or Enfignes vpon them, and they pierced their eares : then fome old man did whip them with flings, and annoynted their faces with bloud, all in figure that they should be true Knights to the Ingua. No ftranger might remayne in Cufco during this moneth, and this Feath, but at the end thereof they entred, and they gave vnto them pieces of the palte of Mays with the bloud of the Sacrifice, which they did eate in figne of confederation with the Inguit, as hath beene faid before. It is strange that the Deuill after his manner hath brought a Tribritie

20 into Idolatry, for the three Images of the Sunne called Apomti, Churunti, and Intiquaoqui which Indian Trining. fignifieth Father and Lord Sunne, the Sonne Sunne, and the Brother Sunne. In the like manner. they named the three Images of Chuquilla, which is the God that rules in the Region of the Ayre, where it Thunders, Raines and Snowes. I remember, that beeing in Cuguifaca, an honourable Priest shewed me an information, which I had long in my hands, whereit was prooued that there was a certayne Guaca or Oratory, whereas the Indians did worthin an Idoll called Tangatanga, which they faid was one in three, and three in one. Comming then to the Feaft of the fecond moneth, which they called Camey, betides the Sacrifices which they made, they Camp feath did cast the ashes into the River, following five or fixe leagues after, praying it to carry them into the Sea, for that the Verochoca should there receive this present. In the third, fourth and

30 fift moneth, they offered a hundred blacke sheepe, speckled, and grey, with many other things, which I omit for being too tedious. The fixt moneth is called Hauncuzqui Aymorey, which answereth to May, in the which they facrificed a hundred sheepe more, of all colours : in this Moone and moneth, which is when they bring May from the fields into the house, they made a Feast, which is yet very vivall among the Indians, and they doe call it Armores.

This reaft is made comming from the Chara or Farme vnto the house, saying certaine Songs, and praying that the Mays may long continue, the which they call Manacora. They take a certayne portion of the most fruitfull of the Maysthat growes in their Farmes , the which they put in a certayne Granier which they doe call Pirna, with certayne Ceremonies, watching three nights: they put this Mays in the richeft garments they have, and being thus wrapped and dref-40 fed, they worthip this Pirua, and hold it in great veneration, faying it is the Mother of the Mays of their Inheritances, and that by this meanes the Mays augments and is preferred. In this moneth they make a particular Sacrifice, and the Witches demand of this Pirna, if it hath ftrength fufficient to continue vntill the next yeere : and if it antiweres No. then they carry this Mays to the Farme to burne, whence they brought it, according to enery mans power; then make they another Pirus, with the same Ceremonies, saying, that they renew it, to the end the Seed of Mays may not perilh, and if it answers that it hath force sufficient to last longer, they leave it vntill the next yeere. This foolish vanitie continueth to this day, and it is very common amongft the Indians to have these Piruss , and to make the Feast of Amorey. The seventh moneth answereth to June, and is called Ancaycuzqui Intiraymi, in it they made the Feath that is called Intiraymi, in the which they facrificed a hundred sheepe called Guanacos, and faid it was the Feast of the Sunne. In this moneth they made many Images of Quinna wood carued, all Imirapai feast attired with rich garments, and they made their dancings which they doe call Caye. At this

Feath they call flowers in the high wayes, and thither the Indians came painted, and their No-

blemen had small plates of Gold upon their beards, and all did ting; we must understand that this Feast falleth almost at the same time, when as the Christians observe the Solemnitie of the boly Corpus Christians Sacrament, which doth refemble it in tome fort, as in dancing, finging and reprefentations. And day recemble for this cause there hath beene, and is yet among the Indians (which celebrated a Feaft formewhat like to outs of the holy Sacrament) many Superfittions in celebrating this ancient Peaft of Intiraymi. The eight moneth is called Chabua Huarqui, in the which they did burne a hundred theep 60 more, all grey, of the colour of Viscacha, according to the former order, which moneth doth anfwere to our Iuly. The ninth moneth was called Tapagnis, in which they burne an hundred sheepe more, or a Chefnut colour; and they doe likewife kill and burne a thouland Cuyes, to the end that neither the Froft, the Ayre, the water, nor the Sunne should hart their Farmes; and

## 1046 Peruan Drunken Feast Situa; Itu-fast and procession Mexican Inbilee. LIRV

they burnt a hundred white sheepe that had sleeces. In this moneth which answereth to Sena tember, they made the Feast called Situa, in this manner. They aftembled together the first day of the Moone before the rifing thereof; and infeeing it they cryed aloude, carrying Torches in their hands, and faying, Let all harme goe away, striking one another with their Torches. They that did this, were called Panconcos: which being done, they went to the common Bath, to the Rivers and Fountaines, and every one to his owne Bath, fetting themselves to drinke foure dayes together. In this moneth the Mamacomas of the Sunne made a great number of small Loaues with the bloud of the Sacrifices, and gaue a piece to enery firanger; yea, they fent to enery Gnaca throughout the Realme, and to many Curacus, in figne of confederation and loyaltie to the Sun and the Ingua, as hath beene faid.

The Bathes, crunkennefle and some Relickes of this Feast Suna, remayne even unto this day. 10 in some places, with the Ceremonies a little different, but yet very secretly, for that these chife and principall Feasts have ceased. The eleventh moneth Homaraymi Punchaiguis, wherein they factficed a hundred theepe more. And if they wanted water, to procure raine, they fet a blacke theepe tyed in the middeft of a Plaine, powring much Chica about it, and giving it nothing to eate vntill it rayned, which is practited at this day in many places, in the time of our October. The twelfth and last moneth was called Aymara, wherein they did likewise facrifice a hundred sheepe, and made the Feast called Raymicantara Raquis. In this moneth which answered to our November, they prepared what was necessary for the Children that should bee made Novices, the moneth following, the Children with the old men made a certayne shew, with rounds 20 . and turnings: and this Feaft was called Ituragmi, which commonly they make when it raines too much, or too little, or when there is a plague.

Among the extraordinary Feafts which were very many, the most famous was that which they called Tim. This Feast Tim hath no prefixed time nor leafon, but in time of necessities To prepare themselves thereunto, all the peopletasted two dayes, during the which they did neither company with their wines , nor eate any meate with Sale or Garlicke , nor drinke any Chica. All did affemble together in one place, where no ftranger was admitted, nor any bealt : they had Garments and Ornaments, which ferued onely for this Feaft. They marched very quietly in Procession , their heads conered with their Veiles, sounding of Drummes, without speaking one to another. This continued a day and a night; then the day 30 following they danced and made good cheere for two dayes and two nights together, faying, that their Prayer was accepted. And although that this Feaff is not vied at this day, with all this ancient Ceremony, yet commonly they make another which is very like, which they call Ayma, with Garments that serue onely to that end, and they make this kinde of Procession with their Drummes, having fasted before, then after they make good cheere, which they vfually doe in their vrgent necessities. And although the Indians forbeare to sacrifice bealts, orother things publikely, which cannot be hidden from the Spaniards, yet doe they still vie many Ceremonies that have their beginnings from these Featts and ancient Superstitions : for at this day they doe couertly make this Featt of Yin, at the dances of the Featt of the Sacrament, in making the dances of Lyamallama, and of Guacon, and of others, according to their ancient Ce- 40

Of the feaft of He Mexicans have beene no leffe curious in their Feafts and Solemnities, which were of I fmall charge, but of great effusion of mans bloud. We have before spoken of the principall Feast of Untaliputali, after the which the Feast of Tezcalipuca was most folemnized. This Feast fell in May, and in their Kalender they called it Tozcolr: it fell enery four evere with the feaft of Penance, where there was given full indulgence and remission of finnes. In this day they did facrifice a Captine which refembled the Holl Texcalipses, it was the nineteenth day of May: vpon the Euen of this Feaft, the Noblemen came to the Temple, bringing a new Garment like vnto that of the Idell, the which the Priest pnt vpon him , having first taken off his other Ger- so ments, which they kept with as much, or more reuerence then wee doe our Ornaments. There were in the Coffers of the Idoll many Ornaments, Iewels, Earerings, and other Riches, as Bracelets, and precious Feathers which ferued to no other vie, but to be there, and was worshipped as their God it felfe. Belides the Garment wherewith they worthinged the Idoll that day, they put upon him certayne enfignes of Feathers, with fannes, shadowes and other things, being thus attired and furnished, they drew the Curtayn or Veile from before the doore, to the end he might be seene of all men ; then came forth one of the chiefe of the Temple, attyred like to the Idoll, carrying flowres in his hand, and a Flute of earth, having a very flarge found, and turning towards the East, he founded it, and then looking to the West, North and South he did the like. And after he had thus founded towards the foure parts of the World (flewing that both they that were prefent and absent did heare him) he put his finger into the Ai, e, and then gathered vp earth, which hee put in his mouth, and did eate it in figne of adoration. The like did all they that were present, and weeping, they fell flat to the ground, inuocating the dark reffe of the night, and the winds, intreating them not to leave them, nor to forget the n, or elfe to take away

## CHAP. 5. Rogations for rain. Tezcalipuas Litter-procession. Manguey whippings. 1047

their lines, and free them from the labours they endured therein. Theenes, Adulterers, and Murcherers, and all other offenders had great feare and heavineffe, whilest this Flute sounded; to as some could not dissemble nor hide their offences. By this meanes they all demanded no other thing of their God, but to have their offences concealed, powring forth many teares, with great repentance and forrow, offering great flore of Incense to appeale their Gods. The couragious and valiant men, and all the old Souldiers, that followed the art of Warre, hearing this Flute, demanded with great denotion of God the Creator, of the Lord for whom we line, of the Sun, and of other their Gods, that they would give them victory against their enemies, & strength to take many Captines, there with to honour their Sacrifices. This Ceremony was done ten dayes beto fore the Feast : During which ten dayes the Priest dil found this Flate, to the end that all might doe this worship in eating of earth, and demand of their Idoll what they pleased; they every day made their Prayers, with their eyes lift up to Heauen, and with fighs and groanings, as men that were grieved for their finnes and offences. Although this contrition was onely for teare of the corporall punishment that was given them, and not for any feare of the eternall, for they certainly beleeved there was no such severe punishment in the other life. And therefore they Nofeare but of offered themselves voluntarily to death, holding opinion that it is to all men an affured rest. The first day of the Feath of this Idoll Texcalpuca beeing come, all they of the Citie affem-

bled together in a Court, to celebrate likewise the Feast of the Kalender, whereof we have already spoken, which was called Toxcoalth, which signifies Admithing: which Feast was not 20 made to any other end, but to demand raine, in the fame manner that wee folemnize the Rogations: and this Feaft was alwayes in May, which is the time that they have most need of rame in those Countreyes. They beganne to celebrate it the ninth of May, ending the nineteenth. The lait day of the Featt the Prieits drew forth a Litter well furnished with Curtaynes and Pendants of divers falhions. This Litter had to many armes to hold by as there were Ministers to carrie it, All which came forth besmeered with blacke and long haire, halfe in treffes with white ftrings, and attyred in the livery of the Idoll. Vpon this Litter they fet the personage of the Idoll, appointed for this Feaft, Which they called the refemblance of their God Te zealipuca, and taking it voon their shoulders, they brought it openly to the foot of the staires: then came forth the young menand Maydens of the Temple, carrying a great coard wreathed of chaines 30 of reafted Mays, with the which they environed the Litter, and putting a chaine of the fame about the Idols necke, and a Garland vpon his head. They called the coard Toxcalt, fignifying the drought and barrennesse of the time. The young men came wrapped in red Curtaines, with Garlands and chaines of roafted Mays. The Maydes were clothed in new Garments, wearing chaines about theirs neckes of roafted Mays; and voon their heads Mytres made of rods coursed with this Mays, they had their feet couered with feathers, and their armes and cheekes painted. They brought much of this roafted Mays, and the chiefe men put it vpon their heads, and about their neckes, taking flowres in their hands. The Idoll being placed in his Litter, they ftrewed round about a great quantitie of the boughes of Manguey, the leaves whereof are large and

pricking.

This Litter being set vpon the religious mens shoulders, they carried it in Procession within the circuit of the Court, two Priests marching before with Cenfors, giving often Incente to the Idoll; and every time they gave Incense, they lifted up their armes as high as they could to the Idoll, and to the Sunne, faying, that they lifted up their Prayers to Heaven, even as the smoke afcended on high. Then all the people in the Court turned round to the place whither the Idoll went, every one carrying in his hand new coards of the threed of the Manguey. , a fadome long, with a knot at the end, and with them they whipped themselues vpon the shoulders; even as they doe here vpon holy Thursday. All the wals of the Court and Battlements were full of boughes and flowres, fo fresh and pleasant, asit did give a great contentment. This Procession being ended, they brought the Idoll to his viuil place of abode. Then came a great multitude of 50 people with flowres, dreffed in divers forts, wherewith they filled the Temple and all the Court,

To as it feemed the ornament of an Oratory. All this was put in order by the Priests, the young men administring these things vnto them from without. The Chappell or Chamber where the

Idoll remay ned was all this day open without any Veile.

This done, enery one came and offered Curtines, and pendants of Sandally , precious Stones, Iewels, Incence, sweet wood, Grapes, or eares of Mays, Quailes : and finally, all they were accuftomed to offer in fuch folemnities. When as they offered Quailes (which was the poore mans offering) they yeld this ceremonie, they defluered them to the Priests, who taking them, pulled off their heads, and cast them at the foote of the Altar, where they lost their bloud, and to they did of all other things which were offered. Euery one did offer meate and fruite accor-60 ding to their power, the which was laid at the foote of the Altar, and the Ministers gathered

them up, and carried them to their Chambers. This folemne offering done, the people went to dinner, euery one to his village or house, leaving the feaft suspended vntill after dinner. In the meane time, the yong Men and Maidens of the Temple, with their ornaments, were builed to ferue the Idoll, with all that was appointed for him to eate : which meate was prepared by

CHAP.S. Sower fauce to sweet meat. Temple and Drum-bels. Comedies & Masks. 1040

other women, who had made a vow that day to ferue the Holl. And therefore fuch as had made this vow, came by the point of day, offering themselves to the Deputies of the Temple, than they might command them what they would have done, the which they did carefully performe. They did prepare such variety of meates, as it was admirable. This meate being ready, and the houre of dinner come, all these Virgins went out of the Temple in procession, energone carrying a little basket of bread in her hand, and in the other, a dish of these meates; before them marched an old man, like to a steward, with a pleasant habit, he was cloathed in a white Surples downe to the calues of his legges, vpona doublet without fleenes of red leather, like to a tacket, he carried wings instead of fleeues, from the which hung broad ribbands, at the which did hang a small Calibase or pumpion, which was coursed with flowers, by little holes that were made in it, and within it were many superstitious things. This old man thus attyred, marched very humbly and heavily before the preparation, with his head declining: and comming neere the foote of the flares, he made a great obeifance and reuerence. Then going on the one fide, the Virgins drew neere with the meate, presenting it in order one after another, with great reuerence. This service presented, the old man returned as before, leading the Virgins into their conuent. This done, the yong men and ministers of the Temple, came forth and gathered vp this meane, the which they carried to the Chambers of the chiefe Priests of the Temple, who had failed fine dayes, eating onely once a day, and they had also abitained from their wines, not once going out of the Temple in thefefine dayes. During the which they did whip themfelues once going our or the rempts in the people for for they called it) what they could, a rigoroully with cords; they did eate of this dinine meate (for fo they called it) what they could, a rigoroully with cords; they did eater of All the people begins direct they did believe they could, a contract they could they could they could they contract they could they contract they could they could they could they contract they could they was it lawfull for any other to eate thereof. All the people having dined, they affembled againe in the court to fee the end of the feath, whither they brought a captine, which by the space of a whole yeare, had represented the Idoll, being artired, decked, and honoured, as the Idollie felfe, and doing all reuerence vinto him, they deliuered him into the hands of the fact ficers, who at that instant presented themselves, taking him by the feete and hands. The Pope did open his flomacke, and pull out his heart, then did he lift vp his hand as high as he could, flowing it to the Sunne, and to the Idoll, as hath beene faid. Having thus facrificed him that represented the the summer and to the summer and the fung with Drummes and other instruments, on the which the chiefe Priests did play and found. 30 Then came all the Noblemen with enfignes and ornaments like to the yong men, who danced round about them. They did no: vfually kill any other men that day, but him that was facrificed, yet every fourth years they had others with him, which was in the years of Jubile and full pardons. After Sunne set, euery one being satisfied with sounding, eating, and drinking, the Virgins went all to their convent, they tooke great diffes of earth full of bread mixt with hony, couered with small panniers, wrought and fashioned with dead mens heads and bones, and they carried the collation to the Holl, mounting up to the Court, which was before the doors of the Oratorie: and having fet them downe, they retired in the same order as they came, the steward going still before. Presently came forth all the yong men in order, with canes or reedes in their lands, who began to runne as fall as they could to the top of the faires of the Temple, 40 who should come first to the dishes of the collation. The Elders or chiefe Priests obscued him that came first, second, third, and fourth, without regarding the rest. This collation was likewife all carried away by the yong men, as great Relicks. This done, the foure that arrived first were placed in the midit of the Ancients of the Temple, bringing them to their chambers with much honour, praising them, and giving them ornaments; and from thence forth they were respected and renerenced as men of marke. The taking of this collation being ended, and the feast celebrated with much joy and noife, they dismiffed all the yong men and maides which had ferued the Idoll; by meanes whereof they went one after another, as they came forth. All the fmall children of the Colledges and Schooles, were at the gate of the court, with bottomes of rushes and hearbs in their hands, which they cast at them, mocking and laughing, as of them that 50 came from the feruice of the Idoll: they had liberty then to dispose of themselves at their pleafure, and thus the Feast ended.

Lthough I have fooken fufficiently of the service the Mexicans did vato their gols; yet A Lithough I haue fooken tufficiently or the seruse our Constant, which was the god of riches, will I speake something of the feast they called Queracoust, which was the god of riches, will I speake something of the far they called Queracoust, which was the god of riches, and they will be a server of the Marchanes bought a slave which those of the which was folemnifed in this manner. Fortie dayes before the Marchants bought a flaue celebrate.ch.30 well proportioned, without any fault or blemish, either of sicknesse or of hurt, which they did attire with the ornaments of the Idoll, that he might represent it forty dayes. Before his cloathing they did clenfehim, washing him twice in a lake, which they called the lake of the god; and being purified, they attired him like the Idoll. During these forty dayes, he was much respected for his sake whom he represented. By night they did imprison him (as hath beene faid) left he should flye, and in the morning they tooke him out of prison, setting him vpon an eminent place, where they ferued him, giuing him exquitite meates to cate. After he had eaten, they put a chaine of flowers about his necke, and many nolegates in his hand. He

had a well appointed guard, with much people to accompany him. When he went through the Citie, he went dancing and finging through all the ffreetes, that he might be knowne for the rejemblance of their god, and when he beganne to fing, the women and little children came forth of their houles to falute him, and to offer vnto him as to their god. Two old men of the Ancients of the Temple, came vnto him nine dayes before the feast, and humbling themselves before him, they faid with a low and submiffe voyce, Sir, you must understand that nine dayes bence the exercise of dancing and singing doth end, and thou must then dye; and then he must anfwer, In a good houre. They call this ceremony, Neyola Maxiltleath, which is to fay, the adwertisement : and when they did thus aduertise him, they tooke very carefull heede whither he 10 were faid, or if he danced as joyfully as he was accultomed, the which if he did not as cheere-

fully as they defired, they made a foolish superstition in this manner. They presently tooke the fact:ficing rafors, the which they washed and clented from the bloud of men, which remained of the former facrifices. Of this washing they made a drinke mingled with another liquor made of Cacao giving it him to drinke; they faid that this would make him forget what had beene faid ynto him, and would make him in a manner insensible, returning to his former dancing and mirth. They faid moreouer, that he would offer himselfe cheerefully to death, being inchanted wich this drinke. The cause why they fought to take from him this heaninesse, was, for that they held it for an ill augure, and a fore-telling of some great harme. The day of the Feast being come, after they had done him much honour, fung, and given him incense, the facrificers tooke

30 him about midnight and did facrifice him, as hath beene faid, offering his heart vn10 the Moone. the which they did afterwards cast against the Idoll, letting the body fall to the bottome of the staires of the Temple, where such as had offered him tooke him vp, which were the Marchants, whose feath it was. Then having carried him into the chiefest mans house amongst them, the body was dreft with divers fawces, to celebrate (at the breake of day) the banquet and dinner of the feast, having first bid the Idoll good morrow, with a small dance, which they made whilst the day did breake, and that they prepared the facrifice. Then did all the Marchants affemble at this banket, especially those which made it a trafficke to buy and fell slaues, who were bound every yeare to offer one, for the refemblance of their god. This Idoll was one of the most hono- Stately Temred in all the Land : and therefore the Temple where he was, was of a great authoritie. There ple,

30 were threescore staires to ascend up unto it, and on the top was a Court of an indifferent largeneffe, very finely dreft and plastered, in the middt whereof, was a great round thing like nto an Ouen, having the entrie low and narrow : so as they must stoope very low that she enter moit. This Temple had Chambers and Chappels as the rest, where there were congents of Priells, yong Men, Maides, and Children, as hath beene faid: and there was one Priest alone refident continually, the which they changed weekely : For although there were in every one of thele Temples, three or foure Curates or Ancients, yet did every one ferue his weeke without parting, His charge that weeke (after he had instructed the children) was to strike vp a Drum Drums vied in every day at the Sunne fetting, to the same end that we are accustomed to ring to Euensong, stead of Bels, This Drum was fuch as they might heare the house found thereof throughout all the parts of the

ao Citie, then every man shut wp his merchandise, and retired vuto his house, and there was so great a filence, as there feemed to be no living creature in the Towne. In the morning when as the day began to breake, they began to found the Drum, which was afigne of the day beginning, fo as trauellers and firangers attended this fignall to begin their journies, for till that time it was not lawfull to goe out of the Citie.

There was in this Temple a Court of reasonable greatnesse, in the which they made great dances, and pastimes, with games or comedies the day of the Idols feast; for which purpose there was in the middeft of this court a Theatre of thirty foote fquare very finely decked and trimmed, the which they decked with flowers that day, with all the art and invention that might be, being inuironed round with Arches of dives flowers and feathers, and in some places there 50 were tied many small Birds, Conies, and other tame beafts. After dinner all the people asembled in this place, and the Players presented themselves, and plaied Comedies, fome counterfeit Comedies the deafe, and the rheumatike, others the lame, fome the blinde, and without hands, which came to seeke for cure of the Idoll, the deafe answered confusedly, the rheumaticke did cough, the lame halted, telling their miseries and griefes, wherewith they made the people to laugh; others come forth in the forme of little bealts, some were attired like Snailes, others like Toades, and fome like Lizards : then meeting together, they told their offices, and enery one retyring to his place, they founded on small flutes, which was pleasant to heare. They likewise counterfeited Butterflies and small Birds of divers colours, and the children of the Temple represented these formes, then they went into a little Forrest planted there for the nonce, where the Priests 60 of the Temple drew them forth with inftruments of mulicke. In the meane time they vied ma-

ny pleasant speeches, some in propounding, others in defending, wherewith the assistants were pleatantly intertained. This done, they made a Maske or Mummerie with all thefe perionages, and so the Featt ended : the which were vsually done in their princirall Featls.

Civill Customes and Arts of the INDIANS taken out of Acost As 6. Boooke.

Of the suppuration of times and the Kalende h Mevi cans vied.cha.z.

Mexican yeare

Will first shew in what fort the Mexicans counted and divided their yeers, their moneths, their Kalender, their computations, their worlds and ages. They diuiled the yeare into eighteene moneths, to which they gaue twentie dayes, wherein the three hundred and threefcore dayes are accomplished, not compre. to hending in any of these Moneths the fine daies that remaine, and make the yeare perfect. But they did reckon them apart, and called them the dayes of sothing; Reis. moneths, during the which, the people did not any thing, neither went they to their Temples, but oc-

Their Kalen-

cupied themseliues onely in visiting one another, and so spent the time: the facrificers of the Temple did likewise cease their facifices. These fine dayes being past, they began the computation of the yeare, whereof the first moneth and beginning was in March, when the leaves began to grow greene, although they tooke three dayes of the moneth of February; for the first day of their yeare was, as it were, the fix and twentieth day of February, as appeareth by their Kalender, within the which ours is likewise comprehended and contained with a very ingenious Art, which was made by the ancient Indians that knew the first Spaniards. I have leene 20 this Kalender, and haue it yet in my custodie, which well deserve the fight, to understand the discourse and industrie the Mexican Indians had. Euerie one of these eighteene moneths had his proper name, and his proper picture, the which was commonly taken of the principall Feast that was made in that moneth, or from the diversitie of times, which the yeare caused in that moneth. They had in this Kalender certaine daies marked and diffinguished for their feafls, And they accounted their weekes by thirteene dayes, marking the daies with a Zero or cipher, which they multiplied vnto thirteene, and then began to count, one, two, &cc. They did like See this in the wife marke the yeares of these wheeles, with foure fignes or figures, attributing to everie yeare

MevicarChro- a peculiar figne, whereof one was of a House, another of a Conie, the third of a Reede, and the nicle in their fourch of a Flint. They painted them in this fort, noting by those figures the yeare that did to owne figures. runne, saying of fo many Houses, of somany Floris, of such a trbeele, happened such a thing. For we must understand that their wheele, which was an age, contained source weekes of yeares, eueric weeke containing thirtcene yeares, which in all made fiftie two yeares. In the midft of this wheele they painted a Sun, from the which went foure beames or lines in crosse to the circumference of the wheele, and they made their course, euen as the circumference was divided into four equall parts, everie one with his line, having a diffinct colour from the rest, and the source colours

which had all their fignes or particular figures, of a House, a Conie, a Reede, or a Flint, noting by enery figne a yeare, and upon the head of this figne they painted what had happened that yeare. And therefore I did fee in the Kalender mentioned the yeare when the Spaniards entered 40 Mexico, marked by the picture of a manclad in red, after our manner, for such was the habit of the first Spaniard, whom Fernando Cortes sent, at the end of the two and fiftie yeares, which finished the wheele. They vsed a pleasant ceremonie, which was, the last night they did breake all their veffels and stuffe, and put out their fire, and all the lights, faying, that the world should end at the finishing of one of these wheeles, and it might be at that time: for (laid they) seeing the world must then end, what neede is there to proude meare to eate, and therefore they had no further neede of Veffels nor fire. Vpon this conceit they paffed the night in great feare, laying, it might happen there would be no more day, and they watched verie catefully for the day; when they faw the day begin to breake, they prefently beat many Drums, and founded Cornets, Flutes, and other inflruments of ioy and gladnesse, saying, that God did yet prolong the so time with another age, which were fifthe two yeares. And then began another wheele. The first day and beginning of this age they tooke new fire, and bought new Vellels to drelle their meate, and all went to the high Priest for this new fire, having first made a solemne Sacrifice, and given

were, Greene, Blew, Red, and Yellow: every portion of these foure had thirteene separations

Lthough this supputation of times practifed amongst the Mexicans, be ingenious enough Ingua account Aand certaine, for men that had no learning; yet in my opinion they wanted discourse and confideration, having not grounded their computation according wnto the course of the Moone, nor distributed their months accordingly, wherein those of Pers have farre surpassed them: for 60 they divided their yeare into as manie daies, perfectly accomplished as we doe here, and into eation of times. Ewelue moneths or Moones, in the which they imploied and confumed the eleuen daies that remaind of the Moone, as Polo writes. To make the computation of their yeare fure and certaine, they yfed this industrie; vpon the Mountaines which are about the Citie of Cufce (where the

thanks for the comming of the day, and prolongation of another age. This was their manner of

accounting their yeares, moneths, weekes, and ages.

CHAS & Suns 12. Pillars Writing by letters, characters, palares Images fooles books Toxi

Kings Inguas held their Court, being the greatest functuatie of those Realms, and as we should say another Rome) there were twelue Pillars fet in order ; and in fuch thiffance the one from the other, as sucrie moneth one of chiefe Pillars did note the tifing and ferting of the Sunne. They 12 Pillars of called them Succanga, by meanes whereof they taught and showed, the Feasts, and the seasons the Sonne, fit to fowe and reape, and to doe other things. They did certaine facrifices to thete Pillars of the Sunne. Euery moneth had his proper name; and peculiar Feaths. They began the yeare by lanurie as we doe. But fince, a King Ingua called Pachacato, which fignifies a reformer of the Tomple, began their yeare by December, by realon (as I confecture) that then the Sunne feturneth from thelast point of Capricome, which is the tropike neerest vnto them. I know not wheno ther the one or the other have obtered any Bifexte, although fome hold the contrarie. The weekes which the Mexicans did reckon, were not properly weekes, being not of leugh daies : the Ingutelikewile made no mention thereof which is no wonder, feeing the count of the weeke is not grounded upon the course of the Sunne, as that of the yeare, nor of the Moone, as that of the moneth; but among the Hebrewer it is grounded vpon the creation of the world; as Morfes reporteth ; and among it the Grockes and Latins upon the number of the feuen Planets,

Etters were inuented to fignifie properly the words we doe pronounce, euen as words (according to the Philosopher) are the fignes and demonstrations of mans thoughts and con- That no Naticeptions. And both the one and the other (Hay the letters and words) were ordained to make on of the Indies things knowne. The voice or fuch as are prefent, and letters for the ablent, and fuch as are to found to have come. Signes and markes which are not properly to fignific words, but things, cannot be called, had the vicol neither in truth are they letters, although they be written, for we cannot fay that the picture of Letters they the Sunne is a writing of the Sunne, but onely a picture; and the like may be faid of other fignes and characters, which have no refemblance to the thing, but ferue onely for memorie: for he that invented them, did not ordaine them to fignific words, but onely to noate the thing : neither doe they call those characters, letters, or writings, at indeede they are not, but rather ciphers, 50 or remembrances as thought which the Spheritts of Attronomers doe vie to fightife divers fignes or planets of Mars, Venus, lupiter. Go.

of whole names the daies of the weeke have taken their denomination; yet was it much for

those ladiens, being men without bookes and learning to have a yeare, scalons, and feaths, so well

appointed as I have laid.

Such characters are ciphers, and no letters : for what name focuer Mart may have in Italian, France, or Spanish, this character doth alwaits figrifie in the which is not found in letters: tot I here wayes although they fignishe the thing, yet is it by meants of words. So as they which know norther trance to pothing, understand them not : as for example, the Oreckes nor the Hebrews, cannot conceive what flerity letters. this word Sol doth lignifie, although they fee it written; for that they understand not the La- as we have; pie tine word : fo as writing and letters are onely practifed by them , which fignifie words there. the er, as the with. For if they lignifie things mediately, they are no more letters not writings, bit ciphers red to, as in and pictures : whereby we may observe two notable things. The one, that the memorie of Hi- China. 40 Rories and Antiquities may be preserved by one of these three meanes, either by letters and wri- Such fool s did tings, as hath beene vied among it the Latines, Greekes, Hebrewes, and manie other Nations; or that wife counby painting, as hath beene wied almost throughout all the world, for it is faid in the fecond Nie chritischerth cene Countell, Painting is a Booke for fooles which cannot reade : or by ciphers and characters, as the inderceind! cipher fignifies the number of a hundred, a thouland and others, without noting the word of a mages not outhundred, or a thousand. The other thing we may observe thereby, is that which is pro- ly to be bookes pounded in this Chapter, which is, that no Nation of the Indies discouered in our time, for such a canhath had the vie of letters and writings, but of the other two forts, Images, and figures objects of wor The which I observe, not onely of the Indies of Pern, and New Spaine, but also of Iap- this to kaned

pon, and China. It is difficulate vaderitand how the Chinese can write proper names in their tongue, especially of strangers, being things they have never seene, and not able to invent figures proper vnto them. I have made triall thereof being in Mexico with the Chinois, willing them to write this proposition in their language, lofeph Acosta is come from Perm, and such like: whereupon the Chinese was long pentiue, but in the end hee did write it, the which other Chinese did after reade, although they did vary a little in the pronuntiation of the proper name, For they vie this deutle to write a proper name : they feeke out some thing in their tongue, that hath refemblance to that name, and let downe the figure of this thing. And as it is difficult among fo many proper names, to finde things to refemble them in the prolation, to is it very difficult and troublelome to write fuch names. Vpon this purpose, Father Allons Sanchez told vs. that when her

Cowas in China, being led into divers Tribunal Seates, from Manderin to Manderin, they were long in putting his name in writing in their Caphas, yet in the end they did write it after their manner, and for idiculoutly, that they scarce came neere to the name : and this is the fashion of Letters and Writings which the Chinois vied. That of the Lapponous approached very neere, although they affirme that the Noblemen of Jappon that came into Europe , did write all things

very eafily in their Language, were they of our proper names : yea, I have had some of their Writing shewed me, whereby it seemes they should have some kinde of Letters; although the greatest part of their Writings, bee by the Characters and figures, as hath beene said of the

An Indian of Peru or Mexico, that hath learned to read & write, knowes more then the wifel Mandarm that is among ft them : for that the Indian with foure and twentie Letters which hee hath learned, will write all the words in the World ; and a Mandarin with his hundred thousand Letters, will be troubled to write some proper name, as of Martin, or Alonso, and with greater reason he shall be eleste able to write the names of things hee knowes not. So as the writing in China, is no other thing but a manner of painting or ciphering. VV.E find among the Nations of New Spains a great knowledge and memorie of antiqui-titie; and therefore fearching by what meanes the Indians had preferred their Hillo-

ries, and fo many particularities, Hearned, that although they were not fo fubrill and curious as

Of the fashion of Letters and writings which the Mexicant vied. Char.7.

the Chinois, and those of Lappon, yethad they some kind of Letters and Bookes among st them, whereby they preserved (atter their manner) the deeds of their Predecessors. In the Provinceos Tucatan, where the Bishopricke is, which they call de Hondaras , there were Bookes of the leaves of Trees, folded and squared, after their manner, in the which the wife Indians contained the diffribution of their times, the knowledge of the Planets, of beafts and other naturall things. Bookes of the distribution heere fallum that all this was an Inchantment and Magicke Arte, who did obstinately maintayne, that they flort, or codex, from the rinde ought to be burnt, foas they were committed to the fire. Which fince not onely the Indian

in which the found to be ill done, but also the curious Spaniards, who defired to know the secrets of the Coun-Ancients with trey. The like hath happened in other things: for our men thinking that all was but Superflition, have loft many memorials of ancient and holy things, which might have profited much This proceedeth of a foolish and ignorant zeale, who not knowing, nor seeking to know what concerned the Indians, fay preindicately, that they are all but Witch-crafts, and that all the Indians are but Drunkards, incapable to know or learne any thing. For fuch as would be curiously informed of them, have found many things worthy of consideration. One of our company of Issuits, a man very wittie and well experienced, did affemble in the Province of Mexico, the 30 Ancients of Tescuco, of Talla, and of Mexico, conferring at large with them, who shewed vnto him their Bookes, Histories and Kalenders, things very worthy the fight, because they had their figures and Hierogliphicks, whereby they represented things in this manner : Such as had forme or figure, were represented by their proper Images, and such as had not any, were represented by Characters that fignified them, and by this meanes they figured and writ what they would. And to observe the time when any thing did happen, they had those painted Wheeles, for every one of them contayned an Age, which was two and fiftie yeeres, as hath beene faid; and of the fide of those Wheeles, they did paint with figures and Characters right against the years, the memo-Table things that happened therein. As they noted the yeere when as the Spaniards entred their Countrey, they painted a man with a Hat and a red lerkin, vpon the figne of a Reed, which did 40 rule then, and fo of other accidents. But for that their Writings and Characters were not suffi cient as our Letters and Writings be, they could not so plainly expresse the words, but onely the Substance of their conceptions. And for a much as they were accustomed to rehearle Discourses and Dialogues by heart, compounded by their Oratours and ancient Rhethoricians, and many Caphas made by their Poets (which were impossible to learne by their Hierogliphickes and Characters) the Mexicans were very curious to have their Children learne those Dialogues and compositions by heart. For the which cause they had Schooles, and as it were, Colledges or Seminaries, where the Ancients taught Children thefe Orations, and many other things, which they preserved amongst them by tradition from one to another, as perfectly, as if they had beene written ; elpecially the most famous Nations had a care to have their chikiren (which had any in- 50 clination to be Rhetoritians, and to practife the Office of Orators) to learne these Orations by

Contession by Pater noster, Anie Maria, and Symboll, or generall Contession of our Faith, written in this

manner by the Indians. And in truth whosoener shall see them, will wonder thereat. For , to signific these words, I 60 a Somer doe confesse my felfe, they painted an Indian upon his knees, at a religious mans feet, 28 one that confesseth himselte : and for this, To God most mightie, they painted three faces with their Crownes, like to the Trinitie, and To the glorious Virgin Marie, they painted the face of

heart : So as when the Spaniards came into their Country, and had taught them to reade and write our Letters, many of the Indians then wrote these Orations, as some graue men doe wit-

neffe that had read them. Which I say, for that some which shall happily reade these long and e-

loquent Discourses in the Mexican History, will easily believe they have beene invented by the Spaniards, and not really taken and reported from the Indians. But having knowne the certains

truth, they will give credit (as reason is) to their Histories. They did also write these Discourses after their manner, by Characters and Images : and I have feene for my better fatisfaction, the

our Lady, and halfe the bodie of a lettle childe : and for Saint Peter and Saint Paul, heads with crownes, and a Key with a Sword : and whereas Images failed, they did fee Characters , as Wherem I have finned, Gre. whereby we may conceine the quicknesse of spirit of these Indians. feeing this manner of, writing of our Prayers and matters of Paith hath not beene taught them by the Spaniards, neither could they have done it, if they had not had an excellent conception of that was taught them. And I have feene in Pers, a confession of sinnes brought by an Indian. written in the same fort with Pictures and Characters, painting euery one of the tenne Commandements, after a certayne mainer , where there were certayne markes like Ciphers. which were the finnes hee had committed against the Commandements. I nothing doubt but if 10 any of the most sufficient Spaniards were imployed to make memorials of the like things by

by their Images and markes , they would not atrayne vnto it in a whole yeere, no not

Before the Spaniards came to the Indies, they of Perm had no kind of writing, either Let. Of Registers ters, Characters, Ciphers, or Figures, like to those of China and Mexico: yet preferred and the manthey the memory of their Antiquities , and mayntaine an order in all their affaires, of Peace, nor of re known and the state of the sta Warre, and Policie, for that they were carefull observers of Traditions from one to mother, and indian of Peru the young ones learned, and carefully kept, as a holy thing, what their Superiors had told them, vied, Chars. and taught it with the like care to their Posteritie. Besides this diligence, they supplied the

20 want of Letters and Writings, partly by painting, as those of Moxico, (although they of Peru were very groffe and blockish) and partly, and most commonly by Quippor. These Quippos are Quippos. Memorials or Registers, made of Bowes, in the which there are divers knots and colours, which doe fignifie divers things, and it is firange to fee what they have expressed and represented by this meanes : for their Quippos serve them insteed of Bookes of Histories , of Lames, Ceremonies , and accounts of their affaires. There were Officers appointed to keepe thele Quippos, the which at this day they call Outpocamajos, the which were bound to give an account of every thing, as Notaries and Registers noe heere. Therefore they fully beleeved them in all things, for according to the varietie of bulinelle, as Warres, Policies, Tributes, Ceremonies and Lands, there were fundry Quippos or branches, in every one of the which there were fo many knots little and great,

20 and ftrings tyed vnto them, fome Red, fome Greene, fome Blue, fome White; and finally, fuch divertitie, that even as wee derive an infinite number of words from the foure and twentie Letters. applying them in divers forts, so doe they draw innumerable words from their knots, and diversitie of colours. Which thing they doe in such a manner, that if at this day in Peru, any Commiffary come at the end of two or three yeeres, to take information vpon the life of any Officer, the Indians come with their small reckonings verified, saying, that in such a Village they given him to many Egges which he hath not payed for, in fuch a house a Henne, in another, two burthens of graffe for his Horse, and that he hath payed but so much mony, and remaineth debtor so much. The proofs being presently made with these numbers of knots and handfuls of coards, it remaynes for a certaine testimonie and register. I did see a handfull of these strings,

40 wherein an Indian woman carried written a generall confeision of all her life, and thereby confeffed her felfe, as well as I could have done it in written Paper. I asked her what those ftrings meant that differed from the reft : the answered me, they were certaine circumstances which the Writing with finnerequired to be fully confessed. Beside these Onippes of threed, they have another, as it forall stones. were a kind of writing with small stones, by meanes whereof, they learne punctually the words they defire to know by heart. It is a pleafant thing to fee the old and the imposent (with a Wheelemade of small stones) learne the Paser nofter, with another the Aue Maria, with another the Creed; and to remember what stone signifies, Which was conceived by the Holy Ghost, and which, Suffered under Pontsus Pilate,

It is a pleasant thing to see them correct themselves when they doe erre; for all their correction consisteth onely in beholding of their small stones. One of these Wheeles were sufficient to make me forget all that I doe know by heart. There are a great number of these Wheeles in the Church-yards for this purpole. But it feemes a kind of Witch-craft, to fee another kinde of Quippos, which they make of graines of Mays, for to cast vp a hard account, wherein a good Arithmetician would bee troubled with his Penne to make a distifion : to fee how much every Accounts by one must contribute: they doe draw so many graines from one side, and adde so many to ano-graines of ther, with a thousand other inventions. These Indians will take their graines, and place five Mays. of one fide, three of another, and eight of another, and will change one graine of one fide, and three of another: So as they finish a certaine account, without erring in any point: and they sooner submit themselves to reason by these Quippos, what every one ought to pay, 60 then wee can doe with the Penne. Heereby wee may judge if they have any vnderstanding, or bee brutish : for my part, I thinke they passe vs in those things, whereunto they doe apply

ners of wri-

TT shall be good to adde hereunto what we have observed, touching the Indians Writings : for their manner was not to write with a continued line, but from the top to the bottome, or in circle-wife, The Latines and Greekes doe write from the left hand vnto the right, which is the vulgar and common manner wee doe vie. The Hebrewes contrariwife beganne at the right to the left, and therefore their Bookes began where ours did end. The Chinois write neither like the Greekes nor like the Hebrewes, but from the top to the bottome, for as they bee no Letters but whole words, and that every figure and Character fignifieth a thing, they have no neede to affemble the parts one with another, and therefore they may well write from the toppe to the bottome. Those of Mexico, for the same cause did not write in line, from one side to another. but contrary to the Chinese, beginning below, they mounted vpward. They yield this manner of 10 writing, in the account of their dayes, and other things which they observed: Yet when they did write in their Wheeles or Signes, they began from the middeft where the Sunne was figured, and so mounted by their yeeres vnto the round and circumference of the Wheele,

By words, Pictures, and these Memorialls, the Kings were often aduertised of that which passed. For this cause there were men of great agilitie, which ferued as Curriers, to goe and come, whom they did nourish in this exercise of Running from their youth, labouring to have them well breathed, that they might runne to the top of a high Hill without wearineffe. And therefore in Mexico they gave the Prize to three or foure that first mounted up the stayres of the Temple, as hath beene faid in the former Booke. And in Cufco, when they made their Solemne Feaft of Capacrayme, the Nouices did runne who could fafteft up the Rocke of Tracauri. And the exercise of running is generall; much vied among the Indians. When as there chanced any matter of importance, they fent vnto the Lords of Mexico, the thing painted, whereof they would adjustife them, as they did when the first Spanish ships appeared to their fight, and when they tooke Topanchan. In Pern they were very curious of Footmen, and the Inquestad them in all parts of the Realme, as ordinary Posts called Chasquis, whereof shall bee spoken in his place.

Diuers formes

Many Nations of the Indies have not indured any Kings, or absolute and sourceigne Lords. but line in Comminalties, creating and appointing Captaynes and Princes, for certayne occafions onely, to whom they obey during the time of their charge; then after they returne to their former estates. The greatest part of this New World (where there are no setled King- to domes, nor established Common-weales, neither Princes nor succeeding Kings) they governe themselues in this manner, although there bee some Lords and principall men raised about the common fort. In this fort the whole Countrey of (bile is governed, where the Anracanes, those of Toucapell and others, have so many yeeres refisted the Spaniards. And in like fort all the new Kingdome of Granado, that of Gnatimalia, the Hands, all Florida, Brefil, Lufon, and other Countreyes of great circuit : but that in tome places they are yet more barbarous, scarcely acknowledging any head, but all command and gouerne in common, having no other thing, but will, violence, industry and diforder, so as hee that most may most commands,

They have onely found two Kingdomes or fetled Empires, that of the Mexicans in New Spaine, and of the Inguas in Perm. It is not easie to be faid, which of the two was the mightieff 40 Kingdome, for that Mosecums, exceeded them of Perm, in Buildings, and in the greatnesse of his Mexican or Pe- Court : but the Inguar, did likewife exceed the Mexicans, in treature, riches, and great neffe of Prouinces. In regard of Antiquitie, the Monarchie of the Inguas, hath the advantage, although it be not much, and in my opinion, they have beene equall in feats of Armes and Victories, It is most certaine, that these two Kingdomes have much exceeded all the Indian Provinces, dilcouered in this New World, as well in good order and government, as in power and wealth, and much more in Superfittion and Service of their Idols, having many things like one to another But in one thing they differed much, for among the Mexicans, the facceffion of the Kingdome, wasby election, as the Empire of the Romanes, and that of Pern, was hereditary, and they fucceeded in bloud, as the Kingdomes of France and Spaine.

Ment of the guas of Peru. Chap. Th.

Of the gouern- He Inqua which ruled in Porn, being dead, his lawfull Sonne fucceeded him, and so they held him that was borne of his chiefe Wife, whom they called Core. The which they have alwayes observed fince the time of an Ingua, called Tupangui, who married his fifter: for these Kings held it an honour to marrie their Sifters. And although they had other Wives and Concubines, yet the fuccession of the Kingdome appertay ned to the Sonne of Coya. It is true, that when the King had a legitimate Brother, he succeeded before the Sonne, and after him his Nephew, and Sonne to the first. The Caracas, and Noblemen, held the fame order of fucceffion in their goods and Offices. And after their manner they made excessive Ceremonies, and obsequies for the dead Being dead, they prefently held him for a God, making Sacrifices vnto him, Images and 60 fuch like, By this meanes, there was infinite Treasure in Pers : for every one of the Inguist, had laboured to haue his Oratorie and Treasure surpasse that of his Predecessors. The marke or entigne, whereby they tooke poffession of the Realme, was a red roll of Wooli, more then fine filke, the which hung in the middett of his forchead; and none but the Ingua alone might

CHAP.6. Peruan holies for their Inga, Iustice, Polity Tribute Provinces.

weare it, for that it was as a Crowne and Royall Diademe : yet they might lawfully weare a Roll hanging on the one fide, neere vnto the care; as fome Noblemen did, but onely the Ingua might carrie it in the middeft of his forehead. At fuch time as they tooke this Roll or Wieathe. they made tolemne Feafts, and many Sacrifices, with a great quantitie of veffell of Gold. and Silver, a great number of imall formes or Images of sheepe, made of Gold and Silver, great abandance of the stuffes of Cumb, well wrought, both fine and courser, many shels of the Sea of all forts, many feathers, and a thonfand theepe, which must bee of divers colours. Then the chiefe Priest tooke a young Childe in his hands, of the age of fixe or eight yeeres, pronouncing thele words with the other Ministers speaking to the Image of Urracocha, Lord we offer this vn 30 to thee, that thou majest majntagne vs in quiet, and beloe vs in our warres, majntaine our Lord the Ingua in his greatnesse and estate, that hee may alwayes increase, giving him much knowledge to so-

There were present at this Ceremonie and Oath, men of all parts of the Realme, and of all

Guaras and Sanctuaries. And without doubt, the affection and reuerence which this people bare to their Kings Ingues, was very great, for it is never found that any one of his subjects committed Treaton against him, for that they proceeded in their governments, not only with an abice lute power, but also with good order and Justice, sufering no man to bee oppressed: The Ingua placed Gouernours in diners Proninces, among it the which, fome were Superiours, and did ac- Exact luftice! knowledge none but himfelfe, others were of leffe command, and others more particular, with 20 fo goodly an order, and fuch granitie, as no man durft be drunke, nor take an eare of Mays from his Neighbour. Thefe Inguas held it for a Maxime, that it was necessary to keepe the Indians alwayes in action : and therefore we fee it to this day, long cawfies and workes of great labour. No idlenesse the which they lay were made to exercise the Indians, left they should remayne idle. When hee permitted. conquered any new Prouince, hee was accustomed presently to fend the greatest part, and the chiere of that Countrey into other Prouinces, or elle to his Court, and they call them at this day Transmigrain Pers, Mitimas, and in their places he fent others of the Nation of Cufco, especially the O. tion. reiones, which were as Knights of an ancient house. They punished faults rigoroully. And therefore fuch as have any understanding hereof, hold opinion, that there can be no better government

O relate more particularly what I have spoken before, you must understand, that the die Of the distri-A ftribution which the Inguas made of their valials, was fo exact and diffinct, as bee might burion the a itribution which the suppus made of their vanato, was not act and dittinct, as nee might laguar made of gouerne them all with great facilitie, although his Realme were a thousand leagues long; for their Vasials. having conquered a Province, he presently reduced the Indians into Townes and Comminatties, Chap. 12. the which he divided into bands, he appointed one to have the charge over every ten Indians, o- Governourse per every hundred another, over every thousand another, and over ten thousand another, whom they called Humo, the which was one of the greatest charges. Yet about all in enery Province. there was a Gouernour of the house of the Ingues, whom all the rest obeyed, giving vnto him enery yeere particular account of what had palled, that is, of fuch as were borne, of those that 40 were dead and of their troupes and graine. The Gouernours went energy yeere out of Cufco, where Tribute yeers

for the Indians, nor more affured, then that of the Inguas.

they remayned, and returned to the great Feast of Rayme, at the which, they brought the tribute ly paid at Casica. of the whole Realme to the Court; neither might they enter but with this condition. All the Kingdome was divided into foure parts, which they called Tabuantinfayo, that is, Chinebasuyo, Fourefold Collasuro, And Suro, and Condesuro, according to the foure wayes which went from Cusco, provincial where the Court was refident, and where the generall affemblies of the Realme were made. These waies and Prouinces being answerable vnto them, were towards the foure quarters of the world, Collafuro to the South, Chinchafuro to the North , Condefuro to the West , and Andefuro to the East. In every Towns and Village, there were two forts of people, which were of Hananfaya, and Vrinfare, which is as much to fay, as those above, and those below. When they commanded any 50 worke to be done, or to furnish any thing to the Ingua, the Officers knew presently how much every Province, Towne, and Family, ought to furnish : to as the division was not made by equall portions, but by Cottization, according to the qualities and wealth of the Countrey. Soas for example, if they were to gather a hundred thousand Fanegues of Meys, they knew presently how much enery Prounce was to contribute, were it a tenth, a seuenth, or a fift

or a burthen of wood, and in a moment they did fee by divers Registers what every one ought to pay. The Elifices and Buildings which the Inguas made in Temples, Fortreffes, wayes, Countrey Of the Edifices houses, and such like, were many in number, and of an excessive labour, as doth appeare at and manner of houles, and incline, were many this day by their ruines and remaynders, both in Cusco, Tyaguanaco, Tambo, and other places, ligan. Chap. 14, where there are stones of an vinmeaturable greatnesse; as men cannot conceine how they were

part. The like was of Townes and Villages, Aillos, or Linages. The Quipocamagos,

which were the Officers and Intendants , kept the account of all with their ftrings and

knottes, without fayling, fetting downe what every one had payed, even to a Henne,

## 1056 Indian skill and stoneworkes, Strawbridges, Tributes. Lands sacred. LIB.V

cur, brought and fet in their places. There came great numbers of people from all Proninces. to worke in thefe Buildings and Fortreffes, which the Ingua caufed to bee made in Cufeo, or other parts of the Realme. As these Workes were strange, and to amaze the beholders, wherein they wied no Morter nor Ciment, neither any Iron, or Steele, to cut, and fet the stones in worke. loyning huge They had no Engines or other Instruments to carrie them, and yet were they so artificially wrought, that in many places they could not fee the joynts; and many of these stones are jo bigge, that it were an incredible thing, if one should not see them. At Tragnanace, I did measure aftone of thirtie eight foot long, of eighteene broad, and fixe thicke. And in the wall of the Force fle of Cufco, which is of Moallon, there are stones of a greater bignesse. And that which is most strange, these slowes being not cut nor squared to joyne, but contrariwise, very vnequal to one with another in forme and greatnesse, yet did they toyne them together without Ciment, after an incredible manner. All this wasdone by the force of men, who endured their labour with an muincible patience. For to loyne one ftone with another, they were forced to handle and trie many of them often, being vneuen. The Ingua appointed enery yeere what numbers of and trie many of them orten, Detty vineters, and again appears to the vineter numbers of people fhould bloom in their thousas and buildings, and the tudians made a distingn amongst them, as of other things, so as no man was opportfled. Although their Buildings were great, yet were they commonly ill appointed and vnfit, almost like to the Mosquites or Buildings of the Barbarians, They could make no Arches in their Edifices, nor Morter or Ciment to build them with all:

Arches.

Bridges

when they faw Arches of wood built vpon the River of Xaura, the Bridge being finished, and 20 the wood broken downe, they all began to runne away, supposing that the Bridge which was of stone should presently fallibut when they found it to stand firme, and that the Spaniards went on it, the Cacique faid to his companions; It is reason we should ferue these men, who in truth seeme to be the children of the Sunne. The Bridges they made were of Reedes pleited, which they tyed the bankes with great stakes, for that they could not make any Bridges of stone or wood. The Bridge which is at this day vpon the current of the great Lake Chiquitto in Collas is admirable: for the course of that water is so deepe, as they cannot fettle any foundation, and so broad, that it is impossible to make an Arch to passe it vas altogether impossible to make a Bridge Straw Bridge, either of wood or ftone. But the wit and industry of the Indians invented a meanes to make a firme and affured Bridge being only of flraw, which feemeth fabulous, yet is it very true : For as 30 we have faid before, they did binde together certaine bundles of Reeds, and Weeds, which doe grow in the Lake that they call Torors, and being a light matter that finkes not in the water, they cast it vpon a great quantitie of Reeds, then having tyed those bundles of Weedes to either side of the River, both men and beasts goe over it with ease : passing over this Bridge I have wondred, that of so common and easie a thing, they had made a Bridge, better, and more affured then the Bridge of Boates from Sewille to Triane. I have measured the length of this Bridge, and as I remember, it was about three hundred foote; and they say that the depth of this Current is very great: and it feemes aboue, that the water hath no motion, yet they fay, that at the bottome it hath a violent and very furious course. And this shall suffice for

Of the Inguas Tributes they imposed vpon the Indians.

He Inguas riches was incomparable, for although no King did inherit the riches and treafure of his Predecessor, yet had he at command, all the riches of his Realmes, aswell Siluer and Gold, as the stuffe of Cumb, and cattell, wherein they abounded, and their greatest riches of all, was their innumerable number of vaffals, which were all imployed as it pleased the King. They brought out of every Province what he had chosen for tribute. The Chicas fent him iweet and rich woods; the Lucanas tent Brancars to carry his Litrer; The Chumbilbicas, Dincers; and so the other Provinces sent him what they had of abundance, besides their generall Tribute, whereunto every one contributed. The Indians that were noted to that end, laboured in the Mynes of Gold and Silver, which did abound in Pern, whom the Ingua entertained with all 50 they needed for their expences: and what soener they drew of Gold and Silver, was for him. By this meanes there were to great treasures in this Kingdome, as it is the opinion of many, that what fell in the hands of the Spamards, (although it were very much, as wee know) was not the tenth part of that which they hid and buried in the ground, the which they could never discover, notwithstanding all the learch covetousnesse had taught them. But the greatest wealth of thele barbarous people, was, that their valials were all flaues, whose labour they vied at their All flaues and pleasure : and that which is admirable, they employed them in such fore, as it was no feruitude vinto them, but rather a pleafing life. But to vinder fland the order of Tributes which the Indians payed unto their Lord, you must know, that when the Ingua conquered any Cities, he divided all the Land into three parts, the first was, for Religion and Ceremonies, so as the Pachayachaqui, 60 which is the Creater, and the Sume; the Chuquilla, which is the Thunder, the Pachamana, and Lands facted, the dead , and other Guacas and Sanctuaries , had every one their proper Lands , the frants whereof were spoyled and confumed in Sacrifices , and in the nourilling of Alinisters and Priests; for there were Indians appointed for every Guaca, and Sanctuarie, and

CHAP.6. Common Lands. Negligence punished. All Peruans were of all Trades, 1057

the greatest part of this revenue was spent in Cufco, where was the uninerfall and general! fanituarie, and the rest in that Citie, where it was gathered; for that after the imitation of Cusco, there were in every Citie, Guacus, and Oratories of the same order, and with the same functi. Order in their ons, which were formed after the fame manner and ceremonies to that of Cufco, which is an ad- Religion. mirable thing, and they have found it by proofe in aboue a hundred Townes, fome of them distant about two hundred leagues from Cufeo.

That which they fowed or reapt youn their Land, was put into houses, as Granaries or flore-

houses, built for that effect, and this was a great part of the Tribute which the Indians paied. I cannot lay how much this part amounted voto, for that it was greater in some parts then in o-10 ther, and in some places it was in a manner all : and this part was the first they put to profit. The fecond part of these Lands and inheritances was for the Ingua, wherewith he and his hous- Royall des hold were entertained, with his kinsfolks, Noblemen, Garrisons and Souldiers. And there- mesnes. fore it was the greatest portion of these tributes, as it appeareth by the quantity of Gold Silver, and other Tributes, which were in houses appointed for that purpose, being longer and larger then those where they keepe the reuenues of the Guacas. They brought this Tribute verie carefully to Cufce, or vinto fuch places where it was needefull for the Souldiers, and when there was store, they kept it ten or twelue yeares, vntill a time of necessitie. The Indians tilled and put to profit the Inguas Lands, next to those of the Guacas; during which

time they lived and were nounfhed at the charges of the Ingua, of the Sunne, or of the Guacas, 20 according to the Land they laboured. But the old men, women, and ficke folkes were referred and exempt from this Tribute, and although whatfoener they gathered upon those Lands were for the Ingua, the Sunne, or the Guacas, yet the propertie appertained vnto the Indians and their fuccessours. The third part of these Lands were given by the Ingua for the Comminaltie and they have not yet discouered, whither this portion were greater, or leffe, then that of the Ingua or Guacas. It is most certaine they had a care and regard, it might be sufficient for the nourishment of the people. No particular man pofferfied any thing proper to himselfe of this third portion, neither did the Indians euer possesse any, if it were not by speciall grace from the Ingua: No proprietie and yet might it not be engaged nor divided amongst his heires. They everic yeare divided these of Lands. Lands of the comminaltie, in giving to every one, that which was needefull for the nourish-30 ment of their persons and families. And as the familie increased or diminished, so did they encrease or decrease his portion, for there were measures appointed for everie person. The Indians paied no tribute of that which was apportioned vnto them : For all their tribute was to till Their Tribute and keepe in good order the Lands of the Ingua, and the Guacas, and to lay the fruits thereof in what. their store-houses. When the yeare was barren, they gave of these fruits thus reserved to the needie, for that there is alwaies superabundance. The Ingua did likewise make destribution Carrelldistre of the cattell as of the Lands, which was to number and divide them; then to appoint the paflures and limits, for the cattell belonging to the Guacas, and to the Ingus, and to everie Town :

and therefore one portion of their reuenues was for religion, another for the Ingua, and the third for the Indians themselves. The like order was observed among the hunters, being forbidden to 40 take or kill any females. The troupes of the Ingues and Guaces, were in great numbers and ve- Hunter lawes rie fruitfull, for this cause they called them Kapaellama, but those of the common and publike, were few in number and of small value, and therefore they called them Baschallama. The Inqua tooke great care for the preferuation of Cattell, for that it hath beene, and is yet, all the wealth of the Countrie, and as it is faid, they did neither facrifice any females, nor kill them, neither did Provisions for they take them when they hunted. If the mangie or the fouruie which they call Carache take anie beaft, they were prefently commanded to burie it quicke, lest it should infect others. They did sheare their cattell in their scason, and distributed to euerie one to spinne and weave Stuffes for the service of his Family. They had fearchers to examine if they did employ themselves in Neeligener these workes, and to punish the negligent. They made Stuffes of the wooll of the Inguas cattell, punished. 50 for him and for his family, one fort very fine, which they called Cambi, and another groffer,

which they likewise called Abasca. There was no certaine number of these Stuffes and garment, appointed, but what was deliuered to every one. The wooll that remained was put into the storehouses, whereof the Spaniards found them full, and with all other things necessary for the life of man. There are few men of judgement but doe admire at fo excellent & well fetled a government, feeing the Indians (being neither religious, nor Christians) maintained after their manner, this perfection, nor to hold any thing proper, and to provide for all their necellities, entertaining with fuch abudance matters of Religion, & that which concerned their King & Lord,

60 The Indians of Pern had one perfection, which was, to teach their children all arts and octor and cupations necessary for the life of man; for that there were no particular Tradef-men, as offices which amone it vs, Taylers, Shoomakers, Weauers, and the rest, but every one learned what was neede- the indians did full for their persons and houses, and provided for themsclues. All could weave and make their excisis, th. 16. garments, and therefore the Ingua furnishing them with wooll, gaue them cloathes. Every man All menotall could till the ground, and put it to profit, without layring of any labourers. All built their own trades Sfif 3

Husbands carefully. Other Arts and Trades which were not ordinary and common for the life of man, had their proper Companies and workemen, as Goldsmiths, Painters, Potters, Watermen, and players of Instruments. There were also Weauers and workementor exquisite workes. which the Noblemen wied: but the common people, as bath beene faid, had in their houses all things necessary, having no neede to buy. This continues to this day, so as they have no neede one of another for things necessary; touching his person and family, as shooes and garments, and for their houle, to fowe and reape, and to make Iron workes, and necessarie instruments, it is worthy observation, although the Indians be simple in their manner and habits, yet doe we see great diverficie amongst the Provinces, especially in the attire of their head, for in some places to they carried a long prece of cloath, which went often about, in some places a large peece of

cloath, which went but once about, in some pares asit were little morters or hats, in some on thers as it were high and round Bonets, and some like the bottome of sacks, with a thousand Vaiformity of other differences. They had a straight and inviolable law, that no man might change the fashion of the garments of his Prouince, although he went to line in another. This the Ingua held to be of great importance for the order and good government of his Realme, and they doe observe it to this day, though not with fo great a care as they were accustomed.

Of the Posts

There were many Posts and couriers which the *Ingus* maintained throughout his Realme, whom they called *Chasquis*, and they carried commandements to the Gouernours, and re-10 the Inaums did turned their aduifes and aduertifements to the Court. Thefe: Chafquis were placed at energy courie, which was a league and a halfe one from another in two small houles, where were four Indians of enery Country, and they were changed monthly. Having received the packet or meffage, they ranne with all their force vntill they had deliuered it to the other Chalquis, such as were ao runne, being ready and watchfull. They ran fiftie leagnes in a day and night, although the greatest part of that Countrie be very rough. They served also to carry such things as the Inous desired to have with speede. Therefore they had alwaies Sea-fish in Cusco, of two daies old or little more, although it were aboue a hundred leagues off. Since the Spaniards entred, they have vied of thele Chafquis, in time of feditions, whereof there was great neede. Don Marin the Viceroy appointed ordinary Posts at every foure leagues, to carry and recarry dispatches, which an were very necessary in this Realme, though they run not so swiftly as the ancients did, neither are there to many, yet they are well paied, and ferue as the ordinaries of Spaine, to whom they giue Letters which they carry foure or fine leagues.

Te Ven as such as had done any good service in warre, or in the government of the Common-

Lawes and pun:fh nents which the In-

Adultery.

Marringe fo-

Eweale were honoured and recompensed with publike charges, with Lands given them in proper, with armes and titles of honour, and in marrying wines of the Inguas linage: Euenio they gaue seuere punishments to such as were disobedient and offenders. They punished murbuffes, and of ther, theft, and adultery, with death, and fuch as committed incest with ascendants or descentheir mariages dants in direct line, were likewise punished with death. But they held it no adultery to have so many wines or concubines, neither were the women subiect to the punishment of death, being found with any other, but onely the that was the true and lawfull wife, with whom they contracted marriage; for they had but one whom they did wedde and receive with a particular folemnitie and ceremonie, which was in this manner: The Bridegroome went to the Brides house, and led her from thence with him, having first put an Ottoyavpon her foote. They call the shooe which they vie in those parts Ottoya, being open like the Franciscan Friars. If the Bride were a maide, her Ottoya was of Wooll, but if the were not, it was of Reedes. All his other wives and concubines did honour and ferue this as the lawfull wife, who alone after the decease of her husband carried a mourning weede of blacke, for the space of a yeare; neither did she marry vntill that time were paft; and commonly the was yonger then her husband. The Ingua 50 himselfe with his owne hand gaue this woman to his Gouernours and Captaines: and the Gouernours or Caciques, assembled all the yong menand maides, in one place of the Citie, where they gaue to currie one his wife with the aforefaid ceremonie, in putting on the Ottoye, and in this manner they contracted their marriages. If this woman were found with any other then her husband, the was punished with death, and the adulterer likewise : and although the husband pardoned them, yet were they punished, although dispensed withall from death. They inflicted the like punishment on him that did commit incest with his Mother, Grandmother, Daughter, or Grandchilde : for it was not prohibited for them to marrie together, or to have of their other kinsfolke for concubines; onely the first degree was defended, neither did they allow the brother to haue the company of his fifter, wherein they of Pers were very much de- 60 ceiued, beleeuing that their Inguas and Noblemen might lawfully controlt marriage with their filters, yea by father and mother : for in truth it hath beene alwaies held vulawfull among the Indians, and defended to contract in the first degree; which continued vntill the time of Topa Ingua Tupangui father to Guaynacapa, and grandfather to Atahualpa, at such time as the Spaniards

entred Perm; for that Topa Ingua Tupangui, was the first that brake this custome, marrying with Mamasello, his fifter by the fathers tide, decreeing that the Inguas might matrie with their fifters by the fathurs fide, and no other. This he did, and by that marriage he had Guaynacapa, and a daughter called Cora Cuffillimar:

finding himfelfe at the point of death, he commanded his children by father and mother to marrie together, and gaue permillion to the Noblemen of his Countrie, to marrie with their fin flers by the fathers lide. And for that this marriage was vulawfull, and against the law of nature. God would bring to an end this Kingdome of the Inguas, during the raigne of Guafear Ingua, and Atabualpa Ingua, which was the fruite that iprang from this marriage. Who 10 fo will more exactly videritand the mannar of marriages among the Indians in Pers, let him reade the Treatife Polo hath written at the request of Don lesonimo Losifa Archbishop of

Kings: which Polo made a very curious fearch, as he hath done of divers other things at the Indies.

BY the commandement of Don Phillip the Catholike King, they have made the most diligent Of the Original Lexact learnth to could be, of the beginning, customes, and principles of the Inguan, goad Lordon the which was not for perfectly done as was defined: for that the Industry law owitten Res. Pennyshitchir. cords: yet the haus recoursed that which I shall write, by meanes of their Quippos and Regi- Conquests iters. First there was not in Perwin old time, any King or Lord to whom all obeyed, but they and Victoriese were Comminalties, as at this day there is in the Realme of Chille, and in a manner, in all Chap.19. 20 the Provinces which the Spaniards have conquered in those Westerne Indies, except the Realme

of Mexico. You must therefore understand, that they have found three manner of Gouernements at the Indies. The first and best, was a Monarchie, as that of the Inguas, and of Morecame, although for the most part they were tyrannous. The fecond was of Comminalties . where they were gouerned by the aduste and authority of many, which are as it were Counsellors. Thele in time of warre, made choise of a Captaine, to whom a whole Nation or Proprince did obey, and in time of peace, every Towne or Comminalty did rule and governe themselves. having tome chiefe men whom the vulgar did respect, and sometime (though not often) some of them affemble together about matters of importance, to confult what they should thinke neceffary. The third kinde of Gouernment, is altogether barbarous, composed of Indians with-

20 out Law, without King, and without any certaine place of abode, but goe in troopes like fauage bealts. As farre as I can conceine, the first Inhabitants of the Indies, were of this kinde, as at this day a great part of the Brefillians, Chiraguanas, Chunchos, Meycingas, Pileocones. and the greatest part of the Floridians, and all the Chichimaquas in new Spainss Of this kinde the other fort of government by Comminalties was framed, by the industry and wisdome of some amongif them, in which there is some more order, holding a more staied place, as at this day those of Auracano, and of Tencapell in Chille, and in the new Kingdome of Grenado, the Moscas, and the Ottomittes in new Spaine : and in all thefe there is leffe fierceneffe and incivilitie, & much more quiet then in the reft, Of this kinde, by the valor & knowledg of some excellent men, grew the other government more mighty and potent, which did institute a Kingdome and Monarchy.

40 Is appeared by their Registers, that their Gouernment hath continued about three hundred Communication yeares, but not fully foure, although their Seigniorie for a long time, was not about fine or of their Mo fix leagues compaffe about the Citie of Cufeo : their originall and beginning was in the valley of narchy. Cuico: where by little and little they conquered the Lands which we call Peru, paffing beyond Onitto, vnto the river of Pafes towards the North, stretching even vnto Chille, towards the South, which is almost a thousand leagues in length. It extended in breadth vnto the South Sea towards the West, and vnto the great champains which are on the other side of the Ander, where at this day is to be seene the Castell which is called the Pucara of the Ingua, the which is a fortreffe built for the defence of the frontire towards the East. The Inguas advanced no farther on that fide, for the abundance of water, Marshes, Lakes, and Rivers, which runne in those parts.

50 These Inguas passed all other Nations of America, in pollicie and gouernment, and much more Strife twize in valour and armes, although the Canaries which were their mortall enemies, and fauoured the Inques and Spaniards, would never confesse it, nor yeelde them this advantage : so as even at this day, if they contribe. fall into any discourse or comparisons, and that they be a little chased and incensed, they kill one another by thousands upon this quarrell, which are the most valiant, as it hath happened in Culco. The practife and meanes which the luguas had to make themselves Lords of all this Countrie, was in faining that fince the generall deluge ( whereof all the Indians have knowledge) the world had beene preferued, reftored, and peopled by these Inqua, and that feyen of them came forth of the Caue of Pacaricambo, by reason whereof, all other men ought them tribute and vaffalage, as their progenitors. Belides they faid and affirmed. 60 that they alone held the true religion, and knew how God should be served and honoured : and for this cause they should instruct all men. It is a strange thing, the ground they give to their

customes and ceremonies. There were in Cusco about foure bundred Oratories , as in a holy 400, Oratories

land, and all places were filled with their mifteries. As they continued in the conquests of Pro- in Calca. unces, fo they brought in the like ceremonies and customes. In all this Realme the chiefe Idols

they did worthip, were Firacocha, Pachayachachic, which fignifies the Creator of the World and after him, the Sunne. And therefore they faid, that the Sunne received his vertue and being from the Creator, as the other Idols doe, and that they were interceffors to him.

Of the first Inqua, and his Succeffors. Chap.20.

T He first man which the *Indians* report to be the beginning and first of the *Inguas*, was Man, gecaps, whom they imagine, after the deluge, to have issued forth of the Caue of Tambo, which is from Cufee about five or fixe leagues. They fay that hee gaue beginning to two principals pall Races or Families of the Inguas , the one was called Hanancufco , and the other Orincufco: of the first came the Lords which subdued and gouerned this Prounce, and the first whom they make the Head and Stemme of this Familie, was called Ingaroca, who founded a Familie or 10 Aillo, as they call them, named Vicaquiquirao. This although he were no great Lord, was ferred notwithfla ding in veffell of gold and filter. And dying he appointed that all his treaffire fhould be imployed for the feruice of his Body, and for the feeding of his Familie. His Succeffor did the like : and this grow to a generall custome, as I have faid, that no Ingua might inherit the goods and house or his Predecessor, but did build a new Palace. In the time of this Inguaroca, the Indians had Images of gold; and to him fucceeded Tagnar guaque, a very old man: they fay, he was called by this name, which fignifies teares of blond, for that being once valing if hed and taken by his Enemies, for griefe and fortow hee wept bloud. Hee was buried in a Village called Paulo, which is voon the way to Omajugo: he founded a Familie called Accuillyanaca, To him fucceeded his fonne Viracocha Ingua, who was very rich, and made much veffell of gold and filuer : he founded the Linege or Familie of Cocopanaca. Gonçales Pigarre fought out his body, for the report of the great treasure buried with him , who after hee had cruelly tormented many Indians, in the end he found it in Xaquixaquana, whereas they faid Picarre was afterwards vanquished , taken , and executed by the President Guasea. Gonçales Picarre caused the body of Viracocha Ingua to be burnt; the Indians did afterwards take the ashes, the which they preierued in a small vesse'l, making great facrifices thereunto, vittil Pollo did reforme it, and other Idolatties which they committed upon the bodies of their other Ingua, the which hee suppressed with an admirable diligence and dexteritie, drawing these bodies out of their hands, being whole, and much imbalmed, whereby hee extinguished a great number of Idolatries which they committed. The Indians tooke it ill, that the Ingua did intitle himfelfe Viracocha, which is the name of their God : and he to excuse himselie, gaue them to vinderstand, that the same Vinaceobs appeared to him in his dreame, commanding him to take this name. To him succeeded Pschacuti Ingua Tupangui, who raigned feuentie yeeres, and conquered many Countries. The beginning or his conquests, was by meanes of his eldest brother, who having held the government in his fathers time, and made warre by his confent, was over-throwne in a battaile against the Changuas, a Nation which inhabites the Valley of Andaguayllas, thirtie or fortie leagues from Cufco, vpon the way to Lima. This elder brother thus defeated, retyred himselfe with tew men-The which Ingua Tupangui, his younger brother feeing, deufed and gaue forth, that being one day alone and melancholy, Vraceche the Creator spake to him, complaying, that though bee were universall Lord and Creator of all things, and that he had made the Heanen, the Sunne, the world, 40 and Men, and that all was under his command, yet did they not yeeld him the obedience they ought, but contrariwise did equally honour and worship the Sunne, Thunder, Earth, and other things, which had no vertue but what he imparted vinto them : giving him to vinderthand, that in heaven where hee was, they called him Viracocha Pachayachachic, which fignifieth minerfall Creator; and to the end the Indians might beleeue it to be true, he doubted not although hee were alone, to raife men vnder this title, which should give him victorie against the (hangus, although they were then victorious, and in great numbers; and make himselfe Lord of those Realmes, for that hee would send him men to his aide innifibly, whereby he precayled in fuch fert, that under this colour and conceit, he began to affemble a great number of people, whereof he made a mightie Armie, with the which he obtayined the victorie, making himfelfe Lord of the whole Realme, taking the 30-50 neriment from his father and brother. Then afterwards he conquered and ouer-threw the Changnas, and from that time commanded that Unacocha should be held for universall Lord, and that the Images of the Sunne and Thunder, should doe him reverence and honor : And from that time they began to fet the Image of Viracocha aboue that of the Sunne and Thunder, and the reft of the Guaras. And although this Ingua Tupangui had given Farmes, Lands, and Cattell to the Sunne, Thunder, and other Gnacas, yet did ne not dedicate any thing to Viracocha, Lying, that he had no neede, being vinuerfall Lord and Creator of all things. Hee informed his Souldiers after this absolute victorie of the Changuas, that it was not they alone that had conquered them, but certaine bearded men, whom Viracocha had fent him, and that no man might fee them but himfelfe, which were fince converted into itones; it was therefore necessarie to feeke them out, 6whom he would know well. By this meanes he gathered together a multitude of thones in the Mountaines, whereof he made choice, placing them for Guacas, or Idols, they worthipped and factificed vnto; they called them Pururaucas, and carried them to the warre with great desotion, beleating for certaine, that they had gotten the victorie by their helpe. The imagination

## CHAP.6. Ingas worshipped. Guanacapas 300 founes Spaniards esteeme coc. 1061

and fiction of this Ingua was of fuch force, that by the meanes thereof fiee obtained goodly victories : He founded the Familie called Tnacapanaca, and made a great Image of gold, which hee called Indillapa, which he placed in a Brancard of gold, very rich, and of great price, of the which gold the Indians tooke great store to carry to Xaxamalca, for the libertie and ransome of Atabalpa, when the Marquisse Francis Pigarre held him prisoner. The Licenciate Pole found in his house in Cusco, his servants and Mamacomas, which did service to his memorie, and found that the body had beene transported from Patallalia to Twocache, where the Spaniards have fince founded the Parish of Saint Blaife. This body was so whole and preferred with a certaine Rolin, that it feemed aline, he had his eyes made of a fine cloth of gold, to artificially fet, as they feemed very 10 naturall eyes, he had a blow with a stone on the head, which he had received in the warres , hee was all grey and hayrie, having loft no more haire then if he had dyed but the fame day, although it were leventie and eight yeeres fince his decease. The foresaid Polo sent this body with some others of the Inguas, to the Citie of Lima, by the Vice-royes command which was the Marquelle of Canerte, and the which was very necessarie to roote out the Idolatrie of Cufco. Many Spania ards have seene this body with others in the Hospitall of Saint Andrew, which the Marquesse built, but they were much decayed. Don Philip Caritopa, who was grand-child or great grandchild to this Inque, affirmed that the treature hee left to his Familie was great, which should bee in the power of the Tanaconas , Amaro, Toto; and others. To this Inqua succeeded Topaingua Tupangui, to whom his sonne of the same name succeeded, who founded the Familie 20 called Capac Aillo.

TO this latter Ingua succeeded Guaynacapa, which is to say, A young man, rich and valiant, Of the greatest and to was he in truth, more then any of his Predecessors, or Successors. He was very wife, and most faplanting good orders throughout his whole Realme, he was a bold and refolute man, valiant, and called Goadvery happy in warre. He therefore obtayned great victories, and extended his Dominions much arrays, char, farther then all his Predeceffors had done before him; he dyed in the Realme of Chitte, the which he had conquered, foure hundred leagues diffant from his Court. The Indians opened him after his decease, leaving his heart and entrailes in Quinto, the body was carried to Colleo, the

which was placed in the renowmed Temple of the Same. Wee fee yet to this day fitariy Caw-30 feys, Buildings, Fortreffes , and notable workes of this King thee founded the Familie of Teme Bamba. This Guaynacapa was worthipped of his subjects for a god, being yet aline, as the old Guaynace men affirme, which was not done to any of his Predeceffors. When hee dyed , they flue a thou- worthippedice fand persons of his houshold, to serve him in the other hie; all which dyed willingly for his fer- 2 god. uice, infomuch that many of them offered themfelues to death, befides fuch as were appointed ; his riches and treasure was admirable. And Forasmuch as the Spannerds entited frome after his death, the Indians laboured much to conceale all; although a great part thereof was carried to Xaxamalca, for the ranfome of Atabulpa his fonne. Some worthy of credit, affirme that he had His 300, fonnes aboue three hundred formes and grand-children in Cufco. His mother called Managella was &c.

much esteemed amongst them. Polo fent her body with that of Guaynacapa very well imbal-40 med to Lima, rooting out infinite Idolatries. To Guaynacapa succeeded in Casco a sonne of his called Titocuffigualpa, who fince was called Guafpar Ingua, his body was burned by the Captaines of Atabualpa, who was likewise sonne to Guaynacapa, and rebelled in Queto against his brother, marching against him with a mightie Armie. It happened that Quifquets and Chillenchi, Captaines to Atabualpa, tooke Guafpar Ingua in the Citie of Cufee, being received for Lord and King (for that he was the lawfull successor) which caused great forrow throughout all his Kingdome, especially in his Court. And as alwayes in their necessities they had recourse to factifices, finding themselues vnable to set their Lord at libertie, aswell for the great powerthe Captaines had that tooke him, as also, for the great Armie that came with Atahuaspa, they resolved (some fay by the commandement of this Ingua) to make a great and folemne facrifice to Vascocha Pachayachachic, which fignifieth vniner fall Creator, defiring him, that fince they could not deliver

50 their Lord, he would fend men from Heaven to deliver him from prifon. And as they were in this great hope, vpon their facrifice, newes came to them, that a certaine people come by Sea, was landed, and had taken Atahualpa prifoner. Hereupon they called the Spaniards Visacochas, beleeuing they were men sent from God, as well for the small number they were to take Ata- Spaniards shualpa in Xaxamalea, as alfo, for that is chanced after their factifice done to Viracocha, aftd there- fixemed men by they began to call the Spaniards Viracochiu, as they doe at this day. And in truth, if we had fent from God, given them good example, and such as we ought, the Indians had well applyed it, in faying they were men fent from God. It is a thing very well worthy of confideration, how the greatnesse and proudence of God, disposed of their rie of our men at Pers, which had been impossible, Pers could not

60 were not the differtion of the two Brethren and their Partifans, and the great opinion they had been conquered of Christians, as of mentent from Hearin, bound (by the taking of the Indians Country) to labour to win foules vinto Almightie God.

Of the laft Inguas. Chop. 22.

THE rest of this subject is handled at large by the Spanish Writers in the Histories of the In-deer, and for that it is not my purpose, I will speake onely of the succession of the Inguist. Atabualpa being dead in Xaxamalca, and Guascar in Cusco, and Francis Picarre with his people having feifed on the Realme, Mangocapa fonne to Guannacapa belieged them in Cufco very ftraightly : but in the end he abandoned the whole Country, and retyred himlelfe to Vilca Benne ba, where he kept himfelfe in the Mountaines , by reason of the rough and difficult accesse , and there the Successors Inquas remayined, vitill Amaro, who was taken and executed in the market place of Cufeo, to the Indians incredible griefe and forrow, feeing inflice done upon him publiquely whom they held for their Lord. After which time, they imprisoned others of the Linage of these Inguas. I have knowne Don Charles, grand-child to Guaynacapa, and sonne to Polo. 10 who was baptized, and alwayes fauoured the Spaniards against Mangocapa his brother, when the Marquelle of Canette governed in this Country Sarraopamena, went from Vilcabamba, and came vpon affurance to the Citie of Kings, where there was given to him the Valley of Tucay, and other things, to whom lucceeded a daughter of his. Behold the succession which is knowne at this day of that great and rich Familie of the Inguas , whose raigne continued about three hundred yeeres, wherein they reckon eleuen Succeffors, vntill it was wholly extinguished. In the other Linage of Vrincusco, which (as we have faid before) had his beginning likewise from the first Mangocapa, they reckon eight Succeffors in this fort : To Mangocapa succeeded Cina choraca, to him Capac Yupangui, to him Lluqui Yupangui, to him Mayraca paeft Tarcogumam, vnto whom succeeded his some, whom they name not, to this some succeeded Doulean 20 Tambo, Maytapanaça. This fufficeth for the originall and fuccession of the Inguas, that governed the Land of Pers, with that that I have spoken of their Lawes, Government, and man-

Of the manner of the Meximenweale, 4 hap.24.

A Lthough you may fee by the Historie written of the Kingdome, succession, and beginning of the Mexicans, their manner of Commonweale and Gouernment, yet will I locate briefly what I shall thinke fit in generall to bee most observed : whereof I will discourse more amply in the Historie. The first point whereby wee may judge the Mexican government to bee very politike, is the order they had and kept inniolable in the election of their King : for fince their first, called Acamapach , vnto their last , which was Moteguma, the second of that name, 30 there came none to the Crowne by right of succession, but by a lawfull Nomination and Election on. This election in the beginning was by the voice of the Commons, although the chiefe men managed it. Since in the time of Isealt the fourth King , by the adulfe and order of a wife and valiant man, called Tlacael, there were toure certaine Electors appointed, which (with two Lords or Kings subject to the Mexican, the one of Tescace, and the other of Tucuba) had power to make this election. They did commonly choose young men for their Kings because they went alwayes to the warres, and this was in a manner the chiefe cause why they defired them to, They had a speciall regard that they should bee fit for the warres , and take delight and glorie therein. Atter the election they made two kindes of feafts, the one in taking possession of the Royall E-Harth, called Dume, where there was a continual! fire before the Altar of the Idoll, and after fome Rhetoricians practifed therein, made many Orations and Speeches. The other feast, and the most folemne, was at his Coronation, for the which hee must first overcome in battell, and bring a certaine number of Captines, which they must facrifice to their gods; hee entred in triumph with great pompe, making him a folemne reception, aswell they of the Temple, who went all in procession, founding on fundrie forts of instruments, guing Incense, and singing like fecular men , as also the Courtiers , who came forth with their denites to receine the victorious King. The Crowne or royall Entigne was before like a Myter, and behinde it was cut, fo as it was not round, for the forepart was higher, and did nie like a point. The King of Teleuco had and weake, the Kings were very moderate in their expenses and in their Court , but as they increased in power, they increased likewise in pompe and state, vitill they came to the greatnesse of Motegama, who if he had had no other thing but his house of Beasts and Birds, it had beene a proud thing, the like whereof hath not beene feene : for there was in this house all fores of hill, birds of Xacamamas, and beatts, as in an other Noabs Arke; for Sea fish, there were Pooles of faltwater; and for River fish , Lakes of fresh-water; birds that doe prey were fed, and likewise wilde beaffs in great abundance : there were very many Indians imployed for the keeping of there bearly; and when he found an impossibilitie to nourill any fort of fish fowle, or wilde bearly he caused the Image or likenesse to be made, richly cut in precious stones, silver, or gold, in marble, pleafure, others of forrow and mourning, and others to treat of the affaires of the Realme. There was in this Palace many Chambers, according to the qualitie of the Noble men that ferued him,

Royall Diapicture ftorie.

House of liting Crea.

flate, for the which they went to the Temple, making great ceremonies and facrifices upon the the privilege to crown the King of Mexico. In the beginning when the Mexicans were but poore 50 or in flone : and for all forts of entertainments, he had his feuerall Houses and Palaces, fome of 60 with a strange order and distinction.

He Mexicans have beenevery curious, to divide the degrees and dignities among it the noble Of the Titles men and Lords, that they might diftinguish them to whom they were to give the greatest and Dignities honor. The dignitic of these foure Electors was the greatest, and most honorable, next to the the Indians v. King, and they were chosen presently after the Kings election. They were commonly brothers, fed. Chap. 25. or very neere Kinimen to the King, and were called Tlacobecalcals, which tignifies Proce of dars, Cors. the which they cast, being a kinde of armes they vie much. The next dignitie to this, were those they doe call Tlucatecati, which is to fay, Circumcifers or Cutters of men. The third dignitie Men-cutters. were of those which they called Eznabnacalt, which lignifies; A Shedder of blond. All the which Bloud fled-Titles and Dignities were exercised by men of warre. There was another, a fourth intituled, ders.

10 Thlancalque, which is as much to fay, as, Lord of the blacke bonfe, or of darkneffe, by reason of cer- Lord of darketame Inke wherewith the Priefts anointed themselves, and did ferue in their Idolatries. All these nesses foure Dignities were of the great Counfell, without whose adule the King might not doe any thing of importance; and the King being dead, they were to choose another in his place out of one of those foure Dignities. Besides these, there were other Counsels and Audiences, and some Other Offifay there were as many as in Spaine; and that there were divers Seates and Iurifdictions, with their cers. Counfellors and Judges of the Court, and others that were under them, as Corrigidors, chiefe Seethe pi Ludges, Captaines of Luftice, Lieutenants, and others , which were yet inferior to thefe , with a dure historie; very goodly order. All which depended on the foure first Princes that affished the King. These foure onely had authoritie and power to condemne to death, and the reft ient them inftructions

20 of the Seutences they had given. By meanes whereof they gave the King to vindentand what had paffed in his Realme.

There was a good order and fettled policie for the Renenues of the Crowne, for there were Officers draided throughout all the Prouinces, as Receivers and Treasurers, which received the Tributes and Royall Reuenues. And they carried the Tribute to the Court, at the least every moneth; which Tribute was of all things that doe grow or ingender on the Land, or in the water, aswell of Iewels and Apparell, as of Meat. They were very carefull for the well ordering of that which concerned their Religion, Superstition, and Liolatries : and for this occasion there were a great number of Ministers, to whom charge was given to teach the people the custome Priests and and ceremonies of their Law. Hereupon one day a christian Priest made his complaint that the Teachers of 30 Indians were no good Christians, and did not profit in the Law of God; an old Indian answered the Law.

him very well to the purpose, in these termes: Let the Priest (faid he) imploy as much care and dilisence tomake the Indians Christians, as the Ministers of Idols did to teach them their ceremonies; for with halfe that care they will make us the best Christians in the world for that the Law of lesus Christ is much better : but the Indians learne it not, for want of men to infirmat them. Wherein he lpake the

very truth, to our great shame and confusion.

He Mexicans gave the first place of honour to the profession of Armes, and therefore the How the Mexi-THe Mexicans gaue the first place or nonour to the production of the state of the s reputation gotten in warres, came to Dignities and Honors, so as they were held for Noble-men. and of the Ore 40 They gave goodly recompences to fuch as had done valuently, who injoyed priviledges that none hood, Chapade

else might haue, the which did much incourage them. Their Armes were of Rasors of sharpe cutting flints, which they fet on either fide of a staffe, which was fo furious a weapon, as they affir - Their Atmess med that with one blow, they would cut off the necke of a Horfe. They had strange and heavy Clubs, Lances, falhioned like Pikes, and other manner of Darts to caft, wherein they were very expert; but the greatest part of their combate was performed with stones. For defensive armes they had little Rondaches or Targats, and some kinde of Morions or Head-pieces incironed with feathers. They were clad in the skinnes of Tigres, Lions, and other fauage beafts. They came presently to hands with the Enemie, and were greatly practised to runne and wrefile, for thir chiefe manner of combate, was not fo much to kill, as to take Captines, the which they vied in

50 their facrifices, as bath beene faid. Morecuma fet Knight-hood in his highest splendor, ordayning certaine militarie orders, as Commanders, with certaine markes and enfignes. The most honorable among ft the Knights, were those that carried the crowne of their haire tied with a Eagle-order little red Ribband, having a neh plume of feathers, from the which, did hang branches of feathers upon their shoulders, and rolls of the same. They carried so many of their rolls, as they had done worthy deeds in warre. The King himfelfe was of this order, as may be feene in Chap altepec, where Morecuma and his fonnes were attyred with those kindes of feathers, cut in the Rocke, the which is worthy the light. There was another order of Knight-hood, which they called the Lions and the Tigres, the which were commonly the most valiant and most noted in Order of Li-

warre, they went alwayes with their Markes and Armories. There were other Knights, as the one and Ti-60 Grey Knights, the which were not formuch respected as the rest: they had their haire our round gres, about the care. They went to the warre with markes like to the other Knights, yet they were Gray Knights. not armed, but to the girdle, and the most honorable were armed all ouer. All Knights might carry gold and filter, and weare rich Cotton, vie painted and gilt veffell, and carry shooes after their manner : but the common people might vie none but earthen veffell , neither might they Knights prise-

Princes todging, the tecond of Eagles, the third of Lyons and Tigers, and the fourth of the gree Knights. The other common officers, were lodged vinderneath in meaner lodgings : if any one

lodged out of his place, he fuffred death.

Of the great

ftory. Colledges.

There is nothing that gives me more cause to admire, nor that I finde more worthy of commendations and memory, then the order and care the Mexicans had to nourish their youth: generals Mex for they knew well, that all the good hope of a Common-weale, conflitted in the norture and ingeneralized to in- fittition of youth, whereof Plate treates amply in his bookes De Legibus: and for this reason in they laboured and tooke paines to fequester their children from delights and liberties (which are the two plagues of this age) imploying them in honeft and profitable exercises. For this causes See the picture there was in their Temples, a private house for children, as Schooles, or Colledges, which was feperate from that of the yong men and maides of the Temple, whereof we have discoursed as large. There were in these Schooles a great number of children, whom their fathers did willing. ly bring thither, and which had teachers and mafters to inftruct them in all commendable exerciles, to be of good behaulour, to respect their superiours, to serve and obey them, giving them. to this end, certaine precepts and inffructions. And to the end they might be pleating to No. blemen, they taught them to fing and dance, and did practife them in the exercise of warrer fome to fhoote an Arrow, to cast a dart or a staffe burnr at the end, and to handle well a Target 20 and a Sword. They fuffered them not to fleepe much, to the end they might accustome themfelues to labour in their youth, and not be men given to delights. Besides the ordinary number of these children, there were in the same Colledges, other children of Lords and Noblemen, the which were instructed more privately. They brought them their meate and ordinary from their Their employ- houles, and were recommended to ancients and old men to have care over them, who continually ments and ri- did aduise them to be vertuous and to live chastely; to be sober in their diet, to fast, and to march gravely, and with measure. They were accustomed to exercise them to travell, and in laborious exercises: and when they see them instructed in all these things, they did carefully looke into their inclination : if they found any one addicted unto warre, being of fufficient yeares, they

fought all occasions to make triall of them, sending them to the warre, vnder colour to carrie 30 victuals and munition to the Souldiers, to the end they might there fee what paffed, and the la-

bour they suffered. And that they might abandon all feare, they were laden with heavie bur-

thens, that shewing their courage therein, they might more easily be admitted into the com-

pany of Souldiers . By this meanes it happened, that many went laden to the Armie, and returned Captaines with markes of honour. Some of them were so desirous to be noted, as they were either taken, or flaine : and they held it leffe honourable to remaine a prifoner. And there-

fore they fought rather to be cut in peeces, then to fall captiues into their enemies hands. See

how Noblemens children that were inclined to the warres were imployed. The others that had

their inclination to matters of the Temple; and to speake after our manner, to be Ecclesiafts-

call wen, having attained to sufficient yeares, they were drawne out of the colledge, and pla- 40

ced in the Temple, in the lodging appointed for religious men, and then they gave them the order of Ecclesiasticall men. There had they Prelates and Masters, to teach them that which concerned their profession, where they should remaine being destined thereunto. These Mexicans tooke great care to bring vp their children : if at this day they would follow this order, in building of houses & colledges for the instruction of youth, without doubt Christianstie should expectation of flourish much amongst the Indians. Some godly persons have begunne, and the King with his Counfell have favoured it: but for that it is a matter of no profit, they advance little, and proexternall gain.

Plaies and Military

Mulicke,

We have not discovered any Nation at the Indians, that live in comminalties, which have not their recreations, in plates, dances, and exercises of pleasure. At Pers I have seene plates in man- 50 ner of combats, where the men of both fides were fometimes fo chafed, that often their Paella (which was the name of this exercise) fell out dangerous. I have also seene divers forts of dances, wherein they did counterfait and reprefent certaine trades and offices, as shepheards, labourers, fifthers, and hunters, and commonly they made all those dances, with a very grave found and pale : there were other dances and maskes, which they called Guacenes, whose actions were pure representations of the deuill. There were also men that dance on the shoulders one of another, as they doe in Portugall, the which they call Paellas. The greatest pars of these dances, Exo.32. athing were superflictions, and kindes of Idolatries: for that they honoured their Idols and Guacas in that manner. For this reason the Prelates have laboured to take from them these dances, all they Comedies, &c. could : but yet they fuffer them, for that part of them are but sports of recreation : for alwayes 63 they dance after their manner. In these dances, they vie fundry forts of instruments, whereof, fome are like Flutes, or little Canons, others like Drums, and others like Cornets: but commonly they fing all with the voyce, and first one or two fing the fong, then all the rest answer them. Some of these fongs were very wittily composed, containing Hustones, and others were full of

CHAP.6. Indian Rope-dancers and agility. Picture fory how gotten.

fuperflittions, and fome were meere follies. Our men that have converfed among them, have laboured to reduce matters of our holy faith to their tunes, the which hath profited well : for that they employ whole dayes to rehearfe and fing them, for the great pleafure and content they take in their tunes. They have likewife put our compositions of Musicke into their Language, as Octaves, Songs, and Rondels, the which they have very aptly turned, and in truth it is a goodly and very necessary meanes to instruct the people. In Perm, they commonly call Dances Tagui, in other Prouinces, Areittos, and in Mexico, Mittottes. There hath not beene in any other place any fuch curiofitie of Playes and Dances, as in New Spaine, where at this day we see Indians fo excellent Dancers, as it is admirable. Some dance vpon a Cord, fome vpon a long and streight Curious Date

10 flake, in a thouland fundry forts; others with the foles of their feet and their hammes, do handle, cers. cast up and receme againe a very heavy blocke, which teemes incredible but in feeing it. They doe make many other showes of their great agilitie, in leaping, vaulting, and tumbling, sometimes bearing a great and heavy burthen , fometimes enduring blowes able to breake a barre of Iron. Great spiller, But the most vivall exercise of recreation among the Mexicon is the following Mittotte, and that is a kind of dance they held to braue and to honourable, that the King himfelfe danced, but not ordinarily, as the King Don Pedro of Arrason with the Barber of Valencia. This Dance or Mittatte, was commonly made in the Courts of the Temple, and in those of the Kings houses, which were more spacious. They did place in the midit of the Court two Instruments, one like

to a Drumme, and the other like a Barrell made of one piece, and hollow within, which they 20 fet voon the forme of a man, a beaft, or voon a Pillar.

Their two Inftruments were fo well accorded together, that they made a good harmony and with the'e Instruments they made many kinds of Ayres and Songs. They did all fing and dance to the found and measure of these Instruments, with so goodly an order and accord, both of their feet and voyces, as it was a pleasant thing to behold. In these Dances they made two Circles or Wheeles, the one was in the middeft neere to the Instruments, wherein the Ancients and Noblemen did fing and dance with a fort and flow motion; and the other was of the reft of the people round about them, but a good diffance from the first, wherein they danced two and two more lightly, making divers kinds of paces, with certayne leaps to the measure. All which together made a very great Circle. They attyred themselves for these Dances with their most pre-30 cious apparell and Iewels, enery one according to his abilitie, holding it for a very honourable thing : for this caule they learned thele Dances from their infancie. And although the greatest part of them were done in honour of their Idols, yet was it not to inflituted, as hath beene faid, hut only as a recreation and pattime for the people. Therefore it is not conucnient to take them quite from the Indians, but they must take good heed they mingle not their superflictions among it them, I have feene this Mutotte, in the Court of the Church of Topetzotlan, a Village feuen leagues from Mexico: and in my opinion, it was a good thing to buffe the Indians upon Festiuall dayes, feeing they have need of some recreation : and because it is publike, and without the prejudice of any other, there is leffe inconvenience, then in others which may be done privately by themiclues, if they tooke away there,

To the Reader.

R Eader, I here present out o the che choife, t of my levels. My travelling saucis bath innied man my Readers to many my labours in ftrange births already. Or z regio in terris nothri non plena las borist Iaponian and China rarities fo remote from our world, are neere to our worke, and their chara-Elers communicated here to the Reader; not their arts alone, Thou haft here also Industran, Arabike, Perfian Turkish, add other Letters, and not onely the transcript from their languages. At for translations and collections, thou haft them here also out of the Hebrew, Auncient and Moderne Greeke, Abaffine, Tartarian, Rustian, Polonian, Egyptian, and innumerable other Nations Christian, lewish, Mahumetan, Ethnike, Civill, Barbarian and Swage; winumerable wayer dinerfified. Tet all thefe in letters. or charafters. In hieroglyphical mysticall pictures the ancient Egyptians and Behingians, bane by may of Emblemes obscurely and darkly delinered their obscure mysteries, uncertaine, waxenly, pliant concontstathe world; some of which our Pilgrimage balb mentioned. But a Historie, yea a Politiche Ethike, Ecclefiaftike, Occonomike History, with tust distinctions of times, places, acts and arts, we hade netther seene of theirs, war of any other Nation, but of this which our light and flight apprehensions seeme not barbarous alone, but wilde and faunge. Such an one we here prefent, a prefent thought fit for him whom the fenders esteemed the greatest of Princes, and yet now presented to thy hands before it could are rine in bis presence. For the Spanish Governour baning with some difficultie ( as the Spanish Presace imports) obtained the Booke of the Indians, with Mexican interpretations of the Pictures (but ten dates 60 before the departure of the Ships ) committed the fame to one skelfull in the Mexican Linguage to be interpreted; who in a very plaine file and verbatim performed the faint, viling alfo fome Motifico words, at Altaquiand Mezquitas (for Prieft and Temples) import. This Historie ibus written, fent to Charles the fifth Emperour, was together with the Shippe that carried it taken by Frenchmen of war, from whom Andrew Theuet she French Kings Geographer, obtained the Same : after whose death;

Master Hakluyt (then Chaplaine to the English Embassadour in France) bought the same for 20. Frencherownes, and procured Master Michael Locke in Sir Walter Raleighs name to translatest. It seemes that none were willing to be at the cost of cutting the Piltures, and sort remained among sibir papers till his death, whereby (according to his last will in that kinde) I became possessiour thereof, and paper till ma deato, morrey (account, avon in the soft for the Preffe. The rather was I easy to be because the more than the soft for the Preffe. The rather was I easy to become the real act of the more than the soft for the Preffe. The rather was I easy to be more therein, as being a thing difficed by that most industries and Antiquest, indicates Scholler, Religions. Gentleman, our Ecclestastite Secular, the Churches champion, Sir Henry Spelman, Knight; whom for honors sake I name, that his name may honour our ruder lines; a name so sitting to the Man, as one which Ban, in regard of his wife spell and science in divine & humane learning, and is ready, with maine conrage ban, in regard of bit wife types any time to the character of the control of the control of the control of the character of t man can ipell, out of Spel-man. ### CHAP. VII.

The History of the Mexican Nation, described in pictures by the Mexican Author explained in the Mexican language; which exposition translated into Spanish, and thence into English , together with the faid Picture-bistorie are bere presented,

# The Mexican Chronicle.

Ere beginneth the Historie and foundation of the Citie of Mexico, founded and inhabited by the Mexicans, who at that time were called Megiti; whose origi-40 nall beginning of being Lords, and their acts and lines are declared briefely in this Historie, according as it is fignified and fet out successively by the pictures and paintings following,

In the yeare 1324, after the comming of our Lord and Saujour Iefus Christ, the Mexican people first arrived at the place of the Citie of Mexico, and because they liked well the greatnesse and the scituation of that place, afterthat they had transiled in their Iournies, and wandered many yeares from Country to Countrey, & in some of them had made their abode, for some yeares, being come from far Countries in following their Iournies, and not being contented with the other places where they had made their abode, they came and fetled themselves in the place of Mexico. The which place at that time was all drowned with water, and wascourred with great bogs and bankes of moorish shegs and bulrushes, which they call Tail, and it had Carrizales, and great plats of dry ground couered with shrubbes, bushes, and briars like woods. And through all the space of that place there went a speing & streame of fair cleere water which was free from all segges and bushes, which water streams went through it crossewise, in manner of Saint Andrewes croffe, as it is shewed in the picture : and about the middle of that place of that water-fireame, the Megiti found a great rocke of flone, and growing thereon a great Tree or bush called Tunal, wherein a great Eagle Candal had her baune and abode for her foode, fo as all about that place was scattered full of bones and feathers of divers Birds and Foules of divers colours. And they having gone stroughout all that place and Countrie theireabout, and finding it very fruitfull and full of wilde beatls, wilde Foules, Birds, and Fiftes, and things of the water, wherewith to fuffaine themselves and to profit themselves in their businesse in dealing with the l'owner thereabouts, and finding the water-courfes of that place to commodious, and that their Neighbours could not trouble nor hurt them, and for other things and causes to their good liking they determined to passe no further on their journeyes in trauelling, but to fettle

themselves and dwell still. And according to their determination, they did settle themselves there effectually. And made themselves a throng Citie of defence with bankes and walles about the waters, and on the plats of ground among the Segges and Bushes of Tulis and Carrialts. And for a beginning of that their feate and habitation, it was determined by them, to gue name and title to that place, calling it Tenulitilan. By reafon and cause of the Tunal glowing but of the Rocke (for Tenuchtitlan interpreted in our Castilian Spanish Tongue is Tunal growing apon

Necestary of the Merken people had with them of their Governous try petions named, October Queyes, Assetti, Manacid, Tapak, Tapak, Tapak, Kacadi, Kacadi, Bullet and the Confession Queyes, Assetti, Manacid, Tapak, Tapak, Marie Sale and Subject of the first part of the Confession of chiefe Gouernour and Lord to governe them, see perion especially choion thereto and fit for it, having in him all parts and abilities o exercise Lordinip. And they appointed the other chiefe Governours, that they should be Agents and Captaynes, Governours vnder him.

And after some yeeres were pass, door their dwelling in that prace, and the people multipixed, the Citie likewise was named Mexico, so named and derived of the Maribane, calling it the

plac of fetting of the Mark an veople.

And when the people were one what multipleed like following wallie people they took beginning of couragious minderian percurving over their Weightons, and is newed themselves in force of arms, whereby they tubuce and market that or, them two Townes next ad-20 joyning to Mexico, named Colhuacan , and Tenamon; as likewife is fet forth in the pictures: Tenubrition, the which doings passed in the si ne of the goustnment of the chiefe Lord Tonich, which was Mexican Lords the frace of fiftie one yeares, at the end whereof he died.

Concerning the Pictures of blew in the margents of this Hilborie, it is to be understood that heaven every several space or partition doth signific one years, and they bee the numbring of years to coloured and it is to be understood that every federall space or partition signific the one severall years, and so Tenancas intothey accounted & numbred energy years fenerally, proceeding by the number of rundles or pricks they accounted to principle of the control of the c 30 the partitions or spaces severally there be durers severall figures, yet the principall accompt of numbering is that accompt of the pictures or randles therein contained. And although the names of the yeares that they give to every partition from the number of the first point till the thirteenth be to some purpose, yet for to advertise the Reader thereof; here is made by at selfe a declaration of the names, with their interpretations,

In the order and rule of the partitions which are numbred for yeares, that partition where there is a branch with a foote like a flower, it doth fignific a bitter and vnfortunate years' which the Mexicans had, and did feare, faying that their predecessours time out of minde did give them warning that fich yeares which befell every two and fiftieth yeare, were dangerous, and vnfortunate, and bitter yeares, because that in such yeares there were floods generally, and like-40 wife darkenesse of the eclips of the Sunne, and universall earthquakes. And likewise in such yeares they made great facrifice and ceremonies to their gods, and gaue themselues to repentance, and did abstaine from all vices against the very day and houre of frich a yeare. In the which day generally they put out all their lights and fires till that day were past; and being pas-

fed they kindled new lights being had out of a Mountaine by a Prieff.

chiefe Lord.

This is a weeke of yeares after the Mexican computation (all coloured blew , the Mexican names written over in red) the first of which they call Setuchtli, that is, one Conie: the second Omeacalt, or two Canes: the third Yeytecpath, three Flints: the fourth Macuilitychtli, which signifieth foure howfes: the fifth Criquacenacatl, that is fine Conies: the fixth, fixe Canes: the fenenth, fenen Flints: the eight, eight Houses : the ninth, nine Conies : the tenth, ten Canes : the elementh, elemen Elmes : the twelfth, welne Honfes : the thirteenth, thirteene Conies.

## 1076 Mexican historie in pictures. Chronicle without writing, Axayacaçi. LIB.V.

IN the yeere 1479, after the death of Gueguemotezuma, succeeded in the Lordship of Mexico Axayacacs ionne of Tecocomoetliquieto, which was the lonne of Tecoals Lord of Mexico, And during the time that the laid Axaracaci was Lord, he conquered and won by force of armes 6uen and thirtie Townes, as hereafter are pictured and named. Amongst which Townes hee fub. dued under his Lordship by force of armes the Towne of Tlatilalco, a thing of great importance. Mogniture was Lord of Tlandulco at that time, who being a mightie person of great strength and of a proud nature, began to give occasion of diffention and warres to the Lords of Mexico. having heretofore held them for friends : by occasion whereof hee had great incounters and battailes, wherein the faid Moquibuix Lord of Tlatitules dyed in throwing himselfe downe from a Cu (or a high Mezeita, or Temple) for he feeing himfelfe so hard befet in the battaile, being ale moit ouercome, entred into a Mizena to faue himielfe, because hee would not be taken prisoner. And an Alfaqui (or Prieft) which was in the Mezquito , or Temple , reprouing him for it and imputing cowardife vnto him, he threw himfelfe downe as aforelaid. At which time the Merk gans had the victorie. And thenceforth the Towne of Tlavilales was subject to the Lord of Mexic co, paying tribute and acknowledging fubication. Axayacaci was very valiant and warlike in armes, and was viciously given to women, having had many wives and fonnes: he was also proud and warlike, whereby all his subjects feared him extremely; hee did maintaine and hold for good all the Lawes and Ordinances that his predecessor Gueguemore and had made, according as hath beene mentioned in his Historie; and hee continued the space of twelve yeeres in the said Lordthip of Mexico, at the end whereof he dyed and departed out of this prefent life,

A. Weine years. B. Angueut. C by a med force subdued this Towns following (and a bifor experient politics). N the yeere 1485, after the death of Tizizacatzi, succeeded Abaizatin, brother to his Predes 1 ceffor Transicurai, in the Signorie of Mexico. And during the time of his Lordfhip, he conquered by force of armes fine and fortie Townes, according as hereafter are pictured and named. The faid Abuzozin was like to his Predecesfor and Brother Tizizoenzi in valiantnesse and feates of warre, whereby he got the title of Tlacatecall, which fignifieth a great Captains, and from the fame title he came to be Lord of Mexico. The faid Abuizonin was by nature of a good inclination, and given to all vertue, and likewise in the course of his life hee had his Commonwealth ruto led and gouerned well, and he fulfilled and kept the Lawes and Statutes that his Predecessors had maintayned fince the time of Gueguemotezuma. And as the flate of the Lordfhip of Mexico was brought to great Majestie, and had the greatest part of this New Spaine subitet, acknowledging their feruice, and by the great and rich tributes which they gave the faid Mexican Lordinip, came to much renowme and mightinesse. And he like a mightie and great minded Prince, gaue great things and preferments to his feruants, and he was temperate of condition and mercifull, whereby his feruants loued him exceedingly, and yeelded him great renorence. And likewife hee had many wives, and children by them, because it was a thing adioyned to the Lordship, and a point of great estate. He was of a morrie condition, whereby his seruants did feast him continually in his life time with great and divers kindes of feafts, and mulick, and fongs, and inftriments, as 60 well in the night as in the day : for in his place the Municians and Singers neger ceased with many Instruments of musicke. The course of his life in that Signiorie was fixteene yeeres; at the end whereof he dyed and paffed out of this prefent life.

A fixteene yeeres. B A. buisezin. E conquered by armes the townes following, Tziccoac, Tlappan, Molanco, Amaxtlan, Zapotlan, Xaltepec, Chiapan, Totore-pec, Xochilan, Xolochsubylan, 13 Cozaquantenanco, Coco. buipilecan, Coynacac, Acatepec, Huexolotlan, Acapulco, Xiubhuacan , Apancalecan, Tecpatepec, Tepechiap. co Xicochimalco Xinhtecza. catlan, Tequantepec, Coyo-lapan, Tatalilalocan, Teocuitlatlan , Hnehaeslan Quanhxayacasıılan, Yzbu. 14 atlan, Comitlan, Nantzine tlan, Huspilan, Cabualan. Titatlan, Huiztlan, Xolot. lan, Quanhnacazilan, Maeatlan, Ayanbtochmitlatla Quantitlan, Cuecalcuitlapi. la, Mapachtepec, Quanhoi. lolan, Tlacoropec, Mizqui-

tie : and he by his granitie and feueritie enlarged exceedingly the State and Dominion of Mexico, yea a great deale more then his Predeceffors. Morezzenma was the fonne of Anagagagi, which had beene Lord of Mexico, and before hee came to the faid Lordship hee had the delerts of a worthy Captaine and a valiant man in warres, whereby her had the title of Tlacatecail, 48 and soluce succeeded in the Lordship of Mexico, as is before rehearled, and being in the faid His weale and Lordship he did greatly increase the Mexican Empire, bearing the rule ouer all the Townes in this New Spaine, infomuch that they gave and payed him great cributes of much riches and

butes, as hereafter by their pictures and declarations is made manifeft. Moregume was by nature wife, and an Affrologor, and a Philosopher, fubtile and skilled generally in all artes as well of warres as all other matters temporall. And for his granitie and estate he had of his Lordship the beginning of an Empire, according as his feruants did reverence him with great honor and power, that in comparison of him, not one of his predecessors came to halte fo much eftate and Majeftie.

N the yeere 1502, after the end and death of Abuiçoçin, succeeded in the Lordhip of Mexi-

co, Motez,uma. Mexico was now growne into great Majestie, Renowme, and Authori-

yal e: He was feared vary much of all his feruants, and like wife of his Captaines and Principals,

intomuch that not one when they had any businesse with him, for the great renerence they had

him in durif for feare looke him to that face, but that they held downe their eyes and their head

low and enclined to the ground a sad many other extraordinarie sofpects and catemonies they

thoritie he held for lawfull wines, according to their rights and ceremonies, and them hee kept within his Palaces and dwelling houses; and the children that came of shem were had in reputation as more lawfull children then the others which here had by the other women. It were a See before in large historie to tell the order he had in keeping of them, and conversation with them. And be- scalla, and afcause this present historie is but briefe, it is left vnrehearsed,

The quantitie, value, and number of the tributes and kindes of things that his subjects did pay ha ions of Ma. for tribute vnto him, shall be seene and vnderstood hereafter, as by the pictures and declarations testing, in a is fignified. And he made a ftraight order that the tributes which they payed him, should be ful- wilde kinde of filled according as they were louised by him; for the fulfilling whereof he had in all his fulfiedt. flare and mahilled according as they were service by min; not not turning written by a containing and the containing and commandement, but that they were kept and wholly fulfilled because he punished and corrected executing the rebels without remission.

And in the fixteenth yeere of the reigne of Motezuma, the Mexicans had knowledge of of the elder certaine Spaniards, which were discourrers of this New Spains, that at the end of twelue Fuff notice of moneths there should come a fleet of Spaniards to ouercome and conquer this Country ; and the Spaniards the Mexicans kept account thereof, and they found it to bee true, for at the end of the faid twelve moneths was the arrivall of the faid fleet at a Hauen of this New Spaine, in the which fleet came Don Ferdinando Cortes, Marques del Valle, which was the feuenteenth yeere of the reign

20 of Motezama; and in the eighteenth yeere he made an end of the continuance of his Lordship and Raigne: in the which yeere he dyed and departed this prefent life. At the time when Mo- Muteruna texama came to his government, he was five and thirtie yeeres old little more or leffe, fo that at death, his decease he was three and fiftie yeeres of age. And straightway in the yeere after his death, this Citie of Mexico, and other Townes adjoyning, were our come and pacified by the faid Marques del Valle, and his Confederates. And to this New Spaine was conquered and pacified. ----

ready, was set in a little pan before the said Boyes, that they might eate it. And after the said bathing or washing, the said Midwife aduertised the said Boyes, that they should with a loud voice give a new name vnto the childe that she had so washed, and the name that they gave it was that which the Midwife would impose,

When the childe was brought forth to wash, if it be a man childe they bring him forth with his figne in his hand, and the figne is the Instrument wherewith his Father did exercise himselfe, as well in the Military art, as other arts, as of a Goldsmith, a Grauer, or any other office what soe uer: And after they had done all the aforefaid, the Midwife brings the childe to his Mother. And if it be a woman-childe, the figne wherewith they bring her to wash, is a Distaffe, a Spindel, 10 a Basket, and a handfull of Broome; which are the things wherewith the thould exercise her

And the bond of the Manchilde with a Shield and Darts for a figne which he brings with him when they bring him for to walk; they offer it to that part and place where are likely to happen warres with his enemies, where they burie it under ground. And fo likewise of the Womanchilde, her bond they buried under the Mesate, which is a stone to grinde Cakes upon.

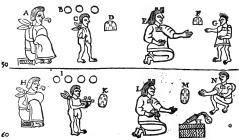

And after the aforefaid, at the end of twenty dayes, the childes Parents went with the childe Prefentation to the Temple or Mixquita, which they called Calmecae, and in the presence of the Priests in the Temple they presented the childe with his offering of Mantels, and Mastelles and some meate: And after the childe being brought up by his Parents, and being of age, they committed the childe to 20 the high Priest of the said Temple, because there he might be taught that hereafter he might be

And if the childes Parents were determined that he (being of age) should serve in warlike affaires, then fraight way they offered him to the Matter thereof, making him a promite of him (the Mafter of Boyes and yong men they called Teacheanch or Telpachilate) which offering was made with his present of meate and other things for the celebrating thereof. And the childe being of age, they committed him to the faid Mafter.

THe declaration of the pictures contained in the deuision following, wherein is declared at what age, and in what manner the naturall Parents did give countell to their children, how they ought to line, as successively is pictured in soure partitions, and so the soure partitions of this fide are declared in order which are thefe that follow.

I The first partition, wherein is declared how that the Parents corrected, their children, in gining them good counfell when they were three years of age; and the portion of meate that they gaue them enery meale was halfe a cake of bread;

2 The second partition wherein is pictured in what things the Parents did instruct their children when they were of the age of four yeares, and how they began to exercise them to ferue in small things. And the portion of meate which they gaue them at a meale, was a 40 whole Cake.

V Captaine Treocyabna-

HE that is fet and at his backe a woman fpinning, fignifieth that it is his wife new married, and because he had taken the state of marrimonie vpon him, having heen a Messenger with the rest that are pictured before him, which are fine, named Tetpuchtly, which are Mellengers likewife. The married man giueth them a reason why hee leaueth the charge of a Mellenger by reason of his marriage, and that hee will rest and leave off his fernice patt. And to please them more, and that they should grant his request, hee maketh them a banquet in giuing them well to eate and drinke, and moreover the prefent that bee giveth them is a handfull of perfumes, a copper Hatchet and two Mantels, as by the pictures of these things are intituled. And by this folemnitie the married man is free from the faid Office.

2 In the second partition : Hee that is set downe and intituled, doth fignifie the Lord of Mexico, that when any Meffenger Telpuchtly pictured in the partition before this had given a good account of his office, and having taken upon them the flate of marriage, the Lords of Mexico from that they were but Meffengers did promote them to a be ter title and degree, in so much that he made them Tegnibus, which is signified by the pictures and titles of Tequibna, with their Speares and Fannes, giving them authoritie to bee his Ambaffadors and Officers in the warres, which they held for an office of great honour.

The Alcaldes doe lignific Iustices , appointed by the Lords of Mexico , that they should heare matters aswell Civill as Criminall. And the pictures of men and women which are before them, are Pleaders and Suitors which doe aske juftice. And the foure pictures that are intituled Teetly, shat are behinde the Alcalas . are principall young men that ionne with the Alealdes in their audience, to learne and infruct themselves in matters of in igement, and afterwards to succeede in the Offices of the Alcaldes. From these Alcaldes, there was an appellation before the counsell Chamber of Motegama, as hereafter is pictured.

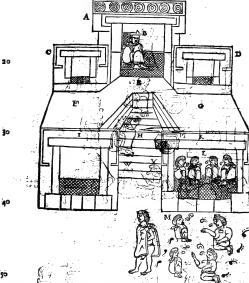

Mexico.

Conquest of Mexico and New Spaine by HERNAN-

a Gemarahis the Conquest of the West Indies eranflated into English by T. Nicolas.

and Cortes his

Ernando a Cortes was borne at Medellin in Andulozia, a Prouince of Spaine, Anno 1485. When he was nineteene yeeres old, he fayled to the Hand of Saint Do. mingo, where Ouando the Gouernour kindly entertayned him. He went to the conquest of Cuba in the years 1511. as Clerke to the Treasurer, vnder the conduct of lames Vela [ques, who gave voto him the Indians of Manicorao, where hee was the first that brought up Kine, Sheepe and Mares, and had heards and

flockes of them ; and with his Indians he gathered great quantitie of Gold, so that in short time he was able to put in two thousand Castlins for his stocke, with Andres de Duero, a Merchant. At this time Christopher Morante had fent (Anno 1517.) Francis Hernandes de Cordona, who first discouered Xucatan, whence he brought nothing (except the relation of the Country) but ftripes : whereupon lames Velafques in the yeere 1518. fent his Kinfman Iohn de Grijalna, with b Of this voy. two hundred Spaniards in foure thips: he traded in the River of Tanafco, and for trifles reage. Reade P. turned much Gold, and curious workes of feathers, Idols of Gold, a whole harnesse or furniture Martyrs fourth for an armed man of Gold thin beaten, Eagles, Lions, and other pourtratures found in Gold, &cc. 20 But while Grinalua deferred his returne, Velasques agreed with Cortes to bee his partner in the Discouery, which he gladly accepted, and procured licence from the Gouernours in Domineo. and prepared for the Voyage.

Velalques afterward vied all meanes to breake off, in fo much that Cortes was forced to engage this Chapter. all his owne stocke, and credit, with his friends in the Expedition, and with five hundred and fiftie Spaniards in eleuen thips, fet faile the tenth of February 1519. and arrived at the Iland of Acufamil. The Inhabitants at first fled, but by the kind entertainment of fome that were taken, they returned, and received him and his with all kind offices.

They told him of certayne bearded men in Tucatan, whither Cortes fent; and one of them, Geronimo de Aquilar came vnto him, who told him, that by shipwracke at Immeica, their Caruell 30 being loft, twentie of them wandred in the Boat without fayle, water or bread, thirteene or fourteene dayes, in which space the violence of the current had cast them on shoare in a Prouince called (Maye, where, as they trauelled, seven dyed with famine; and their Captayne Valdmia and other foure were facrificed to be Idols by the Cacite, or Lord of the Conn.rey, and eaten in a folemne Banquet, and he with fixe other were put into a Coope or Cage, to bee fatned for another Sacrifice. But breaking Prifon, they escaped to another Cacite, enemy to the former, where all the reft dyed, but himfelfe, and Gonfalo Guerrer a Mariner. Hee had transformed himfelfe into the Indian cut, boring his role full of holes, his eares jagged, his face and hands painted; married a Wife, and became a Captaine of name amongst the Indians, and would not returne with this Aguilar.

Cortes with this new Interpreter palled vp the River Tanafco, called of the former Discouerer, Gryalias; where the Towne that stood thereon, retusing to victual him, was taken and facked. The Indians herewith inraged, affembled an Armie of forcie thouland, but Cortes by his Horse and Ordnance preuayled; the Indians thinking the Horse and Rider had beene but one creature, whole gaping and fwiftnesse was terrible vnto them, whereupon they submitted themselues. When they heard the Horses ney, they had thought the Horses could speake, and demanded what they faid : the Spaniards answered . These Horses are fore offended with you, for fighting with them, and would have you corrected : the simple Indians presented Roles and Hens to the beaffs, defiring them to eate, and to pardon them.

Carter purpoled to discouer further Westward , because hee heard that there were Mines of co Gold, having first received their Vassallage to the King his Master, to whom (he said) the Monarchie of the Vniuerfall did appertayne. These were the first Vassals the Emperour had in New Spaine. They named the towne, where these things were done, Villorie, before called Potonchan, contayning neere fine and twentie thousand houses, which are great, made of Lime, Potamber cal- and Stone, and Bricke, and some of mud-wals and rafters, couered with straw; their dwelling and village. is in the vpper part of the house, for the moylinefie of the foyle. They did eate mans fleth

The Spaniards favled Westward, and came to Saint John de Vibna, where Tendille the Gouernour of the Countrey, came to him with foure thousand Indians. Hee did his reuerence to the Captayne, burning Frankincense (after their custome) and little strawes, touched in the bloud of his owne bodie : and then prefented vnto him victuals and lewels of Gold, and other curious 60 workes of feathers; which Cortes requited with a Collar of Glasse, and other things of small value. A woman-slaue, given him at Potonchan, understood their language, and shee with Agui-Lar, were his Interpreters. Corres profesied himfelfe the fernant of a great Emperour, which had

fent him thither, whose power he so highly extolled, that Tendilli maruelled, thinking there had beene no such Prince in the World, as his Master and Soueraigne, the King of Mexico, whose Vaffall he was, named, Matezuma. To him he fent the reprefentations of these bearded men, and their Horses, Apparell, Weapons, Ordnance, and other Rarities, painted in Cotton-clothes, their ships and numbers. These painted Cottons he sent by Posts, which deliuered them from one to another with such celeritie, that in a day and night the message came to Mexico, which was two hundred and ten miles diffant. Cortes had demanded, whether Mutezuma had Gold! Tendills affirmed, and Cortes replyed, That he and his fellowes had a difease of the heart, whereunto ble ficknesses Gold was the best remedie.

Mutezama fent him many Cotton-clothes of divers colours, many tuffes of Feathers, two Wheeles, the one of Silver, with the figne of the Moone, and the other of Gold, made like the Sunne :- which they hold for Gods, and give vnto them the colours of the Metals most like them. Each Wheele was two yards and a halfe broad. These with other parts of the Present were effeemed worth twentie thouland Duckets. Matezama also professed toy, to heare of so great a Prince, & fo strange people, & promised prouision of all necessaries, but was very vinwilling that Cortes fhould come to tee him, as he pretended. Yet Cortes perfifted in that his defire of feeing Mutezuma, that he might further acquaint himfelfe with the knowledge of those parts. The filly Indians having neuer feene fuch ftrange fights, came daily to the Campe to fee them

and when they heard the Ordnance discharged, they fell downe flat, thinking the Heauens had falne : the ships they thought were the God of the Ayre, called Quezalconols, which came with 29 the Temples on his backe, for they daily looked for him. Among it the reft, or rather aloofe off from the reft, were certayne Indians of differing habit, higher then the other, and had the grittles of their Nofes flit, hanging ouer their mouthes, and Rings of Iet and Amber hanging thereat: their neather lips also bored, and in the holes, Rings of Gold and Turkeffe-stones, which weighed fo much, that their lips hung ouer their chinnes, leauing their teeth bare. This vglineffe they accounted gallantry, and fuch viscouth deformitte to be the only brauery. And thou Gallant, that on-mongers readeft and derideft this madneffe of Fashian, if thine eyes were not dazeled with lightneffe (light I cannot call it) of felfe-reflect-d Vanicie, mighteft fee as Monster-like fashions at home, and a more fashionly Monster of thy felfe; thy clothes and oathes, thy gestures and vestures, make thy maked Deformicie worfe then their thus deformed nakedneffe; both in deed feeme to haue re-30 celued fome hellish Character (if there may bee bodily representation) of that olde Serpent in

these new fashions, striuing who shall shape himselfe, neerest to that misse-shapen vglinesse, wherein the Indian-jugges himselfe out of humane lineaments, the other swaggers himselfe further out of all Civili and Christian ornaments. But thefe Fashion-mongers have made mee almost out of my fashion, and to forget my felfe, in remembring their forgetfulnesse.

These Indians of this New-cut, Cortes caused to come to him , and learned that they were of Zempoallan, a Citie distant thence a dayes journey, whom their Lord had sent to see what Gods were come in those Tencallie; that is Temples (fo, it feemeth, they called the ships:) which held no conversation with the other Indians, as being not subject to Matezama, but onely as they were holden in by force. He gaue them certaine toyes, and was glad to hearethat the Indians

49 of Zemposilen, and other their Neighbours were not well affected to Matezama, but readie, as farre as they durft, to entertayne all occasions of warre with him. Hee fayled from thence to Pa. Panica. muce, and passed the River farther, till he came to a little Towne, where was a Temple, with a little Towre, and a Chappell on the top afcended by twenty fteps, in which they found fome Idols, many bloudy Papers, and much mans bloud, of those which had beene facrificed, the blocke also whereon they cut open those Sacrifices, and the Razors made of flint, wherewith they opened their brefts, which strucke the Spaniards with some horrour and feare. They passed a little further, and there having taken poffession, in the Emperours name, of the whole Countrey, they founded the Towne De la vera Crux, Cortes retigning his authoritie, and Officers being elected; Vera Crux. and laftly, all with generall confent appointing Cortes their Captaine.

Cortes went forward to Zempoallan, where hee was folemnely receited and lodged in a great 50 Cortes went forward to Zemponaus, whited with playster, that shined in the Sunne, as if it had beene Silver; house of lime and stone, whited with playster, that shined in the Sunne, as if it had beene Silver; fo did the Silver-conceits of the Spaniarde imagine, the defire of that Merall having made fuch an impression in their imagination, that they told Cortes before hee came at it, they had feene a house with wals of Silver. Here, and at Chiamizelan, Cortes incited them to rebell against Mnzezuma, and to become feruants to the Spaniards, which they did and he voder-hand to wrought, that Mutezuma tooke him for his friend.

All his intent was to fish in troubled waters, and to fee them both by the eares, that hee might watch oportunitie to benefit himielfe. His owne people rebelled, some of whom he chaflied with the halter and the whip for example to the reft : and after caused all his ships to bee 60 funke cloiely, that they should not minde any returne. He left 150, man for the guard of the new Towne, under Pedro de Henrico, and with 400. Spaniards, fifteene Horigs, and fixe Peeces of Artillery, and 1300 Indians, they went from Zempoallan, and same to Zeadoten, the Lord whereof was Olimler the fubj-ct of Mutezama, who to teftifie his joy, and to bonour Cories, commanded fifty men to be facrificed, whose bloud they faw, new and fresh.

Tlaxtallan 2

They carried the Spaniards on their shoulders, fitting on Beeres, such as whereon they vie to carry dead men. He bragged as much of the power of Mutezuma, as their Spaniards of their Em-Blandy Sacri- perour. He faid he had thirty Vaffals, each of which was able to bring into the field an hundred thouland men of Warre, and facrificed 20000. men yearely to the gods : in this he fomewhat exceeded; the other was true, although some yeares, the Sacrifices also were thought to amount to 50000. This Towne was great, and had thirteene Temples, in each of which were many Idols of itone, of divers fashions, before whom they facrificed Men, Doues, Quailes, & other things with great perfumes and veneration. Here Mniezuma had 5000 Souldiers in Garrison. Cortes passed from thence to Mexico by the Frontiers of Tlaxcallon, which were enemies to Misezue ma, whom he might eafily have overcome, but referred, partly for the exercise of his Subiects to the Warre, par ly for the Sacrifices to his gods.

These joyned an hundred and fifty thousand men against Cortes, taking him for Mutezuma's friend : and yet euery day fent him Guinney-cockes and Bread, partly to espie his strength, and partly in a brauery, left their glory should be obscured in the conquest of men already started. But when in many skirmishes and highes they could not preuaile against that handfull of Speniards. they thought they were preserved from harme by inchantments: and sent him three presents with this message; That if he were that rigorous god which eateth mans slesh, he should eate those fine flaves which they brought him, and they would bring him more: if he were the meeke and gentle god, behold Frankinsence, and Feathers: if he were a mortall man, take here Fowle. and gentie god, benow Frankinson and peace with him, and submitted their City to him. Their and submitted their City to him. City Tlax callen was great, planted by a Rivers fide, which iffued into the South-Sea. It had foure Streetes, each of which had their Captaine in the time of Warre. The gouernment was an Aria flocraty, hating Monarchy no leffe then tyranny. It had eight and twenty Villages, and in them an hundred and fifty thousand Housholds, very poore, but good warriors. They had one Marketplace fo i pacious, that thirty thouland perions in a day came thither to buy and fell by exchange:

for money they had none.

should be imposed; onely he would not have him come to Mexico. And now he fent agains, that he should not trust that new friendship with the beggerly Nation of Tlaxcaller; and they againe counselled him not to aduenture himselse to Muczama. Corres held his determination 30 for Mexico, and being accompanied with many of the Tlaxcantlexas, he went to Chololla, a little from whence Muse ame had prepared an Army to intrap him in the way jbut he finding the trechery, it redounded woon the Cholollois, the same day they had thought to have executed the fame upon him. For this end they had facrificed ten children, fine males, and as many females, three yearesold, to Quezalconail their god, which was their custome when they began their Wars. He out-going them in their owne art of fubtilty, intrapped their Captains in Counfell. and fent his Army to spoile the City, where were slaine thousands. There were twenty Gentlemen, and many Priests which ascended up to the high towre of their Temple, which had an hundred and twenty steps, where they were burned, together with their gods and Sanctuary.

This Citie had twenty thousand Housholds within the Wals, and as many in the Suburbs. It 40

yeare, and every one had his Towre. The Spaniards counted foure hundred Towers. It was the

Citie of most deuotion in all India, whither they travelled from many places farre distant in Pile

Mutezuma had fent before to Cortes, and promifed tribute to the Emperour, whatfoeper

ples and deuge shewed outward very faire and full of Towres, for there were as many Temples as dayes in the

grimage. Their Cathedrall Temple was the best and highest in all New-Spaine, with an hundred and twenty steps up to it. Their chiefe god was Quezalcounts, god of the Ayre, who was (they fay) founder of their Citie being a Virgin, of holy life and great penance. He inflituted failting, and drawing of bloud out of their eares and tongues, and left precepts of Sacrifices. Hee neuer ware but one garment of Cotten, white, narrow, and long, and voon that a Mantle, befet with certaine red croffes. They have certaine greene stones which were his, and are kept for great relikes : one of them is like an Apes head. Eight leagues from Chololla is the hill Popoca- 50 tepec, or smoake-hill, which the Earth seemeth to have erected as a Fort to encounter and affault the Ayre: now with fmoky mifts endeuouring to choake his purer breath, another while with violent flames, and naturall fire-workes threatning to joyne league with his elder and fuperiour brother to difinherit him: fometimes with showers of ashes and embers, as it were, putting out the eyes, and fometimes with terrible and dreadfull thunders, rending the eares of that Airy Element; alwayes (fuch is the event of warre) hurting and wasting it selfe, to indamage the enemy. The Indians thought it a place of Purgatory, whereby tyrannicall and wicked Officers were punished after their death, and after that purgation passed into glory. The Spaniards aduentured to fee it, but two lonely held on their journey, and had there beene confumed, had they not by a Rocke bin shadowed from the violent eruption of the fire which then hapned. It 60 chanced that the Earth, weary it seemeth of the warre, as having spent her store and munition, agreed on a truce which continued ten yeares : but in the yeare 1540, it brake forth into more violent hostility then before, quaking and renting it selfe with vibridled passion: and whereas the Ayre had alwaies a snowie Garrison about her high tops and frontiers, to coole and

CHAP.8. Corteles entertainment. Mutezumas Religion Oration death.

quench her fiery showers, yet these did but kindle a greater flame, the ashes whereof came to Huexozinco, Quelaxcopon, Tepiacac, Chololla and Tlazcallan, and other places, ten, or as some say, iffceene leagues diftant, and burned their hearbs in their Gardens, their fields of Corne, Trees and cloathes that they laid a drying. The Unican, Crater, or mouth whence the fire iffued, is about halte a league in compasse. The Indians killed their garments (an honour done vnto their gods) which had aducate ared themselves to this dreadfull spectacle.

men nad aquentated the Mexico, Muteruma feared, faying, Thefe are the people which our Muterumas tegods faid should come and inherit this Land. He went to his Oratory, and there shut vp him-ligion. telie alone, abiding eight daies in praier and falling, with facrifice of many men, to allake the To fary of his offended detties. The Deuill bids him not to feare, and that he should continue those bloudy Rites, affuring him that he should bauethe gods Vizzilipuzzli and Tefcaslipuca to preferue him, faying, That Quezalconatt permitted the destruction at Chololla, for want of that bloudy facrifice. Corres passed a Hill fix miles in height, where, by the difficulty of the passage, and of the cold (being alway couered with Snow) the Mexicans might easily have presented his passing

further. Hence he espied the Lake, whereon Mexico and many other great Townes did Rand, Ixtacpallapan a Towne of 10000 houtholds, Coracan of fix thouland, Vizilopuchtis of fue thoufand. Their Towns are adorned with many Temples and Towres, that beautifie the Lake. From Izzacpalapan to Mexico is two Leagues, all on a face cauley, with many draw-bridges, thorow which the water paffeth. Matezama received Cortes with all folemnity on the eight of November 1519. into this great

Citie, exculing himselfe of former vakindaes the best he could. Of his houle, and Maieffie, and the divine sonceit the people had of him, we shall speake after more fully, as also of the Temples, Priests, Sacrifices and other remarkeable things of Mexico.

Museums prouided all things necessary for the Spaniards and Indians that attended them:
euen beds of flowers were made, in place of litter for their Horles. But Cores disquieted with thole thoughts which commonly attend Ambition (discontent in the present, hopes and feares of the future) vied the matter fo, that he tooke Muezama peiloner, and detained him in the place appointed for the Spaniards lodging, with a Spanish Guard about him, permitting him otherwise to deale in all private or publike affaires, as before. Hereupon Cacama, Lord of Texcu-

30 co, Nephew to Materima, rebelled, but by treachery of his owne people was prefented prilo- a The like ner to Muterana. He, after this fummond a Parliament , where hee made an Oration vnto his speech he had Subiects, faying, That He and his Prodeceflours were not Naturals of the Country, but his made at feft to Fore-fathers came from a farre Country; and their King returned againe; and faid, he would fend, Gits, who ca-Fore-rather scame from And he hath now fent their Spannards, faith he.Hereupon he counfelled on that adumthem to yeelde themselves Vasials to the Emperour, which they did at his command, though tage applying with many teares on his part and theirs, at this farewell of their liberty. Materamae prefently this Trackion with many teares on me part and the same of tribute, a great quantity of Gold and other lewels, which amounted to fixteene hundred thousand Castlins of Gold, besides Silver, Sec. 25. Cortes had hitherto a continuall victory in Mexico without any fight: but news was brought

40 him of Pamphilo de Naruaes, who was fent with eighty Horse, and some bundreths of Spaniards. by Velasques, to interrupt the proceedings of Cortes: who leaving two hundred men in Mexico, with two hundred and fifty other came fuddenly in the night, and tooke Narnass priloner, and returned to Mexico with Naruaes his Company, now his followers: allo, where he found his men exceedingly diffrested by the Cirizens for a murther committed in the great Temple at a folemne Feaft, wherein a religious dance they were flaine, for the rich garments and lewels they ware, by the Spannerds. Cortes came in good cime for the relief of his men: and Materiana Reservance caused the Mexican to bridle cheir rage, which preferrly was renewed; and when Material death, was againe by his Guardians, the Spannerds, caused to fpeake to the people, a blow of a from on his Temples wounded him, whereof three daies after he died.

Cortes had some thousands of the Tlaxeliegas to helpe him, but was driven so flye from Mexico with all his Spaniards and Indians, which he did closely in the night, but yet an alarme was raifed, and the Bridges being broken, much flaughter of his people was made by the Mexicans, and all his treasure in manner loft. They pursued after him also, and had two hundred thousand in the field : when it was Cortes his good hap to flay the Sandardbearer, whereupon the Indians forfooke the field. This battell was fonghe at Ocumpan.

At Tlazcallan, he and his were kindely entertained; they had prepared before 50000. men to goe to Mexico for hishelpe, and now they promifed him all offices of loyalty and feruice. With their helpe he fubdued Tepeasac; and built certaine Brigandines, or Frigats, which were carried 60 many leagues on the backes of thole Indians, and there failined and finished, without which he

could neuer haue won Mexico.

In Texture certaine Spaniards had beene taken, facrificed and eaten, which Cortes now revenged on them. Eight thousand men had carried the loofe preces and timber of this Nauie, guarded with twenty thousand Tlaxeallans, and a thousand Tamemer, or Porters (which carried victuals) attending. They calked them with Towe, and for want of Tallow and Oyle, they vied

City was wont to be ferued.

Mans Greate, of fuch as had beene flaine in the Warres. For forthe Indians vied, to take out the Greafe of their Sacrifices. Cortes had here nine hundred Spaniards, of which fourescore and fix were Horse-men, three cast peeces of Iron, sifteene small peeces of Bralle and a chousand weight of Powder, and 1,00000. Indian Souldiers on his fide. He made a fluce or trench about twelve

foot broad, and two fathome deepe, halfe a league long, in which 40000. men wrought fifty rous production and the Canoas of the Lake, of which were

reckoned in all fine thousand. The Spaniards brake the Conduits of sweet water, wherewith the

Larger Relations of things most remarkeable observed by the Spaniards at their first comming: Cholollas holies; Popocatepecs ashes. Mutezumas multiforme magnificence and maiestie. Mexican Citie and Temple, with other antiquities gathered out of the Third part of the Historie of Francis

lished by The. Niebels, I haue Lopez \* de Gomara. bere in divers places améded

Hololla is a Citie as Tlaxeallan, and hath but one person who is Governour and it by the Itagenerall Captaine, choten by the confent of all the Citizens. It is a Citie of first ranslation twenty thousand housholds within the wals, and in the suburbs as much more. Crausite : for It she weth outwards very beautifull, and full of Towers, for there are as many the Spanish ori-Temples as dayes in the yeare, and every Temple hath his Tower. Our men ginall have counted foure hundred Towers. The men and women are of good disposition, not,

well favoured and very wittie. The women are Goldsmiths and also Caruers, the men are wara riers, and light fellowes, and good Maisters for any purpose : they goe better apparelled then any other Indians yet feene. They weare for their vpper garment, cloakes like vnto Morifcos, but 20 after another fort. All the Countrey round about them is fruitfull and errable ground, well watered, and so full of people, that there is no waste ground, in respect whereot, there are some poore which begge from doore to doore. The Spaniar de had not feene any beggers in that Coun-

trey before they came thither. Chololla is a Citie of most devotion and religion in all India, it is called the Sanctuary, or holy place among the Indians, and thither they translled from many places farre distant in Pilgrimage, and for this cante there were fo many Temples. Their Cathedrall Temple was the best and higheft of all the New Spaine, with a hundred and twenty steps up vnto it, The greatest I-doll of all their gods was called Quexalconately, God of the Aire, who was (lay they) the founder of their Citie, being a Virgin or holy life, and great penance. He instituted fasting, and 30 drawing of bloud out of their cares and tongues, and left a precept, that they should facrifice but onely Quiles, Doues, and other foule. He neuer ware but one garment of Cotten, which was white, narrow, and long, and voon that a mantle befet with certaine red crosses. They have certaine greene Stones which were his, and those they keepe for relickes. One of them is like an Apes head. Here they abode twenty dayes, and in this meane while there came fo many to buy

and fell, that it was a wonder to fee. And one of the things that was to be feene in those faires, The bill called Popocatence.

was the earthen veiled, which was exceeding curious and fine.

40 Here is a hill eight leagues from Chololla, called Popocatepes, which is to fay, a hill of fmoake, for many times it cafteth out smoake and fire. Cortes fent thither ten Speniards, with many Indians, to carry their victuall, and to guide them in the way. The afcending vp was very troublesome, and full of craggie rocks, They approached so nigh the top, that they heard such a terrible noise which proceeded from thence, that they durk not goe voto it, for the ground did tremble and fliake, and great quantity of after which diffurbed the way : but yet two of them who feemed to be most hardie, and defirous to fee strange things, went vp to the top, because they would not returne with a sleeuelesse answer, and that they might not be accounted cowards, leaving their fellowes behinde them, proceeding forwards. The Indians faid, what meane thelemen ? for as yet neuer mortall man tooke fuch a journey in hand.

Theies wo valiant fellowes passed through the Defart of Ashes, and at length came under a great smoake very thicke, and flanding there a while, the darkenesse vanished partly away, and then appeared the vulcan and concaunty, which was about halfe a league in compafe, out of the which the ayre came abounding, with a great notie, very thrill, and whiftling, in such fort that the whole hill did tremble. It was to be compared vnto an Ouen where Glaffe is made. The fmoake and heate was so great, that they could not abide it, and of force were constrained to returne by the way that they had accended : but they were not gone farre, when the vulcan began to lath out flames of fire, albes, and imbers, yea and at the last, stones of burning fire : and if they had not chanfed to finde a Rocke, where under they shadowed themselves, undoubtedly they had there beene burned. When with good tokens they were returned where they left 60 their fellowes, the other Indians kiffed their garments as an honour due vinto gods. They prefen-

ted vnto them such things as they had, and wondred much at their fact. The fimple Indians thought, that that place was an internal place, where all fuch as govern pur prays ned not well, or year evrannie in their offices, were punished when they died, and also believed, that after their purgation, they passed into glory. This Vulcan is like vnto the Vulcan of Sicilia,

CHAP. IX.

Onabusimoe, now the new King of Mexico, receiving incouragement from the Deuillish O. racle, caufed to breake downe the Bridges, and to exercise what to cuer wit or strength could doe 10 racie, caused to ocean course to make the state of the state of the state of warrel conquered. Cortes had in Texasso ordained a new King, a Christian Indian, of the royall bload, who quered. Lorses nau in accome. The Spaniards being Lords of the Lake, and of the Cauleyes, by helpe of their Galliots and Ordinance, they fired a great part of the Citie. One day the Mexinerpe or their Gamos and a your grant thereupon celebrated a Feaft of Victory. The Priefts went vp into the Towers of Tlatelules, their chiefe Temple, and made there perfumes of fweet Gums, in token or vicory, and attribute toky brinkling their bloud in the Ayre; their fellowes looking breits and putseting out their means, sp. white many Indians, & foure Spaniards of Albarada; on, and not able to reuenge it. They flew likewife many Indians, & foure Spaniards of Albarada; company, whom they are in the open light of the Army. The Morkans danced, drankthem felues 26 drunke, made bonefires, strucke vp their Drums, and made all solemne expressings of toy. Dread. Distaine, and all the Furies that Passion or Compassion could conjure vp. had now filled the Operniards hearts and their Indian partakers: and Cortes, that histherto had hoped to referre fome part of the Citie, now did the vtmost that Rage aed Reuenge could effect, helped no lesse with in with Famine and Peftilence, then with Sword and Fire without. At left Mexico is rezed the

Earth and Water sharing betwixt them what the Fire had left, and all which had sometime challenged a lofty inheritance in the Ayre. Their King also was taken; all that mightic State fubuerted. And as the Mexicans before had prophefied, That the Tlaxantleea's should again build the Citie, if conquered, for them; if conquerors, for the Spaniards - It was re-builded with a hundred thousand houses, fairer and stronger then before. The Siege lasted three Moneths, and 30 had therein two hundred thousand Indians, nine hundred Spaniards, tourescore Horses, seventeene Peeces of Ordinance, thirteene Galliots, and fixe thouland Canoas. Fiftie Spaniards were flaine, and fixe Horses: of the Mexicans, a hundred thousand, besides those which died of Hun-

This was effected Anno 1 5 21, on the thirteenth day of August, which for that cause is kept festivall every yeare. For the Description of the Country wherein Mexico is situate. Correi in his fecond Narration to the Emperour faith, it is entirened with hils: (He tellech of fome hils allo in his journey, wherein divers of his people died with cold) in the middeft is a plaine of 70, leagues compaffe, and therein two Lakes which extend the circuit of 30.leagues; the one falt, which ebbeth and floweth (an argument for Parrison lis opinion, that faltneffe is a chiefe caufe 40 of that viciflitude of ebbing and flowing, in the Ocean) the other fresh : When the water of the Salt Lake increaseth, it runneth I'ke a, violent fireame into the fresh Lake, which when it decreafeth, is repaired againe by the like iffue of this into the former.

b N. di Guf.

Numo di Guiman hath written his expedition into Mechoacen and other Countries of New-Spaine 1530. Subduing and taking possession for the Emperour: He found some of them Sodomites, others Sacrificers of mens flesh, and some closly practising this butchery after they had profeffed themfelues Christians : none of them which durft looke a Horfe in the face, but were ae Lit.P. Alua. fraid that that Beaft would ease them. The feneral peoples by him reckoned, would here be tedious to name; which we may say of the like made by Godoy and Aluarado . Of the Customes Godin op, Ram. of the Auntient Mexicans, one of Corses his Gentlemen hath written a Treatife 4 extant in Ra- 50 mustiss, wherein are described their Citie, Temples, Rites of Sacrifice, and the like; as after followeth out of him and others.

CHAP.

it is high and round, and neuer wanteth from about it, and is feene afarre off in the night, it lathe sings and round and the state of the sta nighest. In tenne yeeres space this strange hill of working did expell no vapour or smoke; but in the yeere 1 (40. it began againe to burne, and with the horrible noyfe thereof, the Neighbours that dwelt four leagues from thence were terrified, for the especial flrange smoakes that then were seene, the like to their Predecessors had not beene seene. The ashes that proceeded from thence came to Huexozinco, Quelaxcopan, Tepiacae, Quaubquecholla, Chololla, and Tlaxcallan, which flandeth ten leagues from thence, yea fome fay, it extended fifteene leagues diffant, and burned their hearbes in their Gardens, their Fieldes of Corne, Trees, and cloathes that lay a drying.

He left the way that the Mexicans had perswaded him to come, for it was both euill and dangerous, as the Spaniard which went to the Vulcan had feene , he went another plainer way, and neerer. He afcended up a Hill coursed with inow, which was fixe miles of height, where if the 30000. Souldiers had waited for them, they might easily have taken them, by reason of the great cold : and from the top of that Hill, they discovered the Land of Mexico, and the great Lake, with his Villages round about, which is an exceeding goodly fight. But when Cortes faw that beautifull thing, his joy was without comparison.

There came twelue Lords from Mexico, among whom was Cacama, Nephew to Mutezuma who was Lord of Tezence, a young man of fine and twentie yeeres of age, whom the Indians did much honour; he was carried vpon their shoulders, and when they fet him downe, one went before with a Broome to sweepe the dust out of his way. In this order hee came to Iztacpalapan. Euery two houres came meffengers betwixt Cartes and Musezuma: then came Cuestenac Lord of that Towne, with the Lord Culhuacan his Kinfman to receive him, who prefented vnto him flaues, garments, and feathers, and to the value of foure thousand Duckets in Gold. Cuetnalace received all the Spaniards into his owne house, which hath very faire Lodgings all of stone, and Carpenters worke, exceeding well wrought, with high and low roomes, with all kind of fernice: The chambers were hanged with cloth of Cotton very rich, after their manner. There were faire Gardens replenished with many sweet flowres, and sweet trees garnished with Networke, made of Canes, and couered with Roses and other fine hearbes, with fundry ponds of fweet water. There was another Garden very beautiful of all fores of fruits and hearbes, with 30 a great pond walled with lime and stone, and was foure hundred paces square, made with faire steps to descend voto the bottomean many places, and was full of diners kinds of fishes, and many kind of water Birds, which forestimes covered the pond, as Guls, and Mewes, and fuch like, Iztaenallanan is a Towne of 10000. housholds, and is planted in a Lake of Sale-water, the one halfe of the Towne built on the water, and the other on the Land.

From Iztacpallapan to Mexico is two leagues all voon a faire Calley, woon the which eight pompe where. Horsemen may passe on ranke, and so directly straight as though it had beene made by line. And with Cortes was wholoever hath good eye-fight might differne the gates of Mexico from thence. Covercan is a Towns of fixe thousand dwellers, Vizilopuchtli is of fine thousand. These Townes are planted in the Lake, and are adorned with many Temples, which have many faire Towers, that doe 40 beautific exceedingly the Lake. There is great contractation of Salt, which is made there, and from thence is carried abroad to Faires and Markets, which thing was a great rent to Minternma. Vpon this Calley are many drawne Bridges built vpon faire arches, that the water paffeth

Cortes passed this Calley with 400. Spaniards; and 6000. Indians his friends : their passage was with much adoe, by reason of the great multitude of dudiant, which came to see him, and comming neere the Citie, there adjoyned another Calley with a broader palage; where frandeth a strong Bulwarke of itone, of the heigth of two fathome with two Towres on each fide, and two gates very firong. Here at this Fort came three thouland Courtiers and Citizens to receive him, and every of them touched the ground with his right hand and killed it, and passed forwards in 50 the order as they came. These salutations endured an houre and more. From the Bulwarke the Calfey lyeth directly, and before the entrance into the fireet there is another draw Bridge made of timber ten paces broad, under the which the water passet too and from Ar this Bridge came Matezama to receive Cortes under a Canopie of greene feathers and gold, with much Argentery hanging thereat, which Canopie foure Noble-men did carrie. And the two Princes (netlanao and Cacama his Nephewes, did leade him by each arme; all three were rich apparelled and all of one fathion, except Musezume, which had a paire of thooes of gold beter with precious Stones, and the foles were tyed to the upper part with latcheds, as is plented of the Antikes. His Gentlemen went by two and two, laying downe and taking up Mantlestand Couerlets upon the ground, because his feet should not touch the same : then tollowed him asin Procession, 200. 60 Noblemen bare-footed, with garments of a richer Livery then the first three thouland. Mutezama came in the middeft of the firest, and the others came behind him as nigh the wall as they might, their faces towards the ground, for it was a great offence to looke him in the face. Corres alighted from his Horfe, and according to our vie went to embrace him, but the Princes who led

him by the armes, would not fuffer him to come fo nigh, for they held it for finne to touch hims but yet faluted each one the other.

Certes put about Musezama his necke a coller of Margarites, Diamonds, and other stones all of glaffe. Mutezuma received it thankfully, and went before with one of the Princes his Nephewes, and commanded the other to leade Cortes by the hand, next after him in the midft of the street : and proceeding forward in this order, then came the Gentlemen in the richest Liuery to welcome him, one by one, touching the ground with their hands, and after returned to their standing. And if the Citizens had come as they requested, all that day would not have ferued for falutations. The coller of glaffe pleafed well Mutezama, and because hee would not

10 take without guing a better thing, as a great Prince, hee commanded to be brought two collers somiral side of reid Prawnes, which are there much efteemed, and at every one of them hanged eight Shrimp's gandy glaffe of gold, of excellent workmanship, and of a finger length enery one, he put these collers with for gold and his owne hands about Cortechismecke, the which was effected a most great fatiour, yea and the glory. Indians maruelled at it. At this time they were come to the street end, which was almosta mile long, broad, fireight, and very faire, and full of houses on each fide, in whose doores, windowes and tops, was such a multitude of Indians to behold the strangers, that I know not who wondred moit, our men to fee fuch a number of them, or elfe they to fee our men, their Ordnance and Horles, a thing to strange vnto them. They were brought vnto a great Court or house of P. dols, which was the Lodging Axainen, at the doore whereof, Mutezuma tooke Cortes by the 20 hand, and brought him into a faire hall, and placed him vpon a rich Carpet, faying vnto him, Sir, now are you in your owne house, cate and take your rest and pleasure, for I will shortly come and

visit you againe. Such (as you heare) was the receiving of Hernande Cortes by Mutezuma a most mightie King, into his great and famous Citie of Mexere, the eight day of November, 1519. The house where the Spaniards were lodged was great and large, with many faire chambers The Oration fufficient for them all: it was neate, cleane matted, and hanged with Cloth of Cotton, and or Muleculaid Feathers of many colours, pleafant to behold. When Mairzama was departed from Cortes, nimit, hee breamne to fet his houle in order and placed the Ordnance at his doore, and having affins

things in good fort, he went to a sumptuous Dinner that was prepared for him. Affoone as Mutexama had made an end of his Dinner, hearing that the Strangers were rifen from the Table, 30 and reposed a while, then came hee to Corter; faluting him, and fate downe by him. He gate vato him divers Iewels of Gold Plate, Feathers, and many Garments of Cotton, both rich, well wouen, and wrought of strange colours, a thing comely, that did manifest his greatneffe, and also confirme their imagination. This gift was delivered honourably, and then beganne his talke as followeth : Lords and Gentlemen , I doe much reiogee to have in my house such Valiant men as yee are, for to vife you with courtefie, and intreale you with bonour, according to your defert and my estate. And inhere heretefore I defired that you should not come bither, the evely cause was, my people had a great feare to see you, for your gesture and grimme beards did terrissie ibem, yea, they reported that yee had such beasts as swallowed men, and that your comming was from Heauen, bringing with you Lightning; Thunder, and Thunder-bolts, wherewith 40 you made the Earth to tremble and to Chake, and that yee flue therewith whom yee plaafed. But

now I doe fee and know that you are mortall men, and that yee are quiet and burt no man : alfo I have forme your Horfes, which are but your Sermants, and your Gunnes like unto Shooting Trunkes. I dee now bold all for Fables and Lyes which have beene reported of you, and I doe alfo accept you for my meere Kinsman. My Father told mee that hee had heard his ferefathers say, of whom I doe difcend, that they held opinion bow they were not Naturals of this Land, but come hither by chance, in companie of a mightie Lord, who after a while that hee had abode here, they returned to their natural! Afternee core forte: After many gerres expired, they came agains for those whom they had left heere behind them., nions but they would not goe with them, because they had here inhabited, and had Wines and (hildren, and

our tay would set got an even of the control of the for this consideration, wee have alwayes superited and beleeved, that such a people should come to rule and gonerne us, and considering from whence you come , I doe thinke that you are they whom, wee looked for , and the notice which the great Emperour Charles had for us, who hath now fent you buther. Therefore Lord and Captaine, bee well affored, that wee will obey you, if there beeno femed or decentual matter in your dealings, and will also divide with you and yours all that we have. And although this which I have faid were not onely for your verine, fame, and deeds of valiant Gentlemen, I would yet doest for your worthinesse in the battasles of Tauaico, Teocazinco, and Chollolla. being fo few, to ouercome fo many.

Now seame, if yee imagine that I am a God, and the walls and rooffes of my boules, and all my velfell of fermice, to be of pure Gold, as the men of Zempoallan, Tlaxcallan, and Huexozinco, bane informed you, it is not fo. and I indge you to bee forwife, that you give no credit to finch Fables. Tou half alfonote, that through your comming in ther, many of my subtests have rebelled, and are become my

mortallenemus, but yet I purpose to breake their wings. Come seele you my bodie, I am of stell and bone, a mortall man as other are, and no God, although as a King I doe esteeme my selfe, of greater dianstic and prehemmence then others. My houses you doe also see, which are of timber and earth, and the prescipallest of Masone works, therefore now you doe both know and see what odious hers those Tale bearers were. But troth it is , that Gold Plate, Feathers, Armour, lewels, and other Riches . I have in the Treasury of my Forefathers a long time preserved, as the wife of Kings is, all the which you and your s shall entry at all times. And now it may please you to take your ress, for therep which you are weary of your iourney. Coates with infull countenance humbled himfelfe, seeing some teares full from Mutezuma bis eyes, faying unto him, upon the trust I base had in your clemencie. I enlisted to come both to see, and talke with your Highnesse, and now I know that all are the which to hatb been cold mee. The like your Highnesse hatb beard reported of vs, assure your saffe, that the Emperous King of Spainess your natural Lord, whom yes have expected, bee is the onely being from whence your Linage doth proceed, and as touching the offer of your Highnesse treasure, I do most beartily thanks you.

After all this communication, Mutezuma demanded whether the bearded men which came with him; were either his valids, or his flaues, because hee would enterrayne each one according to his estate. Cortes answered, that they were all his brethren, friends, and fellowes, except some that were his feruants.

Then he departed, and went home to his Palace, and there informed himselfe particularly who were Gentlamen, and who were not, and according thereunto, fent every one particular to gift or prefent. To the Gentlemen he fent his reward by his Comptroller , and to the Mariners and other. Servitors, by a Page of his houshold.

Mitezama was a man of a small stature, and leane, his colour tawnie as all the Indiana Mutequas des are. Hee had long baire on his head, fixe little haires voon him, as though they had beene put in with a Bodkin. His thinne beard was blacke. Hee was a man of a faire condition, and a Joer of Iustice, well spoken, grave and wife, beloved and feared among his subjects. My. tezume Joth fignifie Sadnelle. To the proper names of Kings and Lords, they doe adde this fyllable Cin, which is for courte-

fie and dignitie, as we vie Lord. The Turke vieth Zultan. The Moore or Barbarian calleth his Lord Mulley, and to the Indians fay Mutezumazin, His people had him in fuch reverence, 30 that hee permitted none to fit in his fight , noryet in his pretence to weare shooes, nor looke him in the face, except very few Princes. Hee was glad of the convertation of the Spaniards , and would not fuffer them to stand on foote, for the great estimation bee had of them, and if hee liked any of the Spaniar de garments, hee would exchange his apparell for theirs. He changed his owne apparell foure times every day, and bee never clothed himfelfe againe with the Garments which hee had once worne, but all tuch were kept in his Guardrebe, for to give in Prefents to his Sequents and Ambastadours , and vnto valiant Souldiers which had taken any enemy Prifoner, and that was efteemed a great reward, and a title of priniledge. The coftly Maniles whereof had beene divers fent to Cortes, were of the His Wardrobe, fame Guardrobe.

Change of

Minezama went al wayes very neate and fine in his attyre. Hee bathed him in his Hot-house foure times every day. Hee went seldome out of his Chamber , but when hee went to his meate. Hee eate alwayes alone, but iolemnely, and with great abundance. His Table was a Pillow, or elfe a couple of coloured Skinnes. His Chaire was a foure-footed stoole made of one piece, and hollow in the middeft, well wrought and painted. His Table-clothes, Napkins, and Towels, were made of Cotton-wooll, very white and new , for hee was never ferued but once with that Naperie. Foure hundred Pages brought in his meare, all fonnes of great Lords, and Magrificent placed it vpon a Table in his great Hall. The meate being brought in , then came Matez ama to behold the Diffres, and appointed those Diffres that liked him best, and Chafing-diffres were prepared to keepe that meate warme, and feldome would be cate of any other Difh, except the 50

Lord Steward or Comptroller should highly commend any other Dish. Before hee sate downe, came twentie of his Wines of the fairest and best esteemed, or else those that served weekly by turne, brought in the Bason and Ewre, with great humblenesse. This done, hee fate him downe, and then came the Lord Steward, and drew a woodden Nette before him , because none should come nigh his Table. And this Noble man alone placed the Dishes , and also tooke them away , for the Pages who brought in the meate , came not neere the Table , nor yet spake any worde , nor no

Bare-footfer-

man elle. While the Lord Mutezuma was at his meate, except fome leafter, they all ferued him bare-footed. There affifted alwayes fomewhat a farre off, fixe ancient and Noblemen, voto 60 whom he vied to give of the Dish that best liked him , who received the same at his hand with great reuerence, and eate it incontinent, without looking in his face, which was the grea-

Mulicke.

test humilitie that they could vie before him. Hee had muficke of Fiddle, Flure, and of a

Snaile-shell, and a Cauldron coursed with a skinne, and fuch other strange Instruments. They had very cuill voyces to fing. Alwayes at dinner time he had Dwarfes, crooke-backes, and other deformed counterfeits, all for maieifie and to laugh at , who had their meate in the Hall among the lefters and Idiots, which were fed with part of the meate that came from Materama his lefters. table, all the rest of the meate was given to three thousand of the guard, who attended ordinarily in the yard or Court, and therefore they fay that there was brought for his Table three thousand dishes, and as many pots of wine, such as they vie, and that continually the Buttrey and Pantrey stood open, which was a wonder to see what was in them. The platters dishes and cups, were all of earth, whereof the King was ferued but once, and fo from meale to meale new. to He had likewise his sernice of Gold and Piate very rich, but hee vied not to bee serued with it

(they fay) because hee would not bee ferued twice therewith, the which hee thought a base Plate. Some affirme, that young children were flaine and dreffed in divers kinde of diffies for Matezuma his table, but it was not io, onely of mans flesh facrificed he fed now and then. The table

being taken vp, then came againe the Gentlewomen to bring water for his hands, with the like reperence as they yied at the first, and then went they to dinner with the other wines . fo that

then the Gentlemen and Pages waited as their course fell. When his table was taken up, and his Seruitors gone to meate, Muterama fate ftill : then came in the fuiters that had any affaires to deale with him, bare-footed, for all the persons did 20 yfe that reverence, except fome Princes his Kinfmen, as the Lords of Tefenco, and Tlacopan and a few others : and beeing cold weather, they vied to weare olde ragged clothes upon their rich State ceremogarments. All furters vied to make three or foure courtefies, not looking toward his face, and mes. ipeaking vinto him their heads dowwards, and in that order retyred backe againe. Mutexame

answered his futters very grauely, with low voyce, and in few words, and not to all suiters, for others his Secretaries or Counceliers that stood by, answered for him, and having their answere, they returned backwards, not turning their tailes to the Prince. After these bufineffes done, he vied fome recreation, hearing letters or Songs, wherein he delighted much, or elie to looke voon lefters and the Players, who play with their feet, as we doe with our hands. Thele haue a cudgell like vn. Players. to a Paillers rowler, which they tolle high and low as it were a ball in the Ayre, ftrange to be-30 hold. They vie other Playes to paffe the time, in fuel an order, that it feemed manuellous to the Gimes.

lookers on. Cortes brought into Spaine lome of thefe Phyers. Also they vie Matachine s, in such fort they doe play, that there frand each woon other shoulders, and hee that standeth highest, the weth many feates. Sometime Muezama did behold the Players, who played at a game called Paceliziti, which is much like our Fables, and they play with beanes, squared like Dice, which they call Patelli, and throw them out of both their hands upon a matte, or else upon the ground, where are made certain strikes, voon which they fet downe the chance that is throwne: and at this game they play all that they have, and many times they value their owne bodies, and play that into captiuitie, and to remayne a flaue, I meane, luch as are common Gamesters of

îmall effate. 40 Sometimes Mutezuma went to the Tennis Court. Their ball is celled Villamalizati, and is The Tennis

made of the gumme which commeth from a tree called UB. This tree groweth in a hot Coun- play in Mexico. trey. The gumme being kneaded together, and fo made round, is as blacke as pitch, and fomewhat heavie, and very hard for the hand but yet good and light to rebound, and better then our wind-bals. They play not at Chafes, but at Bandy, or at Check, that is, if the ball touch the wall it loofeth. They may strike the ball with any part of their body, but there is alwayes a penaltie if they onely firike not with the buttocke or fide, which is the fineft play : whereof they yfe a skinne vpon each buttocke. They play fo many to fo many for a packe of Mantles, or according to the abilitie of the Players. Also they play for gold and feathers, and fometime for their owne bodies, as they vie at Patolli, which is there permitted and lawfull. The Tennis Court is called Tlackee, and is a Hall long and narrow, but wider vpwards, then downewards,

and higher on the fides then at the ends, which is an industry for their play. The house is alwayes white and import in the fide walles they have certaine flones like voto Milftones, with a little hole in the middelf that paffe; h through the flone, the hole is fo fmall, that scarcely the ball may paffe through, but he that chanceth to ilrike the ball into the hole, which feldometh happenerh, winnerh the game, and by an ancient Law and cultome among Tennis Players, he ought to haue the Cloakes of all those that stand and behold the play, on that side that the ball went in, and in fome Tennis Courts, the halfe of the garments of them that fland looking on. The Winner is then bound to make certaine Sacrifice to the God of the Tennis play, and to the flone where the ball entred. The beholders of the play would fay, that fuch a Winner should be a Thiefe and

an Adulterer, or elle that he should die quickly.

They vied in the Temple of the Tennis play, two Images of the God of the Ball, which food God of the Ball, which food vpon the two lower walles. The Sacrifice was celebrated at mid-night, with many Ceremonies and Witch-crafts, and Songs for that purpole. Then came a Prieft from the Cathedrall Church, with other Religious persons to bleffe the Sacrifice, saying certain denillish Prayers, and throw-

ing the ball foure times in the Tennis Court. In this order was the Tennis play confecrated and after this confectation it was lawfull to play, or elie not, for this diligence was first to bee done when any Tennis Court or play was newly built. The owner of the Tennis Court also would neuer fuffer any to play, vntill he had first offered something to the Idoll, their Superstition was

His Palace.

Twentie

Mutezuma had many houses as well in Mexico as without, for his recreation and pleasure, as also for his ordinary dwelling. To write of all it should be tedious, but where his continual abiding was, he named Topac, that is to fay, Palace. And that Palace had twentie doores or gates which had their out-comming into the common freets. It hath three Courts, and in the one Three Courts. flandeth a faire Fountaine, many Hals, and a hundred Chambers of twentie three, and thirtie foot long, an hundred Bathes and Hot-houses : and although the building was without nayles, yet very good workmanship. The walles were made of Masons worke, and wrought of Marble, Jafpe, and other blacke stone, with veines of red, like vnto Rubies and other Stones, which glistered very faire: the roofes were wrought of Timber, and curiously carued: the Timber was

Cedar, Cypresse, and Pine-tree: the Chambers were painted and hung with Cloth of Cotton, and Cloth made of Conies haire and feathers. The beds were poore and of no value, for they were nothing but Mantles laid vpon Mats, or vpon Hay, or else Mats alone : few men lay with

Multitude of

There were a thousand women, and some affirme that there were three thousand, accounting Gentlewomen, Setuants and Slaves : the most were Noblemens Daughters, Materama tooke of 20 them for his selfe, those that liked him best, and the others he gaue in mariage to Gentlemen his Seruants. The faying was, that hee had at one time a hundred and fiftie women his wines with childe, who through the perswasion of the Deuill, tooke Medicines to cast their creatures, because they knew that they should not inherit the State : these his wives, had many old women for their Guard, for no man was permitted to looke vpon them.

His Armes hee

The shield of Armes that is set in his Palace, and likewise carried to the Warres, is an Eagle Conie was his foaring vpon a Tigre his tallons, bent as taking prey. Some thinke it is a Gryffon and not an armes, but this Eagle. The Griffons in time past, fay they, did cause the Vale of Anacatlan to bee dispeopled, Eagle was ge- for they were great denourers of men, and that their abiding was in the Mountaines of Teorem: neralito all the they approue that these Mountaines were called Contlachtepels, of Contlachti, which is a Gryffon, 30 Mexican Kings they approve that there mountaines were called Cuntachtepet, of Cutlachtli, which is a Gryffon, Gryffon-tale, bigger then a Lion: but the Spaniards did neuer see any of them. The Indians by their old Pictures doe paint those Gryffons to hauea kind of haire and no feathers, and also affirme, that with their fallons and teeth they breake mens bones. They have the courage of a Lion, and the countenance of an Eagle : they paint him with foure feet, and teeth, with a kinde of downe, more like wooll then feathers, with his beake, tallons, and wings. There are also other Lords that give the Gry ffon in their Armes, flying with a heart in his tallons.

Altoufe of

Mutezama had another house, with very good lodgings and faire galleries, built vpon Pillars of Iaspe which extendeth toward a goodly Garden, in the which there are ten ponds or moe, some of salt-water for Sea-fowle, and other some of fresh water for River-sowle, and Lakefowle, which ponds are deuiled with finces to emptie and to fill at their pleafure, for the clean- 40 nesse of the feathers. There is such a number of Fowle that scarcely the ponds may hold them, and of fuch divers kindes both in feathers and making, as fure it was an admiration for the Spamiards to behold, for the most of them they knew not, nor yet had at any time seene the like. And to enery kind of Fowle they gave fuch bayte as they were wont to feede of in the Fields or Rivers. There did belong to that house three hundred persons of service some were to clense the ponds : other some did fish for baite : other some served them with meate : other did loofe them and trimme their feathers : others had care to looke to their Egges : others to fet them abrood: others cured them when they were ficke : and the principallest Office was to plucke the Feathers : for of them was made rich Mantles , Tapiffary , Targets, tuffes of Feathers, and many other things wrought with Gold and Silver: a most per- 40

their feathers, fit worke.

There is another House with large quarters and lodgings, which is called a House for fowle for haw- Fowle , not because there are more then in the other , but because they bee bigger and king and other to hawke with all, and are Fowle of rapine, wherefore they are eiteemed as more nobler

There are in this House many high Hals, in the which are kept men, women and children: in some of them are kept such as are borne white of colour : which doth very seldome happen : in other some are Dwarfes, Crooked-backes, Burstenmen, Counterfeites, and monitrous Perfons, in great number : they fay, that they vied to deforme them when they were Children , to fet forth the Kings greatneffe : euery of thefe persons were in seuerall Hailes by 60 themiclues.

Wildbeafts.

In the lower Halles were great Cages made of timber: in some of them were Lions, in other Tigres, in other Ounces, in others Wolues: in conclusion, there was no foure-footed beak that wanted there, onely to the effect that the mightie Mutezume might fay that hee had fuch things in his house. They were fed with their ordinary, as Ginea cockes, Deere, Dogges, and

There was also in other Hals great earthen vessels, some with earth, and some with water, wherein were Snakes, as groffe as a mans thigh, Vipers, Crocodiles, which they call Cay- Snakes, &c. manes, or Lizares of twenty foote long, with fuch Scales and head as a Dragon hath ! Alfo or her little Lizarts, and other venemous Beafts and Serpents as well of the water as of the land, a terrible fight for the lookers on .

There were also other Cages for foule of rapine of all forts, as Hawkes, Kites, Boyters, and at Foules of prey the least nine or ten kinde of Haukes. This house of foule had of daily allowance fine hundred 10 Gynea cockes, and three hundred men of feruice, besides the Falconers and Hunters, which are infinite. There were many other forts of Foules that our men knew not, which feemed by their

beake and talents good to Hauke withall .

To the Snakes and other venemous Beafts they gave the bloud of men facrificed, to feede them, and fome fay, they gade voto them mans fiesh, which the great Lizarts doe eate very well. The Spaniards taw the floore couered with bloud like a iellie in a Slaughter-house, it stunke horribly. It was frange to see the Officers in this House, how every one was occupied. Our men tooke great pleasure in beholding such strange things, but they could not away with the rearing of the Lyons, the fearefull haffing of the Snakes and Adders. the dolefull howling and barking of the Wolnes, the forrowfull yelling of the Ownzes

20 and Tigres, when they would have meate. Most certaine, in the night feason it feemed a Dingeon of Hell, and a dwelling place of the Deuill, and euen in re was indeede, for neare at hand was a Hall of a hundred and fiftie foote long, and thirty foote broad, where was a Chappell with the Roofe of Siluer and Gold in leafe Wainefcotted . and decked with great store of Pearle and Stone, as Agattes, Cornerines, Emeralds, Rubies, and diversother forts, and this was the Oratory where Matezama prayed in the night feafon, and in that Chappell the Deuill did appeare vnto him, and gaue him answere according to

He had other houses like vnto Barnes, onely for the feathers of foules, and for mantels which Store-houses proceeded of his rents and tributes, a thing much to be feene : vpon the doores was fet his armes, 30 which was a Conie. Here dwelled the chiefe Officers of his house, as Treasurer, Controller, Receiners and other officers appertaining to the Kings retienews. Muteruma had no house wherein Officers

was not an Oratorie for the Deuill, whom they worthipped for the Iewels there. And therefore those houses were great and large.

Mutezuma had forme houses of Armor, vpon the doores wherof stood a Bowe and Arrows. In these houses was great store of all kinde of Munition which they wie in their wars : as Bowes, of Mutetoma Arrowes, Slings, Launces, Darts, Clubbes, Swords and Bucklers, and gallant Targets more trim then strong, Skuls and Splints, but not manie, and all made of wood, gilt or couered with leather. The wood whereof they make their Armour and Targets, is verie hard and strong, for Armese they vie to toaff it at the fire, and at their Arrow ends they enclose a little peece of Flint stone, 40 or a peece of a Fish bone called Labifa, and that is venemous, for if any be hurt therewith and the

head remaine in the wound, it so festereth, that it is almost incurable. Their Swords are of wood, and the edge thereof is of fline stone, enclosed or loyned into a Wodden

staffe, with a certaine kinde of glew which is made of a roote called Zacolt, and Tenzalli, which Swoids with is a kinde of ftrong fand, whereof they make a mixture, and after kneade it with bloud of Bats flone edges. or Rearemice, and other Foule, which doth glew raruellous ftrong, and lightly neuer vncleaueth : of this stuffe, they make nailes, pearcers, and augers, wherewith they bore Timber and Hone : with their Swords they cut Speares, yea and a Horse necke at a blow, and made dents into Iron, which feemed a thing vnpoffible and incredible. In the Citie no man may weare weapon, but onely in warres, lunting, and among the Kings Guard.

Befales the forefaid houses, he had manie others for his onely recreation and passime, with ex- The Gardens cellent faire Gardens of medicinall Hearbes, sweete Flowers, and Trees of delectable sauour. of Mateguma. In that Garden were a thousand personages, made and wrought artificially of leaves and flowers. Mutezams would not permit that in this Garden should be any kinde of pot Hearbes, or Note of a things to be fold, faying, that it did not appertaine to Kings to have things of profit, among magnificent their delights and pleasures, for such things (laid he) did appertaine to Merchants. Yet not minde. withstanding he had Orchards with manie and fundrie fruites, but they stood farre from the Citie, and whither feldome times he went : he had likewise out of Mexico pleasant houses in fure. Woods and Forrests, of great compasse, enuironed with water, in the which he had Fountaines, Rivers, Ponds with fish, Warrens of Conies, Rockes and covert where were Harts, Bucks, Hares,

60 Foxes, Wolues, and fuch like, with wildernesse for everie fort. To these places the Lords of Mexico vied to goe and sport themselves, such and so many were the houses of Mutez uma. wherein few Kings were equall with him.

He had daily attending upon him in his private Guard, fixe hundred Noblemen and Gentle-Aaaaa a

The Court and men, and each of them three or foure feruants, and fome had twentie feruants or moe, according Guard of Mar- to his estate: and in this manner he had three thousand men attendant in his Court, and some affirme more, all the which were fed in his house of the meate that came from his table. The feruing men alwaies abode below in the Court all the day, and went not from thence till after It is to be thought that his Guard was the greater, because the strangers were there, although

Great Vaffals.

in effect of truth it is most certaine, that all the Lords that are under the Mexical Empire (as they say) are thirtie persons of high estate, who are able to make each of them a hundred thoufand men. There are three thouland Lords of Townes, who have many vastals. These Noble-State-caution, men did abide in Mexico certaine times of the yeare, in the Court of Matezama, and could to not depart from thence without especiall licence of the Emperour, leaving each of them a found or brother behinde them for tecuritie of rebellion, and for this cause they had generally houses in the Citie; fuch and to great was the Court of Mutezuma.

Tribures and fub:ection of the Indians to

There is not in all the Dominions of Materame any fubiect that paieth not tribute voto him The Noblemen pay their tribute in personall service. The Husbandmen called Maceualtin with body and goods. In this fort they are either Tenants, or elfe henes to their poffessions, Those which are berrer, doe pay one third part of all their fruite and commoditie that they doe reape or bring vp, as Dogges, Hennes, Foule, Contes, Gold, Silver, Stones, Salt, Waxe, Hone, Mantels, Feathers, Cotten, and a certaine fruite called Cacas, that ferneth for money, and alio to eate. Alio all kinde of Graine, and Garden Hearbes, and Fruites, whereof they doe main- 20 taine themselves.

The Tenants doe pay monethly, or yearely, as they can agree, and because their tribute is great, they are called flaues, for when they may have licence to eate Egges, they thinke it a great fauour. It was reported that they were taxed what they should eate, and all the residue was taken from them. They went verie poorely cloathed, yea and the most of their treasure was an earthen Pot, wherein they boiled their Hearbes, a couple of Milftones to grinde their Corne. and a Mat tolye vpon. They did not onely pase this Rent, and Tribute, but also ferued with their bodies at all times when the great King (hould command. They were in fuch great fubis Rion to their Prince, that they durft not speake one word although their daughters should be taken from them to bevied at pleafure, All the aforefaid rents they brought to Mexico vpon their to backes, and in Boates, I meane fo much as was necessarie for the provision of the House and Court of Mutezuma, all the reft was spent among Souldiers, and bartred for Gold, Plate, Precious stones, and other rich Iewels, esteemed of Princes, all the which was brought to the Treasurie. In Mexico was large and great Barnes and Houles to receive and keepe the Corne for prouis Secompidare fion of the Citie, with Officers, and underofficers, who did receive the fame, and kept account thereof in Bookes of painted figures.

And in every Towne was a Receiver, who bare in his hand a rod or a bush of Feathers, and thole gave up their accounts in Mexico. If any fuch had beene taken with deceit and fallhood, death was his reward, yea and his kinred punished with penalties, as of a linage of a traitour to his Prince. The Husbandmen, if they paid not well their Tribute, were apprehended for the 40 fame, and if they were found to be poore through sicknesse and infirmitie, then they were borne withall, but if they were found to be lazie and floathfull, they should be vied accordingly : but in conclusion, if they paied it not at a day appointed, then they should be fold for slaues to pay their debt, or elfe be facrificed.

There were many other Provinces, which paid a certaine portion, and reknowledged feroice, but this Tribute was more of honour then profit, In this fort Mutez ume had more then fiffitient to prouide his house and wars, and to heape up great store in his Treasury. Moreover, he spent nothing in the building of his houses, for of long time he had certaine Townes that paid no other Tribute, but onely to worke and repaire continually his Houses at their owne proper cost, and paid all kinde of workemen carrying vpon their backes, or drawing in fleds, Stone, Lime, 50 Timber, Water, and all other necessaries for the worke. Likewife they were bound to prouide all the firewood that should be spent in the Court , which was a great thing , and did amount to two hundred and thirty weight a day, which was fine hundred mens burdens, and fome dayes in the winter much more. And for the Kings Chimneys they brought the barke of Oake trees, which wes belt esteemed for the light thereof, for they were great Sorcerers. Mutezuma had one hundred Cities with their Prouinces, of whom he received Rents, Tributes, and Vaffalage, where he maintained Garrison of Souldiers, and had Treasurers in each

His dominion did extend from the North fea to the South fea, and fix hundred miles in longitude within the maine Land, although in very deede there were some Townes, as Tlazeal 63 lon, Mechnacan, Panuco, and Teocantepec, which were his enemies, and paid him neither Tribute nor Seruice : but yet the Ranfome was much, when any of them was taken Al'o there were other Kings and Noblemen, as of Texento, and Tlacopan, which were not in jubic ction vnto him, but onely in homage and obedience, for they were of his owne linage, vnto whom Matexama married his Daughters.

Description of Mexico as it flourished in those times.

Exico at the time when Cortes entred, was a Citie of fixtie thouland houles. The Kings Mhoul , and o her Noblemens houses were great, large, and beautifull, the other were small and meane, without either doores or windowes; and although they were small, yet there dwelleth in some of them, two, three, yea and ten persons, by reason whereof, the Citie was wonder-

10 fully replenished with people.

This Citie is built whom the water, even in the fame order as Venuce is: All the body of the Three forts of Citie standeth in a great large Lake of water. There are three for is of streetes very broad and Streetes faire, the one forcare onely water, with many Bridges : another fort of onely earth; and the third of earth and water ; that is to fay, the one halfe earth to walke upon, and the other halfe for Boates to bring prouition of all forts. These streetes are kept alwayes cleane, and the most part of the houses have two doores, the one towards the Cawley, and the other towards the water, at the which they take Boate to goe where they lift. And although this Citie is founded vpon water, yet the same water is not good to drinke, whereof there is brought by conduit water from a place called Caputapee, three miles diffant from the Citie, which fpringeth out of a

20 little hill, at the foote whereof standeth two Statues or conered Images wrought in stone, with their Targets and Lances, the one is of Mutezuma, and the other of Axaiaca his Father. The water is brought from thence in two Pipes or Canals in great quantity, and when the one is foule, then all the water is conucied into the other, till the first be made cleane. From this Fountaine all the whole Citie is prouided, so that they goe selling the same water from streete toffreete in little Boates, and doe pay a certaine tribute for the same.

This Citie is divided into two threetes, the one was called Timelulco, that is to fay, a little Iland, and the other Mexico, where Mutexuma his dwelling and Court was, and is to be interpreted a Spring. This streete is the fairest and most principall, and because of the Kings Pallace there, the Citie was named Mexico, although the old and first name of the Citie was Tenuch-

30 sitlan, which doth fignifie Fruite out of stone, for the name is compounded of Tetl, which is, Stone, and Nuchels, which is a Fruite in Cuba and Hispanible, called Timat; the Tree (or to freake properly, the Thiftle) that beareth this fruite, is named Nopal, and is nothing almost but leaves It growth alof a footebroad and round, and three inches thicke, fome more, and fome leffe, according to the to in Birmiddi growth, full of thornes which are venemous : the leafe is greene, and the thorne or pricke ruffer. After that is planted, it encreaseth, growing leafe voto leafe, and the foote thereof commeth to be as the body of a tree, and one leafe doth onely produce another at the point, but at thefides of the fame leaves proceede other leaves. In fome Provinces where water is feant, they wie to drinke the juice of these leaves. The fruite thereof called Nuchtli, is like wnto Figges, and euen fo hath his little kernels or graines within, but they are fomewhat larger, and crowned

40 like vnto a Medler. There are of them of fundry colours, fome are greene without, and Carnationlike within, which have a good tafte. Others are yellow, and others white, and fome speckled; the best fore are the white : it is a fruite that will last long. Some of them have the tafte of Peares, and othersome of Grapes: it is a cold and a fresh fruite, and best esteemed in the heate of Summer. The Spanards doe more efteeme them then the Indians. The more the ground is laboured where they grow, the fruite is fo much the better. There is yet another kinde of this fruite red, and that is nothing effeemed, although his tafte is not cuill, but because it doth colour and dye the eaters mouth, lippes, and apparell, yea, and maketh his vrine looke like pure bloud. Many Spaniards at their first comming into India, and eating this Fruite, were in a maze, and at their wits end, thinking that all the blood in their bodies came out in vrine ; yea and 50 many Philitions at their first comming were of the same beliefe; for it hath happened, when

they have bin fent for vnto fuch as have eaten this fruite, they not knowing the cause, and beholding the wrine, by and by they ministred medicine to stanch the bloud: a thing ridiculous. en fee the Philitians fo deceiued, Of this fruite Nuchili and Tell, which is a Stone, is compounded Tenuchtletan. When this City was begun to be founded, it was placed neere vinto a great Stone that stood in the middest of the Lake, at the foote whereof grew one of these Nopal crees, and therefore Mexico giveth for armes and deurse the foot of a Nopaltree springing from a stone, according to the Cities name.

Mexico is as much to lay, as a Spring or Fountaine, according to the property of the vowell The name of and freech. Others doe affirme, that Mexico hath his name of a more ancient time, whole first Mexico.

60 Founders were called Mexits, for voto this day the Indian dwellers in one ftreete of this City are called of Mexico. The Mexiti tooke name of thir principallelt Idoll called Mexitli, who was in as great veneration as Vitzilopuchtli, god of the warre. Mexico is environed with I weet water. and bath three wayes to come vnto it by cawfie, the one is from the West, and that cawfie is a mile and a halfe long. Another from the North, and containeth three miles in length. Eastward

Two Lakes, one filt the other treft, El bing and winde. Some (25 Partius) hance moued. desine the cause of the Scar flowing from the falt-Cause of the faltneffe.

the Citie hath no entrie. But Southward the Cawfey is fixe miles long, which was the way that Cortez entred into the Citie. The Lake that Mexico is planted in, although it fremteh one, yet it is two, for the one is of water faltish, bitter, and pestiferous, and no kinde of fish liueth in it. And the other water is wholefome, good, and fweet, and bringeth forth small fish. The falt water ebbeth and floweth, according to the winde that bloweth. The fweet water standeth higher, flowing by the fo that the good water falleth into the cuill, and reverteth not backward, as some hold opinion. The falt Lake contayneth fitteene miles in breadth, and fitteene in length, and more then five and fortie in circuit , and the Lake of fweet water contayneth euen as much, in fuch fort, that the whole Lake contayneth more then thirtie leagues, and hath about fiftie townes fituated the whole Lake contaying in the townes doe contaying fire thouland housholds, and some ten thou to fand, yea and one towne called Texeuco, is as bigge as Mexico. All this Lake of water springeth out of a Mountaine that standeth within fight of Mexico. The cause that the one part of the Lake is brackish or lateish, is, that the bottome or ground is all sale, and of that water great quantitie of falt is daily made.

200000, C2-

In this great Lake are about two hundred thousand little boates, which the Indians call Acalles, and the Spaniards call them Canons, according to the speech of Cuba and Santo Domingo, wrought like a kneading trough : lome are bigger then other some, according to the greatnesse of the body of the tree whereof they are made. And where I number two hundred thousand of these boats, I speake of the least, for Mexico alone hath aboue fiftie thousand ordinarily to carry and bring voto the Citie victuall, prouision, and passengers, so that on the market day all the threets of water are full of them.

The Market is called in the Indian tongue Tlanquizzls: every Parish hath his Market place to place of Mexi. buy and fell in ; but Mexico, and Tlatelulco onely, which are the chiefest Cities, have great Faires and places fit for the same, and especially Mexico hath one place where most dayes in the yeere is buying and felling, but every fourth day is the great Market ordinarily : and the like cuftome is vied throughout the Dominions of Muteruma. This place is wide and large, compassed round about with doores, and is logreat, that a hundred thousand persons come thither to chop and change, as a Citie most principall in all that Region. Wherefore the refort is from farre parts Order of Sel. vnto that place. Euery occupation and kinde of merchandile hath his proper place appointed. which no other may by any meanes occupie or diffurbe. Likewife pefterous wares haue their 30

place accordingly (that is to fay) stone, timber, lime, bricke, and all kinde of stuffe vnwrought, being necessarie to build withall. Also Mass both fine and course of fundrie workmanship, also Coales, Wood, and all forts of earthen veffell, glafed and painted very curiously : Deere skinnes both raw and tanned in haircand without haire, of many colours, for Shoomakers, Bucklers, Targets, Jerkins, and lining of woodden Corfelets: also skinnes of other beafts and fowle infeathere readie dreffed of all forts, the colours and strangenesse thereof was a thing to behold. The richest merchandise was Salt, and Mantels of cotton wooll of divers colours, both great and smal, fome for beds, others for garmen's and clothing, other for tapiffarie to hang houses, other cotten cloth for lining breeches, thirts, table clothes, towels, napkins, and fuch like things. There were alfo Mantels made of the leaves of the tree called Metl , and of Palme tree , and 40

Cony haire, which are well effeemed, being very warme, but the Couerlets made of feathers are the best : they fell threed made of Cony haire, pieces of linnen cloth made of cotton wooll, also skaines of threed of all colours : also it is strange to see the great store of fowle, some wilde, fome tame, some water fowle, and other some of rapine. All the brauerie of the Market, is the place where gold and feathers toyntly wrought is fold, for any thing that is in request is there lively wrought in gold and feathers, and gallant colours. The Indians are fo expert and perfect in this science, that they will worke or make a Butter-flie, any wild Beast, Trees, Roses, Flowers, Herbs, Rootes, or any other thing, fo lively, that it is a thing maruellous to behold. It hapneth many times that one of these workmen in a whole day will eate nothing, onely to place one feather in his due perfection, turning and toffing the feather to the light of the Sunne, into the shade or darke place, to see where is his most natural perfection, and till his worke be finished he will neither eate nor drinke. There are few Nations of so much patience. The Art or Science of Gold-finiths, among them is the most curious, and very good workmanship engrauen with tooles made of flint, or in mold. They will cast a platter in mold with eight corners, and every corner of feuerall metall, that is to fay, the one of gold, and the other of filuer, without any kind of folder: they will also found or cast a little caldson with loose handles hanging thereat, as wee vie to cast a hell : they will also cast in mold a fish of metall with one scale of silver on his backe, and another of gold : they will make a Parret or Popinjay of metall, that his tongue shall shake, and his head moone, and his wings flutter: they will caft an Ape in mold, that both liands and feet shall stirre, and hold a spindle in his hand seeming to spin, yea and an Apple in his hand, as though he would eate it. Our Spaniards were not a little amazed at the fight of these things. For our Gold-Imiths are not to be compared vnto them. They have skill also of Amell worke, and to fet any precious stone. But now as touching the Market, there is to fell Gold, Silver, Copper, Leade, Latton, and Tin, although there is but little of the three last metals mentioned. There are

pearles, precious stones, divers and fundrie forts of shells, and bones, spunges and other Pedlers ware, which certainly are many and ftrange forts, yea, and a thing to laugh at their Haberdash toyes and triffles. There are also many kinde of Hearbs, Roots, and Seedes, as well to bee caten, as for medicine, for both men, women, and children, have great knowledge in hearbs, for through pouertie and necessitie, they seeke them for their sustenance and helpe of their infirmities and diseafes. They spend little among Physicians, although there are some of that Art, and many Apothecaries, who doe bring into the market Ointments, Sirrops, Waters, and other drugs, fit for ficke persons: they cure all diseases almost, with hearbs; yea, as much as for to kill Lice, they

haue a proper hearbe for the purpole. The feuerall kindes of meates to bee fold are without number, as Snakes without head and taile, little Dogs gelt, Molls, Rats, long Wormes, Lice, yea and a kinde of earth, for at one fea- Victuall of did fon in the yeere they have Nets of maile, with the which they rake up a certaine dust that is uers forts. bred voon the water of the Lake of Mexico, and that is kneaded together like vnto Oas of the Sea : they gather much of this victuall, and keepe it in heapes, and make thereof Cakes like vnto brick-bats : they fell not onely this ware in the Market , but also fend it abroad to other Faires and Markets afarre off : they eate this meate with as good flomacks as wee eate cheefe, yea and they hold opinion that this skum or farnesse of the water, is the cause that such great number of fowle commeth to the Lake, which in the winter fealon is infinite. All the Sellers pay a certaine fumme for their shops or standings to the King, as a custome, and they to bee preferred and de-20 fended from theeues; and for that cause there goe certaine Sergeants or Officers vp and downe the Market to espie out malesactors. In the middest of the Market standeth a house which may bee

feene throughout the Faire , and there fitteth twelue ancient men for Iudges to dispatch Law matters: their buying and felling is to change one ware for another, as thus, one gineth a Hen for Bartetian a bundell of Maiz, other give Mantels for Salt, or money which is Cacao, and this is their order to chop and change : they have measure and strike for all kinde of Corne, and other earthen meafures for Hony and Wine, and if any Measure bee fallified, they punish the offenders, and breake The Temple is called Tencalli, that is to fay, Gods Honfe; Tentl, fignifieth God; and Calli is The great

a Hone, a name very fit, if that house had beene of the true God. The Spaniards that understand Temple of 30 not the language, doe pronounce and call those Tomples Cars, and the God Vitzidopuchili, Vchi. Mexico. lobes. There are in Mexico many Churches with Towres for their Parithes and Streets, wherein are Chappels and Altars where the Images and Idols doe fland, and those Chappels doe serve for buriall places of their Founders; for others are buried in the ground about them or Churchyards. All their Temples are of one fathion, therefore it shall bee now fufficient to speake of the principall Church. This Temple is square, and doth contayne every way as much ground as a Crosse-bow canreach levell : it is made of stone, with foure doores that abutteth vpon the three Cawfeys, and voon another part of the Citie, that hath no Cawfey but a faire ftreet. In the middelt of this Quiderne standeth a mount of earth and stone, square likewise, and fiftie fathom Chiefe Temple long every way, built vpwardlike vnto a Pyramide of Egypt, faving the top is not flarpe, but described. 

beautifull thing. It was a strangesight to behold the Priests, some going vp, and some downs with ceremonies, or with men to be facrificed. Vpon the top of this Temple are two great Al. Two Akarw tars, a good space distant the one from the other, and so night he edge or brim of the wall, that fearly a man may goe behinde them at pleasure. The one Altar standeth on the right hand, and the other on the lett : they were but of fine foot high, each of them had the backe part made of ftone, painted with monitrous and foule figures, the Chappell was faire and well wrought of Masons worke and timber, euery Chappell had three lofts, one aboue another, suffayned vpon pillars, and with the height thereof it shewed like vnto a faire Towre, and beautified the Citie 50 afarre off : from thence a man may fee all the Citie and Townes round about the Lake, which was vndoubtedly a goodly prospect. And because Correr and his companie should see the beautie

thereof; Mutezame brought him thither, and shewed him all the order of the Temple, even from the foot to the top. There was a certaine plot or space for the Idoll Priests to celebrate their feruice without disturbance of any. Their generall prayers were made toward the rifing of the Sunne, Vpon each Altar ftandeth a great Idoll. Beside this Towre that standeth vpon the Pysumme, planes and the state of nor Westward, but other wayes, because there should be a difference betwitte the great Temple Scuerall Tem-60 and them. Some of their Temples were bigger then others; and entry one of a secural God, ples to fue-

among the which there was one round Temple, dedicated to the God of the aire, called Queeal\_ rall gods. count, for even as the aire goeth round about the Heavens, even for that confideration they made A firange his Temple round. The entrance of that Temple had a doore, made like vnto the mouth of a doore. Serpent, and was painted with foule and denillift geftores, with great teeth and gums wrought, which was a thing to feare those that should enter in thereat, and especially the Christians

vnto whom it represented very Hell, with that vgly face and monstrous teeth-

There were other Tencalles in the Citie, that had the alcending vp by steps in three places: all their Temples had houses by themsclues with all service, and Priests and particular Gods, Ag Temple-halls, every doore or the great Temple standeth a large Hall and goodly Lodgings, both high and low round about, which houses were common Armories for the Citie, for the force and strength of enery Towne is the Temple, and therefore they have there placed their flore-house of munition, They had other darke houses full of Idols, great and small, wrought of fundrie metals, they are all bathed and washed with bloud, and doe shew very blacke through their daily sprinkling and

Deuillifh Paicfin

anointing them with the fame, when any man is facrificed : yea, and the walls are an inch thicke with bloud, and the ground is a foot thick of bloud, fo that there is a deuillish shinsh. The Priests to or Ministers goe daily into those Oratories, and suffer none others but great personages to enter in. Yea, and when any such goeth in, they are bound to offer some man to bee sacrificed, that those bloudie Hangmen and Ministers of the Deutil may wash their hands in bloud of those so facrificed, and to fprinkle their house therewith. For their feruice in the Kitchin they have a Pond of water that is filled once a yeere, which is

foot. refi-

brought by conduit from the principall Fountaine. All the residue of the foresaid circuit serueth for places to breede fowle, with Gardens of herbs and fweet trees, with Roles and flowers for the Altars. Such, fo great and strange was this Temple of Mexico, for the service of the Deuil who had deceived those timple Indians. There doth reside in the same Temple continually five who nad decement thousands they are lodged and have their living there, for that Temple is marvellous rich, and hath divers Townes onely for their maintenance and reparation, and are bound to fustaine the same alwayes on foot. They doe fowe Corne, and maintayne all those fine thoufand persons with bread, fruit, flesh, fish, and fire-wood, as much as they neede, for they spend more fire-wood then is spent in the Kings Court : these persons doe line at their hearts ease, as feruants and vallals vnto the Gods. The Gods of Mexico were two thousand in number, as the Indians reported, the chiefest

The Idols of

were Vitzilopuchtli, and Texcatlipuca, whole Images flood highest in the Temple vpon the Altars: they were made of stone in full proportion as bigge as a Giant. They were coursed with a lawne, called Nacar. Their Images were befer with pearles, precious Rones, and pieces of gold, wrought like birds, beafts, fillies, and flowres, adorned with Emeralds, Turquies, Calce- 20 dons, and other little fine stones, fo that when the lawne Nacar was taken away, the Images feemed very beautifull to behold. The Image had for a girdle great Snakes of gold, and for Collars and Chaines about their necks, ten hearts of men made of gold, and each of those Idols had a counterfait vilard with eyes of glaffe, and in their necks death painted : each of these things had their confiderations and meanings. These two Gods were brethren, for Tezeatipuca was the God of Prouidence, and Viszilopuchti God of the Warres, who was worthipped and feared more

There was another God, who had a great Image placed woon the top of the Chappell of Idols. and he was esteemed for a speciall and singular God about all the rest. This God was made of all kinde of feedes that groweth in that Country, and being ground, they made a certaine pafte, 40 tempered with Childrens bloud, and Virgins facrificed, who were opened with their Rafors in the breaks, and their hearts taken out, to offer as first fruits vnto the Idoll. The Priests and Minifters doe confecrate this Idoll with great pompe and many ceremonies. All the Comarcans and Citizens are prefent at the confectation, with great triumph and incredible deuotion. After the confectation, many denout perfons came and flicked in the dowie Image precious stones, wedges of gold, and other jewels. After all this pompe ended, no fecular man may touch that holy Image, no nor yet come into his Chappell, nay learly religious persons, except they were Tlamscazeti, who are Priests of order. They doe renew this Image many times with new dough , taking away the old, but then bleffed is he that can get one piece of the old raggs for teliques, and chiefly for Souldiers, who thought themselves fure therewith in the warres. Also at the confe- 50 cration of this Idoll, a certaine vessell of water was blessed with many wordes and ceremonies, and that water was preferred very religiously at the foot of the Altar, for to confecrate the King when he should be crowned, and also to blesse any Captaine generall, when he should be elected for the warres, with onely giving him a draught of that water.

Without the Temple, and ouer against the principall doore thereof, a stones cast distant, stanboule, or place deth the Charnell house onely of dead mens heads, prisoners in warres, and sacrificed with the knife. This monument was made like vnto a Theater, more larger then broad, wrought of lime and stone, with accending steps, in the walls whereof was grafted betwixt stone and stone a Scull, with the teethoutwards. At the foot and head of this Theater, were two Towres, made onely or lime and foulle, the teeth outward, and this wall having no other fluffe, feemed a 60 firange fight. At and voon the top of the Theater, were feventie Poles, flanding the one from the other toute or fine toot diffant, and each of them was full of stanes from the toot to the top-Each of their states had others made fast vnto them, so that every of them had five souls broched how the Temple. Andrew de Tapie did certifie me, that he and Gonçalo de Vimbria did rec-

kon them in one day, and found a hundred thirtie and fixe thousand sculls on the poles, staues, and steps. The other Towres were replemified out of number, a most cruell custome, being onely mens heads fixine in facrifice, although it hath a flew of humanitie for the remembrance there placed of death. There are also men appointed, that when one scull falleth, to set vp another in his place, to that the number may never want.

### Other Mexican Antiquities , Letters , Numbers , Teeres , Dayes, Weekes , &c.

Here bath not beene found Letters at any time in the West India, onely in new Spaine were vied certaine figures which ferned for letters, with the which they kept in memorie and preferned their Antiquities. The figures that the Mexicans ofed for letters are great, by reason whereof they accupie great Volumes: they engrave them in stone or timber, and paint them upon walls, and also upon a paper made of coston wooll, and leases of the tree Metl. Their bookes are great and folded up like unto our broad cloathes, and written upon both fides. There are some bookes rolled up like a piece of flannell. Ther pronounce not v, g, r, f, y, therefore they ofe much p, c, l, x. This is the Mexican freech, and Nahual. which is the best, playnest, and the most eloquent, in all new Spaine. There are some in Mexico that doe understand each other by whistling, which is ordinarily used among Lowers, and Theenes, a speech sruly 20 to wonder at, and none of our men could come to the knowledge thereof.

### Their reckoning by numbers was in this fort.

Ome, Two, E1, Three, Nam. Foure.	Chicome, Seuen, Chicoes, Eight Chiconaus, Nine,	Matlaciliome, Twelue, Matlaciliomei, Thirteene, Matlacilimani, Fourteene,	Matlattlichicuei, Eight Matlattlichiconaui, Nure	teene, teene,
Macuil, Fine,	Matlac, Ten,	Mailacthracui, Fifteene,	Cempoalls, Twe	

Eury number is simple untill you come to fixe, and then they count, fixe and one, fixe and two, fixe and three. Ten is a number by himselfe, then you must count ten and one, ten and two, ten and three, ten and foure, ten and fine. Then you count, ten, fine, and one; ten, fine, and two; ten, fine, and three. Twentie goesb by himfelfe, and all the greater numbers.

The Mexican years is three hundreth and fixin dayes, for they have in their years eighteene moneths. and enery moneth contayneth twentie dayer. They base other fine odde dayes, which goeth by themselnes. in the which they veed to celebrate great feath; of cruell and blondy facrifice, with much denotion. And reckoning after this fort they could not choose but erre, for they could not make equal the punctual course of the Sunne. Yea the Christian yeere is not perfect, although wee have learned Aftronomers. But yet these simple Indians went neere the marke.

The names of the moneths, Tiacaxipeualiztli, Tozcutzli, Huei Tozeuztli, Toxcalt, Ecalcoalizth, Tocuilhuicineli, Hucitecuilhuitl, Miccailhuicintli, Veymiccailhuitl, Vehpaniztli, Pachtli, Huei Pachtli, Quecholli, Panquecaliztli, Hatemuztli, Tititlh, Izcalli, Coa Vitleuac.

The names of Dayes, were Cipacili, A Spade; Hecatl, Aire or Winde; Call, A House; Cues Pali, A Lizzirt; Conalt, A Snake; Mizquintli, Death; Macatl, A wilde Hart; Toshili, A Cony; Atl, Water; Izcujnti, A Dogge; Osumatli, An Ape; Malinalli, A Broome; Acath, A Caue; Oceloti, A Tigre; Coanti, An Eagle; Cozcaquahuti, A Buzzard; Olin, A Temple; Tepatlb, A Knife; Quianitl, Raine; Xuchul, A Rofe.

Although the se twentie names serve for the whole years, and are but the dayes of every moneth, yet therefore enery moneth beginneth not with Cipa ali, which is the first name, but as they follow in order, 50 and the fine odde dayes is the canfe thereof. And also because their weeke is of thirteene dayes, which changeth the names, as by example, Cecipactii can goe no further then unto Matlactiomeiacatl, which is thirteene, and then beginneth mother weeke : and we doe not fay Mathaellman Oceloth, which is the fourteenth day, but wee fay Coocelotl, which is one, and then reckon the other fixe names onto twentie. And when all the twentie dayes are ended, begin againe to reck on from the first name of the twentie, but not from one, but from eight. And because yee may better understand the matter, here is the example.

Cecipactli, Omehecatl, E. Calli, Naui Cuezpali, Macuilcouatl, Chicoacen Mizquineh, Chicome Macatl, Chicuci Tochtli, Chiconauiatl, Marlaciz Cuintli, Mailactlioce Ocumatli, Matlactiome Malinalli, Matlactiomei Acatih. The next weeke following doth begin his dayes from one. And that one is the fourteenth name of the moneth and of the dayes, and fasth : Ceotelotl, Omecoaut-

60 li, Ercozca quahutli, Navi Olui, Macuil Tecpatl, Chicoacen Quantil, Chicome Xuchiel, Chicoei Cipaelli. In this second weeke, Cipaelli came to fall on the eight day , being m the first weeke the first day, Cemacatl, Ometochtli, Eiatl, Naui Izcuintli, Macuil Ocumatli. And fo proceeds on to the third weeks, in the which this name Cipactli entreth not, but Macatl, which was the fementh day in the first weeke, and had no place in the second, and is the first in the third. The reckoning is no darker then ours, which we have in a, b, c, d, e, f, g. For they also change with time, and run in such fort, that a. which was the first letter of this moneth, commeth to be the fift day of the next moneth, and the third me neth be counteth to be the third day, and so orderly doth the other sixe letters.

These Mexicans had another order to reckon their yeares, which exceeded not abone four e in number. the account as they lift. Those foure figures or names, are, Tochtli, Acatlh, Tecpath, Calli, and doe fignific a Cony, a Cane, a Kmfe, and a Honfe, faying : Ce Totchti, One yeere; Ome Acatith, Two yeeres: Ei Tecpatlb, Three yeeres; Nam Calli, Foure yeeres; Macmil Tochtli, Fine yeeres; Chioacen A. Es l'espatio, intre yeures, au montant yeures; (bienes Calb, Eight yeures; (bicomani Tocht. ii. Nine yeeres : Mailatli Acath, Ten yeeres ; Matlatlioce Tecpath, Eleuen yeeres ; Mattattliome Calli, Twelue yeeres; Matlattliomei Tocheli, Thirteene yeeres. So that the rectoning paffeth not abone thirteene, which is one weeks of the yeers, and endeth where he began.

The second weeke. Ce Acasth, one yeere; Ome Thepath, two yeeres; Es Calli, three yeeres; Nani Tochili, foure yeeres; Macuil Acath, five yeeres; Chicacen Techath, fixe yeeres; Chicame Calli, feuen yeeres; Chicaei Tochili, eight yeeres; Chiconaus Acailh, nine yeeres; Matlada li Tecpailb, ten yeeres; Matlatilioce Calle, eleuen yeeres; Matlatiliome Tocbili, twelue yeeres; Matlatiliomes Acall, thirteene yeeres. The third weeke of yeeres. Co Tespailb, one yeere : Ome Calls, two yeeres; Es Tochtis, three yeeres; Nans Acasth, foure yeeres; Macust Tecpath, fine veeres; Chicaem Calli, tixe yeeres; Chicame Tochili, leuen yeeres; Chicaei Acatib, eight yeeres; Chiconaus Tespath, nine yeeres; Matlattis Calls, ten yeeres; Matlattisome Tochtis, eleuen yeeres;

Matlatilione Acath, twelve yeeres; Matlatiliomes Tecpath, thirteene veeres.

The fourth weeke. Ce Calls, one yeere, Ome Tochili, two yeares; Es Acath, three yeares; Na. mi Tecparily, foure yeares; Macmil Calli, five yeares; Chicacen Tochtle, fix yeares; Chicane Acatch. feuen yeares; Chienes Tecpatib, eight yeares; Chiconani Calli, nine yeares; Matlatili Tochtli, ten Yeares ; Matlattlioce Acath, eleven yeares ; Matlattiome Tecpatib, twelve yeares ; Matlattiemes Calli, thirteene yeares. Each of these weekes, which our men call Indition, doth contains thirteene yeares, fo that all the foure weekes make two and fiftie yeares, which is a perfect number in their rechening, and is called the yeare of grace, for from fiftie two yeares, to fiftie two yeares, they vied to make folemme feasts, with strange, Ceremonies, as hereafter Shall be declared. And when fiftie two yeares are 20 ended, then they begin againe, by the same order before declared, untill they come to as many moe, beginning at Ce Tochtls, and fo forward. But alwayes they begin at the Conie figure. So that in the forme of reckoning they keepe and have in memory, things of eight hundred and fiftie yeares: and by this Chronicle they know in what yeare every thing hapned, and how long every Kueg reigned: how many children they bad, and all things elfe that importet b to the effate of the gonernment of the Land.

The Indians belowed that paft, which they called

The Indians of Culhua did beleene that the Gods had made the World, but they knew not how, yet they believed that fince the creation of the world foure Sunnes were past, and that the fift and last is the Sunne that now giveth light to the World, They beld opinion that the first Sunne periffed by mater, and five ages were at the same time all liming creatures perifted likewise. The second Suome (say they) fell from the heamens, with whose fall all living creatures were flaine, and then (faid they ) were many Giants in that Coun- AD trey, and certaine monstrous Bones, which our men found in opening of granes, by proportion whereof Some bould seeme to be men of twenty spans high. The third Sunne was consumed by fire, which burned day and night, so that then all living creatures were burned. The fourth Sunne finished by tempost of Agre or Winde, which blow downe Honfes, Trees, yea and the Mountaines and Rockes were blowen a Sunder, but the linage of Mankinde perished not fasting that they were conserted into Apes. And touching the fift Sunue, which now raigneth, they know not how it shall consume. But they fay, that when the fourth Sunne perished, all the world fell into darkenesse, and so remained for the space of fine and twenty yeares consmually, and at the fifteenth yeare of that fearefull darkenesse, the Gods did forme one man and woman, who brought forth children, and at the end of the other ten yeares, appeared the Sunne which was newly borne upon the figure of the Conic day, and therefore they begin their account en of yeares at that day, and reckening from the yeare of our Lord 1552 their age or Sunne is 858. so that it appearreth that they have vied many yeares their writing in figures: and they had not onely this vie from Cetocili, which is the beginning of their yeare, moneth, and way, of their fifth Sunne, but also they had the same order and vie in the other foure Sunnes which were past : but they let many things slip out of memory, saying that with the new Sunne, all other things should be likewise new. They held also opinion, that three dayes after this last Sun appeared, all the godt did dye, and that in processe of time, the oods which now they bane, and worship were borne.

The Corona-

Although one brother was betre to another among the Mexicans, and after their decease, did inherit the Soune of the eldest Brother yet they tooke no possession of the state or name of King, until they were an-Kings of Mex- nointed and crowned openly.

As foone as any King of Mexico deceased, and his Funerals ended, then were called to Parliament 60 the Lord of Tezcuco and the Lord of Tlacopan, who were the chiefest estates, and then in order all other Noblemen, who owed any fermice to the Mexican Empire. And being come together; if any doubt of the in-

heritance of the Crome bappened, then the matter was decided with all hafte: then the new Kong being knowne, he was ftripped farke naked, except a cloath to comer his primie parts, and in this fort was carried among them to the great Temple of Vitzilopuchtli with great filence, and without any soy or plea-(ure: Two Gentlemen of the (tie, whole office it was led him up the staires of the Temple by the armes. and before him went the Princes of Tezcuco and Tiacopin, who that day didweare their raches of Coronation, whereupon was painted their armes and title. Veriefew of the Laitie went up into the Chappels, but onely those that were appointed to attive the new King, and to serve in other Ceremonies, for all the relidue freed upon the steps and below, to behold the Coronation. These Magistrates being above in the Chappell, came with great bumility and renerence, kneeling downe upon their knees before the Idoll 10 of Vitzilopucheli, and touched the earth with one finger and then kiffed the same. Then came the bieb

Priest cloubed in his pontificall vestments, with many others in his company, who did weare Surplices: and without speaking any word, they painted or coloured the Kings person, with Inke made for the perpofe, as blacke as any coale. After this Ceremonie done, they bleffed the amointed King, and fprinkled The cintments bum four etimes with a certaine boly water, that was made at the time of confecration of the God, made of done or pake, with a fprinkle made of bower of Cane leanes, Cedar, and Willow leanes. Then they put voon his head, sloth painted with the bones and fenls of dead men, and next they cloathed him with a blacke garment, or upon that another blew, and both were painted with the figures of dead mens sculs and bones. Then they put about his necke certaine laces, whereat did hang the armes of the Crowne. And behinde his back they did hang certain listle bottels full of powders, by vertue wherof he was delinered from peftilence and difeafes , according to their opinion : yea, and thereby Witches, nor Witcherafts could not bure him. nor ret enill men deceine him. In fine, with those relicks he was sure from all perill and danger. Upon his

left arme they bound a little bagge of Incense, and then brought unto him a chaffing dish of mibers made of the parke of an Oke tree. Then the King grofe, and with his owne hand threw of the fame Incente. into the chaffing -dish, and with great reverence brought the same to the god Vitzilopuchili, and after be bad (monked him therewith, he fat him draine, then came the high Priest and tooke his oath to maintaine the religion of the gods, to keepe alfo all the lawes and customes of his predecessours, to maintaine instice and not to an granate any of his vasfals or subjects, and that he should be valiant in the warres, that be should cause the Sunne to give his light, the clouds to yeelde raine, the riners to runne, and the earth to bring forth all kinds of grains, fruites, and other needlfull hearbs and trees. Thefe and many o-30 ther impossible things the new King did sweare to performe and then be game thankes to the high Priest,

and commended himselfe to the gods, and to the lookers on, and they who brought him up in the same order, earrieth him downe againe. Then all the people cried, the God's preferue the new King, and that he may raigne many yeares in health with all his people. But then some began to dance, other to play on their instruments; Shewing outwardly their inwardinger of beart. And before the King came to the foote of the steps, all the Noblemen came to reelde their obedience, and in token of louing and faithfull subjects, they professed onto him Feathers, frings of Smaile shels, Callers, and other lewels of Gold and Silver, alfo Mantels painted with death, and bare bine company unto a great hall within the compasse of the Temple, and there left him. The King sitteth downe under his cleath of estate, called Tlacatecco, and in foure dayes departeth not out of the circuit of the Temple, the which hee fpends in 40 prayers, facrifice, and penance; he eates then but once a day, and enery day be bathes himselfe, and a-

gaine in the night in a great pond of water, and then lets himfelfe blond in his cares, and fenfeth therewith the god of water, called Tlaloc : be likewife fenfeth the other Idols, unto whom he offereth Bread, Flowers, Papers, and little Canes, died in the bloud of his owne tongue, nofe; hands, and other parts of his body. After the foure dayes expired, then come all the Noblemen to beare him company to his Pallace with great triumph and pleasure of all the Catie, but after his consecration few or none dare looke

And now with the declaration of the Alls and Ceremonies that the Mexican Kings are crowned, I shall not needs to rebearse of other Kings, for generally they all doe use the same order, saving that other Princes goe not up to the top of the Temple, but abide at the foote of the fleps to be crowned, and 30 after their Coronation they come to Mexico for their confirmation , and then at their returne to their Country, they made many drunken feasts and banquets.

The Mexicans did beleeve that the Soule was immortal, and that they received either ioy or paine of the Mexiaccording to their deferts and lining in this world, unto which opinion all their religion did attaine, and consconers chiefly appeare at their burials. They held for an affured faith, that there were nine places appointed ning the Soule for foules, and the chiefest place of glory to be neere unto the Sunne, where the foules of those which Nine places were good men flaine in the warres, and those which were facrificed were placed, and that all other forts for Soules. of entil per fons their foules abode on the earth, and were denided after this fort, children that were dead bornement to one place, those which died of age or other disease went to another, those which died of sudden death to another, those which died of wounds or contagions difeases went to another place, those which

60 were drowned went to another, those which were put to death for offence by order of Instice, a for robbery and adultery to another: Those which flew their Fathers, Mothers; Wines or Children, to another place by themselves: also those who slew their Masters or any religious person went to another place. The common fort of people were buried, but Lords and rich men had their bodies burned, and their ashes birried. In their forondes they had a great difference, for many dead bodies were buried bester apparel-

led then when they were on line. Women were shrowded after another fort. And hee that suffered death for adultery, was stronded like unto the God of lecherie, called Tlazoulteutl; he that was drowned like unto the god of water, named Tlacoc; and he that died with drunk enneffe was forowded like unto the god of wine, called Ometochtli. But the Souldier had an honorable shronde like vito the attire of Vizilopuch: li, and the like order in all other forts of deaths.

When any King of Mexico happened to fall sicke, they wsed forthmith to put a visor wpon the face of Tezestinosca, or Vitzilopuchti, or some other Idoll, which Visor was not taken away, untill they saw whether the King did amend, or elfe dye: But if be chanced to dye, then word was fent throughout all his Dominions to bemaile his death, and also other postes were fent to call the Noblemen that were his nighest kinsmen, and to warne them within foure daies to come unto his bursall.

The dead body was laid upon a faire Mat, and was watched four enights, with great lamentation and mourning: then the body was washed, and a locke of haire cut from the crowne of his head, which was preserved as a great relicke, saying that therein remained the remembrance of his soule. This done, a fine Emerald was put in his month, and his body strowded in seventeene rich Mantels, of colours, both rich and coftly wronght. Vpon the upper Mantle was fet the denife or armes of Vitzilopuchtli or Tezcalipuca, or some other Idoll, in whom the King had great considence in his life time, and in his Temple (hould the body be buried. Upon his face they put a visor, painted with fonle and Denilish ieflures, befet with many lewels, Precious stones, and Pearles, Then they killed his fline, whose office was to light the Lampes, and make fire unto the gods of his Pallace. Thefe things done, they carried the dead body unto the Temple : some followed bem with dolefull tune, others fung the death of the King by note for so was 20

The Noblemen and Gentlemen of his houshold carried Targets, Arrowes, Males, and Enfiones to throw into the fire where the body should be buried in the Temple. The high Priest and all the Clergie received him at the Temple gate, with a forrowfull fong, and after he had faid certaine words, the body was throne into a great fire made for the purp fe, with all the lewels that he had about him, and all the other things which was brought to honour the buriall: also a Dogge newly strangled with an Arrow, which was to quide him his way. In the meane while that the King and Dogge were burning the Priests facrificed two hundred persons, howbest in his Ceremonie there was no ordinary taxe, for sometimes they sacreficed many moe : they were opened with a Rasor of flint in the breasts, and their hearts taken out and throwne into the fire where the Kings body was. These miserable persons being sacrificed, and 30 their bodies throwne into a bole; they beleened affuredly that those should serve for his slaves in another world : some of them were Dwarffes , monstrous and deformed persons , with some women. They placed about the dead body of the King before his buriall, Ruses, Flowers, and sundrie diffes of meate and drinke, and no creature durft touch the same, but onely the Priests, for it seemed to be an offering.

The next day following, all the after were gathered together, and the teeth with the Emerald that was in his moush, the which things were put into a Cheft, painted on the infide with horrible figures of demils, and the locke of haire which was cut from his crowne, and another locke of haire which was preferued from the time of his birth. Then the Cheft was lockt, and an Image of wood made and cleathed like unto the Kings person, which was set on the top of the Chest. The obsequies endured source dayes, in 40 the which the wines and daughters of the King offered great offerings at the place where his body was buried, and before the Chest and his Image.

On the fourth day after the bursall, fifteene flaues were facrificed for his foule; and on the twentieth day, other fine persons were also sacrificed; likewise on the fixtie three and four escore, which was like vinto

The Kingdome of Michuacan is almost as great as the Empire of Mexico, and when any King of that Countrey happened to be vifited with fickneffe, and brought to fuch extremitie, that hope of life were past, according to the opinion of Philitions, then would be name and appoint which of his Sonnes (bould inherite the estate; and being knowne, the new King or heire, incontinent sent for all the Gouernours, Captaines, and valuant Souldiors, who had any office or charge to come unto the buri- 50 all of hu Father, and he that came not, from thenceforth was held for a Traitour, and so punished. When the death of the old King was certaine, then came all degrees of Estates and brought presents to the new King , for the approbation of his Kiegdome , but if the King were not throughly dead , but at the point of death, then the gates were fout in , and none permitted to enter ; and when his life was departed, then began a generall cry and mourning, and they were permitted to come where their dead King lay, and to touch him with their hands : this being done, the carkaffe was welled with sweete waters, and then a fine thirt put upon him, and a paire of spooes made of a Decre skinne put on his feete, and about his anciles were tied certaine Bels of Gold, about his wristes of his hands were put Manillias of Turkies, and other Bracelets of Gold, likewife about his neckether hung other collers of precious stones, and gold, and rings in his eares, with a great Turkise in his neather lippe. 60 Then his body was laid upon a large beere, whereon was placed a good bed under him: on his one file lay a Bowe with a quiner of Arrowes, and on his other sidelay an Image made of fine Mantels of his owne stature or bighnesse, with a great tusse of sine seathers, shoots voon his seet, with Bracelets, and a coller of gold. While his worke was a doing, others were bused in majoing the men and we

men which should be staine for to accompany him into Hell: these wretched folke that should be staine were banqueted and filled with drinke, because they should receive their death with lesse paine. The new King did appoint these who should die for to serve the King bis Father, but yet many of them had rether have beene without bis fernice, notwithit anding some simple soules esteemed that odious death for a thing of immortall glory. First, seven Gentlewomen of noble parentage were appointed to die, the one to have the office of keeper of his lemels which he was wons to weare, another for the office of Cup-beaver, another to give him water with a Bason and Ewer, another to give him alwayes the Vrinall, another tobe his Cooke, and another to serve for Laundresse. They see also many woman-slanes, and free maiding, for to attend upon the Centlewomen, and moreover, one of every occupation muthin the

10 Citie. When all thefe that were appointed to die were malked, and their bellies full with meate and drinke, then they parnted their faces yellow, and put garlands of sweete flowers upon each of their beads. Then they went in order of procession before the beere whereon the dead King was carried, some mens playing on Instruments made of Snatles (hels, others played upon bones and shels of Sea-iurtils, others went whistling, and the most part weeping: the Sonnes of the dead King and other Noblemen carried upon their boulders the Beere where the Course lay, and proceeded with an easie pace toward the Temple of the god Curicaueri: his tenfinen went round about the Beere, finging a forroufull long. The officers and houshold servants of the Court with other Magistrates and Kulers of ma flice bare the Standarts and disers other armes.

About midnight they departed in the order aforefaid, out of the Kings pallace, with great light of 20 fire brands, and with a beame noise of Trumpets and Drummes. The Citizens which dwell where the Corfe passed, attended to make cleane the freete. And when they were come to the Temple, they went force times round about a great fire mide of the wood of Pine tree, which was prepared to himse the dead body: then the Beere was laid upon the fire, and in the meane while that the body was burning, ther mawled with a club isofe which had the Garlands, and afterward buried them by foure and foure,

The next day in the morning, the alber, bones and lewels, was gathered and laid open a rich Mantle, the which was carried to the Temple gate, where the Priests attended to blesse those denetish relickes, whereof they made a dough or palle, and thereof an Image which was apparelled like a man, with a visor on his face, and allother forts of levels that the dear King was wont to weare, fo that it feemed a gal-

30 lant Idol. As the force of the Temple flaves they opened a grane ready made, which was fquare, large, and two fadous deepe it was also hanged with new Mass round about, and a faire bed therein, in the which arelytions man placed the Idol made of a hes with his eyes toward the East part, and hing round about the male, Targets of Gold and Stlarr, with Bowe and Arrowes, and many gallant tuffes of Feathers, with earthen vessels, as Pots, Dishes, and Platters, so that the grave was filled up with boushold flusse. Chest's concred with Leather, Apparell, Ieweis, Meace Drinke, and Armor. This done, the grane was fout vp, and made fure with be ames, boords, and flored with earth on the top.

All those Gentlemen which had serned or conched any thing in the buriall, washed themselves, and went to dinner in the Court or yard of the Kingt house without any table, and having dired, they wiped their bands upon certaine locks of Cotten woll, banging downe their heads, and not speaking any word, ex-& cept it were to aske for dricks. This Ceremonie endured fine dayes, and in all that time no fire was permutted to be kindled in the Citie, except in the Kings boule and Temples, nor yet any Corne was ground, or Market kept, nor none durit goe out of their bouses, soewing all the fortow that might be possible for

In Mexico were twelve ludges, who were all Noblemen, grave, and well learned in the Mexican ludgess Lawes. These men lined onely by the rents that properly appertaine to the maintenance of Instice, and in any cause undeed by them, it was lansfull for the parties to appeale unto other twelve ludges, who were of the Princes bloud, and alwayes abode in the Court, and were maintained at the Kings owne coff and charges. The inferiour ludges came ordinarily once enery moneth to confult with the by her. And and consect. Lo conference in neget with visuality who every moments we compute with one on yet. And it entery four-flowed days came the ladges of enery Province within the Mexican Empire, to confull multi-the ladges of Mexico, but all doubtfull carfes were referred to the King, and so pelfe by his

order and determination. The Painters ferned for notaries, to paint all the cafes which were to be refol. Painters. ned, hat no su te passed abone sourescore dayes without finall end and determination. There were in that Citie twelue Sergeams, whose office was to arrest, and to call parties before the ludges. Their gar - Sergeams. ments were painted Mentels, whereby they were knowned a farre off. The Prisons were under ground, Prisons, moss and darke, the cause whereof, was to put the people in sear to offend. If any mitnesse were called to take an oath, the order was, that he floudd touch the ground with one of his fingers, and then to Witnesses and touch is soone with the same, which servited that he had sworne and promised to seade the treek much cathes. his toughe, taking witnesse thereof, of the earth which did maintaine him. But some doe interprete the outh that if the partie for the not true, that then be might come to fuch extremitie, as to eate earth. Some-

tine they name and call upon the God of the crime, whose canse the matter touched, ne the name evacuar you are wany on.

The large to at about bridge or gets, is forthurate put out of the office, which was accounted a most Bibery, tile and brownial reproseds. The Indian dud affirms that Necessitymeint did hang a Inige in Teawe am order of a range senerate, be bunglife become the contrary. The Montherer is executed Murther.
